## ERRATA AND CORNIGENDA.

Common Abrreviations. Page 342.
E.g. Exempla gratia should be Exempli gratia.
Familiar Latin Words and Phrases. Page 344.
Quem Deus vult perdere dementat, Whom God would destroy He first makes mad, should read :

Quos (or Quem) Deus vult perdere prius dementat, Those whom God would ruin He , first deprives of reason.

> Telegrans, Inland. Page 35 I.

The 4th sentence should read: When the terminal office, i.e. the office nearest to the address, is a Head Post Office, the amount paid for the transmission covers the cost of delivery within three miles, or within the town postal delivery when that extends for more than three miles. But when it is not a Head Post Office the message is delivered free within three miles only. Telegrams are delivered free at all times within the Metropolitan Postal District. When the address is beyond the free delivery, porterage is charged at the rate of 3 d . per mile, or part of a mile, the charge being calculated from the office door.

Money Orders should read: For sums not exceeding $£ \mathrm{I}, 2 \mathrm{~d}$.;
exceeding $£_{I}$ and not exceeding $£ 3,3 d_{-}$; exceeding $£ 3$ and not exceeding $£ 10,4 \mathrm{~d}$.
Miscellaneous. Page 354.
A pint of water weighs I lb., should read:

A pint of water weighs approximately $\mathrm{I} \frac{1}{4}$ : lbs.
"A pint of pure water
Weighs a pound and a quarter." This refers to an imperial pint.

A gallon of water contains 23 I solid inches, should read:

An imperial gallon of water contains $277^{\circ} 274$ cub. inches.
Marriage, etc. Page 36i. Thirdlast paragraph should read:

The, registrar must receive seven clear days' notice prior to the granting of his certificate. A marriage must be registered within three days; a birth in Scotland twenty-one days, in England forty-two days, or even three months without a penalty ; a death in Scotland within eight days, England five; a child must be vaccinated within six months after the date of its birth in Scotland, in England three.

## English Dictionary

Comprising
Besides the Ordinary and Newest Words in the Language, Short Explanations of a large number of Scientific, Philosophical, Literary, \& Technical Terms

THE TIMES says of this Dictionary
"It is neither inadequate nor inaccurate."

## PREFACE

The special feature of this Dictionary is, that by the omission of some words which can hardly be supposed either in spelling or mearing to offer any difficulty to people likely to consult a dictionary, space has been found for a considerable number of puzzling words occurring in the scientific and other higher literature of our time. Care, however, has been taken to omit none of those common words whose spelling or exact use occasions at times a momentary difficulty even to well-educated people. A similar rule has been observed in marking pronunciation: only such words as may reasonably give room for doubt have been marked. The main aim of the compilation is to give as much useful information as possible in a limited space, and in a handy and, it is hoped, not inelegant form. With this view, where noun, adjective, and verb are all obviously connected in meaning, one only has sometimes been inserted ; but in explaining the inserted word, kindred omitted words have either been explained or a key to their meaning has been supplied. The Dictionary will thus be found to contain the meaning of very many more words than it apparently professes to explain.

zYMO1IC, a. yertaining to fornentation.

## Britich Governments.

The period of a Government's existence does not always correspond with the duration of a Parliament, as two or more Governments may hold office during one Parliament. The present is the twenty-fifth Imperial Parliament since 1806

# Pears' 

## Compendium of

# General Knowledge 

Containing

A Mass of Curious and Useful Information about Things that every one Onght to Knowe
In

Commerce, Politics, History, Science, Religion, Literature, \&o other
Topics of ordinary Conversation

## PREFACE.

If we keep our ears and eyes open, we must be struck by the number of names, subjects, and allusions in daily conversation and in the daily press of which we know little or nothing. This Compendium has grown out of a rough census made of such things. It does not pretend to be a Cyclopaedia or to provide Universal Information; some of the subjects treated are very common, and others are very rare; some of them are treated scientifically, e.g. such as Cities, Climate, and Crime; and others are treated superficially, e.g. names of historical personages. All of them, however, are subjects to which the Compiler has had his attention drawn in the ordinary course of conversation or reading, and about which his curiosity prompted him to find out something. He has made every endeavour to verify the 'something,' and hopes that the result may prove useful to fellow-seekers-afterinformation who have not so much time to devote to the satisfaction of their legitimate curiosity.

## GENERAL KNOWLEDGE.

ABbas PASHA, Khedive of Egypt ; he succeeded his father, Tewfik, in 1892.
Abd-uL-HAMiD II., Sultan of Turkey, succeeded his brother, Murad V.i Turkish succession going to senior male descendant of Othman. His reign has been disastrous to Turkey and to civilization. By Berlin Treaty he practically lost Bulgaria, Bosnia, Herzegovina, Ardahan, Kars, and Batuin, and re. cently he has been responsible for Arınenian massacres.
Abdurrahman Khan, Ameer of Afghanistan, succeeded his uncle, Shere Ali.
ABERDEEN UNIVERSITY, founded in 1495 by Bishop Elphinstone, united with Marischal College in 860. With Glasgow, it sends one member to Parliament, and admits women as well as men to degrees.
A BoLrrionists, U.S.A. anti-slavery party, got slavery abolished, by Lincoln, in 1863.5.
Absenter Landlord, does not spend his money in the country from which he gets it. In Ireland 'absenteeism' has given great power to agents and middlemen.
ABSINTHE, liqueur flavoured with wormwood and other aromatics. Made in Neuchâtel. Drunk in France. Colour greenish.
ABYSMAL OOZE, accumulations of red clay, minerals. fossils, etc., over deepest parts of sea-floor.
ACADESIY, a grove wherein Plato taught. Hence, school or society. French A. founded by Richelieu in 1635. Berlin $A$. by Frederick' I. in 1700, Royal A., Loondon, in 5768 , American A. in 1780.
ACCENT, stress laid by voice on part of a word, as emphisis is stress lald on part of a sentence.
ACCLIMATIZATION, process of adaptation in plant or animal to new climate. In Tropics hill-stations are very important in this respect.
ACHATES, trusty friend of Aenens after capture of Troy by Greeks. Hence, fdus Achates.
ACHILILES, hero of Homer's Miad, killed by l'aris.
AChROMATIC LENSES. compound lenses, convex and concave, to refract light without dispersion.
ACIDS, chemical compounds which combine with bases to form salts.
ACOUSTICS, branch of science of sound-waves, which treats of construction of buildings for voice or music. Great point is prevention of echoes.
ACROBAT $=$ ' walker on tip-toe.' Famous A. in inth century were Facloso, Sapui, Diavolo, Blondin.
Ackostic, stanza wherein first or last letters of lines form a word. Very old. cf. yrgth Psalm.
ACRES ENClOSED IN ONE BUILDING. Tlirty and a thalf acres were enclosed at the World's Fair in Chicago withln the building devoted to "Manufac. tures and Liberal Arts." Mr. George Post of New York was the architect, and the building was about 1700 feet long. 800 wide, and 240 high . It consumed 17 million feet of timher, and 14 million of steel and iron; it was three times larger than St. Peter's

Cathedral at Rome, and could have glven standing room to the whole Russian army.
Actors AS Swordsmen. Sir Henry Irving is said to be the most expert, and he has certainly fought more stage duels than any other modern actor. He and Mr. Alexander used to show great skill in the duel in " Macbeth." and he and Mr. Bancroft were equally famous in "The Dead Heart." For weeks before the production of the latter, Sir Henry and Mr. Bancroft used to rehearse constantly at Mr. Bertrand's, where Mr. Fechter and Mr. Hermanu Vezin used also to rehcarse the duel for "Hamlet." The duels at the Lycemm under Sir Henry's man. agement are always very correctly put on in the matter of historical and archaeological details.
Actors, Long-Lived. Mr. Underhill, the famous comedian of the Stuart period, performed in the reigns of Charles II., Janes II., William III., and Queen Anne. When he performed for his last 'benefit'-the part was the First Gravedigger in "Hamlet "-he was considerably over 70 ; and he was one of the few connedians whio adhered faithfully to Shakespeare's own instructions, that clowns. should not 'gag.'
actor Playing every male part in a play. The veteran actor, Mr. Henry Howe, played every male part in " The Lady of Lyons "-from the first officer to Claude Melnotte and General Damas-at the Haymarket. Mr. Howe joined the Haymarket Company in 1839, and remained there for over 40 years, playing with Macready, Buckstone, Webster, Phelps, and Kean, amongst many others.
ACTORS' STATURE. Mr. Fritz Reinma, Sergeant Caramel in "The Old Guard," stands about 6 ft . 4 in.: Mr. Herluert Beerbolm Tree and Mr. Colletto are both over 6 ft . S Sir Henry Irving and Mr. Felward Terry are 5 ft . so in.: Mr. Terris is 5 ft .9 in .: Mr. George Grossmith and Mr. Hermann Vezin are 5 ft . 6 in . Mr . Hare and Mr. J. L. Toole, of "Little Dot" fame, are 5 ft .5 in .
ACTORS WITH OFFICIAL ROBES. The members of the Comédie Française havegorgeous official rohes of scarlet and ermine provided for them, and as one cliaracter costume may cost. a very large sum (e.g. $£$ (roo), this is a great consideration. The dress worn by Febre ir" "IIenri III. et la Cour "cost $£ 400$
ACTRESS WHO HAS PERFORMED MOST OFTEN BEIPORE THE-QUEEN is probably Mme. Albani, the famous oratorio and lyric prima donna. She was born at Montreal, and came out in this country at Covent Garden is 1872. She has a louse in Scotlanel, not far from Balmoral.
ACTRFSS WHO $11 A S$ PLAYFD GRFATRST NUMBER OF PARTS is prohably Mrs. Kendal. She came out at Chute's Theatre in Bristol when she was four years old, in "Uucle Tom's Cabin." Her father and mother, grandfather and graudinother, great-grandfather and great.grandmothor, aunts and uncles,
great-aunts and great-uncles, etc., were all on the stage. She has played in all sorts of clramas, from burlesque to tragedy, but is best in light comedy.
ACTRESS WHO FIRST PLAYED BY' NAME IN THIS COUNTRY was probably Mrs, Aune Marshall, who played in "Othello" in 1660 , though French actresses had certainly played at the Blackfriars Theatre before that date. Pepys says that the first time he saw a woman on the stage was Jan. 3. 166ı. Royal and Court ladies had previously taken part in masques, and Mrs. Coleman is said to have played Iantlie in the "Siege of Rhodes " in 1656.

AMPHITHEATRE, huge oval building used by Romans for gladintorial and will-beast shows. One in reign of Tileerius fell in and crushed 50,000 persons.
moro than twice as large as Albert Hall, London, held nearly 90,000 persons height about 160 fcet, and area about 5 acres. In the United Kingdom remains of $\boldsymbol{A}$. at Cirencester, Dorchester, and Silchester.
AMPIIITKITE, sen.goddess of Greeks, wife of Poseidon.
AMIHITkYON, Greek klng, husband of Alcmena. His story was adapted by Moliere, and hence A. = 'entertainer.
AMPHORA, large clay vessels amongst Greeks and Komans, witl two liandles and narrow neck, espe. cially for wine ; holding about 9 gallons. Sometimes used as cinerary urns.
AMULET, anything worn ascharm; generally stone or metal with inscription; e.g. the Talismark.
ANA, termination to proper names to denote 'table= talk, as Burnsiana.
ANABAPTISTS reject infant baptism and administer rite only to adults. Name originally applied to Ger. man fanatics called "Prophets of Zwickau" in 16th century.
ANABASIS, name of two histories, Xenophon's 'Going up " of Cyrus against his brother Artaxerxes, and Arrian's 'Going up of Alexander the Great.
ANACHRONISM is the reference of a circumstance or custom to wrong date. A. are of no importance unless and until they cannot be unconsciously bridged by the imagination. Shakespeare makes Athenians keep May-Day and talk of nuns in SY.N.D.
ANACOLUTHA, absence of strict logical sequence in writing or speaking.
ANACREON, most famous lyric poet of ancient Greece, lived at court of Polycrates in Samos and at Athens. Translated by Moore.
ANAGRAM, transposition of letters of word, phrase, or short sentence to form new ones. Cabalists thonght they affected character or destiny of persons froun whose names they were formed. A. has survived in ' missing-word coinpetitions."
ANALOGY, agreement in certain respects between certain things which differin other respects, Reasoning from analogy is very dangerous, but very sug. gestive. See the famous Butler"s Analogy.
ANALYSIS, breaking up of a whole into component parts to discover fundamental principles.
ANALYST, PUBLIC, competent person to analyze all food and drugs sold in particular area. Ought to be compulsory everywhere, but is only permissive.
ANAIECHY, revolutionary movement rising into importance from rivalry between Marx and Bakounine, the latter a disciple of Proudhom. Negative and positive conceptions-sweep away existing society, and use all for benefit of all. Doctrines promulgated with outrage practically, but noninally by universal diffusion of knowledge. Prominent leaders are Prince Kropotkin and Elisée Reclus.
ANATHEMA, offering up to gods of some gift; then, the gift itself. Afterwards used by Romish Church as extreme denunciation of obstinate heretics.
ANAXAGORAS, old physical scientist, who had wonderfully accurate notions of light, eartliquakes, wind, etc. Thought all matter existed originally in atoms, and that those atoms were reduced to order by eternal mind.
ANCEIOR, originally large stones. Greeks used iron, with one fluke. Many important improvennents made recently ; e.g. Rodgers, Lcnox, Martin, Wastenay Sinith.
ANCHOR.ICE, forms on beds of rivers or shallow, brackish seas where wilter is not still.
ANCHOVY, kind of lierring, inninly from Mediterranean.
ANCUS MARTIUS, famnis fourth king of Rome, restored religion and cultivated arts of peace.
ANDANTÉ gentle kind of slow movement in innsic.
ANDERSEN, HANS, famous Danish writer of fairy tales, born 1802, son of poor slomentaker, died 1875 ANDERSON COLLFGE, Glasgow, instructs mamly in Physics, Medicine, and Chemistry.
ANDERSON, MAKY, fanous Californian actress, born 1859.

ANDIRON, fire.dog, for lurning wood on open hearth. ANDRI, famous spy in Anterican War of Independence, hanged by Washington.

ANDREW, CROSS OF ST., white saltire on hlue ground, to represent cross on which Scottislı patron saiut suffered martyrdon. Is combined with crosses of St. George and St. Patrick in Union Jack.
ANDROCLUS, Roman slave, hero of fimous story about a tion which lind got a thorn in its foot."
ANDROMEDA, Ethiopian beauty, fastened by rock to appease terrible sea-monster, but rescued by Perseus.
ANEMOMETER, measures pressure or pace of wind. Pace measured by four cups fixed to ends of two horizontal rods which revolve on pivot. Cups move onethird as fast is wind. Pressure measured on brass plate suspended on springs, whicl move a pencil backwards or forwards.
ANEROID, barometer in which pressure of air is neasured without use of liquid. Extremely portable, and very useful for travellers.
ANGELS, spiritual 'messengers.' Originally, only a 'voice, then a form. The three famous angels are Michael, Gabriel, and Raphael.
ANGELICA, aromatic plant, root of which was considered in Middle Ages specific against poison, pestilence, witchcraft, etc., and stalks of which were used as ' celery.'
ANGELICO, FRA, great painter of frescoes in ${ }_{5}$ th century. Specimens of his work survive at Florence, Cortona, Fiesole, etc. The protagonist of pietistic painting.'
ANGELUS, bell rung in Romish countries at morn, noon, and sunset, to invite faithful to recite Angelic Salutation.
ANGER, affects body-blood vessels, pulse, bile, etc. ; and in nervous persons the excitement causes reaction with great depression, which is distinctly dangerous to health and even to life.
ANGLES are measured by degrees, of which a right A. contains go. A. made by straight lines is rectilinear, by curved is curvilinear.
ANGLES, Teutonic Tribe from Angeln, south of Sleswick, who gave name to England.
Anglican Church, includes Church of England, and all other churches in communion with it in United Kingdom, U.S.A., etc. Total number of Anglican adherents estimated at $20,000,000$, of which 12,000,000 are in England. Anglican 'Orders' not recognized by Rome.
ANGLING, art of catching fish by allurement. To be successful, angling needs knowledge of haunts and habits of fish, dexterity, and patience. First printed English book on A. was Book of St. Alban's in 15th century. Izaak Walton's Compleat Angler was published first in 1653 , and has been republished 100 times. Other famous books are Francis' The Book on Angling, Manly's Fish and Fishing, and Foster's Scientific Angler. ${ }^{-}$
ANGLO-ISRAELITE THEORY, theory that English are descendants of Israelites captured by Sargon 721 B.C., founded on ignorant misinterpretation of words and customs.
ANGLomania, term of ridicule in France and Ger. many for indiscriminate admiration of English language, literature, institutions, etc.
ANGLO-SAXON, a bad synonym for Old English, wrongly called Parent of Modern English. Angles and Saxons did not speak different languages, and English is Anglo-Saxon.
ANGORA GOATS have silky hair, for which they have been exported from Asia Minor to Cape Colony and other suitable places, where they are bred for their 'mohair.'
ANILINE, produce of dry distillation of Indigo \{anil in Portuguese) originally, but now of coal tar. Powerful poison which unites with acids to form salts, and gives very strong dyes. Germany monopolizes inanufacture.
ANIMALCULE, very tiny animals, myriads of which can live in a single drop of water, fresh or salt. Luminosity of sea is sometlmes due to them. They increase rapidly in stagnant water. Their skeletons aid largely to form rock, e.g. chalk.
ANIMAL HFAT results from process of disintegration ind oxidntion, which goes on constantly in living protoplasm. Animal body is a machine for converting food into heat, and about $77 \frac{1}{\mathrm{~h}}$ per cent. of
total lheat escapes from body by the skin in conduction, radiation, and evaporation. Of course coldblooded animals lose more heat in comparison with the normal supply than warm-blooded do. The frog averages about $1^{\circ}$ warnier than the air, the human body about $98^{\circ}$, the swallow about $122^{\circ}$.
Animal "RECORDS." Horses and ponies are often taken up in balloons, and Madame Portevin ascended as "Europa" on the back of a bull. Apart from toads and bats, about which there is great doubt, serpents can go longer without food than any other animals. One in the menagerie of the French Museum refused to eat for 22 months. An anaconda in the same menagerie only had 34 meals in $5 \frac{1}{2}$ years. A horse has been known to live 17 days without eating or drinking, and 25 days without eating. The fying lemur can leap on an inclined plain 300 feet. Kangaroos easily jump 60 to 70 feet in length, though they cannot jump more than about 14 feet high. A flea can jump an obstacle 500 times its own height, and a grasshopper can jump 200 times its own length. The famous steeplechaser, The Chandler, jumped 39 feet at Warwick. Lions and tigers jump about ig feet when springing on their prey. Salmon frequently jump 15 feet high. The mina bird excels all other animals in its power of imitating, especially imitating human speech. The specimen in the Zoo in Regent's Park speaks, laughs, and talks like a man. The leech has three jaws, each fitted with 80 to 90 teeth. It is very sensitive, and will not settle on the skins of people who are under the influence of certain narcotics or alcohol. The cuttlefish 'walks' on its liead, with its mouth touching the ground, and the arms extended or contracted on opposite sides niternately. Snakes have an enormous number of ribs. The boa constrictor has 320 pairs of them.
Animal Magnetism, Mesmerism or Hypnotism. Of very old use, e.g. in Egypt. induced by gazing intently for a few minutes at some spot, generally centre of white disk. In ryth century began to be used medically by Greatrakes in London, and in 1774 Dr. Mesmer treated diseased organs by artificial magnets in Vienna. In 184 I Dr. Braid, in Manchester, investigated it, and concluded that, by staring, the eyes with their nerve centres become so fatigued that the balance of the nervous system is upset, and that the mesmeric phenomena depended therefore entirely on the bodily state of the patient. Hence, he suggested the name Hypnotism. It brings extraordinary insensibility to pain, and has been used most successfully in surgical operations; but, as lypnotic state begins with general convulsions, it is a dangerous experiment.
ANIMAL-WORSHIP, characteristic of uncivilized worship, wherein the particular animal is regarded as representative of tribal ancestor, and often possesses his soul. Red Indian and Braliman are chief survivals.
ANIMA MUNDI, to ancients was immaterial vital essence which gave form and motion to matter.
ANIMISM, doctrine of spirits in primitive philosophy controlling whole life of natural man, and answering his two great questions about Death and Dreams.
ANNA, Indian coin, one-sixteenth of rupee, with nominal value of $x \frac{1}{2} d$.
ANNALS, chronological records kept by Romans, which were original form of History.
ANNEALING, process of cooling matter slowly from grent temperature, by which the particles are arranged in uniform way, c.g. in glass. Badly annealed glass will break with sudden clange of temperature. Cast-iron is annealed for tinning, and other metals for various purposes.
ANNEXATION, addition of territory previously inde. pendent or in possession of another nation. Germany annexed Alsace.Lorraine in 1871.
ANNUALS, plants which complete their whole development in one season, i.e. germinate, flower, seed. dic. In gardening A. are divided into hardy, halfhardy, and fender, the latter needing artificial shelter and heat throughout.
ANNUNCIATION, tidings brought by angel cabrel to Virgin Mary of incarmation of Christ, which is commemorated on Marcli 25th.

Asomtaly, any irregularity, especially in Astronomy, for the angle ineasured at the sun between a plane, in any point of its orbit and the last perihelion.
ANONYMOUS, book or article to which author does not put his name. Allows cowards great ease with no responsibility.
ANSELSI, fanous Italian, who succeeded Lanfranc as Archbishop of Canterbury.
ANSON, 1.ord, famous English adniral in 18 th century, who circumnavigated glube in 1740-46, and captured half a million of Spanish and guarter of milion of French treasure.
ANTS, lnsects of the wasp and bee order, with different forms - perfect females, short-lived males, and 'neuter'workers-developed fromegg through larva and chrysalis. They feed on animal matter and sweet vegetables. live in chambered nests with galleries, etc., and have minute divisions of labour.
ANTENNAE, feelers of lobsters, etc., used for feeling their way, smelling food, and catching sounds.
ANTHEM, short form of antiphon, inusical composition sung in parts, alternate or otherwise. Introduced in time of Elizabeth.
ANTHOLOGY, 'collection of flowers,' literal or metaphorical. The latter includes 'flowers' of thought, generally poems. The Greek A. was compiled by Iteleager about 60 B.C.
ANTHRACITE, very hard coal, burns with little or no smell, smoke, or flame, hard to light, but very hot when well lit. Famous ficlds in South Wales, near Cardiff, and in U.S. A., near Philadelphia.
ANTHROPOID APES, monkeys most closely resembling man. It is impossible to establish fundamental distinction, on anatomical grounds, between these apes and man, or to regard any existing ape as in direct line of human ancestry.
ANTHROPOLOGY, science of man, especially as social animal, living in groups by nature and by necessity. Treats of his nature, origin, history, etc. Generally known as Sociology. See Mr. Herbert Spencer's works.
ANTHROPOMETRY, exact measurement of human body, to discover size, proportion, etc., for comparison. Basis of classification of races is skullmeasurement. Very useful in connection with criminal identification.
AnTHROPOMORPHISM, figurative application to God of form, feelings, etc., of men, c.g. all Greek gods and goddesses presented in statues as men and women.
ANTICHLOR, name once given so sulphite of soda by paper-makers, now restricted to the hyposulphite, which is used to free paper pulp from residue of chlorine left by bleaching.
ANTI.CHRIST, false Christ or rival Christ.
Anti-Climax, opposed to climax-addition to a statement of something which renders it ludicrous.
ANTIGONE, Greek ideal of ferninine duty and sisterly devotion. See Sophocles' tragedy, Antigone.
Antinomianism, theory that Christians are freed from obligation to keep law of God. Luther took great part ln great 'A, Controversy,' Term refers to opinions only, not to conduct, in its best sense, but has been perverted to mean 'liberty for a saint to do anything without loss of sanctity.
ANTINOUS, beautiful favourite of Emperor Hadrian, drowned in Nile A.D. 122 . Became a subject for art, e.g. colossal statue in Vatican, statue in Capitoline Museum, etc.
ANTIPATER, a general highly trusted by Philip of Macedon and by Alexander the Great. The father of Herod bore the same name.
ANTIPATHY to things harmless or generally liked is often due to the mental impression of a fright in childhood becoming permanent. A. generally affects special senses-sight of a spider, sournd of mowing machine, smoll of funeral flowers, fouch of satin.
ANTIPHONY, kind of sacred nusic, sung by two voices or choirs, each responding to the other. Most of the Psalms are antiphonal.
ANTIPODES, literally, the parts of the earth exactly opposite our feet, which have seasons, etc., at exactly opposite times.
ANTIPOPE, one elected in opposition to the one
canonically chosen. The first was Felix I., in 4 th century A.D., and the last was Felix V., lin 15 h century.
ANTI-SEMITES, modern enemies of Jews in eastern Europe, where the Jews are very numerous and very wealthy. They urge the folly of allowing weatth and its political infuence to be in hands of aliens. Great many Jews from Kussia, Germany, and Hungary, in $8881-84$ emigrated to Argentille and other parts of America.
ANTITHESIS, a contrast made by uniting ideas which are natural opposites. Very common in Dr. Johnson, Anti-Trinitarian denies the doctrine of the Trinity. Practically same as Unitarian.
ANTITYPE, figure which corresponds to, or which fulfils, some other figure. Christ was the antitype of the paschal lamb.
ANTLERS, horns of deer. Except in relndeer, restricted to the males, for fighting. Year after birth they remain unbranched conical' beams'; second year have first branch on 'brow,' and so on for many years. Sixty branches or 'tines' have been found on most magnificent heads.
ANTONELLI, famous cardinal who left $£ 1,600,000$. Died in 1876 .
Antoninus, PiUS, Roman emperor in and century A, D. Built wall from Clyde to Forth on the line of Agricola's old forts. Fragments remain near Castlecary, Falkirk, and Polmnit.
ANTONY, MARK, famous Roman, friend of Julius Caesar, played great part at time of Caesar's death (see Shakespeare's Julius Caesar). After death of Brutus divided Roman empire with Augustus and Lepidus. Eventually ruined by Cleopatra, and committed suicide.
ANTHONY, SAINT, father of Monachism in 3 rd century in Egypt. Lived alone on hill-top for 20 years. Epidemic of erysipelas in rith century was said to be stopped by prayers to St. Anthony, and hence that disease was called St. Anthony's Fire.
AORIST, a form of the Greek verb to express indefinite time.
APACHES, a tribe of red men, formerly very warlike, living in Texas, New Mexico, and Arizona.
APATITE, mineral, consisting mainly of plosphate of lime, much used in preparation of manures.
APE, part of the Simina family, including nearly all monkeys.
APElLES, most famous painter in ancient times, native of Asia Minor. Studied both at Ephesus, where he learned fine colouring, and at Sicyon, where he learnt accurate drawing. Friend of Alexander the Great, of whom he painted a celebrated portrait. Used to hide behind his pictures when they were on public view, to hear the criticism of the common people. One day a cobbler criticised a shoe in one of the pictures, and Apelles instantly put it right. Next day the cobbler criticised the legs of the same portrait, but Apelles rushed out from his hiding place and told him to mind his own business-"Ne sutor supra crepidam" $=$ Let the cobbler not go above his last.
APHELION, the point in elliptical orbit of a planet farthest from the sun, where the motion is slowest. The nearest point, where the motion is fastest, is Perihelion.
APHIDES, plant-lice, parasites on roots, leaves, etc., of Temperate Zone plants. The worst plague is Phylloxera, which has been very fatal to vine.
Apocalyptic Number is 666 . Among Greeks and llebrews letters stood for numbers, and 666 represents probably Nero Oaesar.
APOCALYPTIC WRITINGS, like the prophecies of Daniel and the Revelation of St. John, set forth in figure and picture the future of tho world.
A POCRYPHA, of Old Testament, consists of r4 books which exist in Septuagint, but not in Hebrew ver. sion. Some are clearly Persian, others Egyptian, aud the rest Palestinian.
APOL.LO, characterlstic gotl of the Greeks, represcuting thelr ifleal of mnnhood.
APOLOGETICS is the branch of Theology that defends Christlanity from external attacks. It is treated under two heads-Natural Theology and Revealed

Theology. It estallishes the moral perfection of Clirist in the Gospels, and the historic character of the latter.
APOSTATE changes his religion from unworthy motives.
ApOSTOLIC SUCCESSION denotes two things-the derivation of holy orders by an unbroken chain from the apostles, and the succession of the ministry so ordained to the powers and privileges of the apostles.
APOSTOLIC FATHERS were inmediate disciples or followers of the apostles, and have left writings belind them ; e.g. Barnabas, Clement, Ignatius, Polycarp.
A POTIIEOSIS was Greek deification of mortal, as part of ancestor worship. The origin of the Divine Right ' of kings.
APPARITIONS are due to diseased condition-temporary or otherwise-of brain, which consists of two hemispheres, and therefore can have two currents of thought. Society for Psychical Research investigates all stories of apparitions.
APPIAN WAY, most famous and oldest of Roman roads; connected Rome with South Italy.
APSE is semi-circular recess usually at east end of choir or chancel of early churches.
AQUARIUM. The three largest in the world are at Brighton, Hamburg, and Paris. The B. one has 41 tanks, and is 715 feet long by 100 feet wide. One tank contains 1 ro,000 gallons of water. The Hamburg one is nearly as large.
AQUATINT, old mode of etching on copper, by which inutations of drawings in Indian ink, bistre, and sepia are produced.
AQUEDUCTS were in great use amongst Romans; and three of the four which now feed Rome are old. They are of varying length, up to about 60 miles. At Nimes there is one of the most famous of the Roman A., and at Marseilles there is a splendid modern one. Glasgow gets its water from Loch Katrine by an aqueduct about 35 miles long, and Viemna from the Styrian Alps 60 miles away: Liverpool is building an aqueduct 67 miles long to Lake Vyrnwy, and Manchester one 100 miles long to Lake Thirlmere.
AQUINAS, THOMAS, the chief of scholastic theologians, born about 1226 A.D. - "The father of Moral Plitosophy." His Summa Theologiae is still a stan. clard work with the liomish Church. His great rival was Duns Scotus.
ARABESQUE, 'the fantastic decorations introduced into Europe by the Spanish Moors in the West, but also by the Greeks and Romans in the East. The Moors, however, were not allowed to represent any animal figures. Raphael adorned the galleries of the Vatican with very famous arabesques.
ARAbIAN NUMERALS ought to be called Hindu, for the Arabs borrowed them, along with the decimal notation, from India in the eigbth century. In spite of their enormous convenience over the Roman figures, it was a long, time before they came into general use-with the introduction of printing.
AkAM. EUGENE, the hero of Lord Lytton's novel
and Hood's ballad, was a Yorkshireman. He murdered his confederate, Daniel Clarke, near Knaresburgh, in 1745. At his trinl lie made a yery famous attack on the theory of circumstantial evidence; but after he was condenned he admitted his guilt.
ArANY, JANOS, the most famous Hurgarian poet in modern tines.
ARMITRATION. The International A. Lencue, or Workmen's Peace Association, was established during the Franco-Prussian War of 1870, and has been very active in Europe and America, having held six great conferences. Its president is Mr. Burt, M. P., and it publishes a monthly paper, The Arbitrator (price Id.). A, is being largely adopted now in private commercial dealings, especially between masters and workmen.
ARBOR DAY. in Americn, is set apart for the planting of trees and shrubs hy scliool children, the plants being given ly the friends of the children. It is generally held on 1 st Friday in May, and millions of trecs have heen planted owing to it.

ARBOR VITAE, which is a kind of cypress, got its name ("Tree of Life') frons the medicinal uses to which its resin was put.
ARBUTHNOT, DR. JOHN, was friend of Swift and Pope.
ARCH was introduced into arclitecture by Romans, and caused complete revolution from old Greek horizontal lines.
ArCHAEOLOGY deduces knowledge of past times from study of existing remains ; e g. Great Britain has many traces of old cairn-builders, who luried their dead in cairns.
ARCHIMEDES was inost famous ancient mathena. tician, born at Syracuse about $28_{7}$ B.C. He discovered the principle in Hydrostatics which is called after him-that a body immersed in Huid weighs less than it does in vacuo by the weight of the displaced tluid. He also invented the endless screw which is called after lim, and whicl!, in a modernized form, is extensively used in Holland for draining or irrigating land.
ARCHITECTURE, MODERN, is purely imitative in style. Churches are generally built in Gothic, and houses in Renaissance style. Romanesque is name applied to all the various round-arched styles of Western Europe, G Gothic to the pointed-arch style, Renaissance to styles which closely imitate classical styles. There are said to be five classical orders, Doric, Ionic, Corinthian, Tuscan, and Composite. Gothic is sometimes restricted to Early English, pointed-arcla (izth century), other English orders being Decorated (i 4 th century), Florid ( 5 th century), and Dcbased (16th century).
ARCTIC EXPLORATION began from the desire to discover a fresh route to India, after Portugal had shut eastern ports to foreign vessels. Artempts were made to find either a N. W. or a N.E. passage. Sir Hugh Willoughby, Davis, Baffin, and Henry Hudson were the nost famous early explorers. The Admiralty sent out Rnss and Parry in 1818, and Ross's success led to Sir John Franklin's ill-fated expedition. The efforts to find the latter led to a number of separate expeditions from Great Britain and from U.S.A.; e.g. those of M'Clure and M'Clintock. In more recent times the most famous expeditions have been those of Lieutenant Greely in $188 \mathrm{r}-84$. Dr. Nansen's crossing of Greenland in 1888, and his subsequent journey with the Fram in 1893.96. On his return he met Mr. Jackson of Cape Flora. Dr. Nanseu and Lieutenant Johansen left the fram to drift along with the current, and set off with two kayaks and a number of doys for the pole. They reached $86^{\circ} 14$ N., 200 miles nearer the pole than had ever been reached before. The lowest temperature recorded on the fram was- $62^{\circ} \mathrm{F}$., and the highest $37 \frac{1}{6}^{\circ}$. No land was seen, and the depth of the sea was unexpectedly great-1800 to 2000 fathoms. The expedition verified the theory that there was a current flowing across the Polar region from the New Siberia Islands, and brought home very valuable results in meteorology, magnetism, etc. Mr. Jackson has discovered a large open sea, by which he hopes to reach the pole from the settlement in Franz Josef Land, where there is an observatory zooo feet above sca-level. Sir Martin Conway and Lieutenant Parry are also conductung important expeditions, Parry for the sixth thine.
AREA COVERED BY A SiNGLE TREE. A lanyan tree on one of Howe islands, covers nearly 7 acres. Another in Guzerat, on the banks of the Narbada, covers 5 acres. The latter is called after a fanous Indian saint, Cubbeer Burr. Floods have swept away a good deal of it, but the circumference of the main stems is still 2000 ft . It lias aloout 350 large trunks and 3000 smaller ones, and is said to mive shade to 7000 persons at once. The largest tree in the world is said to te one near the font of Mount Etna. which is called "The Chestnut of 100 Horses." It has five branches rising from one trunk, which is more than zoofeet romnd. Part of its trunk is broken awiy, and the gap is quite large enough for two good-sized carriages abreast.
ARES was the old Greek god of war, the sister of Eris (strife), and the father of 'Horror' and 'Fear.' ARETHUSA, a fanous fountain in the Morea.

Argon, new element discovered by Lord Rayleigh and Professor Ramsay. It exists in a gascous form in the nitrogen of the air.
Argonauts, mythical Greek heroes who went on a famous voyage under Jason.
ArbadNE, daughter of Minos, King of Cretc, who fell in love with Theseus, and gave lim the clue to the labyrinth in which the Alinotaur monster lived.
AkIANism, called after Libyan Cliristian, whose heresy about the Trinity was the real cause for the Emperor Constantine summoning the famous Council of Nice in $3=5$ A.D.
ArIES, one of the signs of Zodiac.
Ariosto, famous Italian poet of 15 th-16th century. His great poem was Orlundo F'urioso, an epic treating of wars of Charlemagne against the Saracens, Orlando is only another form of Roland.
ARISTIDES, the Just, was one of the ten Greek leaders at the battle of Marathon, where he induced eight of his colleagues to give up their joint claims to the tenth, Miltiades. Aristides was eventually banished from Athens, owing to the jealousy of Themistocles, One man voted for his banishment because 'he was tired of hearing him called The Just.' Aristides also served with great distinction at the battle of Salamis.
ARIST3PPUS, pupil of Socrates, who founded Grecian School of philosophic sensualism.
ARISTOCRACY has its nominal principle that the 'best" people in the state should form a separate class, and should have a larger share of political influence than the rest of the citizens; but, of course, the character of an A. depends on the method of selection. Merit is a good method, birth a bad one, A. supplies generally a body of men who have a hereditary acquaintance with public affairs, and is a great foe to despotisin; but its fatal defect is that it forms a separate interest, which is sure sooner or later to come into conflict with the general interests of the inass. Besides, all class distinctions provoke envy.
ARISTOPHANES, greatest of Greek comic dramatists, lived in 5 th century B.C., and acted the part of the modern newspaper in guarding public rights and elucidating public opinion. His most famous comedies are the Clouds, Frogs, Wasps, Birds.
ARISTOTLE, a Macedonian of 4th century B.C., who went to Athens to study under Plato. He was afterwards the tutor of Alexander the Great. He opened a school called the Lyccum, and his followers were called Peripatetics. A. was the most brilliant philosopher in the Old World. He codlified Plato, and projected an Encyclopaedia of Plilosophy. His most important works are the Analytics, Ethics. Politics, Rhetoric, Metaphysics, Physics, and Poetics. He distinguished three kinds of thought: (1) Theoretical, e.g. Nathematics; (2) Practical, c.g. Ethics; and (3) Productive, e.g. Poetry.
ARITHMETIC began as a science in Indin. Greeks and Komans made very little progress in it because of their clumsy notation ; but after the introduction of IIindu numerals in Irth century A.D., great advance was inade. Rule of Three was discovered in 16 th century, and Logarithms in 17th.
ARITHMETICAL MEAN is that number which is exactly half-way between two others, and is found by adding the two together and then dividing them by 2 ; e.g. $11-14-17, \pi 1+17=28,28 \div 2=14$.
ARITHMRTICAL PROGRRSSION is series of numbers that increase or decrease by exactly same amount, e.9. $2,4.6,8$, or $3,6,9,12$,

ARK OF COVENAN' was box of acacia, overlaid inside and outside with gold; 3 ft .9 inl . long, 2 ft .3 in . high, and the same broad.
ARK, NOAH'S, was only nieant to float, not to be navigated. It was a 'louse-boat,' about 450 ft . long, 45 ft . hroad, and 45 ft . higl. It was built of gopler, or cypress wood, and pitched inside and outside.
ARKWRIGHIT, SIR RICIIARD, a barher's son, born at Preston in 1732, invented the spinning-frame, and afterwards set up water-power factory at Cromford in Derbyshire.
ARM, consists of an upper arm and a forearm, and affords best illustration of some natural principles in
mechanics. The nearness of the muscles to the fulcra causes loss of power, but gain of speed. Left arm is often strouger than riglit. In report of the Anthropometric Laboratory to the British Association in 1893 , left arm of niales was the stronger in about 33 per cent., and of females in about 24 per cent. Both arms are equally strong in 16 per cent. of males, and 29 per cent. of females. Right arm is generally the longer, as is the left leg also. About 46 per cent. have right arm and left leg the longer, and 6 per cent. have left arm and right leg. ARMADA, fitted out by Philip II. of Spain in 1588, was commanded by Duke of Medina Sidonia. It consisted of 129 slips, of which 65 were more than 700 tons; it was manned by 8000 sailors, and carried 19,000 soldiers, nore than 2000 cannon, and food for 40,002 men for 6 montlis, Elizabeth had 80 slips, manoed by 9000 sailors, under Lord Howard of Efingham, who was a Papist. Drake, Hawkins, and Frobisher served under him. A. was first sighted off the Lizard, disposed in a crescent 7 miles long from horn to horn. The excellent manoeuvring of the English, thelr fire-ships, and a gale from the N.W., were the cause of the terrible failure of the Invincible A. Elizabeth had a medal struck, bearing in Latin the inscription, "God blew, and they were scattered." See Charles Kingsley's delightful Westward Ho.
ARMAGEDUON, name given in the Revelation of St. John ;to the great battle in which the first struggle between good and evil is to be fouglit. The name was probably a corruption of Ifegiddo, the fanlous battlefield on the plain of Esdraelon.
ARMATURE, pieces of soft iron placed at the extre. mities or poles of magnets to preserve their magnetic power.
ARM-CHAIRS have cost enornoris sums ; $£ 40,000$ was cost of one given by city of Augsburg to Einperor Kudolph II, about $1575^{\circ}$. It is of steel, and took 30 years to make. The panels represent Daniel and Nebuchadnezzar's dream. It was eventually sold to Earl of Radnor for 600 guineas. Ivory chair pre. sented by Lubeck to Gustavus Vasa was sold in 1825 for nearly $£ 5000$. Shakespeare's chair sold for $£ 120$. Armienians are money lenders of the East, as jews of the West. In India they say "one A. is as bad as nine Jews." The recent massacres, especially in the Sasun district, may be justly traced to this feeling. The whole A. population numbers about $1,000,000$.
Arminianism, doctrine of Jacob Harmensen, who was born in Holland in 1560, especially directed against Predestinatioo. Archbishop Laud's A. made him such a bitter foe to the Scottish jCalvinists.
Armour was worn from the earliest times down to the asth century, when the introduction of gunpuwder made it useless. Tactics then replaced chivalry, and fortified places superseded armed men.
ARMSTRONG, Sir William, inventor of the famous guns, was born at Newcastle in 1810. Most of his gun ideas were gained in serving the War Office during the Crimean War. ITis conmercial success has been due mainly to his invention of hydraulic machinery.
AkMY, THE BRITISt, was re-organized in 8895 , upon the retirement of the Duke of Cambridge from the post of Commander-in-Chief. Its organization is both central and local. The central is vested in an Army Board, consisting of the Comunander-in-Clief (Lord Wolseley), the Adjutant-General, the Quarter-master-General, the Inspector-General of Fortifications, and the Inspector-General of Orduance, ench being directly responsible for his own Department to the Secretary of State. The Accountant-Gencral is also a member, representing the Financial Secretary. The local organization is vested in general oflicers commanding districts, of whlel there are 12, exclusive of Aklershot, Woolwich, and the Curragl, There are 67 regimental districts, under colonels, maintining 133 battalions, I battalion of each regiment theoretically remaining at home to feed its twin albroad. The Artillery has 2 a horse and 87 field batteries, and i horse and a field depot. The principle is voluntary 'short service,' as preparation for the reserve, It is maintained by recruiting, and
needs a special finance. The cost is over $£ r 8,000,000$ a year, and about 30,000 recruits join in a good year. The total A., including first-class Reserve, Militia, and Volunteers, was 640,625 , on January $\mathbf{r s t}$, r896. The Regulars are distributed-about ro6,000 at home, 78,000 in India, 33,600 in Colonies, and 4400 in Egypt. The normal Reserve is about $70,000,55,000$ of which is Infantry, who are familiar with the Lee.Metford magazine rifle. The longest time ever served in the British Army was by Sir Wm. Gomm, who died in 1875 after 8t years" service. Count von Wrangel has served gr years in the German Army, and Sir Patrick Grant has served 74 years in our own. A private, Amos Jinks of Newport, Shropshire, attained the age of rop years. The average age of A. horses is from about 5 years in the cavalry to 7 years in the A. Service Corps. On a peace footing, about 25,000 horses and inules are kept, and at least 40,000 would be required in war. The horses cost from $£ 28$ to $£ 35$ to buy, and $£ 25$ a year to keep, and about 1600 have to be replaced every year Austria can put into the field nearly $2,000,000$ men at the cost of $£ 45$ per man; France nearly $4,000,000$ at the cost of 43 per man ; Germany nearly $6,000,000$ at the same cost; Italy about 900,000 at £38 apiece; Russia 3,000,000 at $£ 37$ apiece. The $\not$ 3ritish A. costs about $£ 93$ per man, i.e. more than double the dearest of the compulsory service armies of Europe. The United States, in 1886, paid for their 25,000 men about $£ 278$ apiece.
ARNE was a famous musician of the 18th century, who composed the tune of Tulle Britannia.
ARNOLD, THOMAS, was headmaster of Rugby from 1828 to 1842 . Besides being the most famous schoolmaster of his age, he wrote a History of home and edited Thucydides.
ARPEGGIO, in music, is a chord the notes of whicln are given in succession. It is indicated by a perpendicular wavy line before the chord.
ARQUEBUS, was first form of hand-gun which was at all like modern musket. The earlier ones were fired by a match applied by hand to the touch-hole, but at end of I5th century a sort of trigger was invented or adopted from the arbalist or cross-bow.
Arrach is East Indian namef or all sorts of distilled spirit, but specially for that made from palms or frons rice.
ARRAS, in north of France, was so famous for tapestry that the name arras was given in England to all tapestry. Cf. currants from Corinth, bayonet from Bayonne, ermine from Armenian (rat).
ARSENALS of Great Britain are at Deptford, Chatham, Pembroke, Sheerness, Portsmouth, and Plymouth; the chief arsenals of France are at Cherbourg, Brest, Toulon, L'Orient ; of Russia at Kronstadt and Sevastopol ; of Germany at Danzig and Wilhelmshaven ; of Italy at Spezia.
ART is knowledge put into practice for a proposed end, as Science is knowledge put into theory for effecting means. Fine Art has been largely connected with religion, and the forms have depended on tlie geography. The quantity of hard rock and the monotony of the landscape directed Egyptians to Sphinxes and pyramids. In stoneless Chaldaea clay was the medium. The open-air athletic life of the Greeks encouraged sculpture in imitation of the human body ; Christianity directing Art towards the glory of God by music and architecture. The material must suit the subject, a remus in granite would be absurd ; the process must suit, nosaic or tapestry must not be copied from oil-paintings, etc. Art is glorified handicraft ; but $A \mathrm{rt}$, whether decorative or creative, aims at 'giving pleasure as well as utility, whereas handicraft aims only at utility. The School of Art at South Kensington was opened in r837, and the Science was added in $\mathbf{r} 853$. The chief scliools of Art on the Continent are Munich, Antwerp. Dresden, Florence, Paris, etc.
ARTAXERXES was name of several Persian kings between 465 and 242 13.C.
ARTEMIS, Greek goddess of hunting, sister of Apollo. She was also goddess of the moon, and the patroness of maidens.
ARTESIAN WELLS are bored through strata through
which water cannot pass, e.g. clay, to others of a porous kind, which are full of water. They can only be dug in basin-shaped hollows over porous strata, some of which crop out on the surface above the level to whicl the water is to be raised. At these exposed places water sinks into the ground. and eventually finds its way down along the porous strata to a resting-place below the clay. Tlie well is driven througl the clay into this reservoir. The fountains in Trafalgar Square are fed by Artesian wells sunk through the London clay into the chalk, about 400 feet. At Grenelle, near I'aris, an Artesian well is about $\mathbf{r} 800$ feet. They are very valuable in countries like Algeria and Queensland, where agriculture depends on irrigation. Australia is an ideal place for them, as it is largely made of limestonewhich is often full of subterranean caves, which act as the reservoirs-and it sinks naturally, like a saucer, from a mountaincus rim down to the interior of the country.
ARTHUR, KING, mythical king of the Britons, who took refuge west of the Severn from the Teuton invaders in the 5 th century A.D. So-called memorials of him are found more or less wherever the Britons took refuge, from Arthur's Seat at Edinburgh to Arthur's Head in Comwall. The earliest legends of him come from the old Welsh bardic lays, and were popularized by Malory in $\mathrm{r}_{5}$ th and by Tennyson in igth centuries. In Tennyson's Idylls Arthur is the perfect man warring against the heathen, and represents allegorically the soul warring against the senses.
ARTIFICIAL LAKE, the finest in the world is probably the huge reservoir of Dhebar in Rajpootana, which covers about $2 r$ square miles. This, however, will become more or less unimportant beside the great Nile reservoir. When the latter is finished, it will have an area of nearly 230 square miles, i.e. larger than Lake Geneva. And even the Nile reservoir is to be exceeded by the Missouri dam, which will practically enclose 430 square miles of water.
ARTIST Curiosities. The best portrayer of birds among British artists has been said to be Mr. Henry Stacy Marks, R.A. Among lis famous pictures are "St. Francis Preaching to the Birds," "Flamingoes and Storks," etc. There was an exhibition of his work in London in 1889.

The greatest age at which an artist ever painted a picture was probably 99, for Titian, who died at that age, painted up to the very last. Mr. Cooper, R.A., who was born in 1803, painted a picture for the Royal Academy in r893. Mr. Scketky, who was born in I778, painted one in the Royal Academy in 1872. Madame Rose Bonheur was 70 when she finished her famous picture "Horses Trampling out Wheat," for which she refused $£$ r2,000.
Sir Edwin Landseer in 8845 painted a picture"The Cavalier's Pets"-in one day. It was painted for the Britislı Institution, and is now in the National Gallery. The French artist, Sebastian Bourbon, completed $\mathbf{r}_{2}$ portraits from life. and life-size, in one day. "Old" Jan Baptist Weeninx, the Dutch animal painter, painted at equal speed in almost any lineportraits, landscapes, animals, seascapes, etc. He painted in one day a bull baited by dogs, and in another three half-length portraits life-size with all their accessories.

Mr. Thomas Shields-Clarke has five studios for five different branches of his art. At nine o'clock each day lie is said to go to the Rue Dareau to paint landscapes, at eleven to Rue St. Honore for sculpture, at one to Rue Clement Mearat for water-colour. The other two are for etching and portraiture.

The largest studios in Great Britain are those of Millais, Herkomer, and Leader.

Many mad artists have done wonderful work. Scale covered his cell in Hanwell Asylum with beautiful oil paintings.
ART UNIONS are associations to promote Fine Arts. Originated by French, but developed by Germans. A. U. of Municll started in 1823 . First in Great Britain was at Edinlurgli in 1834, followed by others in London and Dublin. They purchase works of art for distribution to the subscribers. The dis.
tribution is on the lottery principle, but is differently applied in different places. The Continental method, adopted also in Scotland, is for a committee of connoisseurs to spend the whole sum subscribed on works of art, and to distribute the latter by lot. The English plan is to distribute the money by lot, and allow each winner to select their own picture from any of the value of the particular prize. The weak pout about them is the extremely heavy expense of management.
ARUNDEL MARBLES, part of collection of ancient sculpture purchased mainly at Smyma by Thomas Howard. Earl of Arundel, $1586-1646$ A. D., and presented to Oxford University by his grandson, the Duke of Norfolk. The most precious is the Parian Chronicle, a fragment of inscription containing some important dates in Greek history prior to 263 B.C.
Aryan race and Language, designates the ethnological division of human race otherwise known as Indo-European or Indo-Germanic. Has two branches, Western or European, and Eastern or Armenia-Hindustan. The languages slow proofs of common origin by their vocabulary, syntax, and infexions. The word Aryun means an 'honourable lord of the soil'; the oldest family is Sanskrit, and the chief divisions in Europe are the Teutonic, Romance, Slav, and Keltic. The Turks, Magyars, Basques, and Finas are non-Aryan.
ASBESTOS is mineral very like hormblende, and is valuable as non-conductor of heat. The finest comes from Savoy, but it is most abundant in Canada, Italy, Tasmania, and N.S.W.
AsCension Day, or Holy Thursday, is 4 oth day after Easter, and was the day for beafing the bounds or riding the marches in Great Britain.
ASCETICISM was originally the training gone through by Greek athletes to harden their bodies. Afterwards amongst the Stoics it meant mastering the passions, and then passed into Christianity. It rests on the eastern idea of hostility between mind and matter, and in the east has been carried to terrible lengths in the way of self-mutilation, torture, and human sacrifices. In the west it has never been strong, least of all among the light-hearted Greeks, whose gods were only glorified men, and who felt themselves just as much entitled to enjoy life as the gods were. The chief manifestations of Asceticism in Christianity have been Monasticism and the various forms of personal humiliation, fasting, penance, pilgrimage, etc.
Ascot Heath, famous racecourse in Berkshire, about six miles from Windsor Castle. The course is nearly two miles long, and circular in form. The races take place early in June, but were originally instituted by Queen Anne on August 6, 1711.
AStl is a beautiful tree, but so leafy that it is very harmful to grass or other crops in its neighbourhood. It grows to 100-150 feet, and the wood is so tough and hard that it is nuch used for wheels. It also makes good fuel. In Scandinavian mythology the first man and woman were the Ash and the Elm, and tlie court of the gods was held under an Ash. In Highlands of Scotland it was thought lucky to give infants Ash-sap as their first food.
ASH WEDNESDAY, first day of Lent, on which ashes were sprinkled on the head as sign of penitence. Instituted by Pope Gregory the Great about 600 A.D.
ASHANTI WARS. First, 1807.26 ; second, $1873 \cdot 74$, when Sir Garnet IVolseley burnt Coomassie.
ASP OR CLEOPATRA, probably small horned or viper. ASPARAGUS, which needs sand and soil, and therefore grows best on sea-shore, was favourite vegetable with the ancient Romans.
ASPASIA, wife of Pericles, and friend of Socrates.
Asphal., mineral pitch, found in dried-up petrolenm beds. Most abundant around Dead Sea, Babylon, and in Trinidad. Was userl by ancient Egyptiaus in embalming dead, and at Babylou as mortar. It is used in France and Germany for pavements, but is too slippery in the moist climate of Creat Pritain. The artificial asphalt is a compound of coal-tar, and is inuch used for pavements.
ASSASSINATION became a fine art cluring the religious struggles of the 16th and 17th ceaturics. Famous
cases of assassination are Caesar (B.C. 44), James I. of Scotland (1437), Cardinal Beaton (1546), Riccio ( 1566 ), Darnley ( 1567 ), William of Orange ( 1584 ), Henry IV. of France (1610), Duke of Buckinghath (1628), Archbishop Sharp (1679), Marat (1793), Lincoln (1865), Garfield (1881), Lord Frederick Cavendish and Mr. T. H. Burke ( 1882 ). Attempts have been made on Queen Victoria's life on June 10, 1840; May 30, 1842 ; July 3. 1842 ; May 19, 1849 ; and March 2, 1882.
ASSEMBLY, GENERAL, in Scotland, Ireland, and U.S.A., is highest court of Presbyterian Clurches. It represents both cleric and lay, and has legislative and judicial power in all purely ecclesiastical matters, Scottish assembly meets in Edinburgh in May each year, and in modern times Moderator is always a clergyman. Its relation to State is marked by presence of Royal Commissioner.
ASSIENTO was contract between Spain and some foreign nation for monopoly of supplying negro slaves in Spanish Ainerica. Was held at one tine by famous South Sea Company.
Associated Chamber of Commerce was founded in 1860 to discuss questions about trade and commerce, and to collect and distribute infornation on these and kindred subjects. It represents 87 chambers of commerce, and has offices at I Great College Street, Westminster.
ASSOCIATION OF IDEAS, depends on proximity and likeness. The former appeals to Habit and Routine, the latter works through Reason and Imagination. Actions, sensations, states of feeling, ideas, occurring close to one another, are apt to become blended; and, when present, they tend to revive previous impressions of similar actions, sensations, etc, (See Bain's Senses and Intellect.)
Astarte, clief goddess of Phoenicia, symbol of productive power, and represented by crescent moon. ASTERISK, means 'little star.'
ASTOR, WILLIAM WALDORF, was born at New York in 3848, great-grandson of famous John Jacob Astor. In 1892 he bought Pall Mall Gazette and Budget, and completely reversed their politics. His weatth came originally from fur trading, and is said to be $\$ 50,000,000$. Astoria, the fur station in Oregon, was named after John Jacob Astor, and is now the centre of huge salmon and timber industries.
ASTRAL SpIRITS. Fire worship of East included doctrine that every heavenly body had a spirit. This passed into Christian ideas about Demonology in Middle Ages, Astral Spirits being fallen angels or souls of dead men or fiery spirits. Paracelsus and others attributed an Astral Spirit to every human being, which lives on for a time after deatli.
AsTrOLOGY is one of the oldest superstitions, and found over all parts of Old World, arising out of the truth that light is the source of all life. It still lingers on, and the Astronomer Royal frequently gets letters asking him to cast the horoscope of children; and the languaye preserves such words as jovial, satumine, mercurial, disastrous, ill-starred, etc., all astrological words.
Astronomy is oldest'science. Great Pyramids were probably used for astronomical purposes. Thales was founder of Greek Astronomy, followed lyy Pythagoras. The Ptolemaic System (130-150 A.D.) made the earth immovable in centre of universe, heavens revolving round it in 24 hours. The Copernican Systein ( 1473 - 1543 A.D.) 1uade sun Inunovablo in centre, and all the planets revolving round it, Mercury and Venus within and rest without earth's orhit. Kepler ( $1577^{1-1630}$ ) divested the Copernican System of many absurdities, and his contemporary Galileo ( 156.4 -1642) applied the telescope to inves. tigation of sky. Newton was born year Galileo died, and laid foundation of Physical Astronomy on broad scientific lines, to be developed lay llalley, Laplace, Herschel, etc. In recent times Astronony has henefited inucli by help of photograplyy.
ATAVISM is reversion to original type, i.d. reappearance of ancestral instead of parental clatacteristics it plant or animal. Darwin sliows that such reversion is favoured by 'crossing' or by return to primitivo conditions of life.

ATHANASIAN CREED took its mame from its supposed composer. Contains two parts-detailed cx position of the doctrine of the Trinity, and that of the Incarnation. It was probably composed in 5 th century, but its principal doctrines were propounded by Athanasius, Primate of Egypt, in 4 th.
ATHEISM, general name for disbelief in God. Chief ancient Atheists were Diagoras, Bion, and Lucian; chief modern, La Mettrie, Von Holbach, Feuerbach, Flourens, etc. There are three forms of it-Dog. matic, which asserts that there is no God ; sceptical, which asserts that the finite mind of man cannot ascertain whether or not there is any God; and critical, which asserts that no sufficient evidence has yet becn produced to prove the existence of a God.
AThena, Pallas, great Greek goddess of agriculture and learning. In Latin, Minerva.
Athletic Sports as old as Homer. Greeks who net at the great Olympian, Pythian, Neinean, and Isthmian Games were as a rule trained 'professionals.' There was little 'form' or 'science,' except in foot-racing, and the prizes were generally wreaths of bay or olive, but winners were kept for the rest of their lives at the public expense. Famous classical 'professionals' were Euthymus, Milo, and Hipposthenes, who seem to have over-eaten terribly; fanious 'amateurs' were Plato, Pythagoras, and Cleanthes, who certainly were not equally glittonous. Olympian Games, after interval of more than 1500 years, were revived in 1896. The chief items in these old games were jumping, running, throwing the wcight, wrestling, and boxing. Old English sports were almost universal, and were greatly encouraged by several kings, especially by Henry VIII. They included mainly archery, running, jumping, quarter-staff, etc. London, Cumberland, Westmoreland, and Somersetshire were famous centres. Modern sports began with this century. School sports were started at Eton, Harrow, Kugby, and Shrewsbury in 1840, at Oxford ancl Cambridge in 1855, for Amateur Athletic Championship in 1866. Largest A. club is the Lonclon one, with grounds at Stamford Bridge. Chief A. meetings are the Oxford and Cambridge at Lillie Bridge, the Amateur Championship, the Civil Service, the I.ondon Athletic Club, and the United Hospitals, the Glasgow Queen's Park, and various Highland games at Braemar, Inverness, etc. The "Records "for various "Events" are as follows:-
liunning.- 100 yards in 10 seconds by Cobarton at Stamford Bridge, 120 yards in $114-5$ th sec . by Phillips at Stamford Bridge, 120 yards (hurdles) in 16 sec . by Jackson at Oxford, $\frac{1}{d}$ mile in $48 \frac{1}{2}$ sec. by Tindall at Stamford Bridge, $\frac{1}{2}$ mile in I min. $543-5$ th sec. ky Cross at Oxford, $x$ mile in 4 min. 182.5 th sec . by George at Birmingham, 10 miles in 51 min. 20 sec . by George at Stamford Bridge.

Walking. - 1 mile in 6 min .49 sec . by Merrill at Staniford, 2 miles in 14 min. 212.5 th sec . by Meck at Stanford, 5 miles by Webster in 37 min . 22 sec , at Lillie Bridge, 10 miles by Clarke in $x$ hr. 19 min. 50 sec . at Richmond, 20 miles by Grifith in 2 hr .47 min . 52 sec . at Lillie Bridge, 50 miles by Sinclair in 8 hr . $25 \mathrm{~min}, 25 \frac{1}{2} \mathrm{sec}$. at Lillie Bridge, 100 miles by Sinclair in 19 lir. 4 I min. 50 sec . at Lillie Bridge.

Jumping. -6 ft . 3 d in . high by Pageat Stourbridge, 23 ft .2 in. long by Davies at l'ortarlington.

Putting Shot ( 6 lb ), -44 ft . 9 in . by Gray at Dublin. Throwing the Hammer ( 16 lb ) from 9 ft . circle. r3o ft. by Barry at Stamford I3ridge.
The oldest record mentioned above is Tom Griffith's for the 20 - mile walk, which was done in 1870; the latest is H. C. Tindall's for the 1 -mile running, which was done in 1889 . Some of these were said to have been broken in U.S. A.
ATLANTIC TELEGRAPH was first suggested by lro. fessor Morse in 1843: the depth and whature of the Atlantic floor was nuknown at the time. lient. Maury of U.S.A. discovered that between Ireland and Newfoundland the floor was nearly level anul covered with soft mucl, and a cable was finally laid in 1858. It was 2500 miles lons, and weighed I ton per nile. It was made of 7 fime copper wírs cased in gutta-perclia, which was itself cased in hemp saturated with pitcl!, beeswax, and oil, kept together
by 18 strands of 7 -ply iron wire. It was laid by two vessels, one from each side of the ocean, and spliced in the middle. It was a dead failure. In r 865 another cable, rather sloorter and much heavier, was put whole on the Great Eastern, but broke 1000 miles from port, and could not be fished up at the time. In 1866 another lighter line was successfully laid by the Great Eastern, and the old line was fished up from a depth of two miles, and spliced and completed. Several other cables-British, French, and Portuguese-have since been laid, and the cost has fallen from an original of $£ 20$ for 20 words of five letters each to 6d. a word, which may belong to a code or cipher system.
ATLANTIS, inythical island in eastern Atlantic, perhaps a confused idea of the Canary Isles.
ATMOSPHERE is gaseons covering of easth, which makes life possible. It extends for at least 500 miles, and presses on a grown man with a weight of about 14 tons. In its ordinary condition, it contains about 80 per cent. of nitrogen, about 20 per cent. oxygen, and a minute quantity of carbonic acid.
ATOM is literally what cannot be cut. Extracrdinarily tiny atoms can be detected by tbe nicroscope. In 1883 Dr. Dallinger found in some bad meat $2,800,000,000$ living creatures in a space equal to onethousandth of a cubic inch.
ATOMIC THEORY deals with nature of ultimate particles of matter. It was formulated by Dalton at beginning of present contury. The particles are supposed to be arranged in any substance at a certain average distance from one another, the average depending on the temperature and pressure and on whether the substance is solid, liquid, or gas.
ATONEMENT is fundamental doctrine of every religion which recognizes $\sin$ as a violation of the union between God and his creatures.
ATRIUA of Roman houses was the hall, the most important part of house. It was lighted by an opening in the roof, the chambers were off it on both sides.
At'tila the HUN, "the Scourge of God," was the great conqueror of the $5^{\text {th }}$ century A.D. His army included Franks, Vandals, Ostrogoths, etc., and was practically unbeaten in Europe till the great battle of Chalons, when it was annihilated by the son of Theodoric after his father had fallen on the battlefield.
AUDITOR, ought to be a professional accountart. His duties are to see that all payments and receipts in the accounts have vouchers to prove them, that the books are properly kept and stated, and to certify their accuracy or point out their inaccuracy. There is a public Audit Office.
AUGSBURG CONFESSION is the chief standard of faith in tbe Lutheran Church, and was drawn up hy Luther and other Wittenberg Protestant theologians to present to the Emperor, Charles V., in I530. Melanchthon, in 5540 , published an edition of it with many important changes, and the main difference between orthodox Lutherans and the various reformed churches of Germany has been their acceptance of the altered or unaltered confession.
AUGUST gets its name from the Emperor Augustuc, because it was his 'lucky' month. To make it equal to July, which had been called after Julins Cacsar a few years before, a day was taken from Februarythe last month lin the Roman year-and added to August.
AUGUSTINE, the first Archbishop of Canterbury, was sent, in 597 A.D., by Pope Gregory I., to Kent 10 convert the Jutes, partly because the Jute king Ethelbert had married a Christian wife, Bertha of France, and partly because of the attention attracted ly some Angle slaves in Rome, whom Gregory declared he would have angels. Great Britain owed noost of its early progress in Christianity to the Keltic monks from Londonderry, specially Colnmba; but the Keltic records were destroyed by the Danes, and the Roman monks monopolized communication with Europe. so that the Keltic monks have never had their work sufficiently recngnized.
AUGUSTINE, SAINT, was the ungodly son of a gedly mother, Monica. He has described the ergies of his youth in his famous Convessions, and how lie was
turned towards graver thoughts by Cicero's Hortersius. He died in 430 A.D., during the siege of Hlppo. Aud from his writings were collected the rules by which the several monastic orders that bear his name were governed.
AUGUSTUS, the Roman Emperor, was the sou of Julius Caesar's niece, and was bori in 63 B.C. With Klark Antony and Lepidus, he divided the Roman Enupire, and subsequently became supreme ruler in 3 B B.C., after the fanous defeat of Antony at Actium. He died in If A.D. He ruled with wisdom and mercy, and was a great patron of art and letters; Horace, Virgil, Ovid, Propertius, Tibullus, and Livy all belong to his reign. And the title Augustan algo was afterwards given to tho reign of Louis XIV, of France, and to that of Queen Ame of Eugland.
AUK, the GKeat, is extinct now. It lived in temperate region of North Atlantic, and bred largely on St. Kilda. It was very valuable for food to the early voyagers to the Newfoundland Banks. This, and the fact that it only laid one egg each year, cansed its rapid extlnction. The eggs, of which only some 66 or 67 are known to exist, have fetched very large prices, one having been sold by auction in 1888 for $£ 225$.
AURELIAN, one of the most powerful Roman Emperors, was the soll of a small farmer. He owed his election (in 270 A.D.) to the army, with whom he was very popular on account of his great stature, strength, and courage. His most famous antagonist was the Queen Zenobia
AỨrelius, Marcus, the best of the Roman Emperors, and one of the finest characters that the world hias seen at all. He was born in 121 A.D., and died 180 A.D., leaving in his Meditations an im. perishable memorial of himself, and of the best Stoic philosophy. Like all the good emperors, he persecuted the Cliristians deliberately, Polycarp falling in one of the persecutions ; and lis reason was that he firmly believed in the old religion as the parent of philosophy, and looked upon the uew as a hostile political conspiracy.
AURICULAR CONFESSION is the personal declaration of 'mortal' sins to a priest in order to obtain absolution. The confession of venial sins is advised by the Roman Church, but not commanded. Confession is prescrihed by most of the oriental churches, and is allowed by the English Cluurch, but is rejected by Preibyterians, Methodists, etc.
AURORA Borealis, or 'Northern Llghts,' are also found in the Southern polar regions. The centre of the meteoric arch corresponds probably with the Magnetic North. It is constantly moving, but may remain visible for several hours. When the rays are very bright, they are generally also of very varied colours-green, rose, violet, etc. It seems to be an electric discharge connected with some magnetic disturbance, currents of positive electricity illuminating the atmosphere on their way to the earth.
AURUNGZEBE, the most powerful, and the last effi• cient Mngul einperor of India. He ruled from 1650 to 170, and after his death the Mogul Emplre fell to pieces, as whe Carlovingian Empire did on the death of Charlemagne.
AUSTEN, JANE, was born in 1775 , and died in 1817. Slue introduced the so-called 'domestic novels' into. England, and in her own line has never been surpassed. Her chief books are Souse and Sensibility, Pride and Profudice, and Eimme.
A 'STERLLTLZ, BATTLE OF, was fought near Brünn in Moravia, on December 2, r.805, when Napoleon, with 70,000 men, clefeated combined forces of Ruscia and Austrin, inder their respective emperors, numbering 95.000. The Russians lost 21,000 killed, wounded, and prisoners, the Austrians 6000 , and the Frencli 6800 .
australasian federation has been ' in the air' ever since 1852, hut the question became more or less acute In 1885, when a Federal Council-sanctioned by the Imperinl Parliament-met at Hobart, including representatives of Fii, Tasmania, ?u a enslancl, West Australia, and Victoria. In 1889 'Sir Henry P'arkes, premiler of New South Wales, called a national convention to discuss a sclieme, and in the Australasian

Federal Council which met at Sydncy in 189r, all the colonies were represented, and a Federal Constitution was drawz up. After four years of inactivity another conference was held at Hobart, when a motion was carried unaninoously that Australasian Federation was the nıost pressing question in Australian politics. Satisfactory progress was made In 1896, and there is every hope that the Commonwealth of Australia will shortly be an accomplished fact.
AUSTRALIAN RABBITS, which are such a frightful plague to the country, are not indigenous, but the progeny of a single pair imported by a Melbourne squatter. In four years an average pair of rabbits can multiply into $1,250,000$. In 1887 more than 25 million were killed in N.S. IV. alone, after the Sydney Cabinet had spent $£ 700,000$ in four years to mitigate the plague. More than 1200 miles of fence were put up to check them in various parts of the colony, but without real success. The average number of rabbit skins exported from the various colonies in a year is - I5,000,000 from N.S.W. $6,000,000$ from N. Z., and 3 ,000,000 from Victoria, the latter spending $£ 15.000$ a year in killing them.
AUTHOR WHO WILL TAKE NO PAYMENT FOR HIS Books exists in Count Tolstoi, the famous Russian author, who was at the siege of Sevastopol, and who in recent years has preached the application to practical life of the Sermon on the Afount. In the Russian famines of 189 I and 1892 he made great efforts to help the peasants on and near his own estate. In 1872 he resigned all his social rank and privileges,
and now lives as a peasant devoting his time and money to the peasants.
AUTHOR WITH BIGGEST Index. The index to Shakespeare compiled by Ayscough, assistant in the British Museum, occupied joo pages. Subsequently, Mr. Twiss published an incex to Shakespeare in two volumes, referring to every edition of $S$. and containing full references to every noun, adjective, verb, participle, and adverb used by S .
AUTHORESS BOTH Blind AND DEAF. Madame de Colonne of Paris had this double affiction, and yet has become famous for her poetry, to the volume of whicl the Queen of Rounania wrote the preface.
AUTO DA FE. or Act of Faith, was the barbarous and horrible ceremony at the execution of heretics under the Inquisition in Spain and Portugal. It was generally on All-Saints' Day, and ended of course with the burning alive of the heretics. If they recanted at the last, they were strangled before being burnt. The king and court generally attended, and the most 'splendid' was said to have been celebrated at Madrid in 1680 in the presence of Charles II. As late as 1829 a Jew was burnt at Valencia under the forms of an A , da F .
AUTOGRAPH COLLECTIONS liave becn made since 1 rth century, and since 180 have been a branch of literary trade. The value of an autograph, of course, depends on the importance of the writer, the contents of the writing, and the scarcity of specimens. An autograplı of Shakespeare was bought by British Museum in 1858 for $£_{315}$. Several famous volumes of fac-similes, reproduced by lithography and otherwise, lave been published.
AUTOLYCUS was a grandfather of Ulysses, who scems to have inherited his 'many wiles ' from himl, for he was famous for his cunning and his thefts. Hence, ' a literary $A .=$ a plagiarist.
AUTOMATA have existed since 400 B.C., when Archytas of Tarentum invented an automatic pigcon. The most perfect A. of last century were constructed by M. Vaucanson in Paris ahout 1740, Including a flute-player and a duck. In moolern tlmes Maskelyne has made a Psycho and a Zoe, which are absolutely inarvellous. The so called autonatic machines on railway platforms are more numerous than ingenious. There are nbove 3000 at the varioue Britsh statlons, which bring in about $£^{8000}$ a year to the railway companies for rent, and sell about 16,000,000 packets of swcets, $9,000,000$ of which are chocolates weigling over 150 toins.
AUTONOMY Ouglit to be used of absolute freedom of self. government, but it is applicd to partiat, limitcd, and local freedoun. Indeed, it is generally used now
of territories which are only autonomous in some respects, while in others they are subject to a higher sovereignty. Thus, Eastern Roumelia is said to have administrative A. in its internal affairs, while subject to the direct political and military authority of the Sultan.
AUTOTYPE is very useful for reproducing oil paintings, and the chief works in all the great public galleries of Europe have been thus reproduced by Messrs. Braun of Dornach, near Mülhausen ; but it is not successful for engravings, etclings, or any work which has a perfectly dead surface.
AUYUMN begins scientifically on September 22nd, the autumnal equinox, and ends on December 21st ; but in popular opinion it lasts from the middle of August to the middle of November.
AVALANCHES are of four kinds. (i) Powdery avalancles consist of snow which has become loose and dry from long frost. They therefore occur generally in winter, and are dangerous mainly by the atmospheric disturbance caused by them. The victims generally die of suffocation. (2) Creeping avalanclies are masses of snow which are loosened by spring, but which are on a gentle slope, and only creep down slowly by the force of their own weight. (3) Glacier avalancles are only masses of ice which split off in summer with a great noise, and go clattering down a precipice to be sniashed to pieces at the bottom. (4) The real avalanches consist of huge accumulations of snow, whicli are hurled over almost perpendicular walls of rock into the valleys beneath. One which fell in Italy in 1885 was calculated to contaln 250,000 tons of snow. The famous avalanche of I827 swept away haif the villages of Biel, with 88 inhabitants.
AVALON is the earthly paradise of Keltic mythology, 'far in the Golden West.' (See the end of Tennyson's I'assing of Arthur.)
AVatar is the incarnation of any Hindu deity, especially of Vislnnu, but the word is used now as equivalent to a 'manifestation' of any sort.
Ave Maria, salutation of Romanists to Virgin Mary, and taken from Gabriel's address in St. Luke i. 28, "Hail, Maryl" Aves are reckoned by the small beads of the rosary, tlie large ones representing Pater Nosters.
AVEBURY TEMPLE is famous ruin, probably of late Stone Age, near Marlborough, characterized by upright stones in circles similar to those at Stonehenge.
AVENTINE, one of the famous seven hills of Rone.
AVERNUS, sinall lake in Italy, occupying the crater of extinct volcano. The vapours from it were so fatal to birds, and its sides were so steep and darkened with forest, that it became the classical entrance to the lower, world, where Hecate had a grove and the Cumean Sibyl a grotto.
AVERRHOES, who was most famous of Arabian philosophers, lived in 12th century A.D. He was a profound student of Aristotle.
AVIZANDUM is generally used of the taking of a case by a judge outside the court for private consideration, and the delay of judgment meantime.
A VOIRDUPOIS (=avoir de pois, 'goods of weight') is used in Uniter Kingdon for everything except precious metals, precious stones, and medicines.
AXE was one of the first tools invented by primitive nan in all parts of the world. Old axes of stone, brouze, and rough iron have been dug up. It was old weapon of Early English, and was gradually discarded after Norman Conquest. In modern commerce, the chief manufactoriestof axes are in U.S.A., especially at Connecticut.
AxIom is the assumption of any general truth whlch - any sane person would recognize who understood the words that conveyed it. As soon as it is understood, it is granted.
AYALA, the fanous historian of Castile, lived at Murcia in the isth century A.D. He was a prisoner in England for some time.

「died in her arms.
AYESHAL was the favourite wife of Mulathmed, who
AZRAEL, with Gabriel, Michael, Israfil, forms the quartette of highest angelic helugs in Moslem mythology. He is the Angel of Death,

AzTECS were domlnant tribe in Mexico when the Spanlards first discovered and invaded the country.

## B

B. Owing to physiological causes, $B$ may exclange easily with any other labial sound, i.e. $f, m$, p, or $v$. Thus brother $=$ frater, bishop $=$ episcopus, etc.
BAAL, chief god of Phoenicians and Canaanites, the Sun as the giver of life. He was worslipped on mountain tops, and his temples were originally circles of upright conical stones. Greeks confused Baal with Hercules. The facts that there were no representations of Baal himself, and that he was connected with the fruit-giving power of nature, were great attractions to an agricultural people like the Israelites, who were monotlieistic and forbidden to represent their Gort.
BABEL, TOWER OF, was somewhere in Babylon. The word has nothing to do with 'confusion' of tongues or of anything else, but means Ferally 'the gate of God.' Such attempts to scale heaven are familiar in ancient mythology, e.g. the Titans, and are typical of human presumption.
BABIES weigh in Great Britain from $62 / 3$ lbs, for a female to $7^{1 / 3} \mathrm{lbs}$. for a male; but a baby has weighed only 8 ozs., and has weighed as much as $22 \mathrm{I} / 2 \mathrm{lbs}$.
BABOO, a term of respectful address, like $3 / r$., in use in Lower Bengal. It is often used, however, to mean 'a native clerk who thinks he can write Englisll," hence Baboo-English.
BABOON, species of monkey characteristic of Old World, where they were very numerous, very hideous. and very fierce. They used to be sacred in Egypt. As they generally live and hunt in herds, they can do an immense amount of damage.
BABYLONISH CAPTIVITY, under Nebuchadnezzar, of Judah was about 586 B.C. When Cyrus overthrew the Babylonian Empire about 538 B.C., he allowed the Jews to return to their country, but only about 42,000 took advantage of the permission.
Baccarat. French game of chance, played with a banker and several punters. In Great Britain illegal.
BACCHUS, the classical god of wine, crowned with ivy. Hence old custom of putting ivy-bush above publichouse doors, but " good wine needs no bush."
BACH, JOHANN SEBASTIAN, one of great musicians of world, born at Eisenach in 1685 A.D. of a very musical family, was court organist at Weimar, and afterwards cantor of the Thomas-schule at Leipzig. His work is very intricate and very rich in imagination. He died of apoplexy, brought on by the treatment by an English oculist for weak eyesight, in 1750.
BACHELOR means literally 'cowboy.' In 1 ith century it was introduced by Pope Gregory IX. into university of Paris to denote the passing of the first grade in the academic course, which made the student a candidate for mastership. Aftervards it was used ol an unmarried man, who was supposed to be a candidate for matrimony. In history there are many instances of a bachelor being taxed for his celibacy, especially in Greece and France.
BACILLUS is modern name for Bacteria. (See below.)
BACKGAMMON, an old game in England, originally called the Tables. It gets its name from fact that the players have to bring their pieces back to their own side of the gaming table.
BACON, i.c. cured pork, is really the 'back' of the pigdried and salted or smoked.
BACON, FRANCIS, LORD VERUlAM, was born in ${ }^{1561}$ A.D., and died in 1626 A.D. Ile ought not to be called Lord Baeon. He was the first to dream of a larger science based on reverent and persistent inquiry into the laws of nature. He was always trying to mediate between Crown and Commons, and ended his political career in deep disgrace, after having been accused of taking bribes. His scientific and philosophical fame is immortal. He threw over A ristotelian deductive logic, and by the impetus of his inductive method practically created modern science. His most important philosophical works are The divancement of Jitarning makl the Norun Orgamum, but his excellent lenglish prose is seen best in his Eissays and his Mistory of Henty VII.
BACON, KOGER, was monkish plillosopher of 13 th
century, who was also a great scientist. He believed in astrology and the philosopher's stone, but he made some great cliscoveries in physics and other branches of science; $e . g$. the magnifying glass and gunpowder. The extent oi his knowledge caused him to be thonght a magician, and he was imprisoned in Paris for magic through the jealousy of his brother monks.
BACTERIA are the lowest forms of life, which multiply with enormous rapidity by cross-division. They are found wherever organic matter is decomposing, and are only visible through the microscope. They are also found where there is not decomposition, but they tbrive best where the evidence of their presence is most obtrusive-in rancid butter, hospitals, sewer water. As they increase in size, they are modified in form. The great investigators of $\mathbf{B}$. are M. Pasteur, who has done very valuable work in investigating the Coccaceae forms, and Dr. Koch, who has done special work amongst Bacteriaceae forms, e.g. cholera bacteria.
BADGERS belong to the Otter family, but are very easily tamed. They will eat almost anything, but are very clean in their habits. The word to badger comes from the barbarous old custom of baiting them with dogs.
BADGES seem to have originated in the infancy of heraldry, and generally bore some allusion to the wearer's מame or character or office. For instance, one of Edward II.'s badges was a castle, in reference to his descent from the Spanish house of Castile; the badge of Scotland is the thistle; that of the Warwicks a bear; that of the Campbell Clan wild-myrtle.
BAEDEKER was a German publisher in Coblentz in the earlier part of this century, who made his name very famous in connection with a first-rate series of guidebooks to various countries. Tbey were copied from Murray's "Hand-books," but have improved on the copy. Naturally, the first of them dealt with Coblentz and the Irest of the Rhine district. They are now published at Leipzig.
BAFFIN, the explorer, was born about 1584 A.D., and died 1622 . He was a Londoner by birth, and it was as a Hull pilot that he made his name. He visited Greenland and Spitzbergen, and surveyed the Hudson Strait and the large inlet now called after him, which is about 800 miles long by 300 broad.
BAGATELLE is 'trifling' billiards, and was invented about the time of Waterloo. The board is usually 7 feet long and 2 I inches wide.
BAGEHOT was a famous economist in the middle of this century. His most important works are The English Constilution, Physics anu Politics, and Lombard Sireet.
BAGIMENT'S ROLL was the roll by which all the Scottish clergy were taxed from the end of the 13 th century to the Reformation.
BAGPIPES are characteristic of highlands, and not specially Keltic or Scottish. They are the natural musical instrument of fighting tribes who needed their breath for charging up or down hill, and who therefore could only use an instrument that had a seservoir to economize breath. The Assyrians are the first nation mentioned as using them, and they introduced them into Indlia, though they were probably indigenous over nearly all Asia. Certainly, the Chinese had them. They are quite as common in Italy and Afghanistan to-day as in Scotland, though in the former countries they are very weak and squeaky. Carvings of bagpipes exist in churches round the fens, e.g. at Hull and Great Yarmouth; and they have been used at a church musical service in modern times, e.g. In York Minster, in 1892, when Pipe-Major Matheson and the pipers of the Royal Scots accompanied Dr. Naylor's organ. The pipes probably came to Scotland through England, as they were known in the latter many years earlier than in Scotland. The Irish pipes are much more complete and sweeter than either the Scottish or the bellowsdriven English pipes, but the most famous performers liave been Scots-members of the MacCrimmons, MacArthurs, or the Hasties.
BAIL is the security given that a person charged with some offence will appear for trial if he obtains libera. tion from prison in the meantime.

BaileEy was all tho space within the outer wath of an old castle except the comparatively sinall piece of ground on which the keep stood. Where the space was divided, there might be an Outer and an Inner 8 . The otd nailey, or modern criminal court in London, was within the city wall hetween the Ludgate and the Newgate.
BAILIE is a Scottish term for several legal officials, most often for a superior officer or magistrate ot a municipal corporation, with judical and administrative authority within the limits of the burgh. The word is really another form of Bailiy.
BAIN was born in Aberdeen in 1818 A.D. He was a famous representative of the Experimental School of Mental Philosophy, and wrote several very valuable books, especially The Senses nad the Intellect and The Emotions and the Will, which form a systematic account of mental phenomena.
BAKER, SIR SAMUEL, the great African explorer, was born in 1821 A.D. in London, but was brought up in Ceylon. His best work was done in the Nile basin, where, in 1863, he met Speke and Grant on their retum from the discovery of the Victoria Nyanza. He wrote several books on Ceylon, the Nile, and Cyprus, the last of which he explored after the British occupation in 1879.
BAKSHISH is really the Persian for 'a present,' but has got now the meaning of 'a gratuity.
BALAAM is the type of those who prostitute thelr powers (see Numbers xxii.-xxiv.).
BALAKLAVA is a fishing village about 8 miles from Sebastopol, and has a perfect land-locked harbour with very safe anchorage. It was the British headquarters during the Crimean War, and was the scene of the famous charge of the Light Brigade Six Hundred on October 25, 1854.
BALANCE consists generally of a beam or lever supported exactly in the centre, and having scales at each end. As it is important that the lever should move very easily, it rests on polished agate or steel planes, by means of knives of tempered steel wbich project transversely from its sides. This practically reduces the contact to a single line, and the friction of the lever on the support to a minimum. The lever ought to be horizontal when both scales are empty, and the centre of gravity must be directly below tho point on which it rests. A 'false' balance is one the 'arms' of which are not equal; of course, a lighter weight at the end of the longer 'arm' will balance a greater weight at the end of the shorter. Of course, in the old Roman balance, or steel-yard, one arm must be much longer than the other. For physical and chemical research the balances have to be very delicate, and the lever is generally of aluminium to combine strength with lightness; the ordinary spring balances, which depend on the stretching of a spiral spring, are the most convenient but the least accurate.
balance of Power is a very old idea in Politics, and was key-note, for instance of the policy of Corinth in ancient Greece, as of Tudors in modern England. In recent times it has been greatly developed, in connection with the rivalry of Britain and Russia in the East, or of Britain and France in Egypt, or of Britain and Germany in South Africa.
BALANCE OF TRADE is difference between the moneyvalue of the exports and the imports of a country; and this difference is said to be in favour of or against the country -by the disciples of the Mercantile System -according as the exports or the imports show the larger amount. The fallacy in this is the confusion of money with wealth. Money is simply a standard of value and a medium of excliange; wealth is anything that has an exchange value.
BALCONIES were unknown amongst the Greeks and Romans, which is curious, is they are the natural outcome of the Balkan or Italian climate, but they practically imply more than one storey.
BALDELR THE BEAUTIFUL, was the hero of a very interesting. Edda myth. Ife was the son of Odin, and was killed ly an arrow of mistletoe slot loy a bllnd man. His great eneny was Loki, the malicious. The nyth is a mixture of physical and moral allegory. BALDRIC is a belt worn cither as a military or as a
heraldic emblem, and is frequently seen-round the waist or across the shoulder-on the effigies of knights on old tombstones.
BaLidWin was the name of several kings of Jerusalem in the rath century A.D. The first of then1 was the brother of Godfrcy de Bouillon, the great leader of the First Crusade.
BALEAkIC ISLANDS took their name from the skill of their early inhabitants in slinging (from a Greek word meaning 'to throw. ')
BALFE, the famous composer, was born in Dublin in 1808. He made his debbut as a violin player when he was 9 years old. He had a very good baritone voice, and composed some very popular operas, notably The Bohemian Girl.
BALFOUR, RIGHT HON. ARTHUR, was born in 1848 , and educated at Eton and Trinity College, Cambridge. He was private secretary to his uncle, Lord Salisbury, when the latter was Foreign Secretary in 1878-80, and went with Lord Beaconsfield and Lord Salisbury to the Berlin Congress. In his early career in Parliament he was a temporary member of Lord Randolph Churchill's "Fourth Party." He became Conservative Member for East Manchester in 1885, was President of Local Government Board in the same year, Secretary for Scotland in 1886, Chief Secretary for Ireland in 1887-91, and in the latter year becane First Lord of the Treasury and Leader of the House of Commons. He has written one or two famous books, A Defence of Philosophic Doubt and The Foundations of Betief.
BALFOUR, RIGHT HON. GERALD, brother of the above, is Chief §ecretary for Ireland.
BALIOL was name of Anglo-Norman family which played a prominent part in Scottish history. One of the earliest built Barnard Castle, and his greatgrandson founded Baliol College, Oxford, in 1263. The most famous was Jolin B., who was elected king of Scotland on the decision of Edward I. of England in 1292 .
BALL, SIR ROBERT, Professor of Astronomy at Canbridge, was born in Dublin in 1840, and was fornierly Astronomer Royal of Ircland. He has written some very popular works, e.g. Starland, The Story of the Sunn, etc.
BALL GAMES are of very ancient origin, and were, to start with, a distinct gymnastic exercise. No doubt, all the modern forms of ball games-cricket, croquet, fives, football, golf, tennis-are developments of the old Roman and Greek gymnastic exercise.
BALL PROJECTILES are of all sizes. Probably the largest kind of ' ball' ever fred from a cannon is that used in one of the guns in the fort of Cronstadt, which weighs 2600 lbs. The cannon itself was made in the Krupp works at Essen of the finest cast steel, has a barrel 44 ft . long, and carries for about 12 miles. It can be fired twice a minute at the cost of about $£ 300$ a charge. The heaviest British shot weighs about 1800 lb., the heaviest French about 2000 lb . The old guns were often very huge in size, but carricd very light charges.
BALLADS were originally songs that were danced to, but are now simple songs of a romantic kind. The first were dramatic, the latter are stories, told very simply, about elementary human emotion, Natural ballads are the product of simple, semi-civilized men and ages;; the modern or imitated ballad is the product of a complex, self-conscious age. The best examples of the old are found in Bishop. Percy's Reliques of Ancient English Poetry, from which Sir Walter Scott borrowed so largely; the best examples of the literary ballad are such as Coleridge's Aneient Mariner and Tennyson's Revenge
ballantine, Serjeant, the famous Thames Police Court Magistrate, was born in 1822. Amongst the great cases with which he was connected were the Muiller murder and the Tichborne impersonation.
BALLANTYNE, JANIES AND JOHN, were Sir Walter Scott's printers. Scott became a partner in their business in Edinburgh in 1805, and by lis rasls velltures brought them to the verge of bankruptcy before the business was sold to Constable in 1818
BALLANTYNE, ROBERT, the prolific writer of books for loye, was a resident in the Hudson Bay Com-
pany's fur-lands from 184x to 1847, and thus nccumulated materials for many of his storics.
BALLAST varies in amount with thc build, the size, and the cargo of a vessel, The distribution of it is as important as the quantity; if it is too low, the vessel will be very sluggisli ; if too high, she will lee 'cranky.' Within recent tines water has clisplaced iron, as iron in last century displaced sand and gravel.
Baller sems to have been part of the old Greek religious services, and certainly formed part of the Roman pantomimes. It was revived by the Duke of Milan in 1489 , and Catherine de Medicis introduced it into France, where it was greatly patronized by Henri IV, and Louis XIV. The latter even founded a Ballet Academy, under the great Quinault, who inade the dancing less important than the singing. The chief innovations since his time have been made by Noverre, Galleotti, and Bournonville.
BALLISTA was the Roman name for a lluge bow which threw heavy missiles, very much on the lines ofthough enomonsly larger than-the mediaeval crossbow.
BALLDON is an 'augmentative,' the -oon giving the idea of 'big ball,' as in million (a lig rooo), and trombone (a big trumpet). Balloon ascents practically were first made in the 18th century, with lieated air. They have been used for all sorts of scientific and military purposes. During the siege of Paris nearly $21 / 2$ mallion letters, besides several persons (including Ganibetta) left, the city in bailoons. Balloons have even been used for raising sunken vessels. In 1863 the steamship Ludwig was thus raised in the Bodensee, and two Russian engineers have raised several boats by waterproof balloons fixed by divers. They have proposed to raise the ill-fated Tictoria, which lies more than 100 yards below the surface. The greatest height attained by a balloon is 7 miles, to which Mr. Glaisher and Mr. Coxwell rose from Wolverhampton. The longest journey is about 1200 miles. In 1883 some French balloonists, whllo started for Algeria, were carried by the wind to the neighbourhood of Milan, and eventually dropped amongst the marble quarries of Brescia. A similar experience befell Mr. Green and his friends, who started from London and reached Wiborg. The largest balloon ever made was made by M. Godard, with a capacity of nearly half a million cubic feet. Two ascents were Inade in it from Cremorne Gardens. M. Nadan's "Géant" contained nearly quarter of a million cubic feet, and carried 37 persons at once in a wicker-work cottage from Paris to Hanover in two days. In 1873 Mr. Wise made a balloon of 400,000 cubic feet, to cross the Atlantic, but it burst. In the U.S.A. Aërostation, as they call it, attracts a great deal of attention, and is used for very important meteorological observations. The power of steering B. is still more or less under experiment, but can be done to some extent.
BALLOT voting was in vogue both in Greece and in Rome, but not to nearly the same extent as in modeni states. It was first used in the United Kingdom for voting in Parlianent, not for elections, but, of course, that is inconsistent with the fundamental idea of popular representative government. Bentham and Grote urged its adoption for election in connection with the Reform Bill for 1832, and it was carried in the Commons in 185x, against the opposition of Lord Russell and the Liberal Government of the time; but it did not actually becone legal for parliamentary. election till 8872 , though it had been used for schoolboard elections for two years before that. It was the practice in New England from the very first, and gradually spread to all U.S.A.
BALZAC was born at Tours in 1799, and studied law at the Sorbonne. For more than yo years, as n yoully man, lie suffered very great privations, which did not quencl lis literary ardour, tlough he produced nothing of real value. Ilis first success was Les Derniers Chouans in lis zoth year, which was soon followed by La Pean acc Chayrin. His greatest work is the Comedie Ilumaine, which presents an extra. ordinary picture of the Paris of the Restoration. Ilis industry was phenomenal. and by it le succeeded in writing 85 novols in 20 years He died in 1850 , leaving a very deep influence on the modern literature
of France. His sister, Laura Suiville, of whom he was extrencly fond, wrote his biograpliy.
BAMBOOS are tropical and semi-trupical grasses which grow from zo to 30 to 70 or 100 feet high, and which are put to all sorts of domestic and economic purposes, as they are very strong, light, and clastic. The shoots are eaten as asparagus; the short canes are imported to Europe as wilking-sticks; the leares thatch, and the branclies build houses, etc.
BAMPTON LECTURES at Uxford were institnted by Rev. John Bampton, who left fiso a year to be given for 8 diviuity lectures to be preached in St. Mary's Cluurch, and to be published within two months of their delivery. Only Oxford and Cambridge M.A.'s are eligible, and amongst the most famous lecturers have been Heber ( 1815 ), Whately ( 1822 ), Milman ( 8827 ), Hampden (1832), Mansell ( 1858 ), and Liddon (8866).
BANANAS are both very nutritious and extremely prolific. It is said that I lb. of B. contains more nutriment than 3 lbs . of meat, and that 4000 lbs . of B . will grow on less space than 35 lbs . of whent. They can be put to all sorts of uses. For instance, in Uganda they are converted into beer, brandy, cham. pagne, vinegar, and jam; the leaves are used to build and roof houses, and bits of them serve as plates, spoons, and bottles. A single leaf may act as an umbrella, a series of them as a lady's skirt or a baby's cradle. B. are really herbs, but grow to the height and have the appearance of ( $\mathrm{palm} \cdot$ ) trecs. There is really no difference between B . and Plantains; but the large-fruited kinds, which are very farinaceous, are generally called P., and the small-fruited kinds, which contain a high percentage of saccharine, are generally called B.
BANDS differ from orchestras in being wholly composed of wind instruments and drums. Cavalry and artillery have trumpets and bugles, infantry have fifes, bugles, and bagpipes. Probably the oldest village band in this country is that of Stedham, in Sussex, which dates back to the time of the French Revolution of 1789 .
BaNjo is negro mispronunciation of the Spanish banctore, a kind of guitar played with the fingers, but without frets to guide the stopping. It cance into popularity through a company of real 'nigger minstrels' from U.S.A. in 1846.
BANKiNG is a very ancient institution, for clay tablets have been discovered near Babylon recording the financial frm of Egibi \& Son (in the 7th century B.C.). Chinese had bank-notes centuries ago made of very valuable skins, and the old Greeks issued letters of credit. The Bank of Venice was established, on more modern lines, in the $12 t h$ century A.D., and the famous Bank of Barcelona in 140. In the 17th century the Bank of Amsterdam was the most important, but it had to give place to the Bank of England which was founded by a Scotsman in 1694. The Bank of Scotland was founded in 1695 by an Englishman. The capital of the Bank of England is about $14 \frac{1}{2}$ million pounds, with a reserve of about 3 millions. The most important questions in B. come ninder the heads of (x) Utilization of Deposits and Capital by Private or Joint-Stock Banks; (2) Bankers' Lien; (3) Scotch Credit System and Unpaid Bills Procedure: (4) Registration of B. Companies; (5) Clearing-House System; (G) Disconnt Market: (7) Bankruptcy. Banking is often connected unofficially with Brewing, c.g. in the case of the Guinnesses, the Hoares, the Barclays. Bloyd's Bank at Wolverlampton has an actual license for the sale of beer, and the Bank of England is allowed by its charter to sell beer. The worst bankruptcy on record was that of Overend, Gurney \& Co., whose debts were over fir,Oco,000, and whose fillure entailed the failure of other firms to the awful amount of Ex00,000,000. A much worse disaster woutcl have resulted in 18 go from the fulure of Baring Brothers, with lialilities of over $f, 2 r, 000,000$, if the Bank of England had not come to the rescue, and formed a joint-guarantee fund alone with the leading provincial and London lbauks. Amongst the other most seridus failures in the last 50 years have been the Western Bark of Scotland ( $69,000,000$ ): City of Clasgow F3. ( $66,290,983$ ) : Sanderson \& Co. ( $E_{5,292,000 \text { ) ; 1 iverpool lorougli } 13 .}$
$(£ 5,000,000)$; Peto \& Betts ( $£ 4,000,000$ ) In lirance, during 16 th and 1 th conturies, bankrupts liad to wear green caps, and in Scotland before the Unlon they had to wear parti-coloured garments, generally grey and yellow. A bankruptcy in China entails immediate execution, which accounts for the boast that no failure has occurred in China for goo years. A bink-rupt-John Perrot-las even been hanged in England for secreting lis property, in $\mathbf{y} 7 \mathbf{6}$.

It is rather as pity that nations cannot be hanged for similar offences. Turkey was declared lankrupt iu 2876 ; Portugal and Roumania are practically it the same condition; Spain and Italy are very decply in debt, the latter for her army and navy. The United Kingdom and Prussia are said to be the only European states whicli ralse sufficient revenue to guarantee a fair permanent equilibrium on a yearly budget. The U. K. has reduced her National Debt from 848 millions in 1817 to well unde 700 miltions. France has the largest National Debt in the world, over 1200 millions, i.e. nearly $\mathcal{L} 3^{2}$ per head of the population,
The forgery of Bank Notes is rendered very diffcult by the peculiarity of the paper, design, and printing, e.g. the Bank of England not,s, or by the mixture of colour, c.g. the Bank of Scotland, which defies photography. The actual cost of making each note is about one penny, so that a successful forger has a margin of profit.
BANKS OF NEWFOUNDLAND are made of the sand brought down by icebergs vict the Labrador current from the coast against which they were originally built up. The icebergs melt when they meet the Gulf Stream, and the sand is deposited off the Newfoundland coast. where it is soon covered with the sea-weed, in which the fish can find their food and lay their eggs.
BANNERET must not be confused with Baranef, which is a very much later institution. Banmeret was a ligher grade of knighthood which was cunferred by the sovereign for some heroic act on the field of battle, and it was so-called because the knight was given a banner in exchange for his pennon. As the rank thus conferred was between that of a knight and that of a baron, the word has been confused with baronct.
BANNOCk, is a north country cake of home-baked bread, made of pease or barley meal and unleavencd.
BANNS OF MARRIAGE are available for three montlis after their proclamation, the purpose of thein being merely to secure public knowledge of the intended marriage, and must be in the names by which the persons are usually known.
BANSHEE, of Keltic folklore, is a female fiend wolo gives warning of deaths in any family over which she lias any special guardianship.
Bantam Fowls were originally natives of Japan, though they scem to have taken their name from Bantam, in Java, the place from which they were first imported into this country. Cf. currunts from Corinth, peach from Persia, caliso from Calicut, etc.
BANTU is the name of a group of African languages spoken mainly between $20^{\circ} \mathrm{S}$. and $6^{\circ} \mathrm{N}$., especially by the Zulus and Kaffirs.
BANYAN TRFES are natives of India, and are remark. able for their branches drooping down to the ground and taking root as separate stems. There are some. times as many as 350 large stems and ten times as many small ones. The tree is a great rendezvous for monkeys and birds.
BAOBAB, or Monke:y-bread Tree, is a native of Weat Africa. It is remarkable for the huge size of its trunk and for the girth of its branches.
BAPTISM OF INFANTS rests upon the notlon that the church is always one and the same through all changes of disjensation, and that, is infauts were incladed in olden days in the church in this way, they must be still. And the passages ln the lbible connecting baptism with faith are taken to refer only to adults. The two great nodes of 13 , are clippling and sprinkling, of which only the latter is suitalse for infants. The place of 1 B , in the Christian system ls that of sacrameut, a seal of the covenant of grace, and a sign of lts blessings.

B^pTISTS oppose infant baptism. They came into notice in the age of the Tudors, and are now scattered all over Europe and North America, but their numbers are very small. Their form of church government is congregational, and theylacknowledge only dipping as Christian baptism. They were amongst the earliest of the modern missionary churches, and in the 18th century planted many inissions. They have excellent training colleges; e.g. at Bristol, Nottingham, Haverfordwest, etc.
BAK is literally the barred-off part of a law court in which the lawyers may plead, or in which the accused sits or stands, but the word has been transferred to legal proceedings or the legal profession generally.
BARBARIAN meant to the Greeks any one who could not speak Greek, and was intended to represent by its sound the (to them) senseless babble of foreigners.
Barbarossa. (See Frederick 1.)
BARbary Ape is the only European monkey, but is found only on the Rock of Gibraltar, where the species must originally have been left by the disturbance which separated Europe from Africa.
BARBERS are of very great antiquity (cf. Ezekiel v. 1), and used to be of great importance, because they acted as surgeons. The poles over B. shops are painted to represent a human limb bound with a ribbon previous to bleeding; and this and the drawing of teeth were their most important surgical work. The Guild of Barber-Surgeons was incorporated by Edward IV. in 146 I .
BARD was the old Keltic name for minstrels, who celebrated the gods and heroes at religious festivals and on other public occasions. They have been a very valuable channel for historical gleanings.
barebone's Parliament was an assembly of selfrighteous Roundheads summoned by Cromwell in 1653, and nicknamed after an officious member, a leather merchant who rejoiced in the title of 'PraiseGod Barbon.'
BARENTZ was a famous Dutch explorer of the 16th century, who made great efforts to discover the North-East Passage.
BARGES are generally flat-bottomed freight-boats, but the word is used of 'house-boats' on the Thames, which are more or less models of the old State barges.
BARING BROTHERS are one of the most famous financial firms in the world. It began in a very small way at Exeter early in the 18th century; but became important through its East India Company connection and its support of Pitt. (See above under BANKING.)
BARTIONE is the compass of the human voice between -bass and tenor, but more akin to the bass.
BARK of many trees is used for tanning, but the most useful kinds are those which are rich in tannin. In Europe various species of oak are most used, in North America the favourite is Hemlock spruce, and it is the presence of pasture and Hemlock spruce forests round Quebec that has given it such a large leather trade. Bark is also used for a variety of other purposes ; c.g. for canoes and baskets by Red men, for shields by the Australian natives, for lace in Jamaica, for medicine, etc.
BARNACLES are crustaceans who attach themselves to objects by their heads and kick their food into their mouths by their legs.
BARNACLE GEESE were supposed to come from the above, because it was called the 'duck'mussel' ' Barnacle Gcese are smaller than the ordinary wild geese, and are often confused with Brent Geese.
BARNARDO, DR., began his valuable work for orplan waifs in 1866, when he was a young medical student in London Hospital. He opened a home in Stepney Causeway, nad has never since then refused any destitute child, whatever the age, creed, nationality, or physical defects. At present he has 24 Minor Branches and 85 Homes. At Hford in Essex he has a whole village (1000) of girls under "Mothers" in 52 detached cottages. 11 e has also an Emigration Agency, which sends out about 700 selected boys and girls every year, chiefly to Canada, where he has two special Distributing llomes in Ontario. Altogether he has sent out about 9000 , of whom only 180 liave
turned out failures. Over 30,000 children have been admitted to the various homes, the daily cost of which is nearly £ 150.
BAKNUM, the great showman, was born in 1810 on a small farm in Connecticut, and died in 12gr worth $5,000,000$ dollars. His first 'show' was Joice Heth, the reputed nurse of Washington, at a cost of roco dollars; one of his last, the elephant Jumbo, cost him £2000. His "Greatest Show on Earth " required 100 raihway cars to carry it.
BAROMETER is an instrument formeasuring the weight, i.e. pressure of the atmosphere, which was invented by Torricelli in 1644, and depends for its working on the truth that the veight of ordinaryair is sufficient to keep a column of mercury at a height of 30 inches in vacuum. When the air gets heavier, the mercury will rise higher; and when the air gets lighter, the mercury will fall. Barometers are usually either cistern or siphon. The cistern barometer is the simpler, and only needs to be put in a frame and provided with a scale to measure it. The siphon barometer is the more perfect, and the more dificult to read. The barometer needs to be corrected for temperature, because mercury expands with heat. It is much used in physical research, in which the properties of gases are dependent on the atmospheric pressure, for measuring the height of mountains, and for weather prophesying. The average reading in London ranges from $28^{\prime} 70$ to $30^{\circ} 70^{\circ}$ inches, but it has been as low as 27"93. Near Crieft, however, even $27^{\circ} 33$ has been registered, and on the Ganges Delta 27 12. In his various balloon ascents Mr. Glaisher's barometer registered $24^{\circ} 7$ at I mile, $20^{\circ} 3$ at 2 miles, $16^{\circ} 7$ at 3 miles, $13^{\circ} 7^{\text {at }} 4$ miles, and $11^{\circ} 3$ at 5 miles. The highest reading on record was at lrkutsh on January 14, r893, where it reached $3 r^{\circ} 8$, the temperature at the same time being $-5 \mathrm{x}^{\circ}$, which was about $40^{\circ}$ below the average for the month. The temperature in the north of Sweden on the same day was $38^{\circ}$ below the freezing point of mercury. The highest reading recorded in England was $30^{\circ} 990$ at Hastings in 1882 . The barometer is not a safe weather guide; but damp air is certainly lighter than dry air, and therefore must make the mercury fall.
BARON OF BEEF is a double sirloin, and is served only on particular festive occasions at Court and at civic feasts.
BARONET is a titie often confused with Banneret (g.v.). It was instituted by James I. to provide funds for the colonization of Ulster. The first baronet was Sir Nicholas Bacon, and the fee was fixed at about $£$ reco, a stipulation being made that there should never be more than 200 baronets. Those who have been 'created' since 1801 are baronets of Great Britain or the United Kingdom, not of the several kingdoms. There are two instances on record of the title of baronetess being conferred-by James II. to the mother of Cornelius Speelman, General of the States of Holland. and the other by Charles I. to Dame Maria Bolles of Nottinghamshire.
BARQUE is 3 -masted vessel with a fore-and-aft rigged mizzen; but the word is often used for any small vessel, especially in poetry, in which case it ought to be spelt Bark.
BARRACKS are permanent buildings for soldiers, sailors, or police, and replaced the old system of billeting them on the people. They practically date from the time of the French Revolution. Six per cent. of the soldiers in B. may marry, if of good character; and, if there is no room for them all in the Married Soldiers Quarters, they may live out of B . and are allowed ad. a day extra pay.
BARRAS was one of the prominent figures in the French Revolution, and was largely instrumental in bringing nbout the fall of Robespierre. He was one of the 5 members of The Directory in 1795 , and was even:u* ally removed by his former friend Bonaparte in 170.
BARREL-ORGANS are an improvement on the old hurdy-gurdy, and some very good ones are made in Vienua. The music is unade by a barrel or cylinder, set with pins and staples, which rotate so as to open the valpes for admitting the wind to the pipes.
BARRICADES were used in street fights is early as the Iath century in Paris, but the most famous are those
erected in the Revolutions of 1830 and 1848 . Napoleon III. widened and macadanized many of the chief streets in Paris specially to prevent the eisy and successful erection of B.
BARRISTER is a pleader at the English or Irish Bar ( $(9 . \%$ ). In Scothand he is called an Advocate. The leaders are called Queen's (or King's) Counsel, and wear silk gowns-hence 'taking the silk.' The youngest Q.C. on record was Lord Bacon, who was appointed by Queen Elizabeth when he was only 29 years old. Mr. Erskine was made a K.C. in 1783 before he had been 5 years at the Bar. Sir Richard Webster was made a Q.C. before he was 36, Lord Selborne when he was 37 , Sir Charies Russell when he was 39 . Sir John Gorst and Lord Coleridge when they were 40 Sir Henry Janmes at 4I, and Sir Henry Hawkins at 42. Mr. Montague Williams, Q.C., was a soldier in the Crimean War, an actor in Miss Keely's company, and a joumalist in London, before he went to the Bar at all. Mr. Pope, Q.C., and Mr. Frank Lockwood, Q.C., were also professional actors.
BARROW is the OId English name for a burial-cairn, and B. are found in Europe of all ages-Stone Age, Bronze, and Iron. Those of the Stone Age are more or less peculiar to Britain, the most famous 'Iron' ones are it Upsala in Sweden.
BARTHOLOMEW, ST., is supposed to have been the same person as Nathanael. The awful massacre of the Huguenots in France on the night of St. B.'s day, August 24, was the work of Catharine de Medicis in ${ }^{1572 .}$ At least 4000 were murdered in Paris, and probably 30,003 in the provinces, but the provincial officials were not enthusiastic in carrying out the murderous order. The pope celebrated this foul event with a grand Te Deum, the striking of a medal, and the proclamation of a year of Jubilee. The execution of Mary Stuart in 158 7 by Elizabeth was partly an act of national and religious revenge for this massacre. St. B.'s Hospital in London was founded in 1123 by an Augustine Prior, and was one of the buildings which escaped the fire of London in 1666. The original building was rebuilt in 1729 . It is now the centre of a thriving Medical School.
BARTIZAN is a small battleniented turret that projects from the angles at the top of a tower.
BARTOLOZZI was a celebrated Florentine engraver of the 18th century.
BARTON, ANDREW, was a famous Scottish admiral who was killed in battle with two English ships in 1511 .
BASALT ROCKS are of igneous origin, and occur either as lava currents, e.g. in Mull and'Staffa, or as intrusive sheets, e.g. Edinburgh Castle Rock and Salisbury Craigs.
BASE-BALL is the U.S.A national game, and is simply an evolution of Rounders, the bat being what is known in cricket as a 'broomstick.' The game is advancing in favour in England, especially in Northumberland and Durham, where there are about 20 clubs now.
BASEL. COUNCIL OF, was the last of the three great reforming councils of the 15 th century
BASHI-BAZOUK is modiern Turkish for 'hot-headed,' and the name mildly describes the Asintic ruffinis who carried out the Sultan's atrocious brutalities in Bulgaria in 1876.
BASIL THE GREAT was one of the most leamed and eloquent Greek ' Fathers' of the 4 th century A.I.
Basilica means 'market place,' and they were originally quite unroofed. They afterwards took a furm which is very closely akin to that of the later Christian churches, and it is very proballe that the churches atter the 3 rd century A.D. were modelied on then.
BASIN OF A RIVER is the whole tract of land drained by a river and its tributaries.
BASKETS are a very old invention. B. work formed the shields and the hoats of the ancient Britons, etc. The willows for it are largely grown now in Holland, France, and Germany, though the best kind comes from the valleys of the Thames and the Trent.
Baspues are a curious race who tive in the Pyrenees. They ars of mixerl origin, and speak is langraige which is quite distinct from all the other inngnages of Enrope, and which is perhaps the only example of a consistently incorporating tongue.

BASS BREWING IIRM was founded in I777, and owes its success to the excellent barley of the Trent basin and to the suitability of the Trent water for brewing. BASSOON had reached great perfection by the middle of the r6th century, especially in Bavaria. It is not a solo instrument, but is very importint in an orchestra because of its variety of expression.
BASTILLE was a French nanie for any fortress defended by bastions, but the name was subsequently appropriated to the famous prison, which was built at the end of the 14th century and destroyed on July 15, 1789. It held about 80 prisoners,

BASTIONS were invented by the Italian engineers of tive 16th century to prevent the enemy from collecting in the ditch round a tortified town.
BAT is really a mammal whose fore legs are modified for flying purposes. Bats are generally fruit-eaters or insect-eaters, the former being nost common in the South Pacific region. Of course, the vampires are blood-suckers.
BATH, ORDER OF, was established by Henry IV. in I399, but fell into disuse till 1725 . It was remodelled again in 1815 to commemorate Waterloo, and was enInrged in 1845. It has now three classes-G.C.B. or Knight Grand Cross Bath, K.C.B. or Knight Commander Bath, C.B. or Companion Bath. The G.C.B.'s include 55 military and $\frac{7}{}$ civil knights, the K.C. B.'s 145 military and 100 civil, and the C.B.'s 705 military and 283 civil. The badge is suspended by a crimson ribbon, and bears the motto, Tria juncta in uno (Three joined in one).
BATHING is most popular in Japan, where Tokio alone has 800 public baths where some 300,000 persons bathe claily at a cost of about $\frac{1}{2} d$. apiece, and almost every house in the city has its private bath-room, the water being at a temperature of about $110^{\circ} \mathrm{F}$. It is also a religious ceremony nmongst the disciples of Islam. St. Petersburg is very famous for its vapour baths, to which an immense crowd flock on Saturday evenings, each person carrying his own towel. Vienna has a splendid public bath, 578 ft . long by 156 ft . wide, and deepening to 12 ft ., in which the water is changed three times a dny. The longest swimming bath in Great Britain is at Kensington, but it is only 160 ft . long by 60 ft . wide, and from 3 ft . 3 int to 7 ft . deep. The most popular bathing place in the country is the Victoria Park, where as many as 25.000 bathers may be counted on one fine morning in August before eight oclock, and as many bathe in the evening. The lake is 300 ft . long, and varies from 3 ft . to $5^{\frac{1}{2}} \mathrm{ft}$. deep. The numbers bathing in the Serpentine from January I to August 20 , 1893 , were 268,568 .
BATHOS is a ludicrous descent from the sublime to the commonplace, and is often the result of a misguided effort to be subline.
BATH.STONE comes from quarries in the Lower Oolite of Wiltshire and Somersetshire. It is very easy to cut, and hardens on exposure to the air, but it is not durable.
BATTALION is infantry unit for tactical and adminis* trative purposes, and is roughly 1000 men, which is found to be the largest number that can be controlled by a single leader. Its front, in z-deep line, is about 340 yards. A British D. is divided into eight companies, each commanded by a captain and two lieutenants. The whole B. is under a colonel, and each half-B. under in major.
BATTERY is group of guns inder one immediate commander. A field or horse B. has genernlly 6 guns; in mountain B, has 4 seven-pounder guns, requiring rro mules and 94 mule-drivers; a siege B. has generally 4 heavy guns. Ouly the gunners of garrisoll 13 . and the men carried on the wagons of field B. hiwe carbines.
BATTLFE-AXE was the favourite weapon of the northern nations of Europe in early times. It required strength and personal conrage, but it could scarcely be used effectively hy a mail-clad warrior, and it exposed the vital parts of the bocly very much. Consequently, it hand to give way before the arrow :und the spent.
Batrue is whotesale massacre of game by criving them together into a limited area commanded by a number of guns. There are generally 8 or 10 men
each provided with 2 guns and an assistant to load for them. Even 2000 pheasants in a single day are not unusual under such circumstances. It is a species of sport.
BAUER was a famous Biblical critic, who published a most violent treatise on the Gospels, Ile was a German, and was born in $180 g$.
BAUR, another Gernan, was one of the greatest of modern theologians. He was born in 1792, and died in 1860. He was the founder of the Tübmgen School of Theology, and counted Zeller, Schwegler, Köstlin, and Hilgerfeld among his disciples.
BAXTER, the great Nonconformist divine, was born in 1615 , and died in 169t. He was a very eloquent preacher, and laboured for moderation in the Parliamentary ranks. His best-known work is the Saints' Everlasting Rest.
BAYARDs CHEVALIER DE, "the knight without fear and without reproach," is probably the "only hero of the Middle Ages who deserved the praise bestowed on him. He was born in 1476, and died in battle on April 30, 1524. His love of justice approached a passion.
BAYEUX TAPESTRY represents the conquest of England by William the Conqueror. It is inore a sampler than real tapestry. It is sewed on to a band of linen 230 feet long by 20 inches wide, and has 72 scenes. It was made probably by Queen Matilda, William's wife, or by the Empress Matilda, Henry I.'s daughter, as a pictorial history to decorate Bayeux Cathedral, where William's half-brother, Odo, was bishop. It remained practically unknown outside Bayeux till 1724 .
BAYONET takes its name from Bayonne, where it was first made about 1660 . It was probably brought to Europe by Dutch soldiers from the East Indies. Originally it fitted into the gun-barrel, but General Mackay in 1689 invented the socket-bayonet, which allows the gun to be fired with the B. fixed. B, is either for thrusting, or for cut-and-thrust. The former is generally used by troops ammed with long rifles. [music, and has a nost inagnificent theatre.
BAYREUTH, in Bavaria, is the home of Wagner's
BAY-WINDOW is peculiar to late Gothic and Renaissance architecture, and onght not to be called Bow.
Bazanle is an Oriental institution for real business, but has been transferred to Western Europe as nieans of forcing people to buy what they do not want at prices which they cannot afford. The Anti-Corn Law League B. in the Covent Garden Theatre in 1845 realized $£ 25.046$; the Manchester B. for the Children's Hospital realized $£ 22,000$; the Dublin B. for the Masonic Female Orphans in 1892 realized $£ 21,000$; the Masonic B. in Edinburgh in 1890 realized $£ 20,000$.
BEACON seems to have been the earliest kind of alarmsignal (cf. Jeremiah vi. 1). Agamemnon sigualled the fall of Troy to Mycenae in one night (9), as the English signalled the approach of the Spanish Amnada (cf. Macaulay's Armada). The use of them for coastmarks in very early times is shown by such names for capes as Manborough and Furness.
Beaconsfield, Earl OF, Benjamin Disracli, was born in 1804 of an old Jewish family which had been driven from Spain by the Inquisition in the r5th century. In 1825 he was articled to a solicitor, in 1826 he published Vivian Grey, in 1837 he entered Parliament, after three unsuccessful attempts, as meinber for Maidstone, and he became the real leader of the Tory party in 1846. He carried the Reform Bill of 1867 , giving household suffrage and widely extending county franchise. In 1868 he succeeded Lord Derby as Premier. He was Premier again in $\mathbf{~ 8 7 4 , ~ a n d ~ d i s t i n g u i s h e d ~ l i s ~ t e r m ~ o f ~ o f f i c e ~ b y ~}$ making Great Britain half-owner of the Suez Canal, and instituting the title of Empress of India for the Queen. In 1878 he brought back the famous "Peace with Honour " from the Berlin Conference. He went out of office in 1880, and died on April 19,1881 . He wrote a number of novels, which bristle with epigran, and which contain some famous caricatures of his contemporaries, e.f. Lord L.yttelton as Conizngshy, Croker as Nigby, Mr. Gladstone as Oswald Millbank, and Lord Palmerston as Rechampton.
BEADS are found in the most ancient Egyptian tombs, and were sometlases of enormous value, Since the

14th century the inanufacture of glass B , has beer: more or less a Venetian monopoly, taking its rise in the silica deposits of Murano; but, of course, Bir. mingham has imitated the original. In old English bede meant 'prayer,' and the name was transferred to the balls on the rosaries, etc., by which 'prayers' were counted.
BEAGLFS, which are often confused with Harriers, are the smallest kind of hound, aud are faned for their keen scent and perseverance.
BEANS are valuable food for man and beast. They were regarded as sacred by the Greeks and Konans, and were used for voting by ballot. They grow I est on heavy land, and their long roots prefer the deep soil of an alluvial country like Egypt. Their use for voting has survived in the curious "Bean King's Festival "on Twelfth Night.
BEARS rely more on strengtl than cunning, and are generally content with vegetable food, to get which they can show extraordinary activity both in swimning and in clinbing. In Greece they were sacred to Diana, and they figure prominently in the folk-lore of Northern Europe. They are widely distributed in coldand temperate regions, and the commonest kinds are the brown, which was found in Scotland up to the end of the Irth century; the black, which is a native of North America; the grizzly, which is much more fierce and carnivorous and a much less active climber than any of the others, the sloth of Southern Asia, and the Polar. B. baiting by dogs has been a favourite 'sport' in many countries, especially in England from the time of Henry II. to that of the Stuarts. It was finally made illegal in $\mathbf{1 8} 35$.
BEARDS are usually a distinctive sign of manhood, but there are instances of women with real beards, e.g. Margaret of Parma. They are generally luxuriant in the Keltic and Slav races, and almost absent amongst the Red men. All Moslems, who swear by the golden beard of the Prophet, are very particular about their B., which are often dyed red to imitate the colour recommended by Mahomet, from hatred of the Persian black B. The fashion of soldiers not wearing a beard originated in an order or Alexander the Great, whose soldiers were often caught by their beards by enemies in battle. Among the Teutons the loss of the beard was the sign of degradation till the iath century, and the Nomnans compelled the conquered English to shave, but aftervards began to wear beards themselves. In the time of the Tudors beards were worn of all sorts of shapes, and were satirized by the Water-poet Taylor:-

Some seem as they were starched stiff and fine,
Like to the bristles of some angry swine;
Some cut and pruned to a quickset hedge,
Some like a spade, some like a fork, some square,
Some round, some nowed like stubble, some stark
Some sharp stiletto-fashion, dagger-like. [bare,
The latter is perpetuated in Vandyke's portraits of Charles I. Among the clergy there has been great diversity of custom about beards. For instance, all the popes from 1523 to 1691 wore beards, and the Easterm Church clergy still wear them; but the Anglican Church clergy have largely discarded them, though the more rigidly Protestant Churches retain them almost universally. Side-whiskers are peculiarly English.
BEATON, the infanous cardinal, was born in 1494, and murdered in 5546 for having lurnt Wishart, the cele. brated Protestant preacher. He was a determined foe of England and Protestantism, and a great scoundrel.
BEAUFORT, CAKDINAL, was probably the richest man in Europe in the reign of Henry V. He was also an enlightened, merciful, and patriotic statesman, and did much to help the nation in the troublous days of the House of Lancaster.
BEAUMARCHAS, DE, the name assumed by Pierre Augustus Caron, who was the greatest Frencla connic dranatist next to Moliere. L3orn in Paris in 1732. soll of a watchmaker, taught the harp to the daugliters of Louis XV. Ilis first famous work was Memoircs du Sicur Beaumarchais par hui-mene. Later he wrote two contedies, lo Darbier de serille on lo Precaution

Inutile, and ta Folle Journec out lo Ifariage do Figaro. The connection of the latter work witla the French journal of to day-Ls Figaro-is obvious.
BEAUMONT and FLETCHER. Two of the greatest dramatists of the Elizabetlian era. Beaunont was at Uxford and then at the Inner Temple. Ife was an associate of Ben Jonson's. Ile was born in 1584, and Fletcher in 1579 . The latter was a Cambridge 111 an. The distinpuishing feature of his verses is the frequency of double or feminine endings. Their greatest works are Philaster and The Mtuid's Tragedy, but there are finer passages in The Two Noble Kinsmen by Fletcher and Shakespeare. Beaumont only wrote the Saspue alone, but Fletcher wrote eleven plays after his friend's death.
BEAUTY SHOWS have been held several times in various places, e.g. by the late Phineas Barnum (see above), but the most famous is probably the one held by Messrs. Pears in 1889, when there were several thousand competitors. These were gradually reduced by elinination until only four were left to receive the leading prizes- $£ 50, £ 25, £ 10$, and $£ 5$. At the famous beaty show at Nice the first prize was only £40. At Vienna a mule beauty show was held, at which the judges were 14 ladies. The first prize went to a wine merchant, and the second to a man with a moustache $z 0$ inches long.
BEAVER, a kind of squirrel, usually $2 \frac{1}{3}$ ft. in length, and nearly 1 ft . in height. Its ears are short and scaly, and admit of being folded so as to almost close the opening. They are found in Russia and Poland, in Siberia, and in America. They feed principally upon the bark of trees, and so store up quantities of wood for winter use. They are social animals, but occasionally males are found living alone, apparently expelled from a colony for misbehaviour. The beaverlodge is a wonderful structure. There are three kinds -the island lodge, the lodge built on the bank of a stream or pond, and the lake lodge. The dimensions are sometimes 8 ft . in dianeter, and 2 or 3 ft . in height. Beavers can cut down a tree to inches in diameter, roll it to the water's edge, and float it to their lodge, and anchor it. They have also been known to make a dam 1530 ft . long, and they can const ruct waterways or canals. The Indians think they are immortal.
BECHUANAS, people inhabiting Bechuanaland in South Africa, and they also occupy a portion of the Transvaal. They have been under British protection since 1884, except north of lat. $22^{a} \mathrm{~S}$. They are enemles of the Matabele race and the Boers. They are the most civilized nation of South Africa. The Kuruman Mission of the London Society has done them much good.
BECKET, THOMAS, Archhishop of Canterbury, born III8, was the son of a wealthy London merchant. He leamed arithmetic in his father's counting house, which fitted him for the office of Chancellor, and he learned French, the language of the Courts of Europe, by studying theology at Paris. He became Cham. cellor in 2555 , and Archbishop of Canterbury in 1162. He quarrelled with Henry II. because the King wished all cases to he tried by civil law, whereas lic wislied ecclesiastics to have a court of their own. IIe was defeated in his wishes, and murdered in rizo while in Canterbury Cathedral. People used to make pilgrimages to his tomb to be cirred of their ailfnents, rut it was found ont later that the tomb did not con$t a i n$ his bones. They lad heen removed with his mitre and other appurtenances elsewhere.
BED. In Persia everyone sleeps on a mat, which in summer is laid on the roof of the house, in India beds are raised 4 ft . from the ground, to avoid the insects. The Greek and Roman beds were similar to inodern ones. Anglo-Saxon beds were wooden benches fixed in recesses, the bedding being a sackful of striw. In the a3th century beds were similar to those now used, but feather beds were not gencrally used till the 15 th century, and the old "four-poster" was lntrnduced in the following century, Hirmingliam is the centre of the bedstead' trade. In 1849 , 400 metallic bedsteads were made in a week. Fin 1865 there were 5000 , and in 1885 there were 20,000 . There are hair, strow, and spring thattresses. The
largest B. in the world is Sarah Bernhardt's, which is 15 ft , broad. The Great B , of Ware, which is now at Kye House, 1 s 12 ft . square, and can acconmodate 2 dozen persons at once. It is of onk, dated 1463 , and is sild to have belonged to Warwick the klngmaker. A still bigger bed is mentioned in the Bible, as belonging to Og . King of Bashan-about 84 square feet.
BED OF JUSTICE, the seat occupied by the French Monarch in Parliament. It was used last by Louis XVI. at Versailles in 1787 , when the whole Parliament was arrested and contined in different parts of the country.
BEDCHAMBER, Lords of the, are twelve officers of the royal British household, who wait in turn upon the sovereign. There are also B. grooms of the bedchamber, who do the same, The groom of the stole is at the hearl of them. These offices are performed by ladies when a queen reigns.
BEDDGELERT, the grave of Llewellyn's hound, is in Carnarvonshire.
BEDE, THE VENERABLE, was born in 670 A.D., and was the greatest scholar, theologian, and historian of ancient times. He went to the Benedictine Abbey at Monkwearmouth when he was an orphan of seven years old, but ultimntely went to the Monastery at Jarrow, where he died, He translated St. Joln's gospel into Anglo-Sixon, and died just after finishing the last sentence. His most valuable book is the Historia E'celesiastica Gentis Anglorum.
BEDFORD, JOHN, Duke of, third son of Henry IV., born about r389. He was Protector of the Realm during the infancy of Henry VI., in whose reign he defeated the French several times. He fought against Joan of Arc. He purchased, and removed to London, the Royal Library of Paris, in which there were goo books.
BEDFORD LEVEl, in the Fen district, on the East of England. Probably was a forest ln the time of the Ronnans, who cut the trees clown to form embankments and inade it a fertile, inhabited region. It receives the waters of 9 counties. Many attempts have been made, at great cost, to drain the district. A permanent coffer-dam of pile work has been constructed to shut off the tidal waters, over which siphon pipes have been laid to let off the flood-waters.
BEDLAM was originally Bethlehem, a London Iunatic asylum, founded in 1247 at Bishopsgate, as a priory first. The patients were shamefully treated in those days, being shown to the public like wild beasts, The hospital was transferred to its present site, St. George's Fields, Lambeth, in 1815.
BEDOUINS are Arabs whose central habitation Is the desert of Arabia, though they spread into the Egyptian and Syrian deserts in anclent times, and also to Mesopotamia and Chaldea. They are hospit. able, though they lead solitary, precarious lives, but they have violent passions and love robbery. They believe in one God, but have little religion. They have intellectual capabilities, but are very ignorant. Bigamy is rare, and polygamy hardly known, but divorce is common amongst them. Theylive on their herds, vegetables, rice, honey, locusts, and lizards, Custom is their law, and eachi tribesinan is his own executive.
BEE. This was probably the first insect which gained any attention from humanity. Aristotle, Virgil, and Pliny mention bees, and at the Renaissance they were studiecl. There hives must not fice sunward, or they will come out in the winter to sun themselves and get frozen. The ordinary hive contains a queen bee (the mother of the next brood), the males or drones, and the army of workers or undeveloped females. Bees feed mostly on the nectar and pollen of flowers. Their cells hang perpendicularly from the hive, and are used for storing boney and as cradles for the young. 「ach 'comb' consists of a double row of cells. There is a marvellous accuracy in the formation. The bees drop poison into the cells containing honey, which keeps it from fermenting. Sir John Linhhock is the great antliority on the suhbect. The death's-head moth is their great enemy. They exclude it now lyy in barricr of wax and propolis, They often pull down and re-build had work manship,
and show much intelligence in their mode of working, There are solitary, social, and honey bees. A pound weight of bees contains about 5000 of them.
BEECH. The Common Beech forms whole forests in many parts of Europe. Its bark is smooth and grey, and has knobs in it. Grass does not grow at all well under it, as it has not got deep roots; and the wood being brittle and liable to rot when exposed to the air, it is of little use to the house-carpenter; but when kept under water it is very durable. It is used for chairs, tables, wooden bowls, carpenters' tools, etc, Berkhampstead is noted for its trade in beech tumery ware. In France it is used tor sabots. It makes good charcoal, and the ashes yield much good potash. Beechmast tastes like a walnut, and can be eaten (when the poison has been dried out of it) by pigs, poultry, and cattle, but not by horses. It yields a quantity of oil when pressed. Cocoa is sometines adulterated with it. Beeches grow from $9 c$ to 100 ft . in Britain. The finest is at Newbattle Abbey, Midlothian, The tree is found in Asia and North America, and in the latter country is called the White Beech. In Britain we have the Copper Beech. In the Falkland Islands the beech is used for roofing houses.
Beecher, Harriet Elizabeth (Mrs. Beecher Stowe), was born in 1811, and was the author of Uncle Tom's Cabin, which helped to bring the slave trade into disrepute. She and her sister had a school at Cincinnati, Ohio, near the slave state of Kentucky, and there she saw what misery the slaves endured.
Beecher, Henry Ward, was bom in 18i3. He was a graduate of Amherst College, Massachusetts, and studied Theology under his father at Lane Theological Seminary. Then he preached at Lawrenceburg, and afterwards at Indianapolis, in the State of Indiana. He was also identified with the anti-slavery crusade. In 1847 he came to a church in Brooklyn, New York, where he attracted immense congregations. He wrote Star Papers (published in his own paper, The Independent) and many sermons and addresses.
BEEF is one of the words which distinguish the 'indoor' influence of the Normans from the 'outdoor' influence of the Saxons. The Norman beef is the Saxon ox, as the Norman pork is the Saxon pig, and the Norman mutton is the Saxon sheep.
BEEF-EATER. Members of the Yeomen of the Guard are called Beef-eaters. They formed part of the train of royalty in the reign of Henry VII. The word has been regarded as a corruption of buffetier or beaufetier, one who attends the buffet. Henry VIII. is said to have made them dress in thick quilted costumes, so that they would look as fat as he did.
BEELZEBUB, 'the god of flies,' or more correctly written, Beelzebul, 'lord of the dunghill.' It is a corruption of Baal, whom the Philistines worshipped at Ekron.
BEER is a drink made from an infusion of malted barley which has been boiled with hops and allowed to ferment. A similar drink was drunk in Egypt at least 3000 years before the Christian era. The Romans introduced it into Britain. It is much more wholesome than spirits. The female hops only are used by the brewer. The hop was probably first used for brewing in the 1gth century. In the United Kingdom $27,500,000$ barrels are produced, and $26 \% 7$ gallons per head are drunk in the year. Between 1880 and 1886 there was a great decrease in the number of licensed brewers, but the amount of beer produced was practically the same. Mr. Gladstone's beer-tax, levied in 1880, was the cause of the decrease in the number of those brewers.
BEER-MONEY was a payment to non-commissioned officers and soldiers in the English army. It was established in 1800, and consisted of one penny a day to troops on home service, in lieu of beer and spirits. It was continued as additional pay till 1873, when the stopping of rations was abolished, and the beermoney was included in the pay proper.
BEERSIEBA means "the well of swearing," so called because of Abrabau's covenant with Ablmelech, the Plilistine king. It was situated on the Southern
border of Palestine, and formed the limit of the Israelites' dominion in the south. Two of its wells are still nearly full of water, but the place is in ruins,
BEESWING is a filmy crust of tartar formed, after a length of time, in port and some other wines. It is so called from its resemblance to a bee's wing.
BEET: The common beet is a native; of the shores of the Mediterranean, but it is now cultivated very widely in gardens and fields as food for man and cattle. It has large roots, from which sugar is extracted. It forms a favourite pickle, and also vegetable. It is more nutritive than any other cultivated root, except the fpotato. When the juice is pressed out of the root, it may be used instead of malt. The leaves of the white beet are used like spinach; and the leaves of the sea beet are used, in Ireland, for food. The quantity of beetroot sugar made in $1889-$ 1890 was $3,600,000$ tons. In 188I, Germany sent 2353 tons of raw beet sugar to the United States. In that country 9.26 cwts. of beet produce 1 cwt. of sugar. A large proportion of the saccharine matter of the sugar cane is glucose, and therefore useless for sugar, whereas in beet there is little or no glucose at all; consequently, importation of the tropical sugar has diminished.
BEETHOVEN, LUDWIG VAN, was bom at Bomn in 1770. He was soundly taught by his father and two court-organists, but was not precocious. He wrote his first symphony at the age of 31, though he began extempore playing in his 21st 3 ear. In 1792 he went to study under Haydn. It has been said that Beethoven has 3 styles. He began by writing as his forerunners wrote; then gradually his own genius asserted itself and made his music broader, stronger, and more coloured; and lastly, troubles and the approach of his end brought a spiritual sentiment into it. His nature and his deafness drove his good. ness inwards, so that it must be sought for in his music. Ilis Sonatas, Concertos, String Quartettes, and Symphonies are too numerous and too widely known to need enumeration.
BEETLE. This insect, when young, has a caterpillarlike form and usually six legs. There are about 100,000 different species. Most beetles are roracious and act as scavengers. They remain concealed during daylight, and rarely take to flight. Their food varies from hard wood to soft fruit. They are found on land, in water, on plants, among stones, in the ground, and in wood, in which they drill holes. Fossil beetles are found embedded in amber.
BEG is a Turkish title, now called Bey (lord), and it is given to superior military officers and to distinguished foreigners. Its import being vague, every conceited young Turk allows himself to be addressed by the title. 'Beglerbeg, or more properly Beilerbegi, meaning 'lord of lords,' is given as a title to the governor of a province.
BEGUM is a feminine title corresponding to Beg, and is equivalent to our "princess." It is an Indian honour conferred on the mothers, sisters, or wives of native rulers. The Begum of Oudh is well known in Indian history.
BEHEMOTH is a word of Egyptian origin. It is the name of a large four footed beast referred to once in the Scriptures, in the Book of Job. Gesenius proves that the description is most suitable to the hippopotamus, though some people have sugsested the elephant.
BEHRING, or BERING, VITUS, was bom in 1680, and was a famous navigator. He entered the navy of Peter the Great at an early age, and won renown in the wars with Sweden. In $17=8$ he sailed from Kamchatha, whither he had led an expedition, and he spent some years exploring the coasts of Kam. clatka, Okhotsk, and Northern Siberia. In 1241 he sailed for America, but sickness and storms obliged him to return, and he was wrecked on the desert island of A vatcha, where lie died.
BEIT is an Arabic word meaning 'house," abode, or place.' The equivalent in Helrew is Beth. In Arabic we have lieit-al-Ilaram, "the bonse of the sanctuary, and in Ilebrew beth-el, 'house of God. BEKKEK, IMMANUEL, was a scholar noted for his
recenslons of the texts of Greek classlcs. He was born in 1785, and became Professor of Phllology in x81. He studied at Ilalle, where he died in $88 \%$. The writers included in these recensions are Plato, Aristotle, Thucydides, A ristophanes, and others.
BEL AND THE DRAGON is an apocryphal book of the Old Testament, originally appended to the book of Daniel. It first appears in the Septuagint, and the Jewish Church does not seem to have accepted it as inspired: nor is there proof that any Hebrew or Chaldee version of the story ever existed. However. In 5546 the Council of Trent declared it to be eanonical. It seems to have been written as a warning against idolatry.
BELFRY, from the Old French berfret, is literally ' a place of safety:' Originally it was a kind of movable tower used in sieges for defence. It came to mean a watch-tower or alarm bell-tower, and later any tower where a bell was hung. The belfry usually forms a part of the church, but it is detached from it at Evesham, Beccles, and Berkeley in England, and frequently in Italy. When the church was built in a hollow, the belfry was sometimes put on a height near, as at St. Feve and elsewhere in Cornwall, and at Ardclach and Auldbar in Scotland. When the boroughs became important, they used the bells to eall the burghers together for council or action. At a later clate they were part of the town-house, as at Glasgow and Aberdeen, St. Quentin aud Douai, and at Brussels. The belfry in Bruges is 353 ft . high and has a carilion of 48 bells, regarded as the finest in Europe It has been immortalized in Longfellow's poems.
BELIEF is an opinion upon which a man acts. It is a state of trust in and reliance on a person or a prineiple, and therefore should not be applied to things we know. It should not be used of facts which have been proved by personal experience, nor of principles of which the opposite implies absurdity. Belief may admit of all degress of confidence from the merest suspicion to the fullest assurance.
BELL. The best substance from which bells are formed has been proved to be bronze-a mixture of eopper and tin. The proportions of the metals often differ, but for centuries the ratio of 2 to r was accepted. Later the tendency has been to increase the proportion of copper, which is stated to be in the ratio of 13 to 4 to the tin. Silver is always injurious to the tone of any bell. The pitch of a bell is regulated by the thickness of the striking place in proportion to the diameter, the ratio being about 1 to 12 in a bell of 10 cwt. From the earliest ages cymbals and handbells were used in religious ceremonies In Egypt the festivals of Isis were celebrated with the sound of the sistra. Aaron and other High Pricsts of the Jews wore golden bells on their vestments. The Greeks used bells in camps and garrison; and the Romans used them to announce the bathing hour. Specimens of handbells, which are believed to be as old as the 6th century, are still preserved in Great Britain, the most remarkable being St. Patrick's, ealled "The Bell of St. Patrick's Will." The largest bell in the world is the Great Bell, Monarch or Czar Bell, of Moscow. It weighs 198 tons, beingirg ft . high and 60 ft . round the rim. It was cast in 1653 , and came cracked out of the foundry, so it was never hung. The largest bell in use is another in Moscow, weighing 128 tons. The new Great Bell at St. Paul's, cast in $\mathbf{8} 88$ r, weighs 772 tons, and is the largest in the United Kingdom. From olden times bells have been associated with the services of the Christian Church, and they were consecrated hy a baptismal service, received names, liad sponsors, were sprinkled wlth water, and covered with a white garment like infants. This is still done in Roman Catholic countries. The curfew-bell is rung In many parts of England and Scotland to this day. The number of changes that can be rung on a peal of bells is the fitctorial of the number of bells. Thus 4 bells allow 24, and 8 bells 40,320. A bell costs from \&o to fop per hundredweight. Bells were not used in dwelling-houses till Queen Anne's reign. Now electric bells have superseded those pulled by wires. BEI.I., BOOK, AND CANDLE. "Tocurse by bell, book, and candle" is a phrase which refers to a form of cx-
communtcatlon In the Romish Church, which ended with these words: "Do-to the book, quench the eandle, ring the bell."
BELL, HENRY, introduced steam navigation into Europe. He was born at Linlithgow in ${ }^{2767}$. As early as 1786 he seems to have considered the possibility of applying steam to navigation, $\ln 1812$ he launched the Comet, a vessel 40 feet long, on the river Clydc. It had an engine constructed by himself, and was the first vessel of the kind that sailed in European waters successfully.
BELLEROPHON was the name of the ship whicla carried Napoleon into exile. The sailors corrupted the name into 'Billy Ruffian,' as they corrupted 'God encompasses 'into 'Goat and Compasses.'
BELLEROPHON was a Greek prince, the son of King Glaueus, and his wife Eurymede. Other aecounts say that he was Neptune's son.
BELLINI. There were several painters of this name, of whom one of the most famous is Gentile Bellini. He was a portrait painter, and his processional groups are noted for their fine architectural perspective. "Preaching of St. Mark" is his most famous picture. His brother, who is more celebrated, is Giovanni Bellini, who was the founder of the older Venetian school. His best works are altar pieces, and they are considered some of the best products of religious art in the world. "Blood of the Redeener," which he painted, was bought for the National Gallery in 1887. Titian was his pupil.
BELLONA was the goddess of war among the Romans, probably a Sabine divinity, and was represented as armed with a bloody scourge and as inspiring her votaries to enthusiasm in war. Her priests were styled Bellonarii, and at their festivals they used to gash their own arms and offer their blood to her. Appius Claudius vowed a temple to her, which was erected in the Campus Martius.
BELSHAZZAR is the naine of a Babylonian prince mentioned in the Book of Daniel as being the last Chaldean King of Babylon. He was slain when the Medes and Persians captured that city.
belts and Belting. Flexible belts for the transmission of motion in machinery are made of leather. india-rubber, woven hair, cotton,gutta-percha, canvas, and other materials. Sometimest wo or more of these are combined with wire. The valuable qualities in a belt are-(z) Proper grip of the surface of the pulley, (2) Power to resist strain, (3) Impossibility of stretching, (4) Durability. Leather belts are most lasting when tanned with oak, but American hemlock spruce is used. One of the largest leather belts yet made was for a paper mill in Delaware. It was 186 ft . long, 5 ft . wide, and weighed 2212 lbs . When carefully' made, these belts will last 30 years in daily use. Leather chain belting is used for driving dynamos for electric lighting, and for other purposes. Indiarubber belting is mostly employed in the States, but cotton belting is employed in both England and America. Some of it is waterproof.
BEN, or BEINN, the Gaelie and Irish form of a Keltic word, signifies 'mountain' or 'mountain head.' It occurs in many places in the British Isles, and also on the continent.
BENEDICT is the name of 14 Popes, of whom the most worthy was Benedict XIV. (Prospero Lambertini). IIe was a learned man, and, when he began his pontificate in 1740, he founded chairs of pliysies, chemistry, and mathematics in Rome. He also caused the best English and French books to be translated into Italian.
BENEDICT, ST., founded the Western Monachism. He had a luxurious home, but at the age of fourteen he went to live in a cavern for three years; illd, whlle there, he became famous. Wealthy Komans placed their sons under this care, so that he was able to found twelve nonasteries, one being on Monte Cassino, near Naples. It becane one of the richest in Italy. In 515 lie wrote his llegula Jfonachorum, which becanse the rule of all Western Monaehisn.
Benedictinis was the matne given to the followers of St. Benedict. There are about 800 of their molnasteries now. There have been various orders, such as the Cistcrcians, those of Camaldoti, and Vallom-
brosa, the Silvestrines and the Celestines. In the United Kingdon in 1881 there were eight Benedictine Monasteries and eight Nunneries. Hosjitality and other works of mercy, corporal and spiritual, are strongly inculcated in their rules.
BENEFIT SOCIETIES are associations for mutual benefit, chiefly among the working classes, and are called also Friendly Societies (v.v.).
BENGAL LIGHT, or Blue Light, is a bright signallight, used at sea in time of slip-wreck; and in ordinary pyrotechny for illuminating a district of country. It is a preparation of nitre, sulphur, and the black sulpliide of antimouy, in the proportion of 6, 2, and 1. It is reduced to fine powder which, when kindled, bursts into rapid and vivid combustion. As the fumes are poisonous, the light cannot be used in an inclosed space.
BENJAMiN. The name means 'Son of the right hand,' and it was given to Jacob's youngest child. He was the eponymous founder of one of the twelve tribes of Israel. The Apostle Paul was a Benjanite.
Bennett, Sir William Stekndale, Mus. Doc., D.C.L., iwas born in 1816. He was a great English pianist and composer who studied at the Royal Academy, London, for ten years, and finished his musical education at Leipzic. He was elected Professor of Music at Cambridge in 1856, and in 1868 he became Principal of the Royal Academy of Music. He showed his individuality most in his pianoforte compositions, of which the chiet are four concertos, capriccio with orchestra, two sonatas, and several studies. Since Mendelssohn and Schumann recog. nized him, he has been for some time the only well-known representative of English music on the continent, until lately.
BENSUN, IEDWARD WHITE, Archbishop of Canterbury, was born in 1829, and died in 1897. Hegraduated at Cambridge as a first-class and senior optime, and then becane Head Master at Rugby. He took the same post at Wellington in $\mathbf{1 8 5 8}$, and in 1875 became Chaplain-in-Ordinary to the Queen. In 1876 he became Bishop of Truro, where he raised funds for a cathedral, and in 1882 he succeeded Dr. Tait as Primate of all England, which office he held till his cleath. He was succeeded by Dr. Temple.
BENTHAM, JEREMY, was the son of a London attorney. At the age of twelve he entered Queen's College, Oxford, where he took his B.A. degree in 1763. Eventually he became the best critic of legislation and government in his day. He wrote A Pragment on Government, The Hard Labour Bill (a pamphlet), and Rationale of Punishments and Rewards. In the two last he did more than any other writer of his time to make the theory of punishments more rational, by the consideration of their kinds and effects, their real objects and the conditions of their efficiency. He was the philosophic pioneer of Liberalism and Radicalism to a certain extent.
Bentinck, William, first Earl of Portland, was, from boyhood, the friend of William III., and was descended from a noble family who migrated from the Polatinate to Gelderland in the 14th century. After the coronation of Willian III. and Mary he was made a peer.
William Cavendish Bentinck, third Duke of Portland, was twice Prime Minister. He was also Home Secretary under Pitt. He was born in 1738, and died in 1807.

Lord William Cavendish Bentlnck was made the first Governor-General of India in r833. He advocated several useful reforms before his death in 1839 .
Lord George Bentinck was a sportsman and leader of the Protectionists. He was member for LymeRegis. He was born in 1802, and died In 1892.
BENTLEY, RICHARD, was the son of a yeomen in the West Riding of Yorkshire. After four years at Wakefield Grammar School, he graduated at St. John's College, Cambridge, and became Head Master of the Spalding Grammar School la Lincolnshire, and finally Master of Trinity College, Cambridge. The Dissertation upon the Eipistles of Philaris establlshed his reputation in Europe. The priaciples of historical criticism were unknown before this book was written. As Master of Trinity he was arrogant
and rapaclous, and provoked numberless quarrels, but he edited various classics.
BEOWULF is the name of an Anglo-Saxon rpic poem which consists of 6356 short illiterative lincs, and which is the oldest large poom in the Teutonic tongue. It relates the heroic deeds of Beowulf, prince of the Geatas, who resembles King Offa, though the former is really a mythical clazacter.
Beranger, Pierre JEAN DE, was the greatest French song-writer. He was recognized as the lyrical champion of the opposers of the I3ourbons. He wrote for the working classes, and was very popular with them. He has been compared to Burns, but has not the Scottish poet's humour or passion. His songs are vivacious, light in movement, seemingly unstudied in the grace of workmanship, and well worthy of their popularity.
BERBERS, the name generally given to the inhabitants of the mountainous parts of Barbary and the northern portion of the Great Desert. It is either derived from their supposed ancester Ber, or from the Greek and Roman term Barbari. They call themselves Amázigh, Masigh, Mazys, etc., according to locality and whether singuar or plural. These tribes are the descendants of the aboriginal inhabitants of Northern Africa. Till the nith century they inhabited most of the southern coast of the Mediterranean, but afterwards they were driven to the Atlas Mountains. They are warlike and cruel. They live in clay huts and tents, but in the largest villages have stone houses. They work the iron and lead mines in the Atlas Mountains, and make swords, guns, and gunpowder.
BERENICE was the name of several celebrated vomen in the house of Ptolemy. There were also two Jewish Berenices, one niece of Herod the Great, and one daughter of Agrippa I. After the capture of Jerusalem, the latter went to Rome, and Titus would have married her but for the opposition of the people.
BERESFORD, WILLIAMCARR BERESFORD, Viscount, General, was born in 1768 . He bore a conspicuous part in the reconquest of the Cape and the capture of Buenos Ayres. In 1809 he commanded the Portuguese army, and effectively improved its discipline. He defeated Soult at Albuera, was present at Badajoz and Salamanca, and in the Wellington administration he was Master-General of the Ordnance. He died in 1854.
BERKHLEY, GEORGE, Bishop of Cloyne, is a historical figure in the r8th century on account of his selfsacrificing plilanthropy and his genius. He was born in 1685 , near Kilkenny. At the age of eleven he went to the Duke of Ormond's School, and from there to Trinity College, Dublin, where he stayed thirteen years. His three books - Essay towards a New Theory of Tision, Treatise on the Principles of Human linowledge, and Dialogues between Hylas and Philon-ous-set in motion a train of speculation which still moves human thought on the ultimate questions of our life and its surroundings. His 'new principle, that the world which we see and can touch, is not an abstract independent substance, but is the very world that is presented to oursenses-was for a long timemisconstruedfas the paradox that matter has no perceivable existence. Berkeley tried to persuade the House of Commons to allow a grant for the building of a college at the Bernudas, but the consent unwillingly given was afterwards withdrawn. While waiting at Rhode Island for that consent, he wrote Alcizhron, or the Minute Philosopher, the most finished of his works.
BERLIOz was a French musical composer of eccentric genius, who was born in 1803 . Ile studied first at Paris and then at Rome. In $183^{8}$ he met Paganini, who was so favourably impressed with him that he gave him zo,000 francs, which enabled Berlioz to travel. In 1855 he became conductor of the New Philharmonic Society in London. Sir Charles Hallé (then Mr. Halle) produced his Drmetution de Feust in 1880, at Manchester, and at the Crystal I'alace Mr. Mams has faniliarized English audiences with the masterpieces of this composer. Ilis Faust has made its way into the repertoire of all the best English Choral Societies. He put his best work into his Te Deum. He wrote a well.known treatise on
orchestration, which has been trauslated into Englishl, The orchestration in Romeo et Juliette is wonderfully delicate.
BERNARD, ST., was one of the most noted theologians of the Midelle Ages. He wis born in romi, mid entered the Cisterciinn Nonastery it the age of 22, and finally becane Abbot of Clairyaux Monastery, Pope Alcxander III. canonized him in 1174, 21 years after his death. He founcled more than $7^{\circ}$ monasterics. He drew up the statutes of the Knights Templars in 1128. The influence he had, and the revercuice felt for hinh, gave him great power in the political movements of the time. He was one of the greatest of the Latin hymn-writers.
bernhardt, Rosine, enlled Sarab, is a great Frencls actress. Slie was born in 1844. She gained prizes for both tragedy and comedly at the Paris Conservatoire, but she won her func by her impersonation, of the 'Queen of Spain' in Ruy Blas, and of ' Zanctto' in Pasant. In 1882 she married a Greck actor, M. Jacques Daria, or d'Aniala, from whom she was soon divorced. She is probably the greatest tragedienne since Rachel, and in comedy her acting is most finished. She is also an artist. (Sce BED above.)
BERYL is a mineral very like the emerald, except that its colour is yellowish, greenish-yellow, or blie, instead of rich green It is found mostly in veins that traverse granite or gneiss, or embedded in granite, and sometimes in alluvial soil formed from such rocks. Finer varieties occur in crystals similar to those of emerald, and the coarser varieties aro also found crystallized, but massive. The mountains of Aberdeenshire and of Mourne in Ireland, yield precious beryl ; and it is found in parts of the United States, Brazil, Ceylon, and Siberia. It is less valuable than the emerald, and is used as a magic crystal.
BESANT, SIR WALTER, a well-known novelist, was born in $x 888$. He studied at King's College, London, and at Christ's College, Cambridge. In 1871 he entered into literary partnership with James Rice. The Golden Butterfly was one of the most popular of the books written by the two together, and All Sorts and Conditions of Ben, which was wriken after the death of Mr. Rice, has had a great sale. As a writer of fiction, Sir W. Besant shows direct knowledge of various phisses of life, grisp of character, and constructive skill. The distinguishing feature of his novels is the interplay of fincy and healthy realisn.
BESSEMER, SIR MENRY, was born in 1813. He has been a prolific inventor. His process for making steel rised the annual production from 50,000 tons by the older processes to $1,600,000$ tons in a few years, This steel averages $£ 10$ a ton, whereas the former kinds averaged $£ 50$ a ton, though of course they were finer thinn his.
BETHLEHEM means the 'house of bread.' It was the birthplace of Jesus and of King Divid. It is now an unwalled village of white stone houses, about six miles south of Jerusalem. The population is wholly Christian. The Convent of the Nativity was built by the Empress Helena, but destroyed, and then rebuilt probably by the Crusaders. Within it is the Chureh of the Nativity, huilt like a cross, and below which is a crypt where the chilct Jesus is said to have becn born. The manger is in a low recess cut in the rock.
BeTring may be termed a crize In Englind, for racccourses and race-meetings give so many opportunities for it that more people bet now than ever. The betting world consists of two divisions of peoplebookmakers and liackers. Betting lias prolsilly existed ever since chere was anything to bet about. but in the early listory of horss-racing the clief oppartunity for betting) there were no professiomal bookmakers. Williank Ogeten first made a science of it in 1793. Betting houses were forbiclden in 1853, but the act did not extencl to Scotland, so the hook. makers removed chiefly to Glasgow. A betting apparatus called the 'Pari-Nlutucl' wos introduced Into France about 1865 , and found its way to England three years later. It is n large frane with a number of pursc-like receptacles in it, each one being devoted to is separate horsc. It differs from ordinary gambling, as there are no regular odds against any of the
starters. The biggest het on record is that of the late Mr. Divies, who Laid Mr. Clark Eio0,000 to £rooo against cach of the three horses that he was running in the ' Derby' of 1856. It is said that about E30,000,000 a yenr cliange hands in Australia through betting transactions.
BEWICK, THOMAS, was born in 1753. He practically revived the art of wood engraving. IHls Ifistory of Quadrupeds, issued in 1790 , established his reputation as an cagraver. The woodcuts in that book were cliefly done in the evenings, after the day's work was over. His father was a farmer and lessee of a colliery, so Bewick had to carn his own living. His best work was done in the Jistory of Birds, published in 1797. Collections of his watercolours, drawings, and woodcuts are in the British Museun.
Brble. The Greek word menns 'The Books,' which is significant of the importance which was attached to the writings. The Bible consists of two chief parts, (z) the OId Testament, (z) the New Testament. The Old Testanent is chiefly connected with the literature of Israel, but it is divided into three parts, (i) the Law, (2) the Prophets, (3) Miscellaneous Writings. The oldest proplecy is probnbly that of Amos. The prophets are the exponents of two high idens, (x) that Jehovah alone is God of Israel, in doctrine which reilly meant that he was the only God; (2) that he was a moral and spiritual being who could only be worshipped truly in spirit.
According to the Nassoretic view, the Psalms, Job, and Proverbs are the only strictly poctical books in the Bible. The miscellaneous writings are the expressions of devotion and religious reflection. To the devotional the Psalms belong; to the reflective, Job, Proverbs, and Ecclesiastes.

The Hebrew text was originally purely consonantal. The complete vocalized and punctuated Hebrew text, as now printed, is called the Massoretic text. It has to be purified by means of versions and manuscripts, though they are all very sinnilar:
The apocryphal literature may be divided into four classes-(i) Historical writings, c.g. the Maccabees; (2) Hortatory stories, c.g. Tobit, Judith ; (3) Poetical writings, c.g. Psalter of Solomon; (4) Prophetical writings in imitation of the Book of Daniel, e.g. Book of Enoch, Apocalypse of Baruch.
The origin of the Gospels is difficult to discover. The Epistles were written before them as occasional writings. Our Lord left no written words belind and the disciples ' prencbed' the word. By continual intercourse they would probably arrive at a certain fixed tradition of Christ's life and snyings, and this would probably be put in writing after the lapse of some years, The Gospel of St. Joln dates later than the others, and is entirely independent and personal.
The Canon of New Testament believers was at first (i) the Old Testament, (2) the words and commands of Christ, and it remained so till the and century. All the gospels and epistles were cvidently known to the Apostolic Fathers, judging from their allusions to and quotations from them. The New Testament was published first in 1522 , but there was an English version of part of the Blobe, written partly by Wyclif, published about 1382 . The first completo version was that of Miles Coverdale, published in 1535 .
The ancient versions of the Old Testanent from the original text are: The Septuagint, Syriac, Chaldee, and the Latin. Those of the New Testament from the Greek are Syrinc (in several uditions), Litin (in several editions), Fgyptian, Ethiopic, amul Gothic. Early in the Midetle Ages trauslations of portions of the Bible were rendered in many western languages, but they were chiefly explanatory paraphrases.
Bime SOCIETY is an association which is occupied in spreading the Scriptures. Prolnhly the first was founded in 17 to by Baron Hildebrand yon Canstein, at Halle. The limpulse of forming Bible Societies cance from England, where now was forned for tho clistribution of Bibles amongst soldiers and sailors. In 1802 the British and Foreign Bible Society was formed. The Religious Tract Soclety is another,
and in x96x the National Bible Society of Scotand was formed. The British and Foreign Bible Society (which devotes more than one-half of its expenditure to diffusing the authorized English version of the Bible) is the most important; and then the American Bible Society, which was founded in 18 I 6 . There are nuncrous Bible Societies in Germany, and one in Russia at St. Petersburg.
Bill in Natural History is the horny, lipless, and toothless jaw of a bird. The upper and lower portions are generally equal; but in birds of prey the upper is longer. The bill is not sensitive, as a rule, the distribution of nerves being restricted to the base of the upper part of it, except in the case of the woodpecker and in all aquatic birds. Noliving birds have teeth, but traces of toothed birds still exist. Parrots certainly must once have had teeth. The bill is used for seizing and dividing food, for fighting, preening, nest-building, etc. It is soft in birds which peck their food out of mud, hardest in those which live on seeds, fruits, and flesh, and sharpest in birds of prey. It is longest in marsh birds, widest in those which catch flying insects and in fishing birds, and shortest in the graminivorous. The bill of the humming-bird corresponds in length with the depth of the flower-tube it visits
BILL-BROKERS are people who are skilled in the money-market, rates of exchange, and the state of mercantile and personal credit. They engage, on their own account or that of their employers, in the purchase and sale of promissory notes, and foreign and inland bills of exchange. They must be distinguished from discount-brokers, who discount or advance the amount of bills of exchange and notes which are not yet due, on faith of the credit of the parties to the bill. A bill-broker might purchase a doubtful bill, and discount it by means of his personal credit.
BILL OF HEALTH is a certificate signed by consuls or other proper authorities, delivered to masters of ships when they leave places which are suspected of being subject to infectious diseases. A clean bill implies that, when the ship sailed, no infectious disorder was known to exist. A suspoctcd or touched bill implies that there were rumours of such a disorder, and a foul bill, or the absence of a clean bill, implies that the ship sailed from an infected place.
Bill OF Lading is a receipt from a ship's captain to the shipper undertaking to deliver goods-on payment of freight-to some person whose name is expressed or endorsed thereon by the shipper; and the delivery of this receipt-apart from the actual delivery of the goods-suffices to transfer to the party named, or to any one else whose name he has endorsed therein, the property in such goods. The bill mentions the name of the master, destination of the ship, goods, consignee, and the rate of freight.
Billeting, or Cantoning, is a way of feeding and lodging soldiers and their horses by quartering them on the inhabitants of a town. It is a system much resorted to, as it obviates the necessity of carrying food and camp equipments. Food, drink, bed, and facility for cleaning arns and accoutrements may be demanded for the soldier, and also accommodation for his horse.
BILLIARDS. The word is probably derived from the old Fr. billard, 'a stick with a curved end.' The origin of the game is uncertain. It was brought into fashion by Louis XIV. (I7th century), who was recommended to take exercise after his meals. The carliest description of it is in Cotton's Compleat Gamester (1674). The bed of the table was then made of oak or marble. Slate beds were not used till 1827. Indiarubber cushions were first inade in 1835. Among the most famous scorers the most familiar names are Roberts, Peall, Taylor. In 1890, at the Westminster Aquariun, Peall made a break of 3304, including ro6i spot strokes. In a spot-barred game in $189 x$ Taylor made $146 \%$.
BIMETALLISM is the term used to denote a double Monetary Standard of Value. Bimetallists say that it is a Free Trade movement. They wish to re-open the mints of the leading nations of the world to the unrestricted coinage of gold and silver, as the un-
satisfactory state of commerce generally is due to the appreciation of gold, and the uncertainty of exclange between gold standard and silver standard countries. There is a Binnetallic League, and the Gold Standard Defence Association, the one in favour. the other in disfavour of bunetallism on a broad international basis at a common ratio. The question rests largely upon the fundamental difference between standard coin and token coin, for the quantity of standard money, other things remaining the same, determines the general standard of prices; but the quantity of token money issued is cletermined by the general standard of prices.
BIOGRAPHY is an artistic representation, in a continuous and more or less detailed narrative, of the life and character of any particular person. Its main object, as now written, is portraiture, and its success or failure depends upon the faithfulness or unfaithfulness of the image.0 Plutarch was the prince of the biographers of ancient times, and in later times Boswell comes first. His Life of Johuson is the finest of our biographies.

Johnson's Lives of the Poets, Macaulay's lives of Johnson, Goldsmith, Atterbury, and Bunyan, and Scott's Biographical Memoirs are all well known, as are Lockhart's Scott, and Carlyle's Frederick the Great, Schiller and Letters and Speeches of Oliver Cromwell, and Froude's Life of Carlyle.

A biographer must have adequate knowledge of his subject and his surroundings, and must follow him in his controversies and speculations, and must be capable of weighing his abilities as well as his prisate virtues in the balance.
BIology. The word comes from the Gr. bios, 'life,' and logos, 'discourse.' It is the science of life, which classifies and generalizes the varied phenomena presented by the living world alone. It was first actually formulated at the beginning of this centur'. Charles Robin says: "Biology is the science which has for its object the study of organic beings, and for its end the knowledge of the laws of their organization and activity." Every human being is something of a biologist. The beast, bird, and fish which form the subjects of the science of Zoology, and the tree, shrub, and herb which form the subjects of the science of Botany-these together form the subjects of the science of Biology or Organism. Underlying this empirical view of plants and animals lies a de. tailed analysis of each of these forms, which we call anatomy. This involves comparison, and hence we have comparative anatomy; but, as we discern the marvellous unity of type underlying all apparent differences, the conception arises of philosophical anatomy, which is now called morphology. This Includes all the rtatic aspects of organisms, as distinguished from the dynamic or vital ones which group under physiology.
Jolin Ray was the first to criticise with any point the encyclopaedics of Natural History, in the 17 th century, and he was succeeded by the famous Linnaeus, who laid the basis of the future science of pure morphology. The analytical study of physiology may be said to have begun with Harvey's demonstration of the circulation of the blood; but, later, the physiologist came to view the functions of organ. tissue, and cell alike, as accompaniments of the destructive and constructive molecular changes of its protoplasm, of the physical and chemical processes of its waste and repair, respectively.

For actual biological purposes the lte of an organism is simply the sum of its functions, internal and external, and the entire drama of organic existence we lave learned to call its crolufion, and it is sumnarized under the Darwinian theory.
The recent contributions of biology to the arts of life have been primarily associated with the advance of medical treatment, and have culminated in the labours of Lister and Pasteur.

The substitution of Darwin tor Paley is not the displacement of an anthropomorphic view by a scientific one as is commonly supposed, but merely the replacement of the s8th century anthropomorphism by the roth contury, which has been advanced by the aid of the phenomena of struggle for existence, as explained
by tbe contemporary economic theory, Adam Smith's econonnic theory was borrowed, with fruifful results, by Mihue Edwards.
BrRCH is a beautiful, rapid-growiag, but short-lived forest tree of the palaearctic region. It is the most inportant tree in North Kussia, nnd wo other tree exists in Greenland: and according to $n$ popular belief it was the only tree that grew iu Paradise. The bark is used for tanning, steeping nets, sails, and cordage, and it is sometines inade into shoes, hats, drinking cups, etc. The North American Indians uso it for canoes, and the Russians use it to roof their houses. Birch oil is used in making Russlan leather, and the sap makes wine. The twigs make besons and sticks for whipping naughty boys.
BIRD. Birds are in some ways the highest of the vertebrate animals. They represent the climax of that passage from water to land which the back-boned series illustrates. Birds and mammals represent two divergent lines of progress, but the affinities between birds and reptiles are sufficiently marked to warrant their being included in one class.
Some birds sip honey, and the Kea of New Zealand likes the blood and fat of living sheep. Singing is an expression of emotional energy. It is best, sometimes solely, developed in the males, who vie with each other in attracting the females. The nest-building instinct reaches perfect derelopment in birds. They usually pair in spring-time. The South African 'Republican " birds form bundreds of hanging nests under the shelter of a common thatch.
There are many other curiosities amongst birds. The apteryx has hair instead of wings. The crow is an excellent weather-prophet, wbeeling above his nest before rain, as swallows fly low. The condor can go without food for 40 days. Tbe Pitta Concinna bird of Borneo and Sumatra has practically feathers of every colour of the rainbow. A parrot in the Regent"s Park Zoo has lived for 52 years without drinking. A falcon has travelled with a message from Teneriffe to Andalusia, 750 miles, in 16 hours, and from Fontaine. bleau to Malta, 1350 miles, in 24 hours. The frigatebird can live in the air for a week on end without ever perching for rest, and the albatross can do the same lor weeks together; the wings of both are about is $0 \% 13 \mathrm{ft}$. when expanded. The talegalla bird of Australia leaves the eigs fully feathered. The cuckoo, greenfinch, blackcap, quail, and blackbird are abnormally early risers. The smallest species of humming. bird measures id inch in length, and weighs about 20 grains. The Jacana and the Ypecaha, both species of Rail, are splendid dancers, and provide their own music.
BIRD, ISABELLA (Mrs. Bishop), during a six months' residence in the Sandwich Isfands sent to her sister in Edinburgh glowing accounts of what she saw and did. She has described in books her journeys to the Rocky Mountains, Yezo, Persia, Kurdistan, and Tibet. She was in Corea during the war of 8894
BIRDLIME is an adhesive and a viscid substance placed on twigs of trees or wire.netting to decoy birds. It
is also used for catching mice and rats in houses. It is prepared from the middle bark of the holly, mistletoc, or distaff-thistle, by chopping the bark, boiling for several hours in water, straining and exposing for a few weeks to fermentation. It can also be made from wheat-four, tied in a bag and immersed in a basin of water. If the bag is squeezed afterwards the starch is pressed out and gluter is left on the cloth.
BiRTHDAY BOOKS had their origin by the lssue in 1866 of the Birthicy Seripture Text-Book by Mr. W. Mack, bookseller, Bristol, who helped also to compile it. At first they were used also as autograph books. A Shakespeare hirthday bonk followed, and soon all prose-writers and poets contributed new ones.
Biscuits (Fr. twice-baked) are small pieces of fat bread, made hard and dry by baking to preserve them, In biscuit factories the flour (and the other Ingredients) is not touched from the time it enters the works till it leaves them as the finished article. To make hard biscuits it is put into a kueading machine. In making fancy hiscuits great care is taken to nilx the ingredlents (butter, sugar, or eggs) in a syste.
matic way. Firom 30,000 to $50,000 \mathrm{lbs}$. of blscuirs aro mado per week in the largest mannfuctorics.
Bisifor. The word is derived from the A.S. biscop, an abbreviated form of tho Greek word episcopus, 'overseer.' In classical writers, from Honer downwards, it signifies an inspector or superintendent of nay khat, thongh it is also used of officers with special functions; e.g. of commissioners sent by the Athenians to regulate the affairs of their colonies, The word appears in Syriac, Arabic, Spanlsh, German, nnd Firench, though tho sense has been altered. In tho New Testament episcopus is synonymous with presbyter, but from the end of the and century it has always meant superiority over a body of presbyters ; and, instead of superintendence over a congregation, rulo over a number of congregations in a diocese, Presbyterians reject modern episcopacy as a corruption of primitive Christianity, and indeed as late as 314 the Council of Ancyra assumes that presbyters may elect other presbyters with the bishop's sanction, evidently attributing no supernatural efficacy to the imposition of episcopal hands. There are 2 archbishops and 3 I bishops in England and Wales, 2 archbishops and II bishops in tho Disestablished Church of Ireland, and 7 bishops in the Episcopal Church of Scotland.
BISHOP, SIR HENRY ROWLEY, composer, was born in 1786 . He wrote the famous glee "The Chough and Crow" and several popular songs, probably including the setting of "Home, Sweet Hone." IIe was appointed composer of ballet music at the Opera in 1806, and he wrote 88 operatic pieces. He was director at Covent Garden Theatre, then Drury Lane, tben Vauxhall Gardens. In 1853 he became a Mus.Doc., and ln I84I became Reid Professor of Music in the University of Edinburgh. He died in 1855.
Bismarck-Schönhausen, Otto Euard LeoPOLD, PRINCE VON, was born in 1815, educated at Göttingen, Berlin, and Greifswald, and began his diplomatic career in 1851, when the was appointed Prussian member of the revived German Diet of Frankfort. He remained in Frankfort till 1859, when he was sent as Minister to St. Petersburg, then as Ambassador to Paris in 1862. While in Paris he visited London, but he was recalled to Gernany in the autumn, and made President of the Cabinct. Throughout the events, which led to Austria's humiliation Bismarck was the guiding spirit, and in 1871 he dictated terms of peace to France. In 1866 he was made Prince and Chancellor, and he held the latter office till 1890 , during which time he tried to consolidate the empire which he had created.
BISON is a kind of wild cattle in Europe and America. The Enropean bison was common in Roman times, but has been all but exterminated. It is only found in the imperial preserves of Lithuania and in the Ural and Caucasus Mountains. The American bison is called a buffalo by Anglo-Americans, but it must be distinguished from the real buffalo. There are only a few left-in Montana, Texas, and in the Yellowstone Park-and soon there will be none at all.
BITTERN is a kind of bird closely related to the heron, and distinguished from the latter by the long, loose plumage on the front and sides of the shorter neck, by the greater length of the toes. They are nearly all solitary birds that inhabit marshes, and they are to be found in all temperate parts of the Old World, but they are now rare in Britain, owing to drainage.
BITUMEN is a mineral substance, remarkable for its inflammability and strong odour. The name is sometines used to include Mineral Resins, such as naphtha, petroleun, mineral pitch, asphalt, mineral caoutchouc, etc. Of these resins the last named is the most interesting. It is now called Elaterite, and it is only found in three places-(I) The Odin tead mine in Derbyshire; (2) a coal mineat Montrelais, near Angers, in France; (3) a conl mine near Sonth Bury in Massachusetts. It is elastic and flexible, and may be used as a pencil-craser.
Brvalves form a class of animals whose shell consists of two limy valves, lying one on each side of the body ; mussels, oysters, and cockles are faniliar examples, The fnactlve lives they lead result in ( $x$ ) an
undeveloped structure of head, (2) the absence of head eyes, (3) the absence of biting organs, (4) the marked development of plate-like gills producing nutritive as well as respiratory currents, (5) the presence of thick, intricately-formed shells.
BJORNSON, BJORNSTIERNE, is a celebrated Nor. wegian writer, who was born in 1832 at Kirkne in Osterdalen, where his father was pastor. He studied first at the Christiania University, then at Copenhagen, and in 8857 returned to Norway and published his beautiful story Synnöre solbakken, whichi immediately won attention. He was appointed manager of the Bergen Theatre, then editor of a newspaper at Christiania, and later lie spent two years in Rome. In . 885 he became director of the Christiania Theatre, but in 1883 he settled finally in Paris, though lie was a popular political orator in his own country. He ranks first as poet and novelist among living Scandinavian writers.
BLACK may be regarded as the negation of colour, duc to the absorption of the rays of light by certain sulbstances. Painters produce it by unequal combinations of red, blue, and yellow. In medieval art it was symbolical of evil, error, and woe, and it is still a funereal colour. Black pigments used in painting are Lamp-Black, Blue-Black, Bone-Black, Jvory-Black. Indian Ink: resembles lamp-black, but is not suitable for mixing with other colours.
" BLACK ANDWHITE," the illustrated weekly, appeared first on February 6, 1891.
BLACK BEETLE is a popular term applied to all sorts of forms, from blaps (darkling or churchyard beetles) to cockroaches, which are not beetles at all. This is not surprising since there are 4500 species of the Beetle. They love dark, damp places, and they generally have a disagreeable odour.
BLACKBERRY. (See BRAMBLE.)
BLACKBIRD or Merle is a well-known kind of thrush, common in all parts of Britain and in Europe generally. It is also found in Northern Africa and the Azores. Its size is intermediate between that of the missel-thrush and song-thrush or mavis, Its fondness for fruit is annoying to gardeners, but it is wiser to protect the fruit than to shoot the bird, which is a destroyer of insect larvae. In winter it devours sinall snails, carefully breaking the shell against a stone. The blackbird keeps both the inside and outside of its nest very clean. Its voice is powerful, and its song more mellow than that of the thrush, but with less 'variety, compass, and execution.'
BlackCock, Heath-Fowl, or Black Grouse, is a kind of grouse inost abundant in Britain, especially in bogs and morasses on the moors, or natural woods and plantations of pine and fir near them. There are numbers in Scotland. The only other British species is the wood-grouse.
BLACK DFATH was a scourge that desolated the World from China to Ireland in the astli century. It is now believed to have been a visitation of the Oriental plague. Its westward course was accompanied by dense fogs and an apparent inversion of the order of the seasons. It is thought that at least one-third of the population of England succumbed to it.

The Black Death forms a great economic turning. point in English History, since it led to ill-feeling between land-holder and tiller of the soil, and finally to the rebellion of Wat Tyler.
BLACK EARTH is the name given to a deposit which covers areas of land in South Russia. It varies in thickness from a foot up to 6 or 7 yards; and it is said to have reached 60 ft . It is probably the fine-gralned silt derived from the torrents and rivers that are the result of the melting snows and glaciers of the glacial period. Some geologists, however, say it is in accumulation of wind-blown dust.
BLACK HOLE is the name associated particularly In the public mind with the confinement of a party of English in the prison of Fort William (since called the ' Black Hole of Calcutta'), which took place in India in the year 1756, by order of Sirrij-udl-Daula.
BLACK LBAD, Graphite, or Plumbago, is a inineral, but no lead enters into its composition. It is a perfect conductor of electrlcity. It is found in Norway, Siberia, Spain, Canada, the United States, Ceylon,
and elsewhere. It is used for making pencils, glossing grates, and dininishing the friction of belts, machinery, ctc.
BLACK LETTER is a name applied to types whicl! on the Continent are known as Gothic; and it came into use in 1600. Roman letters and Gothic letters are the two kinds that have been employed in the writings of Western Christendom. Although supplanted in general use, the Gothic or black letter is still kept for special purposes, such as prayer-books, acts of parliament, and proclamations, in England. It was most in use from the 13th to the 16th century.
"Black ROD" keeps order in the House of Lords, and summons the Commons.
BLaCK WATCH, the first Ifighland regiment, origin. ated in a Commission granted to John, Earl of Athole, in 1668, to raise a number of men for securing peace in the Highlands. The term black arose from the colour of their tartan uniform, which distinguished them from the regular troops. In 1743 the regiment went into action for the first time at Fontenoy in Flanders. In 1881, when the numerical designations of the British foot regiments were dropped, the former 42 nd and 73 rd Regiments were called re. spectively ist and and battalions of the 'Black Watch.
BIAKE, ROBERT, next to Nelson the greatest of English admirals, was born in 1599 . He was at wadham College, Oxford. He became Member for Bridgewater in r640 to the Short Parliament, but did not join the Long Parliament till 1645. He was a Republican. His defence of Taunton for nearly a year proved a turning.point in the war. In 1652 he began his struggle against the Dutch seamen headed by Van Tromp, De Ruyter, and De Witt. His crowning exploit was his last, when he defeated the American fleet at Santa Cruz de Teneriffe. He not only defeated England's strongest naval opponent, but he taught English sailors to attempt every enterprise however difficult.
Blakle, William, was an engraver, painter, and poet, who was born in 1757 . He was apprenticed to James Basire, the engraver, then studied at the Antique School of the Royal Academy, and exlibited his first picture in the Academy in 1780 . It was "The Death of Earl Godwin." His Poctical Sketches by F. B. are full of pastoral feeling and spontaneous power.
BLaNC, JEAN JOSEPH LOUIS, a celebrated French socialist and historian, was born in 1811, at Madrid. In 1839 he published his Revuc de Progres, his chief work on Socialism, which won for him great popularity among the French workmen. In 1841-44 he published his Mistorie de Dix Ans, which liad a deadly effect upon the Orleans dynasty. In 1848 he becante a member of the Provisional Government, and, being accused of a share in the disturbances of that year, he escaped to London. On the fall of the empire lic was elected to the National Assembly, and eventually was a member of the Chamber of Deputies. His Lettres sur l'Anglcterre are very bright.
BLANK VERSE, or unrhymed verse, is the name applied to the iambic pentameter, or heroic verse, the regular measure of English dramatic and epic poetry. The first specimen of it in English is a translation of the and and 4th books of Virgil's Acneid, by the Earl of Surrey; but Italian and Spanislı writers had used it at the beginning of the 16 th century. The English version was not published till the middle of that century. Two short poems by Nicholas Grimald, published in 1557, are the first specimens of original blank verse. The five-foot iambic was carly used by Italians and Frencli, but it was not freed from the restraint of rhyme, as it was in England, by the middle of the I6th centiry. Milton, Longfellow. Tennyson, Browning, and Swinburne, all nse it, Milton's Para. alise Lost being the first great poem in our literature so written.
BLANKETS. The best qualities made in England are wholly of wool, but a typical English blanket is made, generally, of cotton and wool. Seotcl blankets are nll made entirely of wool, and are differently finished from the English ones. Witney, Kersey, Yorkshire, nnd Batlo are the best known in IEngland. The Ayr. shire, Berwickshire, and Fife blankets are best known
in Scot ${ }^{\text {and }}$. Very fine woollen blankets are made in Mysore, in India, the best costing $£ 30$; ant some of the American blankets are also fine.
BLARNEY is an Irish colloguial term derived from the name of a castle near Cork, where there is a stonc, difficult of access, in one of the walls, which is stid to endue anyone who kisses it with heroic powers of cajolery. The expression is now generally used about any"smooth, complintentary talk.
BLAST FURNACE had its germ in the Oriental bellows, but made no progress till 1760 , when John Smeaton of the Carron Iron Works introduced blowing minchines with hrge cylinders. The hot blast wis invented either by Neilson or by Carnichael, both also Scotsmen.
BLASTING is the method of loosening or shattering masses of solid matter, which can be fractured, by means of explosive compound. It is more to do with disintegrating rock in the sinking of shafts, or cutting of tunnels, than with quarrying. The explosives used are generally gunpowder, preparations of nitroglycerine, nitro-cotton, or gun-cotton. The first is only used in the free condition under exceptional circumstances, owing to the risk of accidental explosion. There are three kinds of blasting-(I) The small-shot system; (3) the mine system; (3) surface blasts. The removal of Flood Island in Long Island Sound, New York, was the greatest blast the world has yet seen.
BLEACHING (from the A.S. blaec, 'pale') is the whitening of textile fabrics by removing coloured substances naturally present, or adhering to them in the course of their manufacture. It also signifies the decolourizing of bees-wax, castor-oil, and other fatty materials, by exposure to sunlight. It was once the custom to send Scotch linen goods to be bleached in IIolland, and the name Holland is still used for a kind of unbleached linen. Another kind which, from its fineness, was spread on the lawns or better grass fields, received the name of lawn. It is still used under that name. The first Scotch bleach-field was established about I730 in East Lothian. Linen, cotton, jute, wool, silk, and paper are all capable of being bleached: and in 1887 a successful attempt to bleach wood was made.
BLENHEIM is a village in Bavaria, noted for Marlborough's great victory over the French and Bavarians, August 13th, 1704.
BLIND-WORM, or SLOW-WORM, is a limbless lizard. The form is worm-like, and only internal traces of limbs are found. The tail occupies about half the total length, which is a foot. Blind-worms are shy and live in bushes. They are found all over Europe, except in Sardinia and the northern regions, They appear to be hardy, for they have been found 3000 feet up the Alps.
BLIZZARD is a fierce storm of frosty wind, with fine, blinding snow. Men and beasts often perish during the blizzards in the Western States of Americi?, where one took place in 1888, which was the worst since 1864. Some 235 people were killed in it.
BLOCK゙ADE, used in a military, sense, means an operation for capturing an enemy's town or fortress, often without a siege or bombardment. The purpose in view is to prevent the besieged from receiving any supplies. The blockade of Paris in' 1870-71 is the most notable example.
Blockading, in a naval sense, is preventing the entrance or exit of the enemy's ships from a particular port.
BLOCKHOUSE is a stockade, or wooden wall, roofed In and loopholed. The itimbers of twlich the walls are made mny be laid vertically or horizontally, but they must be covered with earth to make them bullet. proof. A ditch is excavated, from which the earth is taken, and stakes are planted in it to keep off the enemy's final assault.
BLoNDEL., a celebrated French minstrel of the 12 th century, was born in Picardy, and was a favourite of King Richard the Lion heart, accompanying hin to Palestine, and being the means of his rescue by singing outside the tower where the royal captive was confined.
BLOOD-HOUND is a hound remarkable for its keen
power of scent and for the quickness with whicls it will track a bleeding amimal. It derives lts name from this faculty. It was formerly common in IBritain and on the Continent. Blood-hounds were used to track prisoners and, in America, slaves also.
BLOOD.STAINS. Oncriminal trials the guilt of prisoners lias often been proved by the discovery of these stains. An ordinary lens or microscope, spectroscope, or artificial light can be used to discover them; or heat, ammonia, the haematin test, and the guiacuin test.
Bloomer Costume is a ladies' dress which partly resembles male attire. At the same time that there was ¿ 'Woman's Rights Movement' there was an agitation for the reform of women's costume. In I849 Mrs. Bloomer adopted the one to which she has given her name, and she wore it while lecturing in New York. It consists of a jacket with close sleeves, a skirt falling a little way below the knee, and a palr of Turkish trousers. It is much used by French women, but the long, pleated divided skirt has taken its place in England, where indeed it was very seldom seen at any time, and then it was only worn by fernale cyclists.
BLOW-PIPE is a small instrument used for glass-blowing, for soldering metals, and in analytical chemistry and mineralogy for ascertaining the nature of a substance by continuous and great heat. When a cylinder of quicklime is heated by it, a most dazzling light is produced, rivalling even the electric light in its brilliance. That is called the Drummond Light.
BlÜCMER, GEBHARD LEBERECHT vON, Prince of Wahlstadt, Field-Marshal of Prussin, was born in 1742. In 1757 he joined a regiment of Swedish hussars, for the Seven Years' War; and being taken prisoner, the Prussian Colonel persuaded him to exchange into the Prussian service, which he left, however, in 1772. When the Prussians rose in opposition to France, he won many victories, mainly by his dash and energy. He was made a prince in memory of his victory at Katzbach, and later the Oxford University conferred on him the degree of Doctor of Laws. Frederick William III. crented a new order for his benefit, and a bronze statue was raised at Rostock, his native town, to commemorate his 'having saved the day at Waterloo.'
BLUE is symbolical of Hope. It was worn as a distinctive colour by the Scottish Covenanters. Dark blue is the Oxford colour, pale blue the Cambridge one.
BLUEBEARD is the hero of a nursery tale. He was so named from the colour of his beard. Greek, Tuscan, Icelandic, Gaelic, and Basque versions of the tale occur, with varying circumstances of detail, but the main idea identical.
BLUE-BELI. is the Scotch popular name for the common wild hyacinth, not an English name as is often supposed. The equivalent name in English is ' hare-bell.'
BLUE-BOOKS, the name generally applied to the re. ports and other papers printed by Parlinment, because they are usually stitched up in blue paper wrappers. Some departments stitch their papers in drab, some in white covers. The issuing of these began in 168x, and in 1836 they began to be sold.
Blue-BOTTLE Fly is an insect of the same genus as the house fly, but is larger in slze, the expanse of its wings being nearly an inch. It lias a delicate sense of smell.
BLUE-COAT SCifoor, is a name given to Christ's llospital in London, and to similar schools in Bristol and elsewhere. The scholars wear long dark blue gowns, with a belt round the waist, yellow stockings, and no covering for thelr heads. It is like the costume boys wore in the beginning of the ath century.
Blue Ribhon is a term applied to any great prize-as the 'Derby' stakes, from the blue r:'bbun worn by the Knights of the Garter. An association of total nlistainers adopted the name of the Blue Ribbon A rmy, froin the badge, in 1883 . It is known as the "Murpliy Movement 'in America.
BlUE STOCKiNG is a nanc given to literary women who display their attainments in a pedantic manner. The name is clerived from a literiry coterie formed in London about 1750 , which included men and
women, A Mr. Benjamin Stillingfleet, who was a distlngulslied nember of the society, wore blice stockings.
BLUNDERHUSS was a kind of short musket with wido bore, capable of firing many balls at once. It is no longer used, as it has a limited range.
BOA is a term applied to large snakes of the Python family, which belongs to the Old World, and the Boa Constrictor family, whicl1 belongs to the New World. Both are large and poisonous, with great powers of crushing. Tho Boa's length is about 12 ft ., but may reach 20 ft .
BOADICEA was the wife of Prasutagus, King of the Iceni. She is called 'the British Warrior queen, because she led an army against the Romans to revenge her daughters' and her own wrongs. Her story is best remembered by the poems of Cowper and Tennyson, She poisoned herself in despair after the Roman Governor defeated her troops.
BOARD OF TRADE, a department of the British Government, is a permanent coinmittee of the privy council, and is presided over by a member of the cabinet, It is divided into six departments-(I) Commerchal, (2) Statlstical, (3) Railway, (4) Harbour, (5) Marine, (6) Financial.

BOARD SCHOOLS. (See EDUCATION.)
BOAT. The forms, dimensions, and uses of boats are very various. The boats belonging to a ship of war are the launch, barge, pinnace, yawl, cutters, jollyboat, and gig. Those belonging to a merchant vessel are the launch, skiff, jolly.boat or yawl, sternboat, quarter-boat, and captain's gig. Every British passenger shlp must have a launch and properly fitted life-boat.
BOATSWAIN (commonly pronounced bosn) is a warrantofficer who has charge of the sails, rigging, colours, anchors, cables, and cordage, and who summons the crew to their duty, relieves the watch, etc.
BOBBIN Is often a cyllndrical piece of wood with a head, on which thread is wound for making lace ; or it may be a spool, with a head at one or both ends, used in spinning machinery or in sewing machines.
BOCCACCIO, GIOVANNI, Italian novelist and poet, was born in 1313. He wrote Teseide, the first heroic epic in the Italian language, and the first example of the ottava rima. The work for which he is famous consists of 100 tales, and is called the Decameron. The first dated edition of this book was sold in London, in 1812, for $£ 2260$.
BoDLey, Sir Thomas, the founder of the Bodleian Library at Oxford, was born in 1544. He studied in Geneva and at Magdalen College, Oxford, and then travelled much on the Continent, after which he spent his life in augmenting the library. He was knighted by James 1.
BOEHM, JOSEPH EDGAR, R.A., sculptor, was born at Vienna in 1834. He studied art in Italy and Paris, and settled in England in 1862. He executed many public statues, including Bunyan's at Bedford, Carlyle's and Tyndall's on the Thames Embankment, Beaconsfield's and Stanley's for Westminster.
BOERS are the farmers of Dutch origin in South A frica. In i $1836 \cdot 37$ they 'trekked' to Natal, where they illtreated the natives, so the British annexed the country in 1843 . In 1848 they began to form the present Transvaal, having left their previous setticment. They now occupy the Transvaal, Orange State, and the New Republic in Zululand. They are rigid Calvinists and very cruel.
BOETHIUS ANICIUSMANLIUS SEVERINUS, a famous Roman statesman and philosopher, was born about 470 A.D., and executed in 525. He was three tlmes Consul, but Theodoric, King of the Ostrogoths, then master of Italy, grew jealous of him. Boethius made translations of the Greek philosophers, especially Aristotle. His fame rests chiefly now on lis Consolations of Philosophy-partly prose, partly verscwhich lie wrote in prison.
BOG, a piece of spongy ground. There are red bogs or peat inosses, and black bogs or mountain mosses. The former are found in extensive plains, e.g. the Chatmoss in Lancashire, and Bog of Allen in Ireland. Black bog is found at high elevations.
BOG-OAK, Trunks and branches of oak found in
bogs and prescrved by the antiseptic properties of peat. It is of a slining black colour, and is used for ornamental furniture, brooclies, etc.
J3OG-TROTTER is a term orlginally applied contemptuously to the Irish peasanlry, from the agility with which they crossed bogs, sometimes to escape tho police and soldiery.
BOHEA is an inferior black tea. The name is sometimes applied to black teas (Souchong, Pekoe, Congon, ctc.) generally.
BOHN, HENRY GEOEGE, an English bookseller, was born in 1796 . He published the Libraries, a collection of standard works at moderate prices.
BOIARS, or BOYARS, were an order of the Russian aristocracy, next in rank to the ruling princes, bearing much the same relation to thein as the lesser barons did to the greater in feudal England. The boiars held!all the highest military and civil offices. Thelr order was abolislied by Peter the Great.
BoIL. The conversion of a fluid into vapour, which takes place at the point of contact with the source of heat, and the bubbles of vapour rising to the surface produce ebullition. The exact definition of boilingpoint in a liquid is 'that temperature at which the tension of its vapour balances the pressure of the atmosphere.' Boiling-point on Fahrenheit's thermometer is $212^{\circ}$.
BOILER is constructed of wrought iron or steel plates riveted together, with needful adjuncts, in which steam is generated from water. The globular shape was adopted as being the strongest to resist pressure. The marine boiler is cheese-shaped, and the loconotive builer is constructed with the multitubular flue, and the fire box is placed at one end.
BOLEY'N, ANNE, the second wife of Henry VIH. of England, was first of all lady-in-waiting to Queen Catherine, and the King divorced the latter and married Anne in 1533, Cranmer declaring the first marriage void and the segond legal. Anne was the mother of Queen Elizabeth. In 1536 she was beheaded on a charge of treason.
BOLINGBROKE, statesman and writer, was born in 1678, and died in 175I. He concluded the famous Treaty of Utrecht, and married as his second wife a niece of Madame de Maintenon. Pope owed many suggestions for tho Essay on Man to B.
BOLIVA, the liberator of Spanish South America, was born in 1783 a and died in 1830 .
BOMBS are usually large hollow iron balls, which are filled with the explosive material and fired by clockwork or other machinery.
BONAPARTE was the family name of the Great Napoleon. (See NAPOLEON.) Joseph was the eldest brother, Napoleon the second, Lucien the third, and Jerome the youngest.
BONE MANURE is a very valuable fertilizer, being rich in phosphates and nitrogenous organic matter; and is therefore most useful to crops which grow very fast or which have very small roots.
BONHEUR, ROSA, the famous painter of animals, was born at Bordeaux in 1822, and exhibited her first pic. tures when she was only 18 years of age.
BONIFACE was the name of nine popes between 418 and 1404 A.D. The most famous was B. VIII., who instituted the jubilees of the church in 1300.
BONNER was the infamous bishop in the reign of "Bloody Mary," who was instrumental in bringing 200 Protestants to the stake.
BONNIVARD was the 'prisoner of Chillon.' He was an ardent republican who sided with the Genoese against the Dukes of Savoy. He was a prisoner from I530 to 1536 .
Books were once written on the bark of trees, and the Latin name for a book is liber, 'bark.' Other materials were also used, c.g. the papyrus plant, parchment made of skins, copper, etc. Copper-plate books have been dug up in various places, cog, near Benares, and in the latter case they relate to things of the date I196-1149 B.C. Hesiod's books were written on lenden tablets, the laws of the Cretans were written on bronze, and Roman convcyancing was done on brass. The earliest book collectors in England were Bencdict Biscop and his pupil, the Venerable Bede. Tho earliest engraved book'plate known is that of Sir

Nicholas Bacon, dated 1574. The most perfect printing in this conntry probably comes from tho Oxford and the Canbridge l'resses, and is secn in their Bibies. The sumallest book in the world is probably the complete transtation of Dunte's Divine Comedy, exhibited at the Paris Exhibition of 1882, It contained 14,328 lines, or 500 pages, in it space less than z/2 inch square. The books most often pnblished in this country are works of fiction, then come educational works, then religious; the fewest are legal books. The Library of the British Museum has a cutalogte of about zoo printed and 1500 mausscript volumes; and the inder to the Chinese Encyclopaedia of Literufure and Science fills 20 volunes.
BOOK-BINDING was done in the Middle Ages by monks; after the invention of printing the gruat binders were Italians, and in this century the art has flourished best in Britain. A book is called 'halfbound ' when only the back and comers are leather. Most books are now bound entirely in cloth, the covers being finished before being attached to the book by canvas.
BOOK-KEEPING by double entry was first adopted by the great trading cities of Italy.
BOOK-TRADE is centred in London. Edinburgh, Glasgow, and Dublin; New York, Philadelphia, and Boston ; Paris, Leipzig, Vienna, and Frankfort.
Boomerang is a peculiar curved picce of very laard wood used as weapon by Australian aborigines, which can be thrown so as to return to the thrower if it misses the object.
BOOTH, GENERAL, the founder of the Salvation Army, was born in 1829 . Ife started his work in East London in 1865 , and published his famous book, In Darkest England and the Way out, in 1890.
Boreas. Greek and Roman name for the god of the North Wind.
BORGIA, CESARE, was a natural son of Pope Alexander VI. Like his sister, Lucretia, he was a liberal patron of art and literature, but a most consummate blackguard. He died in 1507, and his sister in 1523.
BOSSUET, the great divine, was born in $\mathbf{1} 627$, and died in 1704 He drew up the famous propositions which secured the freedom of the Gallic Church. He was for some years a friend of Fénelon.
BOSWELL, the biographer of Dr. Johnson, was the eldest son of Lord Auchinleck, and was bom in Edinburgh. He met Johnson in 1760 , and was afterwards a friend of Voltaire, ${ }^{\circ}$ Rousseau, and Paoli.
BOTANY treats all the vegetable kingdom. Systematic botany deals with its arrangement in groups, Geographical botany with its distribution, and Economic botany with the utility of the various products to man. Plants of the seaweed kind are amongst the lowest, and flowers amongst the highest species. The historic names in connection with the science are Malpighi, Ray, Linnaeus, Jussieu, Brown, etc.
BOTHWELL, EARL OF, was deeply implicated in the murder of Darnley, and married Mary Stuart within three months of Darnley's death. He died in Denmark in 1576.
BotTICELLI, the Italian painter, was born in r447, and died in $\mathbf{5 5 1 5}$. He was apprenticed to a goldsmith, but came under the notice of Fra Lippo Lippi, from whom he learnt his art. In his later ycars he was a disciple of Savonarola.
BoUFFLUS, the celebrated French general, leamt his art from Condé and Turenne, and practised it against Eagene and Marlborough.
BOULEVARD meant originally the ramparts of a fortified town, which were often laid out with trces; afterwards the name was given to any level space planted with trees.
BOUNTY, in economics, is a reward given to encourage a particular trade, whether it is naturally adapted to the particular place or not.
BOUKBON was an old family name, and has been owned by three dynasties in Europe, those of France, Spain, and Naples. There havo been two branches of the French Hine, the Dukes of Bourbon and the Counts of In Marche or Vendome. The litter was divided into the Royal and the Conde families, and the Royal branch was again divided into the Elder and the

Navarre, and tho latter came to the throne through the 1830 Revolution in the person of Louis Philippe.
BOURGEOISIE represcuts all who are not nobles or clergy on the one hand, nor ordinary merchants or tradesunen. The word corresponds in I rance to the English 'midctle class.'
How is a very ancient weapon and was made of wood, horn, steel, etc. The English bow was the long bow of yew or ash, and about 6 ft . long, with an arrow of 3 ft. Its use was encouraged in every way, and was justified by the victories of Crecy, Poitiers, $A$ gincourt, etc. The cross bow was Italian, and becante the usual weapon in France, but was never popular in Britain.
Bow BELLS is the peal of St. Mary-le-Bow Church, Cheapside. To be born within sound of them is the proof of being a real Cockney.
BOWIE KNIFE is a long one-edged dagger, called after Colonel Bowie.
BowLS is a very old game, and is characteristic of northern Britain. Edinburgh is said to have the largest greens in the country, and possesses at least I4 of them. There are about 400 bowling clubs in Scotland, 23 of which are in Glasgow. Newcastle has the best greens of modern make in England..
BOXING-DAY is the day after Christmas, and was so called from the practice of giving Christmas boxes' as presents on that day.
Box-WOOD is very hard and heavy, but takes a beautiful polish. It is the best wood for engraving on. It comes mainly from the Black Sea region. Tlie edging for garden walks is a dwarf variety.
Boycorring was instituted by the Irish Land League in 1880-1881, and took its name from the first landlord against whom it was used, Captain Boycott of Co. Mayo.
BOYS' BRIGADE was set on foot in Glasgow about 1885 by Mr. W. A. Smith and Professor Drummond. The number of boys enrolled in it is 33,000 , and they have 2600 officers. The idea has sprend to the Colonies and U.S.A, In the latter the brigade numbers about 25,000 , and in Canada about 4500 .
BRACELETS were in use in Egypt and among the Medes and Persians, both for men and for women. The Greeks restricted them to women, and preferred the snake pattern, but the Romans and the Teutous used them often as rewards for courage.
BKADDON, MISS M. E, the novelist, was born in 1837 , and brought out her first famous book, Lady Audley's Secret, in 1862. She married Mr, Maxwell, the publisher.
BRADLAUGH, CHARLES, the atheist, was born in 1833, and, in connection with his election as M.P. for Northampton, claimed the right to affirm instead of taking an oath.
BRadShaw'S Railway Guide was started in Manchester in 1839.
BRAHE, TYCHO, the famous Danish astronomer, was bom in 1546, and died in r6or, leaving his name to his plantetary system.
BRAHMAN, or THE UNIVERSAL POWER, is the first person in the Hindu Trinity, the other two being Vishnu and Siva.
BRAHMANISM is a social system founded on a religious caste, and finds its creed in the Vedns, of which the Brahman body became the guardians and interpreters. Consequently, the Brahmans are sacred themselves, and offences agrainst thein are a serious sin. A Brahman ought to pass through four states: those of novice, married man, solitary inhabitant of the forest, and ascetic. The spiritual icleas of the Vedic nature-worship have been mixed up with tegrading superstitions of uncivilized non-Aryan people, e.g. Suttee; but the Brahmans do represent the lighest civilization of India.
BRAMASLE is the Scotch name for the bush which in England is called a Blackberry.
BRANDING for crimes was not abolished by law till ${ }^{1822}$ in Britain. It is still used for diamond stealers in Cape Colony.
BRANDY is clistilled wine, and gets its colour from the casks in which it is kept or from nrtificial colouring matter put into it. The best comes from Cognac, which has given lts namo to the spirit generically.

Brandywine Battle was fought on September in, 1777, and resulted in the defeat of the Americans by the British troops.
BRASS is copper and zinc, and the best B. has two parts of copper to one part of zinc. Birminglam is the chief centre of the brass-working trades.
Brassey, LORD, the great railway contractor, was born in 1805, and died in 1870. One of his chicf works was the Grand Trmonk Railway of Canada, including the Montreal bridge across the St. Lawrence. His wife was the authoress of The Voyage of the sunbeam.
BREACH OF PROMISE. The first trial was in Elizabeth's reign, but complaint to the Ecclesiastical Court was made as far back as 1452 . This first complaint was made by Margaret and Alice Gardyner against John Keche of Yppeswych, to whom they had given 22 marks, and who subsequently married Joan Bloys. In France and Belgium there has been no B. of P. till within the last 6 years.
BREAD is either fermented or unfermented, and is made of all sorts ot materials, which are a guide to the standard of comfort enjoyed by the people of the particular country. Maize and rice are generally used in hot countries, wheat and rye in the rest, the rice and the rye implying a very low standard of comfort, e.g. in Germany and India.

Alum, chalk, starch, potatoes, etc., are put into B. to adulterate it, the alum being the commonest, because it gives a white colour to coarse flour, and retains any moisture, which, of course, increases the weight. All B. except fancy kinds are sold by weight (avoirdupois).

BREAD-FRUIT TREE is a native of South Sea Islands, but was imported into West Indies and S. America.
BREAKWATERS are essential to artificial hurbours, e.g. Plymouth, Holyhead, Dover.
BREEDING is the art of improving animals by artificial selection and treatment, and by careful selection of sires and by special treatment almost any special qualities can be reproduced and emphasized in the progeny. This, however, always involves some corresponding loss. Horses bred for speed lose strength, sheep bred for food lose wool, etc. Scientific B., of course, leads to great value being put on race and genealogy.
BRENNUS was the famous leader of the Senomes against the Romans about 390 B.C., when the capital was said to have been saved by the cackling of geese.
BREVET entitles an officer to a rank in the army higher than thiat which he really holds in his own regiment, but it confers no pay.
Breviary is a Romish book of prayers for the 7 canonical hours-matins, prime, tierce, sext, nones, vespers, and compline. The offices were originally so lengthy that under Gregory VII. (irth century) they were ab-breviated. The present B. practically dates from 1568.
BrEEWING is extracting saccharine from malt, and converting the solution into a fermented alcohol. The excellence of Burton beers depends mainly on the water, which contains lime and magnesia in large quantitics. The chief Lager, or 'store' beer, breweries are in Germany and Austria, e.g. Pilsen, Vienna, Munich. The largest brewing business in the world is probably that of the Messrs. Guinness at Dublin, which paid excise duty in 1893 to the amount of $\not \subset 544,709$. It covers about 50 acres, and employs 1600 men. The Bass Company paid in 1889 only £ 332,000 excise duty, though their works cover 150 acres, on which they have 16 miles of private railway. They have the largest store-houses in the world, and use 150 nillion labels a year, and employ 2600 uen.

- The Allsopp Brewery covers 50 acres, and that of Barclay, Perkins \& Co, about 12.
BREWSTER, SIR DAVID, the natural philosopher, was born in 1781, and died in 1868. He was one of the founders of the British Association, and invented the kalcidoscope.
BRIAR-ROOT PIPES are made of the roots of a large specles of heath which is a native of the Mediterranean region. (French bruybere=' heath.')
BRICk's of very great antiquity have been found in Egypt, Babylonia, and Assyria, etc. The fire-clays of Stourbricge are famous in Britain, consisting

7. mainly of silicates of alunina. The absence of iron and the presence of lime account for some clays burning white,
BRIDGES were first built with on arch by the Romans but the Roman arches seldom exceeded qoft., and were generally quite round. Modern bridge-building dates from I8th century, mainly owing to the Frencli architect Perronet ; and no iron B. were built before about 1777. The most famous tubular bridges are the Britannia, built across Menai Strait by Robert Stephenson, and the Victoria, across the St. Lawrence, which is $5 \frac{1}{2}$ times as long as the Britannia. The illfated Tay Bridge was blown down on December 28, 1879. The Forth Briclge has 2 chief spans of 1710 ft ., 2 of 680 ft ., and 15 of 168 ft ., and is 150 ft . above high water at a spring-tide. The great spans consist of a cantilever at each end, 68 ft . long, and a central girder of 350 ft . ; and it contains 51,000 tons of steel. The Tower Bridge in London was founded in 1886, and opened in 1894. The longest bridge in the world is said to be the Lion Bridge, near Sangung, across an arm of the Yellow Sea, which is $5 \frac{1}{4}$ miles long, and supported by 300 huge stone pillars. In 1860 the British troops marching on Pekin crossed a flooded river on a bridge of coffins, borrowed from a neighbouring village. The most famous Suspension B. are the Menai (near the Britannia tubular one) and the Clifton in this country; the Fribourg and the Buda-Pesth in Europe; the Niagara, the Cincinnati, and the Brooklyn in the New Workd In the U.S.A., however, the most interesting $B$. are the wooden 'lattice' ones, which offer little resistance to wind, but lave been the cause of some awful railway accidents.
BRIGH\%, JOHN, the famous orator and statesman, was born in 1811, and died in 1889. He was a cottonspinner by trade, and a Quaker by creed. He and Mr. Cobden were the leaders of the Anti-Corn Law League.
Britinnnia metal is a compound of tin with a little copper and antimony, and is chiefly used for teapots, spoons, etc.
BRITISH ASSOCIATION was founded in 1831, mainly by Sir D. Brewster, to stimulate scientific inquiry and to promote intercourse between scientists. It meets annually for a week in some provincial town (ncver in London), and in 1884 met in Montreal, and 1897 in Toronto. It is divided into 10 sectionsMathematics and physics, chemistry, geology, zoology, geography, economics and statistics, mechanics, anthropology, physiology, and botany.
BRITISH MUSEUM was practically founded by Sir Hans Sloane in 1753, and was opened in Montague House on Jan. 15, 1759. It was removed to a building of its own, designed by Sir R. Snirke, in 1847. The library was built in 8857 , and'its reading-room is 140 ft . in diameter and 106 ft . higl. The Natural History section was removed to South Kensington in 188c1883. The B.M. has the right to receive gratis a copy of every book published in the United Kingtlom. Admission to the reading-room is free, by ticket, limited to adults whose character is certified by a houscholder of recognized position, which does not include the keepers of hotels, etc. The toral num. ber of non-reading visitors to the B.M. is about lsall a million a year.
BRODIE, SIR BENJAMIN, the famous surgeon, was born in 1783, and died in 186\%. He attended George IV., TVilliam IV., and Victoria.

BRONTE, CHARLOTTE, the novelist, was born in 18ı6, and died in 1855. She and her two sisters published a volume of poems in 1846 mader the names of Cirrer, Ellis, and Acton Bell. Afterwards, all three turned to prose. Charlote wrote Jane Nym and shivtey, and Enily wrote Wuthering Heights. Charlote's blograpliy was written by Mrs, Caskell.
BRONZE is a compound of copper and tin, sometimes with a little zinc. The British B. coins contain about 94 parts of copper; bell uretal contains $7 S$ of copper.
BROOKL, SIR JAMES, and his nephew, Sir Charles, have heen Rajalis of Sarawaln since 1841.
BROUGHAM, LORD, was born in 1778, and died in IE\&8, Along with Jefrey, Homes, and Sydney Smith,
he started the Eilinouryh Fielicto in 1802 , and he helped greatly in passing the leform Bill of 1832. 3ROWN, FRED MADOK, the painter, was born in rear, and was in close sympathy with the Pre-Raphaelite Brotherhood.
BROW:NING, ELIZARETH BARRETT, was born in 1809, and died in 186I. She marricd Robert 13. in 1846. Sho was one of the greatest poetesses that have ever lived. Among her works are Aurora Leigh, Portuguess Sonnets, etc.
BROWNING, KOBERT, was born in 1812. His first poem was Pauting in 1833, followed by Paracelsus. Ilis longest poem is The Ring ant the Book. His bese wotk is in his Dramatic Lyrics, .Men and Fomen, etc.
BRUCE, the name of a Norman family which spread from Northumberland into Annandale, and eventually became the Royal House. The most famous member of it was Robert, tie opponent of Edward 1. and Edward II.; he won the Battle of Bannockburn on June 24, 13:4
BRUCE, JAMEs, the African explorer, was born in 1730 , and died in 1794.
BRUMMELL, the 'Exquisite,' died in a lunatic asylum in 1840, but from'I794 to I81s his word was law on all matters of dress and etiquette in this country.
BRUNEL, the engineer, was born in 1806. His bestknown work was done in connection with the Great Western Railhoay and the Great Eastern Steamship, which laid the Atlantic cable.
BRUSHES have either stiff 'bristles' of wirc, hogs' bristles, whalebone, etc., or flexible ones of hair.
BrUTUS, the Roman patriot, was born in B.C. 85 , and eventually-after the murder of Cacsar-committed suicide in B.C. 42.

CAT. It is belieyed that this quadruped was originally domesticated in Egypt. It was seldom kept by the Greeks and Romans, and rare in Europe until long after the Christian era. Aunong the various breeds are the tail-less cat of the Isle of Man and of the Crimea, the Angora or Persian, and the blue or Carthusian cat. The wild cat exists still in Scotland and parts of Europe. A cargo of mummy cats was brought to Liverpool from Egypt in I8go, and included $\mathrm{I} 80,000$ mummies, weighing about 20 tons. They came from the cat cemetery at Beni Hassan, and sold very briskly. 'Heads' went for 45.6 d . each, and 'bodies' (without heads) for 5s. 6 d .
CATACOMBS are caves or subterranean places for the burial of the dead. The term is applied specially to those round about Rome; but caves of this kind were common in many Oriental nations.
Catamaran, a sort of raft used in the East Indies, Brazil, and e'sewhere. It is from 20 to 25 ft . long, and $2 \frac{1}{2}$ to $3 \frac{1}{2} \mathrm{ft}$. wide, and made, on the West Coast of India. of three logs lashed together. These floats are skilfully navigated by one or two men kneeling.
CATAPULT was a machine of the ancients for projecting missiles, chiefly arrows. They were like huge crossbows. Boys use small catapults mide of a 'fork' of wood and a piece of elastic, wide enough to double up and contain shot at the centre, each end being tied to an end of the wooden fork.
CATARACT or WATERFALL, the leap of a stream over a ledge or precipice which occurs in its course. The Falls of Niagara and the Victoria Falls on the Zambesi are the grandest; the cascade of Gavarnic in the Pyrences is the highest in Europe. The falls of the Clyde are noted for their beauty in Britain, and the Falls of the Rhine at Schaffhausen are still more noted in Europe. They, are beginning to be used very widely now for electrical purposes, e.g.at Niagara and Geneva.
CATECHISM is an elementary book containing a summary of principles in any science or art, but chiefly in religion, reduced to the form of questions and answers. The first catechisins were compiled by Kero of St. Gall and Otfried of Weissenburgh in the 8th and 9 th centuries. A catechism of the Church of England was issued in the prayer book of Edward VI. The catechism of the Church of Scotland was drawn up in $\mathbf{5 6 4 8}$ at Westminster.
CATECHUMENS, a name originally applied to those converted Jews and heathens in the early church, who were to receive baptism, and had a particular place in the church. but did not receive the sacrament. Afterwards it was applied to young Christians preparing to partake of that ordinance for the first time.
Catharine II., Fmpress of Russia, was born in if29, and in 1745 married Peter III. Being jenlons of another woman, she won over the guards, and was proclaimed monarch in 1762 , ands I'eter abdicated alrnost at once, and was strangled a few days later, apparently without her knowledge. She conquered
the Crimea, and opened the Black Sea to the Russian navy, in her war with Turkey. She died in ${ }^{7} 966$.
Catharinf. de Medicl, wife of Henry II. of lrance, was born at Florence in 1559, and was the only daughter of L-orenzo de Medici. She had little inHuence in IFrance until the minority of hicr son, Charles IX., and then she played off the Guise faction against Conde and Coligny. The massacre of St. Bartholomew's Day was largely her work. She was a bad wontan.
Catharine of aragon, Queen of England, was born in 1485. In r50x she married Arthur, Prince of Wales, but, as he died in five months, his father, Henry VII., to escape having to pay back her large clowry married Catharine to his other son, Henty, obtaining a dispensation from the Pope for that purpose. The refusal of the Pope afterwards to divorce Catharine from her husband, Henry VIII.: caused the latter to declare himself head.of the English Church. Cranmer pronounced the sentence of divorce.
Cathenral, the principal church of a diocese, so called from its possessing the episcopal chair or cathedra. The most notable cathedral is St. Peter's at Rome, founded I450. Notre Dame at Paris, St. Paul's in London, Canterbury and York Cathedrals are all noted. Nearly all the cathedrals in England were a very long time in building. Bristol was 582 years before its final completion in 1888, Gloucester was 425, Peterborough was 410, Durham 409, Exeter 366, St. David's 342, York 30r, and Lichfield 27 .
York has one of the finest east windows in the world, 78 feet high and 33 feet wide. Gloucester has an east window 72 feet by 38 feet, but it is not so beautiful, and the lower part is unglazed. St. Pierre, Beauvais, has the highest choir in the world, being 3 feet higher even than that of St. Peter's at Rome, which is 150 feet. Amiens has one 140 feet ; that of York Minsteris 120 feet, Westminster Abbey $\mathbf{x o z}$ fect, and St. Paul's roo feet. Durham has the largest library, 15,000 books; St. Paul's and York have ix,ooo, Canterbury has only 10,000, but has some very valuable manuscripts, as also Lincoln has. Chichester has a secret dungeon, entered by a sliding door.
CATHOLIC EMANCIPATION was the abolition of those civil and ecclesiastical restraints to which the Roman 'Catholics' in Great Britain and Ireland were subjected. In 1829 a bill was passed which made Romanists eligible to all offices of State except the Lorl-Chancellorship of England and Ireland, the Lord-Lieutenancy of Ireland, the Regency of the United Kingdom, or being High Commissioner to the Church of Scotland
Catiline (Lucius Sergius Catalina), a Roman conspirator of noble rank, was born about ro8 B.C. He attached himself to the party of Sulla, but being independent and daring he was made Governor of Africa in 67. On returning to Rome he plotted against Cicero, which worked his own destruction. He was put to death in 62 .
Cato, Marcus porcius, the Censor, was a celebrated Roman, born in 234 B.C. He was a warrior, and rose rapidly in office till he became Consul. His hostility to Carthage furthered the third Punic War.
Cato, Marcus Portius (called Cato of Utica, the place of his death, to distinguish him from his greatgrandfather, the Censof), was born in 95 B.C. He was a stoic and a warrior. His vigorous reforms won him respect, and in 63 he was chosen tribune of the people. 1 le was Cicero's adviser. His failure in defending the city of Utica made hiun counmit suicide in B.C. 46 .

Charitable Instituilons in this country are so numerous that it is difficult to find funds for all of them. Amongst the most famous, Dr. Barnardo's "Homes" draw over EI30,000 a year, London Hospital over $£ 75,000$ St. Bartholomew's $£ 50,000$, St. Gcorge's $£ 45,000$, St. Thomas's $£ 40,000$, which is also drawn by the " Society for Prevention of Cruelty to Children." Altogether about $£ 10,000,000$ a year is spent openly in charity in this country, and probably twice as much is spent anonynously or privately. France spends $5 h$ millions a year, Italy $2 \frac{1}{4}$ nuilions. In London I in every 20 persons lives on clarity.
Charlemagine, King of the Franks, and then Fimperor of the West, was born in 742. His first great enterprise was the conquest of the Saxons, who lived between the Weser and Elbes, and soon after he was crowned King of Italy, having overthrown Desiderius. He established an acadenyy at his palace in Aix-la-Chapelle, the sittines of which he attended. lle built a lighthouse at Boulogne, constructed ports, and encouraged agriculture.
CHARLES V., Emperor of Germany and King of Spain (in which capacity he was Cliarles I.), wils horn in 1500. IIe inherited the fairest European countries, the colonies in the New Wortd, Anstria, Burgundy, and the Netherlands. $\Lambda$ war with France broke out, but even when Henry VIII, took the French side, the treaty which ended it was favourable to Charles; and a war against the Turks won for hini at reputation as defender of the faith. In 1546 a religious war broke out, in which Charles was worsted and in ${ }^{5} 556$, having invested his son with his own dignities, he retired to a monastery.

Cunkles I., king of Great Britain, was born in 1600 and crowned in 1625 . Ite was a weak, unwise King, and in continual tronble with his ministers and parliaiment ; the beginning of Cromwell's career bemg in his reign. Ile was belreaded in 2649 , and he met his fate with dignity.
CIMARLES Il. King of Great Britain, was born in 1630 and crowned in 1649 at Scone. After the death of Cromwell the Restoration was easily effected; but the King was indolent, extravagant, and licentious. A Dutch fleet actually reached Chatham; then came the Plague, and then the great Fire of London, which was rather a blessing than a curse. Clarles died in 1685. "He never suild a foolish thing, and never dia a wise one."
CIIARLES XII., King of Sweden, was born in 1682, and when lie was only fifteen, at lis father's death . Denmark, Poland, and Russia concluded an alliance against Sweden. He was on the whole victorious, though the Czar defeated lina at last, and he had to flee to Turkey. After his death in 1718 Siveden sank from the rank of a leading power into insignificance.
CHARLES EDWARD STUART, called the Foung Pretender, was born in 1720 . In 1742 he went to Paris and persuaded Louis XV. to help him in recovering the throne of his ancestors. At first he was successful, but after 1746 he lost all he had gained, and lated to escape from Scotland and live in Italy. He died in 1788. He is often called "Bonnie Prince Charlie," but he was a sclfish scoundrel.
CIIARLES THE BOLD, Duke of Burgundy, was born in 1433, and succeeded his fatlier, Philip the Good, in 1467. He married Margaret of York, sister of Edwird IV. Louis XI. of France involved Charles in his own quarrels, and while figliting against the Swiss, for Louis, he was slain.

Chateauibriand, lirancois, Augustevicomite DF, a French author and politicinn, was born in 1768 . Ilis celelorated work is Lo Genio du Christianisme. llis early life was chequered, but he eventually becane a diplomatist muler Napoleon, nud at the restoration of Lonis XVIII, he was appolnted annbassador to Berlin. On the revolntion of 1830 he refused to pay allegiance to Louis Ilnilippe, thercby furfuiting a lirge pension IIe died in 18.48.

Chateav-Lafitte, Chateau-Latour, Chateau-Margaux, are famous vineyards all in the departhent or the Gironde, France; and they furnish the best of the red wines of Bordeaux.
Chatham, William Pitt, Earl of, one of the most illustrious of British statesmen. He attracted notice as Walpole's opponent when he became mernber for Old Sarum. In 1756 he became Secretary of State and real head of the Government. He helped Wolfe and Clive to win Canada and India, and Frederick of Prussia to subdue France. In 1768 he resigned, but advised a conciliatory policy towards the colonies. His advice was disregarded, and the colonies declared themselves independent in 1776. In 1778 Pitt died.
Chattertun, Thomas, was born in 1752, and in his youth was clevoted to reading. His parents were poor, so he was educated at a clarity school, and when fourteen apprenticed to an attorney. He went to London, but could not make a living, and poisoned himself in 1770. His best poems were published under the name of Rowley, and are called The Tragedy of Ella, The Battle of Histings, etc.
ChaUCER, GEOFFREy, 'the father of English poetry,' was born about 1340 . He was the son of a vintner, he bore arms in France in 1359 , and married not very long after. He had various posts abroad, and then in England, and his fortunes varied with those of his patron, John of Ghent. His most celebrated work is The Canterbury Trales, in the pages of which we get such pictures of Englisla life and English thoughts in the $14 t \mathrm{l}$ century as are found nowhere else. He was buried in Westminster Abbey.
CHAUVINISM, an unreflecting, fanatical enthusiasin for any cause, especinlly an exaggerated patriotism, so called from Nicholas Chattvin, who was extravagantly devoted to Napoleon I.
CHEDDAR, a village in Somerset where the dairies have long been famous for their excellent cheese, which is made from the whole milk, the whey skimmed off, heated, and added to the curd.
CHEESE is composed cliefly of casein (which exists in cow's milk to the extent of about 3 or' 4 per cent.), fat, and water. Stilton, Cheddar, Cheshire, and Dunlop are the most notable British cheese, and Parmesan, Gruyère, Gorgonzola, and Gouda among foreigu ones. Sheep's and goat's milk cheese are made.
Cheiromancy or Palmistry is the art of diviling by inspecting the lines of the hand. It was practised in India in quite remote ages, and in Europe in the Middle Ages; but later on it was left to the gypsies. Nowadays it has been more taken up, thougl it is not so popular is Graplology or Plysiognomy.
CHEMISTRY is the science which treats of the nature, laws of combination, and mutual actions of the minute particles of varying matter which compose our universe, and the properties of the compounds they form. In its carliest phases it was the same as alcliemy. About the middle of the 18th century, Dr. Black discovered that gas differs from atmospheric air, and soon after two chemists, Priestly and Schede, discovered oxygen, which discovery revolutionized chemistry. Sir H. Davy founded electro-chemistry.

Tlie atomic weight of an element is assumed to be the smallest quantity which can enter or be expelled from combination.

The molecule of a compound is the quantity of it existing in two gascous volumes, or the smallest quantity obtainable in a separate state. Compounds are classified both according to the element they contain and to their special chemical functions, e.g. acids, alkalies, nnd salts. Sulphides are an important class of compounds. They are compounds of metals ith sulphur.
CHEMOSH, the national god of the Moabites, who were on that account called 'the people of Chemosh.' The same deity appears as the god of the Ammonites also, thougli he was succeeded later by Moloch.
CHENILLE, an ornamental falric like a cord, made by weaving warp threads together with a transverse weft, the loose ends of which project all round like a pile.
CHLOSS, the name Herodotus gave to the Egyptian
despot Kliufa. He belonged to the rulers whose capital was Memplis; he lived about 2800 I. C., and built the largest of the Pyramids, for which lie was supposed to have employed 100,000 men for 20 years.
Cifeque or Check, a draft or bill on a bank, payable on presentation. Cheques are an important system of mercantile currency wherever there is a system of banking. They tend to economize the use of the precious metals as a currency. A cheque payable to bearer does not need endorsing, but when payable to the order of someone named it must be endorsed. A 'crossed cheque' (one with two lines across it, and witl or without \& Co.' written between them), can only be cashed through the banker on whom it is drawn, when presented by another banker. Consequently the person to whom it is sent can only obtain payment of it through his own bankers.
Cherry, a fruit tree of the plum tribe. It grows in most temperate countries of the Northerm Hemisphere, and in Britain it is found wild. There are קnrious kinds, such as the red or garden cherry, red heart, white heart, black cherry, etc. This fruit was supposed to have been brought to England by the Romans in A.D. 46. 'Maraschino' is made of Dalmatian cherries, especially at Zara.
CHERUB, one of an order of angels, generally represented as winged spirits, and distinguished, by their knowledge, from seraplis, whose distinctive quality is love, and who are probably of superior rank.
CHESS, a well-known and ancient game, of Eastern origin, having probably arisen in India, and spread through Persia and Arabia to Europe. The word comes from the French eschecs, and the Persian shah, a king; The aim in chess is to force the opposing 'king' to surrender. He cannot be taken, but lie can be 'checkmated.'
CHESTERFIELD. PHILIP DORMER STANHORE, EARL OF, an English statesman and author, was born in 1694, and studied at Cambridge. He entered the House of Lords in 1726, when his father died, and in 1744 he became Lord-Lieutenant of Ireland, and in 1746 Secretary of State. In 1748 he retired from public aftairs. His essays and a collection of letters to his son obtained him some reputation as an author.
CHESTNUT or ChesNut, a tree allied to the beech and having serrated, dark-green leaves. It was probably a native of Asia Minor, and may have been brought to England by the Romans. It may live for many centuries. It is only occasionally in Britain that the fruit ripens. Most edible chestnuts are imported. The horse-chestnut is quite a different tree. CHEVY CHASE, the name of a well-known British Border Ballad. It is almost certainly founded on a different incident from The Battle of Otterbourne, with which it is often confounded. The lncidents in "Chevy Chase" are not historical, though the ballad is probably founded on some encounter which took place between its heroes, Percy and Douglas. Another older version of it is called The IHunting of the Cheviot, written before 5548 , and the later version is believed to date from the time of Charles 11. The similarity between Chery Chase and The Battle of Otterbourne may be due to the possibility of the incidents in the former ballad being borrowed from the latter one.
CHIAROSCURO, in painting, is the distribution of the lights and shades in a picture. The term is Italian, and means 'clear-obscure.' It is most importaut, since it gives faithfulness to the representation of a picture, and hy it objects appear to recede or advance.
CHIEF-JUSTICE or LORD CHIEF-JUSTICE, in England, the presiding judge in the Queen's Bonch Dirision of the High Court of Justice, and, in the Lord Chancellor's absence, President of the lligh Court. The title is generally given in the British colonies to the heads of the dififerent judicial establislintents.
CHigNON, a French word signifying properly the nape of the neck, but now used in Englisls and other langunges to denote ladies' back hair when raised, and folded up round a cushion on the back part of the liead.

ChimaERA. Chimera, in classicnl mythology, a firebreathing monster, with lion-like fore parts, the midhlle like a goat, and triader part like a dragon. IInsee the word came to mean an unnatural production!
CIIMNEYS were not heard of before the Middle Ages. Smoky chimneys may be caused by other obstructing buidelings, or by misconstruction of the fire place nud adjacent parts of the chinney. The first may le cured by a revolving cowl, the second by narrowing the chinney's throat.
CHINA, GREAT WALL OF, the largest artificial structure on the face of the earth, is a barrier extending for about 1500 miles on the north of China proper, and forming part of its boundary. Its west end is in the deserts of Central Asia, its east end reaching to the north-cast of Pekin. Its greatest height is about so fect. It was built to keep out barbarous tribes. Towers strengthen it at regular distances.
CHINA-WARE, porcelain, the finest kind of earthenware, is so called because China first supplied it to Europeans, in the 16th century. Not much later, John Frederick Bottcher or Bottiger started the Dresden china manufactory near Meissen; and about the middle of the 18th century the factory at Seyres was set up. The first successful attempt in England was made at Chelsea by some Germans. In 1748 their factory was transferred to Derby; and about 1768 Josiah Wedgwood started one in Staffordshire.
CHINESE LANTERN, a lantern of thin paper variously coloured, used in ilfuminations.
CIIVALRY is a term which refers to the organization of iknighthood in the Middle Ages, and to the spirit and aims which distinguished its members. A warlike spirit, high devotion to women, a love of adventure, and thirst for glory characterized the knights of those days, and the Crusades gave a religious bent to their minds, which resulted in the institution of such orders as the Knights of St. John, the Templars, etc. Knighthood was not conferred until the 2 Ist year, except in the case of distinguished birth or great achierements. The youth prepared himself by confession, fasting, and making certain promises, e.g. never to lie or utter slander, to protect women and orphans, etc.
Chocolate (from Mexican, chocolat?) is a paste made from the kernels of the cacao-tree, and combined with sugar, vanilla, cinnamon, or other flavouring substance. It is also made into a drink by dissolving it in boiling water or milk. It was used in Mexico long before the arrival of the Spaniards, and it is now commonly used on the continent, while cacao, a preparation from the same fruit, is more popular in Britan.
CHOIRS of surpliced women choristers are becoming fairly common. There are several in London, Manchester, Birmingham, Wakefield, Winchester; they are also found, e.g., at Markethill in Armagh, and at Jordanhill, near Glasgow. The largest church choir in this country is that of the Foundling IIospital in London, which contains at least 200 trained voices. That of'St. Paul's is ahout so strong. The Mormon Choir in Salo Lake City is the largest in the world, being 300 strons.
ChOPIN, FREDERIC FRANCOIS, pianist and musical composer, was born at Warsaw in 1810, and clied in 184\%. He has written nocturnes, polonaises, waltzes, and mazurkas (for the piano) which display wonderful poetic fancy and subtle ideas, besides being most melodious.
Cilop-STICKS, the Chinese substitute for our knife, fork, and spoon, at meals, consisting of two smooth sticks of hamboo, wood, or ivory, with which the Chinese dexterously convey their food to their month. There is a comic pianoforte duet called Chop-sficka.
CHORAGUS, a name given in G,rece to the leader or director of chortisesperformed at public festivals. The best choragus received a tripod of brass for which he had to build a monument on which it was placed. A street in Athens which contained several tripods was called the Street of the Tripmals.
CHORD, in music, the simultaneons combination of different souncls, consonant or dissonant, by playing different notes together. There are major, minor,
diminished, tonic, dominant, and subdominant chords. In geometry a clerd is a straight line drawn, or supposed to extend from one end of an arc of a circle to the other.
Cilorus, originally a Greek terin for a troop of singers and dancers at public festivals. At one tine the clorns perforning in a tragedy never quitted tho stage, but chanted songs in the intervals of the action, and ceven took part in the performance, by advising, consoling, or exhorting the actors and actresses. In music the fchorus is that part of a composite vocal performance which is executed by the whole bocly of singers, or the term may be applied to the verses of a song in which the company join the singer.
CHRIST (from the Greek, Christos) means the anointed, and Messiah is the Hebrew equivalent. (See JESUS.)
CHRISTIAN KNOWLEDGE, SOCIETY FOR PKOMOTING, founded in London in 1698 in connection with the Church of England, having for its chief objects the establishment of schools, churches, libraries, and the publication and circulation of religious and moral literature. In 18ir the National Society branched off from it, and both are doing excellent work.
Christina, Queen of Sweden, was born in I626, and came to the throne at the age of six. The StatesGeneral appointed guardians, and she was educated in ancient languages, history, geography, and politics, and in 1644 she took upon herself the Government, She terminated the war with Denmark, and obtained several provinces by the treaty of Bromsebro in 1645. Her subjects wished her to marry, but she refused to do so, and in 1650 was crowned as Fing. From that time her conduct changed, and became most unwise, and in 1654 she abdicated in favour of a male cousin. Soon afterwards she became a Roman Catholic, entering Rome publicly to be confirmed, dressed as an Amazon. She stayed there till her death, when she left a number of valuable MSS. and a large art collection. Her writings were published in $1752^{\circ}$.
CHRIST'S HOSPITAL (generally known as the Bluecoat School) is in London, and was founded for orphans by Edward V1. The education is classical, but modern languages, literature, etc., are taught. There is a mathematical school attached, and scholarships are given to Oxford or Cambridge, The average number of pupils in London and at the preparatory school in Hertford, which includes girls, is 1000.
Chromatic, in music, a term applied to notes and peculiarities not belonging to the diatonic scale.
Chromo-Lithography, a method of producing a coloured or tinted lithographic picture, by the use of various stones with different parts of the picture drawn on them in inks of different colours, and so arranged as to make a complete picture.
CHRONOMETER, any instrument that measures tine, as a clock, watch, or dial, but specifically the term is applied to time-keepers which determine longitude at sea. The chronometer differs from an ordinary watch in the principle of its escapement, and in being fitted with a 'compensation adjustment' to allow for effects of temperature.
CHRYSALIS, a form which butterflies, moths, and most insects assume when they change from the state of larva before arriving at their winged state. The insect is then insensible and needs no nutriment,
CHRYSOSTOM, ST., was born at Antioch about A.D. 344, and he was brought up by his widowed mother, Arethusa. He lived many years in retirement, studying, and then returned to Antioch to become priest in $3^{8 G}$. In 397 the Emperor Arcadius hearing of hin as a celebrated preacher, sent him to Constantinople as archbishop, where he made enemies by his represslon of heresy and paganisin, so that the Eurperor ordered his banishment, but the night ifter he left there was an earthquake, so he was recalled. Eventually the Empress Eudoxia, his cusmy, had hinm exiled to Armenia. He died and was buried at Comana, but in $43^{8}$ his body was taken to Constantinople and interred in the Fimperor's septilclire. He wrote sermons, commentaries, and treatises upon the characteristics of his age.
CHURCII, a word in its widest sense dunoting the whole commanlty of Christians, but, in a more re-
stricted sense, denoting a particular section of them -as the Protestant Church, Roman Catholic Church, etc. It also signifies the building appropriated to Cliristian worship. Early churches in Britain were made of wood, and in the 6th century of stone. Churches are classed as cathedral, collegiate, conventual or minster, abbey or priory, and parochial. Clxurches have been used for all sorts of purposes, religions and otherwise. An old church in Brussels was for many years used as the General Post Office, and the General Post Office in London was built on the site of the old church of St. MJartin's. The tower of St. Botolph's Church at Boston had been used as a lighthouse, being visible across the waters of the Wash for 40 miles, and the same was the case with that of St. Burgan, near the Land's End, and of Monken Hadley, near Barnet. The Boston Church is an 'almanac' in stone; it lhas 60 steps to the chancel, 24 steps to the library, 7 doors, 52 windows, 12 pillars, 365 steps to the tower, which is 290 ft . high, The St. Burgan tower is 519 ft . above the sea. The widest nave in this country is that of St. Michael's, Coventry, which is 125 ft , York Minster is Io $1 \frac{1}{2} \mathrm{ft}$., and St. Paul's is 202 ft . At Reepham, in Norfolk, and at St. Andrews, in Fife, there are three churches in one churchyard, the three at St. Andrews being the Cathedral, the old chapel of St. Regulus, and the church of St. Leonard's Priory. All three are in ruins. (For the size of Church Livings, see Parish.) Cibleer, Colley, a dramatic writer and actor, born in London in 1671, who went on the stage in 1689. He wrote Love's Last Shift, Woman's U'it, the Nonjuror, etc.; the last being similar to the modern Hypocrite. His daughter-in-law, Susanna Maria Cibber, was one of the best actresses on the English stage. She was a sister of Dr. Arne, and Mandel composed pieces expressly for her,
Cicero, Marcus Tultius, the greatest Roman orator, was born in 106 B.C. He was familiar with Greek literature, and acquired military knowledge in the Marsic war. He visited Greece and profited by the instruction of the masters of oratory, and then made a tour in Asia Minor, remaining some time at Rhodes. He was appointed quaestor of Sicily, where he ruled most justly and took up the defence of the Sicilians against their governor, Verres. Seven of the Verrine orations are preserved, but only two were delivered. In B.C. 63 he became consul, but soon after his fame declined, and he was exiled in B.C. 58 . His enmity against Antony resulted in his death in B.C. 43. His works consist of orations, letters to Atticus, etc. His life was written by Plutarch.
Cil, an epithet applied to Ruy or Roderigo Diaz, Count of Bivar (born in Ioz6), the national hero of Spain. He seems to have spent his life in warfare with the Moors. His exploits are set forth in a special chronicle and in a Castilian poem of probably the izth century. The tale of his love for Ximena is the subject of Le Cid of Corneille; and Southey wrote a Chronicle of the Cid.
CIDER, a fermented liquor made from the expressed juice of apples. Worcester, Hereford, and Devon are the cider-producing counties of England. It is also made in France, Germany, North America, etc. It contains from 4 or 5 to to per cent. of alcohol.
CiGAR. The best cigars come from Havana. Medicated cigars are used for certain complaints, such as stramonium cigars for asthma. Cheroots are pecu-liarly-shaped cigars, thicker at one end than the other They come from Manilla.
CIGARETTES were first used in the street in this country by the late Laurence Oliphant about the year 1844, and became quite common after the Crimean War, mainly owing to their use among the Turkish officers.
CIMABUE, GIOVANNI, Italian painter, born in 1240 at Florence, is considered one of the chief restorers of the art of painting in Italy. His best paintings are in the churel of St. Maria Novella in Florence, and in the Sacra Convento at Assisi. Giotto was his pupil.
Cimmerinns, an ancient Nomadic tribe who occupied the Crimea and country of the lower Volga. A
mythical people mentioned in the Odyssey as dwelling: beyond the ocear-stream in thickest gloom, were called Cimmerii, a fable which gave rise to the phrase ' Cimmerian darkness.'
Cimon, an ancient Athenian general and statesman, son of the great Miltiades. He fought against the Persians at Salamis, and soon after became the head of the Greek naval forces, He distinguished himself at Thrace, conquered the island of Scyros and the cities on the coast of Asia Minor, But the popular leaders soon feared his powor and eventually secured his banishment. IIe was recalled by Pericles and died soon after, while besieging Citium in Cyprus.
Cincinnatus, Iucius Quinctius, a wealthyRoinan patrician, born about 519 IB.C. He opposed the Terentilian law for equalizing patricians and plebeians; then he became consul and soon after he retired to his estate on the Tiber. When Minucius was surrounded by the Aequians, he was made dictator, rescued the army, and returned home. At the age of eighty he was once more made dictator,
Cinna, Lucius Cornelius, an eminent Roman, was made consul in B.C. 87. Being driven away by Octavius, he and his friend Marius besieged and captured Rome, and made themselves consuls. After the death of Marius the army refused to follow Cinna, and put him to death.
CINQUE PORTS, originally the English Channel ports of Hastings, Romney, Hythe, Dover, and Sandwich, to which were added Winchelsea, Rye, and Seaford. They had special privileges in early times on condition that they provided so many ships during war. Hastings and Dover have sent one member each to Parliament since 1885 . Before that there was a different arrangement for all the ports. They are in the jurisdiction of a lord-warden.
CIRCULAR NOTES, notes or letters of credit furnished by bankers to people about to travel abroad. With the notes the traveller receives a 'letter of indication,' bearing the names of the foreign bankers who will cash the notes, in which letter the traveller writes his name, so that his signature may be identified by the bankers, if they choose, when he presents the letters in person.
CIRCULATION, in an organism, the flowing of sap or blood through the veins or channels. William Harvey discovered the continuity of the connections between heart, ${ }^{\top}$ arteries, and veims, the reverse directions which the blood takes in different vessels, the arrangement of valves in the heart and veins, and the necessity of a large proportion of blood returning to the heart, to maintain the supply.
Circuminavigators, a term applied to the early navigators who sailed round the globe. Magellan headed the first expedition, and Drake, Carendish, Cook, and Anson were others who went.
CIRCUS, among the Romans a nearly oblong, roofless building, in which chariot races, etc., took place. The largest was the Circus Alaximus, but little remains of it now, in Rome. The circus of Caractlla is in best preservation. The principal games of the circus were celebrated between September 4 th and $x^{4}$ th, in honour of the great gods. The expense of them was often immense under the emperors.
CISTERCIANS, a religious order, named from its original convent, Citeaux, near Dijon, in eastern France, where the society was formed in yog8, under the observance of the rule of St. Benedict. Next to Citeaux the chief monasteries are La Ferte, Pontigny, Clairvaux (founded by the celebrated St. Bernard in IIIs), and Morimond. The most reniarkable of the fraternities are the Barefooted Monks, nuns of Port Royal, the Recollets, and the monks of La Trappe. There are still two or three houses in the British Isles.
CITIES. Nature and necessity compel men to congregate in social groups. The place for such a process must originally have been easy of access in tunes of peace, and easy of defcnce in times of war. Easy access is got along a river valley or through a mountain pass, and easy defence implies the protection of mountains or the isolation of water. Tho density of the population would vary with the supply of food, e.g. tish, deer, pigs, and of other natural wealth, e.g. nint for weapons, clay for utensils, and salt for pre-
serving food. Anongst the largest citics lut the world aro London, ['aris, Canton, New York, Berlin, Viemn, Tokio, St. Petersburg. Tientsin, and severil other Chinese cities, all of which have $1,000,000$ inhabitants and upwards. Paris has about $2 \frac{1}{2}$ tuillions, and London nearly 6 millions.
CITIES OF REFUGE, six out of the forty-eight citics given to the Levites, set apart for the manslayer or accidental homicide. Tlocir names were Kicdesh, Shechem, and Hebron on the west, and Bezer, Kamoth-Gilead, aud Golan on the east.
CIVIL SERVICE, collectively, all offices under government, except those directly connected with the army and navy. In Great Britain it comprises such departinents as the Home Office, Foreign Office, Treasury, War Office, Admiralty, Post Office, Customs, etc. Formerly, appointments in this service were obtained by influence, but in 1870 it was directed they should be filled by open competition. The sudary of clerks in the lower division begins at $£ 80$, and rises to $£ 200$. In the higher division the silaries are better, but the examinations are more severe. There are also boy clerkships for youths over 15 and under 17 years of age; and certain appointments in the telegraph service and post office are open to women. The Indian Civil Service is a branch by itself, and gives $£ 10,000$ a year and a residence to each of its three chief governors (Bengal, Bombay, Madras), and $£ 8000$ to Members of Council. It gives salaries of $£ 5000$ a year and upwards to at least 27 of its officials, $£ 4000$ to 50 , $£ 3000$ to 125 . £2000 to 351 , £1000 to 1003 . Out of these 1556, only 61 are not Europeans. There are 17,136 officials with salaries of from $£ 100$ to $£ 1000$, of whom II. 625 are not Europeans.
CIvilization is progress in the art of living together. and therefore it eliminates class dictinctions and overcomes geographical obstacles. It brings with it increased knowledge of all kinds, social, intellectual, and moral; and therefore it also brings increased responsibilities-those of the nation, as a nation, and those of the individual, as an individual; and according as that knowledge is used and those responsibilities are recognized, so will a nation be proportionately civilized.
CLATKVOY゙AN゙CE is an alleged faculty by which certain people, under certain conditions and in certain states, are said to be able to see things by spiritual or mental vision, apart from the sense of sight.
ClaN (Gaelic, a tribe or family), among the Highlanders of Scotland, consisted of the common descendants of one person under the patriarchal control of a chicf who represented that person. The most notable instance of a proscribed, persecuted clan, was the MacGregor clan; but the rebellions of the ' 15 and ' 45 induced the British government to break up the cinns.
Clarendon, Constitutions of, a code of laws drawn up in the reign of Fenry II., in II64, at the village of Clarendon. The laws were brought forward, by the king as 'the ancient customs of the realm.' Isy them the power of the ecclesiastical courts was much restricted. Becket signed them, but retracted his signature, and after his murder Henry modified the laws to appease the Pope, but they contained the serm of the ecclesiastical policy of Flenry VIII.
Ci.ARENDON, EDWARDHYDE, EARLOF, Lord High Chancellor of England, was born in 1608. IIe studied at Oxford and at the Midelle Temple, and commenced lis political carecr in 1640 as member for Wootton[3asset. In 164 r he was recognized as leader of the Kine's party in the House; and after Cromwell's death lie elid moro than anyone to bring about the Restoration. In 8660 he becane Chancellor of Oxford University, and the next year was made Earl of Clarenclon. But his sun soon set, and when lie pre. vented the King from repucliating his wifo and inarrying I ady Stuart, Charles deprived him of his offices, so he left for Calais. Ile wrote a Ilistory of the fobelliom and fistor!! of the Romblton in Ireland, the latter in defence of Lord Ormonde.
CLARENDON PRESS, the press of Oxford University. In 1533 Arehbishop. Land obtained a large license in printing for tho University, with a view to publishing

Boalleian MSS. The 'North' side of the offices is used for the "learned" or classical publications of University books and documents ; the 'South' for printing Sibles and prayer books. The Vice-Chancellor and ten other nembers of convocation manage the printing office.
Ct.AKKSON THOMAS, an English enmancipationist, born in 1760 . He stuclied at St. Joln's Collexf: Cambridge, where the gained the Vice-Chancellor's prize for a Latin essay. He allied himself with the Quakers and Wilberforce against the slave trade, and his labours helped largely to bring about its prohibition in I807, and the Emancipation Act in 1833. He wrote A Portrazure of Quakerism, If istory of the Alolition of the Slave Trate, etc. He died in 1846.
Classificatron is defined as the arrangement of things according to their resemblances or identities. There are no fixed methods of doing it; but, obviously, in correct classification, the definitions of a group must be true of all its members and not of any other group. It is, perhaps, most important in natural history.
ClaUde Lokkaine, a landscape painter whose real nane was Claude Gelée, was born in 1600 in the province of Lorraine. Agostino Tassi employed hin: at Rome to grind his colours and do household work; and then he travelled for a while, settling in Rome again in 1627, where his works were greatly sought for. The chief galleries in Italy, France, England, Spain, and Germany are adorned with them. The painting he valued most was one of a small wood belonging to the Villa Madama, Rome. He excelled in luminous atmospheric effects. He made small copies of all his pictures, in six books, called Libri di Verita, which are very valuable, especially to students.
Claudius, or, in full, Tiberius Claudius Drusus NERO GERMANICUS, a Roman Emperor, was born in IO B.C. and proclaimed Emperor in 41 A.D. The restoration of the exiles, the embellishment of Rome, and successes in Britain and Germany took place in his reign. He was, latterly, a very bad man and left the govermment to his wives. His fourth wife poisoned him. She was Nero's mother.
CLAY consists of hydrated silicate of aluminium, with sinall proportions of the silicates of iron, calcium, magnesium, potassium, and sodimm. Of the chief kinds of clay porceldin-clay is the purest ; and besides that there is potter's clay, pipe-clay, and firechoy, Loan is clay mixed with sand. The best wheats in Britain and the European Continent are grown on calcareous clay, as also are the finest fruits and flowers. No soil is really fertile without it.
ClAYTON-BULWER TREATY, a treaty between Britain and the United States, coucluded in 1850, and having reference to the ship canal across the Isthmus of Panama. Both parties agreed to erect no fortifica. tions there, nor to acquire any part of the Central Amcrican territory.
CIEARING-HOUSE, an institution connected with banks and railways. In the former case it is an establishment in large cities to which each bimk connected with it sends daily, in order to have its business with the other banks adjusted. A clearingrhouse was first introduced into Lonclon in 1775, and in 1874 the Stock Exchange clearing-house was formed, which widened the connection. The Fothery Clerring-Ifouse is an association which allows tho various companies to carry on their traffic over different lines.
Clemens, SAMUEL LANGHORNE, the Americin lumorist, more widely known by his pseuclonyms 'Mark Twain,' was born in 1835. Ile was at ditferent times a miner in Nevada, editor of a newspaper in Virginia City, and reporter in San I-rancisco. In 1866 he went to the Sandwich Islinds, and, on lis return, began his lecturing carcer. Thes fonocents Abrocul, A Tramp Ainomb, and Life on the Mississify, i are prolably his best-known books.
CLEON, an Athenian demagogne who was known before Pericles died, and in 4.7 B.C. distimgnisherl himself by proposing to put to death the aftuf males of the revolted Mytilcmeans, and to sell the women and chiddren as slaves. In 425 be took Sphiateria
from the Spartans, and in 422 was sent against Brasidas, but was taken unawares, and slain in his attempt to escape.
Cleopatira, a Greek Queen of Egypt, born in B.C. 69. Such unions being conmon among the Ptolemies, she was forced to marry first her eldest, then, when lie died, a younger brother who was eleven at the time. She poisoned the latter, and so possessed all the power. She was themother of Caesar's son Caesarion, and os three of Antony's sons. Augustus warred against Antony, but Cleopatra took flight and Antony followed her, both going to Egypt. They said they would live in retirement if Egypt were left to her children, but Augustus demanded Antony's death, and, when he came to Alexandria, Antony committed suicide, and Cleopatra followed his example. With her the dynasty of the Ptolemies ended.
CLEOPATRA'S NEEDLES, the name given to two Egyptian obelisks, one of which is in London, the other in New York. They are made of the rose-red granite of Syene, and were originally erected by the Egyptian king, Thomes III., before the Temple of Heliopolis, the On of the Scriptures, where Moses was brought up. The London obelisk stands on the Thames Embankment, where it was erected by the private munificence of Sir Erasmus Wilson. The Khedive of Egypt presented the New York obelisk to the United States in 1881. Each obelisk is about 70 feet high and covered with hieroglyphics.
CLERGY (from the Greek, Kleros, a lot, because the Apostle Matthias was ordained by 'lot') are not compelled to serve as jurymen, act as bailiff, constable, or any like office; but they cannot accept a seat in Parliament, engage in trade, or farm lands of more than 80 acres, without their bishop's consent. Episcopalians recognize three classes of clergy: (r) Bishops; (2) priests; (3) deacons.

CLEVELAND, GROVER, 22nd president of the United States, born in 1837: He was elected mayor of Buffalo in 188x, and in 1882 governor of New York State, and president in 1884. In 1888 , President Harrison succeeded him. Civil service reforms and tariff were advocated by him during his tenure of office.
Climate is the sum-total of the average conditions which make a place suitable or unsuitable for animal and vegetable life; and it is quite possible to have very bad weather-the particular condition-in a place which has an excellent climate-the general condition. Climate depends on (I) the slope of the land, a vertical ray being much hotter than an oblique one, (2) the height, (3) the distance from the sea, the source of all rain, (4) the latitude, and (5) the prevailing winds. Climate is divided roughly into Marine and Continental. The main feature of a marine climate is moisture, which varies with the warmth of the sea from which it comes; that of a continental clintate is dryness, which always involves extremes of heat and cold.
Clincher-built (Clinker-built) is a tern in shipbuilding when the planks are so arranged that the lower edge of the one above overlies the edge of the one below it.
Clive, Robert, Lord Cilve and Baron of PLASSEY, English general and statesman, was born in 1725, in Shropshire. In 175 I he took the large city of Arcot, withstood a two months' siege, and at last routed the enemy, returning to Madras completely victorious. He avenged the sufferers in the Black Hole of Calcutta, and was made governor of Calcutta. He returned finally to England in 1767, and, his health being broken, put an end to himself in 1774 .
CLOCK differs fron a watch mainly in having its machinery moved by a pendulum. The use of a horologium, or hour-teller, was common among the ancients, and Charlemagne had a clock given to him in 807. In the r2th century clocks were used in monasteries. Richard, abbot of St. Albans, made a clock (somewhat like those now used) in 1326. It indicated the ebb and flood tide. In 1657 Huyghens applied the pendulum to clock-work.
Closure, a rule in the Britisli Parliament, adopted in 1887, that at any timo after a question has been proposed, a motion may be made, with the speaker's or
chairman's consent, 'That the question be now put,' when the imotion is put and decided at once without further debatc.
Clothinc is necessary for one reason as a protection from cold, and therefore in a changeable clinate woollen clothing is safest. Cotton, silk, and lireen materials are all used. Clothes should be made so as to allow the body the full excrcise of all its motions, and they should be adapted to the jersonal appearance of the wearer.
CLOUD can be from 1 to 3 miles high, and acts like a blanket for the earth. The cumulus, or summer cloud, which assumes the form of conical heaps, and which accompanies fine weather, attains its greatest size early in the afternoon, decreasing towards sunset. The stratus belongs essentially to the night, and is often seen on calm summer evenings after sunset. The utimbus, or rain-cloud, is the least attractive of the clouds in appearance, but it forms a splendid background to the rain-bow.
Clough, Arthur Hugh, English poet, was bom in 1819, studied under Dr. Arnold at Rugby, and then at Oxford. On returning from a tour in America he was appointed an examiner attached to the educational branch of the privy-council office. He died in 1861. His best-known poems are Bothie of Tober-naFuolich, Amours de Foyages, and the Tragedy of Pipsychus.
Clover, or Treforl, provides the bee with most of its honey. White Clover is most valuable for pasturage in Europe, Central Asia, and North America. Red Clover is the kind most commonly cultivated, as it yields a larger product than the other kinds.
CLOVES are the dried buds of a species of myrtle, now cultivated in Sumatra, Mauritius, Jamaica, etc. The tree grows from $x_{5}$ to 30 feet high with large smootli leaves and numerous purplish flowers on jointed stalks. Essence of cloves will deaden the pain of toothache.
Clovis, King of the Franks, was born in 465 . In $4 \varepsilon 6$ he overthrew the Roman governor at Soissons, and occupied the country between the rivers Somme and Loire. In the last year of his reign (5Ir) he called a council at Orleans, from whicls are dated the privileges claimed peculiarly by the French kings in opposition to the Pope. Clovis was conserted to Christianity through the influence of his wife, Clotilda, a Burgundian princess ; but still, by treachery and cruelty, lie got rid of the other Frankish rulers in order to give their territory to his children.
Clown on the old English Stage took no part in the dramatic development of a piece, but carried on his jokes and tricks with the actors, and often addressed himself directly to the audience also. In Shakespeare's dramas a distinct part is assigned to clown.
CLuB is a peculiarly English institution, which can hardly be said to have taken root in any other country except America. The coffee houses of the $r$ th and 18th centuries best represent the modern club. The Fit-cat Club, one of the earliest of the London clubs, was formed in Queen Anne's reign, and another was the Beefsteak Club. Eventually the former became a Whig and the latter a Tory club. The most celebrated of the last century clubs was probably The Club, to which Dr. Johnsun, Sir Joshua Reynolds, Oliver Goldsmith, Edward Gibbon, and others belonged. The most important London clubs are The Cartton (Couservative) and The Reform (Liberal), The Club des Jacobins, Club des Fenillants, C7ub des Cordeliers, and Club do 1 Monfrompe were famous at the time of the first French Revolution.
Clyde, Lord, Sir Colin CAmpbell, was born in Glasgow in 1792, where his fither worked as a cabinetmaker. In 1808 he received an ensign's commission in the 9th Regiment of Foot, having changed his name to Campbell, his mother's maiden name. He served under Sir John Moore and Wellington in Spain; then he was in the West Indies; in 1842 he commanded the o8th Regiment in China, and, at the close of the Clinese Wir, took active service in India, after which he was given the title of K.C. 13. In 1854 he became Major-General, and connmandad the Highland Brigade in the Crimean War. His services were so conspicuous at Ama and Balaklava
that he was appointed to chief command in the Indian Mutiny. In 1837 he relieved Havelock and Outrain at Lucknow; and he crushed the rebellion in a year, for which he was made Baron Clyde, and was given an income of 62000 . He died in 1863 .
CLyTEANESTRA, in Greck mythology, daughter of King Tyudarus and Leda, aud half sister of Helen. During the Trojan War slie and ler favourite Aegis. thus murdered Agamemnon ou his return from Troy, and then they governed Mycenae together. Her son Orestes killed them both seven years later.
COACH . The earliest carriages appear to have been open, judging from the carvings of Assyrian and Babylonish dhariots. After the fall of the Roman Eupire it was the custom to ride, and in the 15 th century only women and invalids used carriages. They were probably introduced into England in the ith century; and hackney coaches were first used in London in rob25, and stage coaches about the sane time. Before the end of the 17 th century the latter were running on the three principal roads in England, The first mail coach ran between London and Bristol in 178.
COAL is of different kinds, either anthracite (nearly pure carbon, used for furnaces, etc.), bituminous (household coal), or camnel (gas-coal). The first charter was granted by Henry III, in 1239 to the city of Newcastle, giving liberty to dig coal; and a charter was also granted in 129 to the abbot and convent of Dunfermine for the same purpose. The development of the steam engine by James Watt enomnously increased the use of coal, of which the importance is obviously due to its value for motive power. The total coal production of the world is about $500,000,000$ tons a year, of which the British Empire produces about 200,000.000. The most famous coal-fields are-those in Durham and Northumberland; and others in Britain are the Lancashire and Yorkshire, and the South Wales coal-fields. Cardiff exports more coal and more tin-plate than any other port in the world. The Scottish coal-fields are in Ayrshire and along the banks of the Forth.
COALING STATIONS are most important as points of refuge, defence, and repair for British ships, Aden, Singapore, Hong Kong, Sierre Leone, St. Helena, Mauritius, Jamaica, and Simon's Town (Cape Colony) are the best.
COBDEN, RICHARD, the 'apostle of free trade' and English politician, was born in 1804, and died in 1865. In 1830 he started a cotton manufactory in Manchester, which was soon successful ; and in 1838 he joined the Anti-Corn Law League, helping much to win the victory of the movement. In 1841 he entered Parliament, and laboured as an advocate of parliamentary reforin, economy and retrenchment. His last great work was the commercial treaty he brought about between Britain and France in 1860 . His first political writing was a parnphlet on England, Ireland, and America.
COCHINEAL is a dye-stuff made of the dried bodies of the females of an insect found in the warmer parts of America, chiefly in Mexico. The insects live on a $k$ lnd of cactus called the cochineal fig, off which they are gently brushed, and killed by being put in ovens or dried in the sun. Cochineal was first discovered in Mexico and Guatemala.
COCKADE adomed the cap of every Croat in the service of the French in the 17 th century, and the tricoloured cockade-red, white, and blue-was the national distinction during the French Revolution.
COCKATOO is found especially in the Eastern Archipelago and Australia. The crest can be raised or lowered at the will of the bird.
COCK.FIGHTING was an amusement probably first practised by the Grecks and Romans. At Athens there were annual cock-fights. It was a favourite British sport until the begmning of ()ucen Victoria's reign, when it was forhicden.
COCKROACH is nocturnal in its habits and extremely agile in its movements. It was brought from Asia to Lurope, and then it reached America, where it is now common, and where it grows to be 2 or 3 ins. long,
COD is one of the three most important species. of fist for food purpuses, the other two being herring and
salmon. The cod periodically visit a submarine bank on which the Lofoten Istands stand, because it is rich (like the Newfoundland and Massaclusetts banks) in sea-weed. The cod are either split aud dried on 'stakes' (from which they get their market name of 'stock-fish'), or they are salted and ctricd on the 'cliffs' behind the fishermen's huts (froms which they get the market name of 'klipp-fish'), and there is an inportant oil industry in connection with the fishery.
CODEX, an important ancient MS, as one of the Scrip tures or of some classical writer. Codex Sinailicus is a manuscript of the Old Testament (Greek Septuagint version), the New Testament Epistle of St. Barnabas, and part of the Shepherd of Hermas, found in St. Catherine's Monastery, on Mount Sinai, in 1859, by Tischendorf, and it is now at St. Petersburg. He assigns it to the 4 th century. The Old Testa. ment is defective, but it is the only manuscript of the New Testament which is complete, and it is therefore most valuable.
COFFEE is mucla cultivated in Arabia. The shrub is from 15 to 20 feet in height, the flowers being white and sweet scented. The fruit contains two cells, and each cell contains a single coffee bean. A pound of coffee is generally more than the produce of one tree. The best comes from Mocha, on the Red Sea, but mos: comes from Java and Central and South America, espe. cially Brazil, The tree grows best at an elevation of from 3000 to 4000 feet above the sea; and, as it is grown so largely for export, the best situation for a coffee plantation is a low mountain range near a coast whicll possesses good harbours. But, as the plant requires also great heat and a considerable amount of moisture, and as the soil ought to be rich in decayed vegetation, the best sites will be further limited to a forest-clad range in the tropics, and exposed to the Trade Winds. All these qualifications are possossed by the seaward slopes of the Serrado Mar, and, therefore, Rio de Janeiro and Santos are the two greatest coffee markets in the world. Indeed, coffee has made Rio the most important city, except Buenos Ayres, in the whole of South America. The drink was introduced into England in $165 z$ by a Turkish merchant. The Asiatic way of preparing coffee is by pounding, not grinding, the beans; and, in Arabia, spicing (generally saffron) is always used with it instead of sugar and cream.
COHESION is a force by which the various particles of the same material are kept together, forming one
continuous mass. It differs from the attraction of gravitation in that it acts at insensible distances, or between particles in contact, and from adhesion in that it unites particles without producing any change of properties. Hardness, elasticity, ductility, etc., are modifications of cohesion.
Coining. Gold is brought to the mint in ingots, each weighing about 180 ounces. Each ingot is tested in order to know the amount of alloy or fine gold whicl is required to be added to bring it to the stanctard fineness (twenty two parts pure gold to two parts alloy). Coining is one of the prerogatives of the supreme power in all states. The smallest coins in the world are used in Portugal, Russia, and Malay Peninsula. The Portuguese threc-reis is worth three twenty-fifths of a penny; in South Russia a coin one four-thousandth of a penny is used by the peasants; and the Malays have a wafer worth one ten thousandth of a penny.
COKE contains about ninety per cent of carbon, and it is used where strong heat is wanted without smoke and flame, e.g. in drying malt. The largest quantities are consumed in smelting operations. Good ovencoke has an iron-grey colour and a sub-metallic lustre. COLBERT, JEAN BAPTISTE, the celebrated French minister of finances, was born in 1619. Whell he became comptroller general, he found the finauces in great disorder, the revenues being anticipated for two years aud the treasury empty, while the peoplo paid $90,000,000$ livres of taxes, which sum he 50011 reduced to one laalf. IIe coustructed the I anguedoe Canal, dectared Dunkirk and Marseilles free ports, and rapidly developed the industry and commerce of lirance, Ife fanded the atculemy of Inscrintions.
the Acrademy of Sciences, and the Actulemul of Architecture. After doing all that for his country, lie died in disfavour with the king ind people.
COLD is the absence of heat, as restraint is the absence of freedom, both being negative ldens.
COLENSO, JOHN WILLIAM, D.D., Bishop of Natal, and one of the great arithncticians, was born in 18 r4, eclucated at Cambridge, assistant-master at Harrow, and then appointed the first bishop of Natal in $1853^{\circ}$ Ilis treatises on Algebra and Arithmetic have bcen popular text-books in schools and colleges. Il is work on the Pentateuch and Book of Joshua caused the Bishop of Cape Town to depose him since he called in question their historical accuracy, but he was reinstated in his bishopric by the decision of the Court of Chancery. He died in 1833 .
COLERIDGE, SAMUEL TAYLOR, the celebrated English poet and philosopher, was born in 1772. He was educated at Christ's Church Hospital and Jesus College, Cambridge. Then he lived in Bristol with Robert Southey and Lovell, a young Quaker, and in I7p6 he ivas supported by Wordsworth's companionship, and when he wrote his best poetry The Ancient Mavimer and first part of Christabel. In 1800, after a tour in Germany, he settled beside Southey at Keswick, and Wordsworth being at Grasmere, the epithet of the 'Lake School' was applied to their works. After a voyage to Malta for health's sake, Coleridge went to llve with his friend Mr. Gillman, spending the rest of his energies on holding weekly conversaziones and in writing T'able Talk. He died in 1834. He ruined himself, mentally and physically, by opium eating.
Collect. Some of the collects of the English Church are taken from the old Roman Missal, and are believed to have been written by St. Jerome. Others are still more ancient, and some were added after the Reformation.
COLLEGE is generally used tor literary pursuits, but there are colleges of surgeons, pliysicians, heralds, musiclans, and organists. Colleges were probably first founded in the various universities of the Middle Ages. Boarding-houses were provided (chiefly by religious orders for the benefit of their own fraternity), In which the scholars lived under superintendence, and an endowment for the support of poor scholars completed the foundation of a college. Out of this developed such colleges as those at Oxford and Cambridge.
Collis is especially common in Scotland. They are useful as sheep dogs, and as a rule they are very faithful to their employers, showing great intelligence In interpreting their master's comnands.
COLLINGWOOD, CUTHBERT, ADMIRAL LORD, the English naval commander, was born in 1750. He entered the royal navy in 1769; in 1794 commanded the Excallent during the battle off Cape St. Vincent, and was made rear-admiral of the white in 1799. His most distinguished service was at Trafalgar. On the death of Nelson lie took command of the fleet. He died while cruising off Minorca in 18ıo. 1 iis memoirs and correspondence have been published.
COLLins, Wilfiam WILkie, the novelist, was born in London in 1824. He was educated for the bar, but turned aside to literary work, in which he has shown dramatic and constructive power. The Homan in White, Basil, and The Lav and The Lady are probably his best-known tales.
COLOGNE CATHFDRAL is one of the finest and largest Gothic structures in Europe. It was begun in 1248 and not finally completed till this century. It is in the form of a cross, and the height of the two western towers being 520 feet, it is among the highest edifices in the world.
Colonna, an Italian family that had become innportant by the 8th century. Its fame in the Middle Ages was only secoudary to that of the Orsini fauily, and it has furnished many celebrated warriors, popes, fand cardinals.
COLONNA, VITTORIA (one of the same family), the miost renowned poetess of Itrly, was born in 1490. At the age of seventeen she married Ferdinand, Marquis of Pescarn, who was in distinguished man in his age. They lived most happily together, aud when he died after the battle of Pivia ( 525 ) Vitturia
went into retirement. All her poems were devoted to her lusband's mentory. Jime Spirituall is her most celebrated work. Her writings are considered to be imong the best initations of Yetrarca. She died in 1547.
COLONY nuty be formed from the ambition of extending territory or the desire of increasing wealth. Among ancient mitions, the Phoenicians, Greeks, and Romans were the greatest colonizers; and, later, the Spaniards and English; and, in a suraller way, the Portuguese, Dutch, and French. The Germans have lately contributed to the tide of emigration in the direction of America and Africa. Great Britain eclipses all other countries in her prosperous carcer of colonization. It is estimated that the existing British colonies and dependencies cover about one-sixth of the land surface of the globe and about the same proportion of its population.
COLOSSEUM, the Flavian Amphitheatre in Rome, was begun by Vespasian, and finished by Titus, 80 A.1). It is pierced with 8o openings in the ground storey; over which are placed three other storeys, the whole building rising to the height of 160 feet. The outline is elliptic.
COLOSSUS is the kind of Statuary in which the Asiatics, Egyptians, and especially the Greeks excelled. The most famous Egyptian colossus was the statue of Mfemnon, in the plain of Thebes, supposed to be identical with one now standing on the west bank of the Nile. The inost celebrated Grecian colossus was the Colossus of Nhodes, a brass statue of Apollo, 70 cubits high, esteemed one of the wonders of the world, which was erected at the port of Rhodes by Chares about 290 B.C. It was destroyed by an earthquake about 224 B.C. The most famous Roman colossi were the Jupiter of the Capitol, Apollo of the Palatine Libravy, and the statue of Nero. Bartholdi's statue of Libcrty, given to the United Stases, measures 104 ft ., and having been erected at New York harbour on a pedestal II4 ft . high, is constructed for a lighthouse with one of the most powerful forced lights in the world.
COLOUR. Light contains an enormous, if not an infinite, number of quite distinct colours, though orly seven are usually mentioned as the primary colours. Strictly speaking, there are only three primary colours-red, green, and violet ; because they cannot be resolved into any others. The colours in Heraldry are-azutre, gules (red), sable, vert (green), purpure (purple), tawny, and murrey or sanguine (crimson).
Colour-Blindness has been divided into three grades-(a) Inability to discern any colour, so that light and shade (white and black) only are noticed. (b) Inability to distinguish shades of the more composite colours, as browns, greys, neutral tints. (c) Inability to distinguish between the primary colours red, blue, and yellow, or between them and their secondaries, green, purple, orange, and brown. Red is the most difficult and yellow the most easy colour which the colour-blind have to distinguish. Colourblindness is most common among men, and it does not follow that there is any defect in the eyesight, apart from it. The cause of it is in the sensorium, not the visual organ.
COLOUR-PRINTING is produced (1) in the chromolithographic form when a copy of the pieture is transferred to as many stones as there are colours in the original, and then it is again transferred to paper. (2) The block or surface colour printing which is adapted for book illustrations, which is done in a somewhat similar way to the chromo-lithography, only it is a shorter method, as each block is capable of producing three or more gradations of the sane colour.
COLUMBA, ST., a native of lreland, was bom in 52 T . In 545 lie founded the Monnstery of Derry; and, subsequeutly, many Irish churches. About 563 he landed on the ishand of loni, and founded his church there, and about two years later he went on a mission to the northern Picts, Christianizing them and founding monasteries, all of which were subject to the lonian one. The Columban Church was in sonne points of cloctrine and ceremonial opposed to Rome, to which it owed no allegrinte.

COLUMBUS. CIRRISTOPHER, the explorer, was born ins 435 , went to sea nt an early age, ankl navigated apparently all parts of the Mediterranean, and some of the coasts beyond tho Straits of Gibraltar. In x+93 he reached San Salvador, which Columbus believed to be India atl his life, and hente the Ancelican natives were mistakenly callect Indians. He aso discovered Cuba, St. Doiningo, and other West India lshands. Ile went four voyages and then his health gave way, and he dicd in 5506 .
COMBUSTION, the Operation of fire on inflammable substances, or the union of an inflammable substance with orygen, or some other supporter of combustion, attendecd with heat, and generally with lighlt. Sponbuneous Combustion is the igniting of a body by internal development of heat without the application of firc.
COMEDIE TPRAXCASEE, the uational thearre of France, formed in 6680 by the fusion of the two bodies into which Moliere's company of actors lad split.
COMEDY is distinguished from tragedy by its sprightliness and the end of its plot being happy, and irom farce by its greater refhuement and by more of probability with less of burlesgue.
COMETS after being visible from the earth for a shorter or longer time, either disappear into space, apparently never to return, or return to us periodically, according as they move through the heavens. One of the most remarkable conets of recent times was that discovered by Dr. Donati at Florence, and which was seen brilliantly in England in October, 1858 . In 1881 seven comets were recorded, including the wellknown, short-period comet Eucke's. Tycho Brahc, Halley, and Clairaut have been authorities on comets from the r6th to the r8th centuries.
COMMEMORATION is the day on which orations are delivered, prize compositions read, and honorary degrees conferred on distinguished people in the theatre, in honour of the benefactors of the Oxford University.
COMMENCEMENT is the dayl when masters of arts and doctors receive their degrees at Cambridge University and the United States Universities.
COMMERCIAL LAW is derived from the different maritime codes of mediaeval Europe, the imperial code of Rome, international law, and the custom of merchants. Lord Mansfield was the first great exponent of commercial law in Britain in the r8th pontury, and a modern authority is Prof. Leone Levi.
Comsercial Treaties extend commercial reIations between countries, as each country engages to abolish or reduce to an agreed rate, or otherwise modify, the duties on the articles imported from the one into the other country. The first treaty entered into by England with a foreign nation was that with the Flemings in 1272, and the next was with Portugal and Spain in 1308 . The inost famous modern one was between Richard Cobden and the ministers of Napoleon III. in 1860 .
Commines, Philippe De, French writer and statesman, was born in 1445 . Ife was confidential adviser of Charles the Bold, Duke of Burgundy, but afterwards entered the service of Louis XI., who loaded him with favours. In 1484 he attended Charles VIII. to Italy, and soon after he began his Memolrs, valuable as a bistory of the times.
Common Law, the unwritten law that receives its force from immemorial usage and universal reception. Many of these laws originated in judicial declslons, founded on natural justice and equity or on local customs. Common Law is contrasted with the statute law, equity, and the civil law. Statute haw prevails over common law, but common law asserts preeminence against equity.
COMMON PRAYER, BOOK OF, dates from the reign of Edward VI. Some slight alterations were made in Elizabeth's reign and in that of James I., and again after the Restoration it underwent revisions. It is not only used by the Church of England, hut by Episcopal English-speaking churches in Scotland, Ireland, America, and the Colonics.
Common Time is that ln which each har of music contains an eveu number of sub-divisions. It is simple or compound.
Collmons, house of. (Sce Parlidi:amt.)

COMMUNE or PARIS. (i) A revolutionary committec formed in the French Revolution of 1789 to take the place of the nunicipality of Pirls. (Robespierre was a clice member of t.) (2) The nane adopted by the niltria-radical party in J'aris, during the Franco-German War, at the time of the siege of 1'aris in 5870.
COMMUNISM, the cconomic systen which uphoids the absorluing of all proprictary rights into a common interest, an equitable diviston of labour, and the formation of a fund for supplying the wants of the community. It is equivalent to socialism in England.
COMPASS indicates the magnetic meridian, or the position of objects with respect to that meridian. Its origin is unknown, but it is supposed to have been brouglit from China to Europe in the 13 th century.
Compensation balance (Pendulum) is a balancewheel or pendulum so constructed as to counteract the tendency of variations of ternperature to produce variations in the rate of vibration or oscillation. It is used in watches, chronometers, and clocks.
COMPURGATION was a mode of defence allowed by Anglo-Saxon law in England, and is common to most Tcutonic nations. The accused was allowed to call a number of (generally twelve) men to sware to his innocence. They were called compurgators. They acted rather as jurymen, swearing to their belief (not to what they knew) as soon as the accused had sworn to hls own innocence. Compurgation in ecclesiastical courts was not abolished till Elizabeth's reign.
Comte, isidore auguste Marie francois XiviEr, founder of the 'positive' philosophy, was born in 1798. He was a pupil of St. Sinion and drew up a formula of his doctrines which did not satisfy St. Simon. In 1826 Comte began his philosophlcal lectures, but soon after became insane, and did not recover till 1827. His Cours de Philosophia Positive has been translated into English. His second great work was Positive Polity.
COMyN, John, called the 'Red Comyn' (son of John Comyn, Lord of Badenoch, one of the thirteen claimants to the Scottish throne in r29x), was chosen one of the three guardians of Scotland, and defeated the English at Roslin in r3o2. IIe submitted to Edward I. in 1304, and was killed by Bruce in the Convent of the Minorites at Dunfries in I306.
CONCORDANCE is a most useful addition to any work. It is a help in finding any particular passage or reference, and shows the claracter and style of a writer. Two of the best concordances in ${ }^{2}$ English are those of the Bible (by Cruden, Butterworth, Brown, and Taylor), and of Shakespeare (by Mary'Cowden Clarke).
Concordat, a convention between the Pope, as head of the Romish Church, and any secular goverminent for settling ecclesiastical relations. The one at Worms, between Pope Calixtus II. and the Emperor, Henry V., has been regarded as the fundamental law of the church in Germany. Since the middle of tha x8th century concordats have been adverse to papal power.
CONCRETE COnsists of hydraulle or other mortar mixed with gravel or stone chippings. It is used exterssively in building under water, and also for wails of houses occasionally.
CONDE, LOUTS DE BOURBON, PRINCiz of (the Great Conde), the famous general, was born in 162 x . During the troubles of the Irronde, he at first took tho side of the court; but, considering himself ill-treated by Mazarin, he put himself at the head of the Petits Mfaitres, and was imprisoned for a year, in 1650 , by Mazarln. On his relcase he was soon made general. Issimo of the Spanish forces. In 1658 Turenne defeated him at Dunkirk: but he was restored to his rank in France at the peace of 1659 . His successes in Alsace, in 1675 , closed his military career.
CONDENSED MILK is milk preserved by evaporating part of its moisture and sometimes mixing willi refined powdered sugar, and packing in air-tight cans.
CONDOR is a South American blrd of the Vulture tribe. Its wings liave been known to attain an expanse of 14 feet. It is found in the Andes, from io to 15 thousand fect above the sea level. When
hungry it will attack sheep, deer, and even bullocks successfully.
CONDUCTOR, or LIGHTNING CONDUCTOR, was insented by Benjamin Franklin about 1752, the first one being erected in England in 1762 .
CONFEDERATE STATES were the II southern states which tried to sececle from the American Union when Abraham Lincoln, the anti-slavery candidate, was elected President in 1860 .
CONFEDERATION OF THE RHINE was the league of German States formed by Napoleon in 1806 to raise troops and establish a diet at Frankfort, the border town between southern, or highland, and northern, or lowland Germany. The chief members were Bavaria and Wurtemberg.
CONIFESSIONALS in Romish churches and chapels are enclosed seats, like sentry-boxes, the priest sitting within and the penitent kneeling outside.
CONFIRMATION is the ceremony by which a person of 'mature 'age takes the responsibility of the vows made by godparents at Baptism. 'Mature' means ? years in the Roman Cliurch, 33 or 14 in the Lutheran and the Anglican Churches.
CONFUCIUS, or 'KONG-THE-TEACHER,' the famous Chinese philosopher, was born about 550 B.C., and his teaching-social and moral-still has enormous influence in China. He emphasized practical morality and social duty.
CONGER EELS sometimes are as much as ro feet long, and can inflict serious bites on their foes, human and otherwise. Very large and very fierce ones are caught off the Calf of Man.
Congo Free State was formed under European international auspices in 1878 , and was opened up by H. M. Stanley. The central government is at Brussels, the King of the Belgians being nominal 'sovereign,' and the constitution was defined in 1885. CONGREGATIONALISTS claim to continue the primitive form of Church Government. They took their rise as a sect in the 17 th century, and developed rapidly under Cromwell, when they were called Independents. Each congregation is absolutely self-governing, and wholly 'independent' of all other congregations, and every member of the church takes part in the government.
Congress is the legislative assembly of the U.S.A., and has two parts-a Senate consisting of two members from eacl! State, and a House of Representatives elected from each State in proportion to its population.
CONGREVE, the dramatist, was born in 2670 , and made his first hit when he was 21, with his comedy, The Old Bachelor. He belonged to the artificial school.
CONIC SECTIONS deal with three kinds of curves, the hyperbola, where the cutting-plane is parallel to the axis; the parabola, where it is parallel to the slope of the cone; and the ellipse, if it passes through both sides of the cone obliquely.
CONIFERAE, THE-pines, fir, larch, cypress, yewabound in the north of Europe and America, and are very important commercially. They give valuable timber and many subsidiary products, such as turpentine, pitch, tar, etc.
ConJUNCTION, in Astronomy, is used of two heavenly bodies which are in exactly the same direction from the earth.
CONJUNCTION, in Grammar, is a word other than a conjunctive adverb or a relative pronoun, which joins words and sentences. They are either co-ordinating, as and, but, or, or subordinating, as when, if, terause.
CONRAD, the founder of the Suabian dynasty of Hohenstaufen, was King of Germany and Emperor of the Romans from Ix38 to II52 A.D. He joined the Second Crusade, and his inarriage with a Greck princess led to the adoption of the double-headed eagle on the Austrian arms. The factions of Guelf and Ghibelline rose during his struggle with Henry the Proud. He was succeeded by his nepliew, Frederick Barbarossa.
CONSCIENCE is either an inmate moral sense or the instantaneous opinion of the reason on matters of evidence lu connection with questions of right and wrong. According to the former clefinition, it acts
intuitively ; according to the latter, it acts for usility -" honesty is the best policy."
CONSCIENCE-MONEY is received every year ly the Chancellor of the Exchequer, but it varies greatly in amount. In 189y-2 it was $£ 253115.8 \mathrm{~d}$., in 189 c it was Cor 588 os. 5 d ., and in 1885 it was nearly $£ 10,002$. The first linown payment of Conscience-snoney was in ${ }_{17} 89$, the sum being $\mathscr{C}_{3} 60$. Private coupanies sometunes reccive sinilar payments.
CONSCRIPTION was introduced into France in 1798 , and included all males between 20 and 25 years of age. It was abolished by the Bourbons, but reenacted later. The total length of service in Prance is 20 years, in Russia 15, in Germany and Austria 12.
CONSERVATIVE, as the title of a political party, canse into use about 1832 .
CONSERVATORY is the continental name for a systematic school of music, originally of a benevolent and charitable kind. Amongst the oldest are the French founded in 1795 , and the Milan founded in 1808. That at Leipzig was founded in 1842 under the control of Mendelssoln.
CONSERVATORY, in Gardening, ought to be carefully distinguished from greenhouses. In a conservatory the plants grow in the free soil, on the level of the floor: in a greenhouse they grow in pots on shelves.
CONSISTORY is the lighest council of state in the Romish constitution, and the name has been borrowed by the diocesan courts in the English Church.
CONSOLidATED FUND was formed of several separate funds in 1787. It is pledged for the payment of the interest on the National Debt, the Civil List, Pensions, etc., and the surplus has to pay any other services required of it by Parliament.
CONSOLS is an abbreviation for Consolidated Annluties. which form the largest part of the National Debt. The stock was formed originally in 1751 at $3 \frac{1}{2}$ per cent., but the National Debt was really created in r693, when William had to borrow money for the war with France on the security of Parliament. Indeed, the National Debt may be looked upon as the price which we had to pay for our Colonial and Indian possessions and for the defeat of Napoleon's schemes of empire.
CONSONANT is a letter wlich cannot be pronounced alone at the full pitch of the voice, but which can be pronounced as in stammering $b-b-b-o s h$. Consonarts are either mute or sibilant (hissing, e.g. $s, z, x$ ), and the mutes can be classified according to the organ of speech by which they are made-throat, teeth, lips; oryaccording to the quality of the sound-sharp, fiat, or aspirate. For instance, $p$ is a sharp labial or lipsound, and $g$ is a flat guttural or throat sound.
CONSTABLE (Latin, comes stabuli, "count of the stable'). was the first dignitary of the crown in France, and. as commander-in-chief, had so nuch power that Louis XIII, abolished the office. A similar office exists nominally in England attached to the Earldom of Hereford, and in Scotland attached to the Errol title.
CONSTABLE, Sir Walter Scott's publisher and partner, was born in 1774, and was the original publisher ef The Edinburgh Revict. The great failure was in 1826, with liabilities of over $£ 250,000$.
CONSTABLE, the landscape painter, was born in 1776, and was the 'Father of Modern Landscape,' especially in France. He is one of the few instances of an English painter leaving a permanent influence on French art.
Constantine the Great, the Roman emperor, was the son of the British princess Helena. He became emperor in the west in 306 A.D., and adopted as his emblem a cross bearing the inscription "In hoc signo vinces" = "In this sign you shall conquer." In 313 A.D. he published his Edict of Toleration to Christianity, and subsequently declared himself a Christian. He becane sole emperor in 325, and laid the foundation of his new capital at Byzantium in 332. It occupies one of the most important positions in the world-on the narrow Rosphorus, with the splendid natural harbour of the Golden Horn. It has commanded for centuries the trade between Europe and Asia. and still commants that between the Black Sea and the Mediterrancan.

CONSTELIATIONS\&STEM isa purely arbitrary division of the fixed stars. The Egylrian grouping was modified by the Greeks, the cireek by the Rumams and Arabs, and the pagran by variuns Cliristians, e.g. Becle. The old P tolemaean division is retaned on the wholo-with 48 constellations ( 12 sigas of zodiac, 15 southeru constellations, and 21 northern), but increised knowledge of the southern hemisphere has added a few. Stirs of the 6th marguitude are the smallest whicls are visible to the naked eye.
CONSUBSTANTIATION is the inystical presence of the body of Christ in substance anongst the sacranental clenientals after they have been consecrated.
CONSULSHIP, the highest magistracy in the Roman republic, was clual. It was founded atter the expulsion of the kings in 509 [3.C., and one consul could renain at home while the other took the field against a foe. The name of consul was adopted in lirance tem. porarily after the Revolution, but one of the three consuls. Napoleon, was proclaimed First Consul in 1802, as a step to being proclaiued Emperor in 1804. Modern consuls are merely representatives in foreign couutries of the commercial interests of their own couutry, or of some country for which they have been made representatives.
CONSUMPTION, in Economics, is applied to the making use of all products that have an exchangeable value. It is called productive if it directly conduces to the working-value of the consumer, and unproductive if it does not, but the distinction is a very fine one, Bread is obviously 'productive,' and glass-beads are obviously 'unproductive'; but a book or a picture may influence a worker for good, though it is called 'unproductive.' Most problems ought to be viewed from the point of view of the consumer rather than from that of the producer, because the one is a gauge ef social needs and the other of individual profits.
CONTAGIOUS DISEASES ACTS of $1864,1866,1868,1869$, and 1875 were repealed in 1886 .
CONTEMPORARY REVIEW was founded in 1866.
CONTINENTAL SYSTEM was Napoleon's device for excluding Britain from all intercourse with continental Europe. It lasted from 1806 to $\mathrm{I}_{\mathrm{r} 4}$, and led to some curious results commercially. For instance, as timber could not be imported from the Baltic, British timber merchants turned to the Canadian market. And, as the British navy cut off the French supplies of canesugar, the beet-root sugar industry was started in France.
CONTRACTS can only be entered into by persons of full age and sound mind for something which is not contrary to law. Rousseau's Sucial Contract had no historical foundation of any kind. (See ROUSSEAU.)
CONVENTION is used in British History, specially of the Parliaments of 1660 and 1688 , each of which 'came together' (Latin convenio) without a royal writ. In French history it refers to the meeting which prochamed the Republic after the Legislative Assembly had suspended royal functions in $\mathbf{1 7 9 2}$.
CONVOCATION is the assembly of the clergy of the English Church, and each archbishopric has a separate one, that of Canterbury being the more important.
COOK, CAPTAIN, was born in 1728, and began life as an errand boy in a shop; but in 1755 he entered the Royal Navy, and his first piece of work was surveying off the coast of Canada. He discovered New South Wales in 577 r , and did a great deal of other valuable work in the Pacific. He also made an attempt to find the North-West Passage. He was murdered on Valentine Day, 1779, on the island of Hawaii.
COOLIE is the Hindu name for a clay labourer. I-arge numbers of Coolies are exported to the West Indies, Mauritius, Australia, etc., to supply the want of labour. The original cause of $C$. emigration was the demand for cheap labour on the sugar plantations in British Guiana after the abolition of slavery.
COOPER, FENTMORF, the American novelist, was born in 1789, and entered the U.S.A. Navy. His first popular book was The Spy, which, however, was sonn clistanced in popularity by Tha Patheneler. The Deerstaymer. and The Last of the Jrohicams.
CU-OPERATION asserts the principle of mutual exchange agrainst that of hostile competition. Cooperative societies are formed for protuction or
distribution ; prorluctive societies secure dill the profits oflabour to the labourers, while distributive suciutiescommonly. known as co-operative stores-secure the minimum of cost to the consumers. The first cooperative store was the Rocladale Equitable I'ioneers' Society, started in 1844, but the principle spread very quickly. Eventually a number of socicties were associated, as in the Scottish and English Co-operative Wholesale Socicties. Aud similar associations lave been formed for the benefit of various classes : e.g. Civil Service Supply Association or The Army and Navy Stores

The first Co-operative Cougress was held in 1869 , when the various societies of the country were united under a Co-operative Union, with a Central Board. The number of societies in the Union now is about roso, the total number of societies registered being 17II. The total membership of these is about $1,474,000$, their share capital is about $\notin 16,165,000$, the sale of goods in 1895 realized about $\neq 52,55^{\text {r2,000 }}$, and the net profit was $\not \subset 5,397,58$. Besides its large distributive business, the English Wholesale C. makes boots and shoes at Leicester and Heckmondwike, soap at Durham and Crumpsall, woollen goods at Batley and Leeds; and in the same way the Scottish Wholesale makes boots and shoes, shirts, tobacco, bread, etc., and carries on tailoring, cabinct, and printing works. Co-operation has had its failures, and has provoked very violent opposition, especially from butchers in Scotland; but it embodies a right principle, which nust win eventually.
COPE, the painter, was born in 18 rI , and is best known by his frescoes from English History in the House of Lords.
COPERNICUS was born in 1473, and studied medicine ${ }^{-}$ at Cracow for a time; but he eventually turned his' attention to mathematics. He discovered that the sqn was the centre round which the planets move, and anticipated many moderı explanations of astronomical phenomena. His great work was De Orbium Caelestium Revolutimilus, 'On the revolutions of heavenlybodies,' for which the Pope excommunicated him. COPPER takes its name from Cyprus, from which large supplies came in classical times. It is more elastic than any other metal except steel, more sonorous than any other except alunimum, and more ductile and malleable than any other except the precious metals. The richest deposits in the world are round Lake Superior, where the virgin C. is so tough that it can scarcely be worked at all. Cornwall lias been the chief C. mining centre in Britain, and Swansea the chief C. smelting centre. Alloyed with tin it makes bronze, and with zinc it makes brass, and with both it makes $C$. coins. It is rather dangerous for domestic use, as the action of acids on it produces verdigris.
COPTS are Christian descendants of the old Egyptians, and the head of the Coptic Church is the Patriarch of Alexandria.
COPYRIT;HT, ENGLISH. The first English C. Act was passed in the reign of Queen Anne, and gave the author an absolute right in his literary work for r4 years, with an additional is in case of the author himself or his representative living more than the first 14. This was subsequently changed in George III.'s reign to 28 years and the possible remainder of the author's life. The present Act fixes it at 42 years or the period of the author's life +7 years, whichever of the two is the longer. This covers literary, dramatic, artistic, and musical property ; and the Act provides for one copy of the article copyrighted to be presented to the British Mnseum, and also to the University Libraries at Oxford, Cunbridge, Dublin, and the Advocates' Library at Edinburgh, if they demand it.
COPYRIGHT, INTERNATIONAL, was publicly discussed in a conference at Berne in 1885, when a draft of a convention was drawn up securimg for a work published in any one of the countrics represented copyright In all the others. This was signed in 1886, and inchades trauslations, but does not apply to ordinary newspaper articles. The liuropean nations represented in the comference were France, Gernany, Great Britain, Italy, the Netherlands, Norway, Spain, Sweden, and Swltzerland. In U.S.A. a bill was
passed in 1891 giving $C$. to foreign anthors under certain conditions, one of which is the funous "Cliromo:imendment" abont "from type set or from negatives or drawings on stone made withen the l'nited suates." The question is a very difficult one in Canada, as the U.S.A. can lhood the Canadinn market with cheap reprints of English publications. The essence of C . is originality
CORAL REEFS are specially characteristic of the Pacific, the Indian Ocean, and the Red Sea, and are of three main types-fringing, barrier, and lagoon or atoll; but the $C$. of commerce comes mainly from the Mediterranean, and is worked up at Leghorn, Genoa, and Naples.
CORDAY D'ARMANS, better known as Charlotte Corday, was born in 1768 . Her lover was murlered by the order of Marat, and she revenged the nurcler by stabbing Marat in his own house. She was tried for murder, and guillotined on July 17, 1793.
CORDUROY is made of cotton woven very thick and "corded' or ribbed on the surface.
CORINTH SHIP CANAL was opened in 1893 . It is nearly 4 miles long, about 80 ft , wide, and 24 ft . deep. It reduces the voyage from Cephalonia to Athens enormously, but is not very safe.
CORK is the outside bark of a kind of oak which grows well in the Iberian peninsula. It is stripped off when the tree has reached the age of 15 years, but this first crop is very coarse. Alter 8 or 9 years the bark is ready to be stripped again, and the second crop is much better. The best $C$. for champagne bottles conses from Catalonia. C. dust is exported in large quantities from Lisbon to Cape Town for packing grapes in that are to be sent to London; it is very light, has no taste or smell, and is impervious to moisture, eso that it does not break the grapes or taint them, or pass on the moisture of any broken ones.
CORMORANTS are trained by the Chinese to fish for man. They are very greedy, but cannot eat their prey under water, so that they are relentless fishers, but have to bring their 'catch' to the surface.
CORN LAWS were passed to protect agriculture. The first prohibition of exportation was in the Norman time, and it was often repeated, e.g. by Edward III. after the 'Black Death.' In Edward IV.'s reign importation was prohibited until the price of grain in England had risen above the limit at which exportation was allowed. Under William III, a bounty of 5 s. a quarter was granted on exported wheat, which greatly increased the trafic, till about 1750 it reached a maximum. From that period the increase of population at home began to necessitate the import of grain, and the prohibition of foreign grain and a heavy duty on it only meant that so many persons were starved to death. From 1804 to 1846 there was practically a sliding scale of duties, rising as high as 245 . 3 d. if corn was below 635 ., and falling to $6 d$. if it was above 66s. per quarter. In 1846 Sir Robert Peel. mainly througla the instrumentality of Cobden and Bright, reduced the duty to is, a quarter, and in 1869 even that was abolished, lenving bread-the great staple of food, especially to the poor-untaxed.
Corneille, the 'Father of French tragedy and classle comedy,' was born in 1606, and died in 1684. As in the case of Shakespeare, his comedies preceded his tragedies; and, though they have many merits, they are inferior to the tragedies. His great tragedies are The Cid and Cinna.
CORNELIUS NEPOS, the Roman author, was a contemporary of Cicero. His short biographies are a favourite school book, but they are not the easiest Latin that could be found.
CORNELL UNIVERSITY is at Ithaca, New York State. It was founded in 1867.
CORNET, the serpentine wind-instrument of former times, has been replaced by the modern Cornet-2. piston, which is simply a bugle with keys.
CORONATIONS of English sovereigns have been almost always in Westminster Abbey. William the Con. queror's coronation was signalized by a massacre of the English, Stephen's by a dreadful storm, Richard I.'s by a massacre of Jews, Anne's by a pruelish refusal to receive the kiss of homage from the
temporal peers, Gcorge 1.'s ly much bad luacurge, because he could not speak Linglislı properly, and the minister, cuuld not speak Gernian. Henry HI, was crowned at Winchester, and Charles 11. at Scone.
Cokor', the great Irrench artish, was born in m:s6. He exhibited in the Salon for the first time In $\begin{gathered}0 \\ 27 \\ \text { and and }\end{gathered}$ before he died in 1875, he hise gained world-wide fame for his success in painting light and air.
CORRECGIO, the Italian painter, was born in 1494, and took his name from his birthplace. Alnost all his pictures :rre comnected with Sacred History, and he is unrivalled in chiaroscuro.
CORSET, to be healthy and to show off the figure to advantage, must be specially made for the particular person. Of course, it is intended to preserve and protect a natural figure, not to produce an artificial one. CURTES, the old Iberian Parliament, were very inlportant in early times, but Ferdinand and Isatbella broke down their power, and they were practically abolished by Charles in 1538 .
CORTEZ, the conqueror of Mexico, was born in 1485 , and died 1547. His conquest was disgraced by the perfidy and cruelty of hiniself and his soldiers, after they had been received hospitably by Montezuma and his subjects.
CORVEE was a feudal obligation of local services, e.g. repair of roads, etc., which often pressed very heavily on a particular district. It was abolished in Francealong with a good many other barbarous relics-at the time of the Revolution.
CORYBANTES were the mad priests of Cybele, whose mysteries they celebrated with dance and drum and tambourine.
CORYPHAEUS, the leader ot the chorus in the Greek dramas, was at once stage-manager, conductor, and ballet-dancer. He has left his name in coryphee to the latter.
COSMOGONIES, or theories of the origin and character of the universe, are usually based on one of three fundamental views. The Phoenicians, Babylonians, Egyptians, and most other ancient peoples held that the matter of the world is eternal, but that its form is not. A more logical view, that was held by Aristotle, was that both the matter and the form were eternal The author of Genesis taught the Hebrews, as Anaxagoras taught the Greeks, that both matter and form were created by an external spiritual ageucy; what had a beginning shall also have an end.
COSSACKS are of two chief classes, those of Little Russia and those from the Don. They are probably a mixed race of Caucasians and Tartars, and make the best irregular cavalry in the world.
Cost of Armies and Navies. In 1892-93 the cost of all the military and naval equipment was in Russia about $44 \frac{1}{\mathrm{t}}$ million pounds, in France $35 \frac{1}{2}$, in Great Britain 33t: in Germany 33, in Austria 17, in Italy 141, in Spain 7 , in Holland 3 , in Belgium 13 , and in Switzerland is-a total of about $£ 190,000,000$, compared with about $£ 110,000,000$ in $1869-70$. The increase per cent. has been in Germany 137, Italy 92, Austria 85, Russia 79, France 62, Great Britain 37, and Belgium 28.
COST OF SOLOMON'S TEMPLE, in those days when "silver was nothing accounted of," was enormous when estimated in the language of our degenerate days. The talents of gold, silver, and brass used in the construction may be estimated at sercn thousiand million pounds, the various vessels of gold and silver at one thousand milliows, the stone and timber at 8100 hunclred and ffity millions, the food and wages of the 10,000 timber-cutters, 20,000 masons, and 70,000 navvies, for 7 years, one hicndred millions, the vestments of the clergy and choir at fuo and half millions. The amount is simply stupendous.
COTTON is probably a native of tropical Asia, and certainly two of the most important cotton products take their names from Asiatic towns-muslin from Mosul, and calico from Calicut. It likes light soils in warm frostless climates. and requires plenty of moisture and salt. Consequently, it grows best on low coastal lands in tropical latitudes. The three great C. countries are U.S.A., India, and Egypt. The famous 'sea-island' cotton for the Swiss and French muslins comes from Florida, ria Charleston
or Savanuah, the shorter 'upland ' C. comes from the Mississippi basin, uspecially via New Orleans. Tle best Bombay C. Comes from Berar, and the Liryptian from Siut. The development of the Indiam and Egyptian C. was due to the C. fanime and the consequent misery, especially in Lancashire aud Lanarkshire, caused by the Civil War in U.S.A.
Corron Sptiving uade its first great step when Hargreaves invented the spining-jenuy in 1767 ; Arkwright two years later patented his water.frame, and in 5775 Crompron invented the mule, so-called becausu it combined the Hargreaves and the Arkwright principles. In the days of Adam Smith the whole cotton trade of Lancashire employed only 40,000 people, today the six great towns of Manchester, Salford, Oldham, Blackburn, Bolton, and Preston alone have is population of considerably over $1,000,000$. The Lancashire industry, however, has been greatly affected both by that of continental Europe and by that of Bombay and Japan. The Japanese spinner works his mills much longer than his rivals in Manchester or in Bombay; he pays a very low wage; he has his market at his doors. Like his Bombay rival, lie grows some of his cotton on the spot, and has a silver coinage, but has to pay a high price for his coal. However, the Japanese cotton is too short and too coarse for finc yam, and the coarse yarns are too weak to be used in pover-looms.
Councils, EARLY Church, were held at Antioch in A.D. 269 ; at Arles in 314, when three British bishops were present; at Nice in 325 , when 328 Fathers of the Church attacked Arius; at Constantinople in $3^{88}$ I, at Sardis in 405 , at Ephesus in 431, at Chalcedon in 45I, at Constantinople again in 552. 600 , and 680 , and the second at Nice in $7^{87}$. Of these the four great C. were that at Nice 325 , when the dogma respecting the Son of God was settled; that at Constantinople in 38 x , when the dogma respecting the Holy Ghost was settled; and those at Epliesus and Chalcedon, when the clogma about union of the divine and human in Christ was settled. Amongst the Latin C.. three have been very important-that of Clermont in 1og6, resolved upon the First Crusade ; that of Constance in I4I4, condemned John Huss and Jerome of Prague; and that of Trent in 1545.
Count was first used as a title in the 4th century A.D. by the Roman emperors, from whom it passed into France, and eventually became hereditary.
COUNTERPOINT is a term equivalent to harmony, or the writing of a carefully-planned accompanying part. Counterpoint is divided into ( x ) simple, (2) floril or figurate, (3) doubla. It is the art by whicla a nusical thought is developed, embellished, transposed, repeated, or imitated throughout the different parts.
COURT PLASTER is so-called because it was originally applied, by ladies of the court, as patches on the face. It is made of silk, varnislied with a solution of isinglass.
COURTESY TITLE is given, usually, to the younger sons of noblemen who liave the title Lord prefixed to their names. In Scotland the eldest son of a viscount or baron has the courtesy title of Master ; and when a British nobleman has several titles he usually gives one of the Inferior ones to his eldest son.
CoURTS OF LOVE, in the chivalric period of the Midale Ages, were courts composed of knights, poets, and ladies. who discussed questlons of love and gallantry. The first court was probably established in Provence about the 12th century; and they reached their greatest splendour under Charles VI.
COVFNANT, in Scotch listory, refers to an oath drawn up by the Scottish reformers in 1557 and to the Confession of thath (a similar one) Crawn up in 1581 ,
abjuring the errors of popery. The Solemmet Lergmu? abjuring the errors of popery. The Solemin Leagm: and Covennest was a contract entered into between the General Assembly of the Church of Scotland and the Commissinners from the English Parliancent in 16 43 , having for its object uniformity of doctrine, worship, and discipline in Great Britain. In 1662 it was alpured in Parlianent by England and Scothand. COVENANTERA, the party in Scotlindl which strugreled for religious liherty from 1637 to the revolution, and
which eventually took tup ams in tefence of the Presbyterian form of clurcla government.
COVENT GARDEN (that is convent garden) formerly consisted of the garden belongiug to the abbot ant monks of Westurnster. In 8831 the present market buildings were erected by the Duke of Bedford, the owner of the gromad. The Covent Garden Theatre sprang out of one in 1 incoln's-1nn-Fields through a patent granted to Sir W. Davenant in 1662.
CUVERDALE, MLEES, the earliest translator of the Bible into English, was born in 1487, educated at Cambridge, and ordained priest in $15 \times 4$. He assisted Tindall in litis translation of the Bible, and then in 1535 lis own appeared with a dedication to Henry $V 11$. In 1551 lie was made Bishop of Exeter, but was ejected on Mary's accession to the throne, and was thrown into prison. After two years' confinenuent he went to Geneva, and prepared the Geneva translation of the Scriptures, returning to England at Elizabetli's accession. He died in I568.
COWEN, FREDERICK, the popular composer, was born in Jamaica in 1852, and was a pupil of Sir Julius Benedict and Sir John Goss. He has composed a large number of songs and several symphonies, four operas, and two oratorios. He succeeded Sir Charles Halle as conductor of the Mancliester Subscription Concerts and the Liverpool Philharmonic Society.
Cowley, Abraham, the English poet, was born in 1618. He entered Trinity College, Cambridge, but was ejected as a royalist in 1643 , and removed to St. John's College, Oxford, and when the queen left England he accompanied her. His poems lave not their ancient popularity now, but he still holds a high position as prose writer and essayist. Love's Ridalle, Davideis, and The Mistress are his chief works.
Cowper, Williant, the English poet, was born in 1731. He was at Westminster, was articled to a solicitor, and finally called to the bar in 1754. In 1763 he was under Dr. Cotton, and later retired to Huntingdon, where he met Mr. and Mrs. Unwin, and it was at the advice of the latter he wrote the l'rogress of Error, Tabla Talk, etc. Lady Austen suggested to him the Tusk and History of John Gilpin. He clied in 1800.
Cows in the United Kingdom number about $3 \frac{1}{2}$ millions. each yielding on an average 400 gallons of milk a year, a quarter of which is used in making 110,000 tons of butter and cheese. In Holland, which is only one-tenth the size of the United Kingdom, there are about $7 \frac{1}{2}$ million cows. We do not really attempt to provide cheap good milk for the luge inkint population of our large industrial centres.
CRAB Ioses its claws very casily, and renews them as easily again. The racer-crabs of the West Indies suck the juice of the sugar-cane, but the common crab lives on animal matter.
CRABBE, GEORGE, the English poet, was born in ${ }^{1754}$. He was educated for the medical profession, but being unable to make a livelihood, went to London, obtnined Burke's friendship, published his poem The Library, and soon after entered the churcli. He wrote The Vilfage, The Parish Register, and Tales of thn IIall.
CRANE, WALTER, the poct painter, was born in 1845 , and cxhibited for the first time at the Royal Acadenty in 1862 . He is a famous book illustrator, and a great authority on decorative art. In 1893 he was ap pointed Art Director to the city of Manchester.
CRANMER, THOMAS, Archbishop of Canterbury (famous for his part in the Reformation during the reign of Henry V1II.), was born in 1489. ITe was appointed Archbishop of Canterbury in 1533, and soon after pronounced the sentence of divorce between Henry and Catharine. The Pope threatened excommunication, but an Act of Parliament was passed abolishing his supremacy, and Crantuer promoted the cause of the Reformation most zealously. having the Bible translaterl and suppressing monasteries. He took the side of Lady Jane Grey in tho question of the accession, however, and was therefore sent to the Tower and deprived of his office, After this he recauted and becane a Romish convert, lut when brought into claurch to read his recantation,
he acknowledged that he belied his conscience, and so he was hurried to the stake.
CRAWFORD, F. MARION, the novelist, spent most of his early life in India, but now lives partly in New York and partly in Italy. His best work has been done in Dr. Claudius, fioman Shinger, the Saracinesca trio, Pietro Ghisleri.
CRAYONS are generally made from a fine paste of chalk or pipe-clay, coloured with various pigments and consolidated by gum, wax, etc. Crayompainting is practised, and the colouring is then rubbed on in its soft state with the finger.
CRECY is celebrated for the battle fought there, August 26th, 1346, between the English and French, when the young Black Prince won his spurs.
CREDIT, in Economics, is the postponement agreed on by the parties of the payment of a debt to a future date. By means of a credit system a comparatively small amount of money can be used to carry on many transactions, and it implies belief in the honesty, solvency, and resources of a nation or individual.
CREED is a summary of belief. The Nicene, the A postles, and Athanasian creeds are the most ancient ones, dated respectively the 4 th, 8 th, and $9 t h$ centuries, in a definite form.
CREMATION. The Siemens furnace, which has been adopted in Germany, England, and elsewhere, is probably the best known. By it a body weighing 144 lbs . can be reduced in about 90 minutes to not more than 4 lbs . of lime dust. Each furnace costs L 400 , but the cost of actual cremation ought not to exceed more than 305 ., but the present cost is over gos. Cremation was the practice of the ancient Greeks, and is still the custom of some Asiatic nations, and closed incinerators have been constructed by order of the British Government in some towns in India. There are Crematoria in Woking, Manchester, and Glasgow, in Great Britain. The Hon. Sec. of the Cremation Society is J. Swinburne Hanham, 8 New Cavendish Street, London.
CRETE was nominally conquered by the Turks in 1669, but has never really submitted to them, and has con* stantly risen against them. In 1868 a measure or self-government was extorted by one of these insurrections, but the Turks broke their promises so shamelessly that war broke out again in 1877. This occurred again in 1889, and since then Mussulman Valis have ruled, or rather mis-ruled, the island. The people, whonow number about 300,000 , had a very bad reputation in olden times. St. Paul called them "evil beasts, liars, and slow-bellies," and he would probably do the same now.
Crichton, James, sumamed the Admirable, a Scot. tish celebrity, was born in 1560 . He was educated at the University of St. Andrews, and it is said that before he was twenty he had run through all the sciences, could speak and write perfectly ten languages, and could ride, fence, sing, and play many instruments. He was latterly fencing tutor to the Duke of Mantua's son, who is said to have stabbed lim. He died in 1585.
CRICKET BATS ought to be made of the best willow wood, as no other has the necessary combination of lightness and toughness. They are occasionally, however, made of other woods. One of walnut, mounted with silver, was made for the late Duke of Clarence, and cost about $£ 50$.
CRICKET CLUBS first sprang up in Surrey, the Surrey County Club being founded in 1844. The Derbyshire Club began in 1845، Sussex in 1857, Kent in 1859, Notts in $\mathbf{1 8 5 9}$, Yorkshire in $\mathbf{x 8 6 3}$. Lancashire in 1864. Middlesex in 1868, and Gloucester in 1870 . Some of these, notably Sussex and Kent, had practically appeared as counties a year or two before their county club was formed.
CRICKET PROFESSIONALS number about 500 in the United Kingdom. Counties like Notts, Lancashire, Yorkshire, and Surrey have about a dozen aplece, and the town of Sheffield has as many.
CRICKET SEASON OF 1896. The weather encouraged large scoring, the record being Yorkshire's 887 against Warwick. York also made 660 v . Leicester, and won the championship by r3 points to Surrey's ro. The batting average was gained by Mr. Ranjitsinhji with

57 gr, and the bowling by J. T. Hearne with 257 wickets for 14 '28 runs apiece. Abel and W, G. Grace also made more than 2000 runs, and 32 others made over rooo, II6 centuries being made in the season, 7 by Mr. Ranjitsinhji, who had the record aggregate, 2780 runs, against W. G. Grace's old record of 2739 . Kiclardson's bowling average of 246 wickets for $163^{2}$ runs apiece was very little inferior to Hearne's.
CRIME is increasing in the civilized world, though the sentences, especially in Britain, are shorter, and the reason is obvious. Pain is a sensation not a sentiment; and, as it is passive, it has naturally not a very deterrent effect on others. All punishment beyond what absolute morality allows is unjust, and therefore injures both the sufferer and others. The criminal must be prevented from moving about freely anongst others, just as much as if he had small-pox, but a 'time' sentence is probably unjust either to the criminal if it is too long, or to society if it is too short. The sentence ought to be for a definite purpose, not for a definite perioz, because the object of punish ment is threefold, the reformation of the criminal as well as the protection of society and the prevention of crime in others. No one will commit a crime who is really conscious of what he is doing, and who also has self-control, and understands the social necessity for law. If these three conditions are absent, and society is responsible in any degree for their absence, the criminal cannot also be wholly responsible, and therefore he is not wholly guilty. As a matter of fact the high wortality amongst crininals, the high percentage of illiterates, and the social conditions of their parents, show that by body, by mind, and by inheritance they are unfit for the competition of life. The chief difficulty is that their wills are either practically annihilated by bad training or are liable to momentary caprice, and are incapable of concentrated effort. Their reformation must begin at the definite act of crime dangerous to society, and must end in a definite state of mind not dangerous, and must proceed by real education, to produce charauter, by enforced conduct, to produce habits of mind and muscles, and by work, out of the proceeds of which to defray the cost of the education, etc. All this is entirely at variance with general public opinion, but that does not make it either unjust or absurd.
CRIMEAN WAR, the struggle between England, France, and Turkey on one hand, and Russia on the other. which lasted from 1854 to 1856 . A treaty at Paris in the latter year guaranteed the independence of the Ottoman Empire.
CRiNOLINE, really a kind of fabric made chiefly of horse-hair, but it became applied generally to hooped skirts or farthingales worm in the reigns of Queen Elizabeth, James I., and George II. A few years ago there was some discussion about readopting them on a smaller scale, but it has quite fallen through.
Crocodile can close its nostrils to prevent the ingress of water; and its length sometimes reaches thirty feet. In the water it is formidable, but on land it is rery unwieldy. It is no longer conmon in Egypt, but on the West Coast of Africa.
CROFTERS mainly congregate on the seashore, where they partly maintain themselves by fishing. They are numerous in the Highlands and Western Islands of Scotland. From many districts they have been removed owing to their small hotlings being absorbed in sheep farms, etc. A Crofters Act was passed in r886, providung for security of tenure, fixing of a reasonable rent, etc.
CROMWELL, OLIVER, Lord-Protector of Great Britain, was born in 1599. He was at Sidney College, Cambridge, and then entered Parliament. He is most celebrated as a geneml and the leader of his 'Ironsides,' and for his strong Foreign policy. He died in 1568.

CROMVELL, THOMAS, EARI, OF ESSEX, was born in r4go. IIe was Cardinal Wolsey's confidential servant, and at the former's death entered the King's service, was knighted, and made privy comucillor. In ${ }_{1} 535$ he was appointed visitor-general to all English monasteries in order to suppress them, for which service he was made Baron Cromwell. He fell into disgrace for promoting the King's marriago with

Anne of Cleves; and he was beleatled on clarge of treason in 1540 .
Crown of the british Empire is valued at $£ 300,000$, and contains I drege ruby and 4 stuall ones, ${ }_{I}$ large sippliire and 16 smaller, 8 enteralds, 4 drop. pearls and 269 others, 1360 brilliants, and 1273 rose dianonds
Cruden, deexander, compiler of the Concordunco to the Scriptures, was born in 1701 . He hatl a book. seller's shop in London, and in 535 , was appointed bookseller to Queen Caroline. His great work appeared in 1737 as 11 Complete Concordance of the Holy Scriptures of the Oid and Neid Testammert. He died in 1770 .
CruMksinank, Gedrge, the great English pictorial satirist after Hogarth, was born in London in 1792. His earliest known drawing was done at the age of seyen, and when fifteen he was quito distinguished. His poltical illustrations (Cato Street Conspiracy, Triai of Queen Caroline, etc.) were excellent, and his etchings illustrating ofiver Treist are famous. He died in $187^{8}$.
Crisades lasted from the end of the rith to the last half of the rith century. Sonse expeditions that were called Crusades were really only skirmishes with pirates who infected the Mediterranean Sea. Peter the Hernit started the first real Crusude in ro93. There were eight altogether. The capture of Acre in ragr by the Sultan of Egypt put an end to the kingdom founded by the Crusaders.
CRYPT. The largest and loftiest crypt in England is that of Canterbury Cathedral. The finest is that of Glasgow Cathedral, which is really a lower church, as the ground is on the edge of a steep hill. The most decorated is that of St. Stephen's Chapel at Westminster. The most ghastly is that of Hythe.
CRYSTAL PALACE was erected in 1852-54. It lies in about 200 acres of ground. Besides the objects of interest collected in the building, the concerts, flower shows, and fireworks make a variety of instructive and anusing entertainments.
CULDEES, a religions order which used to have many establishments in Great Britain and Ireland, but are especially spoken of in Scotland. The name appears frist in the 8 th century, whien the Culdees seen to have been anchorites living under their own abbots independent of Rome.
CULLODEN MOOR is famous for the battle fought there in $\mathbf{7} 46$. It was the last attempt of the Stuart family to win the English throne back.
CUNEIFORM WRITING is the name applied to the wedge-shaped characters of the inscriptions on old Babylonian and Persian monuments; they are also described as arrow-hended or nail-headeld characters. The use of them ceased shortly after the reign of Alexander the Great. The Persian cuneiform writing contains 60 letters, the Assyrian 600 to 700 characters. partly alphabetic. The Accadian, the oldest of all, ceased to be a liviug tongue about 1700 B.C. The most celebrated inscription is that at Behistun, cut on the face of a rock 1700 ft . high, and recording part of the history of Darius.
CURFEW was instituted by william the Conqueror and repealed by Henry I., but the bell continued to be rung in many parts, and is still heard occasionally.
CURRENCY is a medium of exchange, and it guarantees a standard of value, which facilitates the mechanism of exchange Any satisfactory medium of exchange must be portable, not easily destructible, readily divisible, stable in value, and easily recognized; and metals best satisfy these requirements.
CURREMTS. SEA, are important on account of their influence upon climate-even far inland-and their relation to the art of navigation. The equatorial currents of the Atlantic and Pacific oceans are due to the constant drift of surface water to the west under the influence of the trade wind: and the countercurrents are clue to the same action of the wind, acting in connection with land olstacles. In the case of inland seas evaporation determines the direc. tion of the surface currents.
CUTHBERT, ST., Cather of the early English Church, was supposed to have lyeen born about 635. 111 664 lie becane prior of Melrose, aud, later ont, prior of
I.inclisfarme. Ife died in 687, aud the auniversary of his death was a great church festival.
CUVIER, GEORGES, BARON, the flistinguished modern naturalist, was born in $17 \epsilon_{9}$. IIe was eventually invited to Paris, established at the Central School, and received by the Institute as a first-class member. His lectures were attended by all the accomplished society of Paris. In 1800 he was appointed to the Colége de France, and in 1832 he died. He wrote Recherchezs sur lea Ossemens Fossiles and many other works.
CrCzing as a pastime is the rage of all classes. Birmingham, Coventry, Newcastle, Nottinghan, and Wolverhanpton are the chief nanufacturing centres. The British output is probably about 750,000 cycles per annum, valued at about $£ 11,000,000$ for the whole number. Cycling is quite a profession now, and not a healthy one, though when done in moderation it is quite desirable for the person of ordinarily sound body. For ladies, the pleated, divided skirt is the most satisfactory costume.
CYCzONE is a circular storin, or system of winds, varying from 50 to 500 iniles in dianeter, revolving round a centre that may advance to miles in an hour. The most violent cyclones occur in the tropics. In an anticyctone the tendency of the winds is to blow from the centre.
CyCLDPS, in Greek myths, a race of one-cyed giants, the sons of Heaven and Earth, slain by Apollo. Cyclops is also the name for a kind of lobster which has one eye in the middle of its forchead.
CYMRI (Kimri), a branch fof the Keltic family of nations which appears to have driven the Gaelic branch west and north, i.e. into lreland and the Scutch Highlands, while they themselves occupied the southerm parts of Britain; but, later, they were driven into $W$ ales and Cornwall.
CyNEwUL.F, an Anglo-Saxon or English poet whose name is only known because it is mentioned in the runes of his poems Elene and Juliana. He probably lived in the early part of the 8th century.
CYMICS were Greek philosophers whose sect was founded about 380 B.C. by Antisthenes, a scholar of Socrates. They made virtue to consist entirely in self.denial, and they showed contempt for riches, arts, sciences, and all social civilization. The sect degenerated later.
CYPRIAN, ST:. a father of the African Church. born about the beginning of the grd century. He was a teacher of rhetoric in Carthage. About 246 he was converted to Clristianity, gave his property to the poor, and lived abstemiously. He was beheaded in 258 for preaching the gospel in his gardens. He wrote 80 official letters.
CYRIL of Jerasalem was born there about the year 315 A.D., and in 350 or 35 I became Patriarch of Jerusalen. He engaged in a controversy with the Bishop of Chesarea, by whose artifices he was more than once deprived of his episcopal dignity. He died in 386 or 388 , leaving some writings of not great importance.
CyRUs, King of Persia and Media, in 548 took Babylon. He also subdued Phoenicia and l'alestine, and restored the Jews from captivity. He was slain, figliting, in B.C. 529 .
CZAR is not improbably a corruption of Cacsar. It was first adopted in 1579 by Ivan II.

## D

Dacorty, robbery in India in which more than four persons take part, origimally with armed violence.
DACTYL in Euglish verse is three syllibles, with the stress on the first, as mertily.
Daedalus, mythical Greek mechantic who buitt the Cretan labyrinth and invented mechanical wings.
DAGON, gocl of the Philistines, was in form of a merman.
DAGUERRE, who left lis ume to the photographic Daguerreotype process, was ia 1 Fench scene-painter carly in this century. His invention has now been superseded.
DALIY CHRONICLE was originally local paper for I.ondon. Was purchased ly Mr. Lloyd in 1876 , and converted into in Imperinl Ladical organ, paying
special attention to labour questions. The present editor is Mr. Massinghan.
Dally GRaphic was started on Jan, 4, 1896, and is an illustrated ' Daily.'
DAILY MAIL, an independent Unionist $\frac{1}{2} d$ paper, was started in May, 1896.
DAILY NEWS, a prominent Liberal paper, was started in 1846, and matle its reputation by its Special Correspondence during the Iranco-Prussian War in I8jon I. Charles Dickens was its first editor, and the present one is Mr. E. T. Cook.
Daily Telegraph, an independent gossipy paper, with a circulation of about $\neq$ nillion a day, was founded in 1855. It has special wires from Paris and Vienna, and sent Mr. Stanley to Central Africa.
DAIFIES in Australia are generally co-operative, and have been very successful. The most famous in the world are the Danish, closely followed by the Dutch. Cleanliness is all important.
DAK is the East Indian post.
DAMIASK, like Damson, takes its name from Damascus. It is made of various materials, but generally of linen for table napery.
DAMOCLES was a flatterer of the Syracusan tyrant Dionysius the Elder, over whose head his master had a sword suspended by a single hair.
DAMON AND PHINTIAS were subjects of Dionysius the Younger, and have been proverbial as a pair of friends.
DAMP, Choke-D. consists mainly of carbonic acid gas, and the danger from it is suffocation ; Fire-D. consists mainly of light carburetted hydrogen, and the danger from it is explosion.
DAMPIER, the navigator, was born in 1652.
DAN, the Hebrew tribe, preserved a small bit of territory in the extreme north of Canaan, containing a town called Dan; hence "from D. to Beersheba." Samson was a Danite.
DANCING was originally a mode of expressing rereligious feeling, e.g. David s dancing before the Ark, aud was often used in military displays, thourl the Romans-like Orientals-had their dancing usually done for them by hired slaves. D. is still used in three European Churches, those of Seville, Echternacli (in Luxembourg), and Musgrave (in Westmoreland). At Seville the choir boys dance during the elevation of the Host on the feasts of the Inmaculate Conception and Corpus Christi; at Echternach on the feast of St. Willibrod; and at Musgrave "rushbearing" on the May Day, The Roman custom is, of course, perpetuated by the professionals of the modern ballet, who drav very largesalaries. Taglioni, who taught the Princess Victoria Mary of Teck, now Duchess of York, lad a six-years engagement at S1200 a year; Lottie Collins of "Ta-ra-ra•Boom-de-ay" fame got $£ 80$ a week at the height of the boon; Vanonigot f,I00 a week at the Alhambra; and Loie Fuller got $£ 495$ in one week for ten minutes ${ }^{〔}$ D. a niglit at the Shaftesbury and the Gaicty.
Dandie Dinmont is a breed of Scotch terrier called after the character in Scott's Guy Mannering.
DANEGELT was the annual tax laid on the Old English to provide for forces to oppose the Danes.
DANELAGH was the eastern portion of England which was handedover to the Danes by Alfred-on condition that they becane Christians and his vassals-to get time for consolidatilg his own Kingdom of Wessex.
DANIEL, the prophet, was carried captive to Babylon about 605 B.C., but the Ohl Testament book which bears his name was probably written about 170 B. C.
DANTE ALIGHIERI, the greatest of all the Italian poets, was born in Florence in I265, and died in 1322. The real Beatrice, B. Portinari, whom he fell in love with when he was nine years old, married Simone Bardi. D. himself married Gemma dei Donati. Ilis sympathies were with the Bianchi section of the Grelfic party, which led to his being exiled. His great poem, the Divina Comedia, was written during his exile.
DANTON, the founder of the Cordeliers Club, was born in 1759, and executed by Robespierre in 1794 . He organized and led the attack on the Tuileries, and brought Heblert and the Reason-worshippers to the
scaffold. He owed inuch of his influence to his huge stature, great strength, and powerful voice.
DAPIINE is the Greek name for laurel.
DARIEN SCHEME was projected by Yaterson, the founder of the Bank of England, It was to form an einporium on the Isthnius of Panama, and control the trade of both the Atlantic and the P'acific. The necessary funds were collected in spite of the English jealousy of the Scotch being benefited by the scheme, but the colonization proved a clead failure, nuainly through ignorance of the climate and the conditions of trade. Out of 1200 colonists only about 30 ever returned.
DARIUS was the name of several Persian kings, of whom the first was the most famous. After reducing Babylon by a two-years' siege, he invaded Greece, but was completely defeated at Marathon Li 490 B.C.
Darnley. Henry Stuart, Lord, was born in 1541, and was blown up in 1567. He married Mary, Queen of Scots, in 1565, and was the father of James I.
DARWIN, CHARLES, the great naturalist, was born in I809, and died in 1882. He was appointed naturalist to H.M.S. Beagle in 183I, and in lier circumnavigated the globe. He left a large number of very valuable works, but his fame was mainly acquired by lis Origin of species by Natural solution.
DAUDET', the French novelist, was born in 1840, and published continuously fromi 1874 to 1888.
DAUPHIN was title of the eldest son of the King of France up to the Revolution of 1830 .
[to 970. David, King of Israel, reigned from about roro B.C. DAVID, King of Scotland in the 12th century, introduced feudalism into Scotland and founded several bishoprics and religious houses. In supporting his niece Matilda against Steplen, he was defeated at the Battle of the Standard (in $3^{8}$ A.D.).
DAVID, the great French sculptor, was a friend of Canova, and executed busts or statues of nearly all the famous men and women of his age-Goethe, Schelling, Humboldt, Walter Scott, Canning, Washington, Victor Hugo, Paganini, Madame de Staèl, etc.
DAVID, ST., is the patron saint of Wales. He was an archbishop of Caerleon in the 6th century A.D.
Davis, Jeliferson, was President of the Coufederate States of Anerica during the Civil War.
DAVIS, the English explorer, discovered the strait that bears his name in 1585 . He was killed by Japanese pirates in 1605.
DAVY, SIR HUMPHREY, discovered and invented many other things besides his patent safety-lamp for mines, In I82c he was president of the Royal Society.
DAVY JONES' LOCKER is the sailors' name for the sea, because the dead are generally lowered overboard into it. The Duvy is a corruption of Dufy, the West Indian slang for a 'ghost," and the Joncs is a corruption of Jonah.
DAY is nominally 24 hours, but the real time as measured by the stars is 23 hours, 56 minutes, 5 seconds. Daylight varies from a constant 12 hours at the equator to nothing or 6 months round the pole. Day and night are equal everywhere at the spring and the autumn 'equinoxes,' March 21 and September 21 . Babylonians began day at sumrise, Jews at sunset, both of which vary except at the equator; Egyptians and Romans began it at uiduight, and this has been observed at Greenwich Observatory since 1st January, 1885.

DAY-NURSERY. The largest creche in this country is in West Ham, which was opened in 1893, with accominodation for 150 children and 15 nurses. Another very large one is in Stepney Causeway. The systenn is a French one, but was perfected in Belguin, and came to England from Belgium, a Quaker lady, Nirs. Hilton, being the chief mover in the matter.
DEACON is lowest degree of Holy Orders. A deacon may perform all ordinary duties of a priest excent consecrating the elements at Communion and pronouncing the absolution.
DEAD RECKONING is the calculation of a ship's position at sea, without iny observation of stars or stun, by the log and the compass.
DI:AN (Iatin, decem, "ten') is said to allude to that
particular church dignitary presiling over ten canous or prebendaries, or over ten parislacs.
DEAN OF GUILD in Scothand is magistrate who looks atter all buildings.
DEATH RATE per soso of population is as follows:Under so at liraingham, Brighton, Christiana, Portsmouth, St. Louis, and San Francisco; in Irelank, Demmark, and Sweden. Over 30 in Europe, at IBreslau, Madrid, milan, Munich, Naples, St. Fetersburg, aud generally in Austria. Hungary, in Londion it is only 21'R, compared with $28^{\circ} 6$ in Paris, $27^{\circ} 6$ in Merlin, $=9$ in Vienna, $37+$ in Madrid, and 514115 st. Petersburg. The number of deaths under 5 years of age is enormous in Austrin, Italy, and Spain; those Eetween 5 and so in England are very few. Most deaths lappen in England in spring, in Holland in autum, and in ltaly in winter. March is the fatal month in London. January in France. The deathrate for babies is higher in the middle than in the working class. The lightest death-rate for professions is amongst clergy, ro". per 1ooo, and heaviest amongst surgeons, 19 ' $x$; that for groons is only $12 \%$, while that for publicans is 27 . In ordinary times the death-rate for civilians is 10.02 per 1000, compared with 6 ' 66 for soldiers and 19 '10 for merchant navy: The proportion of violent deaths per 1000 varies from 744 in Russia up to the appalling $4 I^{\prime} I$ of the U.S.A. ; United Kingdom is very bad witb 331 , while France is only $19^{\circ} 7$ and ltaly $8^{\circ} 3$.
The D. R. of Plagues, of course, runs enormously higher. That of $13+6$ probably carried off in Europe 876,000 victims; that of 1656 in Naples lasted 28 weeks, and killed 13.400 a week; that of 1665 in London had a record of 33 weeks, with 2100 victims a week; that of 1730 in Marseilles 36 weeks, with ryoo a week; that of 1775 in Moscow 32 weeks, with 2700 a week ; that of 1778 in Constantinople 18 weeks, with 9500 a week; that of 1798 in Cairo 25 weeks, with 3500 a week ; that of 1812 in Constantinople 13 weeks, with 11,100 a week; that of 1834 in Cairo 18 weeks, with 3200 a week; that of 187 I in Buenos Ayres ir weeks, with 2400 a week. These figures clo not include cholera, which carried off 761,000 in $\mathbf{1 8 4 8}$, 905.000 in 1854, 621,000 in 1873.

DECADE is term of ten years.
DECalogue is the Ten Commandments. (See Exodus xx.)
deceased wife's Sister, Marriage with, is legal in Australia, Canada, Barbados, Ceylon, and Mauritius. And bills to legalize it in England have been passed several times since 1875 by the Cominons, though invariably rejected by the Lords. This is due to the Bishops, who have an affection for the old Canon Law, and who have grossly mis. interpreted passages of the Bible to justify their attitude. Scientifically, the D.W.S. marriage is absolutcly allowable, while that of cousins-which is sanctioned by the Bishops-is wholly bad.
IECEMBER (Latin, decem, 'xo") was the tenth month in the Roman year, which began in March. Cf. September, October, November, the seventh, elghth, and $n$ inth thonths.
DECEMVIRS were ten magistrates who had absolute power in Rome about 450 B.C.
DECIDUOUS TREES are those which drop their leaves annually.
DEECMAL SYSTEM counts from a unit of mo, and is very much simpler than the systern in vogue in Britain. In linear measure, the uusit is the metre, and in money the unit is the franc.
DECIMATION is literally the selection of every tenth minn, hut has coine to be used loosely for wholesale destruction.
declaration of Inoependence was on July 4. 1776.

Dreclension, in Grammar, is the sum total of the infexions of a noun, as conjugation is of a verb.
DECREE NIS! (Latin, nisi, 'unless') is the decree of divorce, which remiins imperfect for six months, and is then made absolute unerss some reason is produced why it should not be mate so.
DFEASTER is the name of the two judges who act as the cliief-justices of the Isle of Man.
DEEK FORESTS cover more than two milllon acres in

Scotland, but the land is practically of no use for ainything elsc.
Dhember of the Fatth, the F.D. of the British coinge, was the title given by l'ope leo $\mathcal{X}$. to IIenry $V 111$. in 152x, for his book against Luther.
DEEOE, the author of Rabinson Crusac; was horn in 1665, and died in $\mathbf{7 7 3}$. IIe joined the insurrection of Alonmotth, and wish often in trouble, and once in Newgate for his zealous Whitgism, Ile published Robinson Crusoo in 17 ITg.
DEGREES OT LATITUDE are about 692 miles, but of longitude vary with the size of the earth in the particular latitude. At London they are about 37 miles, at Calcutta about 50.
DEISM is a phase of Rationalism, and recognizes a great First Cause, distinct from nature and the universe, but taking no part in the concerns of the world.
DELAROCHE, PAUL, one of the greatest historical painters, was born in Paris in 1797, and was regarded as the leader of the Eclectic School.
DELFT-WARE, or DELF, is enamelied pottery, and was invented at Defft in the 14th century.
DELOS was the reputed birth-place of Apolio, and the centre of his worship. It is tbe central and tho smallest of the Cyclades Islands.
DELLPHI was the seat of the oracle of Apollo, and one of the meeting places for the great Amphictyonic Council. The Pythian Games were held near it.
DELTA is the Greek name for the letter $D$, and the alluvial cleposit at the mouth of the Nile was so like the Greek letter D that it was called after it; and the name spread to other deltias.
DELUGES are mentioned in the mytbical or prehistoric traditions of almost every nation in the Old World. and the stories agree in the main with the account in Genesis.
DEMAND AND SUPPLY is a term used in Economics to show the relations between consumption and production, which largely deternine prices. When the demand exceeds the supply prices rise, and vice versa. What is known as over.production is generally underconsuniption, i.c. inability on the part of the mass to buy.
DEMETER was the great "Mother-goddess" of the Greeks. By the Romans she was called Ceres, and she was the mother of Persephone.
DEMOCRACY rests on the principle that all who are fit to perform the duties of citizens should share in the direction of the State, and it allows every one to express their opinion, though it cannot secure that every opinion shall infuence the action of the State. An educated D . is probably the most righteon ', mm of Government, and an uneducated D. one of the most pernicious fornis.
DEmocritus, the great Greek 'laughing philosopher, was born about 470 B.C. He 'laughed 'at the follies of mankind.
DEmosthenes, the Greek orator, was born about $3^{82}$ B.C. He was the great opponent of Philip of Macedon, and-besides being a man of spotless moral character-was the most perfect orator of olden times.
DEMY SIZE in paper comes between 'royal' and 'crown.' Printing D, measures generally 22 in. by 172, and writing D. 20 in. by $15 \frac{1}{2}$, and drawiug D. 22 in. by 17 .
Denarius was a Roman silver coin worth to lbs. of copper, and equivalent to about 7 asl. in modern English money.
DisNSITY, in Physics, is quantity of material la a glven buik, and varies directly with the quantity and inversely with the bulk. In Economics, it is the number of persons per mile or per ncre. The D. of large English towns varies from under 20 per acre in Norwich, Leeds, Shefficld, ancl Nottiugham, to over yoo In Liverpool. Birmingham, Bristol, and Loundon have about 49, and Manchester has 85 . The D. of European countries varies from about 66 per scquare mile in Norway, and 27 in Sweden, up to 485 in England, and 520 in Belghum. Irimee las $\mathbf{1 8 7}$, Germany 2an, Russia 42. The U.S.A. have 18.
Drodar is the Inclian cedar, and is similar to the Lebanon kind.

De Profundis is the rsoth Psalm in the Burial Liturgy of Rome. In the Vulgate it begins with D. P. $=$ " out of the deptlis."

DE QUINCEY, the opium eater, was born in 1785 , and died in 1859. His essays are briltiant.
DERBY, EARL OF, was largely instrumental in passing the Reform Bill of 1832 and in abolishing slavery. He recommended Disraeli as lis successor when lie resigned oflice in 1868
DEREY-DAY is the Wednesday after Easter Sunday. Since 1872 the race has been run on Epsom Downs, the entry-money is 50 guineas, the stake is generally about $£ 6000$, and the competitors are three-year olds. It is much more popular with the mass than Ascot or Goodwood. It was first run in 1780 , when the distance was only 1 mile; but in 1784 the distance was increased to $1 \frac{1}{2}$ miles, and the weights were raised to 115 lbs . for colts, and 112 lbs . for fillies. In 1884 they were made 126 lbs. for colts, and 121 lbs , for fillies. The nominal fee to a jockey for a 'win' is $£ 5$, and for a 'lose' $£ 3$, but custom and gratitude bring the amount up to, in some cases, £1000. The late Fred Archer for years had an income of over $£ 10,000$ a year. Other famous Derby-winners before his time were Maidment, Custance, Wells, F. Butter, J. Marson, Templeman, Scott, S. Day, Conolly, Chapple, Robinson, who won four times in five years- 1824 -1828-the Arnulls, Buckle, and Wheatley. Three tlmes the Derby horse has also won the 'St. Leger' and the 'Two Thousand.' Mr. Bowes's WV. Australian (1853), Count de Lagrange's Gladiateur (1865), Mr. Sutton's Lord Lyon (1865),
DERVISHES are Muhammedan devotees, and are either itinerant or monastic.
DERWENTWATER LAKE, near Keswick, is about 3 miles long and $\frac{1}{2}$ wide. It lies just south of Skiddaw, and receives the cataract of Lodore.
DESCARTES, the great French plilosopher and mathematician, was born in $\pm 596$. He found that he could doubt everything but his own existence-Cogito, ergo sum, 'I think, therefore I exist.' He died in 1650.
DESCENT IN BRITAIN goes by primogeniture, but in U.S.A. distribution of property is equal among all the nearest kin, without regard to age or sex.
DESMOULINS, the famous pamphleteer of the French Revolution, a founder of the Cordeliers Club, and one of those who voted for the death of the king, was aftervards executed by Robespierre, and inet his fate in a paroxysm of terror.
Delicalion was the Greek 'Noah,' whose ark rested on Mount Parnassus.
DEUS EX MACHINA means the explanation of unin ${ }^{+}$'ligible phenomena by supernatural causes.
DEL. ATION OF THE COMPASS from the line of the magnetic meridian is caused by the presence of iron, and can be neutralized by artificial magnets.
Devil means 'slanderer.' Most of the old Oriental religions have a host of Devils, and D.-worship arises out of the idea that no Good Spirit troubles himself about this evil world.
Devonshire, Dulie of, is better known as Marquis of Huntingdon, his title before 180 m , when he succeeded to the peerage. When Mr. Gladstone introduced - Home Rule, the Marquis became the acknowledged leader of the Liberal Unionists. His farnily name is Cavendish.
DEW is the result of radiation of heat from the earth at night, and the consequent condensation of the particles of vapour in the atmosphere. It is heaviest in latitudes where the heat is greatest, and on nights when the sky is freest from clouds. If the temperature falls below $3^{\circ} \mathrm{F}$., the dew becomes hoar-frost. The dew point is the temperature at which the condensation takes place, and is a useful lint to gardeners of what the minimum temperature during the night is likely to be.
DHOW is Arab ship, ranging up to 25) tons burden, with one mast and one large square satil.
DiAl, was earliest form of clock, and came into Europe rit Greece from the Egyptians or the East. It was introduced into Rome during the First Punic War. There are many kinds, but the universal principle is to show the sun's distance from the meridian by the shadow cast ly a finger parallel to the earth's axis.

DIA LECT is local deviation in granimar, vocabulary, or pronunciation, from the general literary language. The present rage for 'dialect' novels may be a step towards phonetic spelling. Dialect is the result of differeut climate, customs, etc., in an age before spelling or pronunciation had been fixed in print.
Diamond is the liardest gein and the purest form of carbon. It ought to be as pure and colourless as a drop of the purest wuter-hence " first water." Diamonds are sold by weight, I carat stones costing from $£$ to $£ 30,5$ carat stolles from $£ 200$ to $£ 300$, yo carat stones from $£ 800$ to $£_{1}$ rooo. The Mattam diamond is 367 carats, the Orloft $194 \frac{1}{2}$ carats, the Regent 1363, the Koh-i-noor 106, and the Braganza r880. If the latter, which is the-Portuguese crown jewel, is really a diamond, it is worth $£ 5,000,000$. The Koh-i-noor, which is one of the British crown jewels, belonged to the Emperor Aurenzebe, and was reduced by his unskilful or dishonest workmen from 793 to 186 carats. It was captured by the British troops in the Sikh War, and presented to the Queen. It had to be re-cut, which further lowered its weight. It is valued at El40,000. The Regent or Pitt diamond cost the Duke of Orleans $\neq 135,000$, and is valued now at $£ 450,000$. Catherine 11 . of Russia paid for the Orloff diamond about $£ 90,000$ in cash, an annuity of $£ 1000$, and a title of nobility. The methods of testing stones are quite simple. Diamonds are so hard that they cannot be scratched by anything except another diamond; they are not electrified by heat; and they cannot be seen through, e.g. so as to flistinguish the marks of the skin on a liand in which they nlay be lying.
DIANA, the Roman goddess of the moon, was identified with the Greek Artemis.
DIAPASON is the concord of the first and last notes of an octave, and then came to be used for the most important stops of an organ.
DIATONIC is the natural scale in music, in which no chords are chromatically altered, and no notes are ' accidentals.'
Diaz, Bartolommeo, the great Portuguese navigator, discovered the Cape of Good Hope-or of Storms, as he called it-in 1487.
DICKENS, CHARIES, was born in 1817, and began life as a newspaper shorthand writer. Sketches by boz appeared in 1835, lickwick Papers in 1837, followed by Oliver Twist, Nicholas Nickleby, etc. He died in 1870, and was buried in Westminster Abbey, leaving behind him some characters whose names hare become typical in English-Sam Weller, Vr. Pecksniff. Sarah Gamp, Eriah Heep, etc. His most popular work was the Christmas Jales, the most famous the Pickavick, and his best The Tile of Two Cilies. He was a great artist, but strained far too much after 'effect.'
DICTATOR, an extraordinary supreme magistrate appointed for six months at Rome when the Republic was in great danger. His power was unlimited.
Dictionary of English Language. The earliest were those of Bullokar (1616) and Cockeran (1623). Dr. Johmson's appenred in 1755 . Webster's in 1828 , Ogilvie's in 1847, and Murray's begun to appear in 1884. The smallest in the world is Bryce's, which is sold along with a microscope.
Dinenot, the French philosopher, was born in 1713. and in $\mathbf{r 7 4 9}$, with D'Alembert, he began the famous Encyclopaedia.
DiDo, the reputed founder of Carthage, was a Tyrian refugee of the gth century B.C.
DIEU ET MON DKOIT, 'God and my right.' was first adopted on the arms of England by Richard 1.; but Elizabeth, the most notorious flirt of her centurywhich also saw Mary Stuart-displaced it for Semper cadem, 'Always the same.'
Digrrs, the ten numerals 0.9. get their name from Latin, dioitus, a 'finger.'
Dilettante is nearly the same as an artistic amateur,' one who devotes his leisure to the arts and sciences for amuscment
DILKE, SIR CHARLFS, RIGITT IION., is proprietor of the Athenazum and ef Ncues and Queries, and has pullished several impcrant works, e.a. Grever Brituin. He was M.F tur Chelsea from ises to IsE6,

## GENERAL KNOWLEDGE.

when he lost his seat owing to certaln cllvorce proceedings. He re-entered l'arlianent in 18 ge for liorest of Dean.
DILLON, JOIN, M.P. for East Mayo, was closely identified with the Plan of Canpaign, and eventually was imprisoned for criminal conspiracy in 1888 . In 1891 he was again imprisoncel, bnt was released at the time of Sir. Parnell's fiasco. Ife wats elected chairman of the Irish Party in succession to Mr. Justin M'Carthy in 1896.
Dimensions or heaven (see Rev, xai. 16). A cube of 12,000 furlong's is $\$ 96,793.058,000,000,060, \mathrm{coO}$ cubic feet. If halt of that is seserved for the Throne of God and the Court of lleaven, and a quarter of it for the streets of the city, there is still left enough space to provide $30,321,843,750000,000$ ordinary-sized rooms. That would give one roon apiece to all the inhabitants of a nillion worlds as thickly peopled as the earth is now.
Diminutives, in Grammar, imply ( I ) actual smallness, as yosling; (z) affection, as clurling; (3) contempt, as lordling.
DINGO, or ' native 'dog of Australia, is very fierce and terribly destructive to flocks. It is probably not indigenous to Australia, as it is the only placental mammal on the continent.
Dinner Services of Gold are owned by Her Majesty Queen Victoria, the Marquis of Breadilbane, and Baron Rothschild, valued respectively at $£$ E00,000, £120,000, and $£ 100,000$.
DIOCLETIAN became Emperor of Rome in 284 A.D.
DIOGENES, the Cynic, was born about 412 B.C. There are many stories of hin and his tub, and he was accused of many crimes; but, as he lived to a great age, his life must have been a healthy one. IIc was guilty, however, ", of elevating impertinence to the rank of a fine art."
DIOMEDE was one of the heroes at the siege of Troy, and a suitor of the fair Helen.
DIONYSIUS was the name of two tyrants of Syracuse, father and son, between 430 B.C. and 340 B.C.
DIPLOMACY really became a fine art in England in the reign of Henry VIl., the first king who had to keep the 'Balance of Power' in Europe. The present system of regular diplomatie relations between governments was probably instituted by Richelicu. Diplomacy agents are of various kinds and rank, from ambassadors and envoys extraordinary down to secretaries of legation and attachés.
DIRECTORY, THE, was a body of five officers to whom the executive authority in France was entrusted in 1795.
DISCIPLINE, BOOKS OF, were two books connected with Church of Scotland. The first was drawn up by John Knox and four colleagues in 1560, and the second by the General Assembly of 1578 .
DISESTABLISHMENT means the placing of the 'National ' Churches of England, Scotland, and Wales on the same footing as the other religious bodies. The Protestant Church of Ireland was disestablished in 186 n , and disendowed at the same time, its funds going largely to build Romanist schools, etc. The real motive of Disestablishment is to get possession of the endownents of the churches for parochial and national purposes, and the annual funds of the English Clurcl! alone amount to about 69,500,000. Its nominal motive is Religious Equality. DISPENSING Power is that held by the Pope, by which he can nominally release from all oaths, vows, etc. It has also becn clamed in history by some English kings, notably, James II., to enable their favourites to "dispense" with the law of the land.
DiskaEli, the father of Iord Beaconsfield, was a well-known mim of letters. He was horn in 1766 , and published his Curionities of Literuture in I791-93.
DISk UPTION was the secession of 474 clergy from the Fistablished Church of Scotland in 18,43 , to protest against the degenerate principles of its life and cloctrinc. They formed the Free Church.
DISSENTERS is the mame in Britain for all members of religions bodies, P'apist or Protestant, other than the three Establislied Churches.
DISTANCE OF SIGHT varies with eleyation, atınosphere, etc. On a clear day an object i foot higli cim Le scen
by au ordinary eye more than a mite off, one ro feet liggh more than 4 mites off, one roo feet high more than 13 miles, one a mile ligh about 100 miles. An ordinary man is not visible, even on a plain, at a distance of 5 miles, owing to the curvature of the earth,
DISTILLATION is the making of a substance volatile and then condensing it. Coal is distilled for gas, wood for tar, shale for oil, etc.
DISTINGUISHED SERVICE ORDER was instituted by Qeen Victoria in 1886 for the adequate reward of naval and military service. It ranks next to the order of the Indian Empire, and the badge is a golel cross, enamelled white, bearing on one side the crown, and on the other the royal cipher, V.R.I., eacli inside a liturel wreath.
Distribution of Religions. Christianity numbers $33^{8}$ millions, Buddhism 340 , Mohammedanism 210, Bralmanism 175, Confucianisin 80, and Judaism 7. Europe contains 147 million Papists and 71 million Protestants, America 47 million Papists and 30 million Protestants. There are about 100,000,000 Englishspeaking persons in the world, 21 million Episcopalian, 16 Methodist, 15 Papist, II Presbyterian, 8 Baptist, 6 Congregational.
Distribution or Wealth in britain. Accord. ing to the Income-Tax returns, incomes of less than E2000 have relatively increased in recent years, and those of more than $£ 5000$ have absolutely decreased.
DIVING-BELLS are generally hollow truncated cones, which contain enough air to prevent them filling at once with water when submerged. Consequently, the diver can breathe freely for a long time if he can be supplied with fresh air when the contained air las become vitiated by his respiration.
DIVISION OF LABOUR is the principle that each person or place should inake or be used for what they can do best, and that practice makes perfect. The saving of time is very considerable, and less ability is required in the workman. Consequently, while stimulating production, especially by machinery, it has a bad moral effect on the workers.
Docks are for various purposes. Wet Docks are for loading and unloading vessels in; Dry Docks or Graving Docks are for examining and repairing them in ; and Floating Docks may be sunk under a vessel and then raised with the vessel. The first Wet Docks in England were the Commercial Docks in London, about 1660. The West India Docks date about 1800, and were followed by the East India, Millwall, London, St. Katharine, and Victoria Docks. These London Docks are the largest in the world, those of Liverpool-six miles long-coming next.
DODO was a kind of bird, now extinct, once abundant in Mlauritius. It was a sort of cross between a pigeon and a swan, and was terribly clumsy.
DODONA was the oracle of Zeus in Greece, where the priestesses received his decisions in the rustling of oak-leaves and the bubbling of a spring.
DOGS belong to the same genus as wolves. The puppies are born blind, and remain so for to or 12 days. Viscount Chetwynd's "Pincher " lived till he was 36 years old.
DOG-DAYS are 42, in the hottest part of the year, beginning with the heliacal rising of Sirius, the dogstar, i.e. July 3.
DOG-LICENSES. A license must be taken out at a cost of 7 s . 6 d . for every dog over six months olel, except when exemption is certified by the Commissioners of Inland Revenue for a dog kept as a leader of a blind person, or for tending sheep and cattle. In Ireland a license costs only 25 . 6 d . The number of licensed doges in Britain is $1,123,000$; in Irciancl. 368,000 ; in France, 2,864,000. The latter hits 75 dugs to every 1000 people. Great Britain has 38 .
DOGE (Latin, dux, 'leader') was the title of the chief magistrates of Venice and Cienoa. In Venice it hesan to be used in 697 A.D., and the dignity was held for life. In Genoa it began in r339 A.D., and was only for two years. The French abulished both in 1797.
DotT, the old Scots coin, was from one-cighth to onetwelfth of a penny.
DOLDRUMS are the equatorial seas, where calms and semalls alternate.
DOLLS have been discovered in Egyptian tombs dating
before the time of Moses ( 1600 n.C.). A doll given by Wm. Penn's daughter to a playmate in philadelphia still exists. The young Queen of the Netherlands lias an enormous number of D., and a D.-house which cost $£ 550$. Peter the Great gave $£ 2500$ for a D.-liouse. Queen Vietoria still preserves 132 of her dolls, most of which are small wooden ones.
DOLLAR gets its name from the German thal, 'valley,' because the first clollars were coined in Bohemia from the sitver in the valley of Joachim, 1518. The value is 45 .
DOLLINGER, the great German theologian, was born in 1799, and published his Doctrine of the Eweharist about 1823. In 1869-70 he made limself very fanious by attacking in the Oecumenical Council the doetrine of IPapal Infallibility, in consequence of whieh he was excommunicated.
[its name to the D. Alps.
DOLOMITE is magnesian limestone, which has given
DOLPHINS are found in every sea; they are abominably greedy, and swim at a great pace, especially when hunting.
DOME is a common feature of Byzantine and Renaissance architecture. The finest D. in existence is that of the Pantheon at Rome, 143 ft . high by $142 \frac{1}{2} \mathrm{ft}$. wide, but it is not the largest. That of St. Peter's at Rome is 139 ft . in diameter and 330 ft . high, that of Santa Maria at Florence is 139 by 310 , and that of St. Paul's in London is 112 by 215 .
Dominant, in Music, is the fifth tone of the diatonic scale.
DOMINIC, ST., the founder of the Dominican Monastic Order, was born in 1170, and was a missionary amongst the Arabs in Castile. He died in 1221, and was canonized by Pope Gregory IX. in 1234. He was not the founder of the Inquisition,
DOMINICAN, or BLACK, FRIARS were governed by the system of St. Augustine, enjoining silence, poverty, and fasting. They produced some famous scholars, e.g. Thomas Aquinas, and managed the Inquisition in Spain, Portugal, and Italy. They were thergreat rivals of the Franciscans, and were practically superseded in the r6th eentury by the Jesuits.
DON JUAN is the proverbiai Spanish libertine, whose prototype Iived in Seville.
DON QUiXOTE, the hero of the famous romance by Cervantes, has given his name to be a synonym for any foolish and extravagant act of chivalry.
DONKEYS are the claracteristic beasts of burden in the Mediterranean reglon, where the dry heat and precipitous roads suit them. Most are fourd in Spain and Portugal, where there is a total of $2 \frac{1}{2}$ millions, (r 125 for every 1000 inhabitants. Greece has 55 per 1000 inhabitants; Italy, 17. Ireland has about 27 per 1000.
DOOMSDAY BOOK contained the Daily Dooms or decisions in the first feudal survey of England in 1086. It does not include the four northern counties, as William's authority had not been fully asserted over them at the time.
DORE, the French painter, was born in 1833. He began as a comic artist, but made his reputation as a book illustrator. He died in-1883.
DORMOUSE is a corruption of the French domense, 'sleeper,' and has nothing to do with mouse.
D'ORSAY, COUNT, was the famous man of fashion in the Waterloo era. He was a friend of Byron and of Countess of Blessington, and a zealous Bonapartist.
DORT, SYNOD OF, was composed of Protestant divines, and met in Holland in 1618.19 . It condemned Arminianism, and established dogmatically Calvinism $\ln$ the Reformed Church.
DORY, JOHN, is a species of mackeral, and ought to be called juane dore, 'the golden yellow.'
DOUBLE STANDARD, (See Bimetallism.)
DOUGLAS is a family name in Scotland, the most famous of whom have been the great Border Earls. They had two branches, Black and Red, the latterthough the younger-flourishing long after the former had disappeared, and still existing in the Angus line. The 'Good Sir James' was a supporter of isruce at Bannockburn. Archibald, 'Bell-the-cat," was Earl of Angus; and his son, Gawin, was the famous Scots poet, the translator of the Acneid, the first poctical translation into Euglish of any classical author.

DOYLE, DR. CONAN, was born in 1859. He was editor of his school magazines both in England (at Stonyhurst) and in Germany, and he published his "Mystery of the Sassassa Valley" in Chambers's Journal when lie was 19. Froin 1882 to I8go he practised as a doctor in Southsea. His best literary work has been done in The While compcry, Micah Clarke, The Refugees, and Rodncy Stone. His most popular book was the collected Adventures of Sherlock Holmes.
DRACO was the Athenian legislator whose severity has made lus name proverbial in Draconlan. He lived about 620 B.C.
Dragoman is an Eastern word for a guide and interpreter.
DRAGON is fabulous monster, represented as a two. legged serpent with wings.
DKAKE, SIR FRANCIS, the great navigator, was born about 1540 , and began his career under Sir Jolin Hawkins. He then cruised in a vessel of his own to the West Indies, and brought home so much booty that in 1577 he returned to the Spanish Main with a fleet of five vessels. With this he earned the honour of being the first Englishman to sail round the earth, and he was knighted by Elizabeth. He was viceadmiral against the Spanish Armada.
DRAMA had its logical origin in the love of imitation, and its two great branches are Tragedy and Comedy. Both forms were perfected in Greece in the sth and 6th centuries B.C., Aeschylus being the creator of Tragedy, and Euripides being the humanizer of it. In inost countries the modem drama took its rise in miracle-plays and moralities, which were really tableaux vivants of Bible history and Christian doetrine. The 'Golden Age' of English D, was in the reign of Elizabeth, when the wonders of war, learning, and exploration stirred the impulse in men of genius like Marlowe, Shakespeare, and Ben Jonson, and stirred the sympathies of a nation victorious over a foreign Papist host. The 'Lieentious Age' of English D. was in the reign of the witty sot, Charles II., the age of Dryden, Otway, Wycherley. The French D. was practically founded by Comeille (r606-84), and developed by Raeine, Moliêre, and Voltaire, The German $D$. was founded by Lessing, and developed by Schiller and Goethe, the greatest of all modern dramatists. The modern Scandinavian D. is connected with the names of Ibsen, Bjormson, etc.
DRAMATIC UNITIES are three, those of Time, Place, and Action. Time was really immaterial, Place was due to the difficulties or impossibility on the classical stage of changing the scenery, Action is still neces. sary, because there must be one supreme chain of interest to hold the attention of the audlence.
DraUGHTS is Prince Bismarck's fayourite game, and he has the most valuable $D$. board in existence. Its squares are made of silver and gold, and the draughts are of the same metals, with a dianond in the centre of each silver one and a ruby in the centre of each gold one. The famous therd laddie' was Janes Wyllie, who played for the D. championship in 1894, when he was in his 77th year.
DREAMS are trains of thought passing through the mind during sleep, and over which there is absolutely no control. Consequently, they are generally incoherent, but not always. Coleridge's Kubla Khan was a dream. They are eaused by external natural causes, and are therefore retrospective, but superstition for ages has regarded them as proplictic.
DRESS, to be effective, should be appropriate, whicl generally means simple and harmonious. An old lady in a baby's bonnet is as unsightly as a Punch and Judy show would be in St. Paul's Cathedral.
DROUGHT in Britain has never lasted more than 49 days, and that length has only been reached once-in 1802-though 42 diys was reached in 1835. In recent times the longest have been 28 days in 18SO, and 29 days in 893 .
DRUIDS were the Keltic priests of Ginl and Britain, and had very great authority as lawgivers, judges, leaders, poets; and, as such, were the most formidable enemies of Rome. They worshipped the unistletoe, because its berries and its leaves grew in clusters of three, which was a sacred number. For the same
reason the Irish Christians began to reverence the shannrock, as an cmble"n of the 'rinity. Tlue circle was also sacred, which acconnts for the shape of Druidical renains. Thu most perfect circle is near Chipping Nurton, 107 ft . in dianeter, with 60 stones remaming. One near Keswick is 108 ft . in diameter, and has 49 stones, 39 in anlonter and 10 in an iuncer circle. At Stonchenge only 17 upright stones reinain. The largest circle in the dinys of the Druids themselves was at A vebury, which is also In Wiltshire. It was 1400 ft . across, and was formed of 100 stones, placed at intervals of 27 yards $(27=3 \times 3 \times 3)$.
DRUMMIOND, PROFESSOR, was one of the most influential Scotsmen of modern times. He had travelled very widely in all quarters of the globe, and his books have spread almost as widely. Amongst his larger books, his greatest success was with Natural Law in the Spiritud Worhl and The Aseent of Mum, and amongst his pamphlet-books The Greategt Thing in the World and Baxter's second Innings. These latter have had an enormous circulation. Dr. D. was Professor of Natural Science in the Free Church College, Glasgow.
DrUMMOND, WILLIAM, of Hawthornden, was a famous poet of the i6th century and a frientl of Ben Jonson. He was the first Scotsman to abandon his native dialect for the language of Sliakespeare.
DRURY LANE THEATRE was built in the time of James I., but was burned down in r67r. It was rebuilt by Sir Christopher Wren, but again burned down in 1809. It was reopened in 1812, and in connection with the opening the Smiths wrote the Rejected Addresses.
DRYADS were wood nymphs in Greek mythology.
DRYDEN, the poet, was born in 163r, and begrin his literary career with his Heroic Stanzas on the death of Cromwell. His first great hit was the fudian Emperor in 1663 , followed by his most elaborate prorluction, the Annus Mirabilis of 1666 . His Essay on Dramatic Pocsy marked an epoch in literary and drannatic criticism. The first of his political satires, Absalom and Achitophel (Monmoutlz and Shaftesbury), was produced in 1681, when he was poetLuureate with a salary of $£ 200$ a year. He perverted to Romanism on the accession of James II., and wrote his Hind and Panther satire on his old creed. His last great work was his brilliant lyric of Alex. anter's Feast. He clied in 1700. He stands unequalled as a satirist among English poets, and wrote excellent prose.
Dry-ROT is caused by a species of fungus which flourishes in clamp and unventilated places.
DUALISA in religion accepts two fundamental beings. one good and the other bad. Dualism in metaphysics accepts the separate existence of spirit and matter.
DUbLIN UNIVERSITY, commonly known as Trinity College, Dublin, was founded by Queen Elizabeth in 1591.

DUCAT was a coin formerly common in south east Europe. It was either silver or gold, the silver ones were worth about 35. 6d., and the gold ones about 95.6 d . It took its name from the fact that it was first coined by the Italian Ductites.
DUCKS are of several y arieties, e.g. Normandy, Picardy, Ayleshury, but all are evolutions of the comnon mallard or wild duck. The Mus\% Duck is often erroneously called the suscovy, and is a native of South America not Russin.
DUCKING-STOOLS were used for slirewish wornenapparently with sone success-from the 1 thll to the beginning of the rgth century. The last case recorded in this country was at Leominster in t8og. They are mentioned in Joomsdry Book:
DUCTILITY is the property of matter which renders it capable of being driwn out, as for wire. The order of cluctility in the metals is:-Gold, silver, platinum, iron, copper, zinc, tin, lead, etc. Glass also is very ductile.
DUDEVANT, MADAMrf, better known as George Sand, one of the greatest of Frencli novelists, was born in 1804, and died in 1876 . Iler first novel was Indiana, and between 1832 and her death slie publislied sixty more.
[Jane Grey.
DUDLEY, LORW GUILIFORD, was the husband of Lady

DUI:LLING existed amongst the Teutons in very early $t$ mes as a judicial process, but the modern duelling arose out of perverted chivalry in France during the 10th century. No less than 6000 men were killed in duels during the reign of IIenri IV. Duelling was never very connon in England till the reign of George Ill., during which men like Fox, Sheridan, Pitt, Canning, and Castlereagh were engaged in 'fatal' duels. One of the last duels in this country was that between the Duke of Wellington and Lord Winclselsen in 1820 . An Irish lawyer and the Mayor of Sligo fouglit a duel in 1851, but with no evil results. The last fatal duel in England was between Captain Seton of the 11th Hussars and Lieutenant Hawly of the Royal Marines in 1845, when the former was shot dead at fifteen paces. The German duel is nore or less a poinpous farce.
DUFFERIN, MAROUIS OF, was born in 1826, and began his public life in 1855 in Earl Russell's mission to Vienna. He las also served in Syria, Egypt, India, Italy, Russia, etc. IIe was Governor-general of Canada from 1872 to $\mathbf{1 8 7 8}$, and Viceroy of India from 1884 to 1888.
Du Guesclin, the famous constable of France, was born in s354, and died in 1380 . He was taken prisoner by Chandos and by the Phack Prince.
DUKES in Britain rank next below a prince or princess of the blood-royal and the arch bishops of the English Church. The first hereditary English duke was the Black Prince, created Duke of Cornwall in 1336, and the Duchy of Cornwall has ever since been the birth. right of the eldest son of the sovereign.
DULCIMER is very ancient musical instrument, and is merely a lidless box with wires across it, which are struck with two cork-headed hammers,
DUMAS was the name of two famous French novelists of inodern times, both of whom were called Alexindre. The elder was born in 1803, and made his first hit with lis drama, IIenri III. in 1829, followed by a number of dramas, Antony, Tercse, Catharine Howard, cte. Then lie turned to romance, and produced a number of historical romances, c.g. The Three Muske. teers and Twenty Fears After. The younger was born in 1824, and wrote La Dame aux Camelias and Diane de Lys, but his satiric dramas are much better than his 'problem' novels.
DU MAURIER, GEORGE, the caricaturist and novelist, was born in Paris in 1834, and learned at first hand as a native what he has described in l'rilby. He died in 1896.
DUN, JOE, the famous bailiff of Lincoln, left his name to others of his peculiar calling.
DUNBAR, the most famous of the old Scottish poets, was born about 1463, and celebrated the marriage of James IV, and Princess Margaret of England in lis beautiful poem, The Thrissil and the Roir.
Dunciad, THE, is Pope's great satire, in which he attacked his critics and his foes, Defoe amongrst the rest.
DUNDEE, Viscount, John Graham of Claverhouse, was the unscrupulous royalist leader who was defeated by the Covenanters at Drumclog after the murder of Archbishop Sharpe in r679. He was killed in the battle of Killiecrankic, 1689.
DUNS SCOTUS was a scholastic divine at the end of the rith century, the great opponent of Thomas Aquinas on the subjects of free-will and grace.
DUPLFIX, the great opponent of the Euglish in India, was born in . 1697, and was appointed Governor of Pondichery in 1742. He knew exactly how to take advantage of the jealousies that existed between the numerous native chicfs, and how to appeal lyy gorgeous display to the inhabitants of the Karnatic. Ile was defeated, however, by Clive, and died in 1763.

DUKER, the German painter, sculptor, and engraver, was born in 1471. He owed his success to liis intense application and his great skill in the meclanical details of the various arts. IIe was the first to teach perspective in Germany, and invented the method of printing wood-cuts in two colours,
DURHAM UNIVFRSITY was founded in r832, and includes University College, Hatfield IIall, and the Newcastle Colleges of Medicine and Science.

DVORAK, the composer, is a Bohemian, and stuclied at Prague and Vienna.
DWAKFS are found in whole tribes in Africa and South America, but individual D. are abnormalities tound amongst all races. The tribes are found in luge stretches of dense, dark, damp, tropical forest, nnder the deep sliadow of which their ancestors for ages have been overwhelmed physically and morally amid the mazes of tropical creepers and undergrowth. Charles I.'s famous dwarf, Jeffrey Hudson, was 18 inches high when he was 30 years old, though he eventually grew to 45 inches. "General Tom Thumb" was 3 I inches, and 'General Mite' $2 x$.
DYE-STUFFS are taken from the animal, mineral, and vegetable kingdoms. Among the most valuable animal dyes are the scarlet and crimson of the cochineal insect, among the most valuable vegetable dyes are indigo and madder, and anong the most valuable mineral dyes are Prussian blue and the various aniline dyes.
DYNAMICS deals with the laws of force in relation to matter in motion or at rest, and the three primary laws were stated by Newton. There are two systems of units; in the British a foot is the unit of length, and the pound is the unit of mass; while in the French a centimetre is the unit of length, and the gramme is the unit of mass. In both a second is the unit of time.
DYNAMITE was patented by Nobel in 1867. It consists of 75 per cent, of nitro-glycerine in sand or sawdust, or some other absorbent material, which facilitates its transport and diminishes its susceptibility to shocks-not, however, destroying its ex: plosive power.
DYNAMOS produce electric currents by mechanical power, using electro-magnets, which are much stronger than permanent steel magnets of the same bulk. The twelve dynamos built by the Westinghouse Company for the World's Fair had a maximum capacity of 580,000 lights, and required engines of 12,000 horse-power. The largest $D$. in the world, however, are said to be those of the Deptford Central Station, London, the field-magnets alone of which weigh 350 tons.

## E

EAGLE was called by ancients Bird of Jove, because of its courage and of the height to which it can ascend. The golden $E$. is the finest species in Britain, but is becoming very rare. The E. was a war standard amongst the Persians and the Egyptians in very ancient times, and was introduced into the Roman army by Marius. In medieval times it became the heraldic emblem of the Old German Empire, and was made double-headed in the 14th century. An E. is also the national military emblem of Prussia, U.S.A., and Russia, the latter's being double-headed.
EAR. The sense of hearing is affected by the mechanism of a drum from which the sound vibrations are conveyed to four bones inside, and these send them on by a double spiral tube to the brain.
EARLY ENGLISH ARCHITECTURE was the first of the pointed or Gothic styles that prevailed in Eng. land. It began in the reign of Richard I., about 1189, and continued to the beginning of Edward IV., 1272. It is characterized by Lancet windows.

EARTH is oblate spheroid, the polar diameter being about 26 miles shorter than the equatorial. The only proof that it is round, is that it throws a round shadow on the moon; the fact that the hulls of ships disappear below the horizon before the mast-heads only proves that the E. is not flat. It might be cylindrical. Its distance from the sun is about 90 million miles, but it is rather farther off in summer. Winter cold is due, not to greater distance, but to the fact that the sun's rays are more oblique, and therefore are more dispersed and come through more atmosphere, There are nearly 200 million square miles on the surface of the E., of which at least two-thirds are eovered with water. The total population of the land is about $1,483,000,000$, of whom 67 die every minute.
EARTHQUAKES are probably caused by a change in the weight of the earth's crust, and this is caused
mainly by the removal of masses of soil from moun. tain tops to the ocean floor. Therefore, a low plain at a great distance from the ocean ought to be exempt from them. E. in 13ritain happen most often, though very slightly, at Comric, where slight shocks are felt almost every year. Of the more distinct shocks, 3 started in $W$ ales, and $3 z$ along the south coast of England. The most serious that has occurred in Britain for four centuries started on the Essex coast on April 22, 1884, and did a great deal of harm in and round Colchester. The three worst $E$. on record in the world are the one of 1693 A.D. in Sicily, which destroyed 100,000 persons; that of 1703 A.D. at Yeddo, which destroyed 200,000 ; and that of 173I A.D. at Pekin, which also destroyed 100,000 . The Lisbon one in 1755 destroyed 50,000.
EARTHuORM, a kind of common worm which has no external respiratory organs, no teeth, and no eyes. It moves by the contractions of successive parts of the body, aided by a double row of bristles.
EAST INDIA COMPANY was formed in London in 1599 for the purpose of trade with the East Indies. Since 1858 the Company has existed only for the purpose of receiving payment of its capital, and of the dividends due upon capital until its repayment. It first established a mercantile supremacy in Indin, which led to the establishment of British supremacy generally.
EASTER is observed in the Romish, Greek, Anglican, Lutheran, and other branches of the Christian Church. The English name comes from the Anglo-Saxon Eastre, a goddess of light, or spring, whose festival was celebrated in April.
EASTERN QUESTION, the name given to the diplomatic and national interests affected by the gradual retrocession of the Turkish Empire in Europe, and the problem of disposing of the territory presumably to be left free. Bulgaria, Roumania, Servia, and Greece are the new States which have arisen. The Crimean War ( $\mathbf{x} 54-56$ ) and the Russo-Turkish War ( r 877.78 ) are the notable events connected with this subject.
EASTWARD POSITION assumed by the clergy of the Anglican Church has been the cause of much controversy, but in 1870 the English Court of Arches and Judicial Committee of the Privy Council decided it was illegal during the prayer of consecration.
EAVESDKOPPER, one who stands under the eares, near the window or door of a house, to hear what is said within doors. Earesdropping is punishable by a fine in English law.
EBERS, GEORGE MORITz, German Egyptologist and novelist, was born in 1837 . In 1870 he became Professor at the Leipzig University. His most important works are Egypt, Deseriptivc, Historical, and Picturesque, and the novels, Au Egyptian Princess, Homo Sum, etc. (all dealing with Egyptian life), The Burgomaster's Wife, etc.
ECCE HOMO (Latin, "Behold the Man !") is the name given, generally, to crucifixes and pictures representing Christ bound and crowned with thorns.
ECCLESIASTICAL COMMISSIONERS, a body corporate with power in regard to church organization, distribution of episcopal duties, forming of parishes, ete. It consists of all English and Welsh Bishops, fire Cabinet Ministers, three Judges, and others.
ECClesiastical Courts. There are three in England for purely E. matters, the Arcli-Deacons", the Bishops', the Metropolitan (York or Canterbury), and the Judicial Committee of the Privy Council is the Final Court of Appeal. The Court of Arches is the Metropolitan Court of Vork and Canterbury.
Ecrio is eaused by the reflection of sound-waves at some moderately smooth surface, as the wall of a building. The sound-waves are turned back according to the same laws that hold for reflection of light. If the sound does not proceed in the direct line of transmission, guided by a direct reflection, others may hear it, but not the person who produced it. Echo was a nymph, in Greck mythology, who fell in love with Narcissus, and because her love was unreturned she pined away till only her voice was left.
ECLIPSE is an obscuring of the light of the sun, moon, or other heavenly bodly by the intervention of another body.
ecumenical. Council is a general Eccleslastical Council regarded as representling the whole Romish Church. The last was held in 1870 at Ronne, when, after much discussion, the Pope wns declared infallible:
E:DDA (meaning" great-grandmother') is the name given to two Icelandic works, one being mythological pucms, the other being in prose.
EDDYSTONE LiGHYHOUSE marks a group of rocks Iying between Start Point and the Lizard. Its light is visible for 172 miles. The present one was built in 1879-1882.
EDIBLE NESTS are built in sumless caverns, and covered with a jolly-like substance, for which they are bought by the Chinese at the price of about $£ 8$ per 1 lb . Each 1 lb . contains about 50 nests, and 9 million are imported annually into Canton alone.
EDINBURGH REVIEW, THE, was established in 1802 , founded by several young men, of whom Brougham, Jeffrey, and Sydncy Smith were the best known.
EDINBURGH UNIVERSITY was founded in IS82 by a Charter granted by James VI. The present buildings were begun in I 789 , and the library contains about 170,000 volumes, besides 2000 manuscripts, and 10,000 theological books. This University unites with that of St. Andrews in sending one member to Parliament.
EDISON. THOMAS ALNA, the American inventor, was born in 1847. He was a news-boy on the Grand Trunk Railicay, and, becoming possessed of some type, issued a small sheet of his own on the train. In I863 he invented an automatic telegraph repeater. The carbon telephone, electric fire-alarm, electric railway, the phonograph, and photometer are his other inventions, as is also the 'Edison system' of lighting.
EDUCATION is the drawing out of power in a character, not the putting in of information into the mind; and its chief product is not knowledge, nor success, but power-power of mind and body, guided by power of will. To attain this end, teachers must be most carefully chosen, and more adequately remunerated; and large sums of money must be spent on subdivision of classes and on the adornment of school buildings. When the classes are too large, the weakest pupils-just because they are the weakestgo to the wall; but-just because they are the weakest-they ought to get most.time and help from the teacher. And the difference between so-called social 'classes' is one of taste only, not of humanity ; and taste is a habit, which can be taught 1 If children are surrounded with beautiful sights and filled with beautiful thoughts, they will become beautiful in mind and body. For beauty is not skin-deep. The main beauty of any face depends on a maze of little nerves and muscles bencath the skin, which themselves depend absolutely on the brain; and, if the brain is occupied with what is pure and brave and beautiful, the effect will be shown in the face.
Compulsory Education was in vogue amongst the ancient Persians and amongst their foes, the Spartans, the former paying great attention to the moral and the latter to the political training. Luther drew up a scheme of C.E. in r524, and found a fellow-labourer in Melancthon. Frederick the Great enforced attendance in I793 througlout Prussia, as Louis XIV. had in France a century sooner. In the United Kingdoin the Elementary Education Acts of 1870 , 1876, and 1880 compelted every school district to provide adequate accommodation for children, and the Act of regr added that such children should be taught gratuitously between the ages of 3 and 15 . Elementary Education is provided, however, by Voluntary Schools (mainly on religious foundation) as well as by Board Schools. There are about 2500 School Boards in England and Wales, controlling a population of about $20,000,000$. The school age is from 5 to I4, with exemption for proficiency after II. In Scothand, though not in England, there is State Secondary Education, but this is supplied in England by uncontrolled and uninspected private or semi-private venture. In 1870 there was only accommodation in Fingland for $8 \% 75$ per cent. of the children requirlng Elementary E., white in 1895 the percentage was I9.53, in 1872 the cost per child was $6 x 75.5 \mathrm{~d}$., and in 1895 it was $\ell^{2}$ Ios. I 1 d. for Board Schools and about
$£ 2$ for Voluntary Schools. The latter represent just falf the total number, and the religious diffichlty has caused acute feeling, especially in London. Secondary Education in Wales and Technical E. in the country generally have made great strides in the last four years, and the County Councils have, in sone places, done valuable pioneer work. The University Extension movement is also a real power making for culture and educational progress.
EdUCATIONAL Chronology. Winchester College was founded in 1387 , Eton in I441, St. Paul's in 1512 , Shrewsbury in 155r, Bluecoat School in 1553. Westminster in 1560. Kugby in 1567, Charterhouse in 1609, the first parochial charity schools in I702, Sunday schools in 1780 , first ragged schools in 1819, Mr. Brougham's first Education Bill in 1820, Irish national schools in 183I, first parlianentary vote ${ }^{i n}$ aid of primary education in 1832, pupil teachers' system in 1846, Lord Russell's Education Bill in 8853 . Elementary Education Act in 1870, Girton College in 1873, Oxford and Cambridge Board in the same year, Newnham College in 1875, new code in 1882.
EdWARD, King of England, was surnamed the Confessor, because he was inore of a monk than a monarch, but he was well-intentioned and won the love of his subjects. He conpiled a body of laws from those of Ethelbert, Ina, and Alfred, and died in rob6, being canonized a hundred years later by Pope Alexander III.
EDWARD, the Black Prince, was born in riso, and in 1346 he commanded part of the forces at Crecy, after which battle he adopted the motto Ich dien, 'I serve,' used ever since by the princes of Wates.
EDWARD I., the finest monarch and statesman of the earlier ages. He was wise in council and vigorous in action. In his war with Scotland he was just, if not generous, and throughout his reign the establishment of law and order in his kingdom progressed rapidly.
EDWARD II. was certainly not 'a chip of the old block.' He was weak, indolent, and too fond of pleasure, and most unwise in his choice of companions. With good friends he might have done much better, for he was amiable in disposition.
EDWARD III. was a brave warrior, and as soon as Mortimer was out of the way, he exerted himself in Scotland and France, and then again in Scotland after the truce of 1350 , with France; but towards the end of his reign he lost most of his French possessions.
EDWARDIV., entered London after a splendid victory at Mortimer's Cross, and was proclained king in 5461 . He alienated wise friends by a footish marriage, and had to flee; but on his return he was victorious against Queen Margaret and her son (Lancastrians).
EDWARDS, JONATHAN, was the celebrated American theologian and metaphysician who wrote on the Frecdom of the Will, which appeared in 1754 .
EEL seldom exceeds thirty inches in length, either the marine or fresh-water species. In England the latter are caught in basket traps composed of willow rods converging to a point, and also by tridents or celspears. Large numbers of them are imported from Itolland to London.
EGGS, THE SEX OF. Eggs that contain male germs are said to be wrinkled on the smaller end, while those that contain female germs are sinooth.
ECYPT. The natives are the earliest people known to us as a nation. Where Abraham entered the Delta from Canaan, they had built cities, invented hieroglyphic signs, and improved them into syllabic writing; they had invented records and wrote their kings' names and actions on the temples they raised; they were carpenters, boat-builders, potters, leathercutters, and glassblowers; and the masoury of the passages in the great pyramid has never been surpassed. Goid-beating, inhaying, engraving, and casting were also practised.
EIDER DUCK is found from $45^{\circ}$ North to the highest latitudes yet visited in Europe and Anerica. It is abuut twice the size of the common duck, and five lbs. of the best quality of its 'down' will be enough for a whote bed, as it is so clastic.
Eikon Basilike (Greek, 'the royal inage') was
published ia 1649 , and 1 s supposed to have been written by Charles I. himself. Milton's Eikonoklastes ('image-breaker ') appeared the same year, by order of Parliament, to answer it.
EIS'REDDFOD is now heid annually in Wales. It used to be an assembly of Welsh bards for the purpose of musical and poetical contests, the juckres being it first native princes and later English kings.
El Dorado is the Spanish for 'the golden land,' and was applied in the 36 th century to the region of supposed fabulous treasure between the Amazon and the Orinoco.
ELECTION, in Theology, is the doctrine that God has from the beginning elected a portion of mankind to eternal life, passing by the remainder. It dates from Augustine's time, but is generally associated with Calvin, who upheld it strongly.
ELECTRIC LighT. The smallest electric lamps are about the size of a pea, and are of great use in medical diagnosis, as they can be used to light up the inside of the body, making, e.g., the walls of the stomach practically transparent.

The charge per unit for electric light has in some places been reduced to a verylow rate. For instance, the Newcastle Company havereduced it to 2d., which is equivalent to gas at is. 1od. per 1000 cubit feet. In St. Pancras it is 3 d ., in Leeds nominally 8 d . , in Liverpool from 4d, to IS.
Electric Photograph, or "Rontgen" or " $X$ " rays. The discovery of the " $X$ " rays was announced by Professor Rontgen in Nature for J anuary 23، 1896. The essentials are a Crookes tub and some elec. tricity, the latter generating some invisible rays in the neighbourhood of the tube, which can be passed through all bodies. Some bodies, however, are less permeable than others, and cast a shadow. The discovery is of enormous value in operative surgery, e.g. in finding bullets, and has been greatly developed by M. Becquere's experiments.

Electric Power from Waterfalls is beginning to be very widely used, even where the fall is quite a small one. e.g. less than 20 feet. It is being most used in U.S.A., but is spreading quickly in Italy and Switzerland-where there is no cool-especially in the Bernese Jura, where 9 villages in an area of 21 miles diameter are being supplied from a single centre. A whole town has sprung up round Niagarn, especially in connection with the manufacture of chlorate of potash and acetylene gas.
ELECTRIC TELEGRAPH was practically invented by Messrs. Cooke \& Wheatstone and the first was along the London and Blackwall Railway in 1837 . In 18.43 Mr . Cooke introduced the practice of fixing the wires to poles. The varieties of electric telegraph are of two main kinds, with transient signals that must be read off as they appear, e.g the needles of Cooke \& Wheatstone, and with recorded signals that can be read off at leisure, e.g. the printing machines of Morse \& Bain, which is generally used in Europe. France is the best supplied with electric telegraph, but does not send so many messages as the United Kingdom. The first submarine cable was from Dover to Calais, laid in 1851 ; and the first Atlantic cable was laid in 1866.
Electric Tramways. The first in the United Kingdom was opened in 1883 from Portrush to Giant's Causeway, and the progress has not been great، only about 80 miles being open in 1897 . Indeed, the invention does not seem popular in Europe, for there are only about 600 miles existing in the whole continent, of which Germany has about 250. In U.S.A. there are more than 12,000 miles, Chicago alone having over 250. The relative cost of slingle-horse cars, electric 'overhead cars, and gas cars, is estimated at $5^{3} \mathrm{~d}$., $4 \frac{1}{d} \mathrm{~d}$., and $3 \ddagger \mathrm{dl}$. The 'overhead' system is practically universal on the continent.
Electrical. Engineering has been taken up even by women. Miss Millicent Fawcett, who was above the Senior Wrangler at Cambridge in 1890 , Miss Mary Bryant of the Durhan College of Science, and Miss Annie de Barr of Chlcago have all taken it up as a profession, and Mr. Edison's preference for wonen machinists for his more delicate work is so marked that lie cmploys 200 of them.

LDEP11ANZS. There used to be a race of dwarf elepliants in Malta, and individual dwarfs are found in differcnt parts of the world. The famous "Lili" cance from Sumatra, was only one yard high, and weighed ouly 172 lbs; the normal height being three yards (at the shoulder), and the nomal weight being about 7000 lbs.
ELEUSINIAN MYSTERIES, the sacred rights anciently observed in Greece at the annual festival of Ceres (goddess of corn), and so named from their original seat Eleusis. There were greater and lesser Eleusinia. the former being celebrated between September is and October 15 and apparently symbolizing the old conceptions of death and reproduction.
Elgin Marbles, the splenclid collection of antique sculptures brought-chiefly frons the I'arthenon at Athens-to England by the Earl of Eigin in 1814, and afterwards purchased by Parliament for the British Museum at $£ 35.000$ (half their original price). They exhibit the best Greek sculpture, and were partly done by Phidias.
Elior, GEORGE (the nom de plume of Marian Evans, the English novelist), was born in 1820. She did not come prominently into notice till $\mathbf{1} \varepsilon_{57}$, when the first of her scenes from clerical Life appeared in Bleckvoood's Magazine, and in 1858 the publication of Adam Betle placed her in the first rank of writers of fiction. The Jill on the Floss, Silas Marner, Nomola, Fevix Holt, and Daniel Derondit are all well known. In May 1880 she married Mr. John Cross, and she died in the following December.
ElizajE'H, Queen of England, kept the 'balance of power in Europe by her numerous and wisely. arranged firtations, whereas unfortunate Mary, Queen of Scots, flirted unwisely to her own destruction. William Grindal and Roger Ascham were. Elizabeth's tutors, and when she was crowned she chose wise advisers in Parker (Archbishop of Canterbury), and William Cecil, Lord Burleigh. The only point on which she refused to follow Parliament 's wishes was on that of her marriage. She felt the wisdom of remaining a spinster and a flirt, though she was in love with Dudley, Earl of Leicester, and probably with Essex.
Elliotr. EbENEZER, the English poet (known as the 'Corn-Law Rhymer'), was born in 1781. The best of his pieces, the Village Palriarch, was published in 1829, and his Corn-law Rhymes were collected from a local paper and published in The Ranter. He died in 1849.
ELOPEMENT is punished with death in some countries. For instance, a Brahman woman who runs away from her husband is eaten by dogs publicly, and her accomplice may be roasted on an iron bedstead. In China she is whipped, and may be stranyled.
Elvstum is often thought to mean 'happiness," but it was in olden times part of the Infernal regions, where the souls of the virtuous lived-sometimes in silence and gloom, sometimes in light and revelry.
Earbalming used to be done by the use of aromatic and antiseptic substances, or by the fuid that flows from imperfectly burned wood (which contains antiseptics, of course) ; but now impregnation with corrosive sublimate appears to be one of the most effective means next to immersion in spirits. The Egyptians and ancient Peruvians practised the custom.
EMBER-DAY'S in the Anglican and Romish Churches are fast-days, occurring at the times of year nppointed for ordinations, those being now the Wednesday, Friday, and Saturday after the first Sunday in Lent, after Whitsundiay, and after the festivals of the Holy Cross (Sept. 14th) and St. Lucia (Dec. I3th).
EMERSON, RALPH WALDO, the American prosewriter and poet, was born in 1803 . In 1829 he became minister to a Unitarian Church in Boston, but in 1833 resigned his clarge. At the close of 1833 he began his career as lecturer, and in 184 r and 184t two volumes of his essays were published, followed in IS46 by his poems. He has also written Representatire Men, Engliss Treits, Society and Solitude, and Pamasars (a collection of poems), etc lie died in 1882, having been a most orgginal, influential writer.
EMIGRATION. The persons wanted in the Colonies are mainly faru labourers, female domestic servants,
and farmers with a little capital ( $\mathrm{C}=00$ ) but the demand even for these is decreasing. Hardly any assisted passages are granted now, excepp by Queensland and West Australia, though abont 300,000 persons emigrate annually, about 200,000 of whom are of British and Irish orign. Unfortunately a number of those who emigrate are vigorous and loyal citizens whon we can ill spare at home; and their olace is partly filled up by alicu immigrants, who are dangerous, politically or industrially, and about whose numbers the Board of Trade returns are characteristically unsatisfactory. The principle of excluding all panper aliens is healthy and expedient for both national ind industrial reasons. Nearly twothirds of the European emigrants, in the case of the Irish emigrants four-fifhs, go to the United States, although the Australasian Colonies have spent a great deal of money in promoting European imnigration, especially from the Mother Country. It is calculated that every inunigrant has cost New Zealand £19. Qucensland £ 18 , and Victoria $£ 17$.
EvAMEL. The art of enamelling was practised by the Assyrians and Egyptians, from whon it may have passed into Greece, thence to Rome and its provinces, including Great Britain. The enamelled gold cup which King John gave to the Corporation of Lynn shows that the art was known to the Normans. The Byzantines of the inth century produced excellent cloisome enamels on a gold base; and in the rath century Limoges attained reputation for inlaid enamels, and in the 16 th century for painted enamels. Enamelling in colours, upon iron, is now common.
ENCALSTIC Tiles, omamental paring-tiles of baked pottery, were much used during the Middle Ages, in the pavements of ecclesiastical buildings. They were decorated with patterns formed by different coloured clays inlaid in the tile and fired with it. The art appears to have originated in the 12 th century. been perfected in the r3th, and fallen into disuse in the 15 th century. It was revived in 1830 by Wright, a Sheiton potter.
Eyergy, The Conservation of, was established from the investigations of Joule and others into the nature and phenomena of heat, and the discovery of the equivalence of a definite quantity of mechanical energy to a definite quantity of heat. This asserts that the total amount of energy in the universe (or in any limited system not receiving energy from without, or parting with it to external matter) is invariable. If energy of any form seems to disappenr, in such a case it reappears in another form. Thus, mechanical encrgy may be converted into heat.
Engineering Prugress has been very great in recent times. Amongst the groat projects recently completed or being now carried out are-the African Transcontinental Telegraph, which has reached north of Salisbury-the Baltic and North Sea Canal, which saves rzo miles for a Hartlepool, and 240 for a London boat going into the Baltic-the supplying of Birmingham with water from the Welsh mountains-the Blackwall Tunnel-the Corinth Canal, which enormously reduces the sea passage from Brindisi to Athens-the Beyrout and Damascus Railvay, which crosses the Lebanon on a gradient of I in $22,-$ the canalization of the Iron Gates on the Danube-the Fgyptian Railway to Assouan - the Gigantic Wheel at Eirl's Court, which is 300 feet in diameter, and can carry 1200 passengers in 40 carringes, and which stuck on May aI, 18g6, and kept aloout po passengers prisoners for 15 hours-the new Craigmaddic Rescrvoir at Glassow-a Russian milway from Merv to within roo miles of Herat, which lias both militiry and economic importance-the Manchester Ship Canal, which cost $£ 5,000,000$ a and hrings $\ln$ about $£$ r 30,000 -the Manchester (Tliirlmere) Waterworks-Niagara Utilization-Nicaragnan Ship Canal, through a district of constant earthquake-the Trans-Siberian Kailway, on which 70,000 men are being employed over a total distance of nenrly 5000 miles, 1300 of which are already open for traftic. This list will illustrate the importance attached nowadays to pure water in cities, and to shortening of time or distance i:1 transport.

EnGines in Great Britain draw on an averace passenger trains of 150 tons weight, and conl or goods trains of 400 or 500 tons weight ; but these weights are often exceeded. For instance, the Great Westem entrines in South Wales draw coal trains of 1000 tons to the Barry Docks at Cardifis: The largest engine in the wortel is said to be one in use on the St. Gothard Kailway, whicla has six axles, and weighs 85 tons. Very large ones are also uesd on the C.P.R. and other railways that cross the Rocky Mountains.
English Language has been spoken in England from the settement of the Anglo-Saxons, about soo; and it was called Auglo-Saxon till the Norman Conquest, when French was introduced and spoken as well, till about 1250. Finally the two languages mingled, English proper being the result.
English Literature rose gradually out of Keltic, Latin, Anglo-Saxon, and Anglo-Norman literatures. Anglo-Saxon was the first, then Latin was used for law, history, and philosophy, and French for light literature, and then Chaucer in the a stll century became the representative English writer of the time. In the 15 th century the Remaissance spread from Florence to England, and Dryden's death in 1700 marked the commencement of the 'Augustan Age,' whilst the French Revolution may be said to mark the beginning of the modern movement in literature.
ENGRAving on wood, intended for printing or inlpressing from, long preceded engraving on metals. The art is of eastern origin, and, at least as early as the roth century, the Chinese engraved and printed fronn wooden blocks. In Europe (Italy and Gernany) it was first heard of in the r3th century, and in the 15 th century the art of printing from engraved plates was discovered in Florence. The Dutch and Flemish schools did mach in the $\mathbf{1 6 t h}$ and 17 th centuries to enlarge the scope of the art, and in the latter year etching became common. During the end of the r8th century line cugraving attained more depth of colour and fulness of tone, and in this century it has been still more perfected.
ENSILAGE, in Agriculture, is a way of storing green fodder, vegetables, etc., in receptacles called 'silos,' which are usually pits, lined with wood, brick, concrete, or stone. The fodder is cut, mixed, placed in the silo, and kept compressed by heavy weights. The modem system dates from about 2875, but the practice was known to the Romans, and has been common in Mexico for centuries.
ENTOMOLOGX is the branch of Zoology which treats of insects. It is so called because they are 'cut in,' the transverse division of the body being the most conspicuous feature.
ENVELOPES were invented by Vallyer in r653, when, with Louis XIV.'s pernission, he established a private -penny post, but they were not introduced regularly into this country till $\mathbf{1 8 3 9}$, as, before the Penny Post was started, E . were charged double postage.
Epaminondas, an ancient Greek hero, was born about 418 B.C., and raised his country, Thebes, to the summit of power and prosperity. He took a leading part in the struggle during which Spartan supremacy was destroyed in Greece. His character is one of the finest in Greek history.
EPIC is restricted, by some authorities, to narrative poems written in a lofty style and describing the exploits of heroes. It is distinguished from drama in so far as the author frequently speaks in his own person as narrator, and from lyrical poctry by making the narration of action, not the expression of cmotion, the predominant feature. Homer's /liad and ot yssey, Virgit's Aencitc, the German Aibelengentied, the Anglo-Saxon poem Dcowutf, Dante's Muime Commedite, and Milton's Paradise Lost are the most famous epics of the world's literature. Barbour's Bruces is an historical epic, and Butler's Mutilibras is a mock-heroic, humorous epic.
EpICTETUS, the Greek Stoic philosopher, was born about A.D. 6o. He lived long at Rome, where, 1 h his youth. he was a slave. Thougli nominally a Stoic, in his discourses he appeared nore as a moral and religions teaclier than as a phiflosopher. The excellence of his systen was tuiversally acknowledred. When Domitian banished the philosophers from Rome,
he went to Epirus, where he is supposed to liavo died.
EPICURUS, another Greek philosopher, founder of the Epicurean School, was born in B.C. 342. The fundamental principle of his ethical system was that pleasure and pain are the chief good and evil, tho attainment of the one and avoidance of the other being the end of philosophy, and peace of mind, based on meditation, he considered as the origin of good.
El'IGRAM was the term originally given by the Greeks to a poetical inscription placed upon a tomb or public monument, and, later, it was applied to every little piece of verse expressiug, with precision, a delicate or ingenious thought.
EPOCH. The most important are the creation and the birth of Çhrist. The Greeks counted their time by periods of four years, called olympiads, the Romans dated from the supposed era of the foundation of their city, and the Ohristian Era, dating from the birth of Christ, was first introduced in the 6 th century. The Chinese reckon their time by cycles of sixty years, giving in different name to each year in the cycle.
EQUINOX, the time of equal length of day and night, comes about the 21st of March and the 23rd of September.
Eras. Christian Era was invented by Dionysius, a Roinan monk, in 527 A.D., but it was not used as a dating-point till 705 in France, 1340 in Spain, and it is not accurate, as Christ was born four years earlier than is usually supposed. The Greek Olympiads, of four years apiece, began in 776 B.C. The Muhammedan Era dates from Muhammed's 'Hegira' or 'Flight' from Mecca to Medina, which was in 622 A.D. (See EPOCH above.)
ERASMUS, DESIDERIUS, the Dutch scholar, was born in 1467 . His original name was Gerard, which he changed according to a fashion of the time. In 1510 he became Margaret Professor of Divinity and Greek Lecturer at Cambridge, and in 1514 he went to live at Basel, where he died. He edited various classics, the first edition of the Greek Testament from MSS., etc., but his best-known works are his Praiso of Folly and his Colloguies.
ESCAPEMENT is the contrivance in a time-piece by which the pressure of the wheels and the vibratory motion of the pendulum (or balance-wheel) are accommodated the one to the other. The necessary point in a good escapement is that the impuise conimunicated to the pendulum shall be invariable, even in spite of irregularity in the train of wheels.
ESCURIAL, a remarkable Spanish building near Madrid, comprising at once a palace, convent, church, and mausoleum. It was built by philip II. in memory of the victory of St. Quentin. It is popularly considered to be built on a gridiron. because St. Lawrence is said to have been broiled alive on one. It was fired by lightning in 1872, and seriously damaged.
Esquimaux, or ES Kimos, call themselves Inu-it, 'the people.' They consist of the Greeulanders, the Esquimaux proper, in Labrador, and the Western Esquimaux, along Hudson's Bay, etc. They are not deficient in intellect, and are kind and hospitable, but their religious ideas seem to be few. They are short, have flat noses, often oblique eyes, and projecting cheek-bones.
ESSAYS AND REVIEWS, a volume written by Dr. Temple (the present Archbishop of Canterbury), Dr. Rowland Williams, Baden Powell, I1. B. Wilson, Mark Pattison, Prof. Jowett, and Rev. C. W. Goodwin, all being Church of England clergymen. The book cane out in 1860 .
Essex, Robert Devereux, Earl of (Qneen Elizabeth's favourite), was born in 1567. He served in expeditions to Portugal and France and Spair. In 1599 he was made Lord-Lieutenant of Ireland, but was not successful in quelling the rebellion there, so returned to Englind, tried to raise an insurrection, was sent to the Tower, and executed.
Esitates of the Realm, in Britnin, are the lords spiritual, lords temporal, and the commons.
Erciling, the art of producing designs on a plate of stecl or coyper, the drawing being done through a
coating of varnish, and bitten in by a strong acid. Drawings done with pen and ink are called etchings, too, nowadays.
E7HICS is closcly connected, as a science, with theology, psychology, politics, political econony, and jurisprudence, but what mast strictly belongs to it is the investigation of the principles and basis of duty, or the moral law; and also an inquiry into the nature and origin of the faculty by which cluty is recognized. The foundations of the leading systems were chieffy laid by Socrates, Plato, Aristotle, Epicurus, the Cynics and the Stoics.
ETHNOI.OGY AND ETHNOGRAPHY are sciences treating of man, the former being connecter with the customs, languages, and institutions of mankind, and the latter with descriptive details and the collection of facts relating to particular tribes and localities. Anthropology is a term used to include both these sciences.
ETRUSCAN VASES were really the productions of a ripe age of Greek art, though made in Etruria. One class (having black figures and ornaments on a red ground) dates about $6 \times 0$ B.C., and another class (having red figures-the natural colour of the clay-and black ground) dates about a century later, extending over a period of about 300 to 350 years, when the manufacture seems to have ceased.
ETTRICK is now a sheep-pasture, denuded of wood, but anciently formed part of Ettrick Forest, which included quite a large portion of the Scottish Lowlands. James Hogg, the Ettrick shepherd, was a native of the district.
ETYMOLOGY is a term applied (i) to the part of grammar treating of the inflections and modifications of words and showing how they are formed from simple roots; (2) to the branch of philology which traces the history of words from their origin to their latest form and meaning. In the latter sense, it is one of the oldest of studies.
EUCALYPTUS is mostly a native of Australin, remarkable for its huge size, sometimes of 480 to 500 feet. In that colony they are called gum trees. The wood is good for ship building, and the oil is a disinfectant, and beneficial in cases of cold, catarrh, bronchitis, etc.
EUCLID of Alexandria, the distinguished Greek mathematician, lived about 300 B.C. Hi Elements of Geometry, in 13 books, are still used, and the severity and accuracy of his methods of demonstration are unsurpassed.
EUGENE, or Francois Eur, was born in 1663, and being offended with louis XIV. entered the Austrian service in 1683, and distinguished himself in the war between France and Austrin and in the Spanish War of Succession. In fact, he was one of the great generals in modern times. He died at Vienna in 1736.
Eugenie, Marie de Guzman, ex-Empress of the French, was born in 1826 . In 1853 she married Napoleon III. In 1870, during the war in Germany, she was regent, but was forced to flee to England, to remain there, first at Chislehurst then at Farnborough, eight years after Napoleon's death in 1873 .
EUPHUISM was the style in writing and conversation of many of the wits at Queen Elizabeth's court. The name and style were derived from Joln Livly's Euphues, The Anatomy of Hit, and the Euphues and His England.
EURASIANS (originally Europ-Asians) are the 'halfcastes ${ }^{\circ}$ of India, prirticularly common in Calcutta, Madras, and Bonibiy. The girls are generally pretty.
EURIPIDES, the celebrated Athenian tragedian, was born at Salamis in the 5 th century B.C. The violence of his enemies forced him to take refuge with the King of Macedonia, who honoured him highly. He wrote many tragedies; e.g. Alcestis, Midea, Hipkolytus, etc.
EVIDENCES OF CHRISTIANITY are either external or intemal; either the body of historical iestimonies to the Cliristian revelations or arguments drawn from the nature of Christianity itself, as exhibited in its teachings and effects, in favour of divine origin. The first Christian apologies were written in the and century; and in the Middle Ages the scientific representation of Cliristianity was the work of those who
welded Ilatonic philosoply with Christimn dognas, In the 16 th and 17 th centuries the Renaissance and Reformation gave rise to a spirit of inquiry which developed Einglish deism as represented in the 17 tht and 88 th cenvuries; and the igth century has been characterized by a strong rationalistic spirit of criticisul.
Evil, ORIGIN OF, has given rise to much discussion. The oldest theory is probably that of Parsecism, or Zoroaster's religion, according to which there were two original principles, one good, the other evil. Plato held that goud was the esscince of all things and that evil had no read existence. Another view ascribes the existence uf exil as due to the exercise of man's free will.
EwALD, GEORG HEINRICH, a German Orientalist and Biblical critic, was born in 1803. Among his chief works are-Complete Course of the Jebrew Lemptulye. The Poeticel Dooks of the Old Tertanent, etc.
EXCHEQUER, COURT OF, was one of the suprome courts of common law, and was established by William I. It is said to derive its name from the chequered cloth, like a chess board, on which the sums were marked and scored with counters.
ExECUTION is performed in various ways in different countries. English-speaking prefer the gallows in private, though New York State uses electricity; Auseria, the Netherlands, Portugal, and occasionally Russia use the gallows in public. Belgium, Denmark, France, and part of Switzerland use the guillotine publicly; Bavaria, Hanover, Saxony, and part of Switzerland use the guillotine privately. Chima uses the cord publicly; Prussia, the sword privately; and Spain the garrott publicly.
EXHIBITION, INDUSTRIAL, was held in 1798 , and arnin in 1802, at Paris. The first exhibition on an international scale was held in 1851 in Hyde Park, London; and in 1889 one was held to commemorate the centenary of the French Revolution, in Paris, when the famous Eiffel Tower was built. In 1887 a Royal Jubilee Exhibition vas opened at Manchester, and a great International Exhibition of Industry, Science, and Art was held at Glasgow the next year. ExTRRADITION is the surrender of a criminal by the government in whose territory he has taken refuge to the government in whose territory he committed the crime, which does not mean any ordinary 'political' oftence.

## F

FABMAN SOCIETY was founded in 1880 to propagate Scientific Socialism, and has published some valuable Essays and Tracts.
FAbil were a famous Roman family, who were killed to a man in an ambush. One boy, who had been left behind th Rome, becime the founder of the second gencration, and the ancestor of the great Fabius Inaximus, whose defensive tactics against Hannibal in the Second Punic War were so successful that he got the title of Cuncta!or 'the procrastinator.
FABLES are generally allegorical stories about animals and things, and consist of tiwo parts-the personifica. tion itself and its symbolical meaning. Aesop is supreme as a writer of fables.
FACTORY LEGISLATION practically began in 1802, when an Act was passed for the sanitation of factories and the limiting of the hours of labour to 12 a day. In 18:9 another Act prescribed sh hours during the day for meals, and prohibited children under 9 from working in factorles at all. In 1833 three factory inspectors ware appointed. In 5878 the Factory and Workshop Act was passed, consolidating previous legislation and beginning the series of modern mea. sures for protecting textion labourers. Three innportant points are-(1) Sanitation and safety from fire and fron machincry; (2) hours and incidence of lahonr; (3) relations between employer and employed. The latter, however, does not touch the numal? ohligation of the employer to slate his profits with his employees.
FigGivg is a Public School custom in England, by which junior boys act as amateur 'servants' for the seniors and reccive in return their protection in-
diviclually and coliectively, The juniors are called - fags 'and the seniors 'prefects' or 'monitors."

FAGGOT Vores are for property purchased ill a number of small lots just large enouglı to give a qualification to vote.
FaHRENHEIH, the German scientist, was born in 1685 , and introduced mercury in place of spirits of wine for thermometers in 1720 .
Faikfax, Lokd, the Parliamentary leader in the Civil War, was born in 16n, and hecame commander-inchief in succession to the Earl of Eissex. IIe was simply a good soldier, without any political ambition.
Falrs are characteristic of early commerce, and were really important in the Mildle Ages; but modern facilities for transport have practically obviated all necessity for such perioclical markets. They still are of considerable importatice, however, in the East, and those of Leipzig. Frankfort, and Nijni-Novgorod collect a very large number of merchants.
FAIRY-LOKE, as found, for instance, in Shakespeare's d/edsummer Night's Dream, is the result of both literary and popular tratition. The Fays of the old romances were enchautresses of human size and appearance; the Elves of popular superstition were a supernatural race of invisible dwarfs. By degrees these supernatural Elves were confused with, and erentually identified with, the more or less inortal Fays. "Oberon "and "Titania " represent the nore literary, while "Puck" represents the more popular tradition; but the two are practically combincd in Fairics. Like Fays, they are generally mortal, they form a community, with sovereigns and subjects, court aad country. Like Elves, they are so small as to be invisible to mortals, they come oust mainly at night, and they have power over nature as well as over men.
FAKIRS are really Muhammedan fanatics whose holi. ness is gauged by the Indian natives from their filthiness and their self-mutilations. They reproduce in a more offensive form the ostentatious self-righteousness of Diogenes ( $/$. v.).
FALCONS feed mainly on game, c.g. grouse, partridges, hares, ptarmigans, etc. The Peregrine F. can fly 150 miles an hour, and was a favourite kind for falconry. This sport was extremely popular in the Middle Ages. Henry the Fowler, Frederick II., and Francis I. were great patrons of it in Gerinany and France.

FALKLAND, LORD, represented on the Royalist side the same high ideal and sincere patriotism as John lIampden did on the Roundhead side, and both fell in the first year of the Civil War.
Fallow. Land must be left fallow, unless it is manured, in order to recover from the exhaustion caused by crops, which grow by absorbing valuable clements out of the soil.
FAISTAFF, SIR JOHN, the famous knight of Shakespeare's Merry, Wins of Winlsor and Ifcury IV., is generally considered the finest comic character ever devised.
FAMINE was a very frequent scourge in ancient and mediaeval times, when transport was very bad and very uncertain; but even in modern times there have been some terrible instances of it. Ireland was simply decinated by the potato famines of 18 r 4 . 1816, 1822, 1831, and 1846; and India and China have suffered in a similar way. In 1837.38 more than

- 800,000 persons died in the N.W. Indian famine, and $5,000,000$ in the Bengal fanine in $1865-66$. Even as late as 1877 about 500,000 died in the Deccom fanine, and over $9,000,000$ are said to have died in China in the same and the following year.
FANCY is concerned more with the extermal and the concrete than imagination is,
FARADAY, MichaEl, the great chemist, was born in ${ }^{1798}$, and begin life as an apprentice to a Loudon pookbinder, but he became an assistant to Sir Humplirey Davey, and was thade Professor of Chemistry in the Royal Institution in 1833. Ite whs the greatest experimental chomist of his agu and in most popular lecturer. He died in 1867.
IFArat Anialat in Eurupe, Catto nre most nnmerous in R ussin and Germany, but most impurtant in Denmark and llolland. Sheep are most numeruus In Russia and France, bint the best wool

Comes from Spain and Germany, especlally Saxony and Silesia. Horses are more numerous in Russia than in all the rest of Europe, but Flemish and Andalusian breeds are very famous. Pigs are most muncrous in Russia and Germany, but they are very important amongst the maize-fields and the oak aud beecli forests of the Lower Danube basin, especially in Servia. The position of Russia in this respect is due to her immense area; and in the particular point of horses Russia is unrivalled in the world-with about 18,000,000. In the matter of cattle, however, both U.S.A. and British India, with about $50,000,000$, have twice as many as Russia; Australasia has about twice as many sheep, with about $90,000,000$; and U.S.A. has five times as many pigs, with about $45,000,000$.
Farnese was the name of an old Italian family which was associated with many famous buildings, and which gave a number of very eminent men to the Church and to the Republic of Florence.
Farrar, Very Reverend F. W., Dean of Canterbury, was born in 183x, and took First-class Classical Honours at Cambridge in 1854. He was an assistant master at Harrow from 1855 to 187 x , when he became Headmaster of Marlborough. He was made Rector of St. Margaret's, Westminster, in 1876, and Dean of Canterbury in 1895. He has written many popular books, serious and otherwise ; e.g. Life of Christ, Life of St. Paul, St. Winifred's, etc.
FASCINATION lies in man's mastery and woman's witchery.
FASTS were regularly observed by the Hebrews, Egyptians, and other nations of early ages. The Romish Clurch distinguishes between fasting and abstinence, but the English Church does not. The chief Romish fasts are the forty days of Lent, the ember days, and certain eves of saints' days. The chief Greek Church fasts are in Lent, after Whitsuntide, before the Assumption, and before Christmas, the latter for forty days. The chief Anglican fasts are Lent and the ember days.
Fates, The, of classical myth, were three sisters who span the thread of human lives. Clotho was the spinner, Lachesis measured the thread, and Atropos cut it. In Scandinavian myth, three similar sisters were called Urd, Varander, aad Skuld-the Past, Present, and Future.
'FATHER OF RIDICULE' was Rabelais (1483 to 1553). Faucit, Helen, Lady Martin, was born in i8i6, and appeared as "Juliet" in I833. She was one of Macready's most valued colleagues during the great Shakespearean 'revival' of 1837, and afterwards was the creator of the heroine parts in Lady of Lyons, Money, Richelleu, etc.
FAUST, DR., the famous 'black artist,' lived in Germany in the 16th century. He abandoned theology for medicine and magic, and was supposed to havemade a contract with Satan for twenty-nine years. He is the subject of Goethe's great drama and Gounod's opera.
FEATHERS are a precarious article of commerce. The most valuable in the world are those from the tail of the feriwah, which form the tuft in the Prince of Wales's crown. They took twenty years to collect, are valued at $£ 10, \infty 00$, and are known to have cost the death of at least twenty hunters, as the bird is a kind of parasite of the tiger. Good ostrich feathers are worth about $£ 45$ per i lb., but, as the trade is a 'fashion' one, the demand is quite unreliable. It is estimated that quite forty millions of birds are killed every year to decorate the hats and dresses of European women.
Female SuFfrage has been much talked about since 1872 in this country, but has made very little progress, mainly owing to the unpopularity/and tactlessness of some of its supporters. In the Colonies, however, it has made great progress; and it is already an accomplished fact in New Zealind and South Australia. Of course, both married and single women are eligible for office under the Local Government Acts of 1888 and 1894.
Fenelon, the famous French divine, was born in $165 r^{4}$ and became Archbishop of Cambray in 1694 . He had a notable theological dispute with Bossuet, which brought him into disgrace with the Pope and with Louis XIV. His most celebrated work is Les Aventures do Telcmaque, He clied in 1755.

FENIANS was the namo of a pre-lilstoric race of Irish warriors, and was adopted in 186I by the gang of Professional Patriots who gathered round fohn O'Mahony in New York, and round Janes Stephens in Ireland. Two risings were planned in Ireland in 1865 and $\mathbf{x 8 6 6}$, but were both anticipated by the Governusent, O'Donovan Rossa and other leaders being captured. Attacks have been made also in Canada. The 'Brotherhood' would have had more chance of helping Ireland if its members had avoided misrepresentation and murder.
FERDINAND, THE CATHOLIC, by his marrlage with Isabella in 1459, brought about the union of Aragon and Castile by which the Moors were driven from Spain in rugr. His reign was made famous by the discoveries of Columbus, and infamous by the institution of the Inquisition. The expulsion of the Jews and the Moors led gradually to the complete decay of home industries in Spain.
Fermenten Liquors are made by the conversion of the sugar in liquids into alcohol, carbonic acid, etc., and their subsequent clarification. The conversion is effected by simple vegetable organisms, which set up 'fermentation' by their growth, and spirits can be extracted by distillation from all liquors so fermented.
FERRETS are a species of pole-cat, and cannot bear cold.
FERRY, JULES, the French statesman, was born in I832, and made his name by journalism. In 2869, in consequence of his articles in the T'emps and other papers, he was returned as one of the Deputies for Paris, and after the fall of Sedan became a member of the National Defence Government. In 1879 he became Minister of Education, and in 1880 Premier, but his hazardous foreign policy brought the Republic into difficulties and him into dismissal from office.
FEstivals of Christian Church owe their origin partly to the six great Jewish feasts, and partly to the pagan religious festivals, which were converted into Christian $F$. when it was found that they were too popular to be abolished. The $F$. are movable and mmovable. The chief movable ones are Easter and Advent Sunday; Easter is the Sunday immediately following the first full moon after March 2Ist, and Advent is the nearest Sunday to November 30th (St. Andrew's Day). The chief immovable ones are Christmas Day, Deceinber 25th; Epiphany, January 6th; and Michaelmas (St. Michael and all Angels), Sept. 29th.
FETISH is an object that is regarded with awe as possessing some mysterious power, which it exercises without being conscious of doing so.
FEUDAL SYSTEM was a system of holding land, but was always tending to become a system of governing. The king owned ail the land by virtue of conquest, and let it to the chief men who had helped him to conquer it, the rent being mainly continued help. There were three processes-the doing of homage, the taking of the oath of fealty, and the being inrested with the land symbolically by being presented with something off it (cf. Ruth iv. 7). There were also three obligations-military service for forty days in each year, money-payments on certain occasions, c.g. for ransom in war, and the reference of questions about marriage, wardship, etc, to the king. The king was called the Licge Lord, and the barons were vassals or tenants, holding a fief, or feud, or tenure, These fiefs were given out in small pieces, except to the Bishops of Durhain and Chester, who were given a large mass of territory in order to defend respectively the Scotcla and the Welsh border; but, as they were bishops, they could not leave their lands to sons, The other barons might hold more than one piece of land, but not in the same place, and this explains how old fanilies have land in so many parts of the country. As all tenants were made, by William the Conqueror, to take the oatl to him before taking it to their immediate over-lord, the power of the nobles was weakened, and that of the king was strengthened, The merit of the F. S. was that it formed a continuous link between the king and the humblest freeman, but it could not stand against the progress of civilization. The chicf causes of its decline were the rise of cities, the change in the mode of fighting, and the spread of knowledge.

FICHTE, the German philosopher, was born in 1762 , and becane professor in Jena in 1793, where he greatly distinguished himself amongst a bevy of brilliant colleagues. His philosophy was founded on Kaut's, but he was a consistent iclealist.
FIELD OF THE Clotif OF (iOLD was in the valley of Andreu, near Calais, and the famous mecting between Henry VIII. and Francis I. took place there on June 7. 1520.

Ftelding, the novelist, was born in 1707, and his first attempts in literature were dramatic. He cevell was for some time manager of the Haymarket Theatre. His first 'great novel, Joseph A nelrews, appeared in 1742, Tom Jones in 1749, and Amelia in 1751. His reckless dissipation brought him to all untiniely end in 1754.
Figures of SPEECH depend on threc great prin. ciples - Rcsemblance, Contrast, and Association. The chief $F$ founded on Resemblance are Simile, or direct compirison, e.g. "like a wolf"; Metaphor, or ituplied comparison, e.g. "You are a mean cat ": Personification, especially of inanimate things, e.g. " The floods clap their hands"; IFyperbole,or exaggeration,e.g. "Oceans of tea and tons of jam." The chief F. founded on Contrast are Antithesis, or direct contrast, e.g. "Speech is silvern; sitence is golden"; Irony, where the real meaning contradicts the words, e.g. "You are a pretty fellow !" Epigram, or surprising contrast, e.g. "The child is father to the man." The chief F. founded on Association are-Metonymy, or direct substitution, e.g. "The bottle is a disgrace to gray hairs": Synedoche, or putting the part for the whole, e.g. "He had only five sail, and was short of hands"; and Autonomasia, or putting a proper name for a common one, e.g. " He is the Milton of the age."
FINANCE. National expenditure may be classed under two heads- ( 1 ) Payments from the Consolidated Fund, which are issued at regular times without the intervention of Parliament after they have once been authorized, e.g. interest on National Debt, the Civil List, etc.; and (2) Supply Services, which are the various items brought before Parliament every year. The Fund for $1895^{-96}$ was $£ 26,601,000$, and the Supply for the sameperiod was $£ 71,163,000$. The total receipts of revenue during the year were $£ 109,527,831$, of which about $£ 102,000,000$ were paid into the Exchequer and about $£ 7,400,000$ transferred to Local Taxation Accounts. The receipts from Customs are about 21 millions, those from Inland Revenue about 64 millions (of which about 27 are Excise), those from Postal Service about 14 millions, and Miscellaneous 13 milions. The total expenditure of Revenue during the year was $£ 97.764,000$, of which $18 \frac{1}{2}$ millions went to the army and nearly 20 millions to the navy. Public works consumed just under, and the Civil Departments just over 2 millions, Law nearly 4 millions, and Education rot millions. The National Debt, which began with a lonn of $£ 1,200,000$ to William III. in 1694, had grown to about 13 millions before Anne's accession, 100 millions before George 111 .'s, 250 at the end of the American War, 885 after Waterloo. In 1896 it was about 6482 millions.
FIR differs from Pine only in the leaves growing singly, and in the scales of the cones being smooth, round, and thin.
Firdusi, the great cpic poct of the Persians, was born about 931 A.D. The Sultan of Ghuznec promised him a plece of gokl for each line of an epic on the history of the Persian kings; but, when he produced his Shanamel in 60,000 lines, the Sultan grve him only a piece of silver for eacli line. IVe retaliated hy one of the bitterest satires ever written, and then wisely took fight.
Fire. Brigades. The London F.B. has about 700 firemen, with about so land and io river stean engines, 70 hand engines, 220 escapes, and 35 miles of hose. There are about 60 stations, 130 watch boxes, and 550 alarm points. And yct, mensured by numbers, the London Brigade is much inferior to scveral others. Paris has about 1700 men, witly 240 engines: St. Petcrsburg has 1150 men; Berlin, 1100 ; New York, 1000: Clicago, 900; and Haniburg, 800. The latter supplies 305 firemen for every 100,000 inhabithnts, while London supplies s3. The New York

Brigade is the most expensive, costing ahout $£ 340,000$ a year, and even in l3oston, U.S.A., the nverige cost per head of population is 6 s . 7 dl ., while in London it is only sd.; but white the N.Y. Brigade has to use 32,000,000 gallous of water il yeir, the Loltion Brigade uses only $17,000,000$.
FIRE.ENGINES were first used in Nuremberg about 1657; but steam $\mathrm{F}^{2}$. - . were not used in London till 1829.

FIRE in Theatres. Between 1750 and 1890 there have been about 750 fires in theatres, with about 6500 victims. Thc worst were at Capo d'Istria in 1794 ( 1000 victims). St. Petersburg in 1836 ( 800 victims). Canton in 1845 ( 1670 victims), Brooklyn in 1876 ( 283 victims). Tientsin in 1872 ( 600 victims), Vienna in 1885 ( 450 victims), in 1887 Paris ( 160 victims) and Exeter (I88 victims), and Oporto in 1888 (II9 victims).
FIRE OF LONDON broke out near London Bridge on Scptember 2nd, 1666, and raged for four days, destroying fortunately two-thirds of the plague-defiled city, including 89 churches. The estimated loss was about ExI,000,000, which is nothing compared with the losses in the much smaller fires of recent times. The fire at Moscow in 1812 destroyed in five days property valued at $£ 30,000,000$; the Hamburg fire of 1842 cost $£_{35,000,000 ;}$ that of Paris in 1871 cost $£ 32,400,000$; that of Chicago in the same year cost $£ 38,000,000$; and that of Boston in 1872 cost £15.750,000.
"FIRST GENTLEMAN of EUROPE " was the phrase used of George IV.
FISH. The most valuable food fishcs are the cod, the herring, and the salmon. The cod visit, for instance, the submarine bank on which the Lofoten Islands stand, and which is rich in the kinds of seaweed amongst which they find their food and lay their eggs; and the herring are found, for instance, in the deep channel which cuts off the Stavanger and Hardanger banks from the foor of the North Sea. And these two places illustrate the three great qualifications for a good fishing centre-they are very prolific, they are near the fishermen's homes, and they are near large markets. The whole fishing industry, besides being immensely valuable from the food point of view, is very important in the light of defonce and labour. The Atlantic coast of Canada has 50,000 men employed in the cod fishery alone, who would be a splendid marine rescrve in times of national danger. There are three great fishing centres in the World. One is the North Sea, from which fish to the value of $4 \frac{1}{2}$ million pounds comes into Great Britain alone; and the other two are the north-west corner of the North Atlantic, and the north-east corner of the North Pacific. The most inportant banks in the Atlantic are those of Ncw. foundland, which are caused by the melting of icebergs by the Gulf Strean and the consequent precipitation of the soll that all icebergs carry with them. The most important part of the Pacific fishery is in the Yellow Sea, for the Chinese and Japaneso eat enormons quantities of all sorts of fish, inclucting stranded whale. It is said that $40,000,000$ Chinamen make their living by fishing. The distribution of fish has been revolutionized by quick steam transport by land and by sea, and the heavy drain on the fisheries has been met by the artificial propagration of fish, the U.S.A. spending as much as $£ 70,000$ a year in hatching about 400 million eggs.
FITZ is a corruption of flius, so that Fitz-willian is simply William's-son.
Five Mile Act', forbidding 'obstreperous' nonconformist clergy to come within five miles of a town, was passed in 1665 in the Clarendon Code.
FIXED STARS are so far distant that they seem to remain in exactly the same relative position.
Flags are of very ancient origin, aud usually bear some characteristic device. Rome's was an eagle, Clinia's is a 'rlaggon', Turkey's a crescent, etc. The National Banmer of England is the St. Gcorge's Cross, of Scotland the St. Audrew's, of Ireland the St. Patrick's; and the Union Jack is the union of the three, and dates from r8or. All coast-guird stations and H.M. ships hoist the White Eusign at tho peak

Ins their natlonal ensign; II. M. consular officlals, any transports or colonial nen-of-war, int Royal Naval Reserve vessels carry the dlue linsign. The Merchant Service carries the Red Ensign.
Frax is probably a native of Southern Russia, and Russin is the chief exporter of it in the world, though the product now comes mainly from the northern part of the country, wia Riga, where the soil has been fitted for fibre-growing by being fertilized for centuries with the decayed fibre-mould of the oak and beech forests.
FLAXMAN, the great sculptor, was born in 1755, and died in 1826. In his early life he designed for Wedgewood, the potter; he became Professor in the Royal Academy in 1810.
FIEECE, GOLDEN. (See JASON.)
Fleet, THE British, was practically started by Alfred the Great in his wars with the Danes, and it was developed very much by King John. The first two decker was built in Henry VIl.'s reign, and the first tliree-decker in Henry VIII.'s. The first frigate was built in $\mathrm{r}_{3} \mathrm{o}$. In recent times the F . has been completely revolutionized by the introduction of steam, big guns, armour, etc.; and great efforts have been made to Improve it in every way. The naval estimates show a rise of nearly $65,000,000$ on those of 1894-95. being about $£ 22,000,000$ for $1896 \cdot 97$. The number of vessels at the chief stations in October, 1896, were36 on the Mediterranean and Red Sea, 24 on the China, ig on the Channel, 15 on the African, is on the North American and West Indian, 12 on the Australian, Io on the East Indian. Besides these, 14 were on ' Particular Service,' and 22 were employed in various other duties. In November, 1896, there were in preparation, under the Naval Defence Act, so battleships of 12,900 to 14,900 tons and 18 knots speed, 10 first-class cruisers of 11,000 to 14,000 tons and 20 to 24 knots speed, 13 second-class cruisers of about 5600 tons and 19 to 20 knots, 8 third-class cruisers of 2135 tons and 20 knots, 25 torpedo-boat destroyers of 300 tons and 30 knots, and 21 torpedo-boat destroyers of 215 tons and 27 knots. The personnel of the Nay and of the Royal Naval Reserve is also being increased and improved ${ }^{\text {a }}$ and new docks and plant are to be provided. (See Lord Brassey's Naval Anmual for 1896-a most valuable book.)
FLEET MARRIAGES were irregular ceremonies performed by needy clergymen without a license in the Flcet Prison, London, from about I616 till the Marriage Act of 1754. The Prison, which was pulled down in 1845 , was in Faringdon Street, and was mainly used for debtors. It was burned by Wat Tyler in 1381, and in the Gordon Riots of 1780 , as well as accidentally in the Great Fire of 1666.
FLEUR-DE-LIS, or 'flower of the lily,' is the emblen of France, but is probably a lance head-not a lily at all.
FLODDEN FIELD was fought on September 9. 1513 ; the Scots lost about 9000 inen, including King James IV. and the Archbishop of St. Andrews.
Flogging in the Army was abolished in 188x, and it has died a natural death in the Navy. It has, however, been wisely introduced as in punishment for a certain class of violent crime, and is the only thing which wife-beaters and that type of ruffian really dread. It should be given them often, and in the Russian form-the knout.
FLorence was aul independent Republic in the Middle Ages, and its history is connected with Dantc, Petrarch, Boccaccio, Leonarda da Vinci, Savonarola, Machiavelli, Michael Angelo, Galileo, and many others of world-wide fame.
Flowers, ARTIFICIAL, are by no means a modern Parisian invention. The Romans made beautiful ones of wax, and the Egyptians werc equally famous for their horn and metal ones. The art was reintroduced into Europe in modern times by the It alians. The French manufacturers use all sorts of matcrial, cotton, silk, feathers, india-rubber, glass, metal, etc.
FI.Y has its feet covered with minute hairs, at the end of which there is a sucker, so that the insect can walk upside down with ease and impunity.
FLYING DUTCHMAN is an inaginary ship supposed to be seen by sailors in bad weather off the Cape of Good Hope.

FI.YING FISH begin their fight or 'jump 'under water, and have fins so shaped that it can le continued out of the water for as fir as 200 yards.
Flying Machines. (See Alerial Nailgation.)
FOCUS is the point where the rays of light reflected or refracted by a mirror or lens inect.
Fog is caused by the condensation of the atmospheric vapour by the presence of cold, and therefore occurs most often at the seasons when there is the greatest variation of temperature during the day. In low places fogs lie about for a long time, and in cities they become pungent with smoke, but in high open country they are very rare.
FOG SIGNALS are of all sorts, one of the strongest being the siren hom. Its sound is produced by two perforated discs, one of which rotates in front of the other very rapidly (e.g. 2800 times a minute), and steam or compressed air is driven from a long 'truntpet through the two in 30 or 40 thousand puffs a minute.
FOLK-LORE is the scientific study of popular beliefs and customs, and throws great light on the early history of the human race.
FOOLSCAP PAPER is the smallest 'size' but one, being about $12 \frac{1}{2}$ in. by $16 \frac{1}{2}$ in, per sheet, and it got its name from the fact that the water-mark on it in early tines was a fool's cap. Now the water-mark is Britannia.
FOOT, in metre, is the combination of 'long' or : accented,' and 'short' or ' unaccented 'syllables. It is the unit of metre, and verse consists of a definite number of feet. Coleridge says that " Trochee trips from long to short; from long to long in solemn sort slow Spondee stalks, strong foot yet ill able ever to come up with Dactyl trisyllable. Iambics march from short to long; with a leap and a bound the swift Anapaests throng; one syllable long with one short at each side, Amphibracliys hastes with a statelystride."
FOot batl seems to become more popular every year, especially the Association game. In the latter, England in 1896 beat Ireland by 2 goals to $0_{8}$ and Wales by 9 goals to 1 ; Scotland drew with Ireland, and beat England by 2 goals to 1 , and Wales by 4 too. In the Intermational League natch England beat Scotland by 5 to 1. The Association Cup was won by the Sheflield Wednesday, who beat the Wolverhampton Wandercrs by 2 to 1 . Oxford beat Cambridge by 1 to o. The Amateurs drew with the Professionals, The Amateur Cup was won by Bishop Auckland, who beat the Royal Artillery (Portsmouth) by i to o. The champion club in Division I. was Aston Villu with 45 points, Derby County having 4I; and in Division II. Liverpool and Manchester City drew with 46 points each. In the Rugby game, Scotland beat England by II to o , and drew with Ireland. Ireland beat England by 10 to 4 , and Wales by 8 to 4. England beat Wales by 25, and Wales beat Scotland by 8 to 0 . North beat South by 13 to 4, and Cambridge beat Oxfor by 5 to 0 . It is estimated that $£ \mathrm{I}, 000,000$ is spent every year on professionals in the country.
FOREIGN MONEY. The following are rough ralues in English money:- The fronc of Belgium and France, like the lira of Italy, $=9 \frac{1}{2} d$; the German mark and the Aust rian crown=is? ${ }^{3}$ d.; the North American dollar and the Japanese yen $=45$. $1 \frac{1}{4} d$.; the rupee at present is 15.5 d .
FOREISiN NAVIES compare very poorly with the British navy (see FLEET above) in every point except three-Unprotected cruisers, torpedo boats, and coast defence vessels. Of course, a mere test of numbers is no safe guide, as the classification is quite relative in each case. Many British Cruiscrs, for instance, would be far more formidable foes than some foreign Battleships. As far as numbers go, there are 45 British battleships to 29 French, 21 German, 13 Italian, ro Russian, and 5 U.S.A.; there are 18 British armoured cruisers, 9 Frenche 9 Russian $^{2} 2$ U.S.A., and I Italian; there are 87 British protected cruisers, 23 lFrench. 15 Italian, 13 U.S.A., 7 German, and $=$ Russian; there are 16 British unprotected cruisers, 22 German, zo Firencha 10 U.S. A., 3 I and I ltalian: there are 15 British const defence vessels, ig U.S.A., in Firench, is Russian, and Is German; there are 35 liritish torpedo vessels, is Kussian, 15 Itilian, 13 French, 5 German, and 2
U.S.A. ; there are 42 British torpedo destroyers and 5 Kussian; there are 101 13ritish torpedo boats, 211 French, 152 Russian, 40 Italian, 105 Gernan, and 3 U.S.A.

With regard to the unprotected cruisers, it must be rememberecl that in munber of magnificent "ocean greyhounds" belonging to the mercantile marine are 'reserved' by the British Government and subsidlized, especially for possible emersencies. The Cuntard Company has six boats on the Admiralty Reserve List, including the Campunia and the Lucania; the White Star Company has four, including the Majestic and the Teutonic; the P. and $O$. Company has twelve, including the Australus and the Himutuya.
FORLORN HOPE Inad nothing originally to do with hope, but was F. Hoop, hoop Deing the Dutcli for 'a company:"
FORMOSA passed into possession of the victors at the close of the China-Japanese War in 1895; and its wealth in tea, sugar, rice, camphor, and coal make it a most desirable acquisition for an energetic people like the Japanese.
Forster, Right Hon. W. E., who passed the famous Education Act of 18\%o and the Ballot Act of 1872, was M.P. for Bradford, and married a daughter of Dr. Arnold of Rugby. He died in 1886.
FORTH BRIDGE crosses the Forth at Queensferry, using the little island of Inchgarvie as the central support of its two huge 1210 ft . spans. Including piers there is about one mile of main span and more than half a mile of viaduct approach on the south side; and there is a clear 150 ft . under the bridge at high water, the ordinary spring tide being about 18 ft . It was begun soon after Niew Year 1883 , and was finished before Xmas 1889.
FORTIFICATION, SCIENTIFIC, practically commenced in the 17th century, when Louis XIV.'s great engineer, Vauban, invented or developed the 'bastion' system, which is still the real type of $F$. in Western Europe.
FOKTUNES IN THE UNITED KINGDOM. Fortunes like Mr. W. H. Vanderbilt's $£ 60,000,000$ are unknown in this country; but, on the other hand, there is a higher standard of comfort than in any other country, the average expencliture per head of population being about $15.8 \frac{1}{2} \mathrm{~d}$. a day. A bout 100 persons in thls country have a yearly income of more than $£ 50,000$.
FOURIFR, the French Socialist, was born in 1772, and died in 1837 . His most important work, Traite de $l^{\prime}$ Association Domestique Agricola, was published in 1822.

Fox. Charles James, the statesman, was born in 1759, and educated at Eton and Oxford. A quarrel with Lord North threw him into the arms of the Whigs, where he supported Burke in his violent opposition to the American policy of the Governnient: and he became Foreign Secretary in 1782. Except on the subject of the French Kevolution, he was a warm friend of Burke, and a great rival of Pitt. The two rivals died in the same year, 1805 .
FOX, GEORGE, the Quaker, was born in 1624, and practicaily founderl his sect in 1648 at Manchester. They were called Zuaters first at Derby, because of their hesitating mode of speech. They were formally inaugurated as a society in 1666, and in 1669 Fox married the widow of Judge Fell.
Foyers, Falls of, the lower of which is one of the mnst natanificent in Great Britain, are heing prostituted to Mammon in the shape of mechanical power for manufacturing aluminium. They are in Inverness-shire, and the lower one is go ft. high.
FRANC (see IFOREIGN MONEY). F, used to be coined both of gold and silver, the goli F. representing Ios. Gd. ; but the morlern $F$. is only silver. It is the unit of the Frencli currency, aurl took its name from the Francorum Rex. 'king of the Firench," which the first F. bore-in 1360 .
FKANCIISE in IBriain is limited to adult males who Fre not ' on the rates' nor aliens. For country F.Frecholders, Copyholders, and Leascholders are eligible: for County and Borough F. Occupirrs also. The most satisfactory $F$. can only be founcl where both male and female adults are qualified, and where
illiterates and receivers of charity are elisqualified. The percentage of illiterates in Ireland is cnomnous, as in most Romish countries; that in Scothand is very suall.
FRANCIS 1, of France was the great rival of Cliarles $V$ and llenry VIII.
FRANCIS, JOSEpH, the Emperor of Austria and King of IIungary and Boliemia, was born in 1830 , and succeeded his uncle in 1849. During his reign Anstria has lost Lombardy, Venetia, and her influence in Cermany.
FRANCIS OF ASSISI, the founder of the Franciscan Order, was born in 1182, and slent a riotous youth ; but in 1208 he gave himself up to a life of rigld poverty. He was canonized by Pope Gregory I $X$. in 1228. His Order was mendicant and preacling, and the monks-from the colour of their cloaks-were often called "Grey Friars."
Fizancis, Sir Philip, the probable author of the fimous Letters of Junius, was born in 1740, and was a determined opponent of Warren Hastings on the Bengal Council.
FRANCO-PRUSSIAN WAR OF 1870.71 was caused directly by the offer of the Spanish Crown to Prince Leopold of Hohenzollern; but the efficiency and organization of the German army proved that the first cause of war would have been seized upon, though the actual declaration of war came from the French. Napoleon III, led the French, and King William of Prussia led the Germans. The latter were in three armies, and the victories of the Third Army at Weissenburg and Wortlı drove the French back on Nancy; and the fatal battle of Gravelotte made Marshal Bazaine withdraw inside Metz. In attempting to relieve him, Marslal MacMahon was surrounded at Sedan on September 1; and on the following day both the fortress and the army surrendered, Napoleon himself, 50 generals, 5000 subordinate officers, and 84,000 soldiers of the line becoming prisoners. The immediate result was a revolution in Paris, and Gambetta's proclamation of a Republic; the ultimate result was the capitulation of Metz by Bazaine and ol Strasburg. This set frec enough German troops to closely blockade Paris, which surrendered after a siege of several months. The terms of peace were the cession of nearly all Alsace and nearly a quarter of Lorraine, an indemnity of $£ 200,000,000$ and temporary occupation of part of France till the indemnity was paid-which was on September 3 , 18,3 , an extraordinarily-short time for such a huge sum.
Frankincense is the gum of various kinds of conebearing trees, the $F$. used in religious ceremonies coming from India.
FRANKLIN, BENJAMIN, the American author and statesman, was born in 1706 . He was a clever man and made some important discoveries in electricity, but was not a man of high morality.
liranklin, Sir John, the Arctic explorer, was bom in 1786, and died near Lancaster Sound in 1847. He was in the battles of Copenlingen and Trafalgar, and accompanied Captain Flinders on his Australian voyage. He began his Arctic work in 1819, and was knighted in 1827 after his second voyage. He was governor of Tasmania from 1836 to 1843, and then in 1845 started with the Erebus and the Terror for a third polar voyage. From the end of 1845 till 1859 no news was ever heard of the expedition, but in the latter year M'Lintock discovered a paper detailing the fate of the expedition and its learler.
FREDERICK BARBAROSSA, or 'RED-DEARD,' was born in Insi, and became Emperor on the death of his uncle in II52. His prucipal aim was to extend the German power in Italy, and between 1154 and 1166 Italy was practically at lis mercy, and lie was even crowned at Rome: but in 1166 a terrible plague decimated his whole army, and he had to hastily retreat out of the colntry. Eventually he lost practically all that he had ever won in Italy, by the Battle of Legnano. He died in Syria in 1190 at the head of i50,000 Crusaders.
FREDERICK THE GREAT was horn in 1712, and succeeded to the throne of P'russia in 1740. 11e conquered Silesia, and then sct to work to develop
his country and improve her defencos. Ile died in 1785, leaving to his nepleew a kingdom increased by 29,000 square miles, a full treasury, a most efficient army of $200,000 \mathrm{men}$, and a people distinguished for industry, honesty, and wealth. He liad the good fortune to have his life written by Thomas Carlyle.
Frederick William, the 'Great Elector, who was born in 1620 , was the founder of the Prussian military monarchy. He freed Prussia from feudal subjection to Poland, and obtained possession of Poincrania. He paid great attention to the development of agriculture and welcomed French industrial refugees, to whom the rise of manufactories in North Germany was largely due.
FREE CHURCH OF SCOTLAND split off from the Established Church, and was formed into a separate body in 1843, the real cause of the schism being the Patronage Act of 1712 , by which unvelcome clergy hid often been presented to livings. The great protest was read by Dr. Welsh in the General Assembly, and the protesters withdrew from the Assembly and constituted themselves the Free Church under Dr. Chalmers as Moderator. In 1876 the United Presbyterian Church became affiliated with the Free Church.
FREEMAN, PROFESSOR, the historian, was born in 1823, and became Professor of Modern History at Oxford in 1884. His works are very numerous, and have had great influence on the interpretation of many vexed questions, especially in connoction with the Norman or Plantagenet times.
Frefmasonry took its rise in the great building days of the Middle Ages, when there was a constant demand for skilled Jasons in connection with the magnificent abbeys and cathedrals that were built all over Western and Southern Europe. These practical masons were itinerant, and it was absolutely essential that there should be some special sign by which good or real masons could be distinguished from poor ones or imposters. This led to the foundation of a Masonic Brotherhood, with three grades -apprentice, fellow-craft, and master mason. Since the $17^{\text {th }}$ century the original idea has been greatly modified, the modern ritual being partly Rosicrucian and Knight-templar. It was introduced into France in 1725, and into U.S.A. in 1733. The English lodges recognize only two species of F.-the Craft and the Royal Arch, but non-English lodges acknowledge the Mark and various other degrees. The two fundamental ideas of modern $\vec{F}$. are conviviality and charity: and the masonry is only speculative, not practical. The Free records the freedom given in the Middle Ages (by Papal Bulls) from many of the vexatious restrictions which were placed on ordinary labourers.
FREETHINKERS was a name applied to the Deists of the 17th and 18th centuries, who argued in favour of natural as opposed to revealed religion. Collins, Tindal, Bolingbroke, and Hume were the chief in England, and Voltaire, Diderot, D'Alembert, and Helvetius in France.
FREE-TRADE is the fetish of the modern quibbler with words. No trade can be free as long as the hours and the incidence of labour are restricted, as they are in the United Kingdom, not to mention the restrictions on British goods entering foreign markets. Therefore, to talk as if we enjoyed Free-Trade is simply stupid. On the other hand, we have more or less Free Imports, which is a very different thing; and the progress made since they were first instituted in 1846, encourages the belief that such a system is beneficial. Real Frer-Trade embodies a scientific principle about which there can be no question-that every place and person ought to produce that for which they are naturally suited, and that no attempt onght to be made to foster an unnatural product or industry. That is to say. Division of Labour is a solid and scientific principle. It remains to be seen how far one-sided 'Frec-Trade,' i.e. Free Importation of goods and labourers, is really beneficial in the long run ; but it is quite certain that taxes will never again be allowed on the importation of real necessaries like bread and meat.
Free-Wimi is the doçtrine, in Theology and Mepa-
pliysics, that we are really free to direct our own actions without ally interference of 'Fate,' i.e. to choose between moral right and wrong. If there is no choice, the word moral ceases to exist. What is done right by accident or by compulsion, is no more moral than it is miraculous.
Freezing Point of fresh water is $32^{\circ} \mathrm{F}$; that of mercury is $-39^{\circ} \mathrm{F}$., i.e. $39^{\circ} \mathrm{F}$. below zero, or $0^{\circ} \mathrm{F}$.; that of alcohol is $-203^{\circ} \stackrel{F}{\circ}$. Water and many other substances expand in freezing-hence 'burst pipes. -but paraffin and a few others contract. Artificial freezing is caused by the liquefaction of solids or the evaporation of liquids.
French Political Parties are roughly divided into two-Republicans on 'the Left,' and Reactionists on ' the Right.' 'The Left 'includes Opportunists, Radicals, and Socialists, as well as ordinary Republicans, and 'the Right' includes Monarchists and the various sections of Bonapartists.
FRERE, SIR H. BARTLE, was born in 1855, and died in 1884. His success as a civil servant in the East India Company led to his being sent to South Africa to settle the native affairs; but the mission was a dead failure, mainly owing to the stupidity and cowardice of the Home Government.
Fresco Painting is painting in water colours on a wall eovered with wet or fresh lime or gypsum. Only those colours can be used which are not affected by the lime, i.c. mineral colours, etc., and the painting is done from a paper cartoon the exact size of the fresco. It has to be done in sections, and each section has to be finished right off, as it cannot be retouched after the plaster is once dry. It is a very ancient art, being well known to the Egyptians, Romans, Mexicans, etc., and was reintroduced into Italy in the 15th century.
Friendly SOCIETIES of all sorts, including ordinary F. S. or Industrial, Provident, Building, Trade Union, Loan S., etc., number in the United Kingdom about $11 \frac{1}{2}$ million members, with nearly $£ 100,000,000$ of funds. The Ancient Order of Foresters and the Independent Order of Oddfellows (Manchester Unity) are far the most important, the former being the largest and the latter the richest F. S. in the world. In 14 years the Manchester Unity has distributed for sickness, etc., more than seven million pounds sterling! The Order of Shepherds is the strongest in Scotland. Anongst the: other F. S. are the Druids and the Rechabites, the latter being a very flourishing temperance movement. Amongst the societies connected directly with particular trades, the most important are those connected with engineering and mining. Registration under the F. S. Acts of 1875:76 is a great benefit, but does not quite guarantee financial security.
FRIENDS, SOCIETY OF, or QUAKERS, was founded in the ryth century by George Fox. They lay great stress on the direct individual guidance of the Holy Spirit, and therefore can hold silent meetings. The total number in the United Kingdom is about 20,000. Frobisher, Sir Martin, the old Elizabethan "Sea Dog." was born in 1535, and died in 1594 as he wished to die-fighting the Papists. He made three expeditions to the Arctic regions, was with Sir Francis Drake in the famous cruise to the West Indies, and was knighted for his gallant seamanship against the Armada.
FROEBEL, the frmous educationist, was horn in 1780. and started the first real hindergarfen in 1840 . The one danger of the system is tendency to teach, by implication, that the maximum results can be obtained with the minimum effort-a most pestilential heresy.
Froissart, the historion, was born in 1337 in the 'Crecy and Agincourt corner' of France, and became Queen Philippa's secretary, so that he had abundance of opportunities for collecting reliable material for his delightful Chroniclea:
FRONDE wis a French party in the time of Louis SIV., headed by Cardinal de Retz, and bitterly lostile to Cardinal Mazarin for his heavy taxation.
Frost, like Liberty, is a negative term and conditionthe absence of heat, not the presence of some nyssterious element dropped from thesky ; and, therefone,
it is checked by anythlng which lmpedes the rirliation of heat fron the earth, e.g. trees or chouls. (See FREEZING, abave.)
FROUDE, the author, was born in 1818, and was ordaned while he was at Oxford, but withelrew from lif clerical arders on the publication of his vemesis of faith. EIis Euglish style is delightful, especially in his Short stedies on Great Subjects; and he wrote a number of historical works, the history of which is greatly inferior to the style. Carlyle, unfortunately, made him his literary executor.
FRY, ELIZABETIt, the philimthropist, was born In I780, and was 'converted' by a sermon preached by the American Quaker, William Savery. She married Joseph Fry, who was also a Quaker, in 1800 , and ten years later becane herself a preacher. She devoted a great deal of her life to the improvement of prisons.
FUEL is made of ail sorts of materials, from dried dung to hydrogengas, and its heating power is measured by the 'unit' or amount required to raise I lb. of water r ? $E$. The 'calorific ' power of fuel therefore represents the number of lbs. of water which can be raised $1 \% \mathrm{~F}$. in temperature by the combustion of 1 lb , of the particular F. ; and it varies very greatly, dry wood having only 7353 units, alcohol $\mathbf{1 2 , 3 3 0}$, coke $\mathbf{1 2 , 8 0 0}$, ordinary gas 21,344 , and hydrogen 62,03r. Consequently, wood is only used in countries which have little or no coal, e.g. Sweden.
FUlLER, the historian and divine, was born in 1608. His books are remarkable both for style and for matter. The most important are his Church History of Britain and his Worthies of England.
FULTON, the Amerlcan engineer, was born in 1765 ; He began life as an artist, but on a visit to England made the acquaintance of James Watt and the Duke of Bridgewater, and his attention was turned at once to invention. In 1797 he exhibited in Paris a boat propelled by steam on the model of the Charlotte nundas, which he had seen plying on the Forth and Clyde Canal; and, on his return to America, he built a steamboat which plied on the Hudson River at the rate of five miles an hour in 1807. In Paris he had invented several torpedoes, and in $\mathbf{1 8 1 4}$ he buitt in America the first war-steamer,
FUNDS, Public. (See DEBT.)
FUNERAL RITES have usually been celebrated either by prolonged fasting, as amongst the ancient Egyptians; magnificent orations, as amongst the ancient Greeks; or heavy drinking, as amongst the Irish poor. In Queen Anne's age the practice of having midnight funerals became common. The Queen herself was buried by torchlight, as also were Addison, Prior, and Gay. Macaulay has described the midnight funeral in Westminster Abbey at the end of his essay on Addison. As lately as 189 r there was a midnight funeral in Lichfield Cathedral.
FUR in the natural protection agninst extreme cold, and therefore most of the furs of commerce come from the 'Frozen North ' of Canada or Russia. The F. chiefly in demand are those of the beaver, raccoon, seal, sable, marten, ermine, lynx. chincilla, bear, etc. The great F. company of the world is the lludson's Biny Company, which was founcled in 1670. The great F. markets of the world are London, I-eipag, Nijni-Novgorod, and New York. Leipzig itself is not a real fur centre; but as the centre of the old road system of the Creat Europern Ilain, it hecane the natural market between Russia and France.
FURIES, in Greek mytholory, were savage deities who were the avengers of murder, false swearing, and filial Ingratitude. They were regarded with such dread that to propitiate them they were spoken of, euphemistically, as the Eumenides. "The kindly-dis-posed,'-much as to-day thereare several euphemisms for Salan in Scotlind, which are "more friendlyolike."

## G

Gmber.IE was originally the name of every indirect tax in France, but was afterwards applied specially to the salt-tiax. Sonue parts of the country purchased perpetual exemption from it, but it was terribly heavy on the rest, especially from the time of Charles V.,
mainly becauso of the scandalous way in which it was collected, about five-sixths of the amount collected being 'intercepted' on its way to the treasury. It was tinally abolished in 1790.
GAELS were a branch of Kelts who inhabited the llighlands of Scotland, Ireland, and the 1sle of Mant but the word lais been specially appropriated ly the Scottish seet, and Gaelic is now distinguished from Erse and Manx.
GAINSBOROUGII, the English painter, was born in 1727. He was one of the original thirty-six Academicians.
GALATEA, in classical mythology, was wooed by the Cyclops Polyphemus, whom she rejected for a shepherd. The monster retaliated by crushing him to cleath with a piece of rock.
Galatians, The Epistle to, was written about 56 A.D., and was specially directed against the sanitary Hebrew custom of circumcision.
GAlaxy is another name for the myriads of stars generally known as the Milky Way.
GALEN, the famous Greek doctor, was born in 130 A.D., and studied in Asia Minor, Greece, and Egypt. Ile was the first doctor who is known to have felt the pulse.'
GALILEO, the great Italian scientist, was born in 1564. He discovered a number of valuable mathematical and scientific priaciples and greatly developed their application, e.g. in regard to the hydrostatic balance, thermometer, magnet, telescope, etc. He detected the satellites of Jupiter, the ring of Saturn, and the spots on the sun. He proved the superiority of the Copernican over the Ptolemaic theory, and was imprisoned for doing so. He died in 1642, the year of Newton's birth.
GALL, the German phrenologist, was born in 1758. 1Ie was the founder of the science of phrenology.
GALLEYS were very common in the Mediterrancan, and required from 100 to 300 rowers, all of whom were, as a rule, slaves prior to the year 1748 .
GALLICANCHURCH simply means the Romish Church in France, which till 1870 was always remarkably independent of the Papal See, asserting its independence most pointedly in 1682 .
Galvani, the Italian scientist, was born in 1737. He was a scientific anatomist, but made his reputation mainly by his theory of animal electricity, published in 1791.
Galvanic Bat tery was called after Galvani, because his experiments lad suggested it to the real inventor, Professor Volta.
GALVANIZED I RON is simply iron coated with zinc by a process which is not strictly galvanic.
GAMA, VASCO DA, the great navigator, was born in 1450. He was the first European known to have made the voyage to the East Indies by the Cape of Good Hope-in 1497.
GAMBEITA, the French statesman, was born in 1838. He became leader of the Republican Party in 1868. After Sedan lie became minister of the interior; and, having escaped from Paris in a balloon, he tried to carry on a fierce resistance to the Gernans. In 188 s he became Presiclent of the Republic, but was accidentally shot in 1882.
GAME, in the United Kingclom, includes lares, pheasants, partridges, black-game, bustards, grouse, fancl other heath or moor game. There is no legal closetime for rabbits or foxes, or (except in Ireland) for deer or hares, but there is a 'customary law' antongst sportsmen. For instance, fox-liunting begins on
 August 12 and ends October 12; otter-lunting lasts from middle of April to middle of September, in the sane way, there is no fixed close-time for shooting woodcock, snipe, hares, rabbits, quails, etc., but they are protected by the Game Laws. No black-game may be shot anywhere in the United Kingdom between December in and August 19; no pheasants bet ween February 2 and September 30 ; no partridges between February a aud August 35; no grouse between December in and August ir. No game may ever be kllled on a Sundity or on Christmas Disy, and a number of 'wild-birds,' not including, lowever, nuy of the ordinary 'garden' birds, are protected from

March 2 to Jnly 31. The following are the correct names for collections of the various kinds of 'gane ': a covey of partridges, brood of grouse, plump of wildfowl, stand of plover, wisp of snipe, nide of pheasant, bevy of quails, flight of pigeons, etc. The penalty for killing ganie on a Sunday or on Christmas Day is $E 5$.
GAMES. (See ATHLETIC SPORTS.)
Gaming Tables, Public, were suppressed in France in 1837, and in Germany in 1872. In the Italian principality of Monaco is the only Government that still supports them.
GAMUT is the entire series of notes in the natural ascent or descent of the scale.
GANGES is navigable for 1200 out of its total 1500 miles of length, and is a sacred river of the Hindus, who believe that any one that dies on its banks after drinking its waters is freed from the necessity of returning into the world to live a second life.
GANNET, or SOLAN GOOSE, is a bird of passage, coming to or leaving the shores of Britain along with the herring, on which they feed, in spring and autumn. They breed in the Hebrides, Orkneys, St. Kilda, Ailsa Craig, Bass Rock, etc., and they lay only one egg.
GANYMEDE, was the great-grandson of Dardanus, the founder of Troy. Ite was so beautiful that Jovesent an eagle to carry him off to Heaven, where he became cup-bearer in succession to Hebe.
GARDE ECOSSAISE, or SCOTTISH ARCHERS OF THE GUARD, was instituted in 1453 , in recognition of the great services rendered to France by the Scottish soldiers in the Hundred Years' War. \|See Scott's Quentin Durward.) In later times there was also a Swiss Guard.
GARDENING. The inportant points are-(i) Situation, which should be sloping gently to south; (z) soil, which should be a loam just rich enough not to prevent water filtering through properly; (3) watering, which must be done regularly with water that has been exposed to the air for some time after being pumped ; (4) digging, which must be done deep with a spade; (5) weeding, which should be done by liand as well as with the hoe as soon as the weeds appear; (6) raking, which should be done very lightly, but constantly, to allow dew, etc., to sink easily into the soil; (7) paths, which should be made of gravel. The Royal Botanic Gardeus at Kev cost $£ 20,000$ a year, extend over nearly 250 acres altogether, and are visited by about 2,000,000 persons every year.
GARDINER, BISHOP, was born in 1483 , and became secretary to Wolsey. He supported the king against the Pope, but would not leave the Romish creed. Under Edward VI, he was even imprisoned for his Romish tendencies, but under Mary he became an active persecutor.
GARFIELD, the American statesman, was the twenticth President of the U.S.A. He began life as a fam-boy; and then thrned lawyer, but in 1861 he entered the army, and became chief of staff to Rosecranz. He was elected President mainly because of his sterling honesty-an unusual clain to political advancement anywhere, and least of all in America.
GARGANTUA is the hero of Rabelais' satire.
GARIbALDI, the Italian hero, was bom in 1807. He was the son of a poor fisherman, but in 1834 becane a member of Mazzini's "Young Italy "party. Having to flee, he served with his famous' Italian legion 'so brilliantly in South America as to earn the title of "the hero of Monte Video." In 1848 he returned to Italy, and did'great harm to the Austrinns in Lombardy, but had again to flee. In 1859-60, with his Alpine Chasseurs, he performed prodigies of valour in Lombardy and Sicily, and was eventually proclained Dictator of the two Sicilies; but he was true to his motto of "Italy and Victor Einmanuel," and at once withdrew to his island of Caprera. He served against the Austrians in 1866, and against the Germans in 1870 , when Rome became the cappital of a united Italy. He died in 1882.
Garlic is a kitd of onion, and is a native of southern Europe.
GARNET is a beantiful kind of mineral or gem and generally red, but found also brown, green, yellow, and even black. The names for them-Syrian,

Bohemian, and Cingalese-like Coynac brandy, Patna rice, Ifavana cigars-are distinctions of quality rather than of geographical distribution.
GARRICK, David, the actor, was born in 1716, and became acquainted with Sanuel Johnson, who took hin up to London. In 1748 he joined the famous Giffiard's company under the name of Lyddal, and miade his name as Richard /II. In 1745 he joined Shericlan in the management of a Dublim theatre, and in 1747 he bought Drury Lane Theatre, and opened it with The Merchant of Venice-an epocli-making event, resulting in a 'revival' of Shakespeare and a complete reform in the conduct and license of the drana in England. Ife died in I779, and was buried in Westminster Abbey. He was one of the greatest actors that the world has ever seen.
Garrison, William Lloyd, the American journalist, was born in 1805, and became editor of the National Fhilanthropist the first U.S.A. Temperance paper) in 1827 . In 1829 he started his denunciations of slave traders in the Genius of Universal Emancipution, and in 1832 he established the Americau AntiSlavery Society. He died in 1879, having seen his life's work so completely successtul that the society was dissolved in 1865.
GARTER, ORDEK OF, was instituted by Edward III. in 1349. As reconstructed in 1831, it is limited to the Sovereign, the Prince of Wales, such other descendants of George I. as may be elected, and twenty-five knight companions; but foreigners of great distinction, especially if of royal blood, are admitted. As it is the highest order of knighthood, its insignia are most gorgeous. The motto is Honi soit qui mal y pense, 'Evil be to him who evil thinks.'
GAS is elastic fluid, and the particular kind which is used for lighting is carburetted and bicarburetted hydrogen gas, i.e. 'olefiant' gas. (See FuEL above.) It was first used by Mr. Murdoch, an Ayrshire man, who used it in his own house in 1792, and applied to the Soho Foundry in Birmingham in 1798. The Lyceum Theatre in London was lit by it in 1803. The chief inventor in connection with coal-gas was Mr. Gleg, who invented the hydraulic main, the wet lime purifier, and the wet gas meter. The best coal for gas is the bituminous kind, and the burner is a matter of supreme importance.
GAS ENGINE was invented by a French workman called Labon in 1799, whose invention was modified and improved by. Lenoir and by Siemens:
GASkell, MRS., the novelist, was born in 1810, and her first important work was Mary Barton. Amongst her other novels are-The Boorland Cottage, Ruth, Forth and South, and Silvia's Lovers. She also wrote an admirable life of Charlotte Bronte.
GASSENDI, the French philosopher, was born in 1592, and became professor of philosophy at Aix when he was only nineteen. He was a great opponent of the Aristotelians, and a warm admirer of Epicurus.
GaUGE, Railway, vaties very much with the gradient and with the supply of materials and other causes. Of course, there can be no through transport. of goods unless all the lines in a country or on a continent are of the same gauge ; but in some places this is, or might be, politically dangerous, because troops might suddenly be run through from one country to another. This accounts for the difference of gauge which used to exist all over Europe, and which still exists on the Franco-Spnnish frontier. Sonetines, however, the difference of gauge is due to the character of the ground, and sonnetimes to motives of economy. Up very steep inclines, e.g. the W. Glats near Poona, or the LImadayas near Darjiling, the line nust be either on a very narrow gauge or on a zigzay to enable the engine to climb. Across a desert. e..g. from Karachi to Lahore, there is a great scarcity of wood. The gnuge up to Darjiling is 2 ft ., the Nor. wegian lines are 3 ft . 6 in , the 1 ritish is $4 \mathrm{ft} .8 \frac{1}{2} \mathrm{in}$., the Indian is 5 ft .6 iln , and the old Great Western Railway had al 7 foot gauge. The gradient practically decicles the gange, and the gange decides the amount of materials, and the latter decides the costi+ the price of land.
GAUL was the old name for France, the Gauls being the chief branch of the origimal keltic fanily in $W$.

Europe. They were conquered by Julius Caesar, 58.50 H.C.

Gauss, the great German mathematlcian, was loorn in 1777. He was saicl to be the greatest mathenatician in Europe.
Gauther, the French critic, was born in 1811, and the success of his romance, Vowlemoixelle sle .tfoupin, bed to his being made bialzac's secretary. He died in 1872.

GAvELKIND was an old Euglish land-tenure, which preceded the brimugeniture of the Norman feuclal systenn ( 9.8. ). By it the laud was divided edually amongst all the sous of any land-owner, or anougst all the danghters. It still prevails in Kent.
GAY, the English poet, was born in 1688 , and became a great friend of Pope. His fanous Fables were published in $\mathbf{1 7 2 6}$, and his Beggur's Opera was produced in 1727.
GAY-LUSSAC, the French chemist, was born in 1778 , and made his famous balloon ascents for scientific observations iu 1804. He was professor at the Sorbonne for twenty-four years, and was widely celebrated for his rescarches into the properties of gases.
GAZETTE was a small Venetian coin, whicl was the price of the first newspaper, and which thus gave its name to papers. The London Gazette was originally published at Oxford in 1665, and is now the official organ of the court.
GEBER, the Father of Chemistry, lived in Arabia during the 8th century, and seems to have anticipated almost all the chemical discoveries down to the 18th century.
GED, the inventor of stereotying, was born in Edin. burgh, and first used his invention in 1725
Gethoes. Jenivy, was the woman, according to tradition, who threw her stool at the head of the Dean of St. Giles's Cathedral, Edinburgh, in 1637, when he was attempting to introduce the episcopal prayerbook.
GEHENNA, which is translated in the English Bible by 'hell,' or 'hell-fire, is a form of the Hebrew Ge-hinnom, or 'the vale of Hinnom,' in which was the Tophet where the Israelites sometimes made their children pass through the fire in honour of Moloch (cf. 2 Kings xxiii. 10). It was afterwards the scavenging centre, where the refuse of the city was burnt in fires which werc kept constantly burning. Hence came the idea of 'hell-fire."
GEIKIE, PROFESSOR ARCHIBALD, the geologist, was born in 1835, and was appointed to the Geological Survey in 1855 He was professor in Edinburgh University from I870 to I88I, when he was succeeded by his younger brother, James. Both lhave written numerous books.
GEISSLER'S TUBES are made of very hard glass, and contain highly rarefied gas, with a platinum wire sealed into each end of the tube. The instrument is called after its inventor, an instrument-maker in Bonn.
GRLATINE is a concrete animal substance, which is soluble in water, but which is not contained in any healthy animal fluid. It exists nearly pure in skin, and also is extracted from tendons, bones, etc.. by the action of boiling water. The coarsest forms, from hoof and hides, make glue : the second quality, from skins, etc., makes size; and the finest quality, from the air-hladelers of fish, etc., makes isinglass.
GELDER-ROSE, or GUELDER-ROSE, is a variety of water elder.
Grison, the Greek tyrant, conquered Syracuse about 485 IS.C., and defeated the Carthaginians in the famous battle of Himera ( 480 B.C.), which was cele-
Gemint. (Sce Castok.) [brated by Pinclar.
GEMS, Tropical conntries, where volcanic action is most frequent or most violent, produce most genis ; and the material of which they are made is very common, and is sometimes almost the same for gems of very different value. The diamond is exactly the same material as carbonate, enverald as beryl, ancthyst as rock-crystal, the ruhy as the oriental topaz + some minute sultie difference of colouring or refracting matter. Alinost all G . Conceal thelr heanty in their natural state, and require extremely skilful cutting to bring themout properly. The comparative
value of pertect stones is-Diamonds (sce above); Wimeralds of 5 grains $£ 5$, of 10 grains $£ 20$, of 24 grains $£$ roo; sapmhires from $£ 20$ to $£ 30$ per carat of $3 \%$ grains ; Rubies under $3 / 2$ carat $\{20 ;$ opetls from £ 3 to $£ 8$ per carat ; etc. Artificial G . are generally of puste, i.e. ordinary glass with 50 per cent. of oxide of lead in it, or doublets, i.e. a thin slice of real stone on a foundation of paste, or a real reproduction of nature, e.g. gems like rubies. The litter are now produced so perfectly that they can be detected only by a most powerful microscope. Artificial ipearls were invented as far back as 1680 -of thin glass conted with an essence made from the "pearly" scales of live fish and filled with wax. Genis with designs raised above the general surface are called camcos; those with designs sunk beneath the general surface are called intuglios,
GEMS, POETRY OF. Special stones are supposed to have 'affinity' for special months, and to have special virtues. The jacinth or the garnet gives constancy, for January; the amethyst gives sincerity, for February; the bloodstone gives courage, for March ; the sapphire or the diamond repentance, for April ; the emerald successful love, for May; the agate health, for June; the cornelian content, for July ; the sardonyx happy marriage, for August ; the chrysolite antidote to madness, for September ; the opal that experience of misfortunes which engenders hope, for October; the topaz faithful triendship, for November; the turquoise or the malachite prosperity, for December.
GENDER is the form given to a noun or pronoun to show a distinction in grammar (i.e. between words) corresponding to the distinction of sex (i.e. between animals). It is marked in English by prefixes, suffixes, and different words; and these prefixes and suffixes are either separable and Teutonic, or inseparable and Romance. Cf. 'he-goat,' 'pea-hen,' 'count-ess,' etc. When we talk of one noun being the feminine of another we niean that it is cither derived from it, as laul and lu(de)ss, or used with it, as uncle and aunt
Genealogy. Systematized lines of clescent, and lines are direct or collateral, the latter uniting only in some common ancestor, but having nothing to do with one another.
General Lien is the right to retain possession of a chattel until payment be made for that or for some other similar chattel or chattels.
GENERALIZATION is the comprehension, under a single unity, of a number of objects agrecing in some point or points which are abstracted from each.
GENERATION is estimated at about 30 years. About zo lives the length of Mr. Gladstone's would take one back to the time of Christ 1
GENERATION, SPONTANEOUS, is the extraordinary doctrine that under certain circumstances dead matter may build itself up into living forms. This was the prevalent belief in the 17 th century, and was even accepted to a certain degree by Buffon. It seems to have arisen from the confusing of minute organisms of a low type with inorganic matter.
GENEVA BIBLE was a copy of the Bible in English printed in Geneva about 1560 , and was the version used in England prior to the Hampton Court Conference, at which the authorized version was decided on.
GENEVA CONVENTION was an International Conference, held at Geneva in 1864, for the succour of the sick and wounded in time of war. It was decided that all vehicles and persons employed in such succour should be held neutral, and that they most be distinguished by a badge of a red cross on a white ground.
GENGHIS KHAN, the Mongol warrior, was born about 1160, and succeeded his fatlier, a chicef of 40 chans, when lie was only 14. He inarried the clanglter of the great Khan Ung, and becnme Khan of the united Mongol and Tartar tribes. After conturering the Nigurs and other peoples of central Tartary, he invaded China in 1209, and took Peking in 1215. In 1218 he conquered Turkestan, and advanced even to the Dnleper. Before his death he had also completely subdned south-western China, nod left an enormous emplre to be divlded imong lis four sons,

Genius was a spirit, good or bad, which was supposed to be attached to persons or places, and to inflicuce actions and events. G. was a Latin word, the Greek equivalent being demon.
GENTILE, in the Bible, means any one who was neither a Jew nor a Christian.
GEOFFREY OF MONMOUTH was a clerical historian of the rath century. He was the Norman Bishoplof St. Asaph, and he published his famous translation of the old Welsh or Breton legends in 1128 . It was the source of endess material for the romancewriters of subsequent ages.
Geoffroy St. Milaire was the mame of two famous French maturalists, father and son, who flourished in the early half of this century.
GEOGRAPHY is a study of the earth from the standpoint of the ordinary merchant as the source of the products which are needed in luman life, and the scene of their transport and preparation for use. When properly taught it is one of the most valuable of all educational subjects, as it involves close observation, constant argument by cause and effect, constant application of known conditions to new cases, and constant verification of facts. The only logical method of teaching it is to give up the stereotyped plan of dealing with the earth piece-meal by continent and country, and to adopt an arrangement by which the great phenomena of geographical science are dealt with in separate masses. This involves a general study of clinate, mountains, rivers, natural products and their distribution, transport, growth of cities, etc. The other important divisions of the subject are conmercial, political, and historical G. Commercial G. is physical G. discussed from the point of view of human wants and their satisfaction; political G. considers the physical surface of the earth as occupied by different peoples and political communities that have uational froutiers and international wars; and historical G. considers how man's relation to that physical surface have moulded his individual or national history.
Ghography, Progress of, began with river civilization, which sprang up in tropical and semi-tropical latitudes where there was abundance of food and where the winter day was never very short, e.g. Egypt, Mesopotamia; but such civilizations were isolated and despotic. Sea civilizations sprang up on small hilly isolated promontories, such as Greece, from which the inhabitants were driven on to the sea in search of fresh homes, partly by the pressure of population from within and partly by the pressure of foes from without. This led to ocean civilization, which involved a complete change iu the nominal centre of the world-a change from Phoenicia to Great Britain, from Tyre and Sidon to London and Liverpool. Phoenicia was the centre of the caravan routes of the Old World, Italy was the centre of the Mediterranean civilization, Spain came to the front when sea civilization was merging in ocean civilization, and Britain has been the practical centre of the world since the defeat of the Spanish Armada, France has always sacrificed commercial and imperial interests to lust for military glory, and Holland has never had a large enough population to found colonies of settlement. The 16 th century was the era of romantic discovery by individuals-limited, disconnected, and hap-hazard; the 17th century was the era of conmercial settlement by means of merchant com-panies-localized, thorough, and permanent; the 18 th century was the era of organized exploration by geograplical societies - all over the world, and scientific. The great names in G. are those of Strabo, Ptolemy, Marco Polo, Columbus, Vasco da Gama, Magellan, John Cabot, Frobisher, Davis, Baffin, Hudson, Tasman, Cook, Bruce, Park, Burton, Speke, Livingstone, Stanley, Nansen, etc.
GEOLOGY took its rise as a science in the observation by Willian Smith, a Bath surveyor, that the same strata always produced the same fossils. The geological survey was started by Sir H. de la Beche in 1830, and was very soon recognized officially as a branch of the Ordnance Survey. 'Geological Time is based upon the formation of yarious strata and the appearance among them of various forms of life. The
human period is called the Psychozoic era, the mammal period is Cenozoic, the reptile period is Mesozoic, the fish period is Paleozoic, etc.
Grometrical Progression is a series of numbers which increase or decrease by equal ratios, as 3.9 . 27. or 27, 9.3 .

GEOMETRY treats of the properties and relations of definite portions of space. It practically commenced with Thales about 600 B.C., and was greatly developed by his pupil Pythagoras, and byPlato, Euclid flourished in Alexandría about 285 B.C., and his work was carried on by Archimedes and A pollonius later in the same century. The work of Archimedes wis resurrected in Kepler ( $\mathbf{1 5 7 1} \cdot 1631$ A.D.), and the branch of analytical $G$. was created by Descartes at the same time. Newton's discoveries were made about 1700 A.D. Modern G. is founded ou the inventions of Carnot (2753-1823 A.D.).
GEORGE, ST., the patron saint of England, was canonized about 495 A.D. His history is very uncertain, but Gibbon's suggestion that he was the turbulent Arian heretic who was killed in a riot in $3^{61}$ A.D. is highly improbable. He was adopted as the patron saint of the Genoese before the Council of Oxford in 1222 ordered his day, April 23 , to be kept as a national hotiday. Shakespeare, the great national poet, is said to have been born and to have died on St. George's day ; and Alfred the Great, the national hero, came to the throne on the same day.
GEORGE I.'S claim to the throne was as the Protestant great-grandson of James 1 .
GEORGE II.'s reign was remarkable for the number of prominent men who were really great in art, letters, war, and statesmanship. Both the Canadian and the Indian sections of the Empire date from his reign.
GEORGE III. had the distinction of reigning for sixty years, of losing the American Colonies in 1775-83: of being a contemporary of the French Revolution and the Napoleonic Wars, and of going mad several times during his long reign.
German political parties are a heterogeneous collection of Centre ( 96 members), Conservatives (75), National Liberals (53), Social Democrats (44), Radical Popularists. Imperialists, Poles, Anti-Semites, Radical Unionists, South German Populists, Guelphs, Danes, Alsatians, and Christian Socialists.
GERMAN SILVER is an alloy of copper, nickel, and zinc, and is used for spoons, forks, etc. It is affected by vinegar.
GERMANICUS, the Roman general, was born B.C. 15 , and adopted by Tiberius. When Augustus died, the legions on the Rhine invited him to assume the sovereignty, but he refused.
GERMANY is an Imperial confederation of States under the presidency of the Emperor William II. of Hohenzollern, King of Prussia. According to the constitution of 1871, all the States have formed an 'eternal union.: The direction of political and military affiairs is in the hands of the Emperor, who may, declare war; but, if it is not merely a defensive war, he must first obtain the consent of the Federal Council. Legislation is entrusted to the Reichstag and the Bundesrath-the former representing the German nation and the latter the individual States. The Bundesrath consists of 58 delegates, and confirms or rejects measures passed by Reichstag, which is composed of 397 members, elected by ballot under universal suffrage. Education is universal and compulsory.
Gervaise of Tilbury was a chronicler who flourished in England about 1200 A.D.
GERVINUS, the German critic, was born $\ln$ 1805, and began life in conmerce. He published his IIisiory of German National poctry in $1835-42$, and became editor of the Deutsche Zeitung about 1845. Amongst his greatest works are his Shakespeare and his History of the rgth Century. He died in 1871.
GESENIUS, the Biblical critic, wiss born in 1;86, and had a very wide knowledge of oriental linggages, especinlly Hebrew and Chaldee. He died in 1842
GESNER, the founder of the science of Zoology; was bom in 1516. Besides his great IIstoria d nimatium, he invented the method of classifying vegetation according to the character of seeds and flowers. He dicd of the plague in 1565 .

Gesta Romanorum, 'Deeds of the Romans,' is tho title of a collection of short tales in Litin that wis very popular in the Midtle Ages. It was probably writen by an English or Gcrman monk called Elinandus at the end of the rath century.
Gestation, PERIODS OF, vary from 25 days for a mouse and 6 wecks for a cat to 12 monthis for a canel anl ar months for an elephant. Pigeons 'sit ${ }^{\text {c }}$ for 14 clays. geese for 30 , swans for 42, and turkeys for 58.
GETHSEMANE Means 'the oil-press,' and was near the base of the Mount of Olives.
Gevsers of ICELANO are about 100 in number, and lie to the N.iV. of Mt. Hekli. The two chief ones are the Great G. and the New G., the basin of the forner being 70 fect in diameter, and the column of boiling water rising sometimes to 200 feet. They are not the only $G$. in the world, nor even the finest. Those of the Yellowstonc Region are larger, and those of the 'Terrace' Region of Aucklaud, N.Z., are more beautiful.
GHETTO is the name applied to the quarter of a city set apart for Jews.
Ghibelfines were a political party in Italy during the $13^{\text {th }}$ and $14^{\text {th }}$ centuries, who generally favoured the Eimperor and opposed the Pope.
GIANTS are constantly mentioned in the Bible as well as in old mythology, the latter merely representing friendly or hostile forces of nature. Amongst autheutic instances of gigantic stature are-the Roman Emperor, Naximus, and the Swede, Cajanus, who were about 9 feet high; Munster, the Hanoverian yeoman-of-the guard, and Frederick William I.'s famous Swedish grenadier, who were 8 ft .6 in .; Marie Wedde, who was 8 ft . $z$ in.; and Anna Swan, who was 8 ft . As a rule, gigantic stature is accompanied by weakness of body or of mind.
GIAUR is a Persian word meaning "infidel,' and is used by the Turks to denote any one who is not a Nfahommedan.
Gibbon, the historian, was born in 1737. While he was at Oxford he declared himself a Romanist, so his father sent him to a celebrated Calvinistic divine in Lausanne, where he was re-converted and formed a valunble habit of regular study. It was during a visit to ltaly in 176.4 that the idea of his great History of the Decline and Fall of the Romtn Empire occurred to him. and the first volume was published in 1776. The other three volumes, which were writter at Lausanne, were published in 1788 , and he died in 1794.

Gibraltar was first fortified by the Saracen General Tarik in 711 A.O., and its name is a corruption of Gebel-el-Tierik, or 'Rock of Tarik.' It was taken from the Moors by the Spaniards in 1462, and from the Spaniards by the English, under Sir George Rooke, in 1704 i and it was secured to Gritain by the Peace of Utrecht. Since that time it has been attacked several times, and in 1779 a tremendous effort was made by Spain to recover it; but it was magnificently defended for nearly four years by General Elliot. The Straits are about 15 miles wide at the narrowest point, and have rather clangerous cirrents.
GIBSON, JOIIN, the famous sculptor, was born in ry90, the son of a landscape grarclener, and was apprenticed to a woorl-carver at Liverpool. IIe was eventually assisted to go to Rome, and studied under Canova, and afterwards under Thorwaldsen. He was made R. A. in 1835, but continued to live in Rome. Nearly all his subjects were taken from classical mythology, and he hadl a curious habit of colouring his statues.
GIBSON, MILNER, the politician, was born in 1807. and began his carcer as a Conservative, but after wards joined the Anti. Corn-Law League. Ife died in 188.4.
GIFFORD LF:CTURES were founcled by L,ord Gifford, who left $\mathcal{C} 80,000$ to form lectureships on Nirtural Relizion in the four Scottish Universities. No test of any religious or ecclesiastical kinel is demanded of the lecturers.
Gilbert, Sir Humphrfy, the poet, idealist, and navigator of pueen Elizalueth's reign, was, like his relation, Sir Walter Raleigh, a Devonshire man. He was drowired at sea, having taken the post of danger
in a tiny sloop, and his last words to his friends in the larger and safer vessel were, "We are as near to Ciod by sea as ever we were oul land."
Giliseker, Sik JOHN, the painter, wals born in 1817, and exlabited his first picture when he was only 19 . Ile was one of the chicf artists on the Jlustrated London tienos for many years, and was knighted as I'resident of the Socicty of Water Colours in 187r. lle became R.A. in 1876.
GILBERT, W. S., the popular librettist, is a barrister of the Inner Temple. He was born in 1836 , and has written nearly all the librettos of Sir Arthur Sullivan'! charming comic operas. He made his name erigin. ally by his "Bab Ballads."
Gildas, The Wise, was an old historian of the 6 : century.
GIN is distilled from grain, gencrally rye, and flavoured with juniper, and the name is a corruption of yenieure, the Frencli for 'juniper.' It is called 'IIollands,' because the best and largest quantities come from Schiedam. The coarse gin of British public-houses is a vile imitation flavoured with oil of turpentine.
Go'T'TO, the celebrated Italian painter, was born about 1276, and was a sheptherd-boy; and he owed his subsequent success largely to the fact that Cimabue saw him drawing some of his sheep on a piece of slate.
GIRAFFE is the tallest animal in the world. A fullgrown male reaches a height of 20 feet, most of which is neck; and its great height is probably due to ages of evolution in an animal which feeds on the leaves of trees,
GiraOUS CAMERENSIS, the historian, was horn about rx46, and was as vain a man aud as untrustworthy a historian as his friendship with Prince (afterwards King) John would lead one to expect.
GIRONOISTS formed one of the great political parties in the French Revolution. They were visionary Republicans, and took their name from the fact that three of their leaders came from the wine clistrlct of the Gironde.
Girton College, Cambridge, was opened in 1869 , at Hitchin, whence it was removed to Cambridge in 1873 ; and in 1875 a second college for women, Newnham Hall, was connected with it.
GIULIO ROMANO, or PIPPI, the Italian painter and architect, was the most famous of Raphael's pupils.
Glacial PEriod, or ICE AGE, is the name applied to part of the Cenozoic or Tertiary period (sec GEOLOGY above), during which the Earth north of latitude $50^{\circ}-40^{\circ} \mathrm{N}$. was covered with glaciers.
GLACIERS are generally masses of consolidated snow, which" by their own weight move slowly down the mountain where they have been accumblated. Their pace is seldom more than one inch per hour. Along their sides or over their surface are scattered accumuslations of stone and detritus, which are called moraines. The Alpine G. give birth to the five great rivers of Central Europe-the Rhine, Rhone, Po, 1mm, and Adige. G move like rivers-faster in the middle and above than at the sides and along the bottom. The torrent of icy water that issues from the lower end of them is simply the resurt of melting. The largest glacier in the world is the Muir,' in Alaska; the largest in Europe is the Justeldals Brae, in Norway.
Glaoiators were the professional fighters who cutertained the Romans in their public grmes. They were first exhibited in B.C. 264 at a funeral, and were drawn from the ranks of prisoners, slaves, and condemned criminals; but later, freemen, even of high rank, 'ancl even women fought for piny or for notoriety. The fate of a defeated glicdiator, who was not nortally wounded, was decided ley the spectators, who turned down their thumbs if they waled the opponent's dagger to be thrust domm into the licart of the fallen man. The prize was nominally a wreath,
 were classified according to their weapons-triclent and net, buckler and short sword, etc. (See Byron's Childt: Marota iv. 140, etc., iml W. Melville's (thadiatora.)
GtansTone, Ricite Ifin. W. E., was born in 8800 , and educated at Eton and Uxford, and at both showed
strong High Church and Tory principles. He made his first speech in Parliament on May 17, 1833, on the Slavery question, and his last on March 1, 1894, on the Parish Council Bill. He took an active part in the Corn-Law debates, but left the Conservative party after his visit to Cavour and Garibaldi in 1850. He became Premier for the first time in 1869, disestablished the Irish Church, and helped to pass the Elementary Education Act and the Ballot Act. Being turned out of office in 1874, he went on his famous " Bulgarian Atrocities " campaign, and became Premier again in 1880. He was Premier a third time in 1886, and irrevocably split the Liberal party by his Hone Rule "conversion," and was turned out of office. In 1892 he became Premier for the fourth time, but resigned from failing sight. He has written a number of books, e.y. The State in its Relations with the Ohurch, Studies in Homer, and The Impregnable Rock of Holy Scripture.
GLASGOW is one of the three great cities (Buenos Ayres and Rouen are the other two) that have held good their position against a harbour lower down on the same river, in spite of the increased size and draught of modern steaniers, by making enormous efforts to accommodate themselves to new conditions. Within the inemory of men living, the Clyde at Glasgow was forclable on foot l-where ocean liners now load and unload.
GLASGOW UNIVERSITY was founded by Pope Nicholas V. in 1450 and was remodelled by the Acts of 1858 and 1889. It has about 1900 students, about 250 of whom are women. It has the most complete accommodation in the world for female medical students, under Mr. T. H. Bryce, the anatomist.
Glass was known to the ancient Egyptians and Phoenicians, from one of whom it was probably borrowed by the Greeks and Etruscans. St. Jerome speaks of G. being used in windows (422 A.D.), and the Venetians have been famous for it since the 6 th century A.D. Bolsemia owes its reputation for coloured G. to the potash of the Bohemia forest and mineral wealth of the Eger basin. G. is now made on nearly all large coal fields, e.g. at St. Etienne, Liege, Newcastle, St. Helens, etc.
GLENCOE, MASSACRE was perpetrated in i6g2 by the foulest treachery on the part of the Master of Stair and Captain Campbell of Glenlyon.
GLENDOWN, OWEN, the ally of the Percies against Henry Bolingbroke, was outlawed unjustifiably through the treachery of his enemy, Lord Grey de Ruthyn. He arrived too late to save the day at Shrewsbury, but was never hiniself conquered; and Henry V. even agreed to treat with him, but he died in 1415 .
GLOSS is an explanation of some difficulty written in the margin of a manuscript by the person who found the passage difficult, and this often led to the gloss being afterwards accidentally incorporated in the text. Hence the dictum with regard to duplicate readings in a manuscript-Stet durior lectio, 'Let the harder reading stand.
GLOVES are a very old article of dress, and were used regularly as a token of challenge. Judges were not allowed to wear gloves on the English bench for fear of bribes being dropped into them; but, if there were no cases to be tried, there was no opportunity for bribing and the sheriffs miglat give the judge a pair of gloves ! About 37,000,000 pairs are used in the United Kingdon every year, about zo million pairs being imported, at a cost of about $£ 1,750,000$. TVorcester is the centre of the British leather or kid 'glove industry, but large numbers of cotton $G$. are made at Nottingham and Leicester, and of woollen G . in Wales and Scotland. The largest firm of glove manufacturers in Britain is that of Messers. Dent, who employ more than 15,000 hands. The chief leathers used are doe, buck: and calf: and most of the socalled "kid" G. are made of lambskin. The chief centre in U.S.A. is Gloversville, and in France is Paris, though Grenoble has the best opportunity of specializing in real kid G .-11p amongst the goatpastures of the Alps. The leather has to be dressed much more lightly thau for boots and shoes.
GLow-WORM can only strictly be applied to the fomato
caterpillar, which can ' light up' its tail, apparently to attract the male, who is winged.
GLUCK, the German composer, was born in 1724, and died in 178 . He maintaned hinself as a young man at Prague University by his skill in playing the organ and harpsichord, and attracted the attention of several Bohemian noblemen. In 1740 he was commissioned to write an opera for the Milan court theatre, and this was the commencement of his 'operatic period.' In 1745 he visited London, where he was very much impressed by the music of Handel and Arne, and this led to his Orpheus and Euridice in 1762, which marked a new era in operatic music and the commencernent of his 'lyric period.' In a preface to his Alcestis in 1766 , he explamed his principles-that an opera was a musical drama, not a concert in fancy dress. Later he wrote for the Royal Opera in Paris; and the works of Cherubinj in France, and of Mozart and Beethoven in Gemany, may be said to owe much of their inspiration and direction to him.
Glue. (See GElatine.)
GNAT is as wide-spread geographically as it is universally anathematized, but only the females deserve the anathema, as the males do not sting. (Cf. GLowWorm above.)
GNOSTICS is the general name given to the early speculators in theology, who combined Oriental mysticism and Greek philosophy with Hebrew Christianity. Simon Magus, of the Acts, is said to have been the first of them; and they all agreed pretty much that God is incomprehensible, that natter is eternal and hostile to God, and that the human nature of Christ was an illusion.
GOAT-SUCKER is the ordinary night-jar, and the idea that it sucks goats is quite erroneous.
GOBELIN TAPESTRY gets its name from a clever dyer in the reign of Francis I., whose factory was afterwards rebuilt by Colbert in 1667.
GOD must, in the nature of things, be self-existent and eternal. The arguments for the existence of God are: ontological-the very idea of God implies His existence; psychological-we could not have got that idea othervise; cosmological-that must have been a cause of the universe; physico-teleological-evidences of design in nature; moral-men have intuitive knowledge of right and wrong. It is curious that the name of God should be spelled with four letters iu so many languages-e.g. Latin Deus, Greek Zeus, French Dieu, Scandinavian Odin, Arabian Alla, German Gott, Japanese Zain, etc,
GOD SAVETHE QUEEN (or king) was probably written and composed by Henry Carey during the dangerous crisis of 'the Forty-Five,' but it was brought into popularity by Dr. Arne, the composer of Rule Britanuia.
GODFKEY OF BOUILLon, the leader of the First Crusade, died at Jerusalem in 1100 A.D., which he had taken after a five-weeks' siege at the head of 80,000 men.
GoDIVA, the heroine of the famous tradition, was the wife of Leofric, Earl of Mercia and Lord of Coventry. Her ride was said to have taken place in 1040 A.D.
GODOLPHIN, the politician, came into notice in the reign of Charles 1I. by voting for the exclusion of the Duke of York from the throne, During the reign of Anne he was Lord High Treasurer, and immensely improved public credit, and checked corruption in public administration.
GODWIN, EARL, the father of Harold, was created Earl of Wessex by Canute, whose niece he had married. He had to flee from England during the reign of Edward the Coufessor, thongh the king had married his daughter, but returned in triumph to carry out his anti-Noman policy. He and his sons controlled a very large proportion of the comintry. and thus-as Dunstan, the originator of the Earl system lad intended-greatly checked the power of the king.
Godwin. Wilmiam, the writer, was born in 1256, and married the notorious Mary Wollstonecraft in 1297 He wrote novels, dramas, histories, and political works of great nerit, and had a deep infucnce un Shelley, who married his daughter,

GOETHE, the greatest Germinn, was born in 1749 , and died in 183\%. ILe was poet, novelist, artist, philosoplıer, and scientist. Anumy his great works areDr. Fibest, 11 ibhedm Jfeister. The sorrows of Werther, etc. As director of the court theatre at Weinne, he produced a number of Schiller's dramas.
GOLIS is found in recif or in alluvinnt, the fornmer re. quiring very expensivo machinery and the latter being very unreliable. During the last five years the output of G. has increased all over the world, but specially in the Transvail and West Australia. Tlue nost inportant centre in the Transvaal is Jolnannes bung, and in West Australia is Coulgardie; but political trouole in the one and want of water in the other latve greatly hampered trade. The anmual out: put in the world is about $8,000,000 \mathrm{oz}$. and $G$. is priced at about $7^{85}$. an $0 z$. British gold coin is 11 parts $G$. aud I part copper; and that $8,000,000 \mathrm{oz}$. in sovereigns placed side by side would stretch from Glasgow to Londou. The annual loss to the British Government from the wear of the gold coins in circulation is nearly C50,0001 Pure gold can be beaten ont into leaves, of which there are nearly 300,000 in 1 inch deep, and it can be drawn out into wire so fine that nearly 200 yards of it will weigh only 1 grain (Troy). The old Hall Mark was practically invented in the year 1300as a Leopard's Head, which has always been the crest of the Coinpany of Goldsmiths. Pure gold \{a4 carats) is worth ff 4 s , $11 \frac{1}{2} \mathrm{~d}$. per oz. Troy, standard ( 22 carats) is $£ 317 \mathrm{~s} .10 \frac{d}{d .}, 18$ carats is $£ 335.8 \frac{1}{2} \mathrm{~d} ., 15$ carats is $£ 2135$. $1 \mathrm{~d} . .12$ carats is $£_{2} 25.5 \frac{3}{4} d .$, and 9 carats is $\mathcal{L}$ IIS. $10 \frac{1}{2} d$
GOLDEN AGE in England was the "spacious days of great Elizabeth." (See $\triangle$ GE above.)
GOLDE゚N ByKL was an edict issued by the Emperor Charles IV. in 1356 , fixing the procedure for election and coronation of the German Einperors.
GOLDEN FLEECE (See JASON.) The Order of the G. F. was founded by Philip the Good in 1429, and belongs to both Austria and Spain.
GOLDEN HORN, the harbour of Constantinople, gets its nanne fronn its shape and its beauty.
GOLDEN LEGEND was a collection of legends about saints, nade by an Archbishop of Genoa in the $13^{\text {th }}$ century. Caveon printed a translation of it.
GOLDEN NUB BER shows the year of the moon's cycle. Add I to the year, and clivide by 19 ; the remainder is the G.N. For instance, $1897+1=1898 \div 19=99+17$. If there is no remainder the G. N. is ig itself.
GOLDEISH are really a species of Chinese carp, which in its original state is greenish rnther than golden.
GOLDSMITH, OLIVER, was born in 1728, and died in 1774 At different times he studied theology, law, and medicine. In 176i he was introduced to Dr. Johnson; and in 1764 he published The Traveller, and in 1766 The Vicar of Wrakefetd Amongst his other successful works were The Doserted Village (1770) nud the comedy of She Stoops to Conquer (1773).

GobF is said to he an evolution of the shepherd's crook and the mbbit hole, characteristic of the old sheep pastures over the sandy downs. There are G. I inks How al! over the world, e.g. at Bachad. In 1896 the Amateur Chanpionship was won by $\mathbb{F}^{*}, ~(r$. Tait: the Open hy H. Vardon: the Laclies' by Nliss Rascoe: the Irish hy J. S. Moore ; the St. Andrew's Gold Cross was won luy H. II. Hilton: the St. George's Vase by F. C. Tait. The best small book on the Finne is probably one published by Park the profussional.
GOl.1AT1t, accorcling to I Sant. xvii., was about in ft. ligh. Josephus, liowever, says fonir, not six, cubits, ic. ahout 7 ft . (Sce GIANTS above.)
GOVDOLAS, which are charmcteristic of Venice, are of all size. but the average is about 30 ft . long by 4 brond.
GONFALON is an ensign having 200 strenmers, and tirns on a pivot like a weather-cock.
GONG is is Chinese instrument. I
GOOD TEMPLARS form a fraternity for total alostinence, but hive arloplod also certain mystic rites in imitation of Ir remnasons ( $4, v$.). The order originated in New York in 185 r , but was extended to Jingland in 1868 by Joseph Jalins. It has a menberslip of
over half it million, of whon 200,000 nre in the United Kingrelon.
GOODALL, the self-tanglat line-cngraver, was bont in 1795, and did sonne of his best work in engriving Turner's pictures. He also engraved some of his son's-lirederick G., the $R . \Lambda$.
GOODWIN SANDS, off the const of Kent, are about in miles loug from $N$. to S., and from 12 to 3 miles wide froin E , to W .
GOORKHAS are mountaineers of Nepaul and I lindus in religion, They are very brave and very loyal, Inaving proved botll during the Mutiny, and are very friendly with our Highand Regiments.
[years old.
GOUSEBERRY BUSHES deteriorate after they are four
GORDON, GENEIRAL, often called "Chinese Gordon," was born in 1833 , and left to die in Khartoum in 1885. It was during the Ineping Rebellion that he gained his nickname for his wonderful success in training Chinese troops. Mr. Gladstone sent him to withdraw the garrisons shut up in the Soudan by the Madhi in 1882, and then, from cowardice or procrastination, failed to relieve lim.
GORBON, LORD CEORGE, the "hero' of the AntiPapist riots, was born in 1750 , and died in Newgate in 1793.
GORGONS, of Greek myth, were three hideous gods desses, only two of whom were immortal. The third, Medusa, was killed by Perseus. They were decorated with serpents in their hair, brass hands, teeth, scaly bodies, etc.
GORILLA is largest kind of ape, standing about 5 ft . 6 in . Its home is among the equatorial forests of Africa.
GORST, RIGHT HON. SIR JOHN, the Vice-President of the Council, "took silk' in 1875 , and in 1885 becanne Solicitor-General in Lord Salisbury's first government. He was a nember of the famous "Fourth Party," and afterwards a delegate to the Berlin Labour Conference in 1890.
GORTSCHAKOFF, the Russian diplomatist, was born in 1798, and began his career in London. He won his reputation by his skill in securing the neutrality of Austria during the Crimean War, and he was a prominent member of the Berlin Congress in 1878 .
GOSCHEN, RIGHT HON. GEORGE, was at Rugby under Dr. Tait, and took a First-Class in Classics at Oxford. He becaine it director of the Bank of England in 1856 , and was afterwards Vice-President of the Board of Trade (1865). First Lord of the Admiralty ( 1871 ), Chancellor of the Exchequer ( 1886 ), etc. He was opposed to Mr. Gladstone's Franchise Bill of 1880 , and left him altogether on the Home Rule question. He has written several books and pamphlets, c.g. Theory of Foreign Exehange.
GOSPELS, THE, were all written in the latter half of the first century A.D., and there is better evidences for their genumeness than for that of any other ancient writings. Those of St. Matthew and St. Mark were written first-before the fall of Jerusalem; that of St. Luke svas written about 64 A.D., and tlat of St. John about 30 years hater. They have different points of view. That of St. Matthew is mainly Hebrew; its Oriental style is stately and symmetrical, it is a narrative of events in their accomplislnment, full of impressions, antithetical, collective, and presents Jesus as the Messiah. St. Mark is mannly Gentile; its Roman style is terse and precise, it is a memoir of events in cletail, graplic and circumstantial, presenting Jesus as the God-man. St. Luke is universal: its Greek style is full and balanced, it is a real history of events in their order and connection, dealing with motives, reflective, incl presenting Jesus as the Redecmer. St. John is mainly Christian; its spiritual style is artless and colloguial, It is a dramatic portraiture of events as significant of spiritual truths, itlemphasizes definite words spoken, actlons done, and presents Jesus as the Son of Cod.
GOSSE, FDMUND, was born in 1849, ansl publislied his From, shakespeare fo Poyn in 1885 . His best work is in his IILstorics of the hiterneure of the $18 t h$ and 1 geh Centurirs.
Gussir SPOONS is amothermane for Apostle Spomm, í. o. gilt spoons kiven by sponsors or "gossips' (foilsib, 'related in Gorl ') to a child at christuning. Ricli jeo"
ple gave the tivelve apostles, poorer people gave the four evangelists, and the poorest gave one of the child's patron saints.
GOTHENEURG SYSTEM regulates the trade in intoxi. cating liquors, and has been warmly advocated in this country by the Bishop of Chester. The essential feature of the system is that the sale of these liquors is in the hands of state-controlled and chartered companies, who are allowed only a fixed rate of interest on their capital, and inust expend any further profits on objects of general utility. It has been very fairly successful in Norway and Sweden, and certainly takes away a great motive for pushing trade.
Gothic Architecture is the name of the various styles of pointed arches in Western Europe from the middle of the 12th to the 16 th century. It was first used in England for Canterbury Cathedral in 1174, and in England it has been divided into Early English ( ${ }^{2} 3^{\text {th }}$ century), Decorated ( $\mathbf{r} 4$ ), Perpendicular (15th and part of 16 th), Tudor (most of 16 th). There has been a revival of G. A. in England during the last sixty years.
Goths were an old Teutonic nation who lived in the basin of the Dneister. They began to encroach on the Roman Empire in the 3rd century A.D., but made no great progress till after 369 , when they split up into two kingdoms, the Ostrogoths or Eastern, and Visigoths or Western. In 396 Alaric, king of the Visigoths, devastated Greece, and in 409 Italy, sacking Rome twice. Eventually the Visigoths spread to France and Spain, and their last king, Roderick, fell in battle against the Moors in 7 II A.D. Theodoric, king of the Ostrogoths, also conquered Italy in 489 A.D., and became king.

GOULD, CARRUTHERS, the great cartoonist, was born in 1845, and began life in a stockbroker's office. In 1879 he began to illustrate the Christmas number of Truth, and afterwards joined the staff of the r'all Afall, from which he transferred his services to the Westminster Gazette, when the Pall Mall was bought by Mr. Astor. He is one of the cleverest of modern political cartoonists.
GOUNOD, the French composer, was born in 1817, and brought out his first great work, Faust, in 1859.
GOVERNMENT in civilized countries is usually divided between two distinct classes of persons-professional and political. The professional persons spend their lives in some definite department of the public service, and generally understand their own business excellently, but are narrow and obstinate-hence 'Red-tapeism.' The political persons hold office in dependence on public opimion and the strength of their party, which, at the longest, cannot remain in power for more than seven years. The relations between the two classes vary according to the ideas and customs of different countries. In Germany the permanent officials are supreme, in England the political. In any case, there must be three divisions of G.-legislative, to make laws ; judicial, to interpret them; and executive, to carry them out; and the curse of the Stuart period was that the judicial element was at the mercy of the king. Now judges are appointed by the people, and hold office for life on "good behaviour. The executive includes the whole machinery from Her Majesty the Queen down to Policeman X, both political and professional. And the political members have both to carry out their administrative work and also to explain publicly the principles on which they are conducting the $G$. The legislative ought to consist of two houses, the one of which is expected to give a considerable amount of expert help, and to excrcise a limited measure of contradiction and wholesome check on rapid legislation. The use of party $G$. is to bring questions into a manageable compass by eliminating minor points of difference and indivldual opinion. The evil of it is that it draws to itself the allegiance which citizens owe to the State, it banishes courtesy from political life, it neutralizesvery much the right of free speech. and it encourages a spirit of plausible lying even amongst otherwise moral and impartial persons.
GOWER, the early English poet, was horn abont 1320, and was a friend of Chancer. Ilis chicf works were spuctatum Meditantis, Jox Clamantis, and Confessio

Amantis; and the fact that they wore written respectively in Frencli, Latin, and English shows the condition of the language at the beginning of Chaucer's life.
GOWRIE CONSPIRACY was in IGOI, and very nearly resulted in the death of Janes VI.
Gracchus was the name of a famous Roman fanily which produced two brothers, Tiberius and Caius, who were murdered in the middle of the and ceutury B.C. for their brave efforts on behalf of the poor.

GRACE, as a theologrical dogma, was unknown before the sth century, when it was raised by Pelagius; and the rival schools of Free-will and Predestination have practically existed ever since, though the position was restated by Calvin.
GRACE, DK, W. G., was born in 1848. Between 1864 and 1879 he made 20,842 runs in 415 innings, and was spontaneously dubbed 'The Champion.' On July 2. 1879, he was presented with a testimonial of $£ 1400$ at Lords' ground. In 1895 he scored his hundredth 100 in first-class cricket, and came out second in the list of batting averages; and in 1896 , though he was only fifth, he made the largest individual score of the season.
Graces, The Three, of Greek myth, were Aglaia (brilliance), Thalia (bloom), and Euphrosyne (mirth).
Graham of Claverhouse was born about r650, and distinguished himself by his relentless hostility to the Covenanters. He was killed at the battle of Killiecrankic, 1689.
GRAIN is simply a cultivated grass, and in the nature of things is often top-heavy by the time that it is ripe.
GRAMMAR is the science of the forms of speech and the art of using these forms correctly. As a science. it is Accidence; as an art, it is Syntax.
GIIAND MOGUL was the English name of the Mogul emperors, from the founding of the empire by Baber in the 15th century to the death of the last emperor in $\mathbf{x} 806$.
GRANITE is a fire-formed rock which has been subjected to intense heat and enomous pressure deep down beneath the surface of the earth. Aberdeen G. is grey, and Peterhead G.-like the Oriental kind. of which Cleopatra's Needie is composed-is red. A block of G., weighing 1217 fons, was used as the pedestal of the equestrian statue of Peter the Great in St. Petersburg. Cleopatra's Needle weighs 186 tons.
GRANT, JAMES, the novelist, was born in 1822, and in 1839 was gazetted ensign to the 62ud Foot. He publislied the Romancc of War in r846, and followed it up by a constant stream of similar books. He died in 1887.
GRANT, PRESIDENT, was also born in 1822, and served in every battle of the Mexican War, except Buena Vista. In the Civil War he soon became Brigadier-General of Volunteers. His successes at Belmont, Fort Henry, Shiloh, Juka, Vicksburg, etc . secured him a Major-Generalship in the Regulars, and in 1866 he became Commander-in-chief. He was elected President of U.S.A. in 1868, reducing the national debt and settling the Alabama dispute (q.e.). He died of cancer in 1885 .

Gravitation, l.aw or, was discovered by Newton from ohservations made hy Kiepler.
GRA', THOMAS, the poet, was born in 1716, nud in

1747 published his Ode on a Distant Prospect of Eton doulege (where he had been cllucated illoug with Horace Walpole). The ELegy appeared in r755, anul in riz60 he was unade Professor of Modern Instury at Cambridge. He died in 177x. He wrote extrentely brilliant Latin versé.
Great britain. (See United Kingiom.)
Great Circle salling is navigating a yessel so as :o seep her as nearly as possible on a diameter or the earth.
Great Eastern Steamship was buit in r854-58 on the Thanes, by Mr. Scott Kussell, from plans by Mr. I. K. Bruncl. She was 680 feet long, 188 feet broad (across her paddle-boxes), and 70 feet high (to top of buliwarks). She had 6 masts, 5 of them being iron, and 8 engines. Her launcling lasted 3 months, and cost $£ 60,000$; and she was never of anly use except in laying the Atlautic Cable (q.v.). She was broken up in 8889
GREEK CHURCH owed its"separate existence mainly to the removal of the capital of the Roman Empire from Rome to Constantinople, and the rivalry between the Eastern and Western Churches had become so interse that in 484 1. D. the Bishop of Rome and the Bishop of Constantinople exconmunleated each other -a proceeding in which their respective successors followed their example more than once. The G. C. is the only one that holds that the Holy Ghost proceeds from the Father alone. Like the Church of Rome, it has seven sacraments, and prays for the dead; but it rejects purgatory, infallibility, carven images, ete The total number of its adherents is about, $80,000,000$, of whom at least $50,000,000$ are in Russia.
Greek Fire was a compound of naphtha, sulphur, nitre, ete., used by the Byzantine Greeks in the Middle Ages; it was poured from ladies or flung in small barrels.
Grezley, horace, the journalist, was born in r8xi, and was a compositor for some time. In 1834 he commenced the Weekly New Yorker, in 1840 The Log Cabin, and in $\mathbf{8} 8 \mathrm{~s}$ The Daily Tribune. He was nominated for Presidency in opposition to General Grant.
GREEN, JOHN RICHARD, the historian, was born in 1837, and died in $\mathbf{1 8 8 3}$. He made his fame by lis Short History of the English People in 1874 .
GREENBACK'S was the name given to the first paper currency issued by U.S.A. Government in 1862 .
GREENE, ROBERT, the great dramatist, was born about 1550 , and died in poverty, after a wild life, in 1592.

GREGORIAN CALENDAR is the calendar as reformed by Pope Gregory XIII. in 1582 . The Julian Calen* dar, established by Julius Caesar in 46 B.C., had replaced the old Roman year of to months counting from March I, by a new one of 12 monthis counting from January I , and had reckoned for a leap year ezery fourth year, without excepting the centuries. Consequently, in the course of centuries the equinoxes got behind the nominal date ; and to correct this, Pope Gregory XIII. suppressed no days, restoring the Spring equinox to March 2r. The G. C. was not adopted Gy Germany till 5700 , and not by Britain till 1752. when tho British Government decreed that the day after Sept. 2 should be called Sept. 14. This was called the New Style, or N.S., and it caused some serious riots, as lgnorant poople thought that they were being deprived of Ir clays of life.
Gregorian Tones were introduced by Pope Gregory the Great ( $7 . v$. ).
GREGORY was the name of 13 popes between the middle of the sth and the end of the $\mathbf{5 6 t h}$ centuries. Only three of them were really important. Gregory I., the Great, succeeded Pelagius as pope in 590, and was a famous 'missionary' pope. Gregory VII., Hildebrand, succeeded Alexander II, in rov3. He deprived the clergy and people of Rome of any share in the election of popes by giving the power of nomination only to cardinals; and he had a fimons quarrel with the Emperor Fhenry IV., based on his successful assertlon of the temporai, power on his spiritual office. Gregory XIII, succeeded Plus V. in 1572. It was he who allowed a thanksgiving for the nuassacre of St. Bartholomew ( $y . v$. ), and who reformed the calendar, (Sec GREGORIAN CALENDAR above.)

GRENVILLE, GEOR (:E, was tho notorious minister who, in 1763 introduced the schenue of colonial taxation whicla ended in the American War of 11 dependence.
Gresilam, Sir Thomas, the builder of the Royal Exchange, was a financier of Heury VIII.'s reign. He built the Exchange in 1556, and left large sums for charitable and educational purposes, one of which survives in Gresham College.

Grey, Earl. was born in 1764, and succeeded the Duke of Wellington as premier on the accession of William IV. His term of office was nade famous by the Reform Bill of 8832 .
Grey, Lady Jane, was behended by "Bloody" Mary on February 12 , 1554. She had been a mere puppet in the hands of her father-in-law, the Duke of Northumberland.
Grimm's Law was called after its discoverer, Jakob Grimm. It formulates the principles of interchange between mute consonants in Aryan languages. The exceptions to it , which are inportaut, were explalned by Verner's Law,
GRINDSTONES used always to be made of sandstone or sandstone grit, but are now made artificially too. The best stones come irom Newcastle.
Groats were coined by Henry III. in 1249 and by Edward III. in 1351, and were revlved again as the fourpenny-piece by william IV. in 1835 , but none have been struck since 1856 .
GROSSETESTE, the great scholar, was born about ri75. and studied at Oxford and Paris. He was appointed Bishop of Lincoln, and made himself famous by refusing to give English benefices to foreighers, even when relations of the Pope.
Grosvenor Gallery was built in $\mathbf{1 8 7 7}$, and preference has always been given in it to acsthetic scloools : e.g. Burne Jones, Rossetti, etc.

Grote, George, the historian, was born in 1794, and died in 187 I . He began to collect materials for, his great Ifistory of Greece in 2823, and published the first two volumes in 1846, and the remaining ten were out before 1857 . It is a wonderful monument of scholarly research.
GUDRUN was the heroine of a famous Teutonic epic which dates from the end of the 12 th century.
GUELFS were the Italian patriots of the Ithll and ruth centuries, The bitter feud between them and the Ghibellines (q.v.) lasted for 300 years.
Guido RENI, the Italian painter, was born in 5575 . Among his most fanous pictures are his "Aurora; "' Magdalene," " Michael Vanquishing Satan," etc.
Guilns seem to have existed as early as the roth century, but did not become important till the 53 th, when their political influence was becoming so great that the Emperor Frederick II. nominally abolished them. The decree, however, like many subsequent ones, was ineffectunl. The oidest of the London $G$. are those of the Weavers (1154 A.D.), Saddlers ( 1280 A.D.), Fishmongers ( 1284 A.D.), etc., and they were all required to have a charter from the Crown. G. were abolished in France at the time of the Revolution of 1789 , and were nade absolutely legal in Britain in 1835.
Guildhall, London, was originally built in 14 is A.D., but was burned to the ground in the great fire of 1666, and had to be rebuitt. The hall, in which the City Fathers have their sumptuous feasts at the expense of the ratepayers, is 153 ft . long, 48 wide. and 55 high.
GUild by the Corporation of London in r 88 o , and students have to be nominated by a nember of the Corporation.
GUillotine beheads persons at a single stroke, ind takes its name from its inventor. It is a stecl llade londed with lead, and falls along the surface of two planks by which the head of the condemned is imprisoned.
Guineas were first coined in the reitg of Charles II., and took thele name from the fict that they were made of gold from the Guiner Coast of Africa. Their value varicd greatly-from zos. up to zos, - but in 5717 it was fixed at ars. The coin itself was with•
drawn from circulation in 1817, being too near the sovereign in value to be of any real use.
GUINEA. PIGS resemble pigs only in their grunting and their stupidity.
GUISE, HOUSE OF, was tounded in 1528 by Claude of Lorraine. the grandfather of Mary, Qucull of Scots, and the father of Charles, Cardinal of Lorraine. It acquired its importance through the marriage of Mary to Francis II. The direct line becance extiluct in 1675, and thirty years later the title was revived for the house of Conde.
GUITAR was introduced into Europe by the Spaniards, who copied it from the Moors.
Guizot, the Frencl historian, was born in 1787, and died in 1874. He was brought up in Geneya, but eventually became Professor at the Sorbonne in 18 rz . Among his chief works are his Listory of Civilization in France, General Ilistory of Civilization in Europe, and Distory of the English Revolution.
GULF STREAM is the best-known of the great ocean currents, taking its name from the Gulf of Mexico, where it practically starts. Like the other warm ocean currents, it comes from the Equator, and owes its existence to the une qual density of different parts of the ocean that have different temperatures and different degrees of saltness. The expansion of heat causes the surface water of the Equator to gravitate towards the Poles, and the pressure of this gravitated water over the deep Polar water causes the latter to move towards the Equator. The vapour taken up by the trade-winds is precipitated when they begin to rise under the heat of the Equator, and thus the Equatorial water is made fresh and therefore lighter; and this increases the gravitation Polewards. The precise direction is, however, modified by the rotation of thic earth, the configuration of the land both above and below sea level, the counterforce of other currents, and the power and direction of the prevailing winds. Consequently, the general tendency of the surfice water is ( x ) westward along the Equator till

- (2) land turns it northward, and (3) then circular, as it returns to the Equator before N.E. trade-winds. Its pace is from 70 to 100 miles a day, and it has a very marked effect upon the climate of Western Europe.
GUN-COTTON is made by the action of nitric acid on cotton. It is quite safe while it is wet, unless it is exploded by a detonator in some dry G . C .
GUNPOWDER is made or saltpetre, sulphur, and charcoal. It was used in China before A.D. ro, and Roger Bacon referred to it in England in 1267. In 1342 the Moors used it at the siege of Algesiras. It is said to have been used lyy the English at Crecy (r3i6).
Gunpowder Plot was originated by Robert Catesby, and was fixed for November 5. 1605, the fixing of the powder being entrusted to a zealous Papist, Guido Fawkes. It was discovered by a letter sent to Lord Mounteagle.
Gustavus Ador.phus, the King of Eweden, was born in 1594 , and commanded his army against Denmark when he was only seventeen with complete success. He then defeated the Russians in battle after battle, conquered Poland, and launclied into the Thirty Years War, in which he won imperishable renown for his extraordinary series of victories at Leipzig, Wuirzburg, the Ieck, etc. He was eventually killed in the battle of Lutzen, 1632 .
GUTENBERG, the reputed inventor of movable type, was born in the xath century, and joined Johann Fust in a printing cuterprise at Mainz about $\times 448$.
GUTTA-PERCHA is very like caoutchouc, but is stronger, more soluble, and less elastic.
GUY'S Hospital was founded in 1725 by Thomas Guy, a London bookseller, who amassed a large fortune, partly by importing Bibles fronl Holland and partly in the South Sea Company. It is one of the largest in London, having over 700 beds.
GUYON, MADAME, the, mystic who 'converted'for a time Madame de Maintenon, and who had an impense influence over Fennelon, was born in 1648 . She introduced Quletism into France.
GWSNN, NELI, was an orange girl. from whom-thanks to Charles II.-the Dukes of St. Albans are descended. She was a 'great patroness of literature,
especlally in the genius of Dryden, Otway, and Butler.
Gymnastic Rui.es. The two great rules are (x) that the strength of any nathine, liuman or ctherwise, is the strength of the weakest part, and (2) muscles are developed by exercise within their extreme power, but injured by exercise bejoud their power.
GYpsies are a distinct race, called Eoliemians by the I'rench, and Zingari by the Italians, and IRoumarny by themselves. They are gradually dying out as civilization checks their power of wandering; and of the possible half-million remaining many no lorger keep up the old custons and language. They probably came from India; they lave no religion of their own, and their one merit seens to be their love of and talent for music. They first appeared in Germany and Italy at the Leginning of the isth century. and reached England about 100 years later.

## H

Hemans, Felicia Dorothea, the English poetess, was born in 1794. Hermaiden name was Brown. The Restoration of the Worke of Art to ltuly, The Sceptic, Modern Greece, and Darmoor won her popularity the last poem gaining the prize of the koyal Society of Literature in 182 I . One of her most popular volumes is The Songs of the Affections. She died in 1835 .
HENGIST, a prince of the Jutes, founded the King. dom of Kent, in Great Britain, in conjunction with his brother Horsa. Together they defeated the northern tribes near Stamford in $450 \mathrm{~A} . \mathrm{D}$. He died about the year 488 .
HENRI IV. of France was the son of the Duke of Vendome (a Bourbon) and the Queen of Navarre. He served under Admiral Coligny. Being a Calvinist, he put himself at the head of the Huguenots; but when he cane to the throne, he thought it necessary to profess the Roman faith. In 1598 the Edict of Nantes secured religious liberty to the Protestants. With the aid of his Prime Minister, Sully, he restored the internal prosperity of France and her wasted finances; and he deserved the title he took at Rouen, in 1596 , of the Regenerator of Prance.
Henrietta Maria (queen of Charles I. of England, and daughter of Henri IV, of France and Maria de Medici) was born in 1609. When civil war broke out, she proceeded to Holland, procured money and troops, and joined Charles at Oxford, but went to the Continent in 1644, and remained there till the Restoration, when she paid a short visit to England. She died in 1669.
HENRY II., King of England, was the first of the Plantagenet line. He reigned prosperously till the contest with Thomas Becket about the Constitution of Clarendon. He had large French possessions, and in 1171 completed the conquest of Ireland, while in II73 he captured William of Scotland. He was a great soldier and statesman. He partitioned England into four judiciary districts, and appointed ltinerant Justices to make excursions through them, and he revived trial by jury. He had a keen sense of justice, which he exercised for the permanent good of his country.
HENRY VII., King of England, was the first sovereign of the Tudor lline. He united the claius of the York and Lancaster houses, by marrying Elizabeth, daughter of Edward IV., but his reign was troubled by insurrections. His policy of depressing the feudal nobility and exalting the middle ranks was excellent, but at first gave unduc preponderance to the power of the crown. His reign was, on the whole, beneficent, as the freedom from wars permitted the development of the country's internal resources.
HFARY VIII. of England, soon after his coronation, joined the league against Louis XII. of France, with not much result. In 1535 he declared hiniself supreme head of the church, because the Pope refused to divorce Catharine; but he adhered to the theological tenets of the Romish Church, and burned

## PEARS' CYCLOPAEDIA.

some reformers. Still the Reformation spread rapidly, and with it learning spread too. Ile was very pophlar as a musician and an athlete, in spite of his tyrinny.
HENKY THE N゙AVIGATOR, son of John 1. of Portugal, was born in r394: He erected ant observatory and school of navikation at Sagres, and sent vessels on voyages of discovery to Barbary and Guinea, and eventually he developed a commerce with the natives of West Africa. He died ill 1458 .
HEPTARCHY, the seven kingdoins into which Eng* land was divided in Anglo-Saxon times. They were founded at different times, and were never all independent together.-King Egbert of Wessex united them into one in 827 .
HERACLES, called IVercules by the Romans, the most celebrated hero of Greek wy thology, was the son of Zeus and Alcmicna. At the bidding of his teacher, Eurystheus, he performed the tasks known as the Tuelve Labours of Hercules, and so became a god. He was poisoned accidentally by his first wife, Dejanira. The principal ancient statue of him is the Furnese Hercules at Rome, a work of the Athenian Glycon.

He has written " The Oceanic Hydrozoin," "On the Theory of the Vertebrate Skull." "Ele"ments of Comparative Anatomy," "Lay Sennons," "Addresses and Reviews," etc.
HUZZA is probably a cormption of Hosmnnah, used as a battle-cry by the Crisatlers. (See IURRAH above.) IIYnER ALI, the Indian Prince, was born in 1728 , and by his nilitary talents became the ruler of Itysore. Ifs encouraged agriculture and commerce, reorganized the army. and wreatly extended lis clominions. He formerl an allianco with the Malirattas against the English, but was defeated. He dled in 1702, and was succeeded by his son, Tippoo Sail).
Hyparta, the Greek femitle philosopher of the eclectic school, was born towards the close of the ath century after Christ. Her father' was Theon, the celebrated astronomer and mathernatician of Alexandria, ant he tanght her all the ordinary branclies of leaning, and
finally philosopliy. Sie was a preceptress in the school of 1"otimus. She was as good and beautiful as she wis learned, but the clergy were jealous of her, and excited the populace into murdering her, in atsThe story of her life is graphically told by Charles Kingsley.

I
IAMbIC VERSE, which is said to live been invented by Archilochus, consists of feet made up of a syllables. the first short and the second long. English runs more naturally in this than In any other metre, blank verse consisting of 5 iambic feet.
IBIS, a kind of Spoonbill, was the sacred bird of the ancient Egyptians, who called it Hab. From its colour it was supposed to symbolize the moon.
IbSEN, HENRIK, the Norwegian dramatist, was born in 1828, and the childhood of his "Peer Gynt" is said to be largely autobiographical. After benig apprenticed to a chemist, he went to Christiania to study medicine; but he soon tired of that, and took up journalism. He produced his first play, "Catalina, in 1850 , and in 185 I was made Director of the National Theatre in Bergen. He managed the Norske Theatre in Christiania from 1857 to 1862. His "Doll's House" was produced in London in 1889, followed by "Rosmersholm," "Ghosts," and "Hedda Gabler." The "Pillars of Society" gives his social philosophy best "Ghosts" his opinions about heredity, and "Brand " is a magnificent lyrical drama. "The MasterBuilder," which was produced in English in 1893, has given rise to very violent criticism.
ICE is specificaliy lighter than water which is just going to freeze, and therefore does not sink in it, Water in freezing expands about one-eleventl in bulk, which accounts for so many burst pipes, etc. Freez: ing takes place usually at $32^{\circ}$ F., but if the water is kept perfectly still, it can be cooled to $22^{\circ} \mathrm{F}$. without freezing. The least shake, however, will make it freeze instantly, and resune the $32^{\circ}$ temperature. Sea water does not freeze till $29^{\circ} \mathrm{F}$. The colour of pure ice is deep blue, but it can only be detected when the ice is in large masses. In the severe winter of 1740 a whole house was built of ice on the Neva. The trade in ice is as old as Nero's tinic, but it has been important in Britain only within recent times -for preserving provisions, for brewing, for surgical operations, etc. America exports enormous quantities especially from the Wenham Lake vic Boston, to all parts of the world; but Britain is supplied almost entirely from Norway, where a lake near Christiania has been christened 'Lake Wenham."
ICELANDIC LITERATURE had its golden age in the 12th and r3th centuries, the father of it being Ari the Learned (ro67-1148 A.D.). It consists mainly of sagas, which are generally in the form of biographies. In modern times there has been a revival of literary activity, and the people are remarkably well educated, and constant readers in the long 6 -Inonths' winter of their Arctic latitude.
ICH DIEN, 'I serve, was the motto of Edward the Black Prince, which-along with the badge of 3 ostrich feathers-he is said to have adopted from the blind King of Bohemia, whons he took prisoner at Crecy.
ICONOCLASTS, or IMAGE-BREAKERS, was the name applicd from the 8th century to opponents of religivens ritual and external symbolism.
IDIESLEIGH, EARL OF, better known as Sir Stafford North cote. Ile was born in 1818, and clied in 1887.
iven in philosophy had the Platonic meaning-an eternal form existing in the Divine mind-down to the 17th century. Since then the worl has been variowly msed, and its obvious meaning is 'any object of thongit.
IDOLATRY forms an essential part of almost all primitive religions, being alsent nuly in the least civilized, e.g imongst Hottentots, 'Bushmen. Eskimo. It is usually preceded by fetichism, a human head heing adted to the bit of wood or stonc. Dirminghann is the chief mannfactory of idols. The otclest idol in the world is the 'Black Stone' of Mecca, which the Angel Cabriel gave to Abraham to kecp ${ }^{3}$ and haud down to Mahomet I

IDYLL is liternlly a picture, often, Lut not always, pastoral. Even Theocritus is more than half nonpastoral, and Tennyson's Idylls are almost epic.
IGNATIEFF, the great Russian diplomatist, was born in 1832, and made his reputation by the treaties by which he got the Anur provinces from China, and by which he secured the commercial friendship of Kliva and Bokhara. The treity of San Stefano was also largely his work.
Ignatius Loyola. (See Loyola.)
IGNEOUS ROCkS have been ejected from the molten interior of the earth, and are either crystalline or fragmental. If they were ejected at the surface, and at the same time as the surrounding strata, they are called Volcanic or Contemporaneous, c.g. lava, tuffs, etc. If they have only been laid bare in the course of time, and are of later date than their surrounding strata, they are called Plutonic or Intrusive.
Illustrated London News was started by Mr. Ingram, a Nottinghan printer, in $18 \$ 2$.
IMPEACHMENT is prosecution of a criminal by the Commons before the Lords. The last case of it was that of Lord Melville in 1805.
Imperial Federation League was formed in 1884, under the chairmanship of the late Right Hon. W. E. Forster, who was succeeded by Lord Rose. bery. It presented a scheme for I.F. in 1892, and then dissolved itself. The points of importance are(1) How any Imperial Council should be constituted, and (2) how the resources of the Empire can be most effectively combined. The work is being carried on by the United Empire Trade League, the British Empire League, etc.; and the appointment of Mr. Chamberlain as Secretary of State has given a direct impulse to it. The great authority and speaker on the subject is Mr, J. K. Parkin.
IMPERIAL. INSTITUTE was built as a record of Her Majesty's Jubilee in 1887, and has had increased interest added to it by the Diamond Jubilee of 1897. The building was partially opened in 1892, and formally inaugurated by the Queen in 1893 . It contains collections of products and industries, etc., characteristic of all parts of the empire, and publishes a most valuable "I. I. Year-Book" dealing with the history, geography, resources, etc., of India and the Colonies.
INA OF WESSEX was one of the greatest Saxon lepislators, and his laws were the foundation of Alfred's Code. He resigned his crown about 228 A.D.
InCome TAX was really originated by 'Morton's Fool' in the reign of Henry VIII., but it was not imposed by name until 1799, by Mr. Pitt. It is the fairest of all taxes when it is graduated so that every one pays according to the ability to pay, and luxury becomes too expensive. It has been regularly imposed ever since 1842 , and has varied from $1 \frac{1}{2} \mathrm{~d}$. to 16 d .
INDEX EXPURGATORIUS is the list of books which Romanists are forbidden to read. It was first drawn up in 494 A. D., and was officially published in 1564. It usually is held to cover both books which are absolutely prohibited, and books which may be read after being 'expurgated.'
INDIA RUBBER is composed of carbon and hydrogen, and requires the condition of soil and climate characteristic of the Selvas of Brazil. Para is the great market for it. Mackintosh patented his invention in 1823. [languages.
INDO-EUROPEAN is another name for the Aryan
INDUCTION is reasoning from the particular instance to the general principle, i.e. the opposite of deduction. INDULGENCE, in the Romish Church, is the remission of the temporal punishment of a $\sin$, in purgatory or on earth and is subtly distinguished from remission of the sin itself. It is held that many persons have done more good works and suffered more than was really needed for the remission of their sin ; and these works of supererogation belong to the Pope, and can be distributed by him to make up for the deficiencies of other persons. The system began in the ath century, and was the inain point of Luther's attack in 1521.
INFINITIVE is really an abstract common noun, and had originally the usual cases, though now it retains only the dative. It is sometimes called a 'mood,' in which
case it is regarded as the form of the verl) which asserts without any reference to person, number, or time.
INFLEXION is any cliange in the form of a word to show a change in its meaning.
INGELOW, JEAN, the poetess, was born in 1833 , and published her first volume of poens in 1863 . In prose her best works are-" Mopsa the Fairy," "Off the Skelligs," etc.
INGOLDSBY LEGENDS were written by IRev. R. II. Durhan in 1837.
INK is a compound of iron, salt, gall-nuts, and gum, which has been exposed to the air for some time.
INNOCENT was the name of thirteen popes, of whom the most important was I. III., who lumiliated King John and was really instrumental in extorting Magna Charta, and I. XI., whose quarrel with Louis XIV. resulted in the Four Propositions of the Gallic Church (q.v.).
INNS OF COURT are four in number, Inner and Middle Temple, and Lincoln's and Gray's Inn. They have the exclusive right of calling to the English Bar.
INQUISITION was instituted in the I2th century by Pope Innocent III. (see above), mainly against the Albigenses, and was developed by Pope Gregory IX. in 1233. It never obtained any real hold on England, but was terribly powerful in Spain, especially under Ferdinand and Isabella, who used it to crush the nobles-appointing Torquemada to be the first Grand Inquisitor in $1+78$. The probable number of victinis between 1478 and the first abolition of I. in Spain in 1820 is about 350,000 .
INSPIRATION is very variously interpreted, The adrocates of plenary or verbal I. believe that every letter in the Bible was directed by the Holy Spirit, and their belief is not shaken by the different readings of various manuscripts, or by their own ignorance of Hebrew and Greek. Others believe in the I. of the 'religious part' of the Bible, or of the 'spirit' as opposed to the letter.
INSTITUTE OF FRANCE was founded in 1795, and has five divisions or 'academies,'-French Language and Literature, Belles Lettres, Science, Fine Arts, Ethics and Politics.
INSURANCE, in its commercial aspect, began in Flan. ders, but was introduced into England by the Lombards early in the 16th century, and originally was only marine. Now, besides Marine I., the main branches are Fire, Lire, Accident, and Fidelity Guarantee.
INVESTITURE. (See FEUDAL SYSTEM.)
I.O.U., which, of course, stands for 'I owe you,' is not negotiable, and is not legally a receipt for or an acknowledgment of money, so that it does not require a stamp.
IRETON, the Parliamentary general, was Cromwell's son-in-law.
IKON is the most useful and the most ubiquitous metal, is either meteoric or telluric. The richest kind is magnetic oxide, such as is found at Dannemora in Sweden; and haematite comes next. Till the 17 th century smelting was done entirely by charcoal, as it still is in some places where forests are very abundant and coal is very scarce, c.g. in Sweden. As the weight of the metal is so great, it has little commercial value unless it is found in close connection with both fuel (coal or oii) and flux (limestone). On the other hand, the possession of these three in proximity to one another forms the basis of manufactures and of transport both by land and by sea. Thus the three great coal-producing countries-Britain, U.S.A., and Germany-are also the chief producers of iron, and lave the largest transport and mamufacturing industries in the world. Shipbuilding has made most progress in the British Isles, railway construction in U.S.A., and manufactures in Germany. All these countries have to import large quantities of iron to enable them to keep pace with the demands of their respective trades; and, in the case of Britain and Germany, the trade is largely a foreign one, in which little Belgium is their greatest rival. The largest amounts of iron in Europe are mined in Britain, Germany, and France, but the richest ores are found in Sweden, Spain, and East Russia.

IRON-CLAD VESSELS were first introduced into the Jritish Navy in 1859, thic lde:1 originating apparently in the use-by the French in the Crimean War-ot some floating batteries. The first Irencli ironclad, "La Gloire," was latuched in 1858 , and the first British, "The Warrior, in 1860, (Sec l"LEET and ARMOUR above.)
IRON CROW:V is nlade of gold, set with gems, but it has a small iron ring in it which is said to have been made out of one of the nails from the Cross. It was used to crown the old kings of ltaly, and afterwards the Germin Emperors, as Kiniss of loombardy; but it was given up to Italy by Austria in 1866.
IRON GATES were a great obstruction to the mavigation of the Danube near Orsova, but they have been practically removed by the cutting of a slip-canal right through the solid rock.
IRON MASK was an unknown prisoner whose identity has never been established. He was carried off to the castle of I'ignerole by St. Mars in 1679, and in 1698 to the Bastile, of which St. Mars had been mande governor. He died there on November 19. 1703, and was buried at once. He was probably an Italian, Count Girolamo Matthioli.
IRONY. (See FIGURES OF SPEECH.)
IRVING, EDWARD, the founder of the sect of the Irvingites, was bom in 1792 , and died in 1834 . His followers are known as "The Catholic Apostolic Church. He was an assistant to Dr. Chalmers in Glasgow. His biography has been written by Mrs. Oliphant.
IRVING, SIR HENRY, was borm in 1838 , and his real name is Brodribb. His first appearance on the stage was at Sunderland in 1856, but his first success was in 1870 as Digby Grant in the "T wo Roses." In I87I he appeared at the Lyceum as Matthias in "The Bells," and established his reputation by his Hamlet in 1874 He took over the management of the Lyceum in 1878 , and opened it with "Hamlet," and produced-along with Miss Ellen Terry-" The Merchant of Venice," "Much Ado About Nothing," "Twelfth Night," etc. He was knighted in 1895.
IRVING. WASHINGTON, the American writer, was born in 1783, and died in 1859. He was of Scottish extraction, and was educated for the legal profession. His "Ietters of Jonathan Oldstyle" appeared in 1802. "Knickerbocker's History of New York" in 19og, the " Sketch Book" in 1818. Among his other fimous works are "I Life of Columbus," "Tales of a Traveller," "Oliver Goldsmith," ctc.
ISABELLA OF CASTILE married Ferdinand $V$. in 1469. and it was to her that most of the famous events of his reign were due--e.g. the introduction of the Inquisition, the discovery of America, and the conquest of Granada.
ISINGLASS. (See GELATINE.)
Isis, the principal goddess of the Egyptians, repre. sented the Moon, her husband, Osiris, representing the Sun. She wore the lotus on lier liead, and carried the sistrum in her hand. The centre of her worship was at Memplis.
ISLAM is the Arabic name for the "complete resignation to Allah, "which is the fundanental characteristic of the Muharnmedan religion.
ISOTHERMAL LINES are drawn on a map through the places which have the same average annual temperature. (See CL.IMATE.)
ISTHMIAN GAMES, like the other Greek GamesOlympian, Nemean, and Pythian-included boxing, wrestling, racing, and quoits. (Sce ATHLETICS.) They took their name from the Isthmus of Corinth, where they were held,
ITALIAN IITERATURE, as distinct from Latin or Roman, dates from about the ri3th century, the first name in it heing that of Cavalcanti. It is always associated, however, with the great trio of conternyoraries, Dante, Petrarch, and Boccaccio, and later with Machiavelli and Tasso. It owed nuch to the patronage of families like the Medici at Florence and the Este in Ferrara. In modern times there is no name in I. L. of outstanding importance,
IVAN is the name of several famons Kussian sovereigns, Ivan I. (sometimes called Iv. III.) was the first who bore the title of Czar of Great Russia, and It was he
who, by marrying the Byzantine princess Sopliia, introdinced the Byzantine donble-lieaded eagle into the Russian coat-of arms. Ivan II. (or IV.), better known as "I van the Terrible," was grandson of the above, and did an inmense deal towards civilizling lis people in many ways; but in fits of rige, such as the one in which he billed his eldest son, he did deeds which grancel him his title of The Tersible. Ile came to the throne in 1534 -at the age of four years, was crowned in 1547 , and died in 1584 .
IVORY comes mainiy from the $X$ frican elepliant, though the tusks of other elephants and of the hippopotamus and the walrus are also used. The average weight of a tusk is about 60 lbs ., but they are found weighing three times as much. The trade in ivory is the chief catuse of slavery in Central Africa.
IVY BUSHES used to be hung over the doors of taverns as sign-boards, because the plant was sacred to Bacclus, the Koman god of wine.

## J

JACKSON, PRESIDENT, was born in 1767, and joined a regiment of volunteers in the American Revolution when he was only fourteen. He served with clistinction both against the British and against the Indians, but sullied his fair fame by his cruelty. He became President in 1828 and again in 1832.
JACKSON, 'STONEWALL, was born in 1824, and entered the U.S.A. army in 1842 . He was made a captain for his gallant conduct in the Mexican War. On the outbreak of the Civil War, he became a Brigadier-General in the Southem army, and connmanded the reserve at Bull's Run. It was for lis conduct in that battle that Ine got his title of 'Stonewall.' He was equally conspicuous in several other famous battles, but was accidentally shot by his own men at Chancellorsville in 1863.
JACOBINS are sometimes confused with Jacobites. The former was a famous society instituted at Ver. sailles in $\mathbf{1 7 8 9}$, and acquired its name from the fact that it met in the hall of an old Jacobin convent in Paris. It practically controlled the Revolution, and originated the Commune of Paris; its inost prominent: member was Robespierre.
JACOBITES were the adherents of James (Latin, Jacobus) after he had fled from his kingdom in 1688 , and eventually made the great efforts of "The Fifteen' and 'The Forty-Five' to restore the House of Stuart.
JACQUARD, the inventor of the machine for figured weaving, was born in the centre of the silk-weaving district of France, and his parents were silk weavers in Lyons. He was mobbed for his invention at the time, 1801 A. D., but since his death a statue fas been erected to him on the very spot where his loom was smashed to pieces.
JAGANNATHA, or JUGGERNAUT, is the Indian rod Krishna, and the temple near which so many deluded enthusiasts have thrown themselves under the wheel of lis car is at Orissa.
JAMES I. OF ENGLAND was called 'the Wisest Fool in Christendom' for his combination of pedantic learning with consummate ignorance of men. As is usual with igmorant people, especially if they Inve weak wills, he was intensely obstinate.
JAMES IV, OF SCOTLAND fell at Flodden Field in I513, for which Henry VIII. of England was really
responsible. responsible.
JAMES, G. P. R., the English novelist, was born in r8or, and published his first novel. "Richelien," in 1829, and the success of it encouraged him to pour out a constant stream of similar historical novels, most of which may be commended to young students of listory.
JANIZARIES were the old body-ghard of the Sultan. and were organized about 1330 , but they eventually became far too numerous and correspondingly dangerous politically. They wore abolished, not without hloodshed, in 1826.
JANSENISTS owed their doctrines to the Dutch! theologian Jansen, a man of great piety in the first quarter of the rith century. They were not looked upon at all favourably by the popes, though lascal and other cminent divines defended them, and eventually their
own excesses led to their utter failure and disperslon about 1740.
JANUS was a two-lieaded gorl who was held in great reverence by the Romins, and after whom January was fittingly called, as looking both back and forward in tume. His temple was never closed except in time of absolute peace, and in the whole history of ancient Rome ( 700 years) this ouly occurred three tintes, one of the times coinciding, curiously, with the birth of Christ.
JAPANESE DIET is composed of a House of 300 I'eers elected for life or for 7 ycars, and a House oi 300 paid Representatives elected by male citizens over 25 years of age who pay 15 yens ( $£_{3}$ ) a year in thucs.
JAPANNING is varnishing articles of wood, leather, papier-mache, etc., in imitation of the lacquered work of Japan.
JASON, in Greek myth, was the leader of the Argonauts to Colchis in search of the Golden Fleece, which was guarded by a sleepless dragon. He succeeded by the help of Medea, daugliter of the King of Colchis, and brought back both the Fleece and Medea.
JEBB, PROFESSOR, was born in 1841, and was Senior Classic at Cambridgc in 1862. In 1875 he was made Professor of Greek in Glasgow University, and in 1889 he was elected to a similar post at Cambridge. His best-known works are "Attic Orators," "Sophocles," etc.
JEFFERSON, PRESIDENT, was born in I743, and drew up the draft of the Declaration of Independence. He was elccted President in 1800, and one of his actions was the purchase of Louisiana from France. He was the third president of U.S.A., succeeding Adams; and both Adams and he died on Independence Day, July 4, I826.
JEFFREY, LORD, the critic, was born in 1773, and took part in founding the "Edinburgh Review "in his native city in 1802. After the first two numbers he was made editor, and hcld the post for 26 years.
JEFFREYS, JUDGE, the scoundrel who held the 'bloody circuit' in Devon and Cornwall, was born in 1648, and died-where he ought to have lived-in the Tower of London in 1689 . His name is still mentioned with loathing in the counties which supplied most of his victims.
JENNER, the introducer of vaccination, was born in 1749, and studied under the great anatomist. John Hunter. The belief among the peasants of Glou. cestershire that milk-maids were exempt from smallpox, because they got cow-pox from milking, led him to study the subject in 1776 .
JEREMY DIDDLER is a scedy individual in Kenny's farce of "Raising the Wind."
JEROME, ST., was born in 340 A.D., and died at Bcthlehem abont 420. His Latin version of the Old Testament was the basis of the Vulgate.

JFRROLD, DOUGLAS, the humorist, was born in 1803. His first success was "Black-Eyed Susan "in 1822, but he is most famous for his "Mrs. Caudle's Curtain Lectures," which originally appeared in "Punch."
JESUITS are the most prominent of the Romish religious orders. They were founded in the 16 th century by Ignatius Loyola (q.v.), and were bound to the Pope directly by oath as well as to the Church. Their foreign missions, which have bcen extremely important, were begun by Francis Xavier in 154I. The clcver exposure of their character as an order by Pascal, Icd to a moventent against them, and in 1759 they were expelled from Portugal, in 1764 from France, and in $17^{67}$ from Spain. Finally the order was abolished by Pope Clement XIV. in 1773. It was reestablished. however, by Pitts VII. in 1814, and was subsequently readmitted into all European countries, though they were expelled from Germany in 1872.
JESUS CHRiST: The actual sentence passed upon Jesus is said to have run as follows:-"Sentence pronounced by PONTIUS PILATE, Intendant of the Province of Lower Galilee, that Jesus of Nazaretly shall suffer death by the cross. In the scventeenth year of the reign of the EMPEREOR TIBERIUS, and on the 25th of the month of March, in the most holy
city of Jerusalem, during the Pontificate of Annas and Catuphas, PONTIUS PILATE, Intendant of the Province of Lower Galilece sitting in judguent in the presidential seat of the P'raetors, sentences Jesus Clirist of Nazareth to death on a cross betwecth two robbers, is the numerous and notorious testinonials of the people prove:- (I) Jesus is a misleader. (z) Ife has excited the people to sedition, (3) He is an encmy to the litws, (4) He calls himself the son of Grad, (5) He calls himself filsely the KiNG Ol IsRABL, (6) Ife went into the Temple followed ly a multitude carrying palms in their liands. Orders:-The first centurion, Quintus Cornclius, to-bring him to the place of execution, forbids all persons, rich or fpoor, to prevent the exccution on Jesus. The witncesses who have signed the execution against Jesus are:-(I) Dauiel Robani, Pharisce; (2) Joln Zorobabel; (3) Raphael Robani; (4) Capet. Jesus to be taken out of Jerusalem through the gate of Tournea."

This sentencc, engraved in Hebrew on a brass plate, was cliscovered near Naples in 2280 A.D., and is kept in the Carthusian Chapel at Caserta.
JEVONS, PROFESSOR, the cconomist, was born in 1835 . and drowned while bathing in $\mathbf{1 8 8 2}$. He published his "Theory of Political Economy" in 187r.
JEW, THE WANDERING, is a legendary person, whose story has been used often in literature, e.g. by Shelley, Schubert, and Schlegel. He is said to have been a cobbler in Jerusalem, and to have been called Ahasuerus.
JEWISH MONEY. An ordinary shekel was worth about 2s. $3 \frac{1}{2}$ d., a gold shekel $£$ Irs. 6 d ., and a talent about £342. Conscquently-though, of course, the purchasing power of money has greatly deteriorated in the meantime-Joseph was sold by his brethren for about $£ 27 \mathrm{~s}$. od.; Judas sold his Master for $£ 3$ Ios. 8d. : Naman offered Elisha more than £10,000; and the debtor who refused to forgive his fellow-servant the roo pence ( $£ 3$ ros. 1od.), had himself been forgiven a debt of $\not\{3.422,625$.
JEWS were carried captive in two divisions - the Israelites in 722 B.C. by Sargon, and the kingdom of Judah in $588 \mathrm{~B} . \mathrm{C}$. by Nebucladnezzar. The first return, under Zerubbabel, was about 538 B.C., and the second, under Ezra, about 458 B.C. The eventual dispersion practically dates from the destruction of Jerusalein by Titus in A.D. 70. The first nation in modern times to put them on an equality with other citizens was the Frencl after the Revolution. Their admission into the British Parliament dates from 1858. In modern tines, too, they have produced some of the greatest mon in the arts and literature, e.g. Spinoza, Becthoven, Schubert, Mendelsshon, Heine, Meyerbeer; and the individual vitality is proved by the almost entire absence of stillborn children. They number probably about $10,000,000$ throughout the world.
JOACHIM, the violinist, was born in Hungary in 183r, and was much hclped by Mendelssohn.
JOAN OF ARC relieved Orleans on April 29, I429, was taken prisoner by the Burgundians on May 25, 1430, and sold to the English, and burned alive at Rouen on May 30, i43I. She is the subject of a great drama by Schiller.
JOHN, KNights Hospitallers of ST., was an order founded at Jerusalent in 2a.48 A.D. for 'hospital" work, but reorganized as a military order in 1118. After Palestine had been lost to the Saracens, the K nights of St. John took refuge in Rhodes, but were driven from there to Malta in 1522 . The order was practically dissolved by Bonaparte's capture of Malta in 1798, though it still exists nominally.
JOHN O' GROAT'S HOUSE stood about in miles west of Duncansby Head, and formed the northern extremity of Grcat Britain, as Land's Find formed the southern-'from Dan to Beerslicba.'
JOHNS HOPKINS UNIVERSITY; in Baltimore, was founded in 1876, and las done some excellent work in the last 20 years.
JOHNSON, DR., was born in Igog, and died in I784, His poverty compclled him to leave Oxford without taking a dcgree, and atter a very chequered career as usher, bookscller, etc., he removed to I.ondon in 1737. "Rasselas" was written in one week (1759), to
pay for his mother's funcral. "The Rambler" essays appeareel in 1750-52, and "The Idler" in 1758.60. He was engared on the Dictionary from 1747 to 1755. He met Boswell in 1763, and mande his tour to the Hebrides in 1773. His last work was his "Lives of the Poets."
Jornp Stock Companies in the United King dom hath, in 1895, a paich-up capital of $£ 1, \times 45,402,993$.
Joves, P.IUL, the fanous senman, was born in 1747, and was a Scotsman by birth. On the outbreak of the Americin War he joined the Americans, and commanded various ships, e.g. "The Ranger." the "Bon Homme Richard," erc.; did great danage to the English coast and marine. He eventually entered the Russian mavy, but was forced to retire owing to the jealousy of the Russian commanders. He died in poverty at Paris in 1792.

Josephine, Empress, was a widow before Napoleon married her in 1796. She was immensely popular, and was crowned along with Napoleon in 1804; but the fact that she wiss childless made him divorce her in 1809. She died a year before Waterloo.

Josephus, the Jewish historian, was born at Jernsalem in 37 A.D., and was present in the Ronman army at the fall of the city in 70 A.D. He wrote his "History" and "Antiquities " in Greek at Rome, where he had gone with Titus.
Jowett, Benjamin, the famous master of Balliol College, was born in 5817 , and became Professor of Greek at Oxford in ${ }^{1855}$. The famous trial for heresy in connection with his essay on "The Interpretation of Scripture "tool: place in 1860, and ended in his acquittal; and he hecame Master of Balliol in 1870 . He published splendid translations of Plato, Thucydides, and Aristote
Jubilee was originally a Hebrew festival, but was adopted in 1300 A.D. by the Romish Churcli, with the result that the Jubilee pilgrims to Rome were so profitable to the Church that the festival was made a pernluanent one, and even shortened to every 33 years in 1389 , and to every 25 years in 1470 . The Reformation materially diminished the attendanco and the profits, but the J. has lingered on. The last one, in 1875 , was the 22nd. Queen Victoria's Diamond J. in 1897 was one of the most striking events and scenes of the last 1000 years.
JUGURTHA, the Numidian general, was led in triumph to Rome by Marius in 106 B.C., and staryed to denth in a dungreon.
Julidy, the Roman Emperor, ' the Apostate,' was the nephew of Constantine the Great, and was brought up as a Christian, bnt perverteci to Paganism, and did his utmost to restore the old heathen worship. He was an excellent soldier and an able statesinan.
JuNiUS was a signature attached to the famous Letters which appeared in "The Public Advertiser" between January 21, 1759, and January 21, 1772. They have been attributed to Viscount Sackville, Lord Temple, and Sir Philip Francis-to the last most often, but with lenst probability.
Juno. (See JUPITPR below.)
JUNOT, MARSHAL, was bom in 177x, and became Napoleon's secretiry at the siege of Tomlon. In Eyypt he won his Generalship of Brigade, and served with great distinction at A1sterlitz, but he was badly defeated hy the British at Vimeira, anul humiliated at Cintra. Failing to retricye his reputation, he became insane and cornmitted suicicle.
JUPITER was the supreme cliety of the Romans, and corresponds to the great 'Zens.' The word ulvans - sky, and he presiderl specially over all climatle changes, as well as generally over property, oaths, etc. He was salk to have deposed Saturn, hut married his daughter, Juno, whot hy lier marriage with him, hecame Queen of I feaven.
Justivian the Grpar was born in 483 A.D. He married the actress Theodora. He was so admirally served by his generals, notably hy Belisarius, that he was ahle to materially extend his empire, and he had the 'body of civil law' drawn in, in a corle. Corpus Jurlis Ci-llis. His reign formed :I reid
quoch in the history of Rome, but lie was not a teally great man himself, and lie grossly overtaxed lis people.

## K

K゚aleidoscope was iuvented by Sir D. Brewster (q. v. ).

Kalmucks are a nomadic Mongol race that spread to Russia. They are short of stature, but fearless soldiers and magnificent horsemen.
K゙anaris, Constanine, the Greck sailor, was born in 1790, and his nime became a syronymin in 1822 for daring deeds. 1 Ie inficted tremenclons losses on the Turks, especially in the Straits of Chios and Tenedos.
Kant, immanuel., the German philosopher, was born in 1724, and becane Professor of I-ogic and Metaphysics in Konnigsberg University in $\mathbf{1 7 7 0}$. Accordming to him, part of our knowledge is a priori, independent of experience, and belongs to 'Pure Reason'; the rest is a poateriori, based on experience. His "Critique of Pure Reason" was published in 1781, and his "Critique of Practical Reason" in 1788 .
KAOLIN is the Chinese name for porcelain clay, i.e. decomposed granite. Deposits of it in Saxony ancl Limousin gave rise to the China industries of Dresclen and Limoges. The 'Potteries' district of England draws its clay from the decayed granite of Devon and Cornwall, especially from St . Austell.
Kaulbach, the great German painter, was born in 1805، and died of cholera in 1874. He represents the transition from the idealism of Cornelius, under whonn he studied, to the realism of the modern historical sclhool. He owed his opportunities to the desire of King Ludwig of Bavaria to make Munich the centre of German art.
KEAN, EDMUND, the great tragedian, was born about 1788, and began his theatrical carcer at the age of troo in a pantomine. He had macle his fane in the Provinces as Hamlet, Cato, ctc, before he was 13 In 1808 he married Miss Chambers, an actress in his company; in 1814 he appeared at Drury Lane as Shytock, and for the next ro years had an unparalleled series ot successes, as Othello, Hamlet, 14acbeth, Ieqo, Lear, etc. In 8825 he made a very discreditable appearance in a divorce case, which lost him public favour; and his dissolute habits brought him to the grave in 1833.
KEATS, the poet, was born in 1795, the son of a liverystable proprietor, and was trinined for a medical carcer, but ith 18 I 7 , encouragecl by Leigh Hunt and Shelley and other friends, he began to devote himself entirely to literature. "Endymion" appeared in 1818, and was attacked with savage and senseless brutality by "The Quarterly Review"; "The Eve of St. Agnes" appeared in 1820 ; and he died of consumption in the following year. He was the most Greek in spirit of all English poets, though he knew no Greek; see his "Ode to a Grecian Im" and "Sonnet on looking into Chapman's Homer,"; Shelley mourned his untimely death in "Adonais."
KEBrIE, JOHN, the divine and poet, was born in 1792, and became Professor of Poetry at Oxford. He was a zealous High Churchman, and was associated with Newman and Prisey in the "Tracts for the Times." He is best known, however, by his "Christian Yenr."
Kemble, Fanny, the famous actress, was born in 1809, and was a niece of Mrs. Siddons and of J. P. Kemble, the tragedian. She appeared at Covent Garden Theatre as Juliet in $\mathbf{8 8 2 9}$, and had very great success, completely relieving the financial difficulties of her fanily. She was equally successful in America, lut had the misfortune to make an most unvise marriage there, which was amnulled by divorce four years later. In 8835 she left the stage to devote herself to literature.
Kemme, John Phifitp, the yreat tragedin, was horn in 1757, and appeared at Drury Leme Theatre in 1783. Fronl 1788 to 1802 lte was manager of the Drury Lane Theatre, in $180 \mathrm{r} \cdot 3$ lic toured most successfully In France and Spain, and then purchased a slare in Covent Garden Theatre, where he made hils world-wide reputation. He was the cause of the famoiss 'O.1'. (old prlce) Riots' by ralsing the
price of seats. He died in 1823. Ile was a brother of Mrs. Sidclons.
KENSINGTON MUSEUM was practically founded by Prince Albert in 1852, and was opened in 1857.
KENT, HOLY MAID OF, was a Romish nirncte. monger calted Elizabeth Barton, who was beheaded by Ileury VIII. for treason in $\pm 534$. She lad foretold all sorts of dire calamities if he divorced Catharino of Aragon,
KENT SNOOKS, or, as it is generally pronounced, 'Cock Snooks, originally refcrred to the vulgar habits of the Kentish street boys in Sevenoaks, which is pronounced snooks.
KEPLEK, the great astronomer, was born in 1571, and was invited to Prague by Tycho Brahe (q.v.) in 1599 to help in preparing the Rodolphin astronomical tables. Brahe died in 160 , and Kepler continued the work alone, publishing the tables eventually in 1627. It was partly the possession of Brahe's papers and precise observations that enabled Kepler to establish his three great laws, from which Newton determined the laws of the attraction of gravitation. K, 's three laws are-(1) Every planet describes an ellipse. (2) The line joining the centre of the sun with the centre of each planet passes over equal areas in equal times. (3) The squares of the periods taken by two planets for complete revolution round the sun are proportional to the cubes of their mean distances from the sun.
KEW GARDENS were first opened as a Botanic Garden in 1760.
KIDD, CAPTAIN, the pirate, was born about 1650 in America, and was appointed in 1696 to the ${ }^{4 d}$ Adventure Galley " by William III. for the suppression of piracy. This enabled him to conduct a gigantic piratic expedition to the Indian Ocean under the English flag. He was arrested and tried for it in England, but the charge could not be proved. He was then tried for the murder of one of his crew, and hanged.
KIEPERT, the geographer, was born in 1818, and studied under Ritter. He became Director of the Weimar Geographical Institute in 1845, and Professor of Geography in Berlin in 1859.
Kindergarten. (See Froebel.)
KINGLAKE, the historian, was born in 18if, and published "Eothen" in 1844 . His fame rcsts on lis magnificent history of the "Invasion of the Crimea," the first volume of which appeared in 1863 .
King'S COLLEGE, LONDON, was established by Royal Charter in 1829, and opened in 1831. It was reorganized in 1882.
KINGSLEY, REV. CHARLES, the poet and novelist, was born in 1819, and died in 1875. He published his " Saints" Tragedy " in 1848, " Alton Locke " in 1849 , "Yeast" in 185x," Hypatia" in 1853, and "Westward Ho" in ${ }^{1855}$. Amongst his other popular works are "Two Years Ago," "Hereward the Wake," and the "Water Babies." He was appointed Professor of Modern History at Cambridge in 1859, and did a very noble work for the poor as 'Parson Lot.' He was the best type of ' Muscular Christianity.'
KIPLING, RUDYARD, who is a nephew of Sir Edward Burne Jones, was borm in 1865, and lived at Southport as a boy. Most of his earlier tales were written for the Indian Press (see The MaN who would be KING), and he stands alone for his ability to depict the military side of Anglo-Indian life. He is probably the most brilliant writer of short stories that the world has ever seen, and his patriotic verse is in its way as good as his prose.
KNIGHT, CHARLES, the editor of Shakespeare, was borm in 1791, and died in 1873. He did a great deal of valuable work in the cause of good cheap literature.
KNIGHTHOOD, ORDERS OF, are either independent associations with property and privileges of their own, or honorary distinctions conferred by sovereigns. To the former class belong the various Orders of Crusading Knights, and to the latter the numerous titular Orders of modern Europe.
KNOWLES, SHERIDAN, the dranatist, was born in 1784, and took to the stage in 1798. Itis first success was with "Cains Gracchus" in 1815 . Among his
other successes were ", Virginius," "Williaru Tell," and "The IIunclıback."
KNOX, JOHN, the great reformer, was born inisos. As a Protestant preacher he was sent to the galleys in France, but was released, after nineteen months, in 1549. On his return to England he was offered advancement in the English Church by Edward VI., but objected to the English liturgy. On the accession of "Bloody" Mary he fled to Geneva, where he formed a close friendship with Calvin, and on the accession of Elizabeth returned to Scotland. Two years later, 1561 , Mary Stuart returned to her king. dom, and her Romish proclivities stirred him to vehement public denunciation of her and her creed. From the nature of things, therefore, the Reformation in Scotland was a successful rebellion of subjects against their sovereign. Knox was a narrow-minded bigot in religion, but broad-minded and deep-hearted as an educationalist. By his "Book of Discipline" he provited for the Protestant clergy, school teachers and the poor; but, as the nobles would not refund the Church wealth which they had appropriated, the scheme was lost. He died in 1572. Commencing life as a Romish priest, he ended it as the most zealous of all Protestants; as a friend of Calvin in Geneva he had imbibed the principles which he afterwards embodied in the "Confession of Faith."adopted by the Scottish Parliament in 1560; and he lived to see the Reformed Church recognized as the National Church of Scotland in $\mathbf{1 5 6 7 .}$ He was obstinate and passionate, but unselfish and patriotic.
KORAN, AL, "The Book, contains the whole religious and ethical code of Muhammedanism. It was written by golden rays on a huge slate in the upper Heaven, and dictated in portions by Gabriel to Muhammed. The joys of Heaven as described in it range from music and many wives to beholding the face of the One.

LETHE (Greek lethe, "forgetfulness"), the River of Oblivion, one of the streams of the lover regions, so celebrated in ancient mythology. Those who drank of it forgot their former existence, whether painful or pleasant.
LEVELLERS were the party in the Long Parlianent, about 1647, who aimed at the establishing of an equality in titles and estates throughout the kingdoun.
LEVER, CHARLES, the Irish novelist, was born in 1806. He graduated in medicine in 183i, taking lis doctor's degree later, in Güttingen. In I842 he became editor of the "Dublin University Magazine." His "Charles O"Malley." "Tom Burke," and "Jack Iinton" are written in a style peculiarly his own, but lis later novels were more thoughtful and artistic. He died in 1872 .
I.EWES, GEORGE, plilosophical and miscellancous writer, was born in 1817 . His first important work was his "Biographical History of Philosophy from Thales to Comte"; but his "Life of Goethe "won lim lis European reputation. The chief work of lis life-time was Inis "Problems of Life and Mind," in which he developed his philosophical views. IIe also wrote n Spanish drama, two novels, and some plays. Fis relations with George Eliot are known.
LEYDEN-JAR is so called, not after the Scottish poet and Orientalist, John Leyden, but because the mane of the town where it was made is Leyden. It is an early form of electric accunulator; and when in number of jars are placed in a box lined with tin-foil connected with the earth they form a' battery."
LIBERAL UNIONIST PARTY was formed in 1886 (under the leadership of the Mnrquis of Hartington) by those who objected to Mr. Gladstone's Irisli Government and Land Purchase Bills. They defeated the Gladstonian ministry by joining with the Conservatives, and in the next election returned abont 80 members to Parlinuent.
LIJRARY. The most celebrated one of antiquity was the Alexandrian. Pisistratus is supposed to liave introduced a public one at Athens About B.C. 337 ; and Chatlemagne encouraged the foumdius of libraries in the West during the 8 th century. In France there was the Abbey St. Germain des Pres, and in Geruany the Fuldi, Corvey, and I-Irschan I, ibraries. The principal inodern ones are the Jritish Alusenm Library, the National Library at I'aris, the Court Library at Munich. nud Imperin I ibrary at St . Petersburg, ctc. Tie Vatican Library at Rome and
the Bodleian, Oxford, are valuable in rare books and MSS.
Liemig, Baron von, the eminent moderis chemist, was born in 1803. He first secured attention by the paper on, fulminic acid and the fulminates (which he read before the French Academy of Sciences), and in which he revealed their true composition. He is regarded as the founder of organic chemistry. His "Cliemistry of Food" has been most useful. He died in 1873
LIFE-BOAT was first patented in Great Britain by Lukin, in 1785, and Henry Greathead introduced an improved one in 1789 , used till 1851. The Royal National Life-Boat Institution was founded in 1824, and by 1888 had saved 33,243 lives.
LIFE-KOCKETS are most reliable when discharged from a mortar or gun, by gunpowder, having a line attached to them. The life mortar invented by Captain Manby in 1807 is still used. Rogers' lifeanchor is also an ingenious rocket apparatus.
LiGHT enables animals to 'feel' beyond the extent of their limbs by exciting the mediun in which the eye and the optic nerves are situated.
Light, ARTIFICIAL, must have been used from earliest times. Antioch was probably lighted by lamps in the $4^{\text {th }}$ century after Christ. Paris was lighted in $\mathbf{~ 5 2 4}$, and Londoners hung out candles in 1668; and in 1690 every housekeeper was ordered to hang a light daily, after dark, between Michaelmas and Lady Day.
LigHTFOOT, the English divine and Hebrew scholar, was born in 1602. His editions of St. Paul's Epistles are famous.
LIGHTHOUSE. The Pharos of Alexandria, founded about 300 B.C., is the first building erected as a lighthouse of which we have an authentic record. The Tour de Cordouan, at the mouth of the Garonne. founded in ${ }^{1584}$, surpasses all others in its architecture. The first sea-light on the British coast was at Dungeness, erected shortly after the accession of James 1. The adoption of lenses in lighthouses was carried into effect in 1788 by M. Fresnel. The Eddystone and Bell Rock are the two most celebrated British lighthouses, and the Skerryvore in Scotland.
L. HUNG CHANG was born in 1823, and served under General Gordon in 1863 . In 1872 he was appointed Governor-General of Chihli, the metropolitan province, and he is also Senior Grand Secretary, the highest official distinction in China. He is friendly to Europeans.
LILBURNE, JOHN, the English sectary, was born in 1618. He was imprisoned in 1637 for tracts against the Anglican hierarchy. He was one of the 'Levellers' and latterly a member of the Society of Friendis. He died in 1657.
LINACRE, THOMAS, the pliysician (who founded the College of Pliysicians in 1518), was born about 1460. He educated Prince Artliur, and finally entered the church.
LINCOLN, ABRAHAM, the sixteenth president of the United States, was born in 1809. In 1846 he was elected a representative in Congress for a district of Illinois, and he voted with the anti-slavery party. He was shot in a theatre in 1865 by an assassin.
Lindsay, Sir David ('of the Mount'), the Scottish poet, was born about 1490. He wrote a "Satyre of the Three Estatis," " Answer to the King's Flyting," "The Monarchie," etc.
LINEN was used by the Egyptlans as wrapping for their embalmed dead. The Jews also manufactured it in Canaan, and at an early period the Greeks and Romans used it. As soon as the 7 th century AngloSaxon women wove it; and in the 17 th century the Irish began to weave it. Leedis is the chief centre of the manufacture in England, Belfast in Ireland, and Dundee in Scotland now.
Linné Karl von (commonly called 'Linnneus'), the great botanist, was born in 17I7. He wrote " Flora Lapponica," ''Systemi Naturne and Fundamenta Botanica," "Genera Plantaruın," etc. He was also a Professor of Medicine at Upsala. He died in $177^{8}$.
LISBON, THE EARTIIQUAKE AT, took place in 1755 , clestroying 30,000 people.

LISZT, ABBE FRANZ, the pianist and composer, was born in 18rs. He studied in Vienna and Paris, and in 1849 became director of the Court Theatre at Weinar, where he introduced the music of Wagner, Berlioz, Sclumann, etc His chief works are the "Faust and Dante" symphonies, "St. Elizabeth" and "Christus," two oratorios.
LITHOGRAPHY, the art of drawing upon and printing from stone, was invented by Alois Senefelder, a native of Prague, in the 18 th century. In 1850 steampower began to supersede inanual labour in driving the lithographic press, and afterwards a cylinder machine was introduced, which has been perfected.
LITURGY seems to have been first used in the 5 th century. The chief liturgical books in the Romish Church are the 'Missal ' and the 'Breviary,' both in Latin. In 1523 Luther drew up a liturgy for his followers, which they were not obliged, however, to use. The followers of Calvin drew up the Genevan and the French liturgies. The English Book of Common Prayer, dating from Edward VI., was based on the Roman Breviary, and the Scotch Episcopal Church uses the same, with sometimes a different communion office. The Kirk of Scotland has no liturgy. The English Book of Common Prayer has been used in the United States since 1789 with minor deviations.
LIvingstone, DAvid, the missionary and traveller, was born in 1813. At the age of ten he was a 'piecer' in the Blantyre Cotton Mills in Lanarkshire. He attended Glasgow University, and became a licentiate of the Faculty of Physicians and Surgeons of Glasgow. In 1840 he went to South Africa, joining Kobert Moffat. In 1857 he published his "Missionary Travels and Researches in South Africa." He died in 1873 of dysentery near Lake Bangweolo, which he discovered previously.
Lizard Point is a corruption of 'Lazar Point,' so called from the 'Lazaretto' or 'leper-house "on it. It is twenty-four miles from Land's End, and was therefore a convenient place for ships to land their sick on.
Lloyd's have daily reports from all foreigniports, and their ' List' is published daily. Their members are admitted by subscription, and their rooms in the Royal Exchange include those for ship-auctions, underwriters, fibrary, and restaurant. They are connected with shipping generally, as well as marine insurance.
LOBSTERS are sometimes caught weighing more than ' a stone and a half." and in Camada 18 lbs. is by no means uncommon. The largest caught in the United Kingdom do not exceed ro lbs., but the number is very considerable. Altogether, about 80,000 lobsters (home or foreign) are eaten 'every day' in Great Britain, most of which come from Norway and Nova Scotia; and the average wholesale price is probably just under ird. a piece.
LOCAL OPTION is the principle by which a majority of the ratepayers of any locality decide upon the number of shops for the sale of Intoxicating drink which shall be allowed to exist. This principle operates in some of the American States.
LOCKE, JOHN, the English philosopher, was born in 1632. At Christ Church, Oxford, he took the degrees of B.A. and M.A., and studied redicine. In 1682 he accompanied his patron, the Earl of Shaftesbury, to Holland, only returning to England at the Revolution. In 1690 he publislied his famous "Essay on the Human Understanding." in which he arrived at the conclusion that 'sensation' and 'reflection' are the two sources of our ideas. He also wrote threc "Letters on Toleration," "Thoughts concerning Education," etc. He died in 1704.
LOCKHART, JOHN, the author, and the editor of the "Quarterly Review," was born in 8794 . He began his literary career in 1817 as a contributor to " 13lackwood's Mngzaze"; but it is as the nuthor 'of the "Life of Sir Walter'Scott " (hls father-in-law) that he is remembered.
Locust is a kind of grasshopper. Their hind legs are large and powerful, which gives then great power of leaping. The inigratory locusts are the most celebrated kind, and are found in Asia and Africa, where
they devastate the conutry in their Journeys. The Arabs eat themr. When dried in the sull, pounderl up, and baked into bread, or fried in vil, they are considered a clelicacy.
Lombards (probably so called from the 'loug barte, or 'spear,' that they carried) dived on the banks of the Lower Elbe, at the beginning of the Cliristian erit, In the 6th century they entered Italy, and with the help of Saxons and others conquered the northern part now called Lombardy. Autharis and Kothari were the only two kings of any carly importance who reigned over the Lombards. Botli instituted good laws. In 713 King Licutprant extended his sway over the whole of Italy, but Charlemagne captured Pavin and put an end to the Lombard kingdon.
LaND in the City of London is so valuable that over $f_{30}$ apiece was paid for 'every inch' of the land between King Willian Statue and Trinity Square, E. C. The ground round Lombard Street is valued at $£ 2,000,000$ an acte.
LoNDON is much the largest city in the world, with a population of practically $6,000,000$. It has two defects as a port: the channels up the estuary are not very good, and it has no coal or iron. The latter want is suining its shipbuilding industry in these days of steel steamers. It has, on the other hand, many merits. It commands the great international trade route through the Dover Straits; it is just opposite the important Continental harbours of Antwerp and Rotterdam; it has double tide, which goes 80 miles up the river, and the largest vessels afioat can reach the heart of the city. It is also the centre of the land of the world; it is far enough from the west coast to have a dry, healthy climate (see DEATH-RATE abore), and it has supremely good communication inland in all directions by a canal. (Cf. the names of the railways - North Western, Midland, Great Northern, Great Eastern, South Eastern, Great Western, South Western, etc.) The hops of Kent and the barley of the eastern countics feed its breweries, as the fruit of Kent and Surrey feeds its jam factories. There are about $\frac{1}{4}$ million foreigners in the city, most of whom live in Soho or about Ratcliff Highway, except the Italian ice-cream and organ-grinding people, who have a colony of their own near Hatton Garden.
Londonderry, The Siege of, lasted from 2rst April to the ist August, in 1689 , when the Protestants of Ulster were besieged by the troops of James II.
Longevity is the tern used both for average duration of life in a community and for great length of life reached by particular individuals. The figures given in the, British life table exhibit the combined experience of seventeen assurance offices. A person at the age of 10 may expect to live 48.36 years longer; at 20 years 4 r' 49 years; at 40 years 27.28 ; at 60 years 13777 ; at 80 years $4^{\prime} 7^{8}$ years longer, but the average duration of life is higher in women than men.
LoNGFELLOW, the American poet, was born in 1807. While at college he distinguished himself in modern languages, and publlshed some short poems, e.a. "Hymn to the Moravian Nuns." In 1835 he was elected to the Chair of Modern Languages and Literature in Harvard University. In 1839 he published "Hyperion" and "Voices of The Night," "The "Spanish Student." "The Belfry of Bruges," and "Evangeline" being written later. Ilis volume "The Poets and Poetry of Europe" (containing translations, by himself and others, from about 360 anthors) has some valuable information in it respecting the writers. "The Golden Legend," "Hiawntha." "Courtship of Miles Standish," and " Tales of a Wayside Inn "are
all well known.
LORRAINE is now divided between Germany and France, It was so named as being origimally the kingdom of Lothaire II. ; and then, later, it was divided into Upper and I,ower Lorraine. The former (between the Rhine, Saone, and Meuse) was ceded to France in 1736, and the latter (between the Rhine, Mcuse, and Scheldt) became part of Belginm. At the close of the war of $1870-7 \mathrm{I}$ a large portion of Lorraine was annexed to Germany, and now forms part of Alsace- I.orraine.

LOST BOONS OF THE BIBLE are-Propliccy of Enoch, the Book of the Wars of the Lord, the Gospel of Eve, the Book of Jasher, that of Iddo, that of Nathan, that of Sliemaiah, that of Jelu, the five books of Solonon on Natural History, and the Prophecies of Alijah the Shilonite. These are referred to respectively in sucls passages as Numbers xxi. I4, Joslıua x. 13, 2 Samucl i. I8, I Kings iv. 33, 2 Chronicles ix. 29 and xii. 15, Jude It, etc.
LO'IZE, RUDOLF, the German philosopher and physiologist, was born in 1817. He wrote "Metaphysik," "Üniversal Pathology," "Logik," "On the Idea of Beauty," etc.
LOUIS is the name of many of the French kings, of whom the most important are Louis 1 X . ('the saint "), Louis XIV. (by no means a saint), and Louis XVI. Louis IX. was born in 1215 , and came to the throne in 1226. In 1248 he and his family sailed with 80,000 men on a crusade to Egypt. He took Damietta and twice defeated the Sultan. He returned to France in 1254 and employed himself in making wise laws, but in 1270 he undertook another crusade, and died at Tunis. He was canonized in 1297. Louis XIV. was born in 1638 , and came to the throne in 1643. During his minority there was the war with Austria and Conde's revolt. When Mazarin died Louis resolved to rule without a ministration. He created refornis and made Colbert superintendent of the administration. The Grande Alliance and the League of Augsburg were formed at different times by the other European nations against Louis, and they checked his ambition, and the War of the Spanish Succession brought him into couffict with united Europe. He impoverished the country by his extravagance. He died in 1715 . Louis XVI, was born in 1754, and ascended the throne in 1774, having married Marie Antoinette in $\mathbf{1 7 7 0}$. He was far too weak to wield the sceptre of a great country, and the queen gave herself up to gaiety, so that it is not surprising to find him arrested and tried before the convention, and guillotined in 1792, on January 17 th.
LOURDES is the town in the department of HautesPyrenées where a peasant girl declared she had been favoured with visions of the Virgin, in a cave near at hand. Since then (1858) pilgnms have flocked there, and a convent, church, and other buildings have been erected in connection with the cave.
LoUVRE, the old royal palace at Paris, is said to have been a royal residence as early as 628, in the reign of Dagobert. Francis I. erected the part now called the 'old Louvre,' and other kings (notably Louis XIV.) have enlarged and adomed it. The 'new Louvre," begun by Napoleon I., was finished by Napoleon III. in 1857. The group of buildings contains museuns of paintings, drawings, engravings, bronze antiques, etc. It was greatly injured, however, by the Communists in 187r.
LOWELL, JAMES, the American author, was born ins 1819. From 1857 to 1862 he wrote essays for the "Atlantic Monthly, " founded by Holmes, Longfellow, Emerson, and himself. In 1877 he became American minister at Madrid, and in 1880 was tmanferred to London, when he was made rector of St. Andrews University, He has written "A Year's Life" (poems), the "Biglow Papers," !" Conversations on some of the Old Poets," etc.
LOYOLA, IGNATIUS, the founder of the order of the Jesuits, was born in r491. Ile belonged to a nolite Biscayan family, and was page to Ferdinand and Isabella in his youth. He was severely wounded in 1521 whilst fighting the French, and during lis convalescence lie read himself into a state of mystical devotion, in whicli he renounced the world. In I528 he went to Paris, and, after seven years' theological training, formed the first nucleus of the Jesuit Society, He died in 1556, and was canonized in 1622 .
LUBBOCK, SIR JOHN, was born in 1834, foined his father's bank in 1848 , and entered I'arliament in 1870. Since 1880 he has represented I.oudon University. and lie is an authority on financial and educational questions. Ife is also a man or science, having written "Prelistoric Thmes," "Origin of Civilization," "Britisls Wild Flowers in their Relation to Insects," etc. 11 e is an authority on bees also.

LUCAN, GRURGE, EARL OF (who is associated with the charge of the Light Brigade at Balaclavia), was born in 1800. He was commander of a cavalry division in the Crinsen, and was wounded hefore Sebastopol. He was made field-marshal in 1887, and died the following year.
LUCKNUW, THE SIEGE Or, took place in 185\%. It was partly relieved by Havelock and Outran, but it Was not till October (the siege having started in July) that Sir Colin Campbell took possession of the place. The city presents a picturesque view from a distance, laving some fine buildings.
LUCRETIUS, TITUS, the Roman philosophic poet, was born about 98 B.C. He wrote "On the Nature of Things," a didactic poem in six books on Epicurean philosophy. His writings are noted for their descriptive beauty.
LUDDITES were rioters in Yorkshire, Lancashire, and Nottingham in 18ir-16. They attributed the prevailing distress to the introduction of machinery. They took their name from Ned Ludd, a half-witted boy who destroyed stocking-frames.
LUPERCALIA, a Roman festival celcbrated in honour of Lupercus, an ancient pastoral god, afterwards identified with the Arcadian Pant it took place on February igth, at the Lupercal (a grotto in the Palatine Hill), when goats were sacrificed and two youths were arrayed in the skins. With thongs in their hands they paraded the streets, striking everyone they met, especially women, who believed that the blow prevented sterility.
LUTHER, MARTIN, the great reformer, was born in 1483. In 1501 he entered the University of Erfurt, and in 1505 received the degree of master. About this time he found a Latin Bible in the university library which contained more than the excerpts in common use, and this made him tum to the study of divinity, so he entered the monastery of the Augustines. In 1510 he visited Pope Leo X., and on his return was inade Doctor of Theology in Wittenberg. The arrival there of John Tetzel in 1517 caused him to draw up his famous protest in ninety-five propositions, which lie nailed to the church door. In 1520 a Papal bull of anathema was written against him, which he burnt publicly, and the following year he appeared at the Diet of Worms, before Charles V., to defend his writugs. He was kept in the castle of Wartburg for a year, when he translated the New Testament into German. In 1525 he laid aside his cowl and narried Catharima von Bora, a nun who renounced her vows under his teaching. He completed his translation of the Bible in 1534, and died in 1546.

LYCURGUS, the great legislator of the Lacedacmonians, son of a Spartan king, lived about 898 B.C. The laws he gave to Sparta bave made his name inmortal.
LYELL, SIR Charles, the geologist, was bom in 1797. He wrote "P Principles of Geology," "Elements of Geology," and "Antiquity of Min."
LYNCH-LAW, the practice of punishing men by private persons without trial originated in America, where the phrase is chiefly used.
Ly'TTON, BULWER, the novelist, was born in 1805 . He entered Trinity Hall, Cambridge, and gained the Chancellor's prize medal for his English poem on sculpture. He first gained a reputation by his novels. "Pelham," "The Disowned," "Devereux," and "Paul Clifford," These were followed by "Eugene Aram." "The Last Days of Pompeii," "Rienzi," etc, His "Lady of Lyons," "Richeliel1," and "Money" were successes at Covent Garden. Then he returned to novel-writing, and published "The Last of the Barons," "The Caxtons," "What will he do with it P" etc. He entered Parliament in 1831, was colonial secretary under Lord Derby's ministry, and in 1866 entered the House of Lords. He lad been elected rector of Glasgow University in 1856. His later works were "The Coming Race," "The Parisians," and "Kenem Chillingly," He died in 1873.

## M

MACADAM, the great improver of roads, was born ln 1756. In 1815 he was appointed surveyor of the

Bristol roads, His method is still called Macadanization.
MACARON: is a preparation of wheaten Hour. It is made best round about Naples, and is a national dish in Italy.
MaCaUlay, LORD, the historian, essayist, and politician, was born in 1800 . In 1818 he entered Trinity College, Cambridge, obtnining the Chancellor's medal for a pocm on " Pompcii " and onc on "Evening." In 1825 he won reputation by his article ons "Milton" in the "Edinburgh Review," and he was called to the bar in 1826. In 1830 he entered Parliament (speaking for the Anti-Sluvery legislation), and in 1839 became Secretary of War. "In 1842 he published his "Lays of Ancient Rome," and, in 1848, part of his "History of England," which is considered au English classic. He died In 1859.
Macbeth, King of Scotland, reigned from 1040 to 1057. He slew Duncan, and so became king, and the latter's sous fought against Macbeth at Lunsinane, but it was in 1057 that he was slain. The legends about him were reproduced by Hollinshed in his "Chronicle," and there, it is supposed, Shalec. speare found them and made use of them.
MACCABEES, a dynasty of ruling Jewish priests, of whom the first important one was Mattathias, who resisted the persecutions of Antiochus Epiphancs. When he died, his sons, Judas and Jonathan, led the people. Simon, the last member of the fanily, reduced 'the tower' of Jerusalem, and established the new state, but he was murdered in 135 B.C. by Ptolemy.
M'CARTHY, JUSTIN, M.P., novelist, historian, and politician, was born in 1830. He edited the "Morning Star" in 1864, and was connected with the "Daily News." He wrote " History of Our Times," etc., and has represented Longford since 1879 in Parlianent as a Home Ruler.
MACClintock, Vice-Admiral, was born in 1819. In 1848 he joined the expedition sent in search of Sir John Franklin, and he also went on three other Arctic expeditions, the third time obtaining evidence of Franklin's death. He also surveyed the North Atlantic for a telegrapls route, was made Superintendent of Portsmouth Dockyard, and finally Com-mander-in-Chief on the West Indian station. He published his "Voyage of the Fox "in 1859.
MacClure, Vice-Adniral, was born in 1807, joined an Arctic expedition in 1836, and accompanied Sir John Ross there in 1848, going alone in continand in 1850. He discovered the passage from the Atlantic to the Pacific called Prince of Wales Strait. He was rescued by MacClintock. From his journals was published " The Discovery of the North-West I'assage." He died in 1873 .
MACCULLOCH, HORATIO, R.S.A., the distinguished Scottish landscape-painter, was born in 1806 . He painted the "Cuchulin Mountains," "A Dream of the Highlands," "Highland Loch," etc. His works are little known south of the Tweed. He died in 1867.
Macdonaid. Flora, was bort in 1720 on South Uist, from which she conveyed Prince Charlie to Skye, She married and settled in America, but returned to die in Skye.
MACE is the symbol of authority in Parliament, and without it the Speaker cannot take the chair. When a new Speaker is being elected, the M. is hidden nnder the table, but otherwise it lies on the table during the session, and is never out of the Speaker's possession while he is in office. When the M. is away, or is on the Sergeant's shoulder, no one except the Speaker is allowed to speak. When the House goes into Committee, the M. is placed under the table. The Lord Chancellor lins also in mace.
MACFARREN, SIR GEORGE, the composer and Principal of the Royal Academy of Music, wis horn in 1813. Ilis chief operas are "The Devil's Opera," "Don Quixote." etc, and his oratorios "St. Jolnn the Baptist," "The Resurrection," "King David," etc. He died in 1887.
Machiavelli, Niccolo, the Italian statesman and hlstorian, was born in 1460 . For more than i4 years he guided the destiny of the Floreutine Republic, but was deposed in 1512 and imprisoned, when the

Medici retumed to power. 11e wrote "The Prince," "Ilistory oi Florence," etc, and two comedies. 1le died in $\mathbf{x 5} 5$.
MaChineky is most important in counection with transport and textiles, and in both it displaces human labour. A good deal of plausible nonsense has been written and swen in the attumpt to prove that M. does not displace human labour ; but the motive for introducing it at all is the desire to reduce the expense of production, and therefore, if a new maciaine pays, it murt always displace a certain amount of human labour. The uaking and managing of the new macline, of course, employ some labour ; but there must be some lessening, of labour, or there would be no economy. In textiles also, though not in transport, the introduction of M. has cialsed is largo amount of male labour to be supplanted by cheaper female lahour, for muscular strength las become practically of no importance.
Again, this use of M. has tended to make employ. ment so irregular, that a number of Trades Unious and other Labour combinations have been called into existence in the effort to keep employment regular. For the largest industries are obviously those which are mainly concerned with the production of neeessaries, the demand for which is naturally regulir; the suall industries are mainly concerned with the production of luxuries, the demand for which is naturally irregular. It is only in the large industries, as a rule, that M. pays; and therefore human labour is being driven from the large regular industries into the small irregular ones.
At the same time, the benefits of machinery aro quite incalculable. Not only does it perform tasks which human labour could never have performed, o.g. moving an express train ; but it also applics smali quantities of force, such as human labour could supply, with much greater accuracy both in time and in place, c.y. in printing. And one bright hope for the future of the race is in the wide development of M.-accompanied by a distribution of labour amongst more labourers, with shorter hours-which will eventually free human labour from all unhealthy, disagreeable, and degrading forms of work.
MaCKENZIE, Sir MORELL, the great physician, was born in 1837. He specialized in diseases of the throat, attending the larynx disease of the late German Emperor. He wrote "Diseases of the Throat ant Nose," etc.
Mackintosh, Sir James, the Scottish historian and philosopher, was born in 176 . He won his fame by his lectures on "The Law of Nature and Nations," and by defending Peltier, who was prosecuted for libel on Napoleon Bonaparte. He was Recorder of Bombay, then entered Parliament for Nairn, became Professor of Law at Haileybury College, and, in 1830 , Conumissioner of Indian affairs. He wrote "History of England," "Dissertation on the Progress of Ethical Philosophy," etc.
M•KinLey. PRESIDENT, was born in 1844 , and served through the Civil War. He entered the House of Representatives in $\mathbf{1 8 7 7}$, and made his mark as a zenlous Protectionist, uitimately being responsible for the Tariff Act of 1890. He was elected Governor of Ohio in 1893 , and President in 1896.
MACLAREN, MN, or REV. J. WATSON, the anthor of "Beside the Bonmle Brier Bush" and "Days of Auld Lang Syne," was born in 1850, and was appointed to the very inportant Presbyterian Church at Sefton Park, Liverpool, in 1880. At least 80,000 copies of the former book and 60,000 of the latter have been sold within 3 years.
MaCleod, NORMAN, D.D., minister of the Church of Scotland, was born in 18iz. In 855 x he was appointed to the Barony Parish, Glasgow, and, in 1854, one of the Queen's chaplains for Scotland. He edited " Cood Worals" and wrote some tales.
Macmahon, Duke of Magenta, and Marshal of France, was bom in 1803 . He served in the Crimean War, assisting in storming the Malakof, and lie won the battle of Magenta against Austria in 1859. In 180 he commanded the ist Army Corps agrainst the
Germans; and in 1873 was elected President of tho Germans; and in 1873 was elected President of tho sepublic.

MaCREADY, the English tragedian, was born in 1793 . Ite appeared at Covent Garden in 1826 , beconing manager of that theatre in 1837 . His "Reminiscences " came out in 1875 .
MAD AS A HATTEK is simply a corruption of 'mad as an adder.
magalhaens, or Magellan, the Portuguese navigator who first sailed round the world, was born about 1470. He distinguished himself at Malacca in r5II, and in 1519 received command of an expedition westward, when he discovered the Pacific.
magna Charta was extorted from King John int 1215 , and helped largely to form the English constitution, It provided that no freeman should bo unla wfully imprisoned or proceeded against, and that no scutage or aid should be inposed (except certain feudal dues to the sovereign) without consent of the Connion Council of the Kingdom. The most accurate copy of it is preserved in Lincoln Cathedrid.
MaGNa Graecia was the name given in 1taly to tho Greek cities and settlements founded in the 8th century B.C. by Greek peoples. In the 7 th and 6 th centuries B.C. they were powerful and rich, but discords ruined them, and they died out in the 3rd century.

In 1859 he loocame I'rofessor of Moral and Metaphysical Philosophy at Oxford, and in 1868 he was made Dean of St. Paul's, London. He wrote "The Plitlosoplyy of Kant," "The Limits of Religious Thought," etc. He died in 187 r.
MANUSCRIPTS are, if ancient, all written on Egyptian, cotton, or silk paper. Red ink was used for the initial letters, first linos, and titles, which were thence called 'rubrics.' On rare occasions gold and silver were the mediums, but chiefly for initial letters, as they cost much. Old and New Testaments of the and and 3rd centuries exist, a 4 th century MS. of Virgil at Florence, and a Livy ( 5 th century) in the Imperial Library of Vienna. The Egyptian papyri were ornanented with miniatures attached to the chapters. The oldest Greek and Roman ornamented manuscripts are the Dloscorides of Vienna and the Virgil of the Vatican, both of the 4th century, and having pictures in the Byzantine style of art From the 8 th to inth century initial letters were composed of figures of men, quadrupeds, fishes, etc., and in the isth century of follage interspersed with the figures. In the 16th century the art of illumination died out.
Manutius, Aldus, the Italian printer, was born about I447. In 1488 he set up as a printer in Venice, but his first work was not published till 1494. He printed works of most of the Greek and Latin authors extant, and also productions of his contemporaries. He invented the italic character, hence called 'Aldine.'
MAP must be a projection, i.e. a plan on a plane surface, because of the earth being a spheroid. There are five chief projectious-the orthographic, stereographic, globular, conical, and cyllndrical or Mercator's, which vary from each other in the different position of the point of projection. Mercator's projection gives an erroneous idea of the relative size of different portions of the earth's surface, but it is useful to marincrs in enabling them to lay off a course that can be steered by compass on straight lines. We find traces of maps among the Egyptians in B.C. 1618, but the first attenupt to draw a map of the whole world was made by Anaximander of Miletus (B.C. 611.547).

MARAT, JEAN, the infamous leader of the French Revolution, was born ln 1744 . When Danton instituted the club of the Cordeliers, he edited the "Publiciste Parisien," afterwards known as the ' Journal de la République Francaise." He was also a member of that terrible committee of public safety, and took part in the assassinations of September, 1792. He suggested the establishment of the revolutionary tribunal, and, as President of the Jacobin Club, signed an address inciting the people to an insurrection.
Margaret of AnJou (daughter of the King of Sicily, and wife of Henry VI. of England) was born in 1425 . The kings imbecility made her practically regent, and the Duke of York contested her power, which led to the Wars of the Roses. She was alternately successful and unsuccessful, and finally was made prisoner after the battle of Tewkesbury. Louis XI, ransomed her, and she died in 1482.
Margaret of Valois, Queen of Navarre, was born in 1492, and brought up at the court of Louis XII. Many Protestants took refuge in her kingdon, her name being connected with those of Kabelais, Dolet, Marot, and others. She knew several languages, and wrote "Le Miroir de l'Ame Pécheresse," etc, and a collection of poems.
MARIA THERESA, Empress of Germany, was born in 171\%. In 1740 slie ascended the throne of Hungary, Bohemia, and Austria, but though her claims were in accordance with the Pragmatic Sanction, they were contested. By the Treaty of Aix-la. Chapelle in ${ }_{1748}$ peace was restored, and slie then began her great fimancial reforms, aided by her husband and her minister, Kannitz The Seven Years' War destroyed Austria's prosperity, but at its close she again tried
to promate tho welfare of her kingdom. Sho died in 1760 .
Marius, CaiUs, the Roman general, was born in 157 B.C. and was made tribune of the people in. 119 and practor in 1r5, and propractor of Spain a year later. He narried fulius Caesar's aunt. He was six times consul after being victorlous in two wars. Ile accom. panied Cinna to Rome, and was joint consul with him for seventeen days, when he died.
Markhasi, Clements, the English geographer and traveller, was born in 1830. He was in the navy in 184 $4-5 \mathrm{~F}$, and then travelied in South America and India, and in 1867 accompanied the Abyssinian expe clition, of whicls he wrote an aceount. He wrote also "Lite of the Great Lord Fairfas," "Sketel of the History of Persia, etc.
MARLBOROUGH, DUKR OF, the English general and statesman, was born in 1650. In 1672 he accompanied the Duke of Monmouth to assist Tureme against the Dutch, and did brilliantly at the siege of Maestricht. In 1702 he was created Captain-General of all the forces at home and abroad, and in succeeding years he won his great victories in the Netlierlands. His wife was a great nuisance to him. She was arrogant and avaricious. He died in 1725 .
MARLOWE, CHRISTOPHER, the English poet and dramatist, was born in 1564. He wrote "T"amburlaine the Great," "Edward 11.," "Dr. Faustus," and other tragedies, and also translated the "Rape of Helen," some of Ovid's "Elegies, " etc. He was the greatest dramatic writer before Shakespeare. He died in 1533.

MARMONT, Duke of Ragusa and Marshal of France, was born in 1774. In 1792 lie became Bonaparte s aide-de-camp, and was present at both Marengo and Wagram; and, in confunction with Soult, raised the siege of Bajahoz. He had command of an army corps in the campaign of 1814 , and his surrender to the allies at Paris caused Napoleon's abdication, and brought him into favour witli the Bourbons. He wroto "Esprit des Institutions Miftaires," ete.
Marque, Letters of, a licence granted by a soverelgn or supreme power of a state to the people of that state to engage in privatcering, $i e$. nuaking reprisals at sea on the subjects of another state. under pretence of being indemnified for injuries received. Such letters were abolished by European nations in 1856.
Marriages. About 15 persons out of every 1000 marry every year in England. Of each iooo inen who do marry. 132 have been married before, while out of each io00 women who marry, only 98 are widows. The average age for men to inatry is $27 \%$. and for women 255 years More than half the total number of womell between the ages of is and 45 are unmarried; the betting on a woman getting married is 52 to 100 between the ages of 20 and 25,18 to 100 bet ween 25 and 30 . 15\} to roo between 30 and 35 . 3 3 to 100 between 35 and 40 and 22 to 100 between 40 and 45 . After 60 it is 1 d . to $£ \mathrm{x}$. Married women, on the average, live two years longer than unmarried, and they average 4 children apiece, most being born in Febrtary and fewest in June. About 5 per cent. have no children at all. Marriage anniversaries are -rst, iron; 5th, woorlen; roth, tin; 15th. crystal; 20th, china; 25th, silver: zoth, cotton; 35th, linen;
 Among the aristocracy $4 \%$ per cent. are selfish enoughi and ignorant enough to marry their cousins, which-scientifically-is a crine, and brings its own reward "to the 3rdand ath generation." In London such criminal folly is discountenanced, the per cent. being only 1h. (See DECEASED WIFE'S SISTER above.) Nen who marry before they are 20 generally marry women of 23 ; men of 25 renerally marry women of 24; men of iminense age generally marry mere ehildren, as they are themselves in second childhood. The mortality among bachelors between $z_{0}$ and 45 is very heavy, 27 per cent.; amongst married men of those ages it is only 18 . The word 'spinster' owes its use to the fact that in olden days thic law wisely did not allow auy woman to marry until she had "spun ' a complete set of bed-linen. Morganatic marriages are a German institutlon, by which a per-
son or magnificent birth can condescend to marry an inferior without loss of dignity to himself, or of honour to her, but from which he can subsequently free himself if lie wishes to marry some one in his own exalted position. Marriage myrtle for members of the Royal Fanily cones from the Queen's private garden at Osborno.
MARRYAT, F゙KEDERICK, the English novelist and naval officer, was born in 1792. In 1806 he was appointed midshipman on the "Imperieuse" (comniancled by the celebrated Coclirane, afterwards Lord Dundonald). In 1830 he retired, having begun his literary career by publishing "Frank Mildmay" In 1829. Some of lis works are "Peter Simple," "Midshipnian Easy," "Masterman Ready," "Poor Jack," etc. He was the author also of a code of signals for the Merchant Service. He died in 1848. His daughter, Florence Marryat, is a wellknown writer.
Marseillaise, The, war-song of the French Republic, is generally believed to have been composed in 1792 (certainly the words were) by Rouget de I'Isle, an officer in a garrison at Strasburg, when some volunteers left for the war against Austria and Prussia. It was then called " War-Song of the Army of the Rline," but is called the Marseillaise because Marseilles volunteers first sang it in Paris.
MARSTON MOOR was fought in 1644 bet ween the royal forces ander Prince Rupert and the parlianentary forces under Fairfax and Cromwell, who won the day.
MARTIAL, the Roman writer of epigrams, was born in Spain in A.D. 43. He went to Rome in Nero's reign, and Domitian made him a tribune. He died in Spain in ro4 A.D. His celebrity is founded on his is books of epigrams depicting life at Rome.
MARTIN, SIR THEODORE, the man of letters, was born in 1816. He lias written translations of the "Poems and Ballads of Goethe," dranias by H . Hertz and Oelnlensclilager, "The Odes of Horace," "Dante 5 Vita Nuova," etc., and wrote the "Life of The Prince Consort," for which the Queen supplied the minterials. He became rector of St. Andrews University in $\mathbf{8 8 8}$, the year he was kniglted.
MARTINEAU, HARRIET, the English authoress (of French Huguenot descent), was born in 8802 . She wrote " Illustrations of Taxation and Poor Laws and Paupers," "' Society in America." "Deerbrook " ( $a$ novel), "Eastern Life, Past and Present," a condensation of "Conte's Positive Philosophy," and "History of England," etc. She died in 1876 .

MARX, KARL, the German socialist, was born in $\mathbf{1 8 1 8}$, and studied law and plilosoplyy at Berlin. He edited the "Rheinische Zeitung," and then in Paris, the "German. French Annual," and a newspaper, "Forward." He 月ed to Brussels in 1848, beconing Lead of the Central Committee of Socialists. He wrote "Das Kapital," and died in 1883.
MARY STUART, Queen of Scots, was born in 1542 at Linlitugow Palace, and in 1548 was sent to a French convent. In 1558 she married the Dauphin, and after his death in 156 r she returned to Scotland, allowed her half-brother, the Earl of Moray (a Protestaut) to be first minister, dismissing most of her Irench eourtiers, who were Romanists, as she was. All that was wise, she was popular, and her court a brilliaut one, but she was very foolish to marry either Lord Darnley, who was weak, or the Earl of Bothwell, who was a scoundrel. In 1568 she had to put herself under Elizabeth's protection, and the latter showed her little sympathy. She managed her love affairs capitally, and Mary managed most of liers very foolishly. She was beheaded in 1597. She wrote some poems.
MASCAGNI, PIETRO, the composer of the popular "Cavalleria Rusticana," or "Rustic Chivalry," was boru In 1863. The ojecra was written for a prize competition, and has been performed in almost dvery language in' Êurope.

MASON AND DIXON'S LINE is the southern boundary between the 'free' stato of l'ennsylvania and the old 'slave' states of Virginia and Minryland, 1t; was drawn by two English survayors between 1763 and 376 , and was often. quoted by Jolm Kandolph during the slavery debate in Cougress in 3820.
MASS, that part of the service in which the Eucharist is offered, consists of four chief parts-(1) Introduction ; (2) the offertorium or sacrifice; (3) the consecration; (4) the communion. There are different masses according to the different rites-the Greek, Latin, Roman, and Gregorian masses, besides the Low inass, High mass, missa pro defunct is (mass for the dead), etc.
Massena, Andre, Marshal of Franco, was born in 1758. In 1793 he was made General of Brigade during the Revolution, and, in 1794, General of Division, taking command of part of the French army in Italy. In 1800 his defence of Genoa for three months gave Bonaparte time to strike at Marengo ; and, in 1809 , his firmness at Esslingen (against the Austrians) saved the Frencli army from destruction. In 18 ro he commanded the arniy in Portugal against Wellington. He died in 1817 .
MASSINGER, PHILIP the distinguished English dramatist, was born in 1584. He is more natural in his character, and more poetic in his diction than Jonson , and $^{\text {a }}$ some critics rank liinn next to Shake. speare, but he is defective in humour. He wrote the "Duke of Milan," "A City Madam," " A New Way to Pay Old Debts،" etc. He died in 1639.
MATCHES, SAFETY, were invented in Sweden In 1855. Their composition is divided between the matches and the friction paper, so that, in ordinary circum. stances, they can only be lighted on that paper.
Mathews, Charles, the eininent English comedian, was born in 1776. After playing successfully at Drury Lane, the Lyceum, Haymarket, and Covent Garden, he instituted his monologue entertainments, under the title of "Mathews at Hone." which drew crowds to the Englishi Opera House. In 1823 he produced his "Trip to America," also successful. He died in 1835. His powers of mimicry have perlaps never been surpassed, and his personal qualities won hin the friendship of Coleridge, Lamb, and others.
MATTEI, COUNT, the famous doctor or quack, was born in 1810, and died in 1896. There seems to be no doubt that his remedies did effect extraordinary cures of several diseases, but Dr. Theobald of Glasgow was struck off the register by the General Medical Council in 1895 for recommending then.
MAUNDAY ThURSDAY is really 'Mandate Thursday,' the day before Good Friday, being the day on which Christ washed the disciples' feet and gave them His - Mandate --tolove one another. The English kings. after 1362 , kept up for a long time the custom of washing the feet of a number of their poor contemporaries, and the Ein peror of Austria still does so.
Maurice, F. D., the Anglican divine and leader of the Broad Church party, was born in 1805. He declined a Fellowship at Trinity College, Canbridge, on the ground that he could not sign the Thirty-nine Articles, but his religious sentiments clianged, and in 1835 lie was ordained, and soon after became Professor of Modern History'and English Literature and of Ecclesiastical Listory in King's College, London ; but in 1853 an essay he wrote on future punishment forced him to resign botli chairs. In 1854 he founded the first working-man's college in London. He wrote the "History of Moral and Metaphysical Philosoplyy," the "Religions of the World," etc., a "History of the First and Second,Centhries," and "Eustace Conyers," a novel. He was a very great power in social politics. He died in 1872.
Maynooth College, or St. Patrick's College was founded in $\mathbf{1 7 9 5}$ for the education of Romish priests in Ireland by an Act of the Irish Parliment. The full curriculum is seven years-one for classics, two for philosophy, and the rest for theology and cognate subjects.
Mazarin, Cardinat., first minister of Louis XIV., was born in 1602, educated at Rome (by Jesuits) and the University of Alcala in Spain. He entered the Pope's military service, and was eventually made
nuncio to the Court of France, where he won Riche. lieu's favour, and succeeded him in 1642. His heavy taxation and increasing supremacy resulted in the civil war of the lironde, but lis foreign policy was as successful as his home policy was disastrous. Ile died in 1661.
Mazzini, Giuseppre, the patriot, was born at Genoa in 1805. In 1826 he graduated in law, and while an advocate turned to literature, his first significant essay being " Dante's Love of Country." He was imprisoned in Savona for a while, and then went in turn to Marseilles, Switzerland, and London. In 1848 he went back to Italy and served under Garibaldi, becoming President of the short-lived Republic, when the Pope fled. Garibaldis successful Sicilian expedition in 1860 was due largely to him. Ife died in 1872 .
MEDALS in the army and navy date from the middle of the 17th century. Charles 1. struck both gold and silver medals in 1643, a gold one specially for Robert Welch for gallantry at Edgehill; and the Parlia. mentary officers at Naseby were certainly ' decorated, as were both officers and men who served at Dunbar. The : Victoria Cross' (q.v.) was instituted in 1856.
Medici, the famous Florentine family who combined the carcer of merchants and bankers with the exercise of political power and liberal patronage of art. Cosmo de Medici ( 1389 -1464) was, for thirty-four years, sole arbitrator of the republic and the adviser of the sovereign houses of Italy. He was wealthy, liberal, and a consummate statesman. His grandson, Lorenzo The Magnificent (1449-1492), governed the state at first with his brother, and then alone, in great :munificence. His grandson, Lorenzo, was the father of Catharine de Medici, Queen of France. Then the family had some reverses, until Cosmo 'the Great' ( $1537 \cdot 1574$ ) becance Duke of Florence and then Grand-Duke of Tuscany, which title the Medicis held until 1737.
MEDUSA was one of the 3 Gorgons in classical myth. She was the only one subject to mortality, but was compensated by her beauty; and Minerva was so jealous of her lovely liair that she turned it into serpents.
MEHEMET, ALI, Viceroy of Egypt, was born in 1769. He entered the Turkish army, and served in Egypt against the French, becoming Pasha of Cairu, then of Alexandria, and finally of all Egypt. In 1811 he massacred the Mamelukes, and then commenced a war of six years' duration against tlie Wahabees of Arabia. By a vigorous domestic policy he reduced the finances to order, organized an army, and stimulated agriculture and manufactures. In 1824-27 he assisted the Sultan's endeavours to reduce the Morea. thereby losing his fleet at Navarino in 1827. He died in 1847, having obtained the hereditary pashalic of Egypt in 1839.
MEISSONIER, JEAN, the French painter, was born in 1815. He first became known as all illustrator of books. His pictures are nearly all small, and are characterized by minuteness of execution and high finish, though not less remarkable for their breadth of treatment. "The Smoker," "I a Partic des Boules," " Napoleon Ill. at Salferino," "Cavalry Charge," the picture entitled " 1807 " (representing Napoleon I. in the battle of Friedland), "Le Guide," and "Jena" are all famous, and some of them have an astonishing market value.
Melancthon, Philip, the German reformer, was born in 1497. His original name was Schwarzerd, which he Grecized into Melancthon. In 1518 he filled the chair of Greek in the lately-founded University of Wittenberg; in 1519 he accompanied Luther to Leipzig, to dispute with Dr. Eck, and in I521 he published his fanons " Loci Communes," an exposition of Protestant dogmatisms. His Greck scholarship was useful to Luther in translating the Bible, and his suggestious, generally, to the reformers were wise. He drew up the "Augsburg Confession" (presented to the Emperor) and the "Apology" for it.
Melpomine. (See MUSES.)
Minn, RACES OF. There are three great divisions of the luman! race-fle White, the Black, and tho

PEARS' CYCLOPAEDIA.

Yellow. The Mediterranean was tho original homo of the White Man, as tropical Africa was of the Black Man and coutinental Asia was of the Yellow Man. For racial colour is the result of the contdition of the blood. Ifeat and moisture dinte the blood-ressels, and, as it were, normally congest the liver, which has to dispose of the extra supply of blood with its extra supply of colouring miatter, Consequently, in the tropics almost all life-1una or beast or bird-shows stromg development of colour. On the contrary, the air of Europe contracts the blood-vessels, and thus diminishes the amount of blood to be distributed. Between these two extremes there is the dry, hot alr of continental clinates, which produces the olive or copper hue found in the uatives of Eastern Asia or North Anserica. The White Man was separated from the Black Man by the Mediterranean, and from the Yellow Man by tho impassable obstacles of the Pamirs. In the tropical 'islands'-as they were originally-of India and Arabia, and in the semi-tropical 'peninsula' of Egypt, the White Man became 'sun-burnt ' compared with his brother in Europe, but he never lost his wavy hair or his narrow nose.
Mendelssohn-Bartholdy, Felix, the composer. was born ln 1800 . His father was a wealthy Jew, who had him well trained, and, at tle age of nine, he appeared publicly in Berlin as a musician. At sixteen he wrote the "Overture to the Midsummer Night's Dream"; and in 8829 he travelled, becoming, on his return home, musical director in Duisseldorf. In z83j he became conductor of the famous concerts of Leipzig; and eventually was summoned to Berlin, by the king of Prussin, to become director of music at the Academy of Arts. His "Elijah," "St. Paul," "Songs without Words." and "Overture to Ruy Blas" are famous. He left the Opera of "Lorlei" unfinished.
Mercantile Marine of the world, according to Loyd's Rexister for 1890.7, was 29,880 vessels, with a tonnage of 25.614 .089 , of which 11,329 vessels with a tonnage of 13.359 .026 were British. No other country approaches these huge figures, the second on the list being U.S.A. with 3215 vessels of $2,234.725$. The records for passenger liners all lie with British vessels, though the "St. Paul " and "St. Louis" have done an average of over 2 : knots an hour between the Needles and Sendy Hook, and the "Furst Bismarck," the "Normannia," and the "La Touraine" have done exccllent work on their own runs. Letters are reguLarly delisered from New York in London by the "Lucania" in 157 hours, and by the "Campania" in 158. The $P$. and $O$. boats have made somewhat similar records for the eastern runs, the "Caledonia" having delivered letters from Bombay so as to reach London in $12 \downarrow$ days. The speed of the various small packet-boats, which ply from the British coasts, is also very great.
MERCATOR, GERARD, the Flemish geographer, was born in 1512. He entered the service of Charles V., for whom he made a celestlal and a terrestrial globe: and in 1559 he retired to Duisburg as cosmographer to the Duke of Juliers. He was the author of "'Tabulae Geographicae," as well as the "Yrojection."
MEKCATOR'S PROJECTION is the method in which meridians and parallels of latitude cut each other at right angles, being both represented by straight lines. By this means seamen can stcer by compass in straight lines. The principles of the projection were first practically apphed by Edward Wright in 1599.
Meredith, GEORGE, the novelist, was born in 8828 , and began his literary career with a volume of verse in 185 . The "Ordeal of Richard Feveril "appeared In 1859, the " Egoist" In 1879 , "Diana of the Cross ways" in 189x, and the "Amazing Marringe" in 8895. Ilis dlifficult style is unnecessarily irritating, and has deservedly prevented him from ever being popular.
Merino Sheff is probably the original species, and Is better fitted by nature than any other species to produce wool, and to protect its wool from the weather. Another advantage is that they are very long.dived. Their home was Spaln, but they have been acclimatized all over the world.'
Merlin, the legendary Welsk prophet ond magician,
sald to liavo lived in the sth $^{\text {thentury, and to have }}$ been the offspring of a demon and a Welsh princess, Ife was regardod as the adviser of the Enghish kings Vortigern, Ambrosius, Utherpendragon, and Arthur, There was also a proplet connected with the king, dom of Strathelyde called ' Merlin the Wihd,' who is said to lhave lived in the 6th century. His prophecies were published in 1655 at Edinburgh.
Mesmer, Friedrich, tho German physician fand founder of tho doctrimo of mesmerism), was born in 1733. In $177^{6}$ ho renounced the use of magnets, and, gong to Paris in 1777, lie achieved considerably success and fane, though the medical faculty regarded him as a charlatan. Ile died in 1815 , having retired after the investigations nado about his sys: tem. He profossed by mesmerism (or animal nagnetism) to cure nervous diseases by an occult force. in himself, and which 110 said pervaded tho universe. Many of the plenomena of mosmerism are genuine, but modern scientific invostigation, while not fully explaining them, has shown that they aro due to peculiar nervous conditions, not necessirily to an occult force. James Baird, a Manchester surgeon, investigated the theories of spiritualisu and clairvoyance, and attempted to explain them in a paper in 1842 and in a book, "Neurypnology," in 1843. To him we owe the term hypnotism. Dr. Heidenhain also has written "Animal Magnetism."
METHODISTS were so called because Wesley and his companions received that name from their fellow. students at Oxford on account of their regular lives and the strictness of their observance of religious duties. The sect was formed there in " 7799 (Johus Westey, his brother Charles, and George Whitfield being the leaders), and it was constituted a legally corporate body in 1784 . There are several different bodies now, who, nevertheless, agree on points of doctrine though not on points of church governneent. There are 'Calvinistic and Primitive Methodists,' tho - United Mcthodist Free Churches, etc. The ' Methodist Episcopal Church ' is the oldest and leading Methodist body in America.
Metternich, Clemens, Prince von Metternich, the Austrian statesman, was born in 1773. He represented Austria as ambassador at varrous European courts between 1801 and 1809 , when he became Minister of Foreign Affairs. During Austria's war with France lie shaped her policy and that of the leading contiuental powers also. He was one of the plenipotentiaries who signed the Treaty of Paris, and he presided at the Congress of Viema in 1814. He also formed the Holy Aliance to check revolutionary principles. He was driven from power by the revolution of 1848 , and died $\ln 1859$.
METz The Battle of, was fought in 1870 , between the Germans and French, and the Germans invested the city. The French were starved out in twomonths, and capitulated under command of Marshal Bazaine. It was ceded to Germany in 1871, and is now an in. portant fortress of Alsace-Lorraine.
MEYERBEER, GLACOMO, the composer, was born in 1791. He studied at Berlin and at Darmstadt, where he began his life-long friendship with Karl von Weber. Some of his operas (on which his fame rests) are " Romilda e Costanza " (the first of a series in the Italian style), "Robert le Diable," "Le Prophète," "L'Africaine," etc. He also wrote ant oratorio, songs, cantatas, ctc.
Micalwber, Mr. Witkins, the sentimental bore and improvident glutton, is in "David Copperfick."
MiCHELET, JULES, the French historian and miscel. laneous writer, was born in 1798 . In 1821 he occupied the Chair of History, and was Professor of Anclent Languages and of Philosophy at the Collége Rollin: aull in 1839 became Professor of History at the Collége de France. He wrote "Histoire de France," "Histoire de la Revolution Francaise," "1Iistoire Romaine," "Dis Prette de la Fenme, et de la Fanille," " Du ['euple"; and, after 1856 " "'Oiseau," "L'Anour," " La Femme," ctc.
MiDDLE AGES, the tern loosely applied to that perlod in Luropean listory between the ancient imel modern civilizations. With some writers it began in $47^{6}$ (when the Western Roman Empire was over.
thrown); with others in 800 (when Charlemagne becane Einperor of the West); and with others, again, in 843 (when the Frankisl Empire ended). The close of the period is considered to lave come either with the German Reformation, the discovery of America, the invention of printing, or the end of the Thlrty Years' War, in 1648 . The two most characteristic institutions which grew up in the Middle Ages were ( I ) the feudal system; (z) the monastic institutions, and the power of the Papal hierarchy.
Migration has generally proceeded from east to west. In the earliest times this seems to have had some connection with the superstitions about " A Land of Eternal Sunshine far in the Golden West "; but, scientifically, it was due to the fact that the mountains of the Old World run from east to west, which encourages movenient eastward or westward, while discouraginginovement nortliward or soutliward. Moreover, climate, with its accompanying conditions of vegetable and animal life, varies less along parallels than up and down meridians. This general principle of migration westward brought the emigrants to the west shore of the Old World, and eventually to the east shore of the New World. There have been two remarkable exceptions to this rule-the Galatians migrated from 'Gaul' to Asia Minor, and the Cossacks migrated from the Don to the Obi, and theu on from the Obi to the Amur.

Modern M. is due to excess of population or defect of work and food, and is attracted towards new countries or to coal-fields in old countries. This explains how towns like Birminghan, Leeds, and Sheffield have supplanted towns like Canterbury, Salisbury, and Exeter. There is a good deal of M. even of native population inside a particular country, e.g. England. A bout $\frac{1}{d}$ of the population of England are not living in the counties where they were born. The number of 'strangers' is highest in Surrey, Middlesex, Essex (which are really London), and Glamorganshire, the greatest coal-mining centre in the world. The number of 'strangers' is lowest in the corners aud out-of-the-way parts of the country, e.g. Cardigan, Cornwall, Anglesey. With regard to individual towns, the 'local' element is very strong in Huddersfield, Norwich, Blackbum, and Preston. being at least 86 per cent., and very weak in sea-ports such as Birkenhead, Cardiff, and Middlesbrough. With regard to counties, very few natives leave Lancashire, Glamorganshire, Yorkshire, or Durham, for they can get plenty of work at home; but the exodus from Rutland, Radnor, Hants, and Brecknock is very large.
MILeS, measured in English yards, vary from 11,703 in Sweden and 1r,559 in Hanover to 1165 in Russia and 629 In China.
Militia is a very old force, and has frequently been embodied for service, e.g. against Napoleon and during the Indian Mutiny. During the Crimean War it drafted at least 30,000 men to the army. The enrolled number in the United Kingdom is 117,789 , of whom about 35,000 are agricultural labourers, and about 22,000 are mechanical labourers.
MILK will not travel, even when frozen ; and, therefore, foreign competition is more or less eliminated from the fresh-milk trade, though foreign cheese and butter are very formidable rivals of home products. The increasing use of Machinery ( $q . v$. ), clieapuess of foreign flour, social and educational advantages, and other canses are drawing the mass of population into the large towns to such an extent tlat twenty-five towns now contain about one-third of the total population of the United Kingdon1. For this huge citypopulation the M. supply is miserably deficient-a tiny country like Holland, ouly one-tenth the size of the United Kiugdom, having at least 4,000,000 more milch kine than we have. At the same time, gallons of M. go bad, unused, every week because the price is beyond the mass of the poor. If private enterprise cannot supply sweet, good milk theap enough for every poor family in the country to have a little every day, the State wlli have to step in; and, if it does, less water wlll be used in the dairy industry; nad some 'old M. + a llttle carbonate of magnesia will cease to be sold as new M.

Mil, L, JOIIN STUART, the logician and poitical economist, was born in 1806 . He entered oll a course of political economy at the age of fourteen, having previously studied Greek, latin, Euclid, and Algebra since he was eiglit. From $\mathbf{8} 35$ to 8840 he principally conducted the "Westminster Review," and in 1843 he publislıed "A System of Logic, Ratiocinative and Inductive," and in 1848 " Principles of Political Economy," his two clief works. He also wrote "Thoughts on Parlianientary Reform,"" "Utilitarianism," "The Subjection of Women, "etc, When M, P. for Westminster he adwocated a measure to admit women to the suffrage. He died in 1873 .
Millais, SIR JOHN, the painter, was born in 1829. He exlibited his first picture in 1846, " Pizarro seizing the Inca of Peru," and received a gold medal in 1248 for "" The Tribe of Benjamin seizing the Daughters of Shiloh." Otliers of his works are "Mariana at the Moated Grange," "The luguenot Lovers," "Ophelia," "Effie Deans," " St. Bartholomew's Day," etc. He succeeded Lord Leighton as President of the Royal Academy.
Miller, HUGH, the Scotch geologist, was born in 1802 . His first publication came out in 1829, entitled "Poens Written in the leeisure Hours of a Journeyman Mason"; and $\ln 1835$ he published a prose volume, "'Scenes and Legends of Cromarty"; but it was "The Old Red Sandstone," which established his reputation. He also wrote "Footsteps of the Creator," "MIy Schools and Schoolmasters,"" "Essays Historical and Critical," "Rambles of a Geologist," and " The Testimony of the Rocks," in which he tried to reconcile the Mosaic account of the creation with the teachings of geology. Having just finished this work, he shot himself in 1856.
MiLMAN, HENRY, D.D., was bom in 179r. In '18iz he received the Newdegate prize for an English poem on the Apollo Belvidere; he published "Fiazio," a tragedy performed at Covent Garden Theatre, and in 1815 becance Vicar of St. Mary's, Reading. He delivered the Bampton lectures in 1827, being Professor of Poctry at Oxford in 1825-31, and was made Dean of St. Paul's in 1849. He wrote "Samor" (a legendary poem), "The Fall of Jerusalem," "The Martyr of Antioch," "' History of the Jews," etc., and " A ninals of St. Paul's Cathedral.
Milton, JOHN, the English poet, wis born in 1608. At Cambridge he excelled in Latin verse and English composition, and while there he wrote "On the Death of a Fair Infant," "On Shakespeare," etc. Then he spent six years in retirement, studying classical literature, philosophy, mathematics, and music, when he wrote "Arcades," 'IL'Allegro" "and "Il Penseroso," the beautiful monody of "1.ycidas" (in menory of his college friend, Edward King), and the masque of "Comus." In $1641-42$ he wrote some polemical treatises, and sketclied his "Paradise Lost." In connection with his divorce pamphlets, written while his wife was separated from him, he was prosecuted for publisling them without a license, and defended himself in the fanous "Areopagitica, addressed to Parliament. In 1649 he wrote " Eikonoklastes" (lmage-Breaker), an answer to the "Eikon Basilike"; and in 1642 he becanse totally blind. In 1667. he published "Paradise Lost"; in 167o his "Historyl of Britain to the Nornan Conquest," and in 1671 "Paradise Regained" and "Samsun Agon. istes." He died in 1674.
MIND YOUR P'S AND Q'S was the regular caution of the Frencl dancing masters in the thits of formal hows and long 'pigtails'-P, being pieds, 'feet,' and Q. being guertes, 'pigtails.'

MINNESINGFRS were a class of Gennan lyric peets of the 12th and $13^{\text {th }}$ centurios, so called because love was the chief theme of their verse, minne leing Old German' for 'love.' They were nearly all men of aristocratic birth, the clief names being Wolfram von Eschenbach, Gottfried von Strassburg, Hart mann von der Aue, and W'alther von der Vogelweide. They sang to the accompaniment of the viol, generally in honour of well-born dames, and their songs were chlefly in the Swabian dialect and seldoin written down, the MSS. contalning their verse being mostly tho result of oral traditions. The largest
collection of their sonys was compiled by Rudiger von Manesse, of Zurich in the 14th century. 7his poetieal movement gradually werged into that of tho Meistersingers.
MiNr, KOYaL, has practically existed since before the Norman Conquest; but the present building dates only fronn the bezinning of this century.
MIRABEAU, COMTE DE, the French statesman, was borm iu 1747. It was during an inprisomment for riotous behaviour that he wrote fils "Lettres a Sophie, " "Lettres de Cachet" "and "L'Espion Dévalisé." On the assennbling of the states.general, he soon becnme prominent, though he, being practicill, found the other members dificult to deal with, for they were inpracticable, inexperienced men. Ile might or might not have been able to guide the revolution into peaceful ways, but his death in 1791 (regarded then as a uational calanity) prevented this being known.
MIRAGE is an optical illusion caused by the refraction of light through contignous masses of air of different thicknesses. Such refraction often produces the effect of a direct reflection. It conslsts in an apparent elevatioo or nearness of eoasts, mountains, ships, and other objects, accompanied by inverted images. In deserts where the surface is level, a plain looks like a lake, rellecting the objects within and around it. Thephenomenon called "Fata Morgana," seen some. times on the Calabrian coast (showing men and animals of immense size in the air), is a mirage.
Missionary Societies were first instituted by the Jesuits in Japan, China, and India. The Society for the Propagation of the Gospel was established in 1647, for work amongst the Red Men of North Ameriea. The Baptist Missionary Society was founded in $\mathrm{I}_{792}$, the London M.S. in 1795 , the Church M.S. about 1800, and the Wesleyan-Methodist M.S. about 1814 . The most fatal mission-field is the "White Man's Grave" of Sierra Leone. In other parts of the world men have served for over 50 years, c.g. Mr. Thomas for 58 , Mr. Birt for 56, and Mr. Burrows for 55 .
MISTLETOE is a European plant, growing parasitically on vartous trees, and celebrated because of the religious purposes to which it was consecrated by the old Keltic nations of Europe. The Druids venerated it, especlally when found on the oak. It is common enough on apple, pear, hawthorn, maple, and lime trees. Traces of the old superstition regarding it are found in Germany and England, as kissing under it at Christmas.
MITHRIDATES, King of Pontus, sumamed the 'Great,' ascended the throne at the age of thirteen, and when he attained his majority began his eareer of conquest, which made him master of nearly all Asia Minor,

- besides Greece, and which brought hin into conflict with Rome. ife had, finally, to take refuge in Armenia, and, raising a third great army, recovered most of his dominions which he had lost ; but Pompey routed his forces near the Euphrates, and in B.C. 63 , when his troops mutinied, he killed himself.
MOFFAT, ROBERT, the Scottish missionary traveller, was born in 1795. He began his work in South Africa in 18.3, and in 1819 married Mary Smith of Cape Town, the companion thenceforward of his labours. During a visit to Britain in 1842, he published an account of his travels and a translation of the New Testament and Psalms in the : Bechuana language. He returned to England in 1870, received the degree of D.D. from Edinburgli University, and died in 1883
Mohamaten (more correctly 'Muhammed'), the founder of lslamism, was born in 571 A.D. His wife and several important citizens of Mecea soon belleved In hin when he announced his apostleship, but in A.D. 622 he hand to flee to Medina, where he assumed sacerdotal and regal dignity. In 630, after nuch fighting, he proclaimed himself I'rince and Prophet of Mecca, and rliod 632 .
MoIIPRE (tho assumod name of Jean Poquelin), the French comie dramatist, was loorn ln 1622 . His "Précietuses Riclieules" profuced a reform in Parls, beine a satire on the affectation of the character of bel caprit. He wrote "L'Etourdi," "Le Dépit

Anourcux," "Don Jıan," etc. Ho died in 1673. As comic actor he was unsurpassed, and in the literature of comedy conmes next to Shakespeare.
MOLTKE, COUNT vON, the German Field-Marshal, was born in 1800. In 1835 he superintended Turkish military reforms, and in 1855 becance Equerry to the Crown Prince; and in $185^{8}$ acted with Von Roon and Bismarck in the plans of military ro-organization. The suceess of the Austro-Prussian War of 1866 and the firanco-Prussian War of 1870 was largely due to hiul. He resigued his position of Chief of the General Staff in 1888.
MONARCHY begins in submission to a captain in time of war, and reverence for the chief who represents the common ancestor. Its principle is that discipline is best secured by all orders being issued in the name of a single person. For some purposes it is best that this person should be the ablest, but there are advantages in having a single head, whether able or not. There are three chief types of monarchy. Des: potic monarchs assume that their power comes from God, and that therefore they are responsible only to God; a bad despot crushes his subjects into slaves, and a good despot degrades them into babes. A constitutional monarch has to consider a powerful aristocracy or a prosperous middle class or both, and his duties are more difficult than those of a despot, for he has to avoid both despotism and impotence. Presidential Republicanism gives a better guarantee of ability than the hereditary principle does, and a better guarantee against tyranny; but it has the great disadvantage that the head of the state is also a party leader. Probably the best system of all is the old English one, in which the head was chosen for his ability, but out of the definite limits of the royal family.
Monasticism existed long before the Christian era; and had no great hold on Cluristianity itself before the end of the 3rd century, when doctrines about the antagonisin of body and soul had gained strength. The first Christian monasteries were in Egypt, and the Egyptian system was introduced into Italy by St. Athanasius. Monastic vows were instituted by St, Benedict. The chief Orders were the Benedictines, Carthusians, Cistercians, Templars, Hospitallers, Franciscans, and Dominicans, etc. Since the middle of the 18 th century Monasticism has been abolished or greatly diminished all over the wortd, except in North America. All Orders were abolished in France at the time of the Revolution, though some have been readmitted in this century. In Germany all except Nursing Orders were abolished in 1875.
MONE $Y$ is a standard of value and a medium of exchange. The substance selected as money should be of uniform value, great durability, and intrinsic worth ; and it should possess great value in small bulk, should be capable of being I divided into minute portions without loss of value, and should be malleable. Gold and silver are precious in themselves, divisible without any loss of value, impervious to time, fire, and water, easily coined, and contain great value in small bulk. Consequently, they are the best material to use for coinage. Many other materials have been used, but possess great disadvantages. For instance, a diamond worth 1 d. would need a microscope: a pennyworth of shells would be a cumbrous burden; tea and salt can be spoilt by time, fire, or water ; a single gen is much more valuable than its two halves would be, if it were divided; an ox is a difficult standard of value for a pair of boots, and cannot be conveniently put in one's pocket. In fact, all these things-salt, tea, cattle, shells, etc.-are means only of barter, not a scientific medium of exchange.
MONEY, UNCLAIMED. There is a considerable amount of money in possession of the Court of Cliancery waiting to be claimed, but nothing approaoning what one would infer from the glowing aceounts of ingenious advisers for the " next of kin." Iven If there were, to proue 'kinship' is an extremely difficult, long, and expensive process.
Mongors aro natives of North. Enst Asin, and their first great advanco was due to Genghis Khan, who in 5206 concelved the idea of conquering the wholo world.

Their invasion of Russia was in 1237, and was accompanied by great cruclty. It would have included the devastation of Hungary too if they had not been recalled on the death of Ogdai, the successor of Genghis Khan, in 1248. The succeeding fifty ycars saw the acme of M. power, under Kublai Khan, the patron of Marco Polo; the empire was so huge that he liad to divide it up under subordinate K hans, and several of these became independent. At the same time, there was a religious division, the eastern half becoming Buddhist and the western half Muhammedan. The most powerful section in the west was that consolidated by Timurlenk (Tamerlanc) round Samarcand; but, after his death in 1405 , his empire gradually split up. One of his descendants, Baber, founded the Mogul Empire in India in 1519.
The word ' Mongolian' is often used to denote that division of the human family of which the Mongols proper are most typical; and, in this sense, it includes Tartars, Turks, Chinese, etc.
Monica, ST., was the mother of St. Augustine, "the child of many tears. ${ }^{\text {. }}$
MONK, GENERAL, was most famous for the part which he played in the restoration of Charles II. He was a Royalist to start with, but was taken prisoner and subsequently 'converted' by the Roundheads. He was a good soldier, and inflicted some very severe naval defeats on the Dutch, even against sucli admirals as De Ruyter.
MONKEvS are dear little things, and so like men. They are malnly of two great classes-Catarhine, or ones with 'human' noses, found in the Old World, and Platyrhine, or ones with 'inhuman ' noses, found in the New World. The former are tailless, or, at all events, their tails are not prehensile; the latter have tails, and their tails are prehensile.
MONMOUTH, DUKE OF, was the natural son of Lucy Walters, one of the numerous women ruined by Charles II. In 1679 he defeated the Covenanters at Bothwell Bridge, but afterwards became the centre of Protestant intrigue against the Duke of York. When the latter had come to the throne as James II., M. attempted an invasion, in which his cowardice led to an awful massacre of devoted but undisciplined troops at Sedgmoor in 1685. (See Conan Doyle's "Micah Clarke.")
MONOPOLY is the least Justifiable of the various rights enjoyed by the owner of a commodity which is in general demand, and of which the supply is limited. It has always been opposed to the spirit of English law, but has been very common, especially in the time of the Stuarts. In modern times speculation is largely devoted to creating monopolies, which leave the consumer at the mercy of the producer. The least injurions form of M. is a Covernment one, e.g. tobacco in France. Municipal control of water, or gas, or tramways leads to a 'natural monopoly, because, as no profits are desired, private companies are undersold and crushed out ; but in this case there is technically no $M$., as all consumers benefit.
Monotheism, or belief in a single personal God, is the highest form of religion, and has had historically great effect on the character of monotheistic races, slmplifying and concentrating all the religious emotions. The three great monotheistic religions of the world all come from the desert-Sinai, Arabia. Judaea-and all are Semitic in origin. All, too, teach the great lesson of the desert-renunciation, "Thou shalt not."
MONROE DOCTRINE formulates the U.S.A. idea of the balance of power in America. It was first stated by President Monroe in 1823, nnd his been reasserted several times, specially in connection with Napoleon III. and Mexico, the Panama Canal, and the British claims against Venezuela.
MONSOONS are ordinary trade-winds which, instend of blowing from the north tropic to the equator, are dragged round by the intense summer heat of some large area of land to the north of them, and blow as S.W. anti-tmdes, The most regular M. are caused by the heating of Tibet in suminer, and carry the main supplles of rain to India; but they occur also of the Califomlan const, There are none south of tho equator bectase the area of land to water is
proportionately very small. The so-called 'N.E. Mousoou,' which blows from Bengal to the Madras coast is the ordinary N. E, trade-wind.
montagu, Lady Mary, the famous letter-writer, was bom in 1689 , and died of cancer in 1762 . She made a runaway marriage with Mr. Wortley Montagu, and was the friend of Addison, Congreve, Pope, etc. Her famous "Turkish Letters" were written while her husband was ambassador in Constantinople. She adopted the Turkish custom of Inoculating her children for small-pox.
MONTAIGNE, the great essayist, was born $\ln 1533$, and 'spoke' Latin before he could speak French. He published the first two books of "Essays" in 1580, and the third in 1588 .
Montespan, Marchioness de, was born In 1641 , and shared Louis XIV.'s contaminating favour with Mdlle. de la Valliere from 1668 to 1674 , and monopolized it more or less from 1674 to 1679, when Madame de Maintenon-the nurse of four of her children by Louis-usurped her position with his majesty.
MONTESQUIEU, the French writer, was borm in 1689, and published his "Lettres Persanes" in 1721. The famous " L'Esprit des Lois" was published in 1748 . M. was a warm adnirer of British social and political institutions.
Montezumi was the Astec Emperor of Mexico when Cortes invaded the country in 15c9; Macaulay assumed that ' any schoolboy would be faniliar with his name and history.
MONTFORD, SIMON DE, was the brother.in-law of Ifenry III, the best swordsmar in Europe, and a really good man. These three advantages put him in a position to extort from Henry the First Parliament (1265). He was ruined eventually by the jealousy of the other Barons, and was killed at the battle of Evesham, but all his most cherished plans were completely carried out by his old pupil, Edward I.
MONTGOMERY, RDBERT, better known as 'Satan Montgomery,' thanks to Macaulay's merciless exposure in the "Edinburgh Review," published his "Omnipresence of the Deity" in 1828 and his "Satan" in 1830.
MONTROSE, MARQUIS OF, was bom in 1622, and joined the Covenanters in 1637 , but went over to the Royalists in 1640 . He won a number of batties in 1644 and 1645 , but eventually had to flee to Norway. On his retum in 1650 he was captured and taken to Edinburgh, where he was hanged and quartered on May 21.
MONUMENTS, HEIGHT OF. The Washington M. is 555 feet, the Pyramid of Cheops 543, Delhi Column 262, Bunker Hill M. 220, the London M. and the Leaning Tower of Pisa 202 each, the Place Vendome M. at Paris 152 , and Trojan's Pillar at Rome r5x. Fot comparison with these heights it may be mentioned that the Eiffel Tower is 10 co feet, St. Peter's Cathedral at Rome 448, St. Paul's in London 404, Canterbury Cathedral 235, and Notre Dame in Paris 232.
MOON is only about 240,000 miles from the earth, which makes it look proportionately much larger than the sun. The extremes of heat and cold must be terrific, and the 'day' is a fortnight long. The surface is covered with mountains, most of them dead volcanoes, and some nearly as high as Mount Everest. It can have no life on it of any kind-no trees, no birds, no grass, not even water or wind-only a changeless burning glare, with inky shadows and deathlike silence. The heat reflected by it from the sun is about equal to that of an ordinary tallow candle at a distance of 25 to 30 feet. (For its effect on the ocean, see TIDES).
MOORE, SIR JOHN, the great general, was born at Glasgow in 176 x , and fell at Corunna in r8og. Hewas gazetted to the 5 Ist Foot, and was appointed Com-mander-in-Chicf in Portugal in 1808.
MOORE, THOMAS, the Irish national poet, was bom in 1779, and died in 1852 . He published lis "Trans* Intion of the Odes of Anacreon " in 1800 , and began the "Irish Melodies" - for Sir John Sterenson's music-in 1807. "Lalla Rookh" appeared in 1817, and brouglit him L3000; aud in 1828 he got nearly $£ 5000$ for his "Life of Byronc"

## GENERAL KNOWLED QE.

MOORS are a people of mired descent, a union of the natlve Berbers of Barbary with their Arab conquerors of the $7^{\text {th }}$ century A.D. There are three important dates in their history. In 732 Charles Martel completely defeated them at Tours, and stopped their advance into Europe. In 1492 Ferdinand conquered the Moorish population of Spain, where the Moors had kept the lamp of learning alight during the Cimmerian midnight of the rest of Europe from the 8 th to the 15 th century. In 16 so Philip III. banished them from Spain thus signing the death-warrant of Spanish industrial prosperity. The expelled Noors turned into the Barbary pirates.
Moravian brethren are practically the religious legacy of J ohn Huss.
MOKAY, EARL OF, the reformer and half-brother of Mary Stuart, was born about 1533, and joined the Lords of Congregation in 1558. After Mary's deposition he becane "The Good Regent." He was murdered by a Hamilton in 1570 .
MORE, HANNAH, the religious writer, was born in I745, and diud in 1833. She was a friend of Dr. Johnson, Burke, Garrick, etc. The profits of her writings even during her life-time exceeded $£ 30,000$,
MORE, SIK THOMAS, the idealist and martyr, was born in $1 \$ 80$, and beheaded by Henry VIII. in 1535 , He was a close friend of Erasmus, land succeeded Wolsey as Chancellor. His "Utopia" was two or three centuries ahead of his age,
MORLEY, HENRY, Professor of Engrish Language and Literature, was born in 1822, and was made Professor at University College, London, in 1865. In 1882 he became Principal of Úniversity' Hall.
MORLEY, JOHN, the politician, was born in 1838, and became editor of the " Fortnightly Review " in 1867.
and of the "Pall Mall" in r880. He was elected M.P. for Newcastle in 1883, and was Chief Secretary for Ircland for a short time in 1886 ,
MORAON SECT was founded by Joseph Smith in 1830. They believe in a continual divine revelation through the inspired head of their Church, and they practise polygamy. They accept the Bible as well as the "Book of Mormon," but both are "interpreted by their head. They settled at Salt Lake City in 1848, after Joseph Smith had been-deservedly-shot by a mob; and they owed most of their progress to Brigham Young, who organized them most skilfully between 1850 and 8877 , when he died.
MOKNing Post, the oldest London daily paper, was started in $177^{2}$.
MORFHEUS, in Greek myth, was the son of Sleep and the god of dreams.
MORRIS, SIR LEWIS, the author of the "Epic of Hades, was born in 1834. IIis "Jubilee Ode" of 1887 received a silver medal from Her Majesty, and he was knighted in 1895. Ainong his other popular works are-"Songs of Two Worlds." "Songs Unsung," "Gwen," etc.
MORRIS, RICHARD, the English scholar, was born in 1833, and became Lecturer on English at King's College School in 1869 . He has done a great deal for the study of English, and has edited a number of old books, e.g. "Early English Alliterative Poens," "Legends of the Holy Rood," etc.
MORRIS, WILLIAM, the poet, artist, and socialist, was borm $\ln 183 t$, and became intimate with Rossetti, which turned his attention to design and house' decorating. His "Earthly Paradise" appeared in 1868-70, and "Sigurd the Volsung" in 1877. He was a dreamer of heautiful dreams-most of which were scarcely practicable.
MORSE, SAMUEL, the inventor of the electro-magnet telegraph, was born in 1791 and died in 1872 . As a young man, he studied chemistry, natural philosophy, painting, and designing. He invented his tel egraphy, system in 1832, and exhibited it in 1835. In 1857 tbe representatives of ten countries met at Paris, and voted him 6:5,000.
MOSCOW, THE BURNING OF, which was really the final death-blow to Napoleon's ambition, was in 1812. MOSES lived about 1600 B.C.
MOTLEY, the author of the "Dutch Republic," was born in 1814, and bis first literary efforts were two feeble novels. His great " History of the Rise of the Dutch

Republic", was published in 1856, and his " Ilistory of the United Netherlands "In $1860-65$. He died in 1877.

MozART, the great composer, was born in 3756 , and began his musical career when lie was only four, and wrote a concerto for the harpsichord when he was five. He published his first sonatis in 1763 , and in the following year performed before the English court. IIe composed his first opera, " Mithridates,"
when he was thirteen, and finally settled in Vienna, when he was thirteen, and finally settled in Vienna, where he composed till his untinely death. His greatest work was operatic, e.g. "Don Giovanni," "Nagie Flute," and "Figaro."
MULE, THE SPINNING, which combined the drawingrollers of Arkwright with the Jenny of Hargreaves, was invented by sanuel Crompton m 1775.
Mumaites have been found belonging to the old Persian, Assyrian, Egyptian, Peruvian, Mexican, and other peoples; and even 'natural ' M., i.e. bodies preserved only by the action of dry air, have been found. The process of embalming was carried on by different ranks of operators. The brains were extracted through the nostrils, and the entrails through an incision in the stomach; and then the body was washed, salted, and finally wrapped in a number of balsam-steeped linen bandages, over which was spread glue or plaster.
Munchbausen, Baron von, was a German officer of the 18th century, who had a more than TransAtlantic power of exaggeration. Hence, 'a veritable M.' means 'a notorious liar.'

MUNGO, ST., or KENTIGERN, the patron saint of Glasgow, was born about 584 . During political troubles he fied to St. David of Wales, and one of his followers, called Asaph, founded the Welsh bishopric of St. Asaph.
MUNGOOSE is a species of iclmeumon, and looks like a ferret. (For its habits, see Rudyard Kipling's delicious story of "Rikkitikkitavi.")
MURAR, the French marshal, was born in 1771, and died the year of Waterloo, Under Napoleon in Egypt he became a general of division in 1799 , and married Napoleon's youngest sister in 1800. In 1804 he was made a prince of the imperial house, and in 1808 King, of Naples under the title of 'Joachim Napoleon,' He was through the Russian eampaign with Napoleon, but deserted him after the battle of Leipzig.
MURCIIISON, SIR RODERICK, the great geologist, was born in 1792, and died in 1871 . He served in the Peninsular War, and after the peace of 1815 travelled over various parts of Europe and A ustralia. He was one of the founders of the British Association, and for many years the President of the Royal Geographical Society.
MURDOCH, WILLIAM, the inventor, was born in 1754, and in 1777 got employnent in Birningham with the great engineers, Boulton \& Watt. In superintending the erection of 'Watt' engines in the Cornish mines, he made many discoveries for economizing and simplifying them, and was admitted a partner about 1800 . Hif greatest invention was that of gas-lighting; he lit his own house in Cornwall with gas in 1792, and introduced it into Birminghan in $179^{8}$.
MURILLo, the Spanish painter, was born in 1618 , and owed some of his early success to Velasquez, and some of his later success to having married an heiress.
MURRAY, JOHN, the publisher, was born in $\mathbf{1 7 7 8}$, and becane both friend and publisher to many of the Chief Post-Revolution writers, e.g. Byron, Moore, Rogers, Crabbe, Campbell, Irving; hut he is probahly best known as the inventor of the GuideBook system.
MURRAY, LiNDLEY, the grammarian, was born in 1745, and left America for England after the Declara* tion of Independence. He wrote several other edueational and ethical works, but his greatest work was his "English Grammar."
MUSES. THE NINE, in Greck myth, were the daughters of Memory, and presided over various arts and sciences. They were-Clio, the Muse of IHistory: Euterpe, I-yric Poetry; Thatia, Comedy; Melpomene,

Tragedy: Terpsichoro, Dancing ; Erato, Love Poetry; Polytymnia, Psalmody; Urania, Astronomy; and Calliope, Epic Poctry.
MUSIC (see SOUND). The two ' Fathers of Church Music 'wero St. Ambrose and Gregory the Great (g.v.). Teut onic M. shows the characteristic Teutonic genius for comblaztion, compromise, and co-operition; Keltc M. has benutiful inclodies, but shows the characteristic Keltic incapacity for any effective soclal combination; Stav M. is characteristically sensuous. Notes appear to have been used first in the i2th century; in the 13th century, Adam the Hunch back composed trios and comic operas; in the 14th century Jean de Muris and Dufay developed counterpoint ; in the ryth century Schools of M. began to be founded by Ockenheim and his Belgian followers, and Palestrina and his Italian followers began to make the music bring out the meaning of the words. Modern M. may be said to commence with Scarlatti, the founder of the Neapolitan School of M. in the 16 th century. Arne and Handel dominated the 17th century; Bach, Gluck, Haydn, and Mozart, the I8th; and Beethoven, Weber, Spohr, Mendelssolnn, Wagner, Liszt, Schubert, Schumann, and Chopin, the 1gth. Recently the most famous names are those of Gounod, Rubinstein, Brahms, Dvorak, and Grieg.
MUSSET, LOUIS DE, the link between the classical and romantic schools in modern French literature, was born in 18ro, and made his first 'hit ' in 1829.' He was a friend of George Sand. He died in 1857 .
MYSTERIES, among the ancient Greeks and Romans, were secret religious assemblies. The most famous were the Eleusinian and the Dionysian, but the latter were rather infamous than famous.
MYSTICISM Is really ascribing objective existence to the subjective creations of our own inaginations: It Is characteristic of the chief Eastern religions, Bralumanism and Buddhism.
Mythology is the name of all the old legends which usher in historic times, and which embody the conviction of all primitive peoples about the world around them. The interpretation of them is threefold. First, ethical-that wise men invented stories about gods and punishments as a means of governing; second, physlcal or allegorical-that the stories contain primitive explanations of natural phenomena, c.g. sunrise, earthquakes, etc.; thirdly, historicalthat the old gods were men of bye.gone ages.

N
NADIR SHAH, the famous Persian conqueror, was born in 1688 , and became King of Persia $\ln$ 1736. He completely subjugated the Great Mogul, and carried off む112,000,000 worth of treasure from Dellii in 1739 . He was eventually assassinated by his nephew in 1747.

NAIADS, in Greek myth, are nymphs of fountains and
Nails of Animals, like hair, are really modifications of the skin.
Names, Personal, whether of individuals or of families, seem originally to have had a definite meaning, and to have been given because of that meaning, e.g. Jacob, 'a supplanter.' The Romans were the first to employ surnames, and usually had three names altogether-the praenomen or Christian, the nomen or Clan, and the cognomen or Family. Great conquerors had often a fourth-agnomen, to commemorate conquests, etc., e.g. Cato of vtica. Most surnames denote personal characteristics or occupations, e.f. Black, Long, Miller, Smith.
NANA SAHIB, the Sepoy leader in the Mutiny, was about 30 years old when the Mutiny broke out. He was responsible for the massacre of Cawnpore.
NANSEN, FRIDTJOF, was born near Christiania on Ootober 10, 1861 . In 1882 he went on his voyage into the seas round Iceland and Spitzbergen, to increase his zoological knowledge; and it was this that led him to cross Greenland, which he accomplished in 1888 -from which time he has been recog. nized as one of the great scientific explorers of modern times. He first thought of his Polar journey in 1884, and he natured his plans with scientific caution and deliberation, based on the theory of Polar currents, which is now established. The
"Fram" was specially built to resist lee pressure, and provisioned and equipped with the most minute care, and on June 24, r893, he left Cluristiania. (See Arctic Exploration above.)
Nantes, Enict of, was signed by Ilemi IV. at Nantes on April 30, 1598, and was revoked by Louis XIV. on Octuber 20,1685 , on which about 400,000 Huguenots took refuge in Britain or Holland. The prosperity of the textite industrics in England realiy dates from this influx of skilled and industriuus workers.
NAPHTHA is a sort of general name for inflammable liquids which are produced by the dry distillatiou of organic matter. The largest supplies of native $\AA$. or petroleum come from Pennsylvania and Russia.
Napier, Sir Charles. There were two cousins of this name. One was the General who gained the splendid victories of Meanee and Hyderabad; and the other was the Admiral who captured Acre.
NAPIER OF MAGDALA, LORD, was born in r810, and saw heavy service in India between 1845 and 1849 , and afterwards at the time of the Mutiny. In 1867 he was entrusted with the A byssinian expedition and took Magdala on April 13 , 5868.
NAples, Kingdom of, was founded by Robert Guiscard in rizo, but soon passed from the Norman to the Swablan race. After a most chequered career under Aragon, Spain, Austria, and France, it was united to the Kingdom of Italy in 1860.
Napoleon I., the Man of Destiny, was born on August 15. 1769, at Ajaccio, and was sent to the Military School of Brienne when he was nine years old. Ihe was gazetted as lieutenant of artillery in 1785, and became captain in 1792. His first real success was the capture of Toulon in 1793. In 1795 he saved the Convention from the Paris mob, and in 1796 marnied Joséphine Beauharnais. He commanded the anny of Italy against the Austrians and Sardinians, and won a series of victories, culminating at Lodi. He landed in Egypt in . 1798 , and took Cairo, but his fleet was annihilated in Aboukir Bay by Nelson. Having himself escaped to France, he abolished the Directory, and was inade First Consul. In 1800 he won Marengo and Hohenlinden, and in I 804 he was crowned as Emperor and issued his Code of Laws. In 1805 he won Ulm and Austerlitz, but lost his fleet at Trafalgar. In 1806 he made his brother Joseplh King of Naples, and his brother Louis King of Holland, and won Jena and issued the Berlin Decrees against Britain. In 1807 he won Friedtand, arranged the Peace of Tilsit, and made Jerbue, his youngest brother, King of Westphalia. In 1808 he lost another fleet at Cadiz, Dupont was defeated at Baylen, and Junot at Vimeira. In 1809 Corunna was lost and Wagram won, and Joséphine was divorced. The years 1850 and 1811 were the period of his greatest power. The Moscow Expedition of 1812 cost 475,000 men, and the "Battle of Nations' at Leipzig in 1813 , practically sealed his fate. Wellington took Paris in 1814, and Napoleon abdicated. After ten unonths on Elba, he escaped and was joined by Ney; Ligney and Quatre-Bras were fought on June 16, aud Waterloo on June 18. He died in May, 1821, in St. Helena, and was buried diede, but in 1840 his remains were transferred to Paris.
Napoleon ili., his nephew, was elected President after the Revolution of 1848 , and took the oath of allegiance to the Republic; but in 1852 he revived the National Guard, and a few months later was proclained Emperor. He joined the Crimean War against Russia, and helped Italy against Austria in 1855, but surrendered ignominiousty to the Prussians at Sedan in 1870 . He died In England in 1873, and his only child, the Prince Imperial, was killed in Zululand in 1879 .
NARES. SIR GFORGE, the commander of the "Challenger," was born in 1831, and took part in the Arctic expeditions of $1852 \cdot 54$ and 1975. Tle commanded the "Challenger" during her scientific expedition of $1872-74$.
NATAL owes its name to the fact that it was discovered by Vasco da Gama on Christınas Day, 149i-Christ's ' 'Natal Day.'

Nattonal Dent in 1806 was about $£ 589,746,000$ It was instituted by Willian III. in 1694 . by a loan of £ $\mathrm{x}, 200,000$. At the accession of Anme it had grown to $£ 13.000,000$, and at that of George 111. to more than E100,000,000. At the end of the American War in $17^{8,}$ it was $E_{249,855,000 \text {, and after Waterloo in }}$ 1815 it was $6885,000,000$. In 1887 it was alpont $736: 6$ millions, and in 12g6-thanks mainly to Mr.Goscheriit had been reduced to about $648 \%$ millions. Consols in 1804 were 56$\}$ with iuterest of $\mathcal{E} 56 \mathrm{~s} .8 \mathrm{cl}$, and in I895 were 106 $\% / 5$ with interest of 22115.9 d.
National Gallery uriginated in a eollection formed by Mr. Augustein, and purchased in 1824 for $£ 57.000$. Since that time it has been increased by purchases and by gits. Mr. Vernon in 1847 gave a valunlle collection of English pictures, and 111851 Turner left a number of his own pictures and drawings. In 1871 SIr Robert Peel's collection was bougit for $£ 75.000$, and in 1885 another large purchase was mate.
National RIFleE Assoctation held its first meeting in 1860 at Winbledon, which continued to be the place of meeting for 30 years. In 1890 it was changed to Bisley.
NATIONAL Union of TEACHERS was founded in 1870, to promote the spread of education, to bring practical knowledge to bear on educational legisla. tion, and to unite elementary teachers in a stromg organization.
NATURAL SELECTION, according to Darwin, is the process by which the plants and animals best fitted to survive, do survive, and the Ieast fit dic.
Navy. (See FleEt.)
Nebuchadnezzar, the conqueror of Judah, reigned from about 605 B.C. to 563 B.C.
NECKER, JACQUES, the French financier, was born in 1732, and died in 1804. He was a clerk in a Paris bank, and afterwards accumulated a large fortune as a banker. He was appointed to the Treasury in 1776. His exposure of abuses, made him so many enemies that he had to retire to Switzerland, but he was recalled in 1788 . His removal in the following year led to the storming of the Bastile, and he was again recalled, but he was not equal to the crisis and resigned. His daughter was Madane de Stacl.
NeEDLES used to be made of bone, ivory, wood, and bronze. Steel N. were first introduced into England in Queen Elizabeth's time.
NeGRoes. (Sec Men, Races of, above.) There are at least seven million negroes in U.S.A., and their numbers have caused a very serious "colour" question.
NELSON, HORATIO, was born on September 29, 1758 . and entered the navy as a midshipman when lie was 12. He became lieutenant in 1777, and post-captain in r779. On the commencement of the 'Napoleonic' Wars he was made commander of the " Agamemnon" ( 6.4 guns), and lost his eye at the siege of Calvi. For his gallantry at the Battle of Cape St. Vincent he was made rear-admiral of the blue in 1797 , and lost his arm at Teneriff. In 1798 he annihilated Napoleon's fleet in Aboukir Bay on August 1, for which he was made "Baron Nelson of the Nile." In 1801 he dcstroyed the whole Danish feet at Copenhagen; and on October 21, 1805 , he gave his life for his country at Trafalgar.
NEatESIS, in Greek myth, was the daugliter of Night, and directed the righteous anger and retributive justice of the grods on the insolent favourites of Fortune.
NEPTUNE, the Roman god of the sea, was identified with the Greek Posetdon.
Nereids, in classical nuyth, were the nymphs of salt water, as the Naiads (q.v.) were of fresh water. They were the constant personal attendants of Neptunc.
Nero, the bestial Emperor of Rome, was born in 37 A.D., and came to the throne when lie was only 17. He murdered the heir to the throne, and sibsequently his vile mother, and then set fire to Rome. A successful revolt against his debaucheries and cruelties led to his suicide.
NBTS, Fisifing, used always to be made by hand till about 8820 , when James Paterson invented is uet machine at Musselhurgh.
NETTLE STINGS are caused by the extrenely fine
hairs with which mettles are covered. These hairs grow upon tily reservoirs of a sour cilustie fluid, which is injected by pressure into wounds made by the hairs in the skin of the hand.
NEVILLE'S CROSS, THit BATILE OF, was fonght on October 17, 1346. The Scots were completely de: feated, and King David (Bruce) was taken prisolner. The English army was led by the Archbishop of York.
NEW JERUSALEM CHUKCH, or Swedenborgian sect, believe that Clirist has already effected His Second Coming by the revelation of His Dlvine Word.
NEIMMAN, CARDINAL, was born in 18Or, and was illcumbent of St. Mary's, Oxford, from 1828 to 1843. During this time lee was assoelated with I'usey and Keble in the so-called 'Oxford Movement, and wrote n number of the "Tracts for the Times." It was the last of these that drew down on him the censure of the University, and led to his resighation of St, Nary's. Two years later, 1845 , he became a pervert to Komanism, and was made a cardinal in 1879.
NEWNHAM COLLEGE FOR WOMEN was founded in 1871, and incorporated in 1880.
NEWSPAPERS of an official kind existed in ancient Rome; but the first modern newspaper was started at Franluort in 1615, and a similar one was intro. duced into England in 1622 . The oldest paper in the country is the official "London Gazette," which dates from 1565, and has been published twice a week without a single omission ever since. The oldest daily paper is "The Morning Post," which was started in 1772, but "The Daily Courant" had been started in 1709, "The Publie Advertiser " (Sce JUNIUS above) in 1726, and "The Morning Chronicle" in 1769. "The Times" was started under the name of "The London Daily Universal Register" in 1785, but that cumbrous title was replaced by its present one in 1788. The leading daily $N$. now are all, except "The Tincs" and "The Monning Post," of comparatively recent date-"The Daffy News," $18+6$; " Daily Telegraph " 1855 ; "'Standard," 1857 , Evening daily papers began with "The Globe" in 1803. The earliest provincial paper was "The Norwich Postman" in 1706; "The Newcastle Courant"started in 1711; "The Kentish Gazette" in 1717! "The Leeds Mercury" in 1718. The first paper in Scotland was "The Mercurius Politicus" 111653 ; "The Glasgow Herald " started in 1782; and "The Scotsman" in 1817. The first paper in Ireland was "The Dublin News-Letter" in 1685 ; "The Belfast NewsLetter "started in 1737, aud "Freeman's Journal" in 1763. There are altogether now about 2355 N. being published in the United Kingdom, of which about 200 are 'dailies.' Nearly 500 are published in London, and about 230 in Scotland.

Telegraphic news-agencies were started by Reuter in 1849, and the repeal of the stamp duty in 1855 and of the paper duty in 1861 gave a tremendous impulse to N .

The first American paper was "The Boston NewsLetter" in 1704; "The New York Herald" was started in 1835; "The Tribune" in 1841 ; and "The Times" in I850. The "Allgemeine Zeitung" was started in 1798, and the "Journal des Débats" in 1848.

The editors of the London morning papers receive from $£ 1000$ to $£ 2500$ a year, and of the cvening papers from $£ 600$ to Erooo. For slngle articles "The Times," $^{2}$ "Spectator," "Saturday Review," and "Pall Mall" pay five guincas, "The Times" sometimes doubling the fee; but the average scale is two guincas. Specially retained leader-writers get a retaining fee of £rooo to $£ 2000$ + the ordinary fee for the leaders, and special correspondents get about the same. "The Times" was the first paper printed by steamin 1814. The "Petit Journal" has the largest circulation of any foreign paper in England. George Borrow was the first war correspondent-to the "Morning Herald" in 1839; and W. II. Russell was the first 'Special'-to "The Tlness" in the Crimean War.
NEWTON, SIR ISAAC, the greatest mathematician of modern times, was born in 1642. He cliscovered his Binomial Theorem before the was 22, and established
his doctrine of fluxions before he was 23. Ile published his "Treatise on Optics" in 1704, and his "Principia" in 1687. He was knighted by Qucen Anne in 1705, and died in 1727.
NEY, MARSHAL, was born in 1769, and entered a hussar regiment as a private in 1788; he was a captain by 1794, and a general of division by 1798. Napoleon made him a marshal in 1805 . He won the Battle of Lutzen, and had five horses shot under him at Waterloo. He was executed for treason, having taken the oath of allegiance to the Bourbon dynasty after the abdication of Napoleon.
NIAGARA FALLS, which are now being utilized for 'electricity' (q.v.), are 162 feet high and 1125 feet wide on the American side, and 149 feet ligh and 2100 fect wide on the Canadian. The suspension bridge is about 200 yards below the Falls, and the railway bridge is about 2 miles below.
NIBELUNGENLIED is the German epic of the 12 th century. It contains about 6000 , lines in the Middle High German dialect.
NICARAGUA CANAL is to be about 170 miles long, and to cost about 135 million dollars. It will probably never be finished, or, if it ever is finished, will be destroyed by an earthquake within a month or two. Considerably more than half of the distance is already provided with transport by Lake Nicarngua ( 56 miles) and the San Juan River ( 65 miles).
NICENE CREED was adopted by the Council of Nice ill 325 A.D., as a protest against Arianism, and was confirmed by the Council of Constantinople in 381 .
NICHOLAS I. OF RUSSIA was bom in 1796, and came to the throne in 1825. His fleet took part in the destruction of the Turkish fleet at Navarino; he signed the Peace of Adrianople in 1829, suppressed the Polish revolt of 1830 with great cruclty, and died during the Crimean War.
NICKEL is beconing of great importance owing to the impenetrability of nickel-stcel armour, the superior toughness and elasticity of nickel-steel over the best mild steel, and the freedom of nickel-plated luulls from corrosion and fouling. By far the most valuable deposits in the world are at Sudbury, on the Canadian Pacific Railway.
Nicknames, Regimental. The Life Guards are 'Cheeses,' Royal Horse Guards are 'Blues,' 2nd Dragoon Guards are 'Bags,' 6 th Dragoon Guards are 'Carabiniers,' 2nd Dragoons are 'Scots Greys,' 6th Dragoons are 'Inniskillings," inth Hussars are 'Cherry-Pickers, ${ }^{\text {D }}$ Grenadier Guards are 'Sand-bags.' ist Foot are 'Pontius Pilate's Bodyguard,' 2nd Foot are ' Kirke's Lamb,' 3rd Foot are 'Old Bufts,' 4 nd are ' Black Watch, etc.
NIEBUHR, the Danish historian, was born in 1776, and died in 183 z . In 1796 he became Private Secretary to the Danish Minister of Finance, and then sublibrarian in the Royal Library of Copenhagen. He was appointed Professor of History in Berlin, and his lectures on "Roman History" were published in two volumes in 181x, to which he afterwards added a third.
NIGHTINGALES sing much more in the between lights ' than at night, as owls hunt ; and only the males sing at all, and they sing only while the females are hatching their broods.
Nightingale, Florence, was born at Florence in 1823, and studied the chief nursing systems in Europe before she took her devoted band of volunteers out to the Crimean War. She was consulted by the Americans during the Civil War, and by the French during the Franco-Prussian War.
Nibilist was the name given originally only to the Russian followers of Bakunin and Herzen, but it is now applied to all Russian revolutionists. Their policy is all destructive, and lacks the vitality of a constructive one. Till 1874 they committed little or no violence, bat in that year the police began to interfere with them, with the result that in 1877 about 100 persons were exiled to Siberia; and ever since Nihilism has been synonymous with violence. Amongst the Immediate vlctims were Generals Trepoff, Mezentzoff, and Drenteln, Prince Ǩropotkin, and Conmander Hezking; and in 88 f they murdered the Czar. Alexauder II., by a bousb thrown beneath his carriage.

Nile begins to rise in June, and is at its highest in September, owing its flood to the nelting of snow anong the Abyssinian mountains. The whole fertility of Egypt depends on the anmual Inundation.
NILSSON, CHRISTINA, was born in 1843, and in 1857 attracted the attentlon of a wealthy patron, who sent lier to Stockholm and then to Paris. She appeared as "Violetta' in "La Traviata" in 1 £64, and visited Iondon in 1867 . Her fame rests most on ber - Ophelia' In Thomas's "Ilamlet," and her "Mar: garet ' In Gounod's " Faiust:"
Nineteenth Century Liandmarks, in British political history; are-Slave Trade abolished in 1807; Reform Bill in 1832, Repeal bf Com-Laws in 1846; Jews admitted to Parliament in 1858, Repeal of Paper Duty in 186r, Public Execution stopped in 1868, Elementary Education Act in 1870, Ballot Act in 1872; Factory and Workshop Act in 1878, Primrose League founded in 1881, Franchise Act in 1884, Conversion of Consols in 1888.
NiOBE, in Greck myth, was so proud of her numerous children that she provoked Apollo and Artenis to kill them all, and she herself was turned into a stone which shed tears in summer.
NITROGEN constitutes about four-fifths of the atmosphere, the rest being mainly oxygen.
NITRO-GLYCERINE is made of glycerine, sulphuric acid, and nitric acid; and its explosive force is thirteen times that of an equal volume of gunpowder. It explodes from concussion or from heat, and is exceedingly dangerous to keep.
NOAILLES, DUKE OF, was bom in 1678, and married a nicce of Madame de Maintenant in 1698. In 1735 he commanded the French army in Italy, and served with distinction under Berwick and Saxe.
NOBILITY. (See ARISTOCRACY above.)
NOMINALISM is the philosophic belief of the disciples of Roscellin, that general notions, e.g. such as the notion of 'pig,' or 'sugar,' have no realities corresponding to them, but are merely ' names.'
NONCONFORMISTS. (See DISSENTERS above.)
NORDENFELT, the inventor of the machine gun, torpedoes, and the submarine boat, is a Swede. He was born in 1844.
NORDENSKIOLD, the Swedish naturalist, was born in 1832. He made a number of expeditions to Spitzbergen, Siberia, and elsewhere, and finally in $187^{8}$ he doubled Cape Tchelzuskin, and accomplished the North-East Passage through Behring's Straits to Japan.
NONES, in the Roman calcadar, were the 5 th or the 7 th day of the month.
"March, May, July, October, these are they
Make Nones the seventh, Ides the fifteenth day."
NORFOLK ISLANDERS settled on Norfolk Island in 1856 , being a detachment of 194 persons from "Pitcaim Island" (q.v.).
NORMAN ARCHITECTURE is a round-arched variety of Romanesque. It is generally plain and massire; and the clief examples of it in Englaud are parts of Durham, Peterborough, Norwich, and Canterbury Cathedrals.
NORTH, CHRISTOPHER. (See JOHN WILSON below.)
NORTH, LORD, has the unenviable notoriety of having been the minister who, by his retention of the teaduty in 1770, drove the Americans into revolt and so' into independence.
NORTHMEN began their piratical expeditions as early as the 8th century. In 795 they established themselves in the Faroe Isles and in Orkney, about $840^{\circ}$ they founded the Governments of Norgorod and Kiev in Russia, in 870 they settled in Iceland, in 912 under Rolf they conquered Normandy, and at the same time became nominally Christians. The N. attacked England in two sets of Invasions-first, is pagans, from the time of Egbert to that of Alfred the Great ; and, secondly, as Christians under Sweyn and Cmute.
NORWEGIAN POLITICAL PARTIES are having a severe constttutional crisis, very similar to the Home Rule crlsis in Jreland. The demand for greater independence for Norway Is being energetically pressed by M. Steen and the Liberals, but King Oscar of Sweden has refused to sanction it.

NoUns are ouly of two kinds, comuon and uncommon or proper, but conu1100 N. are subdivided into classnames, abstract-names, and collective-names. A proper N . is merely a label, and has no meanuig of its own.
Novels, i.e, prose fiction, are of considerable antiguity, having existed in a primitive forn among the Grecks; but the novel, in a modern sense, practicallyi dates from the "Ducauseron" of Boccaccio ( q .0. ) in 1358 . The next step is marked by Rabelais and then Cervantes, and the uovel is full born in - Robinson Crusoe." The art was linmensely' developed by Richardson, Fielding, aud Smollett; Goldsmith Introduced a higher moral tone, which was intensified in "Jane Austen." Wieland, Jean Paul, Richter, and Goethe prepared the way for the modern historical or problem novels. The great names of the century are Scote, Thackeray, Meredith, Hawthorne, Hugo, Dumas, Zola, Ebers; Jokni, Tourguenieff, Tolstoi, ete.
Novust Organust, or New instruatent, is the second'part of Bacon's projected "Instauratio Magna.' It was published in 1620: and, along with the "Ad. vancement of Learning," it forms the basis of his inductive philosophy.
numa, King, the second King of Rome, was a philosophic legislator, and was regarded as the founder of the chief religious institutions. He is supposed to have reigned from 714 B.C. to 672 B.C.
Nuathers, LUCKY. The iden of even numbers being unlucky is a very old one, and seems to have arisen from the fact that they can be divided, and division is personified in death. The luckiest odd number is three, because it is the snmallest. In classical mythology. Hecate had 3 -fold power, Jove a triple thunderbolt, Neptune a trident, Pluto a 3 headed dog; there were 3 Fates, 3 Graces, 3 Furies. The number 13. of course, owes its unluckiness to the fact that Christ and his disciples sat down 13 to that Last Supper, and Judas was the first to rise.
Numismatics is the science of coins and medals. Coins are usually arranged in three classes-Classical. European (mediaeval and modern), and Oriental. 'Classical ' includes Greek and Roman; the most interesting Greek coins are civic or regal (bearing portraits), while Roman coins are Republican and Imperial.
Nuncto is a papal ambassador of the first rank, not being a cardinal. A papal ambassador of the first rank who is a cardinal is called a Legate. An "Internuncio" is a papal ambassador at a minor court.
NUNNERY. The first N . is said to have been founded by a sister of St. Anthony about 270 B.C. The first in England was founded at Folkestone by King Eadbald of Kent about 630 A.D.
NURSING is generally done better by women than by men; but if a man does lt well at all, he is almost cerainly better than any woman. The five important qualifications are-Temperance, cleanliness, firmness, gentleness, and patience.

OATES, TrTUS, the pensioned liar of Charles II.'s reign, had a 'record' history. He began as an English Church clergyman, and then became a chaplain in the Navy, but was discharged for misconduct. He then turned Papist, and went into the Jesuit College of St. Omar, but was discharged for inisconduct. Ite then returned to England, and concocted 'the Popish I'lot,' which led to several eminent Papists being executed, and to his being pensioned with $£$ goo a year and rooms in Whitehall. He was eventually convicted of perjury, and sentenced to imprisonment for life, with the pillory five times a year, and to be whipped from Aldgate to Newgate. On the accession of William and Mary, he was, however, unfortunately liberated, and given a pension of $£ 300$ a year.
OBELTSKS were about nine or ten times as ligh as they were thick at the base, and the thickness at the top was not less than half nor more than three. quiarters of that at the base. They were cut nut of a singlo block of stone, and the two largest were
crected in Heliopolis by Sesostris at a licight ot about 180 feet. 'rlite Luxor obelisk in I'aris is 76 teet 6 inclies high, and Cleopatra's Needle on the Thames Embankment is about 68 feet 6 inches.
OHERAMAEERGAU PASSION P'LAY is performed every ten years, on a Sunday, and lasts about eight hours. It used to be a real religious ceremony, but it has been degraded into a social function.
OBSERVATOREES are a very ancient invention, the Egyptian pyranids-if really O - -being probably the oldest still cxisting. The first hlstorical observatory was founded in Alexandrla about 300 B.C., and Enrope did not follow suit till 1472 A.D., when Bernhard Walther built one at Nuremberg. Tycho Brahe (q.v.) built his famous one on Hveer island; near Copenhagen, and another was built at Cassel in 156I. The first University $O$. were the result of Brahe's work-at Copenhagen and Leyden; the Royal O. at Paris dates from 1667 , that at Greenwich

- from 1675, that at the Cape of Good Hope from 1820, and the Lick O. in California from 1888.
OCCUPATtON OF SUICIDES. The occupation which furnishes the most suicides in the United Kingdom is that of soldier. Out of every million soldiers over 500 commit suicide between the ages of 25 and 45 , and over ${ }^{\circ}$ 2300 between the ages of 45 and 65 . No other figures approach these-those for butchers, who come second for the ages 45 to 65 , only being 700 . Publicans are second for the ages 25 to 45 , with 400 . The smallest percentage for the 25 to 45 period is found amongst fishermen-only 43 per million; but that, owing to the number of accidental deaths, is perhaps not quite a fair test. Millers are only 68 per million. The smallest percentage for the 45 to 65 period is amongst gardeners-274 per million.
OCEAN. Five-eighths of the surface of the earth is covered with sea to an average depth of $2 \frac{1}{2}$ miles, and there is contimous communication over almost the entire area. Thus there is easy access to and from the great inland seas of the Atlantic basin and the great border seas of the Pacific basin. The temperature of the sea varies greatly, but gradually, according to depth; and the density or it varies also, according to the amount of evaporation and precipitation. In the Trade-Wind regions, and over inland seas like the Caspian and the Mediterranean, the evaporation is enormously in excess of the precipitation; under the constant rainfall at the Equator, and among the melting ice of the sub-Polar seas, the increase of fresh water decreases the density of the surface. The surface waters at the Equator are, however, much warmer than those in the Polat seas, owing to the greater heat ; but the temperature at the botton of the sea is about the same in both places.

There is another great difference between surface water and deep water. The former is often agitated by wind into the undulating motion which we call 'Waves,' and which are very slightly progressive; deep water is subject to the very important periodical motion which we call 'Tides,' and which travel at a rate of from 500 miles an. hour clownwards, according to the depth of the water. In the open sea the rise and fall of tides is less than z feet, but, as the water is narrowed and shallowed by lind, the rise and fall increases greatly. For instance, a tide of 30 feet is conmon in the Bristol Channel, and of 40 feet in the Bay of Funday, where spring tides rise to 70 and even to 90 feet. The ocean is also subject to currents, which are due to several causes. The principal cause is the unequal density of the sea, owing to difference of temperature and of saltness. The direction of these currents is generally from the Equator, where the surface water is fresh and expanded by heat, towards the Poles; but this causes a return flow from the Poles towart the Equator, The former currents are warm, fog. Japan Stream and Gulf Stream ( $\boldsymbol{q} . \mathrm{v}_{\mathrm{v}}$ ); the latter are cold, e.f. Labraclor Stream. The greatest depth of the ocean is abont 4655 fathoms, northeeast of Japan; intl tho cleepest blue in colour ls where the greatest degree of saltness is found.
O'CONNET.L, DANIFL, the Irlsh agitator, was born in ${ }^{1775}$, and was mainly responsible for the Romat

Catholic Einancipation Act of 1829. Ile began his great agitation for Repeal of the Union in 184r, and was sentenced to 12 months' imprisonment and a finc of $£ 2000$, but the llouse of Lords quashed the sentence. He died in $184 \%$
OCTAVE is the most perfect chord, consisting of six full tones and two semi-tones. It contains the whole diatonle scalc.
OCrROIS is an old French word for the grant of a monopoly by Government to some private person or company, but afterwards came to be used of the foolish and troublesome tax on produce entering the gates of a French town.
ODDFELLOWS, INDEPENDENT ORDER OF, Manchester Unity, was originally a convivlal association modelled on Freemasonry, but it assumed its present form in Manchester about 1813, and spread to U.S.A. about 1819. (See FRiENDLY SOCIETIES above.) It has now in Great Britain an adult nembership of 750,000 , a juvenile membership of 100,000 , a total capital of $69,000,000$, and an annual expenditure of \& $860,000-$ which, however, is nearly $\mathcal{E} 300,000$ less than its annual receipts. In 1893 it was agreed to admit females as well as males to the Lodges. The Grand Master is Mr. Samuel Turner of Bury.
ODE is a lyrical poem or song, composed under strong emotlon which gives it an irregular form, but it is not intended to be sung as a psalm or hymn is. The great Ode writers of antiquity were Pindar, A nacreon, and Horace ; those of modern times are Dryden, Keats, and Shelley.
ODIN, or WODEN, was the god of battle rage, after whom 'Wednesday ' is named. He held his court in Valhalla.
OUOACER, the first 'barbarian' king of Italy after the fall of the Western Empire, reigned from 476 A.D. to 493. He was defeated several times by the Ostrogoths under Theodoric.
ODYSSEY describes the adventures of 'Ulysses ' (q.v.), and is supposed to have been writfen by Homer (q.v.).
OECUMENICAL is the epithet applied, by an impertinent appropriation, to the General Councils of the Eastern Church, and dates from the Council of Chalcedon in 45 I A.D. It corresponds to the Romish appropriation of the word 'Catholic'; of course, a 'Roman Catholic' is simply a gross contradiction' in terms, for a person cannot be both Roman, i.e. a particular sect, and Catholic, i.e. universal.
OEDIPUS, the ill-fated king of Thebes, has been used by ancient and modern poets as the symbol of man's helplessness before fate.
OFFA'S DYKE was a rampart, the remains of which can still be traced from Flintsliire to Monmouthshire, built by Offa, the famous king of Mercia, in the Sth century A.D. He became a patron of the Church, and founded the Abbey of St. Albans. probably to atone for his murder of King Ethelbert of East Anglia.
OFFENBACH, the French composer, was born in 1919, and died in 1880 . He became conductor of the Théatre Francais in 1847, and subsequently opened the ' Bouffes Parisiens.'
OLAF, ST., the great Norwegian king, was friendly both to the Normans and to Ethelred the Saxon. Ie was a strong supporter of Christianity, but was killed by Canute the Great. Since 1564 he has been the patron saint of Norway.
OLDCASTLE, SIR JOHN, Lord Cobham, was burned in 1417 for his zealous adherence to the doctrines of Wickliffe. The power of the Church had been greatly increased by the fact that Henry IV, was a usurper, and owed his throne largely to the Church.
OLD CAIHOLICS are the portion of the Romish Church in Central Europe which accepted the position of Dr. Dollinger against the decree of the Vatican Council in 1870 about the infallibility of the Pope.
OLIPHANT, LAURENCE, the spiritualist, was born in 1829. He travelled in great deal in Russia, Canada, China, and Japan, and eventually took up his abode near Mount Carmel. He died in 1888.
OLIPHANT, MRS., the authoress, was born in 1828, and died in 1897 . She published an inmense number of books-of historv, blography, fiction, etc.-from her "Life of Mrs, Mirgaret" Maitland "in 88.48 to "The Two Maries" $\mathrm{i}_{11} 1896$.

OLIVAREZ, the great Spanish minister, was born in 1587 , and from 1621 to 1643 his power was alnost unlimited. His cruclty was the main cause of the successful Portuguese revolt.
OIYMPIAN GAMES. (Sec ATHLETICS above.)
OLYMPUS was thought by the ancient Greeks to be the highest mountain in the world (thougln it is only 9700 fect), and they thade it the 'Heaven' of their gods.
OMAR 1., the Muhammedan conqueror of Syria and Persia, was the second caliph from Muhanned, and succeeded Abu-bekr about 634 A.D.
OMAR KhayYam, the Persian poet, lived about rioo A.D. His famous "Rubaiyat" is a collection of alrout 500 epigrams in praise of pleasure. A portion of it was excellently translated by Edward Fitzgerald.
OMEGA, or 'GrEat O.' was the last letter in the Greek alphabet, as 'Alpha' was the first. Hence"I am Alpha and Oniega, the beginuing and the ending.'
OMNIbUSES were invented in Paris as far back as 1662, but did not come into use till 1827. They were introcluced into London in 1829, and into New York in 1830 .
ONOMATOPOEIC denotes words formed to imitate sounds; c.g. 'spank,' 'buzz,' 'bow-wow.'
OPALS come mainly from Hungary, and the ideal of their being unlucky seems to have arisen from their brittleness. The stone was formerly believed to possess magic virtues, and even to make its possessor invisible at will. It is supposed to be peculiarly related to the month of October, and to -ignify that 'experience of misfortune which engenders hope. The Emperor of Austria has an opal weighing 17 oz . and measuring 5 in , by $2 \frac{1}{2}$.
OPERA really dates from the 'Daphne' of Rinuccini and Peri at the end of the 16 th century, for which the orchestra was a harp, harpsichord, viol, and lute. The first real ' airs' appeared in the "'Jason " of Cavalli and Cicognini in 1649, contcmporaneously with the erection of the first stage for operas. It was introduced into France by Cardinal Mazarin, and it owes most of its progress to the Germans, especially to Handel, Glick, and Mozart in last century.
OPHIR, the land of 'King Solomon's mines,' was probably part of British Zambesia.
Opte, the painter, was born in $176 x$, and became R.A. in 1788 . He died in 1807.
OPIUM COMMISSION sat from 1893 to 1895 , when it presented a report that the common use of opium in India is moderate, and that excess is rare, and that the use of the drug in such moderation is not harmful. It is either caten or snooked. It is a Government monopoly in India, and brings in about $£ 9,000,000$ a year.
ORACLES were of immense importance in ancient Greece and Rome. The two chief centres were the O. of Zeus at Dodona and those of Apollo at Delphi.

ORANGE FREE STATE was founded in 1835 by Dutch 'discontents' from Cape Colony, when the slaves in the latter were emancipated by Britain.
ORANGEMEN formed their society in 1795 to uphold Protestant religion and political power. They were dissolved in 1835, but revived in 1845. Their great demonstration is on July 12, the anniversary of the battle of the Boyne.
OKATORIO is said to have started in the Orntory of St. Filippo de Neri in 1540 . It was introduced into England in Handel's "Esther," 1720 . Amongst the famous oratorios are Handel's "Messiah "and "Israel in Egypt," Haydn's "Creation," Beethoren's " Momnt of Olives," Spolir's "Last Judgment," and Mendelssohn's "Elijah" and "St. Paul."
ORCHARDSON, W. Q., the painter, was born in 1855He becanc A.R.A. in =868, and R.A. in 18;0. Among his notable pictures are "The Challenge," "Napolcon on Board the Bellerophon," and "The Young Duke." ORDEAL was the primitive test of innocence In England it was generally by fire-for persons of high rank: or by water-for persons of low rank. It was abolished by Henry III. The Chinese have both methods still.
ORDERS, HoLy. Protestant Episcopal churches recognize only 3 Orders-those of bishop, priest,
and deacon; but the Roman Church recognizes 7-4 minor: dourkeeper, exorcist, reader, and acolyte: and 3 inajor: deacon, priest, and bishop. The Greck Church also has major and minor O., but the minor functions are all united in the single office of reader.
ORDERS, RELIGIOUS. (Sec MONASTICISM above.)
ORDNANCE SURVEY was made first of Scotland privately by Generals Watson and Roy in I755, and in 1784 the public survey of the whole kingdonn was entrusted to General Roy. Subsequently, a trigonometrical survey was begun, on the scale of 1 inch to I inile, and completed in 185\%. In 1863 it was decided te have the following scales: for all towns of 4000 lahabitants and upwards, except London, $126 \% 2$ inclaes to the mile, for London 60 incles, for parishes In cultivated districts 25.344 inches, for counties 6 inches. The whole of Scotland and Ireland have now been published on the 6 -inch scale.
O\&ESTES, in Greck uyth, the son of Agamemnon and Clytemnestra, avenged his father by murdering his mother, for which the Furies dechred eternal enmity against him.
ORGANS, of a very primitive kind, lave existed for centuries. Even in the inth and i2th centuries the keys were 4 or 5 inches broad and an ell long. In the i6th century the bellows were much improved, and the pipes were divided into different stops, In the ryth century the wind-chest was invented. The largest organs of the present day have 5 rows of keys for the great organ, the choir, the swell, the pedal, and the solo organ, respectively: and the keys are less than $x$ inch broad. The keys of these large organs have a weight of 30 or 30 lbs . on thein, so that it would be impossible to pliy them without the pneumatic (or some other) lever, which is set in action by a light touch. Amongst the largest organs in the world are those of St. Peter's, Rome; Seville Cathedral: Notre Dame, Paris; and the Albert Hall, London. The latter was built in 1870, and has 5 rows of keys, 138 stops, and about 10,000 pipes.
ORIGEN, the "Father of the Early Churcli, was born in 185 A.D., and died in 254. His father suffered martyrdom when 0 . was seventeen, and he had to support his mother and her six children. He lived the most rigidly ascetic life, and was so looked up to amongst all Christian communities that his bishop became very jealous of him, deprived him of his office, and charged him with heresy. He was even. tually thrown into prison, and tortured to death.
ORPIIEUS, the famous singer of Creek mythology, is said to have introduced music into religious worship. With a lyre given to him by Apollo. he moved beasts and stones, and even charmed the infermal deities, Pluto and Proserpine, into allowing his wife (Eury lice) to leave Hell-on condition that he did not look back to see whether she was following. He did look, and she was snatched away from him back to Hell.
ORTOLAN, the delight of epicures, is a bird of the Bunting famlly, and is a native of the Mediterranean basin. Numbers are caught and fattened 'for the table ' in the Riviera.
OSIRIS, the great Egyptian god, was called "The Lord of Lords." He was said to be the husband of Isis, and personified the sum total of kindly agencies, as Set did of unkindly ones. His soul was supposed to be continually present among men in the Sacred Bull, Apls.
OSNAN DASHA fought with distinction in the Crimean War, but his fame really rests on his magnificent defence of Plevna in the Russo-Turkish War of 1877 .
OSsisN was the mythical Keltic poet to whom James Macpherson attributed the two epics "Fingal" and "Temorn." which lie published in $1762-63$. Minc. pherson alleged that his version was a literal transintion of works transmitted orally in the Gaclic tongue tlll the introduction of writing. but he never produced any original manuscripts, and in 1800 Malcolm Laing, in his "History of Scotlond," exposed mercilessly the whole imposture. After Macpherson's death in 1807, Gaclic versions of the poems were found-in his handwriting-among hls papers, so that he must liave tranclated the Finglish versions into Gaclic after Laing's attack on him.
OSTRACISM, in ancient Athens, was a system of veting
(on 'shells'-ostraca) for the banishment of any one thought dangerous to the state.
OSIRICHES are very ficrec, aud can kick with terrific force for a short distance, but their eyes are very tender. Consequently, they cun easily be kept off by i piece of prickly bush, or their kickes can be avoided by lying down. As the demand for their feathers depends on fashion, only rich farmers can Afford to keep them.
OTT'AWA was chosen as the capital of Canada, partly because it is fairly central, but mainly because it was so small that the large cities wore not joalous, as they would have been of one of their own number. When Australia is federated, the little town of Wentworth will probably be made the capital for the sance reason.
OTTOMAN EMPIRE was founded by Othman in 1300 A.D. on the ruins of the old Saricen. Seljuh, and Mongol powers. Osman's son, Orkhan, conquered all Asia Minor, and Orkhan's son, Soliman, invaded Europe. Muhammed I. and his grand-vizier, Ibrahim created the Turkish navy about 5420 , and Muhammed II. took Constantinopie in 1453. The consequent dispersion of learned Jews and Greeks over central and western Europe was one of the main causes of the Reformation, as they took with them the New Leaming, with its canons of evidence, etc. The O. E. was at its highest under Soliman II. between 1519 and 1566 . The first great defeat by sea was at Lepanto H 11 1571, by the combined Spanish and Venetian fleets; the first great defeat by land was at St . Gothard in 1664 . With the I8th century Russia, under Peter the Great and Catlarine II., was extended to the Black Sea, and became, naturally, the permanent enemy of the Turk. The roth century has seen the gradual curtailing of the Ottoman territory in Europe, and a glorious prospect of the Sublime Porte disappearing from European politics.
OUDENARDE, THE BATTLE OF, was won by Marlborough on July In, 1708.
OUDINOT, MARSHAL, has never had the credit due to him. Massena made him clief of the general staff, and it was he, not Massena, that decided the battle of Mincio. In 1804 Napoleon gave him 10,000 grenadiers, with whom he performed prodigies of valour. He won the battle of Ostrolenka, and it was he that really decided the battles of Austerlitz, Fried. land, and Wagram. (See NAPOLEON above.) He died at the age of 80 , full of honours, having faith fully served the Bourbons from the time of Napoleon's abdication.
OUSELEY, SIR FREDERICK, the composer, was born in 1825, and died in 1889. IHe wrote a great deal of Church music and some useful books on the 'grammar 'of music.
OUTRAM, SIR JAMES, the great soldier, was born $\ln$ 1803, and gained his first distinction amongst the hill tribes of Bombsy. He took part in the capture of Khelat, was clyef commissioner of Oudh in 8856 , and was commanding the 13ritish forces in Persin when he was summoned to aid in suppressing the Mutiny. He joined Havelock at Cavnnpore, and-though of higher military rank-fought under him till Lucknow was relieved by Sir Colin Campbell. He died in I863.
Ovid, the Roman poet. was born in 43 B.C.: and exiled by Augustus in A. D. 8 to Tomi, on the inhos. pitable western shore of the Black Sea. Among his famous works are his "Ars Amatoria," "Metamorphoses," and "Fasti."
OWEN, SIR RICHARD, was born in r8o4, and became Professor of Comparative A natomy at St. Bartholomew's Hospital, London, in 1834 . He was said to be the grentest palacontologist since Cuvier. and to have rivalled Hunter as a comparative anatomist. He was a voluminous writer, and a member of nearly all the learned societies of Europe and North America.
OWEN, ROBERT, the philanthropist, was born in 177r, and died in 1858 . He published his "New Views of Society" in 1812. He made three unsuccessful attempts to carry out his cconomalc theory of Social. ism-one in America, another in Lanarkshire, and the third in Itampshire.
OWENS COLLEGL, Minchester, was founded in

1846, and re-opened in new buildings in 1873, and made part of the Victoria University in 1880. Several additions have since been made, and women have been ndmitted. There are two halls of residence, the Hulme and the Dalton, only for men, the former being conducted on Church lines. There are about rigo students, of whom about 100 are women.
OXFORD UNIVERSITY seems to have grown up in the rath century, though University College is ala to have been founded by Alfred the Great. Origin. ally the students lived in private houses, and met only for study, as in the Scottish Universities to-day. It consists of twenty-one distinct college corporations, of which the most important are Balliol, founded in 1268, Queen's ( 340 ), New (1379), Magdalen ( 1458 ), Corpus ( 5516 ), Christ Church (1546), Trinity ( 5554 ), and Wadhain (1612). Women were admitted to examinations in 1884, but do not receive degrees. The total number of students is rather more than 2000 , the professors about 50 , and the annual revenue about $£ 400,000$. The Bodleian Library is one of the most important in the world. Candidates for M.A. degrees in olden times had to show proficiency in grammar and in birching a boy, for which the boy got 4 d .
OXYGEN was first isolated by Priestley in 1774.
OYSTERS require a percentage of fresh water, alluvial mud in which to burrow for food, and protection from rough waves. The best in the world come from Whitstable, Colchester, Arcachon, Brittany, Ostend, Texel, and Chesapeake Bay.

## P

Pacific Cable Projects were discussed at the Colonial Conference in Ottawa in 1894, when it was pointed out that a direct cable quite free from foreign control would give a great impetus to Australasian trade and be very valuable for imperial purposes. The two rlval routes are from Vancouver via Fanning Island, Fiji, and Norfolk Island to Tweedmouth, a distance of 6730 miles, and vix Hawaii and the Gilbert and Solomon Islands to Bowen, a distance of 6300 miles; but the entire absence of foreign control on the former route more than compensates for the extra 430 miles. The cost is estimated at $£ 2,000,000$, and price per word would be 2s. from Canada to Australia, and 3 s . 3 d . from Britain (the present price being 4 s . 9 d .).
PACIFIC OCEAN exceeds in compass all the four continents put together. occupying $\downarrow$ of the earth's area, and $\frac{1}{2}$ its water surface. Its average depth appears to be greater than that of the Atlantic, and its bed more uniform. Recent soundings to the south of the Friendly Islands give a depth of 4295 to 4430 fathoms (about 5 miles), but the deepest soundings known are 4475 fathoms S. of the Ladrone Islands, and 4655 fathoms N.E. of Japan. On the west coast of America the tide rises usually less than ro feet, and only in the Bay of Panama does it vary from 13 to 15 feet. Balboa, a Portuguese, discovered the ocean in 1513 from the mountains on the Isthmus of Darien, and Magellan crossed it from east to west in 1520-21.
PADEREW'SKI, IGNACE, the pianist, was born in 1860 in Poland, and began to play the piano when he was 3. In 1872 he went to Warsaw, and studied under Roguski and Kiel, and in 1878 he became Professor of Music in Warsaw Conservatoire. From 1884 to 1887 he studied under Teschitzki in Vienna, and made hls début in 1887 .
PaEAN, In Greek, a hymn to Apollo, or other deities, or song in praise of heroes, which was sung before battle in honour of Ares (Mars), and after victory to A pollo.
PAGANINI, NiCCOLO, the great violinist, was born in 1784. In 1805 Princess Eliza, Bonaparte's sister. became his patroness, at Lucca, and when he visited Vienna in 1828 his fame became world-wide. Ile died in 1840.
PAINE, THOMAS, the political writer, was born in 1767. His pamphlet, "Common Sense," and perlodical, "The Crisis," gave hlm a tltle to be considered one of the founders of Ainerican Independence. In $17^{8}$ he was prosecuted in England for his " Rights of Man" (mn answer to Burke's "Reflections on the

French Revolution" $)$, but he escaped to Frauce. IIe lost his popularity there by defending Louis XVI., and was inprisoned in 1793. He remained in France till 1802, and died in America in 1809, where his work against revelation, the " Age of Reason," had lost him most of his friends.
PAINTING, HISTORYOF OXtends back to the igth century B.C., the most flourishing period in Figypt and Greece being between 14co 1B.C. and 525 B.C. in the former, and the 5 th century B.C. in the latter. In both, painting was the handinaiden, with sculpture. of architecture. The celebrated Greck schools were at Aegina, Sicyou. Corinth, and Athens, the chief masters being Cimon, Polygnotus, and Panaenus. Apelles ( 350 B.C.) was the greatest Greek portrait. painter, and Protogenes a great animal-painter. Rome never produced a famous painter in ancient times, though the ancients there seem to have had a wonderful knowledge of anatomy, judging from paintings found in tombs and baths at Rome, Pompeii, and elsewhere. With the founding of Byzantium in 330 A.D, the Byzantine School of Art grew up. It was the parent of the Italian and Rhenish schools. Siena, Pisa, and Florence shared the honours of the Renaissance in the z3th century, led by Guido of Siena, Guinta of Pisa, and Giovanni Cimabue of Florence, with his pupil Giotto. In the 15th century oil-painting was introduced when the masters of religious art, Fra Angelico (of Florence), Andrea Mantegna (of Padua), and Bellini (of Venice), lived, and also Perugina of the Umbrian school. In the 16th century lived Leonardo da Vinci of the Florence school, with Michael Angelo of no school. Raphael Sanzio (school of Rome), Correggio (school of Padua), and Giorgione, Titian, and Paolo Veronese (school of Venice). In Germany there was Albert Durer (147-154). The Spanish sclool was at its best in the $17^{\text {tb }}$ century, when Velasquez and Nurillo lived, Salvator Rosa worked in the Naturalists' school at Naples, and Rubeus and Vandyke in Flanders. Jean Cousin (150r-89) founded the French school, which soon became Italian in method. Rousseau, Millet, and Meissonier are well-known artists. Russian art has made advances since 1850 , and Uhde and Edelfeldt are Scandinavian painters of tbe Igth century.
Palatinate, consisting of the two portions ' Upper and 'Lower,' together formed a division of the old German Empire. In 1648 the 'Lower' was separated from the 'Upper' Palatinate, Bavaria getting the latter, while the former became a separate electorate of the Empire, known as 'the 'Palatinate. In 1814 the Palatinate was split up, Bavaria getting most of it, and Hesse-Darmstadt and Prussia the rest. The name now belongs to the detached part of Bavaria west of the Rhine; and the 'Upper' Palatinate forms another part of the monarchy.
PALISSY, BERNARD, the French artist and philosopher, was born about 1510. After sixteen years of labour he obtained a pure white enamel in I554, affording a perfect ground for decorative art, which, used on pottery, fonns "Palissy.Ware." He left philosophical works too.
Palladium, a wooden image of Ninerva, said to have fallen from heaven, and to have been preserved in Troy. The Romans pretended that Aeneas brought it to Italy and preserved it in the Temple of Vesta at Rome, but some Greek cities claimed it.
PALLISER, SIR WILLIAM, inventor of the projectiles and guns whicb bear his name, was bom in 1830; and he is, the author of improvements in fortifications, etc.
PALL-MALL, THE GAME of, was practised in St. James's Park, and gave its name to the street of Pall Mall in London.
PaLmerston, Viscount, the English statesman, was born in 1784. In 1807 he was Junior Lord of the Admiralty, in 1809 Secretary of War, and in 1830 Foreign Secretary. He supported Catholic cinancipation and the repeal of the Corn Laws. While Foreign Secretary under Lord Melboume, he gained his reputation in conducting affairs. IIe died in 1865 .
PAMIRS, THE, or 'The Roof of the World,' consist of in number of rough plateaux about 13,000 feet high, and are inhabited by Khinghiz nomads. The meeting
point of the threo Empires-Chinese, Russian, and British-is north of Chltral.
PAN, a rural divinlty of ancient Greece, representod as half man, half goat, who invented the 'Pandean pipes. From hlm conues the expression ' panic fear,' as he inspired terror. His festivals were called "Lyycaea " in Greece, "Lupercalia" at Rome.
Panama Cinal, begun by M. Lesseps in r88r, has proved a failure owing to misuse of funds, etc. The length frons ocean to ocean is 54 miles, the minimurn width $7^{2}$ feet, and the average depth 28 feot. Cutting the Cordillems nurd controlling the flood waters of the river Chagres are the chicf obstacles to encounter.
PANUOKA, in Greek mythology, the first woman on earth, sent by Jupiter to mankind in revenge for Prometheus's theft of heavenly fire. Each god gave her a gift fatal to nan. Epinuetheus married her. Other accounts say she had a box full of blessings for man, but when opened they all flew away except hope.
Panstieisar in Philosophy, the doctrine of the identity of God with the unverse, which stands nidway between atheism and dogmatic theism, It assumies the identity of cause and effect, and insists that matter, not less than mind, is the necessary emana. tion of the Deity. The Persian, Greek, and Egyptian religious systems were pantheistic. Spinoza is the most representative pantheist of modern times.
PAPER was first manufactured in Egypt. China, and Japar The Chinese say they invented it in the and century B.C. out of cotton and vegetable fibre. Linen rags were probably first added to the cotton ones by the Spaniards in the 12th century. The first paper manufactory was set up in England in $\mathbf{x 4 7 5}$. and in Scotland in 695 . Blotting, like ordinary, paper is made of rags, fibres, wood (reduced to pulp), and sometimes straw, the sizing being omitted. Copying paper is writing paper smeared with lard and black lead, which is scraped smooth and wiped with a soft cloth.
Paracelsus, emplric and alchemist, was born in Switzerland in 4493 . In the course of his travels he became acquainted with romedies not commonly used by physicians, by which he performed wonderful cures. In $\mathbf{r} 526$ he took the Chair of Medicine offered him at Basel, lecturing there till 1528 . He died in 154 x , having enriched chembistry and medicine with valuable discoveries. He is sometimes regarded as the founder of modern therapeutics.
PARCHMENT is the skins of sheep, shegoats, or other animals, stretched on a frame, separating the flesh and hair from the skin, the thickness reduced by a sharp instrument, and the surface smoothed and dried for use. The name means ' paper of Per. gamos" (Asla Minor), where parchment was first used in 200 B.C. 'Vellum' is prepared from the skins both of kids and of calves,
Pariah is the name loosely applied to any of the lowest class of Hindustan who have, strictly speaking, no caste; but properly apphed it is a Tamil name for the members of a widely-spread race in Southern India of the Hindu religion, though despised by Hindus. Some are servants to Europeans.
PARIS, in Greek mythology, also called Alexander, was the son of Priam, King of Troy, and Hecuba. He was brought up by a shepherd on Mount Ida and married Oenone, a nymph of Ida. He decided that Aphrodite was more beautiful than Hera or Athena, and so she promised him the fairest woman in the world for his wife. His elopement with Helena, the fairest woman of her age, led to the siege of Troy, where he was killed.
PARIS, UNIVERSITY OF, founded in the $33^{\text {th }}$ century. was for long the! centre of learning in Europe. It was suppressed for a time in $\mathbf{1 7 9 3}$, having much declined in power.
PARK. MUNGO, the African traveller, was born in Myry and educated for the medical profession at Edinburgh. After tracing the course of the Gambia (ry93-95). he publlshed his "Travels in the Interlor of Afric.." In 1805 he accepted command of the government expedition to the Niger, from whici he never returned.

PARKER, MATTHEW, Archbishop of Canterbury, was born in r504. After hlls Cambridge course he was appointod eventually King's Chaplain and Canon of Ely, and then, in $\times 5+4$. Master of Corpus Christi College, Cambridge, and Vice.Chancellor of that Universlty. On Queen Mary's accession he was deprived of his offices, but Elizabeth niade him Archbishop of Canterbury. He founded the Antiquarian Society was a collector of MSS., and edited "Chronicles of Walsinghan," etc.
Parliament, as a representative assembly, dates from 1265, when Simon de Montford forced 11 enry III. to issue a writ summoning representatives of counties and some towns. At first the only real busintess was to wote supplies, but the practice grew up of attaching complaints to the money bills, and gradually the money was kept back until the comphaint had been attended to. The officers of P. are the Lord High Chancellor, the Speaker, the Sergeant-at-Arms, the Clerk, and Blinck Rod. The 'Committees are either of the whole house, i.c. an ordiuary sitting ontly with the Chairman of Ways and Means instead of the Speaker in the chair, or 'Of Supply,' 'Select.' 'Standingo' etc. Bills are either public or private, and can be carried by a majority even of y . Two enormously important bills were carried by 1 yote-the Union of Great Britain and Ireland, and the Reform Bill of 1832: and, in matters of such gigantic importance, a majority ought to be large enough to make the opinion of the country quite clear. The Public Education Act was carried by 2 , and tho Liberals were turned out in 1873 by 3 votes. There have also been 'glorious minorities of r.' Mr. Fawcett walked into the lobby alone to protest against the grant of $£ 30,000$ as the dowry of Princess Louise in 187 I -" 350 to $\mathrm{r}^{\prime \prime}$; and in 1875 Dr. Kenealy was "I to 433 " oll a motion about ' the Clainant.' The same decade saw a number of very long sittings- -26 hours on July $3^{5}$ to August I، 1877 ; 21 hours on August 26 and 27, 1880; 22 hours on January 25 and 26, r88x; 28 hours on June 30 to July I, 1882 (at which 251 rish members were sus. pended); $45 \frac{1}{2}$ hours on January $3 x$ to February 1 and 2, 188ı. Every member must preface his remarks with-"Mr. Speaker, Sir." Hats may be worn by members while sitting, but any one who rises to speak or get a paper, etc., must take his hat off. They are also used to keep seats. Any member can clear the House at once by saying that "there are strangers in the gallery."
Parnell, Charles, the Irish politician, was born in 1846، As member for Meath, he organized the ' Home Rule Party,' and becane president of the Land League in $\mathbf{~ 8 7 9 \% . ~ I n ~ 1 8 8 r ~ h e ~ o p p o s e d ~ t h e ~ C r i n e s ~ A c t ~}$ and Land Act, was arrested under the ternis of the former and imprisoned till May, 8882 . In 1883 he formed the National League, and in 1887 he was accused, with others of his party, of complicity with the outrages committed by the extreme Irish National. ist party, but in 1890 he was acquitted of the graver charges against him.
Parry, Sir William, the Arctic explorer, was born in 1790 , and took part in the successful Connecticut River expedition in 18 r 3 . In 18 x 8 he commanded the 'Alexander' in an expedition to the Arctic regions under Sir John Ross; and in the next nine years commanded other expeditions on his own account. to find a north-west passage and reach the north pole. He eventually became rear-admiral of the white, and lieutenant-governor of Greenwich Hospital, and died 1855.
PARSEES are the fire-worshipping followers of oforoaster. settled, as successful merchants, In Bombay, Surat, etc. Their deity is Ahurd-Mazda (Ormuzd).
Parthenon is the celebrated Grecian temple of Athena, on the Acropolis of Athens. It is built of marble, and served as a Christian Church aurd then a mosque, but was made useless by an explosion of gunpowder whicl the Turks phaced in it in $\times 687$. The best bits of sculpture are now in different European collections.
PASCAL., BLAISE, the Freoch philosopher aud mathematiclan, was born in r623. At the ake of sixteen he wrote a treatise on conic sections which astonished

Descartes, and, by the tiune he was eighteen, his liealth was ruined. In 1647 he linvented a calculating machine and made discoveries about the equillbrium of fluids, etc. Theu he came under the influence of the Jansenlsts, Arnauld, and others, and lived from 1654 much at the Monastery of Port Royal. Ilis famous "Provincial Letters" were written $\ln$ Arnauld's defence. His "Penseces" were published after his death in 1662.
PaSthur, Louis, the French chemist and physicist, was born in 1822. While Professor of Physics at Strasburg he devoted much time to the subject of fermentation; and in 1863 became Professor of Geology, Chemistry, and Pliysics, at the Ecole des Beaux-Arts, Paris, He has achieved success in checking hydrophobia by inoculation, and opened a "Pasteur Institute" in Paris, where his patients could be received.
PASTORAL POETRY has generally flourished in highly corrupted, artificial states of society. Theocritus, the first pastoral poet, protested against the licentiousness of Syracuse ; and Virgil wrote his " Bucolics" and "Eclogues" in the corrupt Roman court. In the 16th century Sammzaro wrote "Arcadia," Tasso his " Aminta," and Guarini his "Pastor Fido" ; and, soon after, were written Spencer's "Shepherd's Calendar," Sidncy's "Arcadh," Fletcher's "Faithful Shepherdess," Shakespeare's" As You Like It," and Milton's "Comus." Ramsay's "Gentle Shepherd " (I725) was the last good dramatic pastoral.
Paterson, William, financier and founder of the Bank of England, was born in 1665. In 1694 he pro. posed and founded the Bank, and next year constituted the Darien Scheme. He warmly advocated the Union of England and Scotland (1707). He died in 1719.

PATMORE, COVENTRY, the English poet, was born in 1823. His reputation was established by the publication of "The Angel in the House," in four parts, 1854-63.
Paton: Sir Noel, R.S.A., the historical painter, was born in 1821. He attracted attention by hls outline etchings illustrative of Shakespeare and Shelley, exhibited his first picture, "Ruth Gleaning," in 1844, gained a premium at the Westminster conrpetition for hls fresco "Spirit of Religion," and a prize for "The Reconciliation of Oberon and Titania," and "Christ Bearing the Cross." "The Pursuit of Pleasure," "Home," "Mors Janua Vitae," "The Man with the Muck-Rake," etc., are known by engravings.
Patrick, ST., was born about 396, probably at Nemthur 'on the Clyde. He was sold as a slave to the Irish Picts, escaped home, prepared himself for the priesthood, was ordained bishop, and went back to convert Ireland. He wrote his confessions and a letter to a Welsh chief named Corotic., He died probably about 469 .
PATTI, ADELINA, the slnger, was born in 1843, and in 186 inade a brilliant debut at Covent Garden in the parts of 'Anina,' 'Violetta,' 'Zerlina,' and ' Martha.' In 1868 she married the Marquis de Caux, but was divorced from hin, and married Signor Nicolini.
PATTISON, MARK, the English writer, was born in 18I3. He won the Denyer Theological prize at Oxford $\ln 1853$; became Tutor of his College (Oriel), and in 186s rector of Lincoln College. He contri. buted to the famous "Essays and Reviews," edited "Pope's Epistles and Satires," a memoir of Milton in the "Men of Letters," etc. He died in 1884.
PAUI:'S, ST., CATHEDRAL occupies the site of a church which Ethelbert built in 6ro, and which was burned down in 108\%. The next building was also burned in 1137, 1444, 1561, and utterly destroyed in 1666. Sir Christopher Wren rebuilt it by order of the Government of Charles II., between 1675 and 1710.
PAYN, JAMES, the novelist, was borm in 1830. He edited "Chambers's Journal" in 1858, and the "Cornhill Magazine" in I882, and he has wrltten "Lost Sir Massingblrd," "By Proxy," "The Talk of the Town," and "The Luck of the Darrells," etc.
PEABODY, GEORGE, the American philanthropist, was bom in 1795. He gave $\mathcal{E 0 0 , 0 0 0}$ to establish a free library ln his native town of Danvers (Massachusetts). $£ 200,000$ to found a llbrary and an institute of art
and science at Baltimore, and $\mathcal{C} 500,000$ to the poor of London, for which he reccived the freedon of the city, and declined a baronetcy.
PEARL. The chief pearl-oyster fislieries are those of Ceylon and the Persian Gulf toycther. These of Ceylon are a Government monopoly, but they sometimes fail. The best pearls are found about Ceylon, Persia, and other eastern coasts, in the Sulu Archipelago, off Bomeo, in Australian seas, the Gulf of Mexico, and California. Scotch pearls were famed in the Middle Ages, and have been revived. The pearl fisheries of Britain are practically neglected, though pearls were got from the fresh-water mussels, but river pearls are sought in Germany, China, and United States. Excellent artlficial pearls are made by the Parisian Diamond Co. in London.
PEASANTS' WAR was an insurrection which spread over Germany iu 1525 , caused by religious fauaticism, and the long oppression of the feudal customs and priestly tyranny.
PEEL, SIR ROBERT, the statesman, was bom in 5788 , went to Oxford, and took his degree with double first-class honours, and ia 1817 lie became nember of Parliament for the University. Ile passed the Roman Catholic Relief Bill and New Metropolitan Police Act. In 1842 he reduced the corn-laws, imposed income tax, and revised the tariff, while in 1844 land 1845 he passed his famous Ienglish and Scotch Banking Acts.
PEERS are created by the Sovereign, and the titles are hereditary except in the case of bishops and lords of appeal. At the union with Scotland it was arranged that the Scottish peerages should rank after the then existing English ones, according to degree, and that the Scottish peers should be represented in Parliament by only a portion of their number, and a very similar arrangenent was made at the time of the union with Ireland. The Lords Spiritual include the 2 archbishops and 24 bishops. The Lords Temporal include hereditary peers of Great Britain, representative peers of Scotland and Ireland, and Lords of Appeal in ordinary. The Scottish representatives number 16, and the Irish 26 ; and there are 4 Lords of Appeal. A new peer, or one taking new rank, unst be introduced by two peers of his own degree, accompanied by the Earl Marshall, the Lord Great Chamberlain, the Garter King of Arms and Black Rod.
I'ELAGIANISM, the doctrine of Pelagius (who came to Rome in the 5 th century), inclindes a denial of original sin, the maintenance of frec-will, and the merit of good works, and the power in man to receive or reject the gospel. In 417 and 418 A.D. the Council of Carthage condemned the doctrine, as did the Council of Ephesus in 43 A.D. Though Augustine and Jerome condemned Pelagius and his doctrines, the latter lived a life of sanctity and purity. His views minimize the effect of the Fall, and unduly exalt man's natural ability, according to present day criticisms.
Pelissier, Jean, Marshal of France, and Duc de Malakoff, was born in 1794 . He served in Spain, the Morea, and Algeria, and iu 1855 was Commander-inChief in the Crimea. At the fall of Sebastopol he received his Marshal's baton. He died in 1864.
PEN has been used since early times, first as a metallic stilus for incising letters. Both Romans and Greeks used a hollow reed, as is used in Eastern countries now. Quills were possibly used in the $5^{\text {th }}$ ccntury until, in $\mathbf{8 0 3}$, Mr. Wise made steel ones, costing half-a-crown at first, but sixpence later. Fountain pens were invented by Joseph Bramah, the Stylograph, patented by Cross, being the best.
PENINSULAR WAR was caused by; Napoleon's proposal of the partition of Portugal, in order to place hils brother Joseph on the Spanish throne. Sir John Moore's retreat to Coruna, and death there, and the formation of the celebrated lines of Torres Vedras by Sir Arthur Wellesley (afterwards Duke of Welling. ton), and his battles at Salamanca and Vitforia were the chief features of the war from 1808 to 1813 , and it was ended by the victory of Toulouse in 1814.
PENITENTIAR PSALMS are the 6th, $3^{2 n d}$, 3 Sth, 5 Ist, roand, 130 hh , and 143 rd .

PEN.N, William, the founder of Punsylyauin, was born in 1644. He became a Quaker while at Oxford, and in 1668 lie appeared as preacher and nuthor of in essay called " Ilie Sandy Foundation Slazken," and beiug lmprisoned for it, wrote his celebrated "No Cross, No Crown" and "Innocency with her Open Face." In 168 a he laid the foundations of his coluny, and in 1685 he nttended the Court of James 11 . procuring a general pardon for Quikers and repeal of religious penalties.
Pentareuch. The evidence that Moses wrote it is cunsiderable. One element in it is partly historical and manly legal, nother (the Jehovistic) is almost all narratlve and historical, and a third elencut is purcly legal, the giving of the Law:
PEOPILE'S PAIACE wis opened by Iler Mijesty, May. 887 . It is in Mile- End Kond, 1 .ondon; nud it provides amusement and instruction for the popuIation of the East End. It began in the Berumont Institute, founded by Mr. J. T. Beaumont, and Besant's novel-m" All Sorts and Conditlons of Men'" -raised the funds considerably. It provldes a large concert-hall, library, reading-rooms, gymilasia, swimming baths, refreshment rooins, trade shops, technical schools, cte. The evening classes have an average attendance of nearly 1000. A grent cleal has been done for the Institution by the Drapers' Company.
PEPIN was the name of two Frank rulers of the 8th century. r. Pepin of Heristal, after the death of Dagobert II., ruled with i despotic sway. 2. Pepin le Bref, son of Charles Martel, was crowned in 752, and defeated the Longobards in Italy, giving the lands he conquered to the Holy Sce, and so originating the temporal power of the Popes. His son. Charlemagne, stirted the Carlovingian dynasty.
PEPYS, SAMUEL, born in 1632, is fantous for his "Diary" (1659-69), which gives an excellent picture of contemporary life and history of the Court of Charles II. He was Secretary to the Aclmiralty during the reigns of Charles II. and James II.
Pfracy is the name of the family who came to England with William I. Richarrl de Percy helped to extort Magna Charta from King John in 12:5; and Henry, Lord Percy, was Marshal of Eugland at the corona: tion of Richard II., but he fought against hin and Henry IV., and he and his son 'Hotspur' were killed while fighting ngainst IIenry. II is grauclson Henry fell at St. Albans (1453), and the latter's son fell at Towton. Josceline, the eleventh Earl, died without a son, so the present Duke represents the female line of the house.
PERFECTIONists, popularly called 'Free-Lovers,' were an American sect founded in 1838 by John Noyes, who took upon himself the restoration of the primitive Christian ideal. All property was thrown into a common stock, all prayer and religious service stopped, and family ties broken up, at first ; but in 1879 the public demanded that it should all be stopped. Marriage and family life were introducet, and the society was incorporated is the Oneid Community, Limited.
PERFUMES were much used by the Egyptinns, Hebrews, Phœenicians, Assyrinns, and Persians, ind, in the Middle Ages, by the Frencls and Italians. Nowadays they are made chiefly in London and Paris, and the south of France, at Cannes (rosc, tuberose, etc.), Nimes (thyme, rosemary, and lavender), and Nice (violet and mignonctte). English lavender is cultivated at Mitcham, in Surrey.
PERICILES, the statesman, and the finest of the ancient Greeks, was born about 49.4 B.C., and in 449 B.C. becamc virtual ruler of Athens, after Cimon's death. He was Commander-in-Chief during the PeloponHesian War, begun in R.C. 43I. IIe died In B.C. 429 . His character was distinguished by freedom from prejudices, hlgh moral toue, and intellectual breadth.
PERIODICAIS were first puhlislied In France, the "Journai des Savants" being issucel in '1665, The most famous French literary perlodical is the "Revue de Deux Mondes", begun in 1829 . The first English one was apprarently "Weckly Memorials for the Ingenious." 168 r . In 1802 a new eri in criticism began with the "Edinhurgh Reviow." The "Tatlor," "Spectator," and "Gentleman's Magazine" were ill
sucessful magnzines, It is impossible to emunernto those of the presint dily. There are legrions of them-good, bad, and indliferent.
Peripatetic Pitilosopily, the philosophy of Aristotle and his followers was so called, it is believed, hecause he waiked up and down while expounding his doctrines (Greck peri, itbout; patcin, to walk). Ife said the idea of thing is not a separate existences from the thing itself, but is related to it only as form to matter, i.e. as actuality to potentinlity. And is there is formless matter, so there is pure form, which is the eternal Being, or, as Aristotle says, the first or printe mover.
Perpetual Motion is a problem which must be solved by the invention of a machine which slaid linve the principles of its motion within itself. It has yet to be done, because an object being kept constantly noving.by outwird power is not the sime as an object which moves perpetually of its own accord,
PERSECUTIONS. The first was carried on by Nero ( $64-68$ ), the second by the Emperor Domitian ( $95-96$ ), the third loy Trajan (begun roo), the fourth under Marcus Autelius ( $16 \mathrm{x}-\mathrm{I} 80$ ), the fifth under Severus (begun 197), the sixth under Maximian ( $235^{-23}$ ) , the seventh (begun 249), under Dccius (the first general one), the eighth under Valerian (259), the ninth under Aurelian ( 274 ), the tenth under Diocletian (303). They continued off and on till 313 .
IERSEPHONE, in Greek mythology, diughter of Jupiter and Ceres. She was worshipped in Attica and Sicily. Pluto carricd her to the infernal regions as his wife, giving her every spring and summer in the world.
PESSIMISM is the doctrine that mantains the most unfavourable, morbid view of everything in uature, and asserts the necessity of abnegation and self-sacrifice as the only good.
pestalozzt, Johann, the Swiss philanthropist and educational reformer, was born in 1746. He devoted his time and substance to the children of paupers until want of means necessitated his having pupils who paid him. The grand principle he followed was that of driwing out the thinking and feeling powers of a child, instead of making it a passive recipient of facts.". His novel " Lienhardt and Gertrud" exerted much influence.
Peter the Hermit, the monk of Amiens, lived at the end of the isth century. He distinguished himself by his personal courage at the storming of Jerusalem. He founded the Abbey of Noimontier, and clicd its first Superior in 1115 .
PETER I. ('The Great '), Emperor of Russia, was born in 1672. At first, his sister Sophia, acting is regent for his brother Ivan and him, did her best to ruin Peter, but in 1689 he had her shut up in a convent. Ife created a uivy, and wrested the Baltic provinces from Charles XII. of Sweden. He founded schools of navigation and mathematics, and encournged agriculture and foreign commerce. He died in 1725 .
PETER'S, SAINT, the Cathedral of Rome, the largest church in Christendom, was begun in r506, built by Bramnnte, Miclanel Angelo, and otwer architects, finished in 1626, and dedicated to Pope Urban VIII. The colonnade was begun 1667, and the sacristy in 1780.
Petition of Right was assented to by Charles I. in 1628, and is only second in importance to Magna Charta. It demanded that-(I) No freeman should be forced to pay a tax, loan, or benevolence, but hy Act of Parliament ; (2) no freeman should be illegafly imprisoned; (3) that soldiers and sailors should not be billeted on private persons; (4) commissions to punish soldiers and sailors, by martial law, should be abolished.
PETRARCH, FRANCESCO, the Italian poet and scholar, was born in 1304 . It was at A vignon, in 1327, that he first saw the Liurn who exercised so great an influence on his llfe and lyrics. It is believed that she wash the wife of Hughes de Sade, when Petrarch saw lier, and that she died faithful to her lutuband in 1348. In i3.as the poet wns called to Rome to reccive the laureate crown, awarded for his 1 ,itin poem of Africa, an epic on the Punic Wars., He recordet I-aura's cleath on his copy of "Virgil," and in his "Trlunplis,"
tupon which his fame now rests, with lis other poems, "Souetti e Cmuzoni in Vita e in Morte di Laura."
PMAROS, a lighthouse, the name being derived from the island of Pharos, how part of Alexandria, wherc the lighthouse of Alcxandrla was built 300 years B.C. It was considered onc of the wonders of the world in olden times.
PHIDIAS OF ATHENS, the famous Greek sculptor, was born about 490 13.C., and lived in the time of Pericles. Anong lis works were three statues of Athena (in the Acropolis of Athens when Pausanius lived), one of which was in bronze, another (more fanous) in ivory and gold, and a third in bronze, called the 'beautiful, ' on account of its perfect proportions. One colossal statue by Phidias, of Jupiter at Olympia, ranked for its beauty as a wonder of the world. It was destroyed by fire, at Constantinople, in 475 A.D.
PHILIP 1I., King of Macedon (the most famous of the Macedonian kings of that name), was born in B.C. 382 and came to the throne in 360 . He was a man of few scruples, and of the highest talents for war and diplomacy, so he soon reorganized the army, and extended his kingdom. By 352 he had made himself master of Thessaly, and he then equipped a navy to harass the Athenian commerce; and by 346 he was crowned Protector of the Grecian faith. He defeated Demosthenes at the battle of Chaeroneia in 338 B.C., and was then acknowledged chief of the Hellenic world. Hc was murdered in $336 \mathrm{~B} . \mathrm{C}$.
PHILIP II. OF SPANN was born in 1527 , and married Mary of England in 1554, and her troops helped to win the battle of St. Quentin, against the French, in 1557. In 1566 the revolt of the Netherlands led to their separation from the Spanish crown and the formation of the Dutch Republic; but in 1580 his troops, under Alva, subdued Portugal, of which Plilip became sovereign. In 1586 he declared war with England, and in 1588 his "Armada" was destroyed. He died in 1598.
PHILIPPICS, the name given to the three famous orations of the Greek orator, Demosthenes, against Philip II, of Macedon (352-342 B.C.). It also applied to Cicero's fourteen speeches agninst Antony, and has, therefore, come to signify a general invective.
PHILLIP, JOHN (one of the greatest colourists of the British school of painting), was born in 1817. His early pictures consist mainly of portraits and subjects fronn Scottish life, c.g. "The Catechism," "Drawing for the Militia," "The Scotch Washing," etc. ; but after residing in Spain for a time he painted the pictures to which he owes his fame, such as "Life among the Gipsies at Seville," "The Letter-Writer of Sevllle," "Death of the Contrabandista," etc., and, in 1860, "The Marriage of the Princess Royal."
PHiloLOGY, COMPARATIVE, treats of the relationships between words of various languages; and a comparison of the chief languages of Europe and Western Asia has led to the conclusion that they all spring from a common source. The proofs of kinship amongst languages may be gathered either from the languages themselves or from the history of the people who speak them; and those gathered from the languages themselves are common vocabulary, conn. mon inflexions, and common syntax.
Philosophy is the science that deals with the general principles which form the basis of the other sciences. For practical lpurposes its history may be treated as beginning with the Greeks, Socrates having first brought the term into general use. Thalcs fabout 600 B.C.) was at the head of the Ionian school, the other school being the Eleatic, which was founded by Xenophanes, Parmenides and Zeno being the two other important members of it. Heraclitus ( $520 \mathrm{~B} . \mathrm{C}$. ) and Empedocles ( 440 B.C.), both advanced the science. After the Socratic school (including Cynics, Cyrenaics, and Megarians), came the system of Plato and Aris. totle, and, in the declining days of Greece, those of the Stoics. Epicureans, and Sceptics. In the 15th century Modern Philosophy began with the two systems, empiricism (Bacon and J,ocke), nind idealism (Des. cartes and Spinoza): Then followerl the materialism of Helvetlus, d'Holbach, La Mettrie, etc. ; opposed hy the idenlism of Leibnitz and Berkcley, with, shortly after, Wolfi. The Scottish or 'common
sensc" school of philosoply was headed by Reid (1710.96) who was followed by Dugald Stcwart. Kant (1724-1804) 111ay be regarded as the father of the igth century philosopliy, for he sousht to unite the realistic and idealistic schools. His opponent was Jacobi. Fichte, Schelling, and Hegel were respcctively subjective, objectivc, and absolutc idealists. Schleiermacher ( 1768.1834 ) followed in the steps of Plato, Spinoza, and Kant; and Schopenliaver (1788-1860) developed a doctrine betwecn Kaut's idealisin and the realism of the present day. Royer-Collard, Reid's disciple, founded an eclectic and spiritualistic school which Cousin built up, when Materialism (Cabanis, Broursais, etc.) and Positivisin (Auguste Comte) came to the front. In Great Britain Sir James Macintosh (1765-1832) and Sir Willian Hamilton (1788-1856) represented the Scottish school. The associational psychology of Priestley and Darwin found representatives in the Igth century in James Mill and John Stuart Mill, and Herbert Spencer tried to widen their principles into the doctrine of evolution. Anong the chief leaders of philosophy opposed to the English school of empiricism are the late T. H. Green, Hutchison Stirling, Edward Caird, Jonathan Edwards, Thomas Uppan, and Francis Wayland, the last three transatlantic philosophers.
PHONOGRAPH, PRINCIPLE OF, is very simple. All sound is produced by vibrations of air, and therefore any sound can be reproduced by reproducing its vibrations. The phonograph was invented by Mr. Edison (q.v.) in 1877 .
PHOTOGRAPHY (Greek, phos, photos, 'light," and grapho, 'I write'), was first discovered in 1814, when M. Niepce, in France, discovered a method of producing permanenf pictures on metal plates by means of the camera obscura; while in 1839 Daguerre produccd the Daguerrotype. In 1841 Henry Talbot patented his process of obtaining pictures in the camera by the agency of light on paper coated with chloride and nitrate of silver, and he could "fix them also. Mr. Scott Archer substituted collodion for paper, and in 1856 collodion dry plates were introduced by Dr. Norris. In 1871 Dr. Naddox discovered the gelatine dry-plate process, which Bennet perfected in 1878 , and which has been generally used since 1880. 'Photo-Lithography' (reproducing copies of a photo from a lithographic stone), was invented in 1859 by Asser.
PHRENOLOGY is a development, partly scientific, partly cmpirical, of the idea that a correspondence exists between the physical structure and the psychical and mental traits of men and animals. Larater, Dr. Gall, and Dr. Spurzheim in turns, gradually developed the science, Gall definitely started it, Spurzhein arranged it systematically, and Dr. Combe of Edinburgh advocated it. At Piris the theories of the two former were inrestigated, and the famous Cuvier reported unfavourably upon them. Spurzheim died in 1832 , having gained Dr. Combe as a disciple in 1814 , when he lectured in Britain.
PHYLLOXERA, a plant-lice, of which one kind lives upon oak trees, and another upon the vine, Of the latter there are two types, one gall-inhabiting and onc root-inhabiting. The proper home of the grapephylloxera is North America, but in IE63 it was found in England and France, from where it spread to all the grape-growing countries of Furope; and in 1885 it appeared in Australia and Algeria; and it does much damage also in Cape Colony nowadays. The vine, when attacked, shows external signs in the second year by the sickly, yellow appearancc of the foliage and by stunted growth.
PHYSICIANS, ROYAL COLLEGF OF (London), owes its origin to the exertions of Thomas Linacre, one of the physicians of Henry VIII., who, through Car. dinal Wolsey, obtained letters patent from the King In 1518 incorporating himself and other physicinns as one body. Their chief privilegre was the prohibltion of any one from practising as ? physician in London, or within seven miles round it, except by a license obtnined from this corporation. Various charters were subsequently granted to the body. The college is now representcd by one member in the Genernl Medical Council established in 1858. The Royal

College of Physiciaus, Iidinburgh, was incorporated by Koyal Charter in 186n.
Pirystognosey was first attempted by Aristotle. Jle observed that each animal hard a special predominant instinct (e.g. the cunning of the fox); and he conl. cluded that men whose features resemble those of certain animals will havo similar qualities to those animals. Baptista della Porta, in his work "De Hymana Physiognomina" ( 15 86), revived this theory. anh the French painter Lebrun adopted and illus. trated it in the next century, while the German paiuter Tischbein followed his example in the r8th century. The physiologist Camper compared the heads of different types of humanity, and tried to deduce the degree of intelligence belonging to each type from the size of the facial angle; but Lavater was the first to develop an elaborate system of physiognomy which incluled the relations between man's physical and moral nature. It is an interesting subject, but one in which general rules are alnost useless.
Phystology as a science may be said to have begun under Aristotle ( $384 \cdot 3 \approx 2$ B.C.). The Alexandrian school, hourishing about 280 B.C. under the Ptolemies, obtained opportunities for acquiring physiological knowledge through the investigation of the bodies of executed criminals. Erasistratus thus threw much light on the physiology of the nervous system; and Herophilus made important observations on the pulse, and discovere: the absorbent vessels. Thers was a period of decline before Galen, who lived in the and century after Christ, and another after his death (though he advanced the science), until in 1543 Vesalius investigated the anatomy and structure of the human body; and in 1619 Harvey discovered the circulation of the blood.
PiLGRiMAGES were made in olden times to certain Egyptian and Syrian temples, and the chief temples of Greece and Asia Minor swarmed with strangers ; but It is in Christianity and Muhammedanisin that the practice attained its greatest development. The first Christian pilgrimages were made to the graves of the martyrs, and by the beginning of the th century the custom had become so general as to be abused. Throughout the Middle Ages many pilgrimages were made, especially to Jerusalem, and the Crusades (to which they led indirectly) were only armed pilgrimages. The shrine of Our Lady of Loretto near Rome, that of St. James of Compostella in Spain, of St. Martin of Tours in France, and of St. Thomas Becket in England were at different times sacred spots, to which innumerable pilgrims resorted. After the Reformation, the practice fell gradually into abeyance, but Romanists still make pilgrimages to the Holy Coat of Treves, to Lourdes, Iona, and Holy Island. In the Greek Church Mount Athos is the shrine of pilgrimaze, and Mecca is the resort of Muhammedan pilgrims.
Pindaragreatest of the Grecian lyric poets, was born about 522 B.C. He was the pupil of Lasus (founder of the Athenian school of dithyrambic poetry). He composed songs for many princes of the Greek states, and practised all kinds of lyric poetry and odes in honour of the victors in Grecian games, which are the only works extant of his. They are the "Epinicia."
PiNero, A. W., the clramatist, was born in 1855, and his first piece was "Two can play at that game." "The Magistrate" appeared in 3885 , followed hy "Sweet Lavender," "The Second Mrs. Tanqueray," and "The Notorious Mrs. Ebbsmith," besides sereral less popular prodlactions.
PiNS. It is calculated that from 50 to 60 million pins are made every day in England alone. One some. times sees a bent pin, but never a breken or worn-out pin. Where do they all go to? Probably several millions are 'lost' every day.
PIPES. TOBACCO, are made of clay (found in the isle of Purbeck, Dorsetshire, and at Newton Abbot, Devonshire), of meerschaum (a plastic magnesian stone), and of briar-root, a kind of heath. Vienna is the centre of the meerschaum plpe manufacture. Sometlmes the stem is made of wood, the Malialeb cherry, and mock orange of Hunkary, and the Jessamine sticks of Turkey being tho best. Indian
pipes of carved soapstone nud wood, or entirely of cliy, have been found In the ancient mounds of the wild west of Anorica.
PISA, 'HHE LEANING TOWER OF, is of white marble, cylindrical in shape, and ornamented on the exterior by a succession of arcades froll base to sumnit. Its height is 179 feet, and it deviates 13 feet from tho perpendicular, owing to the sinking of the foundation soon after it was begun to be built. Another building is the Baptistery, in which there is a most wonderfil echo, and the Camp Santo or cemetery is the most remarkable structure of the kind in existence, consisting of a court surrounded by arcades of white marble, sculptured and frescoed, and it is full of beautiful monuments.
PISISTRATUS, 'tyrant' of Athens, was bom about 612 B.C. Ile was the patron and benefactor of the poor advocating civil equality and a democratic constitution, and by virtue of that position was able to make himself master of the Citadel in $560 \mathrm{~B} . \mathrm{C}$. Though the Greeks called him 'tyrant,' he was wise in his rule, and though twice driven away, he erected public buildings and established a public library in Athens. He died in 527 B.C.
Pistol was so named from being first made at Pistoja, and was dirst introduced into England in $\mathbf{1 5 2 1}$. The 'dag' mentioned by Elizabethan writers was a pistol. Pitcaikn Island in the South Pacific, is fertile yielding good pasture, potatoes, yams, plantain, and bread fruit. pine apples, and other tropical fruit. Whalers and trading vessels call there. In 1884 the population was 130.
Pitman, Sir ISAAC, the shorthand inventor, was born in 1813, and began Jife as a schoolnaster. In 1839 he began his phonetic and stellographic work at Bath, and established the Phonetic Society in 1843. Ilo was knighted in 1894.
Prrt, William, was born in 1759 , and he became Chancellor of the Exchequer at the age of twenty. three, and Prime Minister at twenty-four. The war between Great Britain and France, in 1793 , brought heavy responsibility upon him. In 880 he resigned his post at the Treasury, but resumed it in 3804, and in 1806 he died. Biographers differ about his merits as a statesman, but he was an orator and strictly honourable.
PIUS was the name of several Popes. Pius II. (1405. 1464) who became Pontiff in 1458 , was one of the most learned men of his age, and left valuable historical works, orations, and letters. Pius V. (1504. ${ }^{1572)}$ was the Pope who distinguished linenself by persecuting Protestants and Jews, and by excommunicating Queen Elizabeth of England. lie was canonized by Clement XI. Pius IX. (1792-1878) acquired much popularity by his liberal tendencies. He also showed benevolence in selling his plate, furniture, and equipage, during a cholera epidenic, to relievo the sufferers at Naples. He became Pontiff in 1846, and at his accession 2000 political prisoners were released and pardoned. In 1849 a Roman Republic was proclaimed, under Mazzini, and Pio Nono had to fly. In 1870 the dogma of papal infallibility was established, but the temporal power of the pontificate was much reduced; and eventually it ended, the Vatican being left to Pius, and his independence secured.
Plague first visited Europe in 430 B.C. at Athens, and Josephus records that of Jerusalem in A.D. 72 . The one at Rome in 262, and at Constantinople in 544: are amoug the most disastrous plagues of antiqulty, and the 'Black Death' which traversed Europe from 1347 -1350, brought to England in 1593. was the worst in more modern times The plague raged in Marseilles in 1720, in Messina in 1743, and in Moscow in 1771. Its last appearance in Europo was in the neighbourhood of Astrak lann in 1878-79.
PLAN OF CAMPAICN was a sort of slang name for a system adoptet in freland in 1887 , for forcing rent reductions. Tenants deposited what they considered a fair rental, with the officials of the National League, instead of with the laudlords or their agents, and if the sum was not accepterl, nothing was paid at all. The plan was proclalinod llegal by Government.

Planet. The known 'major' planets are, in order of their proximity to the sun, Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranns, and Neptune. Uranus was discovered accidentally by Herschel in 278r, and Neptune was discovered, after nuch calculation, by Leverrier and Aclams, in 1845. Jupiter Is the largest planet.
PLANTAGENET was first adopted as a name by Gcoffrey of Anjou, probably originating in his labit of wearing plante de genet (broonin) in his cap.
PLASSEY: THE BATILE OF, was fought by Lord Clive with 000 Europeans and 2100 Seproys against Suraja Dowlah with an army of 50,000 foot and 18,000 horse. Clive, by winning it, lad the foundation of the British Empire in 1757.)
PLATE-MARKS include hall-mark, sovereign's mark, name mark, and date mark, which are an index to quality, name of maker, date and place of manufacture. The duty of assaying and stamping plate is done by the Goldsmith's Company of London. Their marks are a leopard's head crowned, and a lion passant as the sovereign's mark. Affiliated with Goldsmiths' Hall are the following assay-offices:Birmingham (ulark, an anchor), Chester (3 sheaves and a dagger), Exeter (castle with 3 towers), Newcastle ( 3 castles), Sheffield (a crown), Edinburgh (a thistle), Glasgow (tree, fish, and bell), Dublin (a harp, crowned). There is no hall-mark for English silver plate now.
Plato, the Greek philosopher, was born in B.C. 429. After the death of Socrates, whose pupil he was, he travelled for a while, returning to Athens about B.C. 388, when he began to teach his system in a gymnasium called the Academy. He died in B.C. 347 . Among his reputed works are the "Letters," but the latter are now regarded as not genuine. Like Socrates, he held the great end of philosophic teaching to be to lead the mind of the inquirer to a discovery of truth, rather than to impart it dogmatically, and so he considered oral teaching superior to writing. He originated the distinction of philosophy into etliics, physics, and dialectics, though the names were first used by his follower Xenocrates. The cardinal priuciple of his dialectical system is the doctrine of ideas; and, having created the realm of ideas, he defined its most excellent forins as beauty, justice, and virtue, and determined that the dominant principle of the whole must be the idea of The Good. The harmony of intelligence with goodness is the highest attaimment of his philosophy.
plautus, Titus, one of the oldest and best Roman comic writers, was born about B.C. 254. The purity of his language, his genuine humour, and his faithful portrayal of middle and lower class Roman life, made his plays successful for centuries. About zo of them have been preserved.
Plebians, or Plebs, one of the great orders of the Roman people, were, at first, excluded from nearly all rights of citizenships and their struggles to assert their claim to a place in the Commonwealth formed inuch of the civil history of Rome. In B.C. 286, the plebiscita (enactments passed at plebeian assemblies) received the force of law. Plebiscite was a form of voting (named after the plebiscita) introduced in France under the Napoleonic regime. It was the nation's vote, obtained by universal suffrage.
Plevna is noted for the gallant resistance of its garrison, under Osman Nubia Pasha, during the last Russo-Turkish War. It is in Bulgaria.
PLINY THE ELDER, the Roman writer, was born in A.D. 23. He served with distinction in the field, and, having been made one of the augurs of Rome, became Governor of Spain. His leisure was devoted to literature and science. His only work now extant Is his "Natural History," containing miscellaneous information outside natural history proper. He perished in an eruption of Mt. Vesuvius in 70.
PLINY THE YOUNGER, who was adopted by his uncle, Pliny the Elder, was born in A.D. 6r. He became consul in A.D. 200, and governor of the province of Pontica in 103. He was most energetic In his llterary pursalts ; but only a collection of letters, In ten books, and a panegyric on Trajan, remain.

PLOTINUS, the systemstic founder of Neo. Platonism, was born in 205 A.D. He eventually lived and taught at Rone, and wrote twenty-one books. About 262264 Porphyry became his pupil, and, during his six years' stay in Rome, Plothus wrote twenty-four books, which he corrected. The teaching of Plotinus secured him great respect and popularity, lout his system depends less upon its truth than upon its historical value.
PLUMPTRE, DEAN, was born in 1821, gradunted B.A. (double first-class) at Oxford in 1844, and lotane Chaplain at King's College, London. He held many livlngs before he was appointed Dean of Weils in 1881. He was a meinber of the Old and New Testament Revision Committees, in England, Boyle Lecturer $1866-67$, and Grinfield Lecturer, 1872-74. Besides his religious works, he lias written translations, including "Soploocles," "Aeschylus," and "Dante." His lintest important work is a "Life of Thonias Ken, Bishop of Bath and Wells."
PluRality, in ecclesiastical law, means the holding by one person of two or more benefices. They are forbidden in England (except in particular cases), as is only just ; but plurality applies to other professions (outside the Church) where it is unfortunately not considered illegal.
ILUTARCH, the Greek writer, probably lived from the reign of Nero to that of Adrian ( $54-117$ A.D.). His "Parallel Lives of Illustrious Greeks and Romans" is the book to which he owes his fame; but he wrote sixty other works.
I'Luto, in classical mythology, the god of the infernal regions, was ruler of the dead. The Greeks called him "Hades." He was a nephew of Jupiter and of Neptune, and he married Persephone. The cypress, the box, the narcissus, and maiden-hair were sacred to him, and oxen and goats were sacrificed to him, at night. He is represeuted holding a two-forked sceptre, a staff, or a l:ey.
Plymouth Brethisen first appeared in 1830 at Plymouth, but they have spread over Great Britain, the United States, France, Italy, etc. since then. They are the only body of Christians who utterly refuse to worship with other bodies.
Pneumatic Despatch is propulsion by means of compressed alr, or by forming a vacuum. Parcels are thus conveyed, and internal communication in hotels and warehouses is carried on by this means. The most developed application of it as a motive force is in the telegraph service of large cities. It was first introduced into London by Latimer Clark, 1853, improved by Varley 1858, and Siemens in 1263. Pneu. matic tubes are used in Liverpool, Manchester, Glasgow, Dublin, etc.
POCAHONTAS was the only Red woman in the early days of colonization who ever inarried a Briton, She married a Mr. Rolfe in 1616, came to England, and was baptized. She had one son. She had always been friendly to the English, who colonized Virginia.
Podiebrad, King of Bohemia, was horn in $\mathbf{i} 420$. He succeeded Ladislas, son of Albert V. of Austria, in 1459. He passed wise laws and administered justice, conciliating the Catholics, for whicli Paul II. denounced him as a heretic in 1463. A German crusade was formed in 1466, and was defeated at first, but Podiebrad's generalship conquered in 1469 , and he won the Poles to his side by declaring that their sovereign should succeed him; and the Emperor Frederick became friendly, and soon after he died Ladislas, son of Casimir IV. of Poland, succeeded him.
Poe, Edgar Allan, the American poet and writer, was born in 180g. He wrote for periodicals at first, from 1835, before which he had an unsetted life. The great event in his career was the publication of his poem, "The Raven." in 1845 . He died from the effects of drink, but lis first biographer Griswold maligned him.
POET LAUREATE was appointed first by Edward IV., and it was his duty to write an ode for each birthday of the sovereign, but this custom was dropped at the end of George III.'s reign. The office has occasionally been held by grent writers, such as Dryden, Wordsworth, and Tenmyson, bit has generally fallen
to mere verse mongers. The youngest on record was Shelton, who was appointed in 1489 at the age of 29 . The salary is $£ 300$ it year.
POETRY is the concrete and artistic expression of the human mind in emotional and rhytrincal language, and its two cardinal points are the power of exciting sympathy by a faithful adherence to nature and the power of Interestiug by uovelties of the inngination. The chicf klinds are Epic (q.v.), Dramatic, Narrative, and Lyrical; and in each cnse the form must be sultable to and significant of the r11atter.
POITIERS, TIIE BATTLE OF, was fouglit between the French under their King, Jolan 11., and the Englislı under the Black Prince, who won the day. It took place in $\times 35^{6}$.
pole, Reginald, cardinal and statesman, was bom in 1500 . He lost the favour of Henry VIII, by opposing the divorce of Queeu Catherine. In 1553 he became Papal legate, and succeeded Craumer as Archbishop of Canterbury. His views were moderate.
Police. The present system in England dates from 1829, when Sir Robert Peel got an Act passed "for improving the police in and near the metropolis." In 1839 and I840 Acts were passed providing for the appointment of a county constabulary, but it was left as oftional until 1856 . The total number of police in England and Wales is about 37,000 , and of these the metropolitan police number fully 14,000 . They aro magnificently trained, as was seen on June 22nd, the day wben Queen Victoria commemorated the sixtieth year of ber raign. They owe their nicknames of "Bobby" and "Peeler" to Sir Robert Peel.
POLO, Marco, the Venetian explorer, was born about 1256. He joined his father and uncle on their second journey to the east in 1271, and reached the court of tbe Mongol grand khan, Kubilai. He was made governor of part of Eastern China, and after the death of Kubidai returned to Venice.
POLYBIUS, the Greek historian, was born about 204 B.C. He was summoned to Rome, and formed a close friendship with Scipio Aemilianus, in whose suite be saw the destruction of Carthage in 146 . His chief work was his "History of Rome" (from 220 to 140 B.C.).
POLYCARP, the Christian 'Father, 'is said to have been a disciple of St . Joln the Divine. During the persecution by Marcus $\Lambda$ urelius he was burnt alive.
POLYGLOT is the name generally used of work which contains the same matter in several languages side by side. The first great work of the kind was a version of the Bible, prepared under the direction of Cardinal Ximenes ( $15 \mathrm{x} 4-\mathrm{I} 7 \mathrm{~A} . \mathrm{D}$.) , in which there are the Hebrew, Vulgate, and Septuagint versions, a literal Latin Translation, and a Chaldee Paraphrase. Other notable Polyglots are the Royal or Antwerp, the Paris, the London or Walton, and Bagster's. Eno's fruit salt has a well-known $P$, advertisement.
POLYPHEMUS, in Greek myth, is the one-eyed Cyclops, who was tricked by Ulysses.
POLYTHEISA is the worslip. of many gods, opposed to Monotheism ( (q.v.). If $P$. was a primary form of religion-which is doubtful-it arose from man attributing to all visible things the same sort of conscious existence as he had himself.
POMPADOUR, MARQUISE DE, the millionaire mistress of Louis XV., was born in 1721. She is said to have brought on the war with Frederick II. She died in 1764, amidst the rejoicings of a down-trodden nation at a deliverance which anticipated their most ardent hopes.
POMPEII was overwhelmed by the eruption of Vesuvius in 79 A.D., and remained forgotten-20 feet below the "new' surface of the ground-till 1748, when a peasant, in sinking a well, accidentally broke into one of the covered houses. Excavations were begun in 5755 , and a good deal was done during the reign of Murat (q.v.). Recently,, 2500 a year has been assigned for carrying on the work.
POMPEY THE GREAT was born in 106 B.C., and first made his name in fighting for Sulla against Marius. After Sulla's death $P$. put down the revolt of Sertorius in Spain, cleared the pirates out of the Medlterranean, and conquered Syria. On his return to Rome he married Caesar's daughter, but afterwards got Caesar
proclaimed a public foc. Cacsar (q.v.) 'crossed tho kubicon 'in 49 B.C. and colupletely defeated $P$. on the plinins of Plarsaliat.
POOR KATE STATISTICS. The total receipts from and in aid of the 'Poor' Rate in 1894.5 were alpout £21,547,000, of which nearly £ir,000,000 were spent on purposes altogether uatconnected with the reliof of the poor! The total rateable value was about f $165,140,000$, which was an increase of about X55,000,000 on that of the year 1870. The value per head was about $£ 511 \mathrm{~s}$. od. over a population of 29,000,000, as compared with C4 r2s. od. 111 1870 over a population of $22,710,000$. Since 1870 the rateable value of land has fallen from nearly 40 millions to less than 34 ; that of buildings leas risen from 55 to about ro3. and that of railways from 5 to nearly 14 .
POPE LEOXIII, is the $258 t h$ Ronan pontlff. He was born in 1810, was a distinguished scholar of the Collegio Romano, took Orders in 1837, was made a Cardinal in 1853, and Pope in 1878.
POPE, ALEXANDER, the poet, was born in 1688 . He was a delicate deformed boy, and before he was 15 had attempted an epic. In 1711 he published his "Essay on Criticism," followed by his "Rape of the Lock." From $\mathbf{x}^{\prime} \mathrm{r}_{3}$ to 1726 he was busy with his translation of Homer, by which he made 69000. The "Essay on Man " was publislied anonymousiy in 1733. Among his friends were Swift and Gay. He died in 1744.

POPULATION, THEORY OF. $P$. is limited by the means of existence, and increases in a geometrical, while the means of exibtence increase only in an arithunctical ratio. The checks on this increase of $P$. are preventive and positive-the former including all causes which prevent births, and the latter including all those which cut off the extra lives. Moral restraint is a very small factor, vice and misery are very large factors in thus checking P.; but the former becomes more and more important and influential as the standard of comfort is raised.
POPULATION OF THE WORLD is estimated at $\mathbf{1 , 5 0 0 , 0 0 0 , 0 0 0}$, scattered over an area of about $52,300,000$ square miles. It is calculated that nearly $2,000,000$ square miles of the land-surface are uninhabited, and that $5,000,000$ more are not definitely occupied. The 75 definite states return their definitely occupied areas at an aggregate of $45,000,000$ miles, of which 40 million are monopolized by 20 states. Asia is much the most populons as well as the largest, having 854 million persons and 17 million square miles. Africa conles next in size-rit million uniles, but Europe is next in population-38I million. America is about 8 million miles, and has 133 million people. Australia is only $3 \frac{1}{2}$ million miles, and has only $4 \frac{3}{2}$ million people. Africa, in spite of its huge size, has only 127 million people; and Europe, in spite of its large population. is only $3^{3}$ million miles. Out of the $1.560,000,000$ total population 1,000,000,000 are not Christian, 812 million being absolute heathen, 180 inillion being Muhammedans, and 8 million being Jews. Protestants number 200 million, Papists 195, and the Greek Church 102.
PORSON, RICHARD, the great critic, was born in $1759{ }^{\circ}$ and became Fellow of Trinity College, Cambridge, in 1782. His best work was done on Euripides. He was one of the best Greek scholars of his age, but a drunkard.
PORTER, JANE, the novelist, was born in $\mathrm{r}_{77}$, and published "Thadeleus of Warsaw "in 1803. "The Scottish Chicfs" appeared six years later, but its history is less accurate than that of her previous romance.
PORTR, SUBLIME, is really the French translatlon of Babi Alf, 'The High Gate' (of the palace)-where justice was administered, and from which the Turkish Government came to be called the 'Sublime Porte.'
PORTLAND CEMENT is so called from its resemblance in 'colour' to Porthand stone.
PORT-ROYAL, the Cistercian couvent which was so famous ln connection with the Jansenist controversy in France, was founded in 1204 under the rale of $\mathrm{St}_{\text {. }}$ Bernard, and was reorganized in 1609, and a second house was procured ll1 1625. Near the original house.
P. R. des Clamps, a group of eminent men-Pascal among them-took up their abode in 1636, and came to be regarded as a joint community with the nuns. The hostility of the Jesuits workod the ruin and dissolution of the community who were Jansenists.
Poseidon was the Greek god of the sea, whom the Komans identified with 'Neptune.' 'The horse was one of the symbols of his worship.
Positivism is the philosophical and religious system of Comte (g.v.). The philosoply has two main princlples-(x) The classification of the sciences in a definite order, from sumple (c.g. mathematics) to complex (e.g. morals); and (2) the classification of mental processes in a definite order, from the theological or personifying attitude through the metaphysical or abstract to the ' positive or scientific. The religion is the "cult' of Humanty, as a corporate unity having a past, a present, and a future. Ainongst leading adherents of Comte were J. S. Mill, G. H. Lewes, Congreve, and Harriet Martineau, and Frederick Ilarrison still preaches his gospel; but Herbert Spencer, Huxley, John Fiske, and M'Cosh have dissipated much of the glamour spread abroad by Cointe's own origiuality and striking personality.
POST OFFICE STATISTICS for $1895-96$ show an increase in every kind of postal packet except newspapers, which has been continuous since 1839, the year before the institution of the uniform peuny postage. In 1840 the number of letters was 169 million, in 1850 about 410 million, in 880 about 927 million, in 1880 about 1310 million, in 1890 about $1785 \mathrm{mil}-$ lion, and last year $1,834,200,000$, averaging about 47 per head of population, There were also $314 \frac{1}{2}$ million postcards sent last year, $672 \downarrow$ million 'book' packets, 149 million newspapers, and $60 \frac{1}{2}$ million parcels. The revenue of the Post Office in 1839 was about $2 \frac{1}{2}$ million pounds; after the introduction of postcards and telegraph it rose in 187x-72 to 6 millions, and last year it was over $14 \frac{1}{2}$ millions. The Parcel Post was started in 1883. Considernbly over 6 million letters, 1 million postcards, 9 million ' book ' packets, and nearly 150 parcels, were ' not delivered.' The Post Office employs about 140,000 persons, issues of million money and postal orders, valued at $£ 25.582,236$; sends $64 \frac{1}{2}$ million telegrams (not counting 6/2 million foreign ones), and has charge of about $£ 98,000,000$ of savings.
The chief events in Postal History during the reign of Queen Victoria are:

1838: Money Order Department established.
1840: Inland Penny Postage.
1848: Book Post instituted.
186x: Post Office Savings Banks created.
1863: Inland Pattern Post established,
1870: Telegraph transferred to the State.
1870: Postcards introduced.
1870: Extensive employment of Women.
1877: Half-ounce limit raised to one ounce.
1880: Postal Orders introduced.
[poly.
1880: Telephoning decided to be a postal mono1880: Sixpenny telegrams introduced.
1883: Parcel Post established.
Miscellaneous Reforms during the past Tvelve Years.
Penny Postcards to the Colonles.
Parcel Post to France.
Postage to the Colonies reduced to $2 \frac{1}{2} \mathrm{~d}$.
Reduction of trans-Continental subsidies from $£$ xoo,000 to about $£ 37.500$ a yenr.
Open Envelopes allowed for Book Post.
Telegraphic Money Orders.
'Private' Postcards transmitted.
Free re-direction conceded.
Reduction of Cable Rates to India and Australia.
State purchase of Cables to the Continent.
The Express Post established.
Hour of collection, etc., stamped on letters.
Potato is a native of the Chilian or Peruvian Andes, but has been enormously improved by cultivation. The Spaniards brought it to Europe in the 16 th century, and Sir Walter Raleigh is said to have grown it first in England, It became a favourite article of food among the Gernan peasants in the 18th century

POTEMKIN, the notorious favourite of Catlyarine 11., was an excellent soldier. Froin 1776 till his death in ryg he exercised uncurbed sway over the policy of Russia.
POTYERY is a very ancient form of art, and, by the time of the Greeks, had attained to great perfection in the matter of form. Glazed ware has beell found In the Egyptian and Babylonian ruins, but the Arabs were the first to introduce it into Europe via Spain, and from there the Italians carried it to Majorca, which gave its name to 'Majolica' ware. The Dutch began to manufacture heavier ware at Delft, at the end of the $16 \mathrm{th}_{1}$ century, and they also intro. duced porcelain from the East about the same tune. In inodern times, porcelain comes naturally from countries in which there are old granites that have 'weathered' into white clay. Thus, Stoke and Derby owe their porcelain trade to the ease with which tbe decayed granite of Devon and Cornwall can be bronght to the Staffordshire coal-field. Karlsbad owes a similar trade to the white clay found round lt and to its nearness to the Prague and Pilsen coal-fields. Meissen, the centre of 'Dresden china, is on the Zwickan coal-field, just across the Erzgebirge from Karlsbad.
POITINGER, Eldrev, the soldier, was born in I8in, and his famous defence of Herat against the Persians was in 1837.
Poultry Farming demands perfect cleanliness, personal supervision, and a dry climate. Now, cleanliness and attention to details are eminently characteristic of the French peasants, and the climate of France has the required dryness. Consequently, there is a huge export of eggs from Normandy to London. Ainongst other large exporters of eggs are Denmark, which sends 150 million a year to Britain alone; Italy, which has a very dry climate and abundance of grain; and Austria-Hungary, which exports two billions every year.
Poussin, Nicolas, the French painter, was born in 1594, and studied in Italy. He was invited to paint the great gallery of the Louvre, and his success was rewarded with a pension of 3000 livres. He bas been called "the Raphael of France."
POYNING'S LAW, by which all general statutes previously inade in England were declared operative in Ireland, was passed in 1495 .
PRAED, W. M., the writer of the best rers de societe ever written in England, was born in 1802, and died when he was only thirty-seven.
PREFECT was the title of various officials in ancient Rome, e.g. the heads of the water-works, the treasury, and the life-guards, etc.
PRAETOR was the name of the chief judicial officials in ancient Rome, and Roman Lav is practically the total development of their edicts.
PRAETORIAN GUARDS were first established as a 'standing' life-guard regiment by Augustus, but only a few were kept in Rome. Tiberius collected the whole :body, and kept it in a fortified camp in the capital, where they became so strong that on several occasions they decided the succession to the throne, and once even put it up to anction. They were finally abolished by Constantine the Great.
Pragmatic Sanction was the legal instrument by which the German Emperor, Charles VI., tried to secure the succession to his female descendants, as be had no son, and settled his dominions on his daughter, Maria Theresa.
PRAXITELES, the Greek sculptor, was a citizen of Athens about 364 B.C., and became the head of the I ater Attic School, as Phidias was of the Earlier. He excelled in his modelling of the human form.
PRECEPTORS, COLLEGE OF, was established in 1846 for the advancement of education, especially amongst the middle classes, by examination and by teaching. Three grades of Diploina are granted to teachers after examination by examiners specially appointed by the College-Associnte, Licentiate, and Fellow : and certificates are given to pupils also after examlnatlon. In 1873 the College founded a Professorship of the Science and Art of Education, and in 1805 opened in non-residential Training School for male teachers in Secondary Schools.

PREDESTINATION forms one of the peculiar tenets of Calvinistic theology, but is as old as St. Augustinc. It has two great dangers of opposite kinds; it has led many; men into gross presumption, and nnore into utter despair.
PRESBYTERIAA STANDARDS OF TAITII are the W'estminster Confession (with or witliout an ' explana. tion') and the Longer and Shorter Cateclisms.
PRESS. LIBERTY OH THE, rests on same princijule as Liberty of Specch. The Press becanne practically free with the accession of Williann and Mary, but the Newspaper Stamp Duty was not abolished till 1856 . It is right that there should be, as there are, restrictions still cnforced agrainst indecency, libel, and plagiarism.
PRESTER JO\&NN was a mythical Christian prince of Central A sia in the Middle Ages, or-according to the Portuguese-of Central Africa. The story was known to the Crusaders, and probably arose out of the tales of some early traveller.
PRIAM, in Greek legend, was the last king of Troy. the husband of Hecuba, and the father by her of Hector, Paris, and Cassandra.
PRIESTLY, JOSEPH, the divine and plitlosopher, was born in 1733. His first book was "The Scripture Doctrine of Remission," which was followed by a "History of Electricity," for which Edinburgh University made him LL.D. His "Institutes of Religion" appeared in $\mathbf{1 7 7 2}$, and in $\mathbf{1 7 7 4}$ he discovered oxygen. He was a very clever man who dissipated his powers over too varied a sphere.
PRIM, MARSHAL, was born in $18 \times 4$, and in 1833 joined the volunteers who had taken up arms in the cause of the baby Queen Isabella of Spain. He was so successful that in 1837 he was made a colonel of regulars. He was assassinated in 1870 .
PRIMROSE LEAGUE was founded by Lady Randolph Churchill in 188 r in memory of Benjamin Disraeli, Earl of Beaconsfield, and took as its badge lis favourite flower, which is worn by all members of the League on April seth, which is the anniversary both of his death and of Luther's famous Protest in 1529.
Prisiogeniture is as old as the time of Esau, but it was introduced into England by the Normans.
Prince of Wales, First, was Edward II., who was born at Caraarvon, and since the time of the Black Prince the title has been 'conferred 'on all the male heirs-apparent to the English throne, who also 'inherit' the Duchy of Cornwall.
PRINTING is done from engraved metal plates or from a level surface, e.g. polished stone, or from a surface in relief; and the latter is the method usually denoted by the word. The elements of the process were known to the ancients, for stamping articles of cornmerce or branding cattle, as well as for reproducing writing. Block-printing from single pieces of wood existed in Europe as carly as the 13 th century, and the first movable types were invented by Laurens Coster of Haarlem about 1420, though Johan Gutenberg was head of the firm in Mainz whlch first invented matrices for 'casting' type. The first important book printed by Gutenberg, Fust, and Schoffe was the Latin Bible, known as the 'Fortytwolined 'or 'Mazarin Bible.' After the sacking of Mainz by Adolphus of Nassau in 1462, the cmployees in the printing house were scattered over Western Europe, carrying with them their valuable art. The 'Roman' type replaced the old Gothic almost im-mediately-frst at 'Rome, and the 'Italic' was introduced in Northern ' Italy' about 1500 . (See Aldine above). Caxton (q.v.) introduced Printing into England in 1476, but he had printed two books"The Collection of the Historics of Troy," and "The Gaine and Playe of the Chesse "- in English before he migrated from the Netherlands to England. The first book printed in Fngland was "The Dictes and Sayings of the Philosophers." In modern times, especially since the days of Ruddman, Scotland has been very fannus for typographical productions of all kinds. The Typotheter was invented by a Swedlish engincer, Lagerman, and the Linotype by Ottinan Mergentheler. The first printing by machincry was done by Nicholson in 1790, and the "Times" of November 28, 8814 , was actually printel by stean
machinery A great inprovement was made by Aplecgarthin 8848 , but never becane popular because of the first 'Hoe' machine which came out about the same time. Finally, the Walter Press solved the difficulty of printing from the continuous roll or web in whicht the paper is supplied.
PRIOR, MATTHEW, the poet, was born in 664 , and sent by the Earl of Dorset to St. Joln's College, Canbridge, where he formed a friendship with Clarles Montague (afterwards Earl of Halifiax) ; and the two togetier ill 1637 composed the "Country Mouse and City Mouse." In connection with the secret negotiations about the Peace of Utrecht, he was imprisoned for two years, during which he wrote "Alma." His most anbitious work was "Solonion." He died 172 I .
Prisonersand Punishments. (Sce Crime above).
PRISON-MADE GOODS, FOREIGN, in spite of thic learned decision of the Board of Trade Committee in January, r896-scriously affect the brush and the mat industries in Great Britain, and affect more or less several other industries.
PRISON REFORM is making progress in this country ; unproductive labour is being abolished, books are provided, 'silence ' rules are modificd, weak-minded prisoners are under special treatment, offenders are more carefully gracled and separated, ctc. The average prison population is about $\mathbf{4 . 4 0 0}$, of whom 12,000 are males.
PRIVATEERS must be licensed by Government and under a letter of marque, or they are simply pirates, They were first instituted by Henry V. to enable aggrieved subjects to avenge their wrongs and compensate themselves for their losses by preying upon France. Since 1856 the Great Powers of Europe have noninally abandoned them, aud in 1870 they were defivitely made illegal in the United Kingdom.
Privy Council has lost ali its old pohitical importance, maiuly owing to the development of Party Government, but it still retains administrative and judicial functions. It is the final Court of Appeal from India, the Colonies, the Channel Islands, and the Isle of Man; and it has committees such as the Board of Trade, the Local Government Board, the Council for Education, etc.
Procter, "Barry Cornwall,", was born in y 789 , and was at Hlarrow with Pecl and Byron. He published his "Dramatic Scenes ' under his pseuclonym in 1819, and "Mirandola" in 1821. He was a great friend of Cliarles Lanib.
Prometheus, in Greek myth, was a Titan, whose name means 'Forethought.' He incurred the hatred of Zeus by the bencifits he conferred on men, especially by taching them the use of fire. His punishment was to be clatiued ou a rock and have a vulture to feed on his liver; but he was rescued by 1 Iercules.
Prose is opposite of 'Vcrse.' not of 'Poctry,' as it refers directly to the external form, not to the internal spirit, of language. Passages of fine poetry abound in Carlyle-in spite of his advice to Tennyson"Alfred, me mon, if ye hev onything to say, say it $i$ ' prose."
Proselyte is one who changes his religion, and is called by old fellow belicvers a 'pervert.'
Protagoras, the Greek philosopher, was born about 480 B.C., and was the first to assume the title of Soplist.
protection, in economics, attempts to encourage weak or 'unnatural 'industries by means of bounties or privileges on home productions, and duties or disabilities on similar articles from almond; nud, therefore, it has got into ill-repute. But it is on an absolutely sound political basis when it simply protects 'natural' home industries, especially those concerned with the production of 'lixuries, from unfair forcign competition. A great deal of nonsense is talked against this fundamental political truth by cowards who regari "Free Importation" as "Fres Trade" (q.v.), and make a fetish of the plirase.
PROTPSTANTS take their name from the 'protest ' made by the Lutheran party against the 'Diet of Splres' in 1529. Amongst the original 'Protesters' were the representatives of Saxony, Brandenburg,

Brunswick, Hesse, Anhalt, Straslung, Nürnberg, Ulu1, etc.
Protocol, in diplomatic parlance, is used either generally of the preliminary papers of any diplomatic transaction, or specially of the minutes of a friendly conference for the peaceful solution of some political problem.
PROTOPLASM is the most clementary organic inater. It consists of carbon, oxygen, nitrogen, and hydrogen, and, in its slmplest form, is found in the lowest types of aninal life-'Protozoa,' usually aquatic in habit and microscopic in size.
Prou dhon, the French economist, was born in 1809, and died in 1865. He published his famous "What is Property ${ }^{\circ}$ " in 1840, and was a leader in the Revolution of 1848.
Provencal is the name applied to the language and Iiterature of the Provence corner of France, which practically spread across the south of France and into Spain. It was the first Romance Ianguage, Provence being the first Roman 'province' outside Italy. It is also known as Langue d'oc, as the kindred tongue of Northern France is called Langue d'oui. It was the mediun for the love lyrics of the troubadours (q.v.) from the IIth to the 15th century.
PROVERBS are short summaries of long experience, but often contain only half a truth, which is more dangereus than a whole lie. "llistory repeats itself" -with minute differences, which are the significant and really important points.
PSALMS OF DAVID are so called because David wrote most of them-about 80 . In structure they have the strophe and antistrophe of Hebrew poetry, the lead probably being sung by the priest alone and the answer by the people. The collection, as we have it, was made as the Hymn-book of the second Temple, in which the services were conducted on the lines prescribed by David.
PSYCHE, in Greek mytl, was a kind of allegorical personification of the human soul.
PSychical Research Society was founded in 1882 to investigate various phenomena of a mysterious kind, e.g. ghosts, telepathy, dreams, etc.
PTolemy was the name of a line of sovereigns who succeeded to the Egyptian portion of Alexander the Great's empire. The first of them was P. Soter, who founded the famous Alexandrian Library; the second, P. Philodelphus? built the lighthouse of Pharos and the Alexandrian Museuin; the last of them was Cleopatra.
PTOLEMY, the geographer, invented the astronomical system called after him about I40 A.D., and it lasted until it was superseded by that of Copernicus (q.v.).
PUblicans, in ancient Rome, were tax-gatherers, and the word has this meaning in the Bible.
PUBLIC SCHOOLS, GREAT, in the restricted sense, include Winchester (founded in 1387), Eton (I441), Rugby ( 1567 ), Harrow (157I), Cheltenhan ( 1841 ), Marlborough (1845), and Clifton (I862); but the phrase ought certainly to finclude such schools as St. Paul's (1509), Shrewsbury ( $\mathbf{1 5 5 1}$ ), Repton (1556), Westminster (I560), Merchant Taylors' (1561), Uppingham (1584), Charter House (I6iI), Rossall (1844), Wellington (I857), Haileybury (1862), and Malvem (1863).
PUCK. (See FAIRY-LORE above.)
PUFFENDOKF, SAMUEL, the great lawyer, was bom in 1632 , and studied at Leipzig and Jena. His "Elements of Universal Jurisprudence" appeared in 1660, and his great work on the "Law of Nature and Nations" in 1670.
PUMICE is found wherever the escape of gases has rendered lava light and scoriaceous, but the only kind that enters into commerce comes from the Island of Lipari.
"PUNCH, THE LONDON CHARIVARI," was started in I84I by Mark Lemon; and Thackeray, Hood, and Leech were among its earliest contributors.
PUNCH, RUM, consists of rum, brandy, sugar, water, and lemon, and takes its name from its panch, "five" (IIindu word) ingredients.
PUNISHMENT. (See CRIME above).
Purcell, Henry, the composer, was born la 1658 , and became organist of Westminster Abbey in1 1679.

Ilis famous "Te Deum " and " Jubilate " were written for St. Cecilia's Day in 1694 .
PURGATORY, accordlng to the Roman Church, is an intermediate state in which the souls of the righteous expiate after death sins not fully atoned for during life.
PURITANS were a separate sect before the accession of Edward VI., but did not become prominent till the reign of Elizabeth. Afterwards they split up into Indepondents and Presbyterians, and the influence of Oliver Cromwell made the former supreme. Since the Revolution the word has been replaced by Non. conformist ' or 'Dissenter' ; but, of course, Romanists in England and Protestant Episcopalians in Scotland are just as much Nonconformists or Dissenters as Baptists or Methodists are.
PUSEY, THE TRACTARIAN, was born in 1800, and became a Fellow of Christ Cliurch, Oxford, in 1824. The "' Tracts for the Times" began to appear in 1833; but, though the movement subsequently was given the name of Puseyism, Dr. Pusey was not prominently connected with it until he wrote the famous tract on Baptism in $1835^{-6}$. In 1843 he was suspended from preaching for three years, which brought his name very prominently before the public; and, when New. man became a pervert to Rome, Pusey became the head of the Tractarian movement. He died in 1882 .
PUSHKIN, the Russian poet, was born in 1799, and killed in a duel with his brother-in-law in 1837. He was much influenced by the poems of Byron.
PYGMalion, in Greek myth, was a king of Cyprus, who fell in love with an ivory statue of a girl that be had carved, and entreated Venus to endow it with life.
PYM, JOHN, the patriot, impeached Buckingham and Straflord, and drew up "The Grand Remonstrance." It was mainly his financial skill which made the Parlianentary forces successful agaiust Charles in 1642 and 1643.
PYRAMIDS are along the west bank of the Nile, on the edge of the Libyan Desert. They are built mainly of Iimestone from the neighbourhood, but contain also huge blocks of granite from Assouan; and the centres of the four sides face the four cardinal points of the compass. The main group, near Cairo, consists of nine, including the three famous ones-the Great Pyramid of Cheops, that of Cephren, and that of Mycerinus. Herodotus says that the Great Pyramid took 300,000 men thirty years to build-roo,000 of them being occupied for ten years in making the causeway along which the stone was carried from the quarries. It occupies about 13 acres, and is about 450 feet high. The interior contains a sarcophagus of red granite. The Mycerinus Pyramid is the best built, but it is only 354 feet square-compared with $75^{\circ}$ feet for the Great P. and 690 for Cephren's, and only 203 feet high. The variation in size is supposed to mark the varying lengths of the reigns of the respective kings who built them-as tombs,
PYRRHO, the Greek sceptic, flourished about 350 B.C. His two great doctrines were that human knowledge can never be certain, and that virtue is the only good.
PYRRHUS, the King of Epirus, made his fame as a soldier at the battle of Ipsus, 301 B.C.
PYTHAGORAS, the aristocratic vegetarian and imaginative theorist, was born about 586 B.C. His influence was immense, his disciples had to live in the greatest simplicity, and his doctrine of transmigration of souls led to his being paid divine honours after his death.
Pythian Games. (See Athletics.)

## Q

QUADRUPLE ALLiANCE. ${ }^{\text {Q }}$ One was concluded in Ifi8 by Britain, France, Austria, and Holland, to maintain the Peace of Utrecht. Another was concluded by Britaiu, Austria, Russia, and Prussia, in 1814 against Napoleon.
QUAKERS. (See FRIENDS.) The most famous Q. was William Penn, who founded the colony of Pennsylvania among the forests along the eastern seaboard of North Amerlca. 111 modern times Hicks, the New York schismatic, Gurney, the higher educationist, and Wilbur, the Yankee reactionist, have been most prominent.
QUARANTINE took its name from the Italian quaran-
tina, 'a space of forty days,' and was origimally introduced into Italy by the Venetlans as a protection against the contagion of Levantine sailors.
QUARTERLY REVIEW was started in 1809 in opposi. tion to the "Edinburgh Review," and was supported by Canning, Scott, and other Tories.
QUARTER-STAFF, the fine old English we pon, was about $6 \frac{1}{2}$ feet long, and generally loaded with iron it both ends. It was held in the middle, and was a most excellent weapon both for defence and for attack.
QUARTRE-BRAS was won by Wellington two days tefore Waterloo.
QUEEN ANNE'S BOUNTY was instituted to increase the incomes of poor (under $£ 50$ a year) clergy in the English Church, and to aid in rebuilding parsonages. All gifts frem this fund are conditional upon an equal or larger sum being privately raised for the same purpose.
[in the hive.
QUEEN-BEE is the only completely developed female
QUIETISM was a mystic movement in the Romish Cburch about 1700 , directed against the formalism and worldliness of the age. The nost famous apostle of Q. was Madame Guyon (q.v.) in France, who numibered Feinelon among her disciples.
QUOTATIONS WRONGLY ATTRIBUTED TO TIIE BIBLE "God tempers the wind to the shorn lamb" comes from Sterne's "Sentimental Journey"; "In the midst of life we are in death" is from a hymn of Luther's; "The merciful man is merciful to his beast," which is no doubt a version, however, of Proverbs 12, 10: "Cleanliness is next to Godliness" is from a speech of Mr. Whitficld's; "Money is the root of all evil," which is some pauper's perversion of St. Paul's malediction on misers (1. Timothy, 6, 1o).

## R

Rabelais, Francois, the French satirist, was born about 1495 , and entered the Franciscan Order of Monks, where his secular studies offended his brethren. He afterwards entered the Benedictine Order, and studied medicinc. His "Gargantua," in its present form, appeared in 1535.
RACHEL, the great fewish tragedienne, was born in I821, and galned her living for a time by singing in the streets of Lyons. She appeared at the " Théatre Français " in 1838, and visited England in 1841 .
Racine, Jean baptiste, the French dramatist, was bormin 1639, and was educated at Port Royal (q.v.). He made the acquaintance of Boileau and Molière, and this led to his writing for the stage, his first two tragedies being brought out by Moliere's company at the " Palais Royal " in 1664 and 1665 . His first great success was "Andromaque" in 1667 . He is considered the model of the French classical tragle drami. RADCLIPFE LIBRARY at Oxford was founded by Dr. John Raddiffe in 1749.
RADETZKY, COUNT, the Austrian soldier, was born in 1766, and served in alnost every campalgn in which Austria was concerned, from 1784 to 1858, doing brilliant service at Hohenlinden, Wagram, and Leipzig; but his most heroic deeds were done in Jtaly, at Milan, Custozza, Novara, etc.
RaDICAL, as a parliamentary badge, was invented in 1819, by the "Radical Reforncers' who were being repressed by Lord Liverpool's Government. and who found that the old name of HFly-which nueans 'sour milk'-meant 'milk and water.'
RaGGED SCHOOLS were pmetically started by John Pounds, a Portsmonth cobbler, in 1859.
RAGBAN, LORD, was boris in 1788 , ind entered the army in 1804. He was attached to Sir Arthur Wellesley's staff on the Copenhagen expedition, and afterwards in the Peninsula. Hegreatly distinguished himself at Badajoz, and lost his armat Waterloo. (Bn the out-break of the Crimean War, he was made commander of the British forces, but he died in 1855 . Ife was very brave, but was not fitted for the Crimean command.
Railways first becane important In England. In the middlle of the 17th century wonden rails were used at Newcastlo for coal transport, and in $\mathbf{y} 80$ Parlianent sanctjoned an iron railoroad from Wandsworth to Croydon, and in r8oz Richard Trevithick, a Comish miner, invented the first locomotive used in

England, The first railway for ordinary traffic was opened between Stockton and Dirlington in 1835 . The Manclester and Liverpool line was opened in 1830, the London and Birnningham in 1838 , the Great Eistern in 1839, the Loudon and South Western in 1840, the Great Western in 1841, and the Great Northern in $\mathbf{4 4 z}$. Austria and France adopted the inventlon in 1828, but in both countries the progress was very slow; U.S.A. adopted it in 1829, Belgrium and Germany in 1835. The amount of railway mileage in the world is over 427.000 -about 200,000 in North Allerica, 150,000 in Europe, 26,000 in Asia, 24,000 in South America, 14,000 in Australasia, and 8000 in Africa. Belgium has much the largest proportion of railway to 'area, the United Kingdom coming second, followed by the Netherlands, Switzerland. Prussia, and France. Canada has the largest proportion to ' population,' the U.S.A. coming second, followed by the Argentine, Cape Colony, and Sweden. The amount of capital per mile varies from about E 45,000 in the United Kingdom down to about $E_{4400}$ in West Australia, France and Belgium coming next to Britain with about $\mathcal{E} 26,000$. Parts of the underground railway in London cost ' $£$ Ioco a yard 1'
The advantages of railways are their speed and their reliability; their disadvantages are their cost and their danger, though the latter is really very smath. They are naturally of more use in the middle of a continent than along the shore of an island; but they are becoming absolutely indispensable everywhere, and their value in developing new countries or new industries is enormous. They are intended to neutralize natural geographical advantages, and this rightly affects the charges for transport, for the charge ought to be in proportion to the value of the service to the public, not in proportion to the cost of the service to the company. For instance, bread and beef are more important than silk and champagne, aad therefore must be carried relatively much cheaper.
The two most important railways in the world are the 'Canadian Pacific' and the 'Trans-Siberian.' The C.P.R. gives through communication across North America oll British territory, and much the shortest route to Australia or Hong Kong: it has valuable coal-fields at both ends of it, and these are close to the magnificent harbours of Halifax and Esquimalt. In time of war, e.g. with France or Russia, the Suez route to India would be too dangerous, and the Cape route would be too long: but the C.P.R. would provlde ono that is both safe and quick. The.T.S.R, traverses some of the richest metal and grain regions in the world; it wlll greatly encourage industries and colonization, and its military importance is enormous; but its total cost $(£ 100,000,000)$ will be too great for the line cver to pay.
RAINBOW IN THE MORNing is a shepherd's wam. ing because it indicates the advance of a rain cloud from the west when the east is clear, and when the temperature ought to be rising. $A$ rainbow at night indicates the passing of a rain-cloud to the east when the west is clearing, and when the temperature is naturally falling.
RAINFALL over the mountainous western edge of Great Britaln varies from about 80 to 120 inches a year, and over the low eastern plaius from 25 to 30. At Cherrapungi it has been as much as 'mo yards. The amount varies with the height, the heat, the winds, and the distance from the ocean.
RsinIEST:DAY is the gth of the moon's 28 , and 4 p.m, is the ramiest hour of it.
RALEIGH, Sir Walter, was born in Devonshire in 1552 , and joined a body of voluntcers in aid of the Huguonots in 1569, He distinguished himself in the lrish rebellion of 1580 , aud ittracted the Queen's attention by throwing his cloak in a pucldle for her to walk over, lle began the colonizatlon of Vlrginia In 1584, and introduced the potato into I reland in the same year. He served with honour in the Armada and at Cadiz, and lost favour at tcourt on the accesslon of James 1. In fact, he wis sentenced to death for trenson, but the sentence was commuted for imprisonment, from which he was released on condltion
of finding a gold mine on the Orinoco. Le fallocl, and, having injured the Spaniards lu his attempt, was put to death by James on his return to England simply to conciliate the Spanish court. His "History of the World" is a splendid specimen of Elizabethan language and statesmanship.
Ramsay, Aglan, the Scottich poet, was born in $\mathbf{1 6 8 6}$, and began life as an apprentice to a wigmaker. IIe published his first volume of poems in 1720, and "The Gentle Shepherd" appeared in 1725 . He was the first to start a circulating library in Scotland.
Ranjitsinhji, KUMar SHRI, the Royal cricketer, was born on September 10, 1872, and played cricket as a boy in India; but he did not become famous till his last year (1893) at Cambridge, when he got his place in the University XI. In I8g5 he qualified for Sussex, and had the third best average in England, and in 1896 he was champion with an average of nearly 58 runs over 55 innings, and a total of 2780 runs.
RANKE, LEOPOLD, the German historian, was born in 1795 , and died in 1886 . He becaune Professor of History in Berlin in 1825, and published his famous "History of the Popes" in 1834.37. He wrote a great number of books, and at the age of eighty began to write-and completed eleven volumes-of a listory of the world.
RAPHAEL, SANZIO, the great painter, was born in 1483, and at the age of twelve entered the studio of Perugino. He went to Florence in 1504, where he learned simplicity and strength of outline from Michael Angelo, grace from Leonardo da Vinci, colouring from Fra Bartolommeo, and draping from Masaccio. He died at the early age of 37, leaving behind bim a great number of notable plotures. Seven of his cartoons for the Vatican tajestry are in South Kensington Museum.
RATIONALISM affirms the right of reason to decide all matters of faith and morals, without any regard to 'Authority' or 'Tradition.' It had its rise in the English Deism of the $17^{\text {th }}$ and 28th centuries, but has had most influence in Germany, especially after the writings of Voltaire had spread in the country. In 1799 Schleiermacher in his "Discourses on Religion " distinguished between the hard rationalism of the understanding and the spiritual rationalism of the 'religious consciousness'; and in 1835 R. may be said to have merged in materialism, agnosticism, etc., after the publication of Strauss' "Life of Jesus." R . did good service in drawing attention to the pestilential heresy that an 'uneducated'conscience has a 'Divine Right' to govern conduct.
RaUCH, the famous German sculptor, was born in 1777 , and made his name by his monument of Queen Louisa of Prussia, He was a friend of Thorwaldsen and Canova.
Rawlinson, Professor, was born in i8is, and became Professor of Ancient History at Cambridge in 186r. He published a translation of Herodotus in 1858-60, and many subsequent works.
RAY, JOHN, the naturalist, was born in 1628, and was a voluminous writer on Natural History and Divinity.
READE, CHARLES, the novelist, was born in 18I4, and made his name by "Peg Woffington," but his most important works are his attack on the vile English prison system in " Never too Late to Mend" and ""The Cloister and the Hearth." He died in 1884.
RECORDS, PUBLIC, OF ENGLAND have been regularly kept since $\quad$ roo A. D.
RED CROSS SOCIETIES. (See GENEVA CON. VENTION above.)
REEVES, SIMS, the great tenor, was born in 1822, and appeared on the stage at Newcastle in 1839. Two years later he joined Macready at "Drury Lane" as second tenor, but subsequently devoted himself specially to oratorio and ballad singing.
REFORMATION, PROTESTANT, was not the first effort at religious reform. The Albigenses lind made a premature effort in the $3^{\text {th }}$ century in France, and Wickcliffe had made another in the ${ }^{2} 4$ th. century in England: but the times were not ripe before the Renaissance, because Reformers coult do nothing without the scholarship which exposed and annihilated the foundations of Papal superstitions and authority,

The Reformers asserted that the standard of truth was not the Bible as misinterpreted by 'Authority,' but the lible as interpreted by the conscience of the individual; but, as they were in a minority in most countries, they had to argue in favour of toleration The Reformation was the begloning of modern social life, for it was a protest against the corruption of Romisli society, and against excessive centralization ; it purified morals, multiplied the centres of spiritual life, and made men think for themselves. The greast dates are-1517 A.D., when Luther condemned indulgences; 1519 A.D., when in the great book city of Leipzig he clained that the Bible was the only standard of authority; 1521 A.D., when at Worms, half way between lowland and highland Germany, he appealed to national feeling against the Italian Pope; and I529, when the great Protest was made. (See PRIMROSE DAY above.) The R. in England came five years later, and was much more political than religious in its character; and in Scotland it was a successful revolt against the sovereign. (See KNOX above.)
REGALIA of ENGLAND include the crown, the sceptre, the staff of Edward the Confessor (\%), the ampulla for sacred oil, swords, spurs, etc. They are all to bo seen in the Tower of London.
REGENT'S PARK was a royal hunting-ground in the time of Elizabeth, and was planned out as a public park by George IV. while he was "Kegent." The Zoological Gardens are on the north side.
REGISTRATION ACT for births, deaths, and marriages was passed in 1836.
REHAN, ADA, the fanmous actress, was born at Limerick, but went to America when she was six,:and came out at Albany, N.Y., when she was sixteen. She was engaged by Augustin Daly in 1879, and came to London in 1884. Heri first great success was as "Katherine ' in " Taming of the Shrew" in 1898, and she was also an excellent 'Rosalind' in "As You Like It."
REID, MAYNE, the novelist, was born in 1819, and joined the U.S. A. Army in $\mathbf{1 8 4 5}$. His experiences in serving against the Mexicans supplied him with most of the material for his stories-"Rifle Rangers," "Scalp Hunters," etc.
REID, THOMAS, the plilosopher, was born in 1710; he became Professor of Moral Philosophy at Aberdeen in 1752, and succeeded Adam Smith in the similar post at Glasgow in 1764 . He attacked Berkeley and Hume, and was the master of Dugald Stewart and Sir William Hamilton.
RELICS were declared, by the Romish Council of Trent in 1563, to be worthy of veneration, and the declaration elicited a curious phenomenon in Eco-nomics-that things of which the supply was naturally 'limited' could be increased to meet demand. The number of crucifixes made of 'the true Cross' was large enouglı to have paved every street in London.
RELIGION Is quite distinct from Morality, dealing with man's relations to God, not with his relations to his fellow-man. It is also distinct from Theology, dealing with subjective feelings, not with objective articles of creed. Religions are of two kinds, monotheistic and polytheistic ; and it is curious that all the monotheistic religions are or ,Semitic origin-Moses, Christ, Muhammed. The various creeds now numberChristians, 480 million; Confucians, 250 million; Hindus, igo unillion; Niuhammedans, 177 million; and of the Christians about 230 million are Papists, 140 million are Protestants, and 100 million are 'Greck.' The growth of Religious Liberty in the United Kingdom is marked by six important dates-the Toleration Act in 1688, the Repeal of the Test and Corporation Acts in 1828, the Roman Catholic Emancipation Bill in 1829, the Admission of Jews to Parliament in 9858 , the Opening of the Lord Chancellorship of Ircland to Papists in 1867 , the Abolition of University Tests in 1871. The 'British and Forcign Bible Society' was founded in 1803 , and lias issued more than 110 million Bibles ;'and the ' Religious Tract Society,' which was founded in 1799. circulates about 60 minlinn of its various publications a year-including the "Leisure Hour," the "Smulay at Home, 'the "Boy's Own paper, "and the "Gir|'s Owu Paper,"

RELIGIOUS ARCHITECTURE. "In Arclitecture," accordiug to old Sir Ileury Wotton, "the end Is to build well. Well building hath threc conditionscommodity, firmness, and delight." This is of Architecture confined to human and secular uses, but the highest use of Architecture is religious, and this raises it into an art by making it the expression of a sentiment. Therefore, to Sir Menry's three conditions we uust add a fourth-symbolism.
Christianity is a development of Judaism, which is peculiarly barren in religious architecture. One buildung represents the whole of Jewish ideas on the subject, and that was designed according to a divine model and not according to the rules of an art. The Tabernacle was the model which was made concrete, stable, and ornamental, in the Temple، and its chief characteristic was symbolisnı.

Congregational worship Is more or less peculiar to those religions which are derived from Judalsm, and this aspect of worship has given a new force to the elernent of 'coumodity' as a condition of a wellbuilt church. The early Christians had to worship wherever they could, and persecution drove many of them into caves and catacombs, as well as into upper rooms and workmen's shops; but after the conversion of the Roman emperors they took possession of many unused pagan buildings, and modified them to their own use, so that the 'Basilica' is the earliest recognized form of Christian architecture. As Christianity spread over Europe, rough attempts were made by the converted barbarians to copy this style in their own churches, and 'Saxon' architecture was probably one of the results.

The pointel-arch style, however, displaced everything else, and was appropriated by the Cluristian Church before the close of the inth century. Whether it was borrowed from the East, or origi. nated in a study of forest scenes, or was a natural evolution from the intersection of two ordinary round arches, is not clear; but the style was adopted and developed by Christian art as expressive of Christian doctrine and enthusiasm.
Pointed architecture is distinguished from classical by the fact that its lines are vertical instead of horizontal, and the upward tendency of these vertical lines is symbolical of the spiritual aspirations of real Christians. The set horizontal lines of a classical temple tell of dogma, conciseness, and even stability; it is dogma without faith, conciseness which has nothing mystic about it, and stablity which weighs us down to earth. It was, therefore, peculiarly appropriate to the depraved Italian Church of the Renaissance.
On the other hand, vertical llnes do not suggest Instability, for the cathedrals of Europe impress one as being above all things stable, but the effect is produced by grouping instead of by weight and size, and the fundamental design of the grouping is the symbolic cruciform, while such accessorics as buttresses give light and shade.
This design had to be modified to suit varlous phases of development. The two great elements of Christian worship are the sacrificial ideal of the Jewish temple and the congregational ideal of the Jewish synagrogue, but In the Middle Ages the latter was entirely neglected-the mass, with magnificent processions, costly robes, and processional music, was everything. There was no "common" prayer and very little preacling. Consequently, the destgn of the church harl to be adapted to this-pillared aisles, a raised choir, and the 'perpendicular' lines whlch spoilt the pointed arch, and introduced the horizontal lines emblematic of spiritual deadness. With the Keformation the Idea of congregational worslip was ungnified, while that of "sacrifice" was In its turn entirely neglected; and this led to the Protestant " barns' of the Refonned Churches, inost wonderful specimens of whlch are still to be found in Scotland.
REMBRANDT VAN RYN, the great painter and etcher, was born in 1606 . His artistic life is generally divided into three periods. The first is the least important, but is well known from the numerous portraits of his first wife; to the second belong
"The Woman taken In Adultery" and various other small groups, in which ho began to show lis unique power of painting groups; and the last period pro. cluced pictures like " Jolu the Baptist preaching." "The Adoration of the Magi," "The Syndics of Ansterdam." Of his etchings, "Jesus Healing tho Sick" and "Jesus before I'late"' are very fanous, and were sold at the Buccleuch sale for 1300 and $\$ 150$ guineas respectively.
RENAISSANCE is the name applied to the awakening of Europe from the moral, mental, and and material slumber of the Middle Ages, in which the creed of Rome, the prevalence of Latin, and the bonds of Feudalism had kept men's souls and minds and bodies stagnant. (See REFORMATION above.) The Crusades, in spite of the benediction of various Popes, had been a dead failure; and in retaliation the Turks invaded Europe, and took Constantinople in x453. This involved the dispersion of the various leanied Greek and Hebrew 'schools,' the members of which carried science and literature into Western Europe.
RENAN, ERNEST, was born in 1823, and read for Holy Orders, but relinquished the idea of that and took up the study of Oriental languages, which led to his being sent on two nissions to the East. In 1862 he became Professor of Oriental Languages in the Collége de France, but the sceptical tone of his "Life of Jesus" led to his being removed from his Chairwhich he recovered in $\mathbf{x} 87 \mathrm{x}$. He has written a number of remarkable books on Christianity and kindred subjects.
RENNIE. JOHN, the civil engineer, was born in 176 x , and joined the firm of Boulton and Walt in Birming. ham in 7780 . He becane the most famous builder of his age, and among his chief works were 'Southwark,' 'Waterloo,' and ' London' bridges across the Thames; the 'Crinan,' the 'Lancaster:' and the 'Avon and Kennet ' canals; the 'London,' 'East India,' and 'West India' docks; the larbours at Queensferry. Holyhead, and Kingstown; and the Government dockyards at Portsmouth, Clatham, and Plymouth. RENT is fixed by custom, by law, or by competition, instead of by equity and science. The same persons who pay exorbitant rents for filthy deus in clty slums pay outrageous prices for alumed bread (q.v.) and watered milk; and the reason is that their poverty puts them at a disadvantage in making a bargain. Two centuries ago the English Hation was paying Ex0,000,000 a year in $R$., now we are paying £ $60,000,000$; then R. made one-quarter of the whole national income, now it makes less than one-twentieth. The community gets little benefit from the rent which individuals are allo wed to charge, but of course it is taxed. Therent of agricultural land is regulated by two circumstances: the fertility of the soil, and the convenience of situation. When either of these conditions is altogether absent land can command no rent. Thus no one will pay rent for land which is so barren that the produce yielded by it is insufficient to remunerate the capital and labour expended in its cultivation. On the other liand, the most fertile land sometimes yields no rent, on account of the inconvenience of the situation in which it is placed. Large tracts of land in America and in Australia are in this condition.
RENT, RICARDO'S THEORV OF. The rent of the less productive farm is determined by the pecuniary value of the excess of its productiveness over that of the worst land in cultivation which pays only a nominal rent. In every country there is some land so barren or so inconveniently situated that the procluce yielded by it is only sufficient to pay the wages of the labourers who till it, and to yield the ordinary rate of proft to the farmer. This land can obviously pay no rent, for if it did pay rent the cultivator would not receive the orlimary rate of profit upon his capltal. The land would therefore cease to be cultivated if rent were exacted, for men will not continue to employ their capital in an occupation wbich yiclds less than the ordiniry rate of profit.

The rent of any particalar land is therefore determined by the excess of its produce over that yielded by the least productive fand in cultivation
whlel pays no rent. This land is described by Rlcardo as belng upon the margln of cultivation, because land of still inferlor productiveness, though free from rent, would not yield the ordinary rate of profit to the cultivator if agricultural prices remained unchanged.

It is evident that the productiveness of the land on the margin of cultivation varies greatly at different times and in different countries.
REPUBLICS in modern tines have usually been founded by subjects in rebellion against their nominal sovereign, who have found it necessary to have some central depositary of power: and therefore they elect a President for a term of years. (See MON. ARCHY above.)
RESPIRATION purifies the blood by removing carbonic acid and other waste products, and revivifies it by introducing oxygen. In men it is abdominal, i.e. below the breasts; in women it is pectoral, i.e. above the womb. This relieves the pressure on the woman's womb, but increases it on the man's bladder.
RETZ, CARDINAL DE, was born in 1614, and led a most scandalous life, but was brilliant, cloquent, and audacious. He was an implacable foe of Mazarin, and $\ln 1548$ became the chief of the Fronde. He was inade a cardinal in 1651.
REUTER, BARON, was born in I821, and was connected with the telegraphic system from the very first. He established his News Agency in 1849 at Aix-la-Chapelle, but transferred it to London after the laying of the Calais-Dover cable in $\mathbf{8 8 5 1}$.
REVISED VERSION OF THE BIBLE was begun in 1870 , and took 14 years. The committee consisted. originally of 16 , but was afterwards increased to 79 members; and the most notable niembers were the Bishop of Winchester (Harold Brown), the Bishop of Gloucester (Ellicott), Professor Green, U.S.A., and Ex-President Woolsey, U.S.A. The Old Testament. under the care of the Bishop of Winchester and Professor Green, was done nucli better that the New Testament, which, however, came out four years before the Old Testament. Any student of the New Testament version should read Burgan's "Revision Revised."
Revivals, Religious, are a kind of Reformation on a sinall scale within a church or community. The first was the Puritan Revival of the I7th century, which was disfigured by creatures of the Captain Hew-Agag-in-pieces-before-the-Lord type. In the 18th century the second was caused by the preaching of Whitfield, theWesleys, and other earnest Christians, which also was the origin of missions to the heathen. The third was the American Revival of 1858, which spread to Wales and the Presbyterians of I reland and Scotland. The fourth was the Sankey and Moody 'sermon and song' of 1873 . The last is the Salvation Army (q.v.).
REYNOLDS, SIR JOSHUA, was born In 1723, and owed much of his early success to the patronage of Admiral Keppel and Lord Edgcumbe. He painted most of the beautiful and famous women of his age, e.g. Duchess of Hamilton, Miss Palmer, Mrs. Nesbitt, Mrs. Siddons, etc. ; and he was an intimate friend of Goldsuith, Garrick, and Dr. Johnson. He died 1792.
RHODES, CFCIL, amassed his fortune in the Kimberley mines. He became Premier of Cape Colony in 1890, and first attracted much notice in Britain by his gift of $£ 10,000$ in 1891 to the cause of Home Rule. He was the chief nover in obtaining mining rights in Mashonaland and Matabeleland, and was chairman of the British South Africa Company till 1896. His aim is to unite South Afrlca in matters of tariff, sailways, law, and coinage, but with local governments. Rhodesla is called after him. He resigned his premiership in 1896 after the Jameson Rald. The coolness and the tact which ensured the success of those negotiations with the natives, won for Mr. Rhodes the more flattering than pronounceable surname of Umlamulammenzi-the bull that separates the two fighting bulls, otherwise the Peacemaker.
RIBBON-WEAVING wis established at St. Etienne as early as the rith century, and St. Etienne still turns out the best ribbons, though Coventry and ElberfeldBarmen are scrious rivals,

RICARDO, DAVID, the economist, was born in 1772, and published lils first essay-on Currency-in r8io followed by one on Kent. Ilis "Treatise on I'olitical Economy and Taxation" appeared in $18 \times 7$.
RICE is thrown at a wedding because it is the emblem of great fertility.
RICHAKD, COEUR DE LION, owes his fair fame to his personal courage on the Third Crusade (sce "The Talisman"). His wife, Berengaria, was a Cyprian princess.
RICHARD III. was not 'hunclı-backed;' but he was a liar and a murderer.
RICHARDSON, SAMUEL, the novelist, was born in 1689, and became an apprentice to a London painter. He was over 50 when "Pamela" was published, and 60 when "Clatissa Harlowe" appeared.
RICHTER, JEAN PAUL, the German writer, was born in 1763 , and published his "Selections from the Devil's Papers" in 1789. His great "Life of Quintus Fixlein "was published in 1796, and he died in 1825.
RIDLEY, BISHOP, the martyr, was bishop of London in the reigns of Edward VI, and 'Bloody' Mary. He was burnt alive on Oct. 16, 1555, near the site of the Martyrs' Memorial in Oxford.
RIENZI, THE TRIBUNE, was born in 1312, and summoned the famous secret assembly on Mt. Aventine in 1347, after which the people conferred on him the title of Tribune. He was at first rigidly just and patriotic, but afterwards became ambitious. (See Lytton's novel "Rienzi.")
Rifles were invented in Germany at the end of the sth century, and were used as military weapons as early as 1631, but were not introduced into the British Army till a century later, and then only for 'ripe" regiments, all the others using the smooth-bore musket up to 185r. In that year also the first rifle fring an elougated bullet came into use-the 'Menie,' a cumbrous 'blunderbuss' which was used by some regiments in the Crimean War. It was succeeded by the 'Enfield 'iu 1853, and the latter gave place to the 'Snider' breech-loaders in 1866, and the 'Snider' to the 'Martini-Henry' in 187\%. The German needlerifle and the French chassepot-rifle had both been invented earlier, but were displaced for the 'Manser' and 'Lebel.' In the latest Inventions, e.g. .EnfieldLee,' ' Mannlicher, 'Hebler,' the bore is being made continually smaller, which gives increased speed, range, and accuracy; and, as the 'magazine' principle is adopted almust universally, the shooting power is enormously increased.
RIGHT FOOT FOREMOST was an old Roman order about entering a house, because the 'left' was thought unlucky. A boy was kept at the door to see that no one entered the house 'left foot first.'
Rime is single, or strong, or masculine, when the riming syllable is the last in the verse; double, or weak, or feminine, when it is the last but one. Rime seems to have been used from time immemorial by Oriental nations, but did not spread to Western Europe till the $4^{\text {th }}$ century A.D. The early Teutonic verses are alliterated, not rimed. It must not be confused with 'Rhythm' or 'Cadence - with which it has been confused both in spelling and in meaning.
RINDERPEST has been a periodical pestilence in Europe for the last $10 c o$ years, the worst visitation of it being in 8865.67 .
RITTER, KARL, the German geographer, was born in 1779 , and in 1819 succeeded Schlosser as Professor of History at Frankfort. In 1820 he was made also Professor of Geography at Berlin. His great work is "Geography In lts Relations to Nature and History:"
RITUALISM, or Pharlsaical observatlon of external rites and forms, was the less worthy side of the Tractarian Movement. It was restrained by Act of Partiament in 1875 . Nothing is more contenptible or inore treacherous than to roluntarily join any service-Amy. Church, or otherwise-and then to deliberately violate the rules of the service.
RIVERS have a variety of uses. They are the chief agents in removing 'weathered' soil from nouutainsides down to the sea, they drive ninachinery, they guide travellers, they attract population, they form convenient polltical boundaries, they water, drain, and transport, etc. For instance, the Bralnnaputra
provides soil, manure, water, and transport for tlo vegetable wealth of Bengal and $\Lambda$ ssim. The longest river in the world is the Mississippi-Missouri, 4200 miles, the Amazon being second with 3750 miles, and the lenisel and the Vangtsekiang thurd with 3300 miles each. The Congo is 2900 , the Hoang. Ho and the Nile are 2600 , the Volga is 2400 , the Niger 2300, the St . Lawronce, the Brammaputra, and the Indus are about zo00 each, the Danube is inbout I800, the Zambesi 1400 , the Ganges 1300, the Rhine 760 , the IElbe 550 , the Scine 470 , the Severn 220 , the Shannon 215, the Thames 200 , the Tweed II5, and the Tay 110.
RIVERS OR EUROPE llow from two great centresthe Alps and the Valdai Hills. The Alps are very high; they have seas near them on every side except one; and therefore they have a very heavy ratnfall. The Valdai Hills are very low; they are very far from the sea except on one side; and therefore they have a very lisht rainfall. The rivers which flow from the Valdai area are very long and very slow; the rlvers which flow from the Alpine area areexcept the Danube-shorter and much more rapid.

The river system of Europe is exceptionally useful for several reasons. The rivers generally run parallel with the mountains, and do not try to break across them. Thereare two important exceptlons to thisthe Elbe in the north-west comer of Austria, and the Danube in the south-east corner. Consequently. they are generally navigable for the greater part of their course-the Seine for 350 out of 470 miles, the Loire for 400 out of 540 , the Rhine for 560 out of 760 , etc. They radiate in all directions from common centres, and the character of the surface allows their lower courses to be interconnected by canals. For instance, the Rhine, Rhone, Ticino ( $=$ Po), and Inn ( $=$ Danube), all rise within 40 miles of each other, and einpty hundreds of iniles apart. Both the Black Sea and the Caspian are connected thus-by river and canal-with the Baltic; both the Black Sea and the Baltic with the North Sea; both the North Sea and the Caspian with the Mediterranean.

There are, howerer, i few drawbacks to this general excellence. The rivers in the south get very little rain in summer, and those in. the east get very hard frost in winter. The increase in the size of modern ships necessitates constant dredging, even in rivers that enjoy the 'scouring' advantage of a tide. Many of the short rivers, and some even of the long ones, especially in the Alpinc area, are too quick for navigation. In the latter case they may still be useful-(1) for irrigation, as in Spain; (2) for mechanical power, as in Switzerland; (3) for timberfloating, as in Siveden.

The most important rivers of Europe are the Seine, the Rhine, the Elbe, and the Danube. The Seine is so useful that Rouen has the best position for trade of any single city in continental Europe. The reasons for this are-( $x$ ) the river rises at a low level, and therefore is slow; (2) it flows through porous soil, which is able to moderate its flood and regulate its volume; (3) it is connected by canal with the waterways of neighbouring countries at more than a dozen separate points.

The Rhine rises in Switzerland, and empties through Holland; but it is essentially a German river. It is, however, really an international lighway of commerce, and it has along its banks probably a greater number of important cities than any other river in the world. The reasons for this are-(1) it is valuable for navigation; (2) Its upper and middle course is so beatiful; (3) its basin is so fertile. The older cities, such as Coblenz and Cologne, are all on the left banik, which had the protection of the river itself against the Teutonic hordes of Central Europe.

The Elbe has several points of resemblance to the Rhine. It is extremely valuable for commerce, being navigable up to Prague nia the Moldau. It does not rise in Germany, but is essentially a Gernan river. Its upper and middle course is beautlful, whlle its lower course is dinll and uninteresting.

The Danmbe is the longest river in Europe, except the Volyr, beins, four times as long as tho Seine. it rises in the Blacik lorest, and empties into the Black

Sea. Though it rises in Germany, and enties througls Roumanin, it is essentially an Austrinn rlver. It does for the trade of south-eastern Europe what the Rline does for the trade of north-western Europe, Like the Rhine, it lias deposited a large. damp delta; but, unlike the Rhine, it has no tide to help in keoping its mouth free from mud. Like the Rhine, it has a very fertile basin-famous at clifierent places for timber, wine, grain, and pigs. Austria. Hungary is so closely shut In by mountains, except where the Danube enters and leaves the countryat Passau and Orsova-that almost the entire foreiga trade is clone via the Danube. The old obstruction of the 'Iron Gates' at Orsova has been largely removed by the cutting of a slip-canal through the solld rock.
RIZZIO, DAVID, Mary Stuart's Italian secretary, canc to Scotland in 1564 in the suite of the ambassador from Savoy, and was murdered in 1566.
ROADS, CIVILIZED, are smooth, properly bridged, and not too steep. If the road is paved, its slope ought not to be more than I foot in 63 ; if inacadam. lzed, the slope may be twice as steep; or, if gravelled, a horse call trot down even $I$ in 15 with safety. France has the best roads in the world. Tolls in Scotland were abolished in 1883 . The two most fanous road-nakers in Britain have been Telford and Macadam.
[Conqueror.
ROBERT THE DEVIL was the father of William the ROBERT THE STEWARD, or the Stye. Warden, was the first 'Stuart ' king, and married Marjory Bruce.
ROBERTS, LORD, OF KANDAHAR, was born in 1832, and appointed lieutenant in the Bengral Artillery in 185I. He got the V.C. during the Indian Mutiny: and was made C.B. for his conduct in the Looshai expedition. In the Afglan War of 1878 he commanded the Kuram Valley column, and made a fine march to Kabul, winning the great battle of Charasial on the way, and then made one of the most brilliant marches of modern times from Kabul to Kandahar. He was created a baronet in 1881, and a peer in 1892. ROBERTSON, TOM, the dramatist, was born in I829, and his first success was " David Garrick," produced by Sothern in 1864. The great series of "Ours," "Caste," "Play," "School," and " MI.P.," were produced at the Prince of Wales' Theatre in 1866-70. He died in 187.
ROBERTSON, WILLIAM, the listorian, was born in 1721, and published his " History of Scotland" in 1759. Anfong his other works are histories of Charles V. and of America.
ROBESPIERRE, MAXIMILIEN, was born in 1758, and was elected deputy in 1789 . He planned the massacres of September, 1792 , but left the execution of them to Marat and Danton. His 'Reign of Terror' was at its heiglt in the spring of 1794, and he was guillotined on July 27. 1794.
ROB ROY, or ROBERT THE RED, was born about 1660, a younger son of Donald Macgregor of Glengyle. He joined the rebellion of 1715 , and thence. forward levied blackmail till his death in 1734 .
ROCHDALE PIONEERS. Many forms of workmen's assoclations could reasonably claim to be applying the co-operative principle to some particular sphere of human energy, but English co-operators generilly look to Robert Owen as their founder, though lie lias had but little influence on modern co-operation. Mis work created dissatisfaction with competitive industry as he saw it, and made men look out for a more humane and more scientific system; but he did not really organize the workers themselves co-operatively. The Rochdale Pioncers, lnowever, was essentially an effort made by workmen to improve their industrial condition by co-operative methods; and, thougl they had been influenced by Owell's teacling, they started the novement themselves.

The society was registered in 1844 , for the follow ing objects:-
"The ostablishment of a store for tho sale of provisions, clothing, etc.
"「ho building, purchasing, or erecting n number of houses, in which those meinbers, desiring to assist eacly other in improvin: their clomestic and social conditions, may reside.
"' To commence the manufacture of such articles as the society may determine upon, for the employment of such members as may be without employment, or who may be suffering in consequence of repeated reductions in their wages.
"As a further benefit and security to the members of this society, the society shall purchase or rent an estate or estates of land which shall be cultivated by the members, who may be out of employment, or whose labour may be badly remunerated.
"That, as soon as practicable, this society shall proceed to arrange the powers of production, distribution, education, and government ; or, in other words, to establish a self-supporting home colony of unlted interests, or assist other societies in establishing such colonies.
"That, for the promotion of sobriety, a temperance hotel be opened in one of the society's houses as soon as convenient."

In December, 1844, a store was opened with a membership of 38 , and a capital of $£ 28$; and, after paying expenses and a fixed interest on capital, and a percentage for education, the profits were divided amongst the purchasers in proportion to their purchases. The idea was a success, and success brought imitators, so that now there are very nearly 1700 societies, with a membership of about $1,350,000$ a capital of $£ 20,000,000$, a trade of $£ 52,000,000$, and a profit in 1896 of $£ 5,344,000$.
The progress of Co-operative Production has not been so great as that of Co-operative Distribution, owing to the greater difficulties to be overcome and the different opinions as to the best method of organizing Production; but there is now a vigorous extension of Co-operative workshops going on.

Two grand results of Co-operative work have been (I) That pawnbrokers-according to the statement of their own association president-have entirely lost their 'rent-day' business in co-operative circles. (2) That working men have been tried and not found wanting in the difficult work of organizing and administrating.
RODNEY, LORD, the naval hero, was bornin 1718, and bombarded Havre in the face of the French fleet in 1759. He won the battle of Cape St. Vincent in 1780. ROLAND, or ORLANDO, the hero of the old romances, was said to be the nephew of Charleınagne. His exploits of love and rage are related in the famous epics of Boiardo and A riosto.
Roman Church. (See Religion and ReformaTION above.) Papal Infallibility was defined as an article of faith in 1870.
ROMANCE LANGUAGES are tlose which are based on the 'Roman' tongue, i.e. Italian, French, Spanish, etc.
Romances are tales of wild adventure in Iove and war. In olden times there were three cycles of romance, connected respectively with Charlemagne, King Arthur, and Alexander the Great, and they were written in verse. As soon as printing obviated the advantage of verse as being easier to remember than prose, romances ceased to be metrical.
ROMAN ROADS. The four great R. R. in England were Watling Street, from the Thames to the Dee; the Foss, from the Exe to the Wash; Icknield Street, from the Severn to the East Coast; and Ermine Street, from the Thames to the Humber.
Roman Walls. Agricola's was built from the Clyde to the Forth about 83 A.D., and Hadrian's from the Tyne to the Solway in 120 A.D. Antonine had Agricola's Wail repaired in I39 A.D., and it is therefore often called after him.
RDME was founded in 753 B.C., and expelled its kings in 509. The empire may be said to -date from Antony's defeat by Augustus in 3 I B.C., and to end with Odoacer's conquest of Italy in $47^{6}$ A.D. The great literature of Rome was in its prime from $80 \mathrm{~B}, \mathrm{C}$. to 14 A.D. The chief poets during that period were -in order of time-Plautus, Terence, Lucretius, Catullus, Virgil, Horace, and Ovid. The chief prose writers were Cicero, Caesar, Sallust, and Livy.
Romney, George, the painter, was born in 1734, the son of a carpenter. At his best, 1775-1785, he was a worthy rival of Reynolds and Gainsborough.

ROMULUS, the mythical founder of Rome, was the son of Mars and Sylvia.
ROOKE, SIR GEORGE, the English Admiral, was borm in 1650 . He was knighted for his gallantry in the night attack on the French fleet off Cape La Hogue in 1692. He cominanded the expedition against Cadiz in y702, amnihilated the French and Spanish fleets in Vlgo Bay during the same year, and helped to take Gibraltar in 1704.
ROSA, SALVATOR, the Italian artist and poet, was born in 1655. His greatest pictures were studies of nature, especially along the Neapolitan coast, and his poems were biting satires.
ROSAMOND, FAIR, was the daughter of Walter de Clifford. She died about 1176 .
ROSARIES were probably introduced into the Romish Clurch by the Crusaders, who borrowed them from the Muhammedans. The complete or Dominican Rosary consists of iso small beads for Avez, divided into tens by 15 large beads for Paternostert. The ordinary rosary has only 50 small beads and 5 large, which have to be counted three times to make the full rosary.
ROSCOE, SIR HENRY, the great chemist, was born in 1833, and was professor at Owen's College in 1858-86. In I8g6 he was made Vice-Chancellor of London University. His " Lessons in Elementary Chemistry" has been translated into many languages. He is a grandson of Williain Roscoe, the author of the excellent lives of Lorenzo de Medici and of Leo X.
ROSEBERY, LORD, was born in 1847, and succeeded .his grandfather in 1868 . He was Under-Secretary in the Home Office from 1881 to 1883, Lord Privy Seal and First Commissioner of Works in 1885, and Foreign Secretary in 1886, 1892-94. In 1880 he was elected Rector of Edinburgh University, and in 1889 was elected to the London County Council, of which he was Chairman in 1889 and again in 1892. He was Prime Minister in 1894.95 . He is a strong advocate for Imperial Federation. He resigned his leadership of the Liberal Party in 886 owing to Mr. Gladstone's letters on the Armenian question.
ROSES, WARS OF, lasted from the battle of St. Albans in 1455 to that of Bosworth in 1485. The Lancastrians wore red, and the Yorkists wore white, roses.
ROSETTA STONE, which is now in the British Museum, was discovered in 1799. It is of black basalt, and bears an inscription in three difierent languages-hieroglyphic, enchorial, and Greek. It thus frmished Greek scholars with a key to hieroglyphics.
ROSICR UCIAN SECRET SOCIETY was first described by a Lutheran clergyman early in the 17 th century, and Cagliostro said that he was a member of the society, but it is generally regarded as mythical. It was said to be a sort of Freemasonry.
ROSS, SIR JAMES, the explorer, was bom in 1800, and went on voyages both with his uncle (see below) and with Captain Parry. He commanded the "Erebus" and "Terror" expedition in 1839 -43. but made his name chiefly by discovering the north magnetic pole in 1831.
ROSS, SIR JOHN, was boru in I777, and commanded the "Isabella" and "Alexander," with Lieutenant Parry in charge of the latter, in 1818 . In $182 g$ he went out in the "Victory," but had to abandon his ship in I832, and would have perished if he had not been picked up by his old ship the "Isabella," In 1850 he made his last voyage in the "Felix," in search of Franklin.
ROSSETTI, DANTE GABRIEL, was born in 1828, and became a pupil of Ford Madox Brown. In 1848 he joined Holman Hunt, Thomas Woolner, Millais, and others in founding the 'Pre-Raphaelite Brotherhood.' Like his sister, Christina, he wrote poens of great merit and mystic beauty. His most famous poens are "House of Life," "King's Tragedy," "Blessed Damozel." Her chief works are "Goblin Market," "Prince's Progress," " The Pageant," etc.
ROSSINI, the Italinn composer, was born in 1792, and made his first hit with "Tancredi" in 1813 He carried ont in Italy the improvements in operatic music carried out by Mozart in Germany. His most popular opera is "William Tell" (1829).

ROTHSCItILD BANKING-HOUSE was founded by Mayer Anselm Bauer in Frankfort-on-Minin, at the sign of the 'Red Shield ' (Roth Schild), ind his first govermment loan was 10 million thaters for Denmark in 1802. At his death, in 18:3, he left five sons to face the political troubles of Europe. Anseln Mayer von Rothschild, the eldest of them, became head of the Frankfort centre, and branches were opened in Vienna by Solomon, in London by Nathan, in Paris by Jncob, and in Naples by Karl. The latter branch was discontinued in r860, and Karl's sons succeeded theis uncle Anselnt in Frankfort. Nathan was the most enterprising of the fite brothers, and by means of carrier pigeons was continually in possession of news (e.g. the result of Waterloo) long before the l3ritish Government. His son, Liouel Nathan, was the first Jew who sat in the Britislı Parliament. All the five brothers had been made Austnin barons in 1822, and in 1885 Nathan's grandson was raised to the English peerage.
ROUND-ARM BOWLING was introduced either by Mr. Knight of Alton, or by Mr. Willes of Sutton Valence. On the tombstone of the latter there is an inscription which says-"He was a patron of all the manly sports. First to introduce round-arn bowling in cricket." The M.C.C. had adopted it about the beginning of the century, but discarded it; it was re-adopted about 1825 .
ROUSSEAU, JEAN JACRUES, was born in 1712, and led a wandering precarious existence till 1750, when he attracted notice by a prize essay on civilization. His "Social Contract" was published in 1762. In it he disregarded history and induction, and imagined that man was by nature good until he was depraved by governments, and that, therefore, what he needs to nake him perfect is liberty, not law. The work did good by exposing the barbarous foolishness of some liws which priests and politicians maintained were beneficial and essential to human society; but it did harm by leading people to think that there need be no struggle for right. Consequently, French humanitarians began their 'retum to nature' by destroying everything-creeds, institutions, customs, lives; and on their ruins Napoleon constructed his own positive ambition.
Koyal Academy of MUSIC was founded in 182z, and reconstructed in 1868 . It gives a number of scholarships and prizes.
ROYAL ACADEMY, THE, was founded by George III. in 1768 in Somerset House, and was removed to Trafalgar Square in 2834 , and to its present site, Burlington House, in 1869. Its two objects are to estahlish a school of design, and to hold an annual erhibition. It consists of 42 Rojnal Academicians (R.A.), and at least 30 Associates of the Royal Academy (A.R.A.). The first president was Sir Joshua Reynolds.
Royal agricul.tural Society was founded in 18 fo. It holds annual shows, and maintains it large staff of experts to make chemical. botanical, zoological, and other scientific experiments. Its experimental farm is at Woburn.
ROYAL COLONIAL INSTITUTE was founded in 1868, and diffuses an immense amount of valuable informa-tion-by its library, museum, and lectures-about the geography, history, and commerce of the British Empire.
ROYAL OBSERVATORY was built at Greenwich by Charles II. on the site of Duke Ilumphrey of Gloucester's castle, because the great increase in Brish commerce had made the determination of longitude at sea an absolute necessity. The official chronometers for the Navy are bought and generally tested at the R. O., and about 400 are tested every day.
ROYAL SOCIETY was also founded practically by Charles II., and has numbered among its presidentswho are the semi-nfficial advisers of the Govemment Sir Isaae Newton, Sir Christopher Wren, Sir Humphrey Davy, etc.
RUBRNS, the greatest of Flemish painters, was burn in 2577. and in 1598 was admitted as a master of the Antwerp guild of painters. His most famous picturo is the "Descent from the Cross."

RUBENSTEIN, the Russian pianist, was horn in r829, ind made a triumplat tour in Europe when he was 10.
RUBRICS get their name from the fact that titles, rules, etc,, in old legal and liturgical books used to be printed in red.
RUSKIN, JOHN, was born in 18土9. His "Modern I'anters" began to appear in 1843. " Unto this Last" in 1862, "Hors Clavigera" in 1871, "Sesane and Lilies "in 1865, and "Praeterita" in 1885 . Ife writes most beatiful Euglish, and has had immense infucnce both as an art critic and as ant ceonomist.
RUSSELL, LORD JOHN, was born in 1792, and in 1819 moved the first motion in favour of his life's aimParliamentary Reform.
RUSSElL, William Clark, the novelist, was born in 1844, and abandoned the sea for literature in 1865. Anong his most popular books are "John Holdsworth," "The Wreck of the Grosvenor," "Marooned," ctc.
RUSSELL, WILLIAM HOWARD, the war correspondent, was born in 1821, and joined the staff of "The Times" in 1843. He has been through the Danish War of 1848 , the Crimean, the Mutiny, the FrancoPrussian, etc.. and was present at many of the great battles of modern times, e.g. Alina, Balaclava, Inkerman, etc.
RUSSIA is the largest of the European powers, and the strongest, and has for centuries been the guardian of Furope against the infidel. Upon its border the full horrors of Asiatic conquest have burst again and again, and there was a time when every Tartar considered the Muscovite as his slave. But the storm of Tartar savagery spent itself on Russia, and thus Europe was saved. When the Russians had once thrown off the Tartar yoke, they entered on another mission against the Turk. And it is fairly true to say that there is not a freeman between the Pruth and the Adriatic to-day who does not owe his freedom mainly to Russia. Iler great writers, such as Turgenieff, delight the civilized world as much as her painters, Gay and Verestchagin, and her musicians, Rubenstein and Paderewski; and in Count Tolstoi (q.v.) she possesses the only real prophet of the present age.
Europenn Russia has some sea on every side-the White Sea on the north, the Baltic on the west, the Black on the south, and the Caspian on the enst. They are all inland seas, and have the usual disadvan. tages of inland seas in respect of climate and commerce. The White Sea is merely an arm of the Arctic Ocean; but the latter is of very little value for commerce, and is practically an inland sea between Nordkyn and Novaya Zemlya. The Baltic and the Black, thouglr independent seas, are terribly shut in ; and the Caspian is simply a huge lake. Therefore, Russia must get a port on the Mediterranean!
RUSSIA LEATHER owes its pleasant scent to the birch-bark oil with which it is prepared.
RUSSIAN COAL. A very erroncous idea has become very fwidely spread-that Russia has no coal. This is a very great error, for the coal area is larger than that of any other European country, and is well distributed. The largest field is in the basin of the Donetz, near Kharkov, and this has made the city one of the great seats of general manufacture, and given it a population as large as that of Salford. The second field is in the basin of the Vistula, near Lodz; and the nearness to the Silesian sheep-pastures, and the facilities for importing cotton and flax up the Vistula to Warsaw, bave made Lodz the most important textile centre in Russia, and drawn to it a population as large as that of Oldham or Dundee. The third field is in the very heart of the country, round Tula; it has macle Moscow the great railway centre of the country, with a population twice as large as that of T.eeds or Dublin, and las also drawn to it a large trade in raw cotton and silk mia the Caspian Sen. There is also it sumall field in the basin of the Kaina, near Perm, which has been of very great value in cleveloping the mineral wealth of the Urals On the Caucasion const of the Caspian Sea there are also extremely rlch oil wells. The quality is inferior to that of the American oil, lutt it is heginning to be
very widely used for locomotives and steamers, and it lias dravn to Daku a population as large as that of Bolton or Brighton.

SABBATH (meaning 'rest ${ }^{\text {') }}$, was formerly instituted as a holy day when the Israelites gathered manna in the wilderness, but it was not rigidly liept till after the captivity. In the 'Sabbatical year' it was unlawful for the Jews to plough, sow, or prune vines, and it was the year when Jewish debtors were released. Sunday was instituted in order to distinguish between the Jewish and Christian observances of the holy day. At the Council of Laodicea (366) it was declared that no Christian need observe the Jewish Sabbath.
SACCHARIN was first introduced to commerce in 1887 by its discoverer Dr. Fallberg. It is a preparation of coaltar and is not fermentable. It is used in treating diabetes, etc.
SACIEVERELL, HENRY, D.D., the English divine of the Establisliment, was born in 1674 . In 1709 lee was impeached for preaching against dissent and the Whig ministry; and was suspended for three years, which caused him to be considered a martyr. He was the hero of the hour when the Whig ministry was overthrown, and Parliament thanked hisn for his defence of the church, Queen Anne presenting him, at the same time, with a fich living in Holborn. IIe died in 1724.
SACK (French, sec, 'dry') was formerly the name for all kinds of dry wine, especially the Spanish, which were much used in the r6th century.
SACRAMENT. In early times the church had numerous sacraments, as many as thirty being enumerated in the 12th century. The Roman and Greek churches recognize seven, whereas the Protestant recognizes two; Socinians regard them as divine rites having no efficacy and therefore not binding on Christians; and Quakers regard them'as acts of the mind only, and lave no outward ceremonies for them.
SACRIFICES. Their symbolic character is represented as (I) propitiatory, (2) eucharistic, (3) expiatory, or to conciliate, show gratitude to, and atonement to the Deity. Deprecatory sacrifices, offered to appease the wrath of gods, are different.
SADI, the most celebrated didactic poet of Persia, was born about the end of the 1ath century. In his youth he travelled much, and whilst in Syria, being taken by the Crusaders, was made to labour is a slave. He returned to Shiraz, his native city, after fifty years; He wrote "Gulistan" (Garden of Roses), "Bostan" (The Orchard), etc.
SAFETY-LAMP was invented by Sir Humphrey Davy in 18i6. One of the newest makes is the "Thornbury, which is said to be self-extinguishing in an explosive mixture of firc-damp and air. There are also electric miners limps in the market.
SAGAS are a class of prose epics, among the Icelanders, of a mixed character, and blending fiction with authentic narrative. Some detail political or religious events, others the history of a family, and others again the lives of kings and eminent individuals. They were first written down between the izth and Isth centuries. The "Saga of Gisli," the outlaw; the "Saga of Egile," the hero and poet ; the "Eyrbyggia Saga" (of mixed contents); the "Iaxdoela Saga" of the heroine Gudrun; and the "Saga of Nial," a complex saga of great legal and historical value, are all important.
SAINTE-BEUVE, CHARLES, the French writer and critic, was born in 1804. His first important work was on the French literature of the icth century. In I 837 he delivered lectures at the School of Port Royal, Lausanne, which formed the basis of his work, "His" toire du Port Royal." In 1840 lie became conservator of the Mazarin Library, and in 1852 Professor of Latin Poetry in the College de France. He contributed critiques to the Monday numbers of "Revue des Deux Mondes," the "Constitutionnel," and the "Moniteur."
SAINT-SIMON, CLAUDE, COMTE DE, founder of tlie sect of philosophico-religious socialists, was born in 1760. He was nade a prisoner at the naval combat in which Rodney defeated the French during the

American War; and lie remained a prisoncr till $\mathbf{7}^{3} 3$. In $1803 \cdot 13$ lie wrote on scicuticic and political subjects. reveloping the socialistic theories be expressed cefinitely in "J "Jndustrie ou Discussions Politiques," "Morales et Philosopliques," and "Parabole," in which Thierry, Aubin, and Conste, lis disciples, collahorated. St. Simonism was suppressed in 1832 by government, but became temporarily active in 1848 and 1871 ; and there are still members of it in Paris.
SALA, GEORGE AUGUSTUS, the joumalist and author, was born in 1828. Under Charles Dickens he contri. buted to "Houschold Words," and afterwards edited "Temple Bar," in wlijch appeared his novels, "The Seven Sons of Mammon" and "Captain Dangerous." He was a grent traveller, and described his travels in a keen, humorous way of his own. He contributed to the "London Daily Telegrapln," "All the Year Round," "Cornlill Magnzine, "etc.
SALADINi(properly 'Salah-Ed-Din'). Sultan of Egypt and Syria, was bom in 1137. He became vizier to the last of the Fatimite Caliphs, and, at the latter's death, usurped his wealth and authority. In 1173 he succeeded the Sultan of Damascus, and extending his conquests over Syria, lee came in contact with the Crusaders in the Third Crusade. In 1187 he gained the famous victory of Tiberias, when Jerusalem surrendered to him; but the conquests of Richard I. compelled him to make a truce. He died about ingz. He was a skilful general and an astute ruler.
SALAMANDER is entirely harmless, though it is supposed to be venomous; and it does not live in the midst of fire as the legend says, though the watery secretion of the skin might enable it to resist great heat with impunity. The 'land salamander is like a lizard, and the 'water' salamander is a newt.
SALISBURY, ROBERT, THIRD MARQUIS OF, the English statesman, was born in 1830 . He entered Parliament in 1853, and became Secretary of State for India in 1866, which he resumed again in 1874, having retired for a while before enterng the House of Lords in 1868. In 1878 he accompanied Disracli to the Congress at Berlin, and at the latter's death became the leader of the Conservative party. He becanie Premicr as well as Foreign Secretary in 1885. In lis early days he contributed regularly to the " Saturday Review" and "Quarterly Review. "
SALLUST, CAIUS, the Roman historian, was born in 13.C. 86. In B.C. 47 he was praetor elect, and accompanied Chesar to the African rrar, where he was left as Governor of Numidia. He wrote "Bellum Catilinarium " (history of the Catiline Conspiracy) and " Jugurtha " or "Bellum Jugurthinum " (history of the war ngainst Jugurtha).
SALT, common, is found cither dissolred in sea-water or the water of salt-springs, or in solid deposits, sometimes on the surface, sometimes deeper, in geological series. 'Rock-salt' is found in Cheshire, Yorkshire, and Worcesterslire, and in nearly every European country, besides other Continents. There are salt-plains in India, salt-wells in China, and supplies in the Sahara and Central and South Africa. Most salt is produced from rock-salt or brine springs, but 'hay-salt' (from sea water) is also used. The silt-mines of Wielicza. in Galicia, were worked in the 12 th century, and are the most famous in the world. Salt is made in Scotlind at Preston- (salt) -pans, round the coast, to which fact we owe the word "bay: salt.' and which developed the trade in connection with fish. It was important in Saxon times because all meat was salted for winter use. The important rock-salt centres have therefore Saxon names, c.g. Northwich. The salt of Cheshire has attracted chemical works to Widnes and St. Helens, though the industry itself depends on the coal-fields of Cheshire and South Lancashire.
SALVATION ARMY' was originated in East London in 1865 by General Booth. It received its present name in 1876 , and with the name army came military phraseology, such as kner-drill for prayer, afferrs for the evangelists, etc. The weekly joumal of the army is tlie "War Cry."
SANCTUARY, RIGBT OF, can still be obtaised in Holyrood. During the middle ages the custom of
sanctuary was much abused, so it was abolished In England in 16o7. The abbey and palice of Holyrood with their precincts (including Arthur Seit and the Queen's fark) can give simctuary to civil debtors.
SANHEDRIM was the suprense judicial tribunal of tho Jews, existing in the time of the Maccabees, and in New Testantent times. According to the Talmud, Moses founded it when he elected 70 elders to assist him in judging in the wilderness: but this idea is now rejected. The Council became extinct in 425.
SANSKRTT LANGUAGE AND LITERATURE. Sanskit was the classical language of the Hindus, in which most of their vast literature was witten ; but it has not been a living spoken language since the and century before Chtist. 1t is the oldest of the Aryan linguages, and is therefore related to the Persian, Greek, Latin, Teutonic, Stavonic, and Keltic tongues. It was not until Sinnskrit became known to Europenns that philology became a science. Its great value is due to the transparency of its structure, and its freedom from the corrupting effect of phonetic change, and from obliteration of the original meaning of the vocables. The literature covers a period extending from at least $1500 \mathrm{~B} . \mathrm{C}$. to the present time, The oldest literary monuments are the "Vedas," regarded as the source of all the sicred writings of the Hindus (see VEDAS); but the "Puranas," though later, form an important department in the religious literature. The oldest law.book is the "Dharma-Shastra," while in epic poetry the chief productions are the "Rāmāyana" and the "Mahābhảrata." The latter forms yuite a cyclopaedia of Hindu mythology, legendary history, and philosophy. The "Meghaduta (Cloud Messenger) of "Kălidasa" is a fine lyric puem. Hindu poetic tales and fables bave exercised much influence on Eastern literature, and on that of our middle ages.
SAPPHO, the distinguished Greek poetess, lived about 600 B.C. There are various legends about her, one being of ber love for Phaon, which was unrequited, and so caused her to leap from the Leucadian Rock. At Mitylene (her birth-place), she seems to have been the centre of a female coterie of which the members were her pupils in poetry and fashion. Her odes, elegies, and epigrams show feeling and imagination.
SARTO, ANDREA DEL, the famous painter of the Florentine School, was born in 1486. He painted many frescoes in Florence, and, after visiting France, returned to Italy and painted the "Sacrifice of Abraham," the "Mar riage of St. Catharine" (both in Dresden Gallery), the 'Madonna di Sin Francesco," the ". Annunciation," and the "Assumption of the Virgin" (in Florence), and the "'Virgin and Child, with St. Joseph' (in Madrid). He is best known in gatleries by his " Holy Families."
SATURN, an ancient Italian deity, believed to have first appeared in Italy in the reign of Janus, to instruct the people in agriculture, gardening, etc., and to elevate them generally. He was elected to share the government with Janus, and his reign came to be sung by the poets as 'the golden age.' II is festival, the "Saturnalia" was a season of unrestrained mirth and freedom for both Roman citizens and their slaves. Under the Caesars it came to last seven diay, and during that time no work was clone, and masters even waited at table on their slaves $]$ In the last days people exchanged presents with each other.
Savonarola, Girot amo, the Italian ecclesiastical reformer, was born in 1452. Ile was educated for the medical profession, but secretly entered the Order of Dominicans at Jologna in 1475 ; and in 1482 began preaching in St. Mark's Convent at Florence. Being unsuccessful he retired to Lombardy, but in r too his increasing fame caused Lorenzo de Medici to invite him hack there. He eventualiy became so powerful in his infuence that, after Lorenzo's dcath, he orgnnized the city into a republic, and then wrote to the Christian princes declaring that the Church was corrupt, for which the Pope excommanicated him. The uther Florentine monks became jealous of him at this time, and in 1498 ho was burnt, Ho wroto
a treatise on the " Government of Florence," and also several sermons.
SAVOY, HOUSE OF, one of the oldest royal honses of Europe, is now represented by the King of lialy. llumbert White Hand (the reputed descendint of Wittekind, the last old Snxon king) was the first pronninent member of the family, and Victor Amadeus II. ( $1675.873^{\circ}$ ) was the last. In 1720 his kingdom, with Piedmont, and his other dominions becanc the kingdom of Sardinia.
SAYCE, ARCHIBALD, D.D. (the English comparative philologist and orientalist), was born in 1846 . 11 c became a fellow and tutor at Queen's College, Uxford. and, in 1878, was appointed deputy Professor of Comparative Philology under Max Miiller. He was also a member of the Old Testament Revision Committee, ind was Hibbert Lecturer in 1887. He wrote "Principles of Comparative Philology," "Ancient Empires of the East," "Assyrian Grammar," etc.
SCALE has been considered natural or normal when it has C for its keyenote or tonic. The diatonic scale is that which ascends by five tones and two semitones, and the chromatic that which ascends only by semitones. In the Tonic Sol-Fa system, so much used, the notes of any scale are called do, re, mi, fa, sol, la, ti, do, which forms the complete octave, from keynote to key-note. It is a most useful method in sight-reading.
SCALIGER, JOSEPH, the celebrated litterateur, was born in 1540 at Agen. He went to Paris in 1559 to study Greek, Hebrew, Syriac, Persian, and most modern European languages. Having become a Protestant he retired to Geneva after the massacre of St. Bartholomew, but returned in 1574 . In 1593 he was appointed to the Chair of Polite Literature in the University of Leyden. His most important work was "De Emendatione Temporum."
Scarron, Paul, the French comic author, was born in 1610 . He became an invalid at the nge of thirty. and was pensioned by the Queen and Mazarin, but his hostility to the latter and his writings in favour of the 'Fronde," lost him both patrons. In 1652 he married Francoise d'Aubigné, afterwards Madame de Maintenon. He wrote "Roman Comique," " Jodelet " (a play), etc.
SCEPTICISM has been specifically applied to the doctrin'es of the Pyrrhonists, Greek philosophers who denied the possibility of knowing anything with certainty. The founders of the Middle Academy, Arcesilaus ( $315-241$ B.C.) and Carneades ( $213 \cdot 129$ B.C.) employed this philosophy of doubt against the dogmatism of the Stoics. In later times Al-Ghazzali (1059-1111) taught, at Baghdad, a philosophical scepticism toenforce the truth of his Muhammedan doctrine, and among modern sceptics may be mentioned Montaigne, D'Alembert, and Hume.
SCHELLING, FRIEDKICH vON, the German philosopher, was born in r775. His studies were guided mainly by Fichte. In 1803 he became Professor of Philosophy at Würzburg; he lectured at Erlangen in 1820-26, and in 1827 becane a professor at Munich, whence he was called to Berlin in 1842. He defined positive philosophy as being not to prove the existence of God from the iden of God ; but, from the facts of existence, to prove the divinity of the existent. He wrote "Icleas for a Plilosophy of Nature," "The Soul of the World," "System of Transcendental Idealism," etc.
SCiItLLER, FRIEDRICH VON, the great German poet, was born in 1759 . He first attended the military. nonastic school founded by Charles, Duke of Wurtemberg, then he studied medicine, being eventuatly appointed physician to a regiment in Stuttgart. In r78ıhe published " Die Räuber" (The Robbers), which excited much attention. In $7^{8} 7^{3}$ he settled at Mannheim, as poet to the theatre, and he wrote "Fiesco," " Cabale," and "I icbe," In 1787 "Don Carlos" appenred, and in 1788 a " History of the Revolt of the Netherlands." Wielnnd, Herder, and Goethe then procnired for him a Professorship of Philosophy at Jena, where he lectured, and published historical "Memoirs from the Twelfth Century to the Most Recent Times"; and in r790.3 his " History of the 'Thirty Years' War." From 1799 he published
successively" 'Wallensteln," " Marla Stuart," " Willlam Tell," etc. His correspondence wlth Goethe, Willian von Ilumboldt, and Korner has been published, and Carlyle wrote his life.
SChliemann, Heinrich,'the German archaeologist, was born in 1822. He trivelled much, and in 1875 began excavations at Athens and Mycenae, and in 1877 discovered the five royal tombs said to be those of Agamemmon aud his companions. Schliemann published "Recherches Archacologiques" in Paris, an account of his travels in the East. He also wrote "Mycenae," "Troja," and "Tiryns." He received valuable help from his wife (a Greek) in his investigations.
SCHOLASTICISM was the system of plilosophy taught by the philosophers of the Middle Ages, who were cilled 'scholastics' or 'schoolmen' because their philosophy originated in the schools instituted by, and after, Charleinagne, for the clergy. The first period (from the gth to the 13 th century) was represented by Berengarius of Tours and his opponent Lanfranc, by Anselm, Abelard, Peter of Lombardy, etc. The zenith of Scholasticism was constituted by Thomas Aquinas, the Dominican, and Duns Scotus, the Franciscan, of the 13 th and isth centuries respectively, who founded the two schools into which the movement divided.
SCHOOL ATTENDANCE varies from about rgo per 1000 in U.S.A. and r8o in Switzerland to 70 in Greece and 15 in Russia. In the United Kingdom it is about 150.
SCHOPENHAUER, ARTHUR, the German philosopher, was born in 1788 . Ile graduated at Jena in 1813, with an essay on "The Fourfold Root of the Principle of Sufficient Reason." His most important work was "The World as Will and Idea"; but he also wrote "The Two Fundamental Problems of Ethics" and "Parerga und Paralipomena." His final teaching is of a philosophic pessimism, drawn partly from the Platonic system, partly from the Buddlistic doctrine of Nirvana.
SCHUMANN, ROBERT, the great composer and the critic, was born in 1810. He studied law, but finally devoted himself to inusic. In 1834 he started his musical journal, which exercised an important influence upon the development of music, not incomparable with Lessing's " Hamburg Dramaturgy" in drama. Before 1840 he composed his "Fantasias," "Etudes Symphoniques," the "Kreisleriana," etc.; and in 1841 he published nearly 150 songs. Then he began his orchestral works, some of which are the B Flat Symphony, D Minor and C Major Symphonies, "Genevieve," "Manfred," the " Faust " music, the E Flat Syniphony, besides his quartets, etc. He died in 1856.
SCIENCE AND ART. Science is knowledge put into a system to devise means. Art is knowledge put into practice to attain an cund.
SCIPIO AFRICANUS, the Elder, one of the most illustrious of Roman warriors, was born about 235 B.C. He was one of the few who escaped from the battle of Cannae in 216 B.C., when he succeeded in collecting the remnant of the Roman army, and saving Rome. He became proconsul in Spain, and took New Carthage, the stronghold of the Carthaginians; and the next year he totally defeated Hannibal's brother; and after a second defeat at Zama, in $z 02$ B.C., the Carthaginians sought for -peace. On his return to Romc. Scipio received the surname of ' Africanus,' and was made censor. Eventually he fell into disgrace, though the populace were in his favour, and he left Rome, and died probably in B.C. 183.

Scipin Africanus, the Younger, son of Paulus, the conqueror of Macedonia, and adopted son of Cornelius Scipio, who was Scipio Africanus the Elder's son, was born about 187 B.C. In B.C. 152 he went to Spain as military tribunc, and, on the outbreak of the third Punic War, commanded in Africa under Consul Manlius Nepos. His scrvices were so important that although he was not legally of age, he was unanimously chosen consul and leader of the forces against the Carthaginians. In B.C. r 46 he burned Carthage by order of the Senate, for which he received the sur-
name 'Africanus.' In B.C. 142 he became censor. and twelve years later entered on his second cousul. ship to put down the war with Numantia in Spain. For his conquest of this powerful city a triunuph was decreed to him and the surmame of Numantinus. In the last years of his life be made cnemies by opposing popular measures, and the was found dead in lis bed in B.C. 129.
SCORPION seldom, if ever, gives a fatal sting to a human being, though it is very painful. It has four pairs of limbs, and the organs of touch are largely developed, constituting a pair of formidable nipping claws. It has six, eight, or twelve eyes. They exist in Southern Europe, Africa, East Indies, and South America. Book scorpions (found among old books) are not genuine scorpions.
SCOTCH RaILWAY SpeEdS. The Caledonian early morning train from Carlisle to Aberdeen is described as the fastest train in the world by an export who has made special trips in it with timing apparatus, and gives the results in one of the technical journals. For 20 miles the average was $72-8$ niles an hour, and for two miles 81.6 miles. The whole performance is described as the ordinary work now on the Caledonian, and far in excess of English times. The engine was the ' Dunalastair,' which. in addition to large cylinders- 6 feet 6 inches-has the largest boiler- 4 feet $8 \frac{1}{2}$ inches in diameter-of any locomotive in this country. From Carlisle to Stirling, 117 miles 69 chains, the speed was $59^{\circ} 3$ miles an hour. notwithstanding the long clinsb of $49 \frac{3}{2}$ miles to Beattock summit, the speed towards the top dropping from $67^{\circ} 2$ miles between Wamphray and Beattock to $43^{\circ} 4$ miles from Beattock to the summit. On the down line run there were fine speeds. From Elvanfoot to Crawford the rate was 738 miles, to Abington $71^{1}$ miles, from Abington to Lamington $77 \frac{1}{2}$ miles, the down gradient being 1 in 300 . This, however, was not the highest speed made on the whole run, for the 2 miles 7 chains between Crieff Junction and Auchterarder were traverscd at the rate of $8 r^{\circ} 6$ miles an hour, the down gradient being I in roo: while the next 4 niles, to Dunning, were made at $78^{\circ} \mathrm{I}$ miles, to Forteviot at 74 miles, and to Forgandenny at $73^{\circ} 9$ miles. From Woodside to Coupar-Angus, again, the speed was $76^{\circ} 9$ miles. But to take the records over the longer distances, that from Stirling to Perth, for the first part of which there is an up gradient and then a down gradient, the mean speed was $58^{\prime} 1$ miles an hour, which is over heavy roads. From Perth to Forfar the speed was 608 miles, and from Forfar to Aberdeen, 53.7 miles; but the engine was slowed down, as the train was much before time. Between Cargill and Kirriemuir Junction, a distance of nearly 18 niles, the average was 7011 miles. But the best 20 miles' run was from Elvanfoot to Strawfrank Junction, the average being 72.8 miles. In ten years the Caledonian have reduced the time from Carlisle to Aberdeen from 7 hours 22 minutes to 4 hours 31 minutes; and it is pointed out that if the English lines made the same speed, 2 hours 17 minutes would be sased in the journey from London to Holyhcad, 53 minutes to Manchester, 52 to Liverpool, $18 \frac{1}{2}$ to Birnningham, 41 minutes to Exeter, and 64 minutes in the Midland Company's run to Carlisle.
SCOTT, SIR GEORGE, R.A., the arclitect, was born in rexr, near Buckingham. To him, in a large measure, is due the revival of Gothic architecture in Great Britain. He was employcd in the erection of new churches, colleges, and secular public buildings, some of them being St. Nicholas Church (Hamburg), the first important specimen of Gothic revival in Germany; the Foreign Office, India Office, Home and Colonial Offices, London ; Glasgow University the Memorial to the Prince Consort, in London; and St. Mary's Cathedral, Edinburgh. He also 'restored' the cathedrals of Ely. Lichfield, Hereford, Ripon, Gloucester, Chester, Salisbury, etc. He wrotc a book on 'restoration.'
SCOTT, SIR WALTER, the poet and novelist, was born in 177. He matriculated at the University of Edinburgh, without showing much brilliance of intellect; but he began to read ballad litcrature at an early age, and history and romance, and he knew

## GENERAL KNOWLEDGE.

modern languages. IIe trinslated poems of Burger and of Goethe. In 1805 the "Lay of the Laist Minstrel " won hint fame as a poet; and in reo8 he published " Marmion," followed by "The Lady of the Lake" in 1810. Ihis other poems, "The Vision of Don Rorlerick," "Rokeby." "The Lord of the Isles," were less successful. The appearance of ". Waverley" in 1854 fonned an epoch in modern literature. Others that followed-"Guy Mannering," "The Antiquary." "Old Mortality," " Rob Roy," "The Heart of Midlothian," "Ivanhoe," etc.together formed the series known as "The Waverley Novels." They were published anonymously, and Scott 'remained the "Great Unknown" until 1827. His Life, written by Loekhart, has taken the position of a classie. He died in 1832.
SCULPTURE, the simplest form of Arto gave place to painting in the same way that painting has given place to photography, The earliest records exhibit the art in bondage to religion, but Egypt cut the bonds. The symbolism of Egyptian sculpture, linked with regularity of workmanship, gave it the distinction and dignity of a style. Greek seulpture developer mpidly after the oth century B.C., aided much by Pericles and Phidias, the latter's statues of "Athene" (at Athens) and of "Zeus" (at Olympia) marking its highest stylc. Praxiteles was a later representative, and to his period belongs the famous group of " Niobe and her Children," followed (about B.C. 146) by the eelebrated group of the "Laocoorn," the "Dying Gladiator," and "A pollo Belvedere." Italian scu!pture was a continuation of Grecian sculpture. The best-known statues are the "Borghese Gladiator" (in the Lourre), the "Venus de Medici" (at Fbrence), and the "Farnese Hercules" (at Naples); and a more modern one is Donatello's "St. George." Luca della Robbia, Andrea Verrochio, and Leonardo da Vinci were leaders in Italian sculpture in the 15th century; but Michael Angelo was the greatest master Italy ever produced. The sculptures of the French cathedrals show Byzantine, Romanesque, and Gothic influences. Bouteillur, Colombe, Goujon, and Cousin were among the earlier sculptors; and in the present day St. Marceaux, Frémiet, Mercié, Dalon, and others form a school which is the foremost in Europe. Albert Diirer and Rauch were great German sculptors, and Schilling is now the most noted living sculptor in Germany. Grinling Gibbons, Banks, Flaxman, and later Alfred Stevens, were leading English sculptors, and Boehm, Thornycroft, Gilbert, Broek, and Leighton have helped to give English sculpture a high place in more recent times.
SEAL. The use of seals is of the highest antiquity, and one of the earliest forms was the signet ring. In Egypt impressions of seals were made in fireclay and attached to documents by slips of papyrus; and the Romans made them in clay, bees'-wax, and (in the time of the empire) in lead. In the days of Constantine flat metal seals, called bulluc, were used. The metals employed were gold, silver, and lead, and the bullate were attached to documents by silk or woollen bands. The leaden seal was adopted by the popes. The western monarchs used bullae up to the 16th century; the use of bees'-wax was introduced by the Normans; and sealing-wax was invented in the rith century. English documents are still legally sealed, but the true youcher to which alone importance attaches is the signature. There are three seals used officially in England, by, or in the name of, the sovereign-the great seal, privy seal, and signet. There is in similar set for Seotland,
Seas, Important Inland. The North Sea, or German Occan, is really a portion of the Atlantic Ocean, to which it is joined by the Straits of Dover and the English Channel. It is very shallow, and contains a number of sandbanks and! sand-choked harbours. These sandbanks have been formed by the meeting of the two ticles which fow round Great Britain, one round the north of Scotland, and the other up the Englislı Channel, and which nieet off the Thames. Some of them are very dnagerous, especially the Goodivins; and sotne are very useful for fishing, especially the Dogger. These bank; have the three great qualifieations for a good fishing
centre-(r) They are very prolific, being covered with the particular kinds of sen-weed amongst which the fish fund their food and lay their eggs. (2) The sea is so small-only about twice as large as the British Isles-that the fishermen lave not to go very far from their homes. (3) For the same reison, markets are very near. One of the markets, Billingsgate, supplies London-the largest city in the world. The North Sea never freezes, even up the coast of Norway This is due to the Gulf Stream and the warm south-west winds, which keep the coast-line of Europe free from ice even within the Arctic circle.

The Baltic Sea is only three-quarters the size of the North Sea, and is landlocked, so that it has no perceptible tide. It is also so shallow that it has very few good harbours. The only really good one is Copenhagen, which stands on the Sound-the shortest and the straightest of the three chamnels into the Baltic from the Kattegat. The Scandinavian Mountains to the west of it intercept all the warm wet south-west winds, but send down into it a very large nunber of rivers; and the huge plain of Russia to the east of it exposes it to the cold, dry, nortli-east winds from Siberia. The Baltic is more or less ice-bound for four months in the year, during which nails and passengers are sometimes sent across in sledges. Even in Riga, which is in the latitude of Dundee, the harbour has been blocked for nearly three months in the year with a line of icebergs more than thirty feet high, and nearly a nile long.

The Mediterranean presents some strong contrasts to the Baltic Sea, in size, depth, drainage, latitude, and water. It is six times as large, and at least one hundred times as deep. Between Malta and Crete it is about as deep as the Matterhorn mountain is high, whereas the Baltic is very seldom more than fifty feet. Like the Baltic, it is too small and too much landlocked to have a real tide; but, while the Baltic has a current out through the Kattegat, the Mediterranean has a current in through the Straits of Gibraltar: and while the Baltic is very fresh, the Mediterranean is very salt. The reasons for this current in are-(r) The sea gets comparatively little fresh water from rivers. (2) It loses a great deal by the rapid evaporation in such a southern latitude. In the old days, under the Tyrians and Carthaginians, the Greeks and the Romans, the Mediterranean was the great centre of trade in the known world; but its prosperity disappeared for three centuries owing to -(r) The Turkish invasion of Europe from the east. (2) The diversion of trade westward to America, and round the Cape of Good Hope to the east. (3) Improvements in ocean, opposed to sea, navigation. Since the opening of the Suez Canal in 1869 , the old prosperity has returned.

The Black Sea is nearly as large as the Baltic, and its average depth is nearly as great as that of the Mediterranean. Like the Baltic, it receives a very large amount of river water; but, like the Mediterranean, it is in a southern latitude. Consequently it is more salt than the Baltic, but less salt than the Mediterranean. Its great depth keeps its water very cold; and the luge plains round it expose it to great extremes of temperature, and especially to dry, hot winds in summer. Consequently, like the great lakes of Canada, it is subject to sudden stornis and dense fogs.

The Caspian Sea is about the same size as the Black Sea, but it has no outlet at all. Consequently, all its surplus water hass to be got rid of by evaporation, and this causes it to be extremely salt. It is also being gradually filled up by the mud brought down by the Volgn, as the Sea of Azov is by the mud brought down by the Dous. It is nearly 7000 miles snatler than it was roo years ago, and this is affecting both its climate and its eommercial value. It is probubly, like the Sea of Aral, or remnant of a huge sea which connected the Black Sea with the Arctie Occan, and which separated Europe from Asia,
SECOND SiGHT (ia Gaelic T'aiseh) was formerly quite common, but the world is too prosaic and matter-of. fact now to contain miny souls pure enough and exnlted enough in mind to be endowed with that power of sechig future or distant events as if they
were present. It was quite characteristic of the Highliand mystics of former times. The subject is treated at length in Martin's "Description of the Western Islands of Scotland, " published in 1703; and in Macleod of Hamers " Treatise on the Second Sight," published in 1763: and it is discussed in Dr. Juhnson's "Journey to the Hebrides." In George Alicrlonald's book, "What's Mine's Mine," 'Ian Macrundl' is a wonderful revelation of the influence of pure mysticisn in a character.
SECRET SOCIETIES IN U.S.A. are used for getting their members posts of honour and titles of office. According to Mr. W. S. Harwood, the membership of the seeret fraternal orders of the United States in the month of December, 1896, was, in round numbers, $5,400,000$. Taking the adult male population of the nation at the present time to be nineteen millions, and allowing that some men belong to more than one order, it will be seen that, broadly speaking, every fifth, or possibly every eighth, man you meet is identified with some fraternal organization, for the preservation of whose secrets he has given a solemn oath, a pledge more binding in its nature than perhaps any other known among men. In this vast number have not been included the many thousands who are members of the variols labour organizations, thougn they, to a greater or losser extent, are knit together by secret threads; ror about 500,000 members of the secret military orcers, as the G. A. R.; nor has any account been taken of the many other thousands who are identified with the fraternities of the eolleges. Auxiliary to and a part of these orders are military branches, having at the present time about two hundred and fifty thousand mentbers in the prime of life, who are trained in military tactics. It is perhaps quite within bounds to say that these orders are increasing in membership in the United States at the rate of between two hundred and fifty and three hundred thousand members annually.
EECUIARISM is a philosophy of life, the gist of which consists in the adrocacy of free thought. Secularists believe that the best means of arriving at the truth is to place perfect confidence in the operations of human reason. They do not consider that faculty to be infallible, but they think that reason should only be corrected by reason, and that no restraint, penal, moral, or social, should be placed upon holding, expressing, or acting up to an opinion intelligently formed, and sincercly lield, however contrary that opinion may be to those generally held. They regard scepticism (the questioning of traditional beliefs) as a moral duty, but their creed cannot be called sceptical, since they are not content to doubt, but when they find it impossible to feel absolute conviction on any point, they confess their ignorance, and leave it unproved. They believe in the doctrine of Utilitarianism. Secularism in England was the offshoot of Robert Owen's socialism, but its direct founder was George Holyonke of Birmingham, born in 1817. It was through him that affirmations were legalized in place of oaths, and his successor, Charles Bradlaugh, refused to take the parliamentary oath, and brought in an Oatlıs Bill in 1888.
SEDAN is in the department of the Ardennes on the Meuse, and there, on September 2nd, 1870 , Napoleon III. and his whole anmy surrendered to the Germans in the Franco-German War.
SFDGWICK, ADAM, the English geologist, was born in 1785. educated at Sedbergh and Trinity College, Cambridge, and in 1818 became Woodwardian Professor of Geology in his own university. He determined the geological relations of the palaeozoic strata of Devon and Cornwall, and of the strata (afterwards called Permian) in the north-east and north-west of England. He also explained the geological character of North Wales, and enlarged the geological museum. at Cambridge. His only considerable work was his "Discourse on the Studies of the University of Cannbridge." He clied in 1873 .
SEELEY, SIR ROBERT, the English scholar and writer, was born in 1834, and educated nt the City of London School and Christ's College, Cambridge, of which he eventually lecame a fellow. In 8863 he was appointed Professor of Latin in University

Collegre, London, and in 1869 suecceded Charles Kingsley in the Chair of Modern listory at Cambridge. In 1865 appeared a work, "Ecce 1 Iomo, or the Life and Work of Jesus Christ," which lie was supposed to have written, and it created a great sensation; but "Natural Religion, by the Author of 'Ecce Ilomo,'" attracted muel less attention. Among lis avowed works are "Life and Tines of Stein, or Germany and Prussia in the Napolconic Age," "The Expansion of England," "A Short Life of Napoleon the First," etc.
SELAH, THE WORD, occurs about seventy times in the Psalms, and seems to be either a musical or elocutionary sign or an invocation to Jehovah.
SELDEN, JOHN, the jurist, legal antiquary, and Oriental scholar, was born in 1584, educated at the Free Gramnar School, Chichester, and at Hart Hall, Oxford, from which he went to Clement's Inn and the Inner Temple. When called to the Bar he practised chiefly as a chamber counsel, and studied constitutional history in his leisure tinie. In i62I he was imprisoned for a short period, having advised the House of Commons against King Jnues; in 1628 he helped to draw up the Petition of Rights, and in 2629 was committed to the Tower. After his liberation he wrote his famous work " Mare Clausum," and in 1640 he sat in the Long Parliament, espousing the popular cause moderately. In 1646 he subscribed the Solenm League and Covenant, and in 1654 he died. He wrote " Analecton Anglo-Britannicon," "Janus Anglorum," "Facies Altera" (on the progress of English law down to Henry II.). "Titles of Honour," "De Diis Syriis" (on Syrian mythology), and "His. tory of Tithes." His "Table Talk" was published by his amanuensis, Richard Milward, in 1689.
SELECTION is a necessary part of the art of intellectual living so as to escape the worse evils of hurry. All depends upon the rejection of unessentials, and the selection of essentials-to skip what does not concern us, to recognize limitations, to be independent of other people's advice, and of custom.
SELKIRK, ALEXANDER, the prototype of ' Robinson Crusoe, ' was born in 16\%6. He took part in buccaneering expeditions in the South Seas, and, having quarrelled with his captain, was put ashore, at his own request, on the island of Juan Fernandez. He lived there alone for four years and four months, and was then taken off by the captain of a privatcer. He returned home in 1712, and his adventures became known to the public. In 1719 appeared Defue's "Robinson Crusoe." but his experiences are not those of Selkirk. Selkirk rose to be Lieutenant in the Navy before he died in 1723 .
SEMIRAMIS, whose history is enveloped in fable, was a queen of Assyria. Being exposed, as a baby, by her mother, she was miraculously fed by doves until found, and adopted by the chief of the royal shepherds. Onnes, the governor of Nineveh, married her, and she accompanied him to the siege of Bactra, assisting his operations by her advice. She became endeared to Ninus, the founder of Nineveh (about B.C. 2182), who threatened Onnes if he did not give her up, and so Onnes hanged hinself. Ninus then resigned the erown to Semiramis and proclaimed her queen of Assyria. She built Babylon, making it the nightiest city in the world; she was renowned as a warrior, and she conquered many adjacent countries, but being defeated on the Indus she was either killed or compelled to abdicate by her son Ninyas. According to the legend slie disappeared or became a dove, and was worshipped as a divinity. She was most likely a mythological being, like Astarte or the Greek Aphroditē.
SEMITIC LANGUAGES are generally divided into a northern and southern section. To the northern belong the ancient dialects of Assyria and Babylon (recorered by means of the cuneiform inscriptions), the Hebrew (with the Samaritan and Moabitic), the Phoenician, Carthaginian, and Arnnaic (including the Chaldee and Syrinc). The only one of the southern section now used extensively is the Arabie, which is divided into the dinlects of Arabia, Syrin, Fgypt, and Barbary, and which also includes the Himyaritic (formerly spoken in Arabia), the Ethiopic
spoken hin Abysslata, and the Anharle and other modern dialects of the same country. Tlie pecullarities of these languages are that their roots always consist of three consonants, into which the vowels are introduced to form words, and that they have no compound words.
SENECA, LUCIUS, called 'Seneca the philosopher,' was born in A. U. 3. He was taught by lus father, and he pursued the Stoic philosuplly most studiously. lbeing banished to Corsica in A.D. 41 , because Messalisa was jealous of his intimacy with Julia (niece of th.e Emperor Claudius), he wrote two treatises, "Consolatio ad Helviam" (a consolatory letter to his mother), and "Consolatio ad I'olybium" (a letter consoling Polybius for the loss of a brother). He was recalled in 49 , made praetor, and appointed joint-tutor, with Burrhus, of Domitius, afterwards the Emperor Nero; and the good government in the early years of Nero's reign was due to him. He lost his infuence and commited suicide in A.D. 66 . He also wrote treatises "On Anger," "On Providence," "On Tranquillity of Mind," "On Clemency" (atldressed to Nero), etc. The tragedies which bear the name Seneca are infurior, and may have been his father's work.
SENSATION is primarily received by the organs of the senses-eye, ear, nose, and tongue, besides the sensation of touch which makes us aware of heat, cold, roughness, smoothness, etc. ; but, according to Professor Bain, "the feelings connected with movements of the body or actions of the muscles have come to be recognized as a distinct class, and, by some metaphysicians, as proceeding from a sixth or muscular sense."
SEYT TO COVENTRY is an expression derived from the severe measures taken in olden times by the town of Coventry against interlopers in the trades of the town.
SEPTUAGINT, the Version of the Seventy, the Alexandrine Version, etc., is the oldest Greek version of the Old Testament, and was so called because it met with the approval of the Sanhedrim, the Supreme Council of the Jewish nation, or, according to tradition, because seventy men were employed on the trans. lation. It is reported to have been made in the reign, and by order, of Ptolemy Philadelphus, King of Egypt, about a7o or 380 B. C., but modern critics think it was written at different tlmes and that only the Pentateuch was at first translated. The Septungint was used up to the time of Christ, and most of the citations from the Old Testament in the New Testament were out of it. The chief extant MSS, known are the Codex Alexandrinus in the British Museum, the Codex Vaticanus at Rome, and Codex Sinaiticus (imperfect) at St. Petersburg, and the printed editions are the Aldine, Complutensian, Roman, and Grabian (Oxford, 1707).
SERAPIS, the Egyptian deity, was first worshipped in Egypt in the reign of Ptolemy I. Plutarch and Tacitus wrote that the king saw the image of a god in a dream, and had a huge statue brought from Sinope and set up in Alexandria. It was supposed to represent Serapis, and the temple callod the Serapium was built for it. It was the last hold of the pagans after the introduction of Christianity into Alexandria. The İgyptians themselves did not acknowledge him, but he was worshipped in the Greek and Roman towns of Egypt. It was said that forty-two temples were erected to him under the Ptolemies and Romans, and his worship extended to Asia Minor, and in r $46 \mathrm{~A} . \mathrm{D}$. to Rome. His temple and image at $\Lambda$ lexnendria were destroyed in 389.
SERFS existed under the fendal systen, and their condition was not far removed from slavery. There were two classes of labourers, the villeins and serfs proper; but, according to Hallam, from the reign of Henry II. only the latter existed. They could not be sold, but coutd be transferred with the property to which they were attached; but they could buy their freedom (after the revival of the custom of manumission) either by purchase, by residing for a year and a day in a borough, or by military service. They dismppeared in most parts of the Continent by the rith century, but, even fin the r8th cen.
tury, a kind of serfdom existed among Scottish miners.
SERIENT-CHARMING is an nrt of great anticquity, confined, in practice, exclusively to the Liast. Allusions are made to it in the Bible (Ps. Iviii., İccles. x., etc.) and in classical writers. The instrument usually employed is a kind of pipe, which is varied by whistling and the use of the voice. Thismedicy of sounds entices the serpents ont of their holes, ant then the clarmer' pins them to the ground with a forked stick
SERPENTS have sometimes more than 300 pairs of ribs, which serve to give form to the body, aikl in respiration, and are organs of locomotion. Their tectly are useless for mastication, but serve to hold their prey. Typical non-poisonous snakes have continuous rows of solid, conical teuth in both jaws and palate; but in venomous ones there are no teeth in the upper jaw, except the two poison fangs. They have no eyelids, but an anterior layer of transparent skin instead; neither have they external ears.
SEVEN was one of the mystic numbers, and might have either its strict numerical merning of ' 7 ,' or its metaphorical meaning of 'perfect.' Of course the $J u b i l e e$ year was reckoned by $7 \times 7$. The following instances illustrate the more or less 'mystic ' use of the word scuer. Cf, also 'Seventh Heaven,' 'Seven Golden Candlesticks, ${ }^{\text {e ctc. }}$
SEVEN CHAMPIONS OF CHRISTENDOM were St . George of England, St. Andrew of Scotland, St. Patrick of Ireland, St. David of Wales, St. Denis of France, St. Anthony of Italy, and St. Janies of Spain.
SEVEN WONDERS OF THE WORLD were the Pyramids of Egypt, the Pharos of Alexandria, the Fianging Gardens of Babylon, the Temple of Diana at Ephesus, the Statue of Jupiter at Olympia, the Mausoleum of Artimisia at llalicamassus, and the Colossus of Rhodes.
SEven Slefpers. The famous story of the seven Christian youths of Ephesus, who lieing imprisoned by the Emperor Decins in a cave, slept for 200 years, until the reign of Theodosins II. They related their story to the inultitude, blessed them, and expired. The 27th of June was consecrated by the Church to their memory. The story was probably based on the fact that seven dead bodies were found in a cave, and the habit of Christian writers always describing death as falling asleep, would contribute to the miraculous character of the tale.
SEven Solirows of the Virgin, feast of, a Romish festival, was instituted by Pope Benedict XIII. in 1725, and celebrated on the Friday before Palm Sunday. The seven sorrows are-(I) The prediction of Simeon, (2) the flight into Egypt, (3) the loss of Jesus in Jerusalem, (4) the sight of Jesus bearing the Cross, (5) the sight of Jesus on the Cross, (6) the piercing of the side of Jesus, (7) the burial of Jesus.
SEven Stars. (See Pleiades.)
SEvEN WISE MEN, or Seven Sages of Greece, were generally set down as Periander of Corinth, Pittacus of Mitylene, Thales of Niletus, Solon of Athens, Bias of Prienē, Chilo of Spartn, and Cleobūlus of Lindus. Maxims of prudence and elementary morality are regarded as embodying a summary of their wiskom.
SEVEN YEARS' WAR lasted from 1756 to 1763. As a result of the war with Prussia, Maria Theresa of Austria had to cede Silesia to Frederick the Great, and, with the view of recovering it, she concluded an alliance with Russia, secured the support of Poland and Saxony, and tried to form a closer union with France; but France and Fontland were at war, so George II. concluded an alliance with Prussin, while France helped Austria. In 1757, Austria, Russia, France, Sweden, and the German Empire were against Frederick, England, and a few German States. In 1763 peace was signed between Britain and France at I'aris, and Frederick concluded a peace with. Austria and Saxony by which he retained Silesia.
SEvignf, Marif, Marruuise de (distinguished for her letter-writiag talents), was born in 1636 . In 1644 she married the Marcjuis de Sévigne, who was kilied
in a duel in 165 , leaving her with a son and daughter. She then devoted herself to her children's education and the culture of her own mind. In 1669 her dauglnter married the Comte de Grignan, ind accompanied him to Provence, and, during a seven years' separation from her daughter, Madane de Sévigné wrote most of her fanous "Letters," some of which abound with Court anecdotes, remarks on men and books, and topics of the day. They are models of the epistolary style.
SEWING-MACHINES, as contrivances for imitating the movements of the hand in sewing, were made in 1804 , consisting of two pairs of pincers, one seizing the ncedle above, the other below, and so pulling it through the cloth. In 1834 a machine for embroidery work was invented by Heilmann, Thimmonicr \& Ferrand having contrived a clain-stitch machine in 1830 for plain work In 1854, Singer, the American, invented his machine; but in 1841, a poor American mechanic, Elias Howe, had patented the first really satisfactory machine, on the lock-stitch system of single-tliread maclincs. One of the best is that of Willcox \& Gibbs. The inanufacture of sewingmachines is carried on extensively in America, and also near Glasgow.
Sex Differences in Europe. Females are 6 per cent. shorter than males, and have 7 per cent. less bulk, 16 per cent. less weight, 12 per cent. Iess skull, 9 per cent. less brain, and 33 per cent. less strength.
SHAKERS, or SHAKING QUAKERS, are a sect which arose in Manchester (England) about 1747, founded by Ann Lee, an expelled Quaker, who went to Alneriva in 1774, with seven friends, and formed the first settlement of the United Society of Believers in Christ's Second Appearing. Like the Quakers they object to taking oaths, they neglect the common courtesies of socicty, and reject the Sacraments. Celibacy is enjoined upon all, and those who enter the community as married persons must live together as brother and sister. In America there are about 20 communities with 2000 to 3000 members in each, chiefly living in the New England States.
SHAKESPEARE, WILLYAM, the greatest English poet and dramatist, was born in 1564 . Very little is actually known of his earlier life, except his marriage with Anne Hathaway in 1582, by whom he had three cliildren, Suzanna, Hamnet, and Judith. Having settled in London he published "Venus and Adonis" and "'The Rape of Lucrece," in 1593; and from this time he grew in fame and fortune, playing before Queen Elizabeth in 1594. In 1598 twelve of his plays were mentioned in a publication, but he still continued to act, taking part that year in Jonson's "Every Man in his Humour," and, in 1503 , in his "Sejanus." He probably retired to Stratford about 16 io or $\mathbf{1 6 1 2}$. He died in 1616. It is impossible to enumerate more than a few of his best-known works, which are "The, Comedy of Errors" and "Midsummer Night's Dream," etc. (in the first period) : "King John," "Romeo and Julict," "The Merchant of Venice,", "Much Ado about Nothing." "As You Like it," etc. (second period); "Julius Caesar," "Hamlet," "Othello," $\because$ King Lear,"" Macbeth," etc. (third period), "Cymbeline," " The Tempest," and "Henry VIII.," etc. (fourth ${ }^{\text {period); which are partly by another }}$ writer. Critical editions of his plays have been published by Nicholas Rowe (Izog), Bishop Warburton ( 1747 ), Samuel Johnson (x765), Capell (I767), Bosivell (x821), F. A. Marshall, "Henry Irving Edition." ( x 888 -90), and others; and $\mathrm{C}_{\text {, }}$ Knight published his "Shakespeare, a Biography," in 1843.
SHAKESPEARE'S PLAYS, DATE OF. The date of a play is important for two reasons, and may be calculated from two kinds of evidence. Its importance lies in the fact that it enables us to compare the particular play with other plays written by the same author, and to appreciate the conditions under which it was produced. The difficulty involved is that most old plays were 'written' long before they were 'printed'; and this was speciaily the case with the work of an actor author. For, if his plays were once printed, other theatrical companies might perform them without either getting his permission or giving hilu any sluare of the proceeds; and, of course, the
public could buy the book Instead of going to see the actor in his own play. The evidence from which we may calculate the date is either external or internal. The External Evidence is gathered from-(a) Contemporary records of the actual existence of the play-especially in the case of Slakespeare, in Francis Mcres' "Palladis Tannia." (b) Allusions to, or quotations from, the play by other authors. (c) Prominent historical events which have very close parallels in the play. The Intermal Evidence is gathered from- $\langle a\rangle$ Direct allusions in the play to past or contemporary events. (b) A critical exanination of the matter and the language of the play.
SHAMROCK, the national emblem of Ireland, is a trefoil plant generally called 'white clover,' though some think it is the 'wood-sorrel.' The plant sold in Dublin on St. Patrick's Day is the small yellow trefoil. SHARP: JAMES, Arclibishop of St. Andrews, was born in 1613 . He studied at the Aberdeen University, visited Oxford in 1639, and on his return home was appointed to the parish of Crail. He soon becane a leader of the moderate clurch party, and visited London as one of their deputies to Cromwell. He also went on a mission to Monk, in favour of the Restoration, and the latter sent him to Charles II. In 1660 he became Professor of Theology at St. Andrews and the King's chaplain for Scotland; and soon afterwards he became Archbishop of St. Andrews. He was murdered by the Covenanters in 1679.
Shelley, Percy Bysshe, the famous poet, was born in 1792, and educated at Sion House School, Brentford, at Eton, and University College, Oxford. He was expelled from Oxford for writing "A Defence of Atheism," and soon after he finished "Queen Mab." His first great poem, "Alastor, or the Spirit of Solitude," was published in 1816, and "The Revolt of Islam" in 1817. He married Harriet Westbrook in 181I, who died in 1816, and he soon after married Mary Goodwin, living abroad the rest of his life. He was drowned in r821. His minor noems, "The Cloud" and "The Skylark,", are his woost popular works; but he also wrote "Rosalind and Helen," "The Cenci," "Prometheus Unbound," "The Witch of Atlas," "'Adonais," etc. Professor Dowden has written his memoirs.
Sheridan, Richard, the dramatist and orator, was borm in 1751. In 1762 he was sent to Harrow, and in 1772 he eloped with the young singer, Niss Linley. In I775 he brought out "The Rivals" and "The Duenna," which ran for seventy-five nights. In 1776 he became a proprietor of Drury Lane Theatre, and in 1777 he brought out his most famous comedy. "The School for Scandal," and in 1779 "The Critic." a farce, which was a model of its kind. His dramatic reputation got him into Parliament, and in 1783 he became Secretary of the Treasury, and in 1806 Treasurer of the Navy and Privy Councillor. He was an orator, but not a statesman. His " Begum" speech, on Warren Hastings' impeachment, was famous. His Parlianentary career ended in 1812, and he died in 1816 .
SHIP. The primitive types of shipbuilding were the raft and the canoe. Evidently the progress in the art under the Roman Enupire. not to mention the Phoenicians and earlier navigators, was much greater than in mediaeval Europe, where little was done until the discovery of the compass in the reth century, and the beginning of trade with India and discovery of America again increased the progress. When Henry VII. built the "Henry Grace de Dicu," the parent of the British Nary, the Spaniards and French had far better ships, though the Englishl flect soon out-rivalled the former in Elizabeth's reign. In 1637 the first three.decker was built, called the "Sovereligu of the Seas"; and since the early part of the x9tl century it las been a race of inprovement between Britain and America. The first steamer built for regular royages between the two countries was the "Great Western," launched in 1837. She was propelled by paddles, but very soon after Ericsson invented his screw-propeller, and in 1842 the British Admiralty had a screw vessel. Iron vesscls were first built in 1838, and the first occan.
roine steamship of the present kind was the "Great Britan," hanched in 1842 . Conipound engines (introduced by Messrs. Randolph, Elder \& Co., of (alisgow) were first used in 1867 in the ""Sirius." The Clyde. Tyne, and Wear are the chief ship. huikling centres.
SIIID'S TIME is marked by 'Watches.' Afternoon watch is from mid-day to 4 p.m., first dog watch from 4 to 6 p.m., second dog watch from 6 to 8 p.m., first watch fron 8 to midnight, middle watcli from nidenight to 4 aim., morning watch from 4 to 8 2.m., and forenoon watch from 8 a. m. to mid-lay. The morning watch is the coldest; the dog watches are clivided to give a crew alternate nighlits of cluty on deck. The - Watches' are announced by 'Bells.' Mid-day or midnight, 8 oclock, and 4 oclock are niarked by ' 8 bells,' and nalf an hour past nny of the four is 'I bell'; I o'clock, 5 o'clock, and 9 o'clock are ' $z$ hells, 'and half an hour past any of these is' 3 bells 's $20^{\circ c l u c k}$, $60^{\circ} \mathrm{clock}$, and ro o'clock are ' 4 hells.' and hall an hour past, any of the three is ' 5 bells 'i 3
o'clock, 7 oclock, and in o'cluck are 6 bells,' and half an hour past any of them is ' 7 bells.
SHOES seem to have been used by the Jews as well ns sandals, and the Romans wore various kinds: the 'solea,' or sandal, the ' calceus,' which covered the whole foot, and was tied with a latchet or lace, and the 'caliga, a stroug shoe, sometimes shod with niils, worn by soldiers. The long-pointed slooes. curling upwards, were fashionable in the reign of Heury 1 . and Stephen, and by the time of Richard 11. were so long as to be chained to the knee! In the 18th century absurdly high-heeled shoes were the fashion for ladies, and among ultra-fushionable people they are still worn higher than is desirable or graceful. The present shape of shoe was adopted early in the 17th century, buckles going out of faslion, but quite lately the latter have couse into faslion again, especially for out-loor shoes. It was not until the roth century that shoes were made right and leit for each foot.
SuOR rest Title of Novel in Great Britain is "B." á novel in three volımes, by E. Dyne Denton. Many well-known novels have monosyllabic titles, e.g. "She." "Eve," "May," etc.; and a novel has been published in U.S.A. under the title "?."
ShokThand was practised by the ancient Greeks and Ronlans, on account of its brevity and its secrecy; but all knowledge of the art was lost from the rolh to the 15th century, when Dr. Timothy Bright published liis "Cliaracterie " (in 1587). and Peter Bales his "Art of Brachygraphic " (in 1590), hut the earliest system of any importance was that of John Willis, whose "Arte of Stenographie" (1602) Uecame very popular. William Mason was the best shorthand writer of the ${ }^{7} 7$ th century, and in 1767 appeared the "Universal English Shorthand" of Jolin Byrom, followed in 1786 by Samuel Taylor's "Stenography," the best of the A, B, C systems, used almost universally until Isanc. Pitinan gave his "Phonogriphy" to the world in 1827, which has never been surpassed.
Shovel, SIR CLotDesley, the British admiral, was born in 8650 , entered the navy as cabinoboy, and eventually commanded the "Edgar", at the first fight of Bantry Bay. He also distinguished himself at Beachy Head (r6oo), La Hogue (1692), and Malaga ( 5704 ), and in 1705 became rear-admiral of Englancl, succeeding Sir Georse Rooke as Commander-inCliief of the British Fleets. The snme year he took part in the capture of Barcelonn, and in the unsuccessful attempt on Toulon in 1707, after which he was wrecked off Scilly with all his men; but his body was washed ashore and buried in Westminster Abbey.
Shrove TUesnay was the day on which Papists hid to confess their sins and be 'sliriven,' after which they amused themselves-and, we may hope, began their new list of sins-by throwing sticks or stones at cocks. S. T. can fall as carly as February 3, and as late as March 9.
SIAsteSE TWINS were born in 18ys in Sianı of a Chinese father and Chino-Siamese mother. They were named Eng (' right') and Chang ('left,') and were brought to the United States in 8829 . They married two
sisters, and their cliildren shewed no malformation whatever. Chang received a paralytic stroke in 1820 aud clied in 1874, his brother dying 2h hours afterwards. They were joincd by a thick fleshy ligament from the lower end of the breast-bone of eacli, which could probably have been cut with impunity.
Shibyb was the mane of certain women, mentioned by Greek and Roman writers, and said to be endowed with a prophetic spirit. It is generally supposed that there were ten of them, the most celebrated being the Cumnean sibyl (from Cumae in Campanin). She is said to have written the fanous collection of prophecies in Greek verses, called the Sibylline books, whiclı slie offered for sale to Targuin the Proud. When the king, on account of the high price asked, refused to buy, she threw three into the fire, and on a second refusal threw three nore in, so he bought the remaining three for the price originally asked for the nine books. These hooks were kept in the temple of Jupiter Capitolinus, and consulted on occasions of national danger, but they were clestroyed in 83 B.C. with the temple. About 1000 Sibylline verses were, however, collected from 1 talian and Greek cities and preserved till $400 \mathrm{~A} . \mathrm{D}$. The so-called Sibylline oracles preserved to modern times are of Jewish or Christian origin.
SIDDONS, MRS. SARAH, the first great tragic actress of the English stage, was born ill 1755. She hegan her theatrical career when a child, and at the age of nineteen married William Siddons, an actor in her father, Roger Kemble's, company. In 1774 slie woon recognition by her representation of 'Belvidera' (in "Venice Preserved") at Cheltenham, yet her first appearance at Drury Lane was a failure ; but in 1782 she appeared a second time, as 'I sabella' in "The Fatal Marriage," and won complete success. She was best as "Queen Catharine' (in " Henry VIII.")
and "Lady Macbeth.' She left the stage in 8812 and and 'Lady M.
Sidney, Algernon, one of Chief Justice Jeffrey's rictims, was born in 1622 . He was the second son of Robert, second Earl of Leicester, and he accompanied the latter in his embassies to Denmark and France. After serving with some distinction as a soldier in I reland, he joined the Parliannentary forces, and in 1644 was lieutenant-colonel in Manchcster's army at Marston Moor. In 1645 he was given command of a cavalry regiment in Cromwell's division of Fairfax's army, and was returned to Parliament. He was nominated one of the commissioners to try Charles I., but took no part in the trial, though he approved of the sentence. He refused to concur in Cronnwell's Government, and retired till $\mathbf{1 6 5 9}$; and at the !Restoration he went abroad. In 1677 he was allowed to return, but was arrested as a conspirator in the Rye-House Plot, was most unjustly tried by Jeffreys, and executed in 1678 ,
Sidney, Sir Philip, the writer, soldier, and statesman, was born in 1554; and he became a great fryourite of the queen. He was knighted the year of his marriage in 1583. In 1585 be went to the Netherlands with his uncle, Dudley, Earl of Leicester, and was appointed Governor of Flushing and General of horse; but he was mortally wounded at Zutphen in 1586. He wrote "Arcadia," " Astrophel and Stelhn" (the first important body of sonnets in the language), and "Defence of Poesy."
Siege of Gibraltar by the French and Spaniards lasted three years, during which it was desperately clefended by General Elliot ( $q, v$.) against the foes and against starvation. The siege was raised on February 2. 1783 .

Siece of Khartoum by the Madhi legan on April 16, 1884, just a month after General Gordon hitd reached the city, and lasted five montlis. Lord Wolseley's relief force arrived-too late-on Septemher 10.
SIEGE OF LONDONDERRY listed from April 20 to August x, 1689. The l'rotestant garrison lost 3000 out of a total of 7000 men.
Stege of Serastopol by the British and French in the Crimean War lasted a year, aut the Russians evacuated the city durlng the night of September 8 , ${ }^{2} 85$.

Siemens, Sir Charles, the engineer, was born at Ilanover in 1823, educated at the gymnasimu at Lubeck, the polytechntic scliool at Magdeburg, and the University of Göttingen. He came to London in 1843, and, with his brother, established in 1858 the great works of Sientens Brothers it Charlton, West Wuolwich, for the manufacture of suburarine electric telegraph cables, and in 1868 the steel works at Landon, Swansea, He won reputation for his applications both of hent and of electricity. He was knighted in April, 1883, and died the November following.
SIGISmuNd, German Emperor from 14 II to 1437 , was born in 1368 , and at his father's death became Margrave of Brandenburg. He was crowned King of Hungary in r 387 , and, becoming involved in a war with Turkey, he fled to Greece in 1396. On his return home in 1 for he was imprisoned, and the throne given to Ladishaus of Naples; but lie escaped and reduced Hungary to submission. In 1411 he was crowned Emperor of Germany, and iu 1414 took a leading part in the Council of Constance, but disgraced himself by allowing John Huss to be put to death after granting him letters of safe-conduct; so in 1419, when their king died, the Hussites refused to accept him as king of Bohemia till he signed a compact at Basle in 1431. He was then crowned Emperor at Milan, and again at Rome in 1433 . He died in 1437.
SIGNATURE 'X.' The origin of the X used by illiterates to denote their signature was the practice of all Christians to mark their signatures with the sign of the Cross, to distinguish them from Pagans and infidels. Afterwards the X became a guarantee of the Christian's word that the written statement was correct.
SIGNS OF INNS have often been grossly perverted from their original fomn. Thus, "God encontpasses" has become "Goat and Compasses," Belle Sauvage" has become "Bell and Savage," "Pige Washael" ( $=$ the Virgin's greeting) has become "Pig and Whistle."
SIGURD, in modern mythology, was the hero of the Volsunga Saga, on which the "Nibelungenlied " is based. According to the Volsungs' legend Sigurd (the Siegfried of the " Nibelungenlied) was a descendant of Odin, who obtained the golden treasure by slaying the dragon Fafius with his good sword Gram, after which he ate the monster's heart, and so acquired the power of understanding bircls' songs. Then he rode through a volume of flame to Brenhyldr's house, plighted his troth to her, and rode off to the palace of Giuki the Niflung, where he was given a potion that made him forget Brenhyldr and marry Giukis daughter. Giuki's son, wishing to marry Brenhyldr, his mother made Sigurd rescue her through the flames, and then she was inarried to Gunnar. When she discovered the truth she tried to kill Sigurd, but her husband, Gunnar's half-brother, killed lim, and she died of a broken heart.
SikHs (from a Sanskrit word meaning ' disciple ') were originally a religious sect in North-Western Hindustan, founded by Nanak Shah ( $1469-1540$ ) who taught them a pure religion of love to God and man. His successor, Arjun-mal, published lis writings in the Adi-granth, the first sacred book of the Siklis. They then roused the enmity of Muhammedans and Brahmans by rejecting the Koran and the Vedas, and from peaceful believers the Sikhs became gradually valiant warriors under Har Govind, but Govind Singh really founded the Sikh State, abolished the system of castes, and gave all men equal rights. He wrote a book of his exploits, which also treated of religious subjects, and which is mucl venerated by the Sikhs. He died in 1768, and the Sikhs gradually yielded to their enemies, but after Nadir Shah's return to Persia they formed into a number of cummunities. In 1792 Runjat Singh established himself as ruler over them, but after his death anarchy followed, and in 1845 the first Sikh war began, followed by a general revolt in 1848 ; but at Gujerat, in 1849, their power was broken, and the Punjab was annexed to the British Empire in India. During the Mutiny the Siklis displayed great loyalty to the British. They are full of courage and power of endurance.

Silver hallomarks were instituted as far back as 1300 A.v. in England, when a law wis yassed com. pelling, sterling articles to be stamped with a leopard's head, l'urther 'marks' were added, until eventually an ordinary piece of plate canne to bear-(I) The maker's mark, i.e. the first detters of his Christian name and surnane; (a) the leopard's héad, 'the mark of the Goldsmiths' Company ; (3) the sovercign's mark, a linu; (1) a letter denoting tise year; and (5) the sovereign's head-on articles subject to duty.
Simon, JULES, the French philosopher and states. man, was born in 1814, and was educated in the Ecole Normale, Paris. He succeeded Cousin as Professor of Philosophy in the Sorbonne, but lost the post in 1852 by refusing to take the oath of allegiance to Napoleon III. In $1855-56$ he lectured in Belgium, but, in 1863 , he was returned for the Chamber of Deputies. He oppused the war witli Prussia, aud. after 1870, became a nember of the provisional government, and minister of education under Thiers frum 1871 to 1873 . In 1876 he becante a leader of the Republicans, and was minister of the interior till 1877, when Mac-Mahon dismissed him. He wrote "Histoire de l'Ecole d'Alexandrie," "' Le Devoir," "La Liberté de Conscience," "L'Ecole," "Le Travail," "La Peme de Mort," "Le Gouvernement de M. Thiers," etc.
SIMIPSON, SIR JAAES YOUNG (the most eminent medical practitioner of his day, famous as the discoverer of the anæsthetic properties of chloroform)was born in 1811. At the age of fifteen he went to Edinburgh University, and in 1830 he was licensed by the Royal College of Surgeolis. In 1832 he became assistant to Professor John Thomson, and soun after was elected a President of the Royal Medical Society. In 1835 he published a paper on "Diseases of the Placenta," and in 1839 was appointed to the Cliair of Midwifery in the University of Edinburgh. His first paper on chloroform was read in 1847 before the Medico-Chirurgical Society of Edinburgh, and the gas soon came into general use. In 1856 he received the laureateship and gold medal of the French Academy of Sciences, with the Monthyon prize of 2000 francs. awarcled for 'most important services dune to humanity.' In, 1864 he published his treatise on "Acupressure." For the last 20 years of his life he was occupied with the subject of hospital reform. He died in 1870 .
Sims, GEORGE. the journalist and dramatic writer, was born in 1847. He contributed to "Fun" under the name of 'Dagonet,' and he wrote much on the London slums. His best dramas are "The Lights of London." "The Romany Kye," and (in collaboration with Henry Pertitt) " The Harbour Lights," and "London Day by Day."
SINKING FUND was a scheme first projected in 1716 by Sir Robert Walpole, but not developed till 1786 , when Pitt proposed that the sun of $£ 1,000,000$ sterling should be set apart from the country's income for the extinction of the National Debt. This scheme was not strictly adhered to, for instead of paying out of the surplus revenue, sums were borrowed for the purpose to such an extent as to increase the debt after a quarter of a century. In 1828 that plan was abandoned, but later sinking funds have proved more successful.
Sisy PHUS was a mythical King of Corinth who promoted navigation and commerce, but was fraudulent. avaricious, and deceitful ; so, in the nether world, he was obliged to roll a heavy stone to the top of a hill, on reaching which it would always roll back again.
Siva, the name of the third deity in the Hindu triad (Brahma, Vishnu, and Siva), in whiclt he is represented both as the destroyer and creator or regencrator. His worshippers are called Saivas, and they place lim first in the trinity and clothe him with attributes which belong to the other deities. He is often represented riding on a white bull, with serpents hanging about him.
Sizar was the term used at Cambridge University and Trinity College, Dublin, denoting the students of limited means who receive their commons' free, and are otherwise pecuniarily assisted. They used to
perform menial duties, but that practice has been perform disused. The eorresponding class of students at Uxford are the servitors.
Size of European States. The three NorthWestern States are France, Belquin, and II olland. (s) Holland is rather more, and Belgium rather less, than twice the size of Yorkshire ; (z) 1France is thirtyfour times the size of Yorkshire-i.e. exactly four times the size of England (without Wales).
The Baltic States are Scandinayia, Denmark, Germany, and Kussia. (x) Demmark is exactly twice the size of Wales; (a) Gerinany is about four times, and Norway and Sweden together are six times, the size of England (without Wales), (3) Russia contains half the land of Europe-i.e. it is about ten times as large as France or Germany. This accounts for the large number of its donestic animals.
The Southern Peninsulas include Portugal, Spain, Italy, Grecce. Turkey, Montenegro, Bulgaria, Servia, and Roumania. (t) Portugal is rather more than four times as large as Wales, and Spain is rather less than four times as large as England; (z) Italy is about twice as large as England; (3) Roumania is the same size as England. and Greece is exactly half the size of Koumania; ( $\downarrow$ ) Servia is three times, and Bulgaria is six times, the size of Yorkshire ; (5) Turkey is rather larger than England and Wales together, and Montenegro is half the size of Wales.
The two central countries are Switzerland and Austria-Hungary. Switzerland is rather more than twice the size of Wales, and Austria-Hungary is rather more than five times the size of England.
SKEAT, REV. WALTER, was born in $1835^{\circ}$ and educated at King's College School, London, and Christ's Collese. Cambridge, where he graduated in re58 as 1 th Wrangler, and became a Fellow in 1850 . In $1865-67$ he was Mathematical Lecturer, and in ${ }^{1867-76}$ English Lecturer at his College, while in ${ }^{1878}$ he was elected to the Elrington and Bosworth Professorship of Anglo-Saxon at Cambridge. He has edited early English literature most successfully, His ehief works inclucle a "Moeso-Gothic Glossary," The Gospels in Anglo-Saxon and Northumbrian Versions," editions of "The Vision of William coneerning Piers the Plowman,' "Piers the Plowman's Crede," "The Lay of Havelok the Dane," etc. ; and for the Clarendon Press he has edited " Specimens of Early English Literature" and portions of Chaucer's "Canterbury Tales." His "Etymological Dictionary of the English Language " ( $1879-82$ ) marked an epoch in this branch of knowledge. It was republished in an abridged form. He has also written some poems, and translated Uhland's songs and ballads.
SKELTON, JOHN, the English poet, was born about 1460. He studied at Oxford and Cambridge, receiving the laureateship from the former, which was then a degree in grammar. He was tutor to the Duke of York (afterwards Henry VIII.). His satirical attacks made Wolsey his enemy, and he had to take refuge in the sanctuary at Westminster, remaining there till his death in 1529 . He wrote the drama or morality of "Maznyfycence," a satire on Wolsey entitled "Why come ye not to Courte?" "The Tunning (i.e. brewing) of Elynor Dummyng." a picture of low life, and the " Book of Phylyp Sparrow."
SKOBRLOFF. MIKHAIL, the Russian general, was born in 1843, and entere il the army in 185x. He clistinguished limself against the Poles in 1866, and in 1876 was appointed military governor of the province of Ferghana. In the Russo-Turkish War he distinguisked himself, also at Plevna (second battle), and at Loftscha. In 1878 he became adjutantgeneral to the Emperor; in r880 he led a successful expedition ngainst the Tekke Turcomans, eapturing Geok Tepe in 188 x ; and he died in 1882 . He was a brilliant officer, and much loved by the troops.
SLANG is not necessarily vulgat, and is trenerally very expressive, e.g. 'the briny,' 'a choker,' 'fishy,' 'giglamps,' ' 'to put an oar in,' 'a a pigeon,' 'to 'spout, ‘a tile, ' 'up a tree, ' ${ }^{\circ}$ a wrinkie. ${ }^{\text {a }}$ A great deal of American slang is really Old English, carried to Pennsylvania by the 凤uakers, who were extremely conservative.
Slavery. Among the Hebrews native slaves were
released every seventh year, nnd they were always kindly treated, and at Athens they were well treated, but not at Sparta. Slavery was a rooted institution with Greeks and Romans. The slaves of the ancient Komans were captives, or debtors unable to pay, and they had origimally no righes. Slave revolts occurred in 134 and roz B.C. in sicily, and $\ln 73$ B.C. in 1 taly, where the rebellion was led by Spartacus, the gladiator. Augustus first granterd the slaves a legal status, and Antoninus took away the power of life and death from their masters over them. The early Claristian Church did nothing to suppress slavery, and it was not till the 13 th century that its severity relaxed in Europe. The Koran pernits Moslems to acquire slaves by conquest, but, until the Crusades, they were imported from among the African negroes. Early in the 18 th century some Quakers in England and North Anmerica were the first to liberate their slaves, and try to put down the trade; and later Wifberforce, Pitt, and Fox presented petitions against it to Parliament, and Clarkson was most energetic about it. The fannous Abolition Act was passed in 1807; in 183 the British Government emancipated the slaves of the Crown, and in 1833 alt slaves in the British Colonles; but, in spite of vigorous efforts, they still exist in East Africa.
SLEEP affords the interval during which the nervous energy expended in waking hours is renewed. Habit, age, temperament, and occupation have much effect upon the induction and maintenance of sleep in different people. The phenomenin of dreams and somnambulism are examples of differing degrees of sleep in different parts of the cerebro-spinal nervous system.
SLOANE, SIR HaNs (the distinguished naturalist and founder of the British Museum), was born in 1660. In $\mathbf{1 6 8 4}$ he began to practise as a medical man in London, became a Fellow in 1685, and President in 1727, of the Royal Society, having been elected Physician-General to the Forces in 17x6. His book, "Natural History of Jamaica," was the result of a visit there in $1587-89$. On the accession of George II. he became Plysician-in-Ordinary to his Majesty. He died in 1753 .
SLOYD, or SLOjD (a Scandinavian word equivalent to the English stcinht), is a systern in which the pupils are accustomed to using tools in a handicraft which is not necessarily intended to form their future occupation. It is much in vogue in elementary and higher schools on the Continent, and in some English educational establishments. It is applied to any useful handiwork, such as carpentry, metal-work, basket-work, fret-work, book-binding, etc., but it is usually confined to 'wood-sloyd' (the use of the knife and carpenter's tools). There is a training school for sloyd near Gothenburg.
SMEATON, JOHN, the civil engineer, was born in 1724 . In 175 the invented a machine for measuring a slipis way at sea, and also a new compass; in 1753 he became a Fellow of the Royal Society, was awarded the Copley medat in 1759 ; and in $1755-59$ rebuilt the Eddystone Lighthouse. Ile was entployed on the Forth and Clyde Canal, Ramsgate Harbour, and other public works. He died in 1792.
SMEDLEY, FRANCIS, the novelist, was born in 88 x9, and died in 1864. He was a hopeless cripple. He wrote "Frank Fairleigl,"," "Leewis Arunclel," "Harry Coverdale's Courtshlp," "etc.
Smell is one of the special senses, because the nerves exercised are affected only by odours, and none of the other nerves are capable of receiving the impressions of odours. The sense is derived exclusively through the olfactory nerves, which form the first pair of cranial nerves, or those given directly from the brain as a centre. Carnivorous animals are most susceptible to the odours of other animals, and herbivorous animals are most susceptible to the scent of plants; while man's sense of smell, thougli less acute, is more extended.
Smiles, Samuel, LL.D., was born ln 1816, and edneated for the medical profession. IIe practised as a surgeon at Leeerls, and edited the "Leeds Mercury"; in 1845 he became Secretary to the Leeds and Thirsk Railway, and in 1852 to the South-
liastern Railway, Most of his works are on inclustrial enterprise, the chicf of them being: "Life of Gcorge Stephenson," "Self-Help," "Wurkmen's Eamings," "Strikes and Wages," "Lives of the lingineers," "Industrial Biography," "The ILuguenots, their Settlements, Churches, and Industries in England and Ireland," "Thrift," "Life and Labour," "Character," etc.
SMITH, ADAM, the writer on political economy and on morals, was born in ry23. He was educated at the Kirkcaldy School, Edmburgh University, and Baliol College, Oxford. In 1751 he became Professor of Logic in Glasgow, and Professor of Moral Philosophy in 1752. In 1764-66 he travelled with the Duke of Buccleuch; in 1778 became Commissioner of Customs in Scotland, and in 1787 was chosen Rector of Glasgow University. He wrote "The Theory of Moral Sentiments," "Essay on the Origin of Languages," "Inguiry into the Nature and Causes of the Wealth of Nations" (his most celebrated work, deemed the precursor of the modern science of economics). The hest edition of this last work is that with a life of the author, by John Ramsay Macculloch.
SMITH, GOLDWIN, LL.D., the English historical writer, was born in 1823, and cducated at Eton and Oxford, where he graduated first-class in Classics in 1845, and became Fellow of University College in 1847. He was also Regius Professor of History in the University in 1858-68. Having defended the cause of the North, in the American Civil War, he was invited to deliver a course of lectures in the States, and he eventually became Professor of History at Corneli University, New York. In 187 r lie was appointed member of the senate of Toronto University. Among his chief works are: "Lectures on Modern History," " The Empire "(a series of letters), "Speeches and Jeetters on the Rebellion," "Three English Statesmen" (Pym, Cromvell, and Pitt), etc.
Smith, HORACE and JAMES, joint-authors of the famous "Rejected Addresses," were born in r 775 and 1779 respectively. In 1812 the competition was started for the best poetical address to be read at the opening of Drury lane Theatre after the fire; and this suggested to the Smiths the idea of producing a collection of parodies of the most noted writers of the day, under the title of "Rejected Addresses."
SMITH, SIR SIDNEY, the admiral, was born in 1765. and at the age of nineteen was created post-captain. He served with distinction as a volunteer in the Swedish navy against Russia, then under Lord Hood agninst France, and returning to England was made commander of the "Dianond." After being imprisoned at Havre for two years, he escaped, and did good service in Syria and in Egypt against Bonaparte. In 1802 he entered Parliament ; was created rear-admiral of the blue in 1805, and in 1806, as commander of a small squadron, inficted injuries among the French off the coast of Naples. In 1807 he destroyed a Turkish squadron, was made viceadmiral in 18 ro and admiral in 1821 , while in 1830 he succeeded Willian IV, as lieutenant-general of marines.
SMITH, SYDNEY, the English clergyman so noted for his wit and humour, was born in 1771, educated at Winchester School, Sydney, and New College, Oxford, of which he became a fellow. He was one of the founders of the "Edinburgh Review" in 1802, and contributed largely to it; and in 1804 he moved to London and inarried. His celebrated "Letters of Peter Plymley" appeared, anonymously, in 1807, and they advocated Catholic emancipation. In 183r he became a canon of St. Paul's, London, where he resided, till his death in 1845. He published a collection of his writings, including papers contributed to the "Review," "Sketches of Moral Philosophy," etc.
Smith, William, the 'father of English geology;' was born in 1769. Acting as land surveyor, mining surveyor, and canal engineer, led him to indulge in geological speculations, and in 1815 he submitted to the Society of Arts a complete coloured map of the strata of England and Wales. He died in 1839.

Smith, William H. (father of the present Hon. W.
13. Smlth), the bookseller and librarian, was born in 1825. 11 e became a member of his father's firm, and in 1868 entered l'arliament as Conservative mempor for Westminster, continuing to sit for Westminster till 1885, and then for the Strand. He was a member of the London School Board in 1870-74, was First L.ord of the Admiralty in $1877 \cdot 80$, and Secretary of War in 1885 ; and, when Lord Randolph Churchill resigned, he became leader of the House of Commons, as lirst Lord of the Treasury.
SMITH, W. ROBERTSON, the biblical scholar, was born in 1844, and educated at Aberdeen University, New Collcge, Edinburgh, and the Universities of Bonn and Göttingen. In 1878 he became I'rofessor of Hebrew in the Free Church College, Aberdeen, but was removed in 1881 for his critical views on the Old Testament. He then helped to edit the "Encyclopaedia Britannica," and, when Professor Baynes died, became editor-in-chief. He was a member of the Old Testament Revision Committee in $1879-80$; in 1883, after travelling in A rabia, he became Professor of Arabic at Cambridge, and in 1886 Librarian of that University. He wrote "The Old Testament in the Jewisl! Church," "The Prophets of Israel and their Place in History to the close of the 8th centur. B.C." "Kinship and Marriage in Early Arabia, etc.
SMITHFIELD is the square in London (north of Newgate and west of Aldersgate) where till lately, the only market for live stock was held in that city. It was outside the old city walls, and was therefore the place of public execution, and was only too wellknown in the days of religious intolerance as the place where the victims of that persecution were burnt. Bartholomew Fair (often mentioned in literature) was held there, and the cattie market dated from IIso; but now a fine meat and poultry market has been erected there.
SMOKE, BLUE OR GREY. The smoke from the bowl of one's pipe is blue, because, coming direct from the red-hot tobacco, it is very highly oxydized; but the smoke from one's mouth is grey, because it is highly watered and hydrocarbonized.
SMOLLETT, TOBIAS, the novelist and miscellaneous writer, was born in 1725 , in Dumbartonshire, and he was educated at Glasgow University. In I740 he became surgeon's mate in one of the ships that formed the unfortunate expedition to Carliagena, under Admiral Vernon, in 1741. He gave an account of the affair in his "Compendium of Voyages and Travels." He left the navy, stayed in Jamaica till 1746, and then, returning to London to hear of the Duke of Cumberland's barbarities, he wrote the wellknown ode, "The Tears of Scotland," and also "Advice: a Satire," with a second part in 1747 , entitled "Reproof : a Satire." In 1748 he published his "Adventures of Roderick Random." which brought him fame and fortune: and, while he was in Paris in 1750, he wrote "Adventures of Peregrine Pickle, followed by a new translation of "Don Quixote" in 1755. Soon afterwards he took the management of that Tory organ the "Critical Review." in 1757 he produced " The Reprisal," a successful comedy, followed by his "History of England from Julius Caesar to the Treaty of Aix-laChapelle in 1748." While in prison for libel, he wrote his "Adventures of Sir Lancelot Greaves," and in 1761, 1762, and 1765 appeared his "Continuation of the History of England down to 1765 ." In 1766 , after t wo years' residence ahroad, he published his "Travels through France and Italy," and in 1767 his "History and Adventures of an Atom." In 3770 , while at Leghorn, he wrote "Humphry Clinker," the best of all his works. Though his writing was often coarse, it has infuenced English fiction.
SNEEZING is preceded by a deep inspiration which fills the lungs and then forces the air violently through the nose. It is, ordinarily, a healthy action, throwing off automatically whatever irritates the delicate membrane of the nostrils, but if violent an appli. cation of warm milk and water, or a decoction of poppies, should be applied. The disagrecable complaint "hay-fever" slows itself in that way. The custom of blessing people when they snecze is an nacient and widely spread one. Germans say the
word "Gesundbeit" (health), and Italians "Felicita" (happiness).
SNow answers uany valuable purposes in the economy of nature, by feeding streans gradually, by tempering the burning heat of hot coutries, and the cold in very cold countries, where it protects vegetation and gives shelter to animals. Each snow-flate is composed of minute crystals of ice, which usually adhere together, and therefore all the rays of light refracted or reflected so as to present individually the prismatic colours are scattered after reflection, and grive to the cye the colour sensation of "white."
SNUFF is a powdered preparation of tobacco, made by grinding the leaves and stalks after they have been fermented by moisture and warmth. The tobacco is well dried, first of all, and this is carried so far sometimes as to give to the snuff the peculiar flavour of the high-dried snufis of Irelandi, Wales, and Scotland. Dry suufis are often adulterated with quick: lime, and the moist kinds with ammonia, hellebore, pear-ash, etc.
SOAP is a composition resulting from the actlon of caustic alkali on animal or vegetable fats or oils. with or without the addition of rosin. For hard or washing soaps a mineral alkali (soda) is used with fats rich in stearine, whilst for soft soaps a vegetable alkali (potash) is used with fluid oils, or the oleic acids extracted from solid fats. The addition of rosin to hard soaps is made to improve the lathering qualities, and when the process is properly carried ont is by far the best material for the purpose. Soap should be perfectly neutral, i.e. contain neither excess of all:ali nor grease-an excess of the former means destruction to the fabric washed, and of the latter, loss of detergent powers. The fats in general use for making sonp are:

## for Hard soaps: <br> Tallow. Palm Oil. <br> Cocoa.Nut Oil, and <br> Cotton-Seed Oil. <br> And for Low Qualities of Scouring Soap: <br> Any Refuse Grease.

FOR SOFT SOAPS:
Olive Oil and
Oleic Acid.
And for Low Qualities:
Fish Oil.
Cotton-Sced Oil, Or any thin, poor Oil,

All fats are capable of being made into soap, even castor oil, but those given above are most in use, and their respective qualities are understood by their position in the list. Glycerine is a "bye product " in the manufacture of soap. (See pare 673.) Among the most famous soap-makers are Messis. Pears. Dr. Redwood, Ph.D., F.C.S., etc., said of their soap: "The proportion of alkalies to fats is absolutely chemically correct. In a perfect soap neither preponderates. It is also free from any admixture of artificial colouring substances. The perfumes introduced are pure and perfectly harmiess." Stevenson M'Adam, Lecturer on Chemistry, Surgeons" Hall, Edinburgh, said: "I can certify to its being a pure and genuine soap. . . practically devoid of causticity. It combines detergent with cmollient properties, and may therefore be used with great adrantage for toilet and bath purposes, especially in the case of children and others whose skin is soft and delicatc." The late Sir Erasmus Wilson, President of the Royal College of Surgeons, Charles Tichbourne, LL.D., F.C.S., and others also have recommended it.
SOCIALISM is primarily an economic doctrine, though it involves political. religious, and social changes. It proclaims the equal right of all subjects of a State to share the material wealth of that State, and the equal duty of all to share the labour necessary to develop that wealth, so as to maintain the necessaries and comforts of life. There are two great classes ot Socialists, however, who have very difierent opinions of the causes of poverty, the great cvil, and different remedies for it. Ore class consists of the Anarchists, who hold that society is utterly bad, and must be destroyed, so that some now form of it may rise 'naturally' on the ruins of the old. They are the disciples of Rousseau, and are best represented by Bakunin and other Nihilists, who have demanded even the abolltion of science-in order that all men might llve together, sympathetically, in a state of 'holy and wholesome ignorance."

Scientific Socialists have nothing in common with such illegitimate and absurd extravagances and inanitics, thougls ignorant people think ind assert the opposite. Scientific Socialists seem to really know what their ideal is, how they got it, and how they want to carry it out. They define it as a state of things in which every soul in the nation shall have an equal chance of realizing such perfection as it i: naturally capable of realizing-as a pot-boy or a premier-without any reference to the lot into which, by fortune or by misfortune. it has been born; and they assert, often with too iittle regard for the feelings of the rich middle-class, that at present society. does not give the mass of men the "chance' $0^{\circ}$ realizing such perfection: edrfation does not glve them the ' will," and natural inheritance of brain and body-due mainly to bad food-does not give them the power. Further, they consider that this feverish scramble for material wealth is both unseemly and unscientific, because what one man gets another has to go without.

The cure lies in their scheme of 'Education' (q.v.). so as to bring out the power of each individual charncter, and in the strengthening of existing authorities, so that they may be used vigorously for the benefit of the poor and needy. The chief demands on the latter are for ( 1 ) Taxation graduated so as to correct fully gross inequalities of fortune; (2) loans of public money at a very low rate to persons :oo poor to borrow in the open market; (3) stric: enforcement of the moral and social duties attaching to wealth, especially in land. Such proposals may be inexpedient, but they are perfectly legitimate.

The English Societies representative of Socialism are the Social Democratic Federation, the Fabian Society, and the Independent Labour Party. In Germany they form the strongest political party in the whole cmpire, and polled 25 per cent. of the total number of votes at the last election; and the Social Democrats are deadly foes to State Socialism, which they cousider as a system of half-measures dictated by fear and intended to undermine real Socialism by petty concessions. The leaders are Liebknecht, Bebel, Vollmar, and Singer. In Austria, too, they are strong, but split into two parties-one following Karl Marx under the leadership of Dr. Adler, and the other led by Herr Hanser. Both in Germany and in Austria the political discontent is very much in favour of a wide spread of Socialism.
Socinus, the Latinized name of the two celebrated theologians (uncle and nephew), who gave their name to the religious sect of the Socinians, whose modified doctrines are now called Utilitarianism. Laclius Socinus (Lelio Sozzini) was born in 1525 , in Tuscany. In 1546 he became a member of a secret society at Vicenza, which arrived at the conclusion that the doctrine of the Trinity was untenable, and that many of the Romish dogmas were quite unreasonable. Soon after the socicty was broken up several members were put to death, and others faniong whom was Socinus) fied the country. He visited France, England, Holland, and Poland, where he resided for a time. He died in 1592. He wrote "Diologus inter Calvinum et Vaticanum," "De Sacramentis," etc. Faustus Socinus (Fausto Sozzini) was born in r539. On the death of his uncle he came into possession of the latter's manuscripts, which confirmed him in his former religious opinions. He lived twelve years at the Court of the Grand Duke Francesco de Medici, and began to publish his views in Florence in anonymous writings, but he fled to Basle to escape the Inquisition, and died in 1604 .
SOCrozogy ls the science which investigates the liws of those forces that regulate human society, existing and historical, savage and civilized. It trcats of the general structure of society, the laws of its development, and the progress of actual civilization. Comte was the first scientific sociologist, and he was followed by Quetelet and Herbert Spencer. Comte wrote the "Traité de Sociologic," and Spencer" The Study of Sociology" and "Principles of Sociology."
Socrates, the famous Greek philosopher, was born aloout 469 13.C. IIs father, Sophroniscus, was a sculptor, and the son followed in lils footsteps for a
time. He served as a common soldier in the campaign of Potidaea (432-429 I3.C.), fought in the battle of Delium (424), and marched with Cleon against Amphipolis in 422 B.C. His bravery and endurance were conspicuors, and he was the means of saving the lives of Alcibiades and Xenophon. After the naval battle of Arginusae (406) against the Spartans, ten Athenian officers were arraigned for neglecting to bury the dead, and the court wished to condemn them unheard, but Socrates, the judge, refused to allow that. Soon after he declined to share further in public affairs, and, following the promptings of a warning voice within him, he began to lead an ascetic and pure life, though perfectly natural in his behaviour. Aristophanes attacked him in his "Comedy of the Clouds," but Plato, Xenophon, Euclid of Aegara, Aristippus, Alcibiades, and others defended him. In 399 B.C. he was tried publicly for disbelief in the gods, introducing new divinities, and corrupting youth. Plato preserved his defence in his "Apology of Socrates." He was condemned to death, refused help to escape, and thirty days later drank the hemlock cup with composure. Socrates wrote nothing, but stuclied mankind. Plato and - Xenophon are the two chief authorities on his life.

SOLITUDE AND SOCIETY are alike necessary, for each has its own uses. In solitude we learn to know ourselves; in society to know one another.
SOLOMON'S TEMPLE. (See COST above.)
SOLON, one of the seven wise men of Greece and great legislators of Athens, was born about B.C. 640. He acquired wide knowledge of the world in commerce and travel. He stirred the Athenians to recover Salamis, after which be was chosen chief archon (B.C. 594), and invested with unlinited powers. He cstablished a new constitution, divided the citizens according to their wealth, added to the powers of the popular assembly, and abolished the law which gave a creditor power to make a slave of his debtor. When his laws were completed he bound the Athenians by an oath not to change his code for ten years, and then left the country. He found the old dissensions on his return, but Pisistratus soon succeeded him. Still his laws were effective.
SOMERSET, ROBERT, EARL OF, the favourite of James $I_{\text {., }}$ was born in 158.". He was first page to James, and then followed him to England when Elizabeth died. Ife was made Treasurer of Scotland, and entered the House of Lords as Viscount Rochester. He married the divorced wife of the Earl of Essex, and she found out that her husband's secretary had tried to persuade him against the marriage, so she had him sent to the Tower for a trivial offence; and soon after he died of poison. The murder was discovered, and Somerset and his wife were confined in the Tower, spending their latter days of liberty in disgrace.
SOMNAMBULISM is a peculiar perversion of the mental functions during sleep. While the organs of sense are torpid and the intellectual powers blunted, an instinctive excitation takes place, producing various impulses, such as walking, talking, and even riding. Artificial somnambulism is produced by hypnotism
SONNE' (Italian sonnetto) consists of fourteen rhymed verses, divided into two stanzas of four verses each, called the "octave," and two stanzas of three verses each, called the 'sestette.' The 'octave' of the proper sormet consists of two quatralns, which is thePetrarchan or Italian form; but the verses may also be arranged in three quatrains of alternate rhymes clinched by a couplet, which is the Shakespearian form, or it may be in the irregular form used by Coleridge and others. The Sonnet generally consists of one principal idea, pursued through the various antitheses of the different strophes. The lightness of the Italian, Spanish. and Portuguese languages enables their poets to express every feeling and fancy in their sonuets; but, in English, grave, dignified, and contemplative subjects are most suitable. Among the best writers of English sonnets are Shakespeare, Milton, Drummond of Hawthorneden, Bowles, Wordsworth, Rossetti and Elizabeth Barrett Browning.
SOPHISTS were philosophical teachers or 'thinkers' who appeared in Grcece in the period immediately
preceding Socrates, and contemporary with him, i.e. the latter part of the 5 th cuntury B.C. Their plibosophy (if it can be so called) was one of criticisin of those that had gone before; there was nothing creative or formative in it, and its tendency was chiefly sceptical about previous philosophles, while their ethical teaching was quite undesirable. But they rendered considerable service to science and literature, and, indirectly, to philosophy. They belonged to the liberal professions, and some of then were distinguished as rhetoricians and grammarians, and they supplied the earliest models of Greek prose,
SOPHOCLES, one of the three great tragic dramatists, was born in B.C. 495 . He received an excellent education, and, appearing as a dramatist in B.C. 468 , he took the first prize in competition with Aeschylus, who soon retired to Sicily, and left Sophocles in undisputed possession of the field, until Euripides appeared in 44r, and took the first prize. The former, however, excelled both his rivals in the number of his triumphs. In B.C. 440 he was one of the ten generals chosen for the war against the aristocratic party of Samos. When he was old, his son, Iophon, being jealous of his father's attention to the latter's grandson, summoned him before judges and declared he was incompetent to manage his own affairs. In reply Sophocles read part of the chorus in his "Oedipus at Colonos," which he had just composed, and so proved that his faculties were unimpaired. He was said to have written 130 plays, but ${ }_{7} 7$ are probably spurious; but 8 of his dramas, including the 7 now extant, were written after he reached the age of eighty. Besides the one mentioned above, he wrote: "Antigone," "Electra," "Trachiniae," "Oedipus Tyrannus," "Ajax," and "Philoctetes." He made the Greek drama as perfect as drama can be, bis versification stands alone in dignity and elegance, and his iambics are the purest. The tendency of his plays is ethical. He introduced scenlc illustration and a third actor.
SORBONNE was a theological institution founded in I252 by Robert de Sorbon, chaplain and confessor of Louis IX. It was in connection, and still is, with the University of Paris. It exercised a high infuence in theological and ecclesiastical affairs from the 14 th to the 17th century, but was suppressed during the first revolution. At the reconstruction of the University in 1808, the building erected for it by Richelieu was given to the theological faculty in connection with the faculties of science and belles lettres.
SoUL is the immaterial, immortal part of man's being. It is sometimes used as synonymous with 'mind,' but it is generally considered as a whole of which the faculties that: constitute 'mind' are a part. Nearly all philosophies agree in regarding the soul as that part of man which enables him to think and reason, and which renders him a subject of moral government, though they differ on the points of origin and detail. The truth is, psychology furnishes the conditions of the problem of immortality, but does not answer it; it refers that to the higher science of theology. The end of philosophy, therefore, is (or should be) religion; and it is to the views of God, supplied either by natural or revealed reiigion, that we inust look for light upon the question of the soul and of its immortality. It was from such a source, i.e. a divine one, that men like Socrates and Plato drew their surest and best arguments.
Soult, Nicolas, Marshal of France and Duke ot Dalmatia, was born of humble parentage in 1769 , and in 1785 entered the army as a common soldier. He becanse at length captain in his regiment, and served on the Upper Rhine, distinguishing hiunself at Kaiserslautern. Weissenbugg, and other places, and eventunlly Masséna (to whose arny he was attached) named him general of division. In the Italian campaign he was taken prisoner, but ubtained his liberty after the victory of Niarengo in 1800 and in 2804 was created marshal. In 1 Eos he distinguished hiniself at Ulm and Austerlitz in the Austrian war, and in the Prussian war lie won fane at the battle of Friedland and in the taking of Konigsberg, Is: $1808-12$ he fought in $\mathrm{S}_{\mathrm{p}} \mathrm{ain}$, but was over-matched by Wellington; and in 1813 he was recalled un accomit
of Napoleon's disasters, and put in command of the infantry of the guard at Litzen. At the news uf Wellirgton's victury uf Vitturia, he was sent back to Spain, and fought hard till Napoleon abdicated. In I8It Louis XV111. nande him Minister of War ; and then, when Napoleon returned, Soult joined lim, and was major-geueral in the campaign of Waterloo. After the second Kestoration he resided it Dusseldorf till 1819, and in 18a7 was raised to the peerage. He held ministerial office in the Revolution of $1830^{\circ}$ and on two other occasions ; and in $\mathbf{1 8 4 6}$, on retiring from public life, he was made Grand Marshal of France.
SOUTH SEA BUBBLE was the fuancial speculation which aruse in England in the beginning of the $18 t h$ century. It origilated with the directors of a jointstuck company, which, in consideration of certain exclusive trading privileges in the South Seas, offered Government easier terms fur the advance or negotiation of loans than could be obtained from the general public. In 1720 the company took over the National Debt ( $\mathcal{K} 31,000,000$ ), receiving 5 per cent. , and promising. in retum for this so-called privilege, a premium in their own stock of $£ 7.500,000$. Then the directors beld out promises to the public of paying 60 per cept. on their shares; but, of course, in a few months the crash came, and thousands were ruined. The Chancellor of the Exchequer and others in high positions were implicated.
SOUTHEY, ROBERT, the English poet and miscellaneous writer, was born in 1774 . He was sent to Westminster School in 1788, but was dismissed in I792 for writing a satirical paper on flogging, published in " The Flagellant," a school journal. Soon after he entered Balliol College, Oxford, which he left in 1794; and he and Coleridge were niarried on the same day, in 1795, to two sisters. Having sold his "Joan of Arc," he went, not long afterwards, to Portugal, and returning in 1798, entered Gray's Inn, but made no progress there ; and in 180 again visited the Peninsula. He had already published a violent. demodratic piece, entitled " Wat Tyler," but he now renounced those opinions on democracy, and his poem, "Thalaba the Destroyer." published in 1802, attracted much notice. In 1804 he settled near Keswick, and in 1839, having lost his first wife, he married the writer, Catharine Bowles (1786-1854); but he soon became imbecile, and died in 1843 ; Besides the poems mentioned, he wrote "Madoc," "The Curse of Kehama," " Roderick, the Last of the Goths," "A Poet's Pilgrimage to Waterloo," and "Vision of Judgment." His prose works are in excellent style, his "Life of Nelson" being a model of its kind.
SOVEREIGN consists of 22 parts of pure gold and 2 parts of copper. It weighs about 5 dwts, $3^{3}$ grains, and a million sovereigns weigh about 8 tons, and will stretch edge to edge for about 14 miles.
SPACE, in Plilosophy, is extension considered in its own nature, independently of anything it may contain. Aristotle defined it as the possibility of motion, and therefore possessing the quality of being, potentially, divisible ad infinitum. Space and Time are two of the so-called innate ideas. Locke maintained that we acquire the idea of 'space' by the senses of sight and touch; and Kant maintained that space and time are the ultimate forms of external and internal sense, and that these forms are innate in the human mind. Herbert Spencer said: "It will be sufficient for present purposes to say that we know 'space' as an ability to contain hodies"; and though that is not a definition, it may be admitted that the antithesis between bodies, and an ability to coutain bodies, represents the contrast between our concep. tions of the sensible non-ego (matter) and the insensible non-cgo (space).
SPANISH COAST has a most unenviable reputation for shipwrecks, which it owes to five great defects. (1) It has dangerous currents, such as helped to wreck H.M.S. "Serpent," the "Rountania," the "Trinacria," the "Utopia." and many other vessels; and on the Atlantic side there are also very strong tides. (2) On the north and north-west it is very rugged, and yet very badly supplied with lighthouses
-some of them being practically belind lills, " to shelter then from the violence of the "Athantic " (3) It is very badly sippolied with harboars, partly because the currents close the openings on the north and north-west, and partly because elsewhere there are scarcely any openings at all to make into harbours. (4) The enormous masses of magnetic iron in the Calicion mountains are said to affect the compass of passing slaips. (5) Very few of the harbours have guod comumaication inland.
Spartacus, the Tliracian gladiator, Instigated and led the Servile War, or revolt of the slaves in Italy. in 73.71 B.C. He had been compelled to serve, like other barbarians, its the Roman army, from which he had deserted. Being made prisoner, lie was sold as a slave, and placed in the gladiatorial school at Capua with 200 other Thracian, German, and Gaulish slaves: and they forme:l a conspiracy, effected their escape, and before long Spartacus was the leader of 60,000 men. Two armies were sent in succession against him, but he defeated them both, and led his forces towards Rome. In this crisis, Licinius Crassus (afterwards a triumvir) hemmed in the revolted slaves near Rhegium. Spartacus broke through the enemy at night, and retreated; but eventually had to encounter the army of Crassus, and he fell fighting.
Speaking, Faults in, are generally of fire kinds. (i) Incxperience often makes a speaker either too loud or too low. (a) Negligence or nervousness makes him indistinct. (3) The formation of the mouth helps to make him too slow or tou rapid, (4) An unmusical ear makes him too uniforn or too irregular. (5) Affectation makes him adopt a peculiar intonation, e.g. the drawling lisp of sentimental curates.
SPECIFIC GRAVITY is the relative weight of any body or substance considered with regard to an equal bulk of some other body which is assumed as a standard of comparison. The standard for the specific gravities of liquids and solids is pure distilled water at the temperature of $62^{\circ}$ Falrenheit, which is reckoned unity. By comparing the weights of equal bulks of other bodies with this standard we obtain their specific gravities. Thus, the specific gravity of castiron is 7.21 , that means that any particular mass of cast-iron will weigh $7^{\circ} 21$ times as much as an equal bulk of water. The practical rule is to weigh the body in the air, and then in pure distilled water, and the former weight divided by the latter will give the specific gravity of the body. In gases the standard of unity (for designating the specific gravities) is atmospheric air.
SPECIFIC HEAT is the term applied to the quantity of hent required to raise equal weights of different substances through equal intervals of temperature. Water is taken as the standard substance in measuring quantities of heat. The 'specific heat (or thermal capacity) of unit mass of a substance is identical with the ratio of the thermal capacity of any mass of the substance to that of an equal mass of water, because the thermal capacity of unit mass of cold water is unity, and the number denoting the themal capacity of a body expresses also the mass of water which has an equivalent thermal capacity to that of the body.
SPECHACLES are supposed to have been invented by Roger Bacon in the $13^{t h}$ century. In long-sighted persons the defect of the cye must be counteracted by conver lenses, and in short-sighted ones by concave lenses. 'Periscopic' spectacles have been invented also. in order to allow considerable latitude of motion to the eyes without fatigue.
SPPCTRUM is the oblong figure, or stripe, formed on a wall by a beam of light, is of the sum, received through a narrow slit. passed througls a prisu, and thus separated into its constituent rays. It is coloured from red at one end, through orange, yellow, green, blue, indigo, to violet at the other; the colours being due, of conrse, to the different constituents of which solar light is made up, ind the stripe itself is formed by an indefinite number of inages of the slit maged in order and partially overlapping. Besides the coloured rays the spectrum contains thermal (or heating) rays, and chenical rays which are invisible
to the eye. The 'heating' effect of the spectrum increases in going from the violet to the red, and also for a certain distance beyond the visible part at the red end; while the 'chemical' action is very faint in the red, strong in the blie and violet, and sensible to a clistance beyond the violet end.
SPEED OF BIRDS has been estinated at 150 miles an hour for a hawk, i20 for a swift, 100 for a crow, 90 for an eider duck, 80 for a swallow, 60 for a rook, 40 for a pigeon. The pigeon is not nearly so fast as is generally supposed, but is very strong on the wing and has immense powers of endurance.
SPEKE! JOHN HANNING, the English traveller, was born in 182\%. In 1844 he took part in the war of the I'unjab; in I 854 he accompanied Burton's expedition to Somali Land, where he was wounded ; and in 1857 he and Burton again set out (directed by the Royal Geographical Society) and discovered lake Tanganyika. Burton fell sick then, but Speke went on and discovered the south end of the Victoria Nyanza. In 1862, accompanied by Captain Grant, he explored the western and northern margin of the lake, and discovered the White Nile. He described his discoveries and adventures in his "Journal of the Discovery of the Sources of the Nile." and "What led to the Discovery of the Sources of the Nile."
SPELLING, PHONETIC, is impossible until we have a perfect alphabet and a uniform pronunciation, and the stupid Yankee habit of dropping the $u$ in words like honour only disguises their Latin origin without aiding the adoption of phonetic spelling. The craze for 'dialect novels,' on the otherhand, is a real step towards phonetic spelling. (See ALPHABET above.)
Spencer, Herbert, the English philosopher, was born in 1820. He was apprenticed as a civil engineer. worked several years on railways, and contributed professional papers to the "Civil Engineer and Architect's Jourmal," besides a series of letters in 1842 on the "Proper Sphere of Governinent "to the "Nonconformist." In 1848 he became sub-editor of the "Economist," published " Social Statics" iu 855 , and " Principles of Psychology " in 1855. About the year 1859 he projected his Scheme of Philosophy, Gased on the principle of evolution in its relation to life, mind, society, and morals, which included "First Principles," "Principles of Biology," "Principles of Psycloology," "Principles of Sociology." "' Ceremonial Institutions, ""Political Institutions," "Ecclesiastical Institutions" (which were part of his "Principles of Sociology "), "Essays: Scientific, Political, and Speculative," "Classification of the Sciences," "The Study of Sociology," "Data of Ethics," "Man versus the State," and "Principles of Morality."
Spenser, Elimund, the well-known English poet, was born about 1553 ; was admitted as a sizar to Peinbroke Hall, Cambridge, in 1569 ; graduated as B.A. in 1573, and as M.A. in 1576. It is thought that he then went to live in the north of England, and celebrated a lady, whom he wooed unsuccessfully, as Rosalind in his poem the "Shepherd's Calendar," published in 1579 . In 1580 he became Secretary to the Lord-Lieutenant of Ireland, who, in conjunction with the Earl of Leicester and Sir Plilip Sidney, obtained for him a grant of land in Cork In 1589 Sir Walter Raleigh visited him while he was engaged in writing the "Faerie Queene." In 1590, having accompanied Raleigh to England, he published his first three books, with a dedication to Queen Elizabeth. In 1594 he married, and he celeGrated his courtship in 88 sonnets, and his marriage in the "Epithalamium." In I595, he published "Colin Clout's Come Home Again," "Astrophel," "The Morning Muse of Thestylis," his sonnets and the "Epithalanium," with three more books of the "Faeric Queene," his "Prothalamium "on the marriages of the Ladies Elizabeth and Catharine Somerset, and " Four Hymns in Honour of Love, of Beauty, of Heavenly Love, and of Heavenly Beauty." In I 598 he became Sheriff of the County of Cork, but his house being burnt, and his infant child in it, during the Tyrone Rebellion, he came to England, and died in 1599. He also wrote a "View of the State of Ireland

SPHINX was a fabulous monster that figured in Grecian and Egyptian mythology. The Grecian sphinx was represented with a body like that of a lion with wings, and the upper parts like a wonnan. The Egyptian sphinx was represented with a human head (nale or female) and with a lion's body (not winged, which Was alwilys in a recumbent posture. The fable about the Grecian sphinx was that Hera, provoked with the Thebans, sent the sphinx to punish them. She proposed the riddle-' What animal walks on four legs in the morning, two at noon, and three in the evening ${ }^{\prime \prime}$ Oedipus explained that man did, and, when her riddle was read, the sphinx destroyed herself. The Grecian sphinx was used for artistic and decorative purposes, and seems to fave beell partly symbolical, and the Egyptian sphinx was purely symbolical (laving no connection with the Greek fable). The largest is that at Gizell.
SPICK AND SPAN NEW referred to the stretching of a new piece of cloth on spikes (hooks) and spans (stretchers) in order to stretch it evenly.
SPIKENARD, or NARD, is a highly aromatic plant. growing in the East Indies. The root has a strong smell and a sharp, acid taste. This is the true spikenard of the ancients, which was famous from earliest times, because of the perfume obtained from its roots, and which was used in the baths and at feasts. It is now used in the East to scent oil and unguents and as a perfume.
SPINNING-IENNY was the name given to the first spinning-machine by means of which a number of threads could be spun together. It was invented by. James Hargreaves, a Lancasliire weaver, about 1767 , and consisted of several spindles turned by a coumon wheel or cylinder worked by hand.
SPINOZA, BARUCH (who afterwards called himseli Benedict de Spinoza), was born in 1632, of Portuguese Jewish parents; at Amsterdam. He was trained in Talmudic and other Hebrew lore; acquired a knowledge of Latin from the free-thinking plysician Van den Ende, and came under the influence of the pliilosoplic teaching of Descartes, after which he was expelled from the Jewish comnunity. Ife ultimately settled in the Hague in $1 \epsilon_{71}$, where he died. Ile refused both a pension froin the French king and a professorship in Heidelberg, lest their acceptance should hazard his freedom of thought and conduct ; but a legacy received from De Vries enabled him to devote himself to philosophy. In 1670 he published, anonymously, "Tractatus Theologico-Politicus," whicl was placed on the Index by the Romanists, and was condemned by the authorities in Holland, because it pleaded for liberty of speech in philosophy. After his death all his writings were collected and publislied as "Opera Posthunia," including the "Ethics," in which his system of philosophy was developed.
SPINSTER, URIGIN OF. (See MARRIAGE above.)
SPIRES, DIET OF, was held in 1529 , at which the reformers adopted the protest which conferred on them the name of Protestants.
Spiritualism, in Philosophy, is the term used to indicate the opposite of 'Materialism, but it is now specifically applied to the belief in and methods of communication with departed spirits. This form of spiritualism was first heard of in 1848 in the house of a Mr. and Mrs. Fox, inhabitants of New York; but the first professional medium who cane to Europe was a Mrs. Hayden, followed in 1855 by Daniel Honie, who visited most European courts. He was exposed in America by.Judge Edmonds and Professor Hare, but they had to admit that some of his evidence was genuine, while, in England, A. R. Wallace, W. Crookes, F.R.S., and Professor De Morgan believed in him. In 1871 the London Dialectical Society investigated the subject, but could not explain the phenomena; and the more recent investigations of the Psychical Society seem to show that there are hypnotic forces which could explain the occult occurrences in spiritualism, by natural though hitherto unknown laws. Florence Marryat and others have written on the subject.
SPOHR, LUDWIG, the famous German violinist and nusical composer, was bonn in 1784 . In 1805 lie conducted the court concerts at Gotha, was then attached
to the theatre in Vienna, and fually, from 1823, was nnisical director to the electoral court of Ilesse. Cassell. His studies for the violin ("Violin School") are excellent, and his oratorio. "The Last Judgruent," and symphony. "The Consccration of Sound," are widely krown. I fe died in 1859.
SI'KING-TIDE happens at or soon after the new moon and the tull moon: and it rises much higher than ordinary tides. At these times the sum and moon are in a straight line with the earth, and their combined infuence being greatest, the tides are highest then.
SPURGEON, REV. CHAKLES (who built the wellknown *Metropolitan Tabernacle'), was born in 1834 , was educated at Colchester, appointed usher in a sehnol at Newmirket, and then engaged in charch wurk it Cimbridge, where lie becane known as the lloy-preacher. In 1853 he went to a chapel in Suuthwisk, but had soon to engage the Surrey Music Hall in which to preach, and ultimately he built the - Tabernacle" in 186 ェ. From 1855 he published a weekly sennon, and he also wrote "The Saint and his Saviour," "John Ploughman's Talk," "The Treasury of David," "Types and Emblems," "Farnn Sermons," "The Present Truth," "Storm Signals," "Silit Cellars," etc. Ife founded the Pastors' College, Stockwell Orphanage, Colportage Association, a Book Fund, Supplementary Pastors' Aid Fund, almshouses, schools, etc. He scvered from the Baptist Union in 1887.

STADiUM in Greek measure was 125 paces, in Roman measure 625, which equals 606 measure. The Greek stadium was a little less than cur furlong, and was the chief measure of length; but the term also applied to the course for foot-races at Olympia, which was one stadium in length; so the name was given to all places in Greece where gantes were held.
STADTHOLDER was in titic given in the Netherlands to a governor of a province, who was also Commander-in-Chiel of the Forces; but the title reccived its specian significance in 1580 when the provinces of Holland and Zealand revulted against Spain's authority, and accepted Willian, Prince of Orange, as their stadtholder. He was assassinated before he was invested with the office, but his son, Prince Maurice, received the title, which continned to be the hereditary title of the chief of the state until Holland was annexed by France in 1802 ; and the title was finally dropped in 18is, when the Prince of Orange was recalled from England and proclaimed King of the Netherlands by an assembly of notables.
STAEL-HOLSTEIN, ANNE, BARONESS DE (the only child of Necker, Swiss banker'and minister of finance to Louis XVI.), was born in in66. Her mother was very severe with her, but her father encouraged her to converse with the eminent philosophers who frequented his house. In 1786 she published "Sophia" (a connedy), and "Lady Jane Grey" and "Montmorency" (two tragedies) : and the same year she married Baron de Stael-Holstein, Swedish ambasSador at the $F$ rench court. In 1788 she published her "I Lettres sur les Ecrits et le Caractere de J. J. Ronssenu." At the outbreak of the revolution in 1789. she exercised considerable power, thronglt her lather's high position at court and her own wit and charm; but in the Reign of Terror she fled to Switzerland, after vainly endeavouring to save her friends and the royal fanily, She came to England in 1793, and published her "Reflections on the Trial of the Qneen" and "Reflections on the Peace." Dtring the Dircctory she returned to Paris, becoming again infuential; and she published her essay on "The Passions." Napoleon banished her, and she descrilsed her wanderings in "Ten Years of Exile." Sise also wrote "Literature consiolered in its Relations to Social Institutions," "Delphine." "Corine ou 1'Italie" (lier most popular work, showing knowledge of Italian life and scenery), and also "Del'Allemagne" (showing want of knowledge of the German char. actert, and also "Principal Events of tie French Revolution." She died in 1817 . having secretly married M. de Rocca in 18r2, ten years after lier first hushand's death.
STAINER, SIR JOHN, the musician and organist, was
born in 1840 ; was a chorister in St. I'aul's from his seventh to his sixteentll year, and was appointed as organist, first at St. Miclacl's Collegre, 'I'cnbury, then to Magdalen College, Oxford, in 1859 , and finally to St. I'aul's, in 1872 . While at Oxford he graduated in arts and music, and he was Inspector of Music to the Edncational Department. Ife las composed the oratorio "Gideon," and the cantatins, "The Daughter of Jairus," "Mary Magdalenc," and " Tlie Cruci. fixion " and has written "The Theory of Ilarmony" and " Music of the Bible," and later he collaborated with W. A. Barett in the "Dictionary of Musical Terms," lis "Music Primers" are famous.
STALACTITES are masses of calcarcous matter, usually in a conical or cyilindrical form, hanging from the roofs of caverns. They are produced by the filtration of water (containing particles of carbonate of lime) througln fissures and pores of rocks. The water, having evaporated, leaves a deposit of lime belind it which gradually increases; and, simultaneously with the growth of the stalactite, a similar growth, but upward, takes place at the spot immediately below where the drops of water fall, and that upward growth is the stalagmitc. It sometimes forms sheets over the surface, sometimes rises to meet the stalactites.
"ST'ANDARD, THE," London daily newspaper, was founded in 1827, and has always been Conservative in politics. There is an evening edition called the "Evening Standard." It has a very large circulation.
STANDISH, MILES, was born in 1584 . He served as a Captain in the Netherlands, and then joined the Puritans who sailed for New England in the "Mayflower " in 1620 . He took an active part in the early struggles of the colony. Longfcllow has celebrated a tradition regarding his courtship in the poem so well known.
STANFORD, VILLIERS, Mis. Doc., the composer, was borm at Dublin in 1852 , and he became organist of Trinity College, Cambridge, conductor of the Cinbridge Musical Society, and, in 1887, Professor of Music in Cambridge. His operas include-" The Veiled Prophet of Khorassan," "Snvonarola," and the "Canterbury Pilgrims." "He has also written The Three Huly Clildren" (an oratorio), an Irish Symphony, a choral ode, "The Revenge," and a setting of Whitnan's poem on the "Death of Abraham Lincoln,"
STANHOPE, I-ADY HESTER, the traveller, was born in 1776. She lived for many ycars with lier uncle, William Pitt, and at his death received a Government pension of $£ 1200$. In 18 ro she left England, visited various places in the East, and then settled in Syria. She established herself in the deserted Convent of Mar Elias in the Lebanon, adopted the style and dress of an Arab chicf, and by her kindness and energy exercised great influence over the Bedouins. She died in 1839, and her "Memoirs" were published in 1845.6 .
STANLEY, IREV. ARTIUR, D.D., was borm in 1815 , educated at Kugly and Balliol College, Oxford, took a first class in classics, won the Newdigate prize, obtained a Fellowship, and was tutor for twelve years. In 1845 he was appointed preacher to Oxford University, was presented to the canoury of Canterbury in 2851 , and then travelled extensively in Palestine, accompanying the Prince of Wales to the East in 1862. In 1863 he married Lady Augusta Bruce, to whom he owed much of his popularity. He was a leader of the Broad Church party, and amongst his works were-" Life of Arnold," "Memoir of Bishop Stanley," "Commentary on the Epistles to the Corinthians," "Memorials of Canterbury Cathedral," "Lectures on the Eastern Church." "I Lectures on the Jewish, Church." "Essnys on Church and State," "Lectures on the History of the Church of Scotland," ctc. He died in 188 r .
STANLIYY, H. M., the explorer, was born in 3840 . Ifo crossed from Wiles to America in 1855 , and soon after culisted in the Confederate Ammy, was taken prisoner, relemsed, and entered the U.S. Navy, At the close of the wirl lie went to Turkey, and, as war correspondent for the " New York Iferald, "joined the Abyssinian expedition of 1867.8 . He afterwards travelled in Spain, and in 1869 was asked to go and
find Livingstone. After visiting the Crimea, Palestine, I'ersia, and ludia, he crossed Africa and found the traveller at Lake Tanganyika, and then returned to England. He again acted is the "Herald's" correspondent in the Ashantee Wir, and then in 1874 again explored Africa, tracing the Congo Kiver from the interior to the mouth in 1877. In 8879 he returned there, planted stations, and established stean navigation under the direction of the International A frican Association, and so he founded the Congo Free State in $\mathbf{x 8 8 5}$. In 1887 he organized the expedition for the relicf of Emin Pasha, neeting him, after many adventures, near the Albert Nyanza, and returning in 8890 . He has written "How I Found Livingstone," "Through the Dark Continent," "The Congo and the Founding of its Free State," and "In Darkest Africa." He lias lectured successfully in England and America.
Star-Chamber was an Englis! court of civil and criminal jurisdiction in Westminster, and it originally consisted of the Privy Council, but was remodelled in the reign of Henry VII., and consisted then of four high officers of state, who could add to their number a bishop, a temporal lord of the Council, and two justices of the courts of Westminster. It had jurisdiction of forgery, perjury, riots, maintenance, fraud, libel, and conspiracy, and could inflict any punishment but death. Its process was summary, and, in the reigns of James I. and Charles I., often iniquitous, but the latter king abolished it in 1640 . It was called the 'Star-Chamber from the design on the table at which the Council sat.
STATE, THE MODERN, arose out of the combination of tribal communities into cities and kingdoms. In it the force of the community is vested in certain persons for the purpose of defence and government ; and laws are simply general rules haid down by the State for its subjects, the rights of the subjects being any claims which are recognized and enforced by the State. Such general rules must be reasonable and just, and the State must have force to carry them out. This force it derives from its own subjects, and therefore a State is really strong in proportion to the number of its subjects who believe in it. To carry out the force, it needs wealth ; and this too it derives from its subjects-in return for the protection which it gives to person and property.
As the State is practically exempt from competition - which, in rightcous moderation, is always healthyit is generally the most expensive of social agencies; and therefore it is important to limit its functions.
Social agencies are of three kinds-(x) Voluntary agencies worked for a profit ; (2) yoluntary agencies worked from public spirit; and (3) the State, which acts by compulsion. The State must do all the rough work, such as national defence and repression of crime, which involves the use of force on a large scale; and there are other things in which the State can give assistance to check abuses or to introduce discipline. But in all its work the State needs to be carefully watched, because exercise of power generally brings temptations to tyranny and to waste of money.
STAUNTOR, HOWARD, the champion chess-player and the Shakespearian scholar, was born in 1810, educated at Oxford, and settled in London as editor of the "Chess-player's Chronicle." In this game he defeated M. Amant (in 1843), who was the champion of Europe. He published some treatises on chess, as the "Handbook," the "Companion," "Chess Tournament," and "Chess Praxis." He also published an edition of the plays and poems of Shakespeare, a facsimile of the first folio, and also "Memorials of Shakespeare"; and he wrote "Great Schools of England." He died in 1874.
Stenm-Engine. The power of steam was known to the ancients, a mechanical contrivance in which it was used being noted by Hero of Alexandria about r30 B.C., but nothing came of it ; and it was not till the 17th century that its power was again recognized -Giovanni Battista della Purta (x6or), Solomon de Caus (I615), Giovauni Branca (I629), and the Marquis of Worcester ( $\mathbf{5 6 6 3}$ ). The principle of their inven--tions was put into practical use by Captain Thomas

Savery $\ln 1698$, in a stean.engine constructed to raise water out of nimes; but the same principle had been unlproved by Denis I'apin in 1690, who first used a piston working in a cylinder; and Janes Watt developed the principle considerably in 1759 . He obtained the 'double-acting' enkrine; and in 1785 Jonathan Hornblower adopted the 'compound' engine, whicla was used in the Cornish inines in 8814 and in $\mathbf{1 8 5 4}$ adapted by Elder to marine enkines The 'road locomotive' was first suggested by Wilibian Symington in Scotland, and used about aroo in America and Wales. It is now called a 'traction engine.' 'Railway locomutives' were attempted by Blenkinsop (1811). Blackett (1812), Hedley (18:3). Dods and Stephenson ( $\mathbf{1 8 1 5}$ ), and others; but it was not till r 829 , when the Liverpool and Manchester Railway was opened, that the modern high-speed locomotive was used, On that occasion Steplienson's was used. The 'marine locomotire' was proluably first derised by Patrick Miiller of Dalswinton, and constructed in Edinburgh by Symington; and in $x 801$ the latter constructed an engine on W'att's principle. which was used on a canal in Scotland in the steamboat "Charlotte Dundas." In Great Britain the first - passenger steam-vesscl ' was the "Coniet," built at Port-Glasgow by John Wood, who plied it between Glasgow and Greenock. The first three-erank tripleexpansion engine was designed in 1874 by Mr. A. C. Kirk, and it has been found to save a considerable amount of fuel; and the principle of expanding the steam has even been used successfully in a fourcylinder quadruple expansion engine.
STEAM-HAMMER (the machine employed in making large iron and steel forgings) was invented by James Nasmyth about 1839 and patented ir. 1842 . From the increased size of gun forgings it has attained enormous proportions, one crected by Krupp at Essen in 1888 being 150 tons; but hydraulic or pneumatie power has succeeded the use of steam in the Iargest hammers.
Steam Navigation. In 1736 Jonathan Hulls patented a method in England by which steam propelled a vessel; and in 1786 James Rumsey and John Fitch each constructed a vessel in America that was actually driven by steam; but the real percursor of the paddle-wheel steanner was constructed in 1788 by Patrick Miller of Dalswinton, Dunfriesshire, the mechanical part being made in Edinburgh under Symington's superintendence. In 180 the latter constructed a steamboat for use on the Forth and Clyde Canal by order of Lord Dundas. In reoz Robert Fulton, the American engineer, eniployed the English firm of Boulton \& Watt to construct an engine on the same principle as Symington's, and it was fitted into the "Clernont," which plied on the Hudson River. The first passenger-steamer employed in Great Britain was the "Comet," built by Jolin Wood of Port-Glasgov in 1812, and fitted with an engine by John Robertson of Glasgow. It plied between Glasgow and Greenock; and in 1818 the "Rob Roy " sailed between Greenock and Belfast, and the "Talbot" in 18 xg between Holyhead and Dublin. The first steam-vessel used in the British Navy was the "Comet," built in 1822 at Woolwich dockyard. In 1819 the "Savannah" sailed from America to Liverpool in 26 days. It was both sailing vessel and steamboat in one. It was not till 1838, however, that regular communication was established between America and England. The first 'screw-steamer' in Great Britain was the "Archinedes," built in 1839 on the Thames, and the first 'iron screw-steamer" was the "Fire-Queen," built in 1845 at Glasgow. The modern type of ocearn steamer is built of steel.
STEELE, SIR RiChard, the Enylish essayist, was born in 1672, and edncated at Clarter-house and Oxford, and in 1694 he enlisted as a private in the Royal Horse Guards, and, gaining the patronage of Lord Cutts, Colonel of the Coldstream Guards, became his secretiry and aide-de-canp, and ensign in his reginent. In 170 lie published a prose treatise, "The Christian Hero," but its severe morality was ridiculed; and, to establish his character as a wit, he wrote the comedies of "The Funcral," "The Lying

Lover," "The Tender Husband," and later, "Tre Conscious Lovers." In 3707 he became cditor of the "Gazette," and two years later of the "Tatler," through, and witb the help of, his friend Addlison. These were fullowed by "The Spoctator" and "The Guardian." which establisbed the fawe of the two frlends as the first of Enylish essayists. Stcele entered Parlianient, but was expelled in 1754 for the alleged sedition of his pamphlet "The Crisis"; but in 1715 . when the Ilanowerian Party came into power, he tecane Deputy. Lieutenant of Middlesex. He s:arted various journals, such as "The Reader," "Tbe İnglishman," "Iown Talk," etc. ; and "c wrote an "Apolosy for myself and my writings," a puphlet, published in 1714 . Ife died in 1729 .
Stephen, Sir James Fitz-James, the judge, was born in 18zう; cducated at Trinity College, Cambridge: called to the bar in 1854 ; became legal adviser to the Indian Council in 1869 ; Professor of Common Law at the Inns of Court in 1875 ; and Judge of the High Court of Justice in 1879 . He wrote "Essays of a Barrister," "General View of the Criminal Law of England," " Liberty, Equality, and Fraternity," "A Digest of the Law of Evidence," " A Digest of the Criminal Law," and "History of the Criminal Law of England," published in 1883 .
STEPIEN, LESLIE, brother of the foregoing, was boru in $183 \%$; educated at Eton, King's College, London, and Trinity Hall, Cambridge, of which he became Fellow and Tutor. Ile edited the " Cornhill Magazine" ( $3371-82$ ), and wrote "Essays on Free Thinking and Plain Speaking," "History of English Thougbt in the 15th Century," "The Science of Ethies" ; lives of "Pope," "Sivift," and "Johnson," in the "English Men of Letters" serics, and "Life of Henry Fawcett."
STEPHENSON, GEORGE, the engincer, was born in 1781, and in 18:2 he was appointed to manage the engineht Killingworth Collicry; and be constructed a travelling engine for the colliery tramway in 18r4; and in 5855 he introduced a great improvement by his steam-blast. In 1822 he induced the projectors of the Stockton and Darlington Railway to adopt an improved locomotive; and then he constructed the Liverpool and Manchester Railway, on which his locomotive the " Rocket" ran. He was employed in numerous railway undertakings, and he isvented a miner's safety lamp. He died in 1848 .
STERNE, LAURENCE, the English humorist, was born in 1713. He lived as a boy in Ireland, and then came to England, and went to Jesus College, Cambridge. He eventually obtained the living of Stillington by the interest of his wife. In 1759 he published part of "The Life and Opinions of Tristram Shandy," and other parts in 1761, 1762, 1764, and 1766. He also wrote "A Sentimental Journey through France and I:aly," and printed some sermons.
Stevenson, Robert, the engineer, was born in Glasgow in I772. In 1791 he constructed a lighthouse on the island of Little Cumbrae, and eventually erected 23 lighthouses round the coast of Scotland, the most notable of which was the Bell Rock Lighthouse. He wrote some articles in the "Edinburgh Encyclopaedia." Ile died in 1850 .
STEVENSON, ROBERT LOUIS, the well-known author, was born in 1845, educated at Edinburgh University, and called to the Scottish Bar, but he devoted himself to literature. His writings include "An Inland Voyage," "Travels with a Donkey in the Cevennes," "New Arabian Nights," "Treasure Island," "Dr. Jekyll and Mr. Ilyde," and "Kidnapped," etc. Me died out in Samoa, where he had resided for some time.
STEWART, DUGALD, the Scottish philosopher, was born in 1753, educated in Edinburgh, and attended Dr. Reid's lectures in Glassow. In I775 he became Joint-Profossor (with his father) of Mathematics in Fdinburgh University, and in 1785 succeeded Adam Ferguson in the Chair of Moraj Philosoghy. He vrote "Elements of the Philosophy of the Human Mind," "Outlines of Moral Philosophy," and accounts of the
i "Llfe and Writings of Adam Smith," of "Dr. Robert" son," and of "Dr. Reid." He died $\ln 1828$.
STOCK ExCHANGR. During the reth century the business was done in and abont the Royal Exchange;
but ill 1773 the stockbrokers formed an association aud moved to Swecting Alley, and then to Capel Court. Bartholomew Lane, where a new bullding was erected in r80r, which has been gradually extended. The business of the London Stock Exchange is managed by a committee of thirty, appointed annually by ballot. There are about 2500 menters who are ' jobbers ' or 'brokers.'
SToICS were the sect of philosophers which flourished first in Greece, then in Rome, and were so-called from the porch or 'Stoa' at Athens, where Zeno, its founder, taught. He founded the school about 17, C. 308, and his two chief disciples, Cleanthes and Clarysippus, developed and systematized the Stoic doctrines. They were carried to Rome by Panaetius of Rhodes, whose disciple, Posidonius, Instructed Cicero. Cato and Brutus were also Stoics, and the chief teachers among the Romans were Cicero, Seneca, Epicterus, and Marcus Aurelius. The Greeks appear to have tried to reconcile a theological pantheism and a materialist psychology witb a logic whicb sought the foundations of knowledge in the perceptions of the senses, and a morality which claimed as its first principle the freedom of the human will. The Romans made that philosophy a practical rule of Iife. Later Roman Stoics thought the supreme end of life was virtue; and that all cmotion, being productive only of evil, must be subdued.
STONEHENGE, the group of standing stones on Salisbury Plain, Wiltshire, forms two clrcles and two ovals. The outer circle is about 300 feet in circumference, and when entire consisted of 60 stones ( 30 unrights and 30 imposts), of which only 32 stones remain ( 87 standing); and at the grand entrance 86 stones remain. The inner circle now consists of 19 stones, 6 fect in heigbt, of which II arc standing. The circles were probably formed in comection with the Druidical or other old religion. The first oval consists of $5^{\prime}$ trilithons (or groups of 3 stones), and 3 smaller stones stood before each; but now only 6 stones remain. In the lnuer oval is one large slab, supposed to have been an altar.
Stowe, MRS. HARRIET (sister to Rev. Henty Ward Beecher), the authoress, was bonn in $8 \mathrm{Sr}_{2}$ in Connecticut. She contributed to the "National Eri" the serial story of " Uncle Tom's Cabin," whicl was issued in book form in 1852 , and achieved an enor. mous success. She also wrote " Sumny Memories of Foreign Lands," "' Dred, a Tale of the Dismal Swamp," "The Minister's Wooing," and "Lady Byron Vindicated."
STRADIVARI, ANTONIO, the celebrated maker of Stradivarius violins, was born about 1649 at Cremona. Ile was Nicolo Amati's pupil, remaining with hin till rooo, when he set up for himself. He settled the typical pattern of the Cremona violin, and his instruments have never been equalled. He died in 1737.
Strafgord. Thomas, Earl of, the English statesman, was born in 1593, and educated at St. John's College, Cambridge. He entered Parliament, and opposed the tyranny of Charles I. In 1628 he became Privy-Councillor and President of the North; and in I632 Archbishop Laud selected him as Lord-Deputy of Ireland, where he did much good. In I640 he was inpeached of high treason, but, thanks to Pym's defence of him, the original bill was deserted for one of attainder; but at Strafiford's own request the King, for bis own safety, ratified the bill, and Strafford was beheaded in r64I. Ile invented the "Tborough" system of government.
STRAUSS, FRIEDRICH, the pupil of Schleiermacher and Hegel, was born in 1808, studied in Tiibingen University; assisted a country clergyman in 1830 ; became temporary Professor in the Seminary at Maulbronn: and in 1835 went to Berlin to study under the two famous philosophers mentioned. In 8835 he published his famous "Life of Jesus," and lie afterwards wrote "' Christliche Glaubenslehre,'" " Life of Schubert." "Llfe of Jesus for the Gernian Poople," "The Christ of Faith and the Christ of History." "The Old and the New Faith." etc. He dled in 1874, hostile to the Christian falth.
STRAUSS, JOHANN, the composer of the famous waltzes, was born in 8825 . Ite toured through Europe, and
in 1863 became conductor of the court balls at $S t$. Petersburg. Besides his 400 waltzes he wrote several successful operas.
STUART, Arabella (for whom the conspiracy was formed, , was born in 1575 , and, being the great-great-grand-daugliter of IIenry VII:, she was in the line of succession to the throne. When Queen Elizabeth died a conspiracy was formed for setting up Arabella in opposition to her cousin James. Her private marrage with William Seymour (grandsorn of the Earl of Hertford) alarmed the court, and they were both confined, but she escaped, only to be re-captured and placed in the Tower till she died in $16 \mathbf{1 5}$.
STUBBS, William, D.D., the English historian and divine, was born in 1825, educated at Ripon Grammar School and at Oxford, and eventually became a Fellow of Trinity College. In 1848 he was ordained, and in $\mathbf{x} 862$ became Librarian of Lambeth Palace; Professor of Modern History at Oxford in 1866 ; Curator of the IJodleian Library in 1869; Canon Residentiary of St. Paul's in 1879 ; Bishop of 'Chester in 1884, and Bishop of Oxford in 1888. He edited some yaluable listorical works in the Rolls Series (including "Memorials of the Reign of Richard $I_{\text {.," }}$ "Gesta Regis Henrici II.," "Memorials of St. Dunstan," etc.), but his chief work was the "Constitutional History of England " (r874-78).
STUDDING-SAILS (formerly called' scudding-sails') are fine-weather sails set outside the square sails. The top-mast and top-gallant studding-sails are those set outside the top-sails and top-gallant-sails. They have yards at the head, and are spread at the foot by booms which slicle out on the extrenities of the lower and top-sail yards, and their heads are hoisted to the top-sail and top-gallant-sail yard-arms.
STURT, CHARLES, the Australian explorer, was born in England early in this 1gth century. He entered the army, and in 1825 was stationed, with the ranke of captain, at Sydney. In 1828 he led an expedition to explore the interior of A ustralia, and discovered the Macquarie, Castlereagh, and Darling rivers; and he explored the Murrumbidgee, and in 1830 discovered the Murray. In 8844 he penetrated nearly to the centre of the continent. He was subsequently made Colonial Secretary of South Australia; but exposure having ruined his health, he returned to England totally blind and died in 1869 . He wrote "Two Expeditions into the Interior of South Australia " and "Narrative of an Expedition into Central Australia."
Stylites, or Pillar Saints, were a class of Cliristian saints who passed the greater part of their lives on the top of high columns, by way of penance. This method of self-torture was introduced by Simeon the Stylite ( St. Simon Stylites), a Syrian monk who lived near Antioch on the top of a column 40 cubits high, and only 3 feet in diameter at the top. It appears that he must have descended at times, because he cured the sick by his touch and worked other miracles, and he wrote epistles, and took part in political quarrels. He died in 459 or 460 . His example was imitated in Syria and Palestine, and the mania continued till the izth century. It was a form of conceited asceticism.
SUBMARINE CABLE was first attempted in 1850, between Dover and Calais, but it only lasted a few hours, owing to the friction of the rocks; but electric communication was re-established across the channel soon after. The first Atlantic cable, from I reland to Newfoundland, was successfully laid by the "Great Eastern" in 1866, after three previous unsuccessful attempts. Long submarine cables connect most parts of the world now. A rope of wires and insulating materials are laid on the bed of the sea, and the conducting part of the cable consists of a number of pure copper wires twisted into a strand, and covered with alternate coatings of a pitchy mixture and gutta-percha. This core is then covered with Manilla yarn and twisted iron wires. Signals through the cables are recorded by Thomson's mirror galvanometer and lis syphon recorder, which enables the messages to be transmitted with great rapidity.
-SUCKLING, SIR JOHN, the wit, courtier, and dramatist was, born in 1609, and educated at Trinity College, Cambridge. In 163r:a he served is a
volunteer under Gustavus Adolphus, and in 1639 equipped a troop of horse for Charles I. against the Scotch. Being concerned in a plot to rescue the Farl of Straftord from the Tower, he fled to France, and is said whave killed hinisclf about $\mathbf{6} 65$ I. He wrote letters, poems, ballads, songs, and a treatise, "An Account of Religion by Reason," besides the plays "Aglaura," the "Gublins," "Brennoralt," ctc.
SUEZ CANAL, which connects the Mediterranean (from Port Said) and the Red Sea (from Suez), is nearly 900 miles long. According to IIerodotus, a canal was constructed from the Red Sea to the Nile about 600 B.C., but it scems to have been unused, and was blocked up about 767 A.D. Napoleon I. conceived the idea of making a ship-canal across the isthmus of Suez, and M. Ferdinand de Lesseps executed it in r858-69. A canal was also constructed for bringing fresl water from the Nile, near Cairo. In 1875 the British Government bought from the Viceroy of Egypt his interest in the Canal, and now four-fifths of the tonnage passing through it is British. The voyage to India by it is nearly 5,000 miles sliorter than the old route round the Cape. The Canal was opened in Norember, 8860 . It starts at I'ort Said and ends at Suez, Ismailia being between the two. Its total length is 92 miles, and the tide is felt as far north as the Bitter Lakes It cost $£ 99,000,000$ and about 200,000 out of the original 400,000 shares were bought by Lord Beaconsfield for the United Kingdom-a brilliant investment.
SUGAR is generally of vegetable origin and crystallizable. The 'sugar-cane' and ' beet' are the best. It was probably first cultivated in India, but a knowledge of the sugar-cane and its cultiration was brought from Persia, by the Arabs, to Europe. The Spaniards planted it in Madeira in 1490 , from whence it spread to the West Indies and South America; and in the Middle Ages, Venice was the emporium of the sugar trade. It was probably shipped from there to London in r319, but it was used chiefly as medicine till the beginting of this century. The greatest producers of cane-sugar are the East and West Indies nowadays, though it has deteriorated in the West Indies, through the 'beet' competition of Germany and France and the laziness of the negroes; but Cuba produces twice as much cane-sugar as any other country in the world, while Batavla exports to Great Britain only, and Havana to the United States. The maple tree in Canada gives a large amount of sugar during March. There are many sugar refineries in Germany, e.g. at Brunswick, Magdeburg, and Halle.
SUICIDE in the Army is far more destructive than war is. About 80,000 British soldiers have commirted suicide in the last fifty years, while oully about 60,000 have been killed in war-the Crimean War being responsible for nearly half. (See DEATH-RATE and OCCUPATION above.)
SUlla, LUCIUS, the Roman dictator, was born in 138 B.C. He served in the Jugurthine and Cimbrian Wars, and for his services in the Social War ( $00-88$ ) was appointed consul, and the province of Asia fell to his lot. He was obliged to flee to Rome, however, to avoid Marius, who was violently jealous of him. At dength he drove the larter to Africa, expelled the armies of Mithridates from Europe, and counpelled him to make peace. He then went to Rome with a large army, and after much bloodshed was proclaimed dictator in B.C. 8. He died in 78 B.C.
SUllivan, Sir Arthur, the popular composer, was born in 1842 . He was choir-boy at the Chapel Royal, and in 1856 gained the Mendelssohn Sclolarship of the Royal Academy of Music. In 1858 he went to Leipzig, and, returning in 1862 , artracted attention by his inusic to Shakespeare's "'Tempest." IIe his written oratorios ("Prodigal Son," "Light of the World "), anthems, and sougs ; but his operettas are most popular, and written in conjunction with W. Gilbert. Some are "H. M. S. S. Pinafore"" "Pirates
of Penzance, ": Patience," Mikado," "Yeomen of of Penzance," "Patience," "Mikado," "Yeomen of the Guard," " Gondoliers," "Utopia, Limited." etc.
His nusic to Longrellow's "Golden Legend "is very fine.

and first Minister of Henri IV., was born in 1560, and educated in the Protestant (Calvinistic) faith. He won dissinction at the battle of 1 yri ( 5590 ), and afterwards helped the King to resist the intrigues of the League. In 1597 he became Controller of Finance, and received many other offices in succession, being unwearied in his industry. After the murder of Henri IV. he retired in 1611, was made Marshal in 1634 by Kichelieu, and died in i64r. He left meuoirs, which have been published in English.
SUMMER HEAT is snid to be nbout $150^{\circ} \mathrm{F}$. in the Sahara, $120^{\circ}$ at Calcutta, $105^{\circ}$ at New York, $90^{\circ}$ at Buenos Aires, $75^{\circ}$ in Scotland, and $45^{\circ}$ in Icelnad.
SUBNER, CHAKLES, the American jurist and statesman, was born in 1811, and educited at Harvard University. In r834 he was called to the Bar, and soon became reporter of the United States Circuit Court. In 1836 he published three volumes of Judge Story's decisions, which are now known as "Sumner's kepores." He visited Furope in 1737-40; and in 1844-45 he published "Vesey's Reports." In 1851 he was elected to the Senate of the United States, and distinguished himself by his antipathy to slavery; and in 186i he became Chairman of the Senate Committee on foreign relations. He died in 1874 .
SUMPTUARY LAWS (intended to repress extravagance in eating, drinking, and dress) were common in ancient times, and appenr in the old statute books of most modern nations. After the Twelve Tiables, the first Roman sumptuary law was the Lex Oppin, clirected only against female extravagance in dress, jevelry, etc. The Lex Julia, the last one, was passed in the reign of Augustus. These laws were revived by Charlemagne, and were kept in force until the reign of Louis AV. In England they were passed from the time of Edward III, to the Reformation, but were not all expunged from the statute book until 1856 . They were passed by the ancient Scotrish legislature, but were all repealed, evaded, or neglected.
SUN, WORSHIP OF THE, prevailed in the earliest times among all nations and the chief deities of the Polytheisms of ancient India, Egypt, Greece, Rome, Germany, etc, are, according to a popular theory, all identified as sun-gods. But the followers of Zoroaster, the ancient Celts, etc., worshipped the sun itself, as a physical object associated with fire. Peru seems to have had the most complete system of sun worship. Indra, Zeus, Jupiter, and Odin, etc., were sun-gods.
SUNDAY SCHOOL STATISTICS Slow that U.S.A. have about eight million scholars, and more than one million teachers; the United Kinglom has about six million scholars, and 650,000 teachers; and British North America comes third with about 450,000 scholars, and 55,000 teachers.
SUN'S SPOTS cross the sull apparently from enst to west, and show that its axis, like the earth's, is not luite perpendicular. A spot 'revolves' in about 27 days.
SURAJAH DOWLAH (notorious for his perpetration of the massacre in the Black Holc) was the last independent narvaub of Bengral. He was routed by Clive and Admiral Watson at Plassey (1757), fled up the Ganges, and was murdered. 11 is reign lasted 15 months, and he was only 20 yenrs of age when lie
cljed.
SURFACE OF ITATV is naturally divided into three areas-continental, peninsular, and insular. Therefore the country is, like Egypt, too long to be easily governed from a single celtre; ind the different charncter of the surface gives the different areas different interests and halbits.
SURFACE OF GREECE has had great historical and political importance, Both the coast and the surfice are remarhable. The coast is at least twice as long. in proportion to the size of the country, as that of Great Britain. The surface is covered with masses of mountains, most of which run out into the sea as bold peninsulas. The sea roumd is comparatively so small that the climate is thoronghly continental, i.c. the air is dry and the sky is generally clondless. The sea surroundings eleveloped a race of sailors and colonists. It is easiest to conduct even the 'domestic'
trade by sean and the wincling bays and wooded islands afforded every chance to those whom their trinde tempted into piracy. The belt of mountains along the north so isolated the people that they naturilly expanded into Asia-by the bridpe of islinds across the AEgean. The surface and climate made then independent and patriotic. The valleys are so small that they could easily be governed from a single centre, which strongly developed 'clan' spirit. They are so near to one another that intercourse could not be avoided, which encouraged commerce. They are so numerous that the rivalry between valley and valley was very strong. Tlie climate encomraged an open air athletic life, in which this rivalry found scope for itself. Conmon sportsaided by common religion, a common linguage, and a common isolatiou from the rest of Europe-developed very strong patriotism.
SURGEONS, ROYAL COLLEGE OF, descended from the Company of Barber-Surgeons, was incorporated by royal charter in r 461 . A separate association of surgeons was fomied later, but Henry VIII. united the two companies in 1540, under the title of Masters or Governors of the Mystery and Commonalty of Barbers and Surgeons in London. In 1745 the latter were raised to a separate corporation; and in 1800 the title of the company became the Royal College of Surgeons of London, which was changed in 1843 to that of the Royal College of Surgeons of England. The College is governed by twenty-four members (including president and vice-president), who nust le fellows of fourteen years' standing. The buildings are on the south side of Lincoln's Inn Fields, and contain a museum, library, and theatre for lectures.
SURCERY was early separated from medicine, and cane to embrace the science pertaining to surgical operations and the art required for conducting them; but the progress of science has both extencled the domain of surgery and made its relations with medicine nore intimate. The Greeks made considerable progress in it, and Celsus (called the Latin Hippocrates), who lived about the beginning of the Christinn era, was a famous surgeon. In 1163 the Council of Tours prohibited the clergy from perforning any operation, and surgery then was incorporated with the trade of barber, and reduced to the operation of letting blood. In the irth century, Salemo (1taly) was fanmons for its school of medicine. Guy de Chnuliac, who lived in the rath century, was the first great French surgeon, while Vesalius, a Belgian physician, is regarded as the father of modern amatony; and Anibrose Pare did for surgery what he had done for anatomy. Paracelsus, Guillemeau, Pincau, Démarque (wloo first wrote on bandages), and Fabricius of Hilden (in Germany), were all famous on the continent, and Harvey in England, with Wisemnu, who founded a school of surgery. Astley Cooper, Brodie, Simpson, Annandale, Macewan, Horsley, Dupuytren, Dubois, Grïfe, and Langenbeck may be meutioned as eninent surgeons of the 1gth century in England, France, and Germany.
SUTTEF was the term applied by the Euglish to the self-immolation of Indian widows on the funcral pile of their dead lusbands. The origin of the practice was ancient, but not based on the "Vedas." It was alsolished in 1829 by Lord Bentinck, but cases are still heard of.
SWEATING SYSTEM, by which sub-contractors undertake to do work in their own prenises, and employ others to do it, is a selfish and scandalons way of making profit between the price of a contract and the wages paid to the unfortunate person who actually is employed to fulfil it. A report was made to the Board of Tracle in 1887 by Mr. John Burnett on the Sweating System in Enst London, which led to investlyations in all large to wns.
SWFDENFORG. EMMANUEL, fommer of the New Jerusalem sect, was bom in 688 at Stockholun. In 17ro-14 he went on scientific travels, and in 1726 he became assessor extraorelinary in the Roval College of Mines. Ilis "Opera ['hilosophica et Miner lia" (1734) attracted much attention ind in 1740 he pub. lished "Economy of the Soul Kingrlom." In 1747 he resigned lis office in the College, and gave himself
up to religion. He wrote "Arcimn Caclestia," "New Jernsalenn," the "Apocalypse Explained," etc. Tho 'Swedenborgians " are his followers. John Flaxninn, the sculptor, was one of the enrliest nembers of tho sect ; but the Rev. John Clowes, Rector of St. John's Church, Manchester, was their great apostle. They believe that Jesus is God, in whom is a 'trinity of essentials,' not of persons.
SWIFT, JONATHAN, the greatest English satirist, was born in 1667, and educited at Trinity College, Dublin, In 1688 he crossed to England, and in 1692 graduated as M.A. at Oxford. In 1 zor he took his doctor's - degree, and three years later published his "Tale of a Tub," to which twas appended the "Battle of the Books." His "Project for the Advancement of Religion " (1709) was the only work to which he put his nime. His political tracts, "The Conduct of the Allies" and "The Barrier Treaty," were famous; and his "Proposal for the Universal Use of Irish Manufictures," and his "Drapier's Letters," made the Irish people worship him. His fanous "Gulliver's Travels " appeared in 1736, and he died in 1745.
SWImMING ON DRY LAND, The Life Saving Society, under the direction of Mr. Willian Henry, the amateur champion swimmer of England, is giving great attention to this subject, and has published full information for the guidance of parents and teachers. It is perfectly easy to teach children to suim withont ever being in the water at all, and of course it is enormously important.

First the children are drawn up in ranks as in ordinary drill, and when the command 'Position' is given, they place their hands on their hips. The first novement in this swinming drill is the leg movement. When 'One' is called, the children raise the left knee (directing it sideways), the heel of the left foot touching the inside of the right knee, with the toes pointing downwards. When 'Two' is called, the left leg is straightened and lowered by a backward and rounded movement until the point of the big toe touches the ground one pace to the left. Then, when 'Three' is called, the left foot is drawn along the ground, and the leg is closed smartly. The right leg is put through similar movements.

Next comes the arm movement. When the command 'Position' is given, the children raise their arms by bending them upwards from the elbows, and shoot the hands forward, with arms extended and directed slightly upwards, thumbs touching, with the palms turned downward, and the head inclined slightly backward.

Then they sweep the arms round in a quarter curve right and left, until they are in line with each other, with the backs of the hands turned slightly towards the front.

Then the elbows are closed to the sides of the body, and the hands are brought to the sides of the chest slightly to the front; the fingers are closed, pointing to the front with palins downward, the thumbs about six inches apart,

Then the hands are shot forward to the full extent of the arms and slightly upward, thumbs touching, the palms turned down, and the head inclined backward. The third movement in this drill is a combined arm and leg movement, when the two movements just described are combined.

These movements if gone through continually become nutomatic, and when the children are taken to the water little explanation is required as to what they have to do. They are taught to trust themselves to the water, and to put into action the movements they have practised on Iand.

Instruction is also given on the management of the breath, which is, of course, of the grentest importance, for when the lungs are properly filled the body is much more buoyant when in the water.
SWINBURNE, ALGERNON, the poet and essayist, was born in 1837, and educated at Balliol College, Oxford. His tragedies, "Atalanta in Calydon" and "Chaste lard," and his "Poems and Ballads," excited criticism, and since then he has been! well known. He has written "William Blake" (a critical essay), "Ocle on the Proclamation of the French Republic," "Songs of Sunrise," "Bothwell," "Notes on Charlotte Brontë,"
" A Century of Roundels," poem on the " Armada, ctc.
SWITHIN, ST., Bishop of Winclester from 852 to 862, was the patron saint of Winchester Cathedral fron the soth to the xGth century. He is popularly known because if rain falls on the 15 th of July (St. Swithin's Day) it is supposed to rain for six weeks after.

## T

TAbArD was a 'tippet' (probably the same word) or loose cloak worn by poor people originally, and atter wards by knights over their armour. It survives in heralds' coats.
TABBY CAT ought to be really 'atal)e, and is derived from atab, the name of a famous street in Bagdad which used to be the great market for 'silks'; and the cat's coat was like the wavy markings of the watered silk.
TABLEAUX VIVANTS are said to lave been invented by Madame de Genlis for the children of the Duke of Orleans.
TACITUS, the Roman histcrian, was borm about 53 A.D., and rose to great entinence as a pleader at the Roman Bar. He was an eye-witness of Domitian's reign of terror. Among his most fomous works are his "Agricoln," "Germania," "Historiae," and "Annales," His aim was always a noble one-to perpetuate virtue for praise and vice for blane.
TAGLIONI, MARIA, the celebrated danseuse, was born in 1804, the daughter of a ballet master. She made her first appearance with the greatest success at Paris in 1827, and in 1832 she married the Count de Voisins. She died in $\mathbf{1 8 8 4}$.
Taine, Henri, the French critic, was born in 1828 , and conquered fortune and religious prejudices by the strength and originality of his literary work. He established the critical method of making a searching investigation into the race, social conditions, and environment of a writer in order to see the special bearing on him of the tendencies of his age. His greatest work is his "Origins of the French Revolution," but his "History of English Literature" and his various books on Art are splendid productions, though imperfect.
TAI-PINGS was the name given by foreigners to the followers of Hung in the Chinese rebellion of 8851. Hung was a village schoolmaster, who preached a "Grand Peace' (Tai-Ping) by the subversion of the Manchau dynasty. He was finally defeated by Colonel Gordon in 1864, and committed suicide.
TAIT, ARCHBISHOP, was borm in 18II, and died in 1882. He was educated at Glasgow University, and became fellow and tutor of Balliol College, Oxford. He was one of the four tutors who protested against Newman's "Tract 90." In 1842 he succeeded Dr. Arnold as Headmaster of Rugby, and became Dean of Carliste in 1849 and Bishop of London in 1856 , where he encouraged open-air preaching. He was made Primate of England by Mr. Disraeli in 1868.
TALENT was the heaviest unit of weight among the Greeks, and especially as a definite weight of some monetary currency. It may be estimated roughly as worth $\notin 300$, though it was sometimes as low as $\mathbb{2} 203$ and as high as $£ 400$.
"TAIISMAN," SIR WALTER SCOTT'S. The virtues of the all-potent Talisman used by the Hakim were suggested to Scott by the famous Lee Penny, which has been in possession of the family of Lockhart of Lee, in Lanarkshire, since the first half of the rith century, and the therapeutic powers of which were formerly very famous. Sir Simon Lockhart of Lee, one of the chief of the band of Scottish chivalry that set sail for the Holy Land with the heart of King Robert Bruce, took command of the expedition after the unfortumate death of the 'good I-ord James Douglas in Spain, and after his arrival in Palestine, took part in the wars against the Saracens. It was while so employed that he gained possession of the invaluable heirloom, and the traditionary account of its acquisition is thus given by Scott. Sir Simon having captured in battle an Fimir of considerable wealth and consequence, the agen mother of the prisoner came to the Christian camp and proceeded to tell out fronn an embroidered purse the sum fixed
as ransom, as If she cared littie for mere money in comparison with her son's liberty. In the process, however, a pebble inserted la in coin fell out of the purse, and such haste dld she show in picking it up and such care in retuming it to its iplace, that the Scottish knight, concciviny slie must put a high value on it compared with gold or silver, refused to set the Emir free unless the anulet were added to the ransom. To this the lady nut only consented, but explatited the mude in which the Talisman was to bo used, and the purposes for which it might be employed. Water in which it had beeu dipped had numerous medicinal properties, but was ot special value as a styptic or as a febrifuge.

In eariy rimes the charin wis held in hlgh esteem, and even as tate as the first half of the 17.th century such was the value placed on it that the inhabitants of Newcastle, who burrowed it to enable then to combat a visitation of playue, granted a bond for E6000 for irs safe return, and so much good did it do that they 'offered to forfeit the money and keep the stone.' About the same time the ecclesiastical authorities, who were most anxious to put down everything that savoured of heathen necromancy and divination, made a special exception in favour of this stone, on the ground that no use was made in connection with it of 'words such as chamers and sorcerers use in their unlawful practices; and considering that in nature there are many things seen to work strange effects whereof no human wit can give a reason, it having pleased God to give to stones and herbs special virtues for the healing of many infirmities. They seem, however, to have been a little doubtful whether its properties were not due to some league with the powers of darkness, for they enjoined the laird to use it ' with the least scandal that possibly may be.' The healing properties of the little red stone-it is triangular in shape, measures about half an inch along each side, and is set in a silver groat of Edward IV.-were believed in till well into the present century, especially in connection with the cure of hydrophobia, and of all the diseases to which cattle are subject. For the latter purpose it was considered quite sufficient that a bottle of water in which the stone had been dipped should be hung from one of the rafters in the byre.
TALLEYRAND DE PERIGORD, the famous politician, was born in 1754. and an accident, by which he was lamed for life, deprived him of his right of primogeniture and transferred his career frum the army to the church. In spite of notorious immorality he was promoted so quickly that in 1780 he was made agentgeneral to the French clergy, and in 1789 Bishop of Autun. In the latter year he became one of the chief authorities on constitutional, financial and educational questions, and used his influence for the destruction of the profession to which he nonninally still belonged. He so won the hearts of the extreme revolutionists in the Assembly by proposing the confiscation of church property that they made him their president. Under the Robespierre tyranny he left France and lived in London for three years, but returned in 1795 and became Foreign Minister under the Directory. He was afterwards of immense use to Napoleon, for whom he did many dirty tricks, until on the occasion of the invasion of Russia he deserted him. He was a wonderful judge of men, and amarinyly clever, immoral, and mendacious. He died in $1838^{\circ}$. His report on education has moulded French policy since.
TALLIEN, the revolutionist, was conspicuous in the - attack on the Tuileries, and so was made secretary to the Commune. After a career of shanaeless profligacy and vile cruelty, he came under the suspicion of Robespierre, but realized his danger, and headed a successful attack on the great tyrant.
TALLIS, 'the father of Cathedral music in England,' lived in the Tudor period, when he was organist of Waltham Abbcy.
TALMUD is the fundamental code of the Jewish civil and canonlcal law, by which-in adelition to the Old Testament-the conduct of the people is regulated. It Is practically the Interpretation of the Mosaic Law by the ancient rabbins. After the second destruction
of Jerusalem, tho disperslon of the Jews raised fears lest the oral traditions should be cutirely lust, and lunce arose the necessity of committing then to writing. The original text of them, or Mishma, was drawn up in 190 A.D., but subsequently two conmentaries were added-the Bilbylonian Gemara about 430 A.D., to which the jews always refer, and the Jerusalen Gemara, which was earlier and shorter.
TAMERLANE, or TimUR THE LAME, the great conqueror, was born near Samarcand in 1336, and he raised himself to the throne of Snmarcand in 1369 . He first organixed his kingdom, and then started on his raids. He conquered nearly all Persia, India, Syria, AsiaMinor, etc., and would probably have conquered China if he had lived. He died in 1405.
TAmMANY was an Indian Chicf, of the Delaware tribe, Wio lived in the middle of the seventeenth century. He is said to have had a motto, "Unite in peace for happiness, and in war for defence." This seems to liave been the reason why the New York democracy adopted hin as their patron saint.
TANCRED, The CRUSADER, was born in moge. He is the beau ideal of crusadiug chivalry, and the hero of Tasso's great epic.
TANNAHILL, ROBERT, the weaver-poet, was born in 1774, and owed much of his early inspiration to the poems of Burns, Fergusson, and Ransay. He published his "Poems and Songs" in 1807.
TANNHAXUSER, the hero of the German legend, personifies the regret of the people for the old paganisn and the stern treatinent of it by the Churcli of Kome. There was a real Tannhäuser, who was a knight and minnesinger of the $13^{\text {th }}$ century.
TAPESTRY was known to the Greeks, and had been carried to a high state of perfection at Athens, but it is usually associated with the Flemish weavers of Arras during the 15 th and roth centuries. It was introduced into England by Willian Sheldon in Henry VIII.'s reign, and into Paris by Henri IV, about 1606, the Gobelins Tapestry being due to Louis XIV. The " Bayeux Tapestry' is simply a roll of linen cloth worked with coloured thread.
TARGUM is a Chaldee paraphrase or version of the Old Testament. There are eleven of then altogether, but by far the best is that of Onkelos on the Pentateuch, the author having been a disciple of Hillel about 65 B.C.
TARIFF takes its name from the town and cape of 'Tarifa, where, during the Moorish dominion in Spain, dues were collected from ships using the Straits of Gibraltar.
TARTARS ought to be called 'Tatars,' but the name was changed apparently because they were looked upon as 'fiends from hell ' (Tartarus).
TASSO, TORQUATO, was born in 1544, the son of a poet highly esteemed in his own day, and whose wanderings in exile he shared. Ile published his first poem 'Rinaldo' in 1560 . In 1565 he entered the service of Cardinal Luigi d'Este, who took him to the court of his brother Alfonso II. d'Este, Duke of Ferrara, where, under the encouragement of the Duke's two beautiful sisters, Lucrezia and Leonora, he began his great epic " La Gerusalenme Liberata," which was completed in 1575 . He wrote the sweet pastoral play of "Aminta" in 1573, and died in 1595. For several years he was kept confined, as he had shownesigns of homicidal mania.
TASTE, AESTHETIC, is the mental faculty by which we recognize and distinguish the beautiful and the proper. It is generally looked upon as the result of caprice or fashion, and it is so very often, especially in reference to women's dress; but it is really a habit of mind, and there are uniform and permanent principles on which to ground its decisions. (See EDUCATION above.)
TATTERSALL'S HORSE MART takes its name from Dick Tattersall, an auctioneer of last century. In ${ }^{1766}$ he took a 99 ycars' lease of premises at Hyde Park Corner, on the expiration of which the mart was removed to Knightsbridge Green.
TAUCHNITZ, the famous printer, was born in 176r, and set up a small printing business of his own in Leipzig in 1796 . In 1809 he began to issue his famons editions of the Classics, and $\ln$ I816 he Introduced stereotyping
into Germany. His nephew also started a house in Leipzig in 1837, and in 184n began the well-known series of "British Anthors."
TAX ON INCOMES is not levied on incomes less than £ $x 60$, and a relief of $£ 60$ is allowed on incomes less than $£ 400$ a year, and of $£ 100$ on incomes from $£ 400$ to $£ 500$. The joint incomes of husband and wife not exceeding $£, 500$ get relief on each income separately only if the wife's income is derived from trade or profession.
TAXATION is necessary under every form of Governnient, but a good Government will try to make the taxes as light as possible. Adam Smith's four maxims of taxation are-( $x$ ) That the subjects of every State ouglit to contribute to the support of their Government in proportion to the respective abilities as judged by their respective revenues; (2) that the tax should be certain-the time and inanner of payment and the quantity to be paid being perfectly clear and fixed; (3) that it should be levied at the time most convenient to the payer; (4) that it should take from the payer as little as possible above the anount which eventually goes into the public treasury.
Taxes are either direct or indirect. Direct taxes, e.g. income tax, are paid by a person who cannot shift the burden of payment to another or indemnify hinself at the expense of another. Indirect taxes, e.g. excise, are paid by one person, but the burden ultimately falls on another. The latter are the most popular, because, as the tax is generally paid in the first instance by the producer, the purchaser confuses it and identifies it with the price of the article. Another reason for their popularity is that they are paid in small quantities, e.g. with every I lb. of tea and tobacco, and therefore are less felt.

Taxes on raw materials are unwise, and taxes on such raw inaterials as are necessaries of life are iniquitous.
TAYLOR, JEREMY, 'the glory of the English pulpit,' was born in 1613 , the son of a Cambridge barber. He took his degree at Cambridge about 1633, and through the influence of Archibishop Laud was made a Fellow of All Souls' College, Oxford, and Rector of Uppingham. The "Liberty of Prophesying" appeared in 1647, "Holy Living" in 1650, and "Ductor Dubitantium' " in 1660 . He died in 1667; he was above all things a preacher.
TEACHERS' GUILD, THE, was established in 1885, and now includes well over 4000 members, of whom about 1800 are in the Central Guild, and the rest in the 30 local branches. The Guild is specially engaged in the attempt to raise teaching to the rank of a learned profession - through (I) registration, (2) efficient tests of teaching power, and (3) organization of Secondary Education in harmony with the views of practical teachers. It bas also started a Pension Fund, which promises to be of extreme value, especially to poor female teachers.
TEA DRINKERS, THEGREAIEST, are the Australians, who consume about 8 lbs . per head of population every year-generally cold and always abominably strong. Great Britain comes second, with an average of about 2 lbs . The U.S. A. average is only about $1 \frac{1}{2}$ lbs., and on the Continent of Europe the average is even less than I lb.
TEA PLANT is a native of Assam, and therefore it ought to grow better in the Brahmaputra Valley than anywhere else in the world. Indeed, it must have originally been taken from there into China, but the variety grown in China now differs from that grown in Assam. The main difference is illustrated by the different height at which the gardens are situated. In China, as along the Himalaya Mountains, they are at a height of several thousand feet; and, in the case of India, this is a great attraction to European planters. The best-known Himalayan gardens are in the Punjab and Bengal, round' such famous summerstations as Palumpore, Simla, and Darjiling.

In all these places the soil and the climate are alike suited to the plant. For instance, the rainfall is heavy and regular, but the slope prevents the moisture from settling round the roots of the plant; the soil is light and friable, but plentifully supplied with vegetable refuse from the great Himalayan forests; the
heat is great, and there is abundance of iron in the gromed. The main drawback is that the climate tends to extrenes, and the weather is apt to be stormy. Consequently the seed-beds require to be pro: tected by a hedge of some quick-growing tree, and this is generally supplied by the cinchona, which is valuable also for its "Peruvian bark.'

This protection is quite unnecessary in the natural hot-bed of the sheltered Bralınaputra Valley, where there is also the additional advantage of teak forests, for teak or some other wood which contains no resin or aromatic oil must be used for the tea chests. The chief centres along the Bralmaputra itself are at Dibrugarh and Sibsugar, but the valley of the Barak, i.e. practically Cacliar, is rapidly becoming more iunportant. There are sone gardens near Sylhet, but the great centre in Silchar.

The best Chinese gardens are along the Bolsea Mountains, to which the necessary moisture is brought by soutli-east monsoons in summer, and the product naturally gravitates for export to the inland riverport of Hankow.
TEARS usually consist of pure water with saline traces ; but in cases of poisoning, they may show traces of the poison. They serve to prevent the friction of the eyelids on the eyes, to keep the cornca moist, and to wash away any extraneous bodies-generally flies-that may have found their way by accident or by diabolical deliberation into the eyes.
TECHNICAL EDUCATION is a modern institution, adopted first in Germany; but it is the logical outcome of the modern use of machinery ( $q . v$.) and the highly developed division of labour, to replace the old apprentice system by which workmen used to learn the complete practical details of their crafts. The Livery Companies ol London opened the Cowper Street Scliools in 1879, the City and Guilds of London Institute was registered in 1880, and the Central Institute at South Kensington was started in 1884. Parliament took up the matter in 1887, and passed a Technical Instruction Act for Scotland, and two years later a similar Act was applied to England, by which local authorities can levy a rate of Id. per pound to further technical instruction.
TECHNOLOGY is the science of the mechanical arts, most of which are the result of our being born without clothes and without weapons and tools.
TE DEUM LAUDAMUS are the first three words of a Latin hymn written by Nicetus, Bishop of Tiess, in the 6th century.
TEL-EL-KEBIR was won by tbe British troops on September 13, 1882, and was a serious blow to the prestige of A rabi Pasha.
TELEGRAPH, ELECTRIC, consists essentially of (I) a battery or source of electric power; (z) a line-wire or conductor for the electric current ; (3) an indicator or signalling instruntent. As early as 1747 signals were sent through a wire stretched across the Thames by discharging a Leyden jar through it, and in 1774 Lesage actually erected at Geneva a telegraph line of twenty-four wires, each for a separate letter. But the first great impulse to the invention was due to Volta's discovery of the galvanic pile in 1800 , and Oersted's discovery of electro-magnetism, by which the electricity was more easily retained on the conducting wires. Baron Schilling was the first to use a single needle, in 8832 ; and the idea was practically perfected by Professor Steinheil, who invented a telegraph alphabet andl superseded return wires by earth-connections. The first 'modern' telegraph was laid by Messrs. Cooke \& Wheatstone along the London and Blackwall Railway in 1837. (See ElECTRICITY abore.)
TELEGRAPH WIRES APPAKENTLYRISE ANDFALL because the weight of the wire makes it dip between the posts, no wire being strong enough to bear the strain of being stretched quite level. Consequently, the course of the wires is a succession of curres. with the convex downwards. The optical illusion is, therefore, due to the fact that the eye passes them so quickly that they appear to be moving when it is really the train that moves. $A$ similar illusion may be found when a field in furrows or with aicrop in lines is at right angles to the railway, when the furrows
or lines of crop will appear to be revalving like tho spokes of a wheel.
TELEPHONE was invented by Reis of Frankfort about 1860, but was made practical by Graham Bell in 1876. It consists of a wooden bux, within which is an iron vibrating plate fixed in front of a steel niagnet, round which there is in coil of insulated copper wire. The two ends of the wire are connected by two united wires to the corresponding instrument, and the vibrating plate is covered with a mouth-piece. The microphone and the phonugraph ase simply modifications of the same principle.
TELESCOPE was invented by accident, though Roger Bacon had hidd a very definite idea of the principle involved. The children of a spectacle-maker in Holland, called Jansen, were playing one day with two powerful inamnifying glasses and happened to place one below the other in such a position that a church tower in view seemed suddenty to come much nearer to thein. They told their father, and he made up several 'telescopes' as toys, Galileo heard of this and had soon perfected it lito the modern telescope, though his first instrument only magnified threc times. He soon made another which magnified nine times, and with it he discovered Jupiter's moons. Nowadays, iustead of rough instrumients constructed and worked under great dificulties, like the telescopes of Galileo and Herschel, we have magnificent refracting cnes, with large achromatic lenses, and they are self-registering, recording in a permanent form phenomena which had formerly to be recorded at intervals by human observers who were liable to error. Now clockwork regulates the movements of the telescope itself, the microscope enables the observer to read off the most delicate measurements, and photography gives permanent records of passing phenomena.
TELFORD, THOMAS, the engineer, was born in 1757 in Dumfriesshire, and was eventually appointed a surveyor of public works in Shropshire, and entrusted with the construction of the Ellesmere Canal. In 1803 and 1804 he was appointed engineer for the Caledonian Canal, and for the roads of the Scottish Highlands. He also constructed several other canals. a number of large bridges, five across the Severn, and more than 30 harbours. He is best known in Britain for the Menai Suspension Bridge and the Broomiclaw Bridge at Glasgow, and on the continent for the Swedish canal systern.
TELL. WILLIAM, the peasant hero of Switzerland, is probably a mythical personage. The stories about him belong to the end of the $x$ ith century.
TEMPERANCE ORDERS. The first seeins to lave been founded in 1517 A.D., under the title of the Order of St. Christopher, in Germany; and at the end of the same century the Landgrave of Hesse formed an Order of Temperance. Both these orders were literally 'Temperance,' and not merely an inpertinent appropriation of an honourable title by, 'Total-Abstainers." Their idea of 'Temperance' was-the Order of St. Christopher were pledged not to drink 'toasts, " and the others were pledged not to drink more than seven glasses of liquor at a time, and not to drink seven at a time more than twice a day. The modern T. movement originated in U.S.A. by the formation of the New Jersey 'Sober Society' in 1805. The first society definitely founded to promote temperance was also in U.S.A. about 1826 . The first temperance hall founded in England was the Brad. ford one in $\mathbf{1 8 3 7}$, where the first temperance society had been started seven years earlier. The year 1830 may be called the starting-point of the movement in England.
TEMPERATURE AND COLOUR. A faint red is probably about $950^{\circ} \mathrm{F}$., a dull red $1360^{\circ} \mathrm{F}$., bright cherry red about $1800^{\circ} \mathrm{F}$., orange $2000^{\circ} \mathrm{F}$., bright white heat $2550^{\circ} \mathrm{F}$, and the greatest heat of an iron blast furnace $33,000^{\circ} 1 \mathrm{~F}$. Compared with these leats ether boils at $104^{\circ}$, alcohol at $173^{\circ}$, nitric acid at $210^{\circ}$, oil of turpentine at $304^{\circ}$, sulphur at $570^{\circ}$, and mercury at $65^{\circ}$, The usual temperature of tea or coffee 'at table' is about $110^{\circ}$, and a bath scalds at $150^{\circ}$. Metals taken from a bath at $150^{\circ}$ feel much hotter than wood taken from it; and metals from boiling water cannot be
linndled though wood can. The heat-conducting power of metals varies very much, gold coming first ( $1000^{\circ}$ ) and platinum second ( 9819 ); iron is about $374^{\circ}$ and lead 1809.
TEMPLARS, KNIGHTS, were a Crusading Order, established shout Iry 8 A.D. for the protection of jilgrins in Palestine, and aftervards for the defence of the Holy Sepulchre. The knights wore a white cloak with a red eight-pointed (Maltese) cross on the left shoulder. Philip 1V. of France massacred the 54 chief knights in $\mathbf{3 3 0}$, and his accomplice, Pope Clement $V$., abolished the order in 1322.
TEMPLE, SIR WILLIAM, the great statesman, was born in 1628. He is best known in connection with the Triple Alliance of 1668 (England, Holland, and Siveden), and with the marriage of the Prince of Orange to Mary, eldest daughter of the Duke of York, in $\mathbf{1} 677$. He was a friend of S wift's.
TEMPLE BAK originally stood between Fleet Street and the Strand, and divided 'the City' from Westninster. It was such an obstacle to cominerce that in 1878 it was taken down and re-erected at Theobald's Park, Cheshunt, in 1888,
TENANT RIGHT, 'ULSTER.' According to this custom the in-coming tenant pays to the out-going tenant a certain sum, partly as a consideration for the goodwill of the farm, and partly as compensation for unexhausted improvements. The sum paid for goodwill is really a part of the economic rent. If the in-coming tenant had not to pay this sum, he would be obliged to pay more rent. The custom therefore divides the economic rent into two parts, one of which is capitalized and paid by the in-coming tenant to the out-going tenant; the other part is paid in the usual manner annually to the landlord. The economic advantage of this custom is that it gives practical security of tenure to the tenant, by recognizing that be has a proprictary right in the soil. On the other hand, the custom is economically pemicious because it reduces the capital of the in-coming tenant just at the time when he wants it most to stock his new farm. The Ulster custom, although very prevalent, had formerly no legal sanction. Prior to 1870 there were really two laws in Ireland, one the law of the land, and one sanctioned by the customs and habits of the people. The Irish Land Act of 1870 reconciled these two conflicting systems by legalizing the Ulster custom of tenant right.
TENIERS was the name of two famous painters of the Flemish school, father and son. The father was born in 1582, and studied under Rubens; the son was born in I6IO, and was the tutor of Don John of Austria. Like his father, he specialized in the delineation of fairs, rustic sports, taverns, etc.
TENNIEL, SIR JOHN, the artist, was born in I820, and has been entirely self-taught. He made his name by his illustrations for "Alice in Wonderland," and joined the staff of "Punch" in 1851. He was knighted in 1893.
TENNYSON, ALFRED, LORD, was born on 6th August, 180g, at Sonersby Rectory in Lincolnshire. He was the third son of the rector of the parish, Rev. George Clayton Tennyson. He received his early education at the village school, and afterwards at the Grammar School at Louth. In 1828 he went to Cambridge, and left in $183 r_{1}$ in consequence of his father's death, without taking a degree. He lived for some years in or about London, and in 1842 his third volume of puens, containing " Morte d'Arthur," "Ulysses," and "Locksley Hall," established his poetical fame. In 1845 he was pensioned by Sir Robert Peel, and two years later published "The Princess." In 1850 three important events in his life took place-the publication of "In Memoriam," his marringe to Emily Sellwood, and his appointment as Poet Laureate in succession to Wordsworth. He spent the rest of his retired and uneventful life at Twickenham, at Aldworth in Surrey, or at Farringford in the 1sle of Wight ; and there is little else to record except productions of new poems or dramas, In 1855 appeared "Maud "; between 1859 and 1872 "The Idyls of the King." In 1884 he was raised to the pecrage as Baron Tennyson D'Eynecourt. His other important works are "Teiresias," "Locksley

Hall sixty Years After," ete. He Hed of old age, after a short and painless llness, on 6th October, 182z, and was burled In Westminster Abbey.

Tennyson's surroundings in early life were of a kind to encourage the poet in him. His father firmly believed that his childish attempts at verse would develop into something great. Ilis school days gave ample opportunity for the accurate study of nature, for whicli his poetry is remarkable. Lincolnshire scenery-the flats and ridges of the fen country-are worked into all his early poetical attempts, which are not mere imitations of other authors, His precocious genius was shown by the share he took in "Poems by Two Brothers," published in 2826, the other author being his brother Charles.
His life at Cambridge added rather to his friendships than to his attainments. Upon a receptive mind like his, the effect of living among men such as Trencls, Alford, Milnes, Merivale, and Hallam, must have been great. He carried off the Vice-Chancellor's medal for English verse with a poem on "Timbuctoo," and it is to be noted that he used blank verse in this performance, although the custom of the University demanded the heroic couplet. In 1830 appeared his first volume of poems; his second in 1832, shortly ifter he had left Cambridge. They were praised by Coleridge, and blamed by the "Quarterly Review." Though Tennyson had a morbid dislike to adverse criticism, he never failed to profit by it when revising his work.
The shock caused by the death of his friend Harry Hallam in 1833 silenced the poet's voice for many years. This time he spent mostly in London, enjoying the friendship of Carlyle, Rogers, Thackeray, and Landor. It was his period of concentration and the most important epoch of his life. He read, he thought, he smoked "infinite tobacco' with Carlyle far into the night. The result was seen in the 1842 volumes.
TERAPHIM were the household images ot the Hebrews, and seem to have been of human form, though small in size. In fact, they were sacred dolls.
TERENCE, the Roman comic poet, was born in 195 B.C. His comedies have been translated into English by the elder Coleman and several others.
TERMITES is the scientific name for white ants. They are magnificent architects, but terribly destructive to wood.
TERRA COTTA means 'baked earth.' It is usually made of potter's clay and fine powdered silica.
TERROR, REIGN OF, is the period of the French Revolution between the appointment of the revolutionary tribunal and the committee of public safety on April 6th, 1792, and the fall of the butcher Robespierre on July a7th, 1794.
TERRy, Miss ELLEN, was born on February 27th, 1848, and made her first appearance at the age of ten as "Mamillius' in "The Winter's Tale," and as 'Prince Arthur' in "King John" during Charles Kean's Shakespearian revival. At the age of fourteen she joined Chute's Bristol Company, which included the present Mrs, Kendal and Mrs. Labouchere; and she made her début in London in 1863. In 1864 she married and left the stage, but returned to it in 1867. She joined Mr, and Mrs.' Bancroft at the Prince of Wales' Theatre, and played 'Portia'; and on Dec. 3oth, 1878, she made her first appearance at the Lyceum. She has played in 'record' runs of "Ham: let," "The Merchant of Venice,""Romeo and Juliet," and "Much Ado about Nothing."
TERTULLIAN is the earliest Latin "father of the church' whose works are extant. He flourished about 200 A,D. His most famous book is the "Apologia."
Testudo, in the old Roman army, was a roof of shields lapped over one another like the scales of a tortoise (Latin, testublo), from which it got its name. It was a great protection against missiles thrown from the walls of a besieged town.
TETZEL, the scoundrel whose sate of Indulgences so roused Luther's indignation, was a Dominican monk who had been sentenced to death by drowning for adultery, Pope Leo $X$. absolved hinn from the adultery, and recommended the vigorous sale of the

Indulgences (See Reformation abovo.) Tetzel died of the plague in 2519.
TEUTONIC KNIGHTS were established as a Military Order at the end of the 12th century, in imitation of the Templars (g.v.) and Hospitallers. In the 13 th century they acquired Poland and Prussia, and lons held sway over Central Europe, They declined in the 15th century; but lingered on as an Order till Napoleon abolished them in 1809 .
Thackeray, william Makepeace, known to all the world as a novelist, would still have taken high rank amongst writers of English prose, if he had never written a line of fiction. Some obscurity hangs over the events of his life, for it was his characteristic desire that no biography should be published, and the wish has been respected by his family. He was born at Calcutta 181 h July, 1811, His father and grandfather were in the Indian Civil Service. Coming from India in childhood he was sent to Charterhouse School, the 'Grey liriars ' of "'The Newcomes." In 1829 he went up to Trinity College, Cambridge, but only remained there for a year.

In 1832 he came of age and inherited his fortune, which all passed through his hands in a year or twopart of it lost at cards, part in an Indian bank, part in two unsuccessful newspapers. He had intended to become an artist, but never learnt to drawaccurately. Meeting Dickens in 5835 , he proposed to illustrate that novelist's earliest book; the offer was rejected, and Thackeray set about writing books and illustrating them himself. In 1837-38 "The Great Hoggarty Diamond " appeared in "Fraser's Magazine." In 1840 he brought out the "Paris Sketch Book." A bout this time he began to write for "Punch," to which he contributed the "Snob" papers and many other things. His first great novel was "Vanity Fair," 1848;" Pendennis ", was published in 1849-50; his great historical novel, "Esmond," in $1852 ;$ "The Newcomes" appeared in 1854 -55; "The Virginians," a sequel to "Esinond," in 1857-59. He also wrote two brilliant sets of lectures, one on "English Humourists" ( 8851 ), and the other on the "Four Georges" ( 1856 ), delivering them with great success both in America and England.

Ir 1837 he had nuarried Isabella, daughter of Colonel Matthew Shave; by her he had three daughters, of whom the eldest is Mrs. Richmond Ritchse, known herself as a novelist and as the writer of delightful reminiscences. In 1859 he was invited by Messrs. Snuith \& Elder to edit their new monthly magazine, "The Cornhill," which was a success from the first, and has since had a distinguished history. The best known of subsequent editors has been his son-in-law, Mr. Leslie Stephen,

Thackeray was still writing novels and editing "Cornhill" when his careerwas abruptly terminated. He died suddenly an 24th December, 1863, in a house which he had lately built for himself at Palace Green.

Widely as he was and is read and admired, the superficial stricture upon him, that he was "a cynic, is often repeated. So far as it rests on any basis, the criticism is due to his intense and even morbid sensitiveness to 'snobbishness,' against which he is always raising his protest. But he did not really think meanly of human nature, and he was himself a man of inost tender heart, one of the most lovable of English writers.
THALES OF MILETUS was the earliest philosopher of Greece, and was born about 640 B.C. He is said to have studied in Egypt, and his learning was so great, that he was reckoned among 'the Seven Wise Men.' He held that 'fluid' was the elemental principle of everything.
THANE was a title of honour among the Anglo-Snxons. In England any freeman who got five hides of land, or who made three sea voyages, or who took Holy Orders, became a Thane; and every Thane had the right of voting both in the shire and the national Witanagemot or 'Meeting of Wise Men,' which elected the king and helped him to make or alter the laws and to appoint or remove state officials.
ThEATRE CAPACITY.* The Stadt Theatre in New York holds 3000; Covent Garden Theatre in London,

2684: the Alexander in St. I'etersburg, 2332; the Operu 1 House In Munich, z307: La Scila in Milan, z113: and the Opera House in Berlin, 1636 . Connpared with these St. P'eter's Cathedrall in Rone holkls 54.000, and exen St. Paul's Cathedral in London Pitlds $=5,600$.
THIEATRES were among the chief public buildings in Classical times, but disappeared with the decline of the ancient drana. The first modern theatres were in Italy, at Florence and Parma, buitt about the end of the 16 th ceutury. The London Theatre was built about the same time, and the old theatres in Shoreditch, Blackfriars, and Whitefriurs were very little later. Slakespeare's dranas were brought out at the Black friars Theatre or at the Globe. The latter was a six-sided wooden building, partly open at the top and partly thatclied, and the scenery was all 'fixed.' Movable scenery was introduced by Davenant in 1662. (See Actor above.)
THEMIS, in Greek myth, was the goddess of law and justice-the daughter of Heaven and Earth.
THEMSTOCLES, the great Athenian admiral, was born in $5 \mathbf{4} 4 \mathrm{~B} . \mathrm{C}$ : On the second invasion of Greece by Xerxes, he obtained the command of the Athenian fleet by bribery, and tricked Xerxes into the battle of 'inmortal Salamis,' 480 B, C. Jealous rivals afterwards accused him of treachery, and he fied to the Persian court, where he died.
THEOCRITUS, the great pastoral poet, flourished about 280 B.C. About 30 idyls attributed to hinm still survive.
THEODOLITE is a surveying instrument specially constructed for measuring horizontal and vertical angles by means of a telescope, the movements of which can be graduated and marked very accurately.
THEODORA, the wife of the Byzantine emperor Justinian, was a licentious ballet.girl, who in later years assumed the role of a pious benefactress of the Church.
THEODORIC King of the Ostrogoths, was born in 455 A.D.. and died in 526 . As a youth he lived in Con. stantinople as a hostage. In 493 A.D. he induced Odoacer, King of the Visigoths, to share his authority with him, and then by the nurder of Odoacer he became sole ruler. He was a 'Christian.'
TilgoLogy treats of the existence and attributes of God and His relations to man. With regard to its origin it is classified into Natural or Plilosophical where the knowledge of God is derived from His works by the light of reason, and Supernatural, Positive, or Revealed where the dogmas are systematized from the Bible. With regard to its contents it is classified into Theoretical or Dogmatic and Practical or Ethical. Historical T. explains itself. Exegetical T. interprets the Bible, and A pologetic T. defends and attacks.
THEOPHRASTUS, the peripatetic philosopher, was born early in the 4 th century, and studied under Plato and Aristotle, whose favourite pupil and successor he was. His most famous book was a work on "Characters." and we are indebted to him for the preservation of Aristotle's writings.
THEOSOPHY is said to be the ancient knowledge of the deeper mysteries about man and nature handed down from master to disciple for centuries. It is said to include all the fundamental truths of all religions. sciences, and philosophies-a modest claim 1 The chicf agents in founding the present 'boom' were Madame H. P. Blavatsky. Colonel H. S. Olcott, and Mr. W. Q. Judge-with such initials it was innpossible to fail It had its headquarters in New York from 1875 to 1879, when they were transferred to the greater ease and less responsibility of Madras. And Madame H. P. B. visited London in 1887 . Mr. Judge separated from the original society in 1894 in consequence of some charges brouglt ayainst him by Mrs, Annie Besant in connection with some 'Mahatmas ': and in consequence of the revelations at the time Mr. Herbert Burrows resigned his cunnection with the society.
Thirresa, ST., was a religious enthusinst of the roth century, who became a Carmelite nun In Spain. She died in 1582 , and was canonized by P'ope Gregory $X V$. She was the author of several works, ail of thent more
or less of a devotional claracter, including a very curious auto biographi.
THんMO-Electrkicity is produced at tile junction of two nietals or at a point where a mollecular change occurs in a bar of the same metal.
THEкмометEK is graded by being placed first in show and then in the stean of boiling water. In each case a mark is made opposite the end of the column of mercury, and the one mark denote; freezing-point, while the other denotes boiling-point. The space between is then divided into a number of equal parts, which vary according to the description of thermoneter. In a Falmenheit T. the number is 180; and as the freczing-point is $32^{\circ}$, the boilingpoint becomes $212^{\circ}$. In the Centigrade, which is used for scientific purposes, freezing point is marked $0^{\circ}$. and boiling-point $100{ }^{\circ}$.
Theseus, the mythical king of Athens, is said to have governed with mildness, instituted new laws, and made the government more democratic ; but his fame rests on his slaying the Minotaur, and thus freeing Athens from the annual tribute of seven youths and seven girls to that noonster. He is best known to English readers by the delightfill portraiture in "A Midsummer Night's Dream," where he appears on the scene as a conqueror whose hand and head have been directing the world ; but his days of heroic action are for the time past, as the days of his idle triling with Perigenia and her kind are also-for ever. The heroic action and the trifling have alike come to a common end, in the conquest of the Ainazon Queen.
To him in his hour of rest and relaxation cone all the world with their troubles, and all obey his word without question or delay-even Egeus, when that word is to leave his daughter alone with the hated Lysander.
He condescends to argue with Hermia, taking up the position of the lawgiver who defends all laws, parental or national; he condescends to plead for the players in their absence, and to thank them face to face.

The only thing for which he has small tolerance is poetry, that imagination of which

## "The lunatic, the lover, and the poet "

are all compact ; he prefers fact to fiction.
While all the others, fairies included, are quarrelling and breaking law, he rules serenely and loves abidingly. The importance of the character is most emphasized by the fact that the whoie play turns on the Duke and his marriage.
THESPIS, the Athenian, was said to have invented the Tragic Drama in the 6th century B.C.
ThIERRY, JACQUES, the French historian, was born in 1795, and died in 1856. He was secretary to St. Simon, from whom he learned his socialistic creed. The great work on the Norman Conquest of England was published in 1835.
THIERS, LoUis, the French statesman, was born in 1797, and died in 1877. He took up political literature in 1821, and assisted Carrel and Mignet in founding "The National"; and during the Revolution of 1830 his office was the hendquarters of the Revolutionists. In $\mathbf{8} 840$ he was head of the ministry for a few months, and after the Revolution of 1848 voted for the presidency of Louis Napoleon, but was banished in 1851. During the crisis of $1870-7 \mathrm{x}$ he showed himself to be the one really great man in France, and after the fall of Paris was made President. He had to draw up the treaty of peace, to suppress the Communist insurrection at the loss of Aisace and T.orraine, and to pay the indemnity.

THIRLWALL. BISHOP the listorin, was born in 1797. and brouglit out his great "History of Greece" between 1835 and 1840 . In the latter year he was made Bishop of $S_{t}$. David's, and was a menniber of the Old Testament Revision Comunittee. He died in 8875 . thikteen at Table. (See Numbers, Luckr. above.) This superstition is grossly illagical, though, of course, logic is powerless against nerves. If the average age of the company is $72 \frac{1}{2}$ years, then there Is a scientific probability that one of then will dle withln a year; if the nverago age is less than $72 \frac{1}{2}$,
there is no scientific probability at all. If the average age is 20 years, there must lee 129 people at dinner before there is any scientific probability of one of them dying within a ycar. At 30 years there must be Irg، it 40 years ro3, at 50 years 73, at 60 yeaars 35 , and at 70 years 17.
THIRTY YEARS' War lasted from 1618 to 1648 . It was at first a religious war, Austria and the Romanist princes of Germany being on one side and the Protestant powers and Jirance being on the other. Subsequently it lost its religious aspect, and became simply a struggle for ascendancy in Europe. The cause of it was that the Bohemian Protestants refused to be ruled by the Papist Ferdinand 11., and chose as their king Frederick, the Elector of the Palatinate. The chief actors were Maximilian of Bavaria, Wallen. stein of Friedland, Gustavus A dolphus of Sweden, and later Turenne and Condé. The war was concluded by the Peace of Westphalia.
THISTLE, THE SCOTTISH, has really no botanical type, but the "Cnicus Acantis" or stemless thistle is generally considered the national emblem in Scotland, Thomas a Kempis, or Thomas of Kempen, was born about 1330 , and retired to an Augustine monastery near Zwolle when he was twenty. The celebrated work, "The Initation of Christ," is probably his, but is sometimes attributed to Gerson, his contemporary.
THOMSON, JAMES, the Scottish poet, was born in ${ }^{1} 7^{\circ}$ So, and published his "'Winter" in 1726 , followed by, "'Sunmer" in 1727. "Spring" in $\mathbf{8 7 2 8}$, and "Autumn" in 1730. Anong his other works the most popular is the "Castle of Indolence." He, or his collaborator, Mallet, was the author of "Rule Britannia."
THOMSON, JOSEPH, the explorer, was born in 1858 , and in 1878 accompanied Keith Johnson to Central Africa. In 1882 he visited East Africa, and in 1884 Masai Land, Among his most graphic books are "Through Masai Land," "To the Central African Lakes," "Travels in the Atlas," etc.
Thomson, William, Lord Kelvin, was born in 1824, and was second wrangler and first Smith's prizeman at Cambridge in 1845. In 1846 he was appointed Professor of Natural Philosophy in the University of Glasgow. He has made most important contributions to our knowledge of electricity, mag. netism, and heat. He was knighted in 1866 for his services in connection with the Atlantic cable, and made a peer in 1892.
THOR, or THUNOR, the Scandinavian god of war, is still commemorated in 'Thursday ' (Thor's-day).
Thoreau, Henry David, the American philosopher, was born in 1817, and was for several years a schoolmaster. In $\times 845$ he built his hut near Walden Pond. Concord, and lived there as a hermit for two years. Besides his delightful "Walden" he "also wrote " A Week on the Concord and Nerrimac," and several other books which were not published till after his death. He was a friend of Emerson.
THORWALDSEN, BERTEL, the sculptor, was born in I770, and as a boy helped his father to cut figureheads in the royal dockyard at Copenhagen. He went to Rome in 1797, and studied the work of Canova and Carstens, and in 1803 he was commissioned by Sir Thomas Hope to execute a marble statue of Jason. His success was immediate and permanent. He was most successful in subjects from Greek mythology.
Three Estates of the Reald, as in France before the Revolution, are the Lords, the Clergy, and the Commons. The higher clergy entered the House of Lords, and so the lower clergy obtained the right to vote for members of the House of Commons. There is a theory that the tivo Houses are equal in authority, that the House of Lords, as a permanent and hereditary body, can check hasty or revolutionary impulses in the House of Commons; and this was so practically before 1832 , because the Peers controlled the great majority of elections to the Lower House. But since 1832 it has been obvious that the latter is the governing House, and that the Lords are neither able to resist, nor justified in resisting, a majority of the Commons when that majority representsa majority of the nation. And it
is precisely when the Commons are bent on making some great and sudden changes that the Lords have really least power.
THUCYDIDES, the great Greek listorian, was born near Athens in 47 I B.C. Ife was a prominent consnander in the D'eloponnesian War, but was exiled for alleged remissness in duty. As a historian lie was indefatigable in collecting facts, severe in sifting then, and very terse in recording them; and in the power of analyziug character and actions he has probably never been surpassed,
THUGS were religious robbers, who way-laid and assassinated any one who did not belong to their own caste and the sect of the goddess Kali. . The Indian Government took active measures against then in 183 I and 1835 , and they are practically extinct now.
THUNDER is simply the crackle of the lightning-spark, and corresponds exactly to the noise made in lighting a match; but, as sound travels so mucla slower than light, the flash and the crack only cone together when the storm is inmediately overhead. The crack from the end of a flash 6 miles long will be heard lialf a minute later than that from the beginning of it.
Thyrsus, among the ancient Grecks, was an ivywreathed wand, with a pine-cone at the top. It was sacred to Bacchus.
TIARA was originally the cap of the Persian kings, from whom it was borrowed by the Popes.
TIbERIUS CAESAR, the Roman emperor, was born in 42 B.C., and was adopted by Augustus as his heir. IIe was excellently served by his two royal generals, Germanicus and Drusus, but fell under the execrable influence of the incarnate fiend. Sejanus. He spent his last years in gluttony and solitude on the island of Capreoe.
TiDFE. The surface of the ocean rises and falls twice in every 'lunar' day, i.e. about 25 hours, and this rise and fall appears along a coast to be a 'horizontal' motion-ebbing and fowing. The movement of a tide-wave is quite different from that of a wind-wave (see WAVES below), for it affects the whole depth of the ocean equally, while even the most violent windwaves do not trouble the water at all at a depth of 50 feet. Every fortnight, i.e. after a new or a full moon, the tides rise much higher than in the alternate weeks after the first and last quarters of the moon; and these high tides are called Spring T., the low ones being called Neap. This shows that the moon's influence is much greater than the sun's. Of course, the whole attraction of the sun on the earth is enormously greater than that of the moon; but the moon is so much nearer to the earth that the difference between her attraction at its centre and on its surface is nearly three times as great as the difference of the sun's. And it is 'this difference' that causes the tides. Spring Tides are the result of both sun and moon pulling in the same direction, and Neap tides are the result of their pulling at right angles to each other.
TIECK, LUDWIG. the great writer, was born in 1773. and along with the Schlegels, Novalis, and Brentano, founded 'The Romantic School of Germany' in 1799 . He was a deep student of Shakespeare.
Tight ROPE ACROSS NIAGARA was 400 yards long, and Blondin inade his first crossing on June $30,1859$. The rope was only three inches thick, but cost over £ 1000 , being made entirely of hemp. In 1860 Blondin crossed it 'on stilts' in the presence of the Prince of Wales, and was photographed standing still in the middle. He also walked across in a sack, wheeled a barrow across, turned somersaults, cooked his dinner, and carried a man over on his back.
Tillotson. Archbishop, was born in 1630, and was for many years a Presbyterian preacher, but in 1652 he submitted to the Act of Uniformity, and was subsequently Dean of Canterbury and then of St. Paul's. During the suspension of Archbishop Sancroft he exercised the primate's jurisdiction, and became primate himself in 1691.
Tilly, COUNT OF, was one of the mos: famous generals of the 17 th century, and served through the Thirty Years' War till his death in 1632. His most celebrated exploit is the sack of Magdeburg.
Tilsit, PEACE Or, was concluded between Russia and Prussia and Napoleon in July; 1807.

Ttaber is either 'ommental' or 'commercial. ' Almost all the ornanental woods, except walnut and minte, conte from 'tropical " climates - mathogany from Hayti and llonduras, ebony from liast Africa, and rosewood troni lirazil. Some of the commercial woods conte also fron tropical clinates-teak from loarther India, kauri from New Zealand, eucalyptus from Atistralin, etc. Isut most of the ordinary timber of commerce comes from North Americi, Russin, anl Scandinivia, Russia and Canada being most important. The forests in Russia are of plne in moro northerly, and of oak and beech in the more central latitudes, and the clearings of the latter have been so richly manured for centuries with the fibre-mould of the fallen leaves that they raise immense quantities of such fibres as thax and hemp.
Canada owes most of her present prosperity to the timber of her eastern area, for the 'lumberers' were the best possible pioneers-making roads, bridging rivers, and clearing the land of 'lumber' for the farmers who were to follow them. The suitability of Enstern Canada for timber is due to its position between three large areas of water-the Great Lakes, Hudson Bay, and Gulf of St. Lawrence-from which there is grent evaporation. Thele is, however, practically no good condensing medium for rain, and therefore most of the moisture evaporated is precipitated, by the cold winds from the north, in the form of snow. This is a very great advantage to the timber tracle, for the snow can be beaten into excellent temporary roads, and of course in the unsettled parts of the country-where the supplies of timber are naturally largest-there are no other roads or means of transport at all. Nor is this all. For when the snow melts in the spring, the resulting floods carry the 'logs' down to the saw-mills.
The chief timber provinces are Ontario, Quebec, New Brunswick, and British Columbia, and the timber is of four chief kinds. Where the surface is flat and marshy cedar flourishes best, and the conditions under which it is grown make it very suitable for purposes involving constant exposure. The hemlock spruce gives very useful bark for tanning, and the combination of hemlock forests and pasture round Quebec and Fredericton has given rise to a large leather industry in both towns. Pine and maple are, however, the most valuable of all Canadian trees. The former is strong, light, and easy to work; the latter gives a large amount of sugar in March, has a very beautiful wood. and makes excellent fuel, even when apparently quite drained of its sugar. Ottawa, which stands in the middle of a huge region of white and red pine forests, is the centre of the whole timber trade of the Dominion; and it derives its mechanical power for the saw-mills from the fanous Chaudiere Falls. In British Columbia the Douglas fir grows to an enormous height, and grows slow enougl to have a good grain.

- Times. THE," is-in every thing exceptits price, 3 d ,the representative English political daily paper. It was first published in 1785 as "The Daily Universal Register," but was renamed in 1788 . The five editors down to the present time have been Dr. Stoddart, Thomas Barnes, J. T. Delane, Professor Cheney, and G. E. Buckle. The "Times Weekly Edition" (zd.) contains a summary of the whole week's news, on the lines of "Public Opinion" (2d.), which, however, draws from all sources and not merely from "The Times "itself. Palmer's "Index to "The Times" is very convenient.
TINDALI, WILLIAM, the martyr, was bom in 1484, and began the translation of the New Testament in London, finishing it after a visit to Luther, He grot it partly printed at Cologne, but had to flee from the town, and the complete work was printed at Worms. Practically all the copies that ever reached England were, with in few exceptions, scized and burned, but one perfect copy exists in the Blaptist Muscum in Bristol. In $\times 535$ he was strangled for heresy near Brussels,
Tintoretto, the painter, was born in 1578, and mado it his aim to unite the colouring of Titian with the tlrawing of Michaci Angelo.
-TIPYOO EAIB, the Sultan of Mysore, was hom in 1749,
and succeeded his father, Hycler All, in 1782 . Ho itbandoned the Cimatic in order to concentrate his forces ngainst the British on the Matabar Coast, aurl completely defented and murdered General Manhews at Berluore. Eventually he was shut up in Seringaipathm, mal compelled to make peace in 1792 ; hut, to escape paying the indennity and giving up his forfeited territory, he begran to intrigue with the Erench, and the East India Company at once declared war again, in which he wats killed.
Tips in Country Houses. Accorcling to Mr. G. W. Smalley, in the possibly prejudiced pares of "Harper," no question gives rise to more searching of hearts tham that of tips. To whom are you to give, and how much are you to give? Well, Americans have done something to spoil the market. They almost always give nore than the English, I have known a sovereign given for a Saturday to Monday visit. An Englishman would give half a crown or five shillings., A young guardsman who, unlike most guardsmen, is not rich, once told me that he gave two shillings for the first night, and at the rate of a shilling a night after the first, but never more than half a sovereign, "I don't mind giving them odd sums," he added. Another friend of much experience laid down the general rule that you give in proportion to your means, and that servants understand this. Whether they understand it or not is hardly to the point. If you try to adjust your gifts to the expectation of those who are to receive them, you will find it extremely expensive, and you will nevertheless fail in the end. It used to be, and to some extent still is, the custom to give to the butler or to the groom of the chambers-possibly to both. "I long since set my face against it," was the answer of an Englishman who visits constantly, and knows his way about as well as anybody. If you give, it will be accepted-you need have no fear on that point. Almost anything would be accepted. I havo seen a man of rank hand a butler, at the end of a long stay, half a crown, and the half-crown remained in the butler's hand. Something depends on the frequency of your visits at the sume house, and on whether a particular servant has done anything for you out of the nature of his service. If you have given trouble with telegrims and letters, you would naturally give a tip, and this would be to the groom of the chambers if there was one; if not, to the butler.

There is no hard-and-fast rule. A guest in this, as in other things, must keep his eyes open. He may always ask-not, of course, his host, who is supposed to be unaware of these things, but of his fellowguests. You may hear it discussed with freedom in the smoking-room, and all sorts of opinions expressed. There is, or was, in some houses a box in which guests are invited to deposit such largess as they choose to bestow on the domestics of the household. The contents of the box are divided among them according to some rule agreed on anong themselves. But this I relate on hearsay evidence. It is unusunl, and it involves the host in the matter in a way which few hosts like.

If you are not alone, the complications become more numerous, but the matter of gifts to housemaids and women servants in general is one with which only the feminiue mind is competent to grapple. Hero again, however, it is safe to say that English ladies, who seldom visit without a maid, give little; and that American ladies, whether they take a maid with them or not, give toomuch. An American lady has been heard to declare that a Saturday to Monday visit in the country at a great house cost her a fivepound note in fees. What she did with her fivepound note passes conjecture. Nor does it signify whether the house be great or small, except that the more servants the more numerous may be the opportunities of giving. No clains are made.
TITHES were established by Charlemague in those parts of the Roman Empire which were under his sway in $77^{8}$ A.D., dividing them into four parts(1) To mantain the edifice of the church; (2) for the poor; (3) for the bishop: (4) for the parochial clergy. 1'lueir payment was first Clecreed in England in 786,
but the first mention of them that can be found in statute law dates ouly from 1285 . The dilficulty of collecting tithes from Dissemters vell to the Tithe Commutation Act of 1836 , which has been further developed.
Titian, the great painter, was born in I477, and studied under (Giuvanai liellinit at Venice, whose unfinished pictures he completerl. llis " $\Lambda$ ssumption of the Virgin," painted at Venice in 1596, is said to be one of the finest pictures in the world. "The death of St. Peter," which was little, if at all, inferior to it, was unfortunately burnt in 1867. He died of the plague at the age of 99 , haviur painted up to the last. For general mastery of his art he has never been surpassed.
Titus, the Roman Emperor, was born in 40 A.D. He served under his father, Vespasin, before the latter became Emperor in 69. He took Jerusalem in 70 , and became Emperor nine years later. He was an enlightened and benevolent ruler.
TOADS are often thought to be poisonous, probably from Shakespeare's reference in "As You Like It" to
"The toad, ugly and venomous."
They have a very unpleasant odour, but they are not renomous. The word 'Jewel ' in the passage of Shakespeare referred to, might be their cyes, which are of remarkable beauty; but more probably Shakespeare held the superstitious belief that ' toad. stones' were antidotes against poison. These ' toadstones' are really formed of a bony substitute for tceth, of which the truc toad is destitute.
TOBACCO was in use among the red men at the time when America was discovered, and the practice of smoking was a kind of religious ceremony. It was first used in Europe in the form of snuff, but Drake and his companions introduced into England the practice of sinoking it on their return from Virginia in 1585 . Pope Urban VIII, and Pope Innocent IX. issued Bulls excommunicating any one who used snuff in Church, and in Turkey smoking was made a capital crime, while in Bern a prohibition of the use of tobacco was added to the commandment about adultery.
The best cigar tobacco comes from Cuba. There in the famous Vuelta-abajo district, west of Havana, the soil is a light sandy loam, very rich in lime, potash, and forest refuse; and as both the heat and the humidity are great, it is an ideal site for the tobacco plant. As the area is, however, strictly limited, it is physically impossible for half the 'Havana' cigars which are in the European market to have been grown in this district. So, too, gailons of wine are distilled into 'Cognac' which never came from Charente, millions of oranges are labelled 'Jaffa' and 'St. Alichael' which never grew in Palestine or the Azores; tons of 'Patna' rice hail from Bangkok or Rangoon, and hundreds of 'Kashmir' shawls are woven in Paisley, though some do stiil come from Srinagar.

At present the only important rival of Havana in the production of cigars is Manilla, though Borneo is coning into the market; but in regard to the total quantity of tobacco grown, the U.S.A. rival Cuba and the Philippine Islands combined, and British India is not very far behind the States. While the Indian tobacco is, however, of inferior quality and largely converted into Trichinopoli cheroots, the Virginian and Kentucky product is of excellent quality, and largely converted into pipe and cigarette tobacco. Louisville, the Kentucky centre, though not so well known as Richmond, the Virginian centre, is the largest tobacco market ' on earth.
TOBIT, BOOK OF, is rejected from the Old Testament by Jews and Protestants, but accepted by the Church of Rome.
TODDY ought really to be applied only to the juice of certain palms, which is very cool and sweet when fresh, but beconses very intoxicating if allowed to stand for 10 or 12 hours.
TODHUNTER, ISAAC. the mathematician, was born in 1820, and was Senior Wrangler at Cambridge. He wrote a whole series of good and popular text books, which, however, have now been superseded.

TOGA was the clitef outer garinent of the Roman citizen, aud was originally worn by both sexes, thouglo alterwards luatrons asfopted the stola. The togut virilis was assuned by boys when they reached the age of fonrteen. The toga was made of wool, and was generally white in colour, but different shades of colour, dillerent finconess of wool, ind ormanents were adopted to indicate difierences of rank.
TOLERATION, RELIGIOUS, is a doctrinemore preached than practised by individual Christians, though the country and all scientific thinkers practise it without any preaching. It had its rise in the 16th century, when Protestants were in a minority in Europe, and were therefore reduced to argue in favour of tolera. tion. In early times no one disputed the rizht of the State to impose its religion, i.e. the religion of its ruler, on all subjects. No one now inmagines that the State can compel its subjects to be religious, or even to belong nominally to any particular religious body, though in England and Scotland it does still acknowledge a particular body as the National Church of the particular country. This can be defended on grounds of expediency, and has a certain historic interest and value, and the attacks on the Established Churches are mainly dictated by envy of their social position and lust for their wealth. It is entirely a matter of political and social equality, and nothing to do with creeds. And it is a very great pity that the creeds of the non-established and rival churches were often drawn up during times of passionate controversy.
TOLSTOI, COUNT LYOF Nikolaivitch, the great novelist, was born in 1828. He entered the army and served through the Crimean War, and it was his vivid descriptions of the siege of Sebastopol that first started his literary reputation. His "War and Peace" is regarded in Russia as his greatest work, and it is certainly a wonderful picture of the year 1812; but his most popular work in England is his " Anna Karenina." His smaller books are concerned almost entirely with education and religion, and it is on them that his influence mainly rests-e.g. "Christ's Christianity," " My Religion," "Kingdom of God within Us," etc.
Tomato is a native of South America, and is the Love-Apple.
TONE is the sound produced by the vibration of a string or some other sonorous body, and nearly every 'musical sound' consists of several simultaneous tones of different rates of vibration.
TONE, WOLFE, was born in 1763, and was called to the English Bar in 1798. He was a warm sympathizer with the doctrines, if not with the practices, of the French Revolutionists, and founded the Society of United Irishmen in 179r. He was detected in treasonable intrigue with France, and had to flee to U.S.A., from which he went to France, and becanse brigadier in Hoche's projected invasion of Ireland. He was eventually captured on board a French ship, and sentenced to death, but committed suicide.
TONGUE is much more sensitive at the top and along the edges than in the centre. Tise necessary conditions for 'taste' are-( r ) The solution of the substance to be tasted, (2) the presence of a gustatory nerve, and (3) a moist surface to the tonguc.
TONIC SOL-FAH SYSTEM was popularized by the Rev. John Curwen, who obtained the leading features of the system from Miss Glover of Norwich. The principle is that, as key is much more important than pitch, it should be greatly emphasized by always naming the 'tone ' or key note 'Doh,' no natter what the absolute pitch is. The whole scale runs-Doh, Ray, Me, Fah, Sol, Lah, Te, Doh.
TONNAGE used to signify the number of tons weight which a ship conld carry safely, but it is now used of the vessel's dimensions for the standard of tolls, etc. It is estimated ronghly that 40 cubic feet constitute one ton, and allowance is made on steamers for engineroon, boilers, coal-bunkers, ctc.
TUNNAGE AND POUNDAGE were duties formerly imposed in England on every 'tun' of wine imported, and on every 'ponnd ' of merchandise intported or exported. The poundago was an ad valorem duty
of a shalling in the poumd. 'Hey were abolished in 1787.
TUNSURE ls the shaved patch on tho lieads of Creek and Romish priests, and is a relic of the cearly custom of delication to religion by external symbol.
TONTINE SYSTEM took its name from its inventor, Tonti, an Italian of the 17th century.
TOOKE, IlORNE, was born in $1730^{\circ}$. He was for a time a close friend of Wilke's, and a vigorous opponent of Junius.
TOOLE, J. L., the comedian, was born in 1833, and made his first appearance at the Haymarket I heatre in 1852 . In 1888 he published his " Reminiscences." Ile is one of the nost popular actors on the stage, and is really successful as 'Caleb Plummer.
TOP.SPCNNING, UPRIGIIT, is kept in that position by the combination of two furces-(i) Gravitation, which pulls it downwards to the earth; and (a) centrifugal furce, which pulls it horizottally in all directions at once. As soon as the speed becomes too slow to resist the gravitation, the vertical position is lost; but while the speed is great enough to resist the gravitation, the puce is about 'a mile a minute.' The motions of the planets are controlled by precisely the same laws.
TOKNADOES are violent cyclonic storms which occur in the West Indies, the Indian Ocean, and the South Atlantic. They are short and quite local, but very severe while tbey last, being accompanied by terrific thunderstorms.
TORPEDOES are either offensive, i.e. movable, or defensive, i.e. fixed in subunarine mincs. Of the offensive there are several kinds. The best-known is the Whitchead 'locomotive' or 'fish' torpedo, which is from 14 to 19 feet long, and from 14 to 16 inches in clianeter. It is made of steel, and carries the charge in its head, the engines to propel it in the centre, and the compressed air to work the engines in the tail. Numerous modifications of this general plan have been adopted by different nations. (See FLEET alove.)
[rank by the ancient Britons.
TORQUE was the stiff gold collar worn as a symbol of
TORRES VEDRAS, LINES OF, were about 24 miles north- ve est of Lisbon, and consisted of two lines of furtifications, the outer being 29 and the inner being 24 miles in length. They were constructed by Wellington in asio.
Torso is an Italian art term for the trunk of a statue of which the head and extremities are lacking. The minst famous is the Torso of Hercules in the Belvidere at Rome.
TORTOISES, though excellent swimmers, are really lind animals, and are strict vegetarians. They live to a very great age, and hibemate through the cold scason. (See TURTLE below.)
TORTURE used to be common in all the European countries, and was carried to a fine pitch of perfection by the IHoly Order of Jesus in the Ronish Church. It was employed as late as the earlier part of the 17 th century in England, and the latter half of the 17th century in Scotland, but has never been recognized by the cominon law of the land.
TOKY is an Irish word for a 'bog-runner,' and was originally applied to the Romish outlaws in Ircland, and then to all Jacobites. The word came to be used as a political badge in the 18th century, and has been revived in connection with the ToryDemocracy of recent tines. Toryism, in its strict nleaning, is now a sentiment rather than a belicf: but in its new meaning it is a synonyn for Imperialism. Tories proper believed that the Monarchy, the Aristocracy, and the Church were divincly appointed; they took a very high view of the moral responsibilities of authority, but relied more on the loyalty than on the judgment of the people. The transition from Toryism to Conservatism was guided by Sir Robert Peel.
TOTEMS are rude pictures of natural objects nised by the Ked Men as syntbols of tribes and fanilies.
TOUCH, SENSE OF, is in the skin, and is most sensitive in the tip of the tongue and the tips of the fingers.
TouCliwoon is simply ordinary wood converted hy the action of fuugi luto a soft, white pulp, which wilt suoulder for a long time when once lit.

TOURGUENIEIFI?, IVAN, the Russian novehist, was bora ln 1818, and died in France in 1883 . In 1842 he was lanished from an oflicial post to his paternal estate in consequence of an article which he had written. Ilis first important book was "The Experiences of a Sportsmanl", which was followed by a number of tales and dramas. Ifis earliest novels were "Liza" (1859) and "On the Five" (8859), and "Fathers and Sons" appeared in 186 .
TOURISTS KILLED IN THE ALPS number about 24 a year, out of a total of about one million visitors, for whom 1000 inns have becn built, about 300 of them being at least 3400 feet above the sea.
TOURNAMENTS reached their full perfection in France in the gth and roth centuries, and were introduced into England by the Normans. 'Jousts' were single combats between two knights at a tournament, and the 'Lists' Fere only the place of combat. They died out cluring the 1 th century.
TOUSSAINT-L'UUVERTURE, Toussaint, 'the maker of the breach, the negro statesman, began life as a slave in Hayti; but he showed such military skill atter the insurrection of 1791, that the French appoin. ted him to be Commander-in-Chief of the Troops in San Domingo. He eventually became President of the Hayti Republic, and governed so well that commerce and agriculture began to make great progress. Napoleon became jealous of him, and sent an expedi. tion which took him prisomer, and he died in a French prison in 1803.
TOWNSHEND. VISCOUNT, the statesman, was born in 1674, and entered public life as a Tory, but soon after became a disciple of Lord Somers. He was jointplenipotentiary with the Duke of Marlborough at the Hague, and was Secretary of State to George I., and for a time the real leader of the Whigs, with his brother-in-law, Walpole, as Chancellor of the Ex. chequer. The latter, however, soon overshadowed him, and he withdrew into private life. He introduced the turnip into Norfolk, and greatly improved the system of agriculture, especially in reference to the rotation of crops. If is grandson, Charles. was the wit and orator of the Chatham ministry of 1766.
TOYNBEE, ARNOLD, was born $\ln$ 18j2, and intended to enter the army, but changed his mind, and went to Oxford, where he becane a proninent figure amongst a devoted circle of students of economics and social questions generally. In 1875 he took up his residence in Comnercial Road, Whitechapel, and devoted the rest of his short life to helping the poor by living amongst them. His health gave way under the strain of the moral and social surroundings, and he died in 1883 , but the inspiration of his example led to the founding of Toynbee Hall. A number of his lectures and addresses were published in 1884 under the title of "The Industrial Revolution"; and in 1885 the Toynbee Hall Honse was organized under the direction of his former colleague, Rev. S. A. Barnett. It partakes of the nature of both a college and a club, and is carried on by University men from Oxford and Cambridge.
TOUS, WOODEN, are manufactured in the greatest numbers at Niirnberg, a town about the size of Cardiff or Oldhan. It commands the southern part of the Maine Valley, as Frankfort cloes the northern part, and it utilizes the surronnding forests and the graphite of Passan in its famous toy and pencil factories. It was led to specialize in this kind of trade because it is too far from water-transport to make 'heavy' goods.
TRACTARIAN MOVEMENT was the "movement at Oxford, headed by Dr. Pusey (q.v.). Newman, and Keble, which produced the "Ninety Oxford Tracts."
TRADE, BUARDOF, consists of numerousdistinguished nonentities ex-offin, but the real work is done by the President (Mr. Richie), a Parliancntary Secretary (Earl Dudley), a Permanent Secretary (Sir Courtenay Boyle), and six Assistant Secretaries. It controls, by its six departments, harbours, mercantile marine, finance, commerce, railways, and fisleries.
TKADE MARKS, by the Act of 1883 , require to be registered for 'exclusive use," and remuin then in force for fonrteen years, when they can be renewed
on payment of certain fees. In 1887 the Merchandise Mark Act was passed, and further developed by Acts in 189r and 1894. They were intended to protect home-made goods from cheap imitations, and since the Ciernian Emperor sent his foolish telegram to President Kruger they liave further been a means of itlentifying-for rejection-German goods.
Trade statistics cannot be given for home industries with very few exceptions, as firms naturally do not care to publish their own secrets. Our imports in 1895.96 were valued at about $432 \frac{1}{2}$ million pounds, October being the busiest month, and August the slackest. The exports for the same time were valued at about 240 millions, January being the busiest month, and April the slackest. Some of the items are very significant. For instance, the supply of foreign and colonial ' butter' is increasing enornously, owing to its uniform excellence and low price, while the supply of home butter has positively clecreased; in 1888 we consumed, per head of population, about 5 x -5th lbs. of home and 5 lbs. of foreign, white in 1895 it was $4 \frac{1}{2}$ lbs. of home, ilb. of colonial, and 7 lbs of foreign. For 'coal ' France is our best custonter, and with Gernany and Italy takes lialf our total export. For 'cotton Germany is much our best customer, Holland being second, and Japan third, except for piece goods, for which India and China are much our best customers. We take about one-third of the total American crop. The 'iron ' and 'stcel ' output for the first six months of 1896 was a ' record,' nost advance being made in South A frica, Australasia, and India-and Japan for railway material. Our 'tea' comes now almost entirely from India and Ceylon, the China product having gone completely out of favour, mainly owing to these facts-(x) It costs more, having to bear a very heavy land-tax; (2) it is more adulterated; (3) it has a longer sea-voyage. which affects its quality.
Trade UNions are the lineal descendants of the old craft guilds, which were practically suppressed in the time of Henry VIII., but the ordinances of which were preserved here and there by specinal charters, e.g. in Exeter and Norwich, or by special conditions, e.g. Berwick-on-Tweed. In the carlier history of Trade Unions, they were regircled as supporters of industrial monopoly, and therefore 'Combination Laws' were passed to suppress or repress them. This policy was dropped about 1825, and they were recognized but not protected by law; and in 1871 they obtained permanent legal protection.
They are essentially voluntary associations of workmen for mutual protection and help in improving the conditions of their labour. This means specially the raising of wages, the reducing of hours, and the general regulation of work. The constitution of the Unions is democratic, the contribution varies from 2d. to 15. a week, and the benefits vary from strike pay and funeral allowances up to extremely valuable provident benefits.' The latter are not very widespread as yet, but in the last forty years 13 societies have paid seven and a half million pounds sterling in PROVIDENT BENEFIT, while the total STRILE PAY by the same 13 societies during the same forty years was less than five hundred thousand pounds. These figures are enormously significant, and should be carefully noted by the numerous rash ignoramuses who babble across dinner tables about strikes and Trade Unious, for it is these very 13 societies who have secured and maintained the highest rate of wages, the shortest hours, and the best conditions of work.

The cconomic and moral effect of these huge 'benefit clubs' is enormous; 'sweating' is made impossible, old age is provided for, strikes are replaced by arbitration-just because the Unions are strong. The Miners' Federation has 155,000 members, the Amalgamated Society of Engineers and the Northern Counties Association of Weavers have about 84,000 apiece, and there are half-a-dozen other socicties with a nembership of over 40,000 .
Trades injurious to Teeth are specially those connected with mercury, chloride of lime (for bleaching, etc.), phospliorus (for matches, etc.), soda, etc. TRAFALGAR, BATTLE OF, was fought on October 2I, 1805, against the combined fleets of France and

Spaln, under the French admlral Villeneuve. The British Filect consisted of 27 sail of the line, 4 frigates, I Schooner, and I cutter, while the combined FrancoSpanish Fleet consisted of 33 sail of the line, 5 frigates, ind 2 brigs. Villeneuve formed his ncet in a double line in close order, and Nelson attacked in two lines, Collingwood leading the first. He ran his own vessel, the famous "Victory," on the "Redoubtable" with the intention of breaking the line, and soon forced lier to strike her colours, but not before Nelson had been mortally wounded by the nutsket fire from her tops. He lived long enought to know that 20 of the enemy's ships had struck, while he liad only lost 1587 men.
TRAJAN, the Roman emperor, was born about 56 A.D. and gained such distinction in the Parthian and German wars that he was adopted by Nerva as his collcague and successor. He became sole emperor in 98 , and in zor led forth his legions to battle in person-the first emperor who had cver done so-and converted Dacia, Armenia, and Mesopotamia into Roman provinces. He died in II7.
TRAMWAYS were used in quarries and collicries at a very early date, but always of woed till 1738 , when an iron 'plateway' was laid down at Whitehaven, but for some time the flange was put on to the rail instead of on the wheel. In 1789 the flange wis changed to the wheel, and the track assumed its present forn more or less. In 1801 a tramway 28 miles long was constructed in South Wales, but the spread of railways drew public attention away from the tramways, The Fourth Avenue Tramway in New York was started in 1831, and Philadelphia and Boston soon followed suit. There are now at least 12,000 miles of tramways in U.S.A., a great deal of it worked by electricity.

The reintroduction of tramways in Britain was in 1858, but was a failure because of the obstacles to commerce and ordinary traffic owing to the absurd shape and construction of the rails. The removal of toll-bars, however, gave a fresh impulse to tramway construction in London, and about 1870 the leading tramway companies were incorporated. The relative cost of the three great methods of traction are shown below, but the superior speed of the cable and electric systems must be taken into account. Taking the horse-car as the unit, the relative results of expenses per car-mile are about 11 for electric, 15 for cable, and 24 for horse; and the investments per mile of street are 1 for horse, $1 \%$ for electric, and $10 \% / 5$ for cable.
TRANCE is distinguished from normal sleep in (1) duration, (2) insensibility to external impressions, (3) following excitement rather than fatigue. It is a species of hysteria.
TRANSCENDENTALISM, in ordinary phraseology, is whatever is abstruse, speculative, and fantastic in philosophy; but it has a scientific application of its own to conceptions of transcendent universality, e.g. ' Being.
Transmigration of Solils, otherwise known as Metempsychosis, was belief deeply rooted in primitive and ancient philosophy, and is widely spread still amongst Brahmans and Buddhists, and is practically involved in the Christian doctrine of the Resurrection of the Body.
TRANSMISSION OF POWER exists, of course, in all sorts of belting, but the phrase is generally used of electric power over long distances. The city of Frankfort was lit from the Falls of the Neckar during the exhibition of 189 x -over a distance of 108 miles, which established the possibility of transmitting electricity over a long distance without a great waste of power. Niagara is already being used to supply, Buffalo with sufficient power to run more than half the machinery in the town, including mills and strectcars, and yet only about $x-800$ th of the possible power is being used. Probably before long all the cities within a radius of 100 miles will be supplied from Niagara, and the barges on all the canals for a much greater distance.
TRANSPORT. One reason for the collection of pcople in towns is to obtain casy transport for their goods, because there is nearly always direct communication
between towns, which saves the expensive transshipment of goods. This communication is either by water or by land, and, as the former is much the cheaper, every effort is made to obtain It. If this is done by cands, as In the case of the Manchester Ship Canal, there are dues to pay; but, as the water bears the great proportion of the welght, haulage is much cheapened. A horse that can draw only one toll onl a road can draw forty tons in a barge.
TKANSUBSTANTIATION is the Romish doctrine that the bread and the wine in Holy Communion do actually become the body and the blood of Christ, and is a very old doctrine, but the term 1 tself is of much later invention-probably about 1215 A.D. The Greek Church holds the same belief.
TRANSVAAL is about the same size as the United Kingdom, and has a population of about 800,000 , of whom about $:=0,000$ are whites. The relations of the Kepublic to Britain were hid down by the Convention of London in 1884-to the effect that, while independent with regard to lts internal administration, the Stato could conclude no treaty or political engagement of any kind with any other nation or tribe except the Orange Free State without the approval of Her Majesty the Queen. The Witwatersranil gold was discovered in 1886, and Johannesburg has now a population of over 170,000 . The Republic is ruled by a president elected for five years, with a council of five members; and legislation is carried out by a Parliament of two cliambers, each of twenty four members, called the first and second Volksraad. Bills passed by the second chamber must be approved by the first before they can become law. The members of the first chamber are elected by all male whites who were resident in the Transvaal before $187^{6}$, or who fought in the war of 1881; and the privilege of voting has been extended to the children of such. The members of the second chamber are elected by naturalized aliens, and naturalization can be obtained after two years'residence in the country. The humiliation of Majuba Hill was due to the stupid exaction of a petty tax by military martinets. The Convention of 1880 gave the Boers republican rights under certain restrictions, which were further modified by the Convention of 1884
TRAPPISTS, the religious order, took its name from the narrow valley of La Trappe, in which it was founded in the middle of the iath century. It was reorganized in 1662 under rules of extraordinary severity.
TREAD-WHEEL was practically invented by Sir W. Cubitt in 1818, and every male adult prisoner who has been sentenced to 'hard labour 'has to be employed on the T.W. or other similar bodily labour for at least one month of his imprisonment. The steps are about $7 \frac{1}{2}$ inches apart, and 32 are taken a minute for 15 minutes, and the power is now utilized for grin ling corn, pumping water, etc. The total time of tie labour is six hours a day, in two periods of three hours each, and five minutes' rest is allowed at the end of every fifteen minutes.
TREASURE.TROVE, according to Roman law, belonged to the finder if he found it in his own land : if he found it in some one else's land, half went to the finder and half to the landowner. In English law, wherever found, it belongs to the Crown, and to con' ceal it is punishable by fine and imprisonment. In 1886 the Home Uffice decided to allow finders to retain anything not wanted for a national institution, subject to a deduction of ro per cent. If the article is wanted it will be paid for at 20 per cent. less than its antiquarian value.
TKEBELLI, ZELIA, the opera-singer, was born in 1838 , and made her dehut in 8859 . Fler first ippearance in fondon was in 1862 , and she became the greatest mezzo-soprano of her day. She was equally great in the concert-room and on the stage. She died in 1892.

Tree's Ileight from its Shadow. Set a stick quite upright in the ground so that its shadow falls beside the shadow of the tree; then, as the length of the stick's sliadow to the stick's lieight, so is the length of the tree's shadow to the tree's height. That is to say, multiply the lengeth of the tree's
shatlow by the height of the stick, and divide the result by the lengtli of the stick's shadew,
TEELAWNEY, EDWARD, the adventurous Coruishnan, whose nane is linked with the names of Shelley and Byron, was born in 5792 and entered the navy whenl he was in. Ilarsh treatnent made him desert, and le lived a lifs of desperation in the Indian and Malay seas. Ile eventually died in England in I88ı, and his itocly was cremated, and the ashes were cnrried to Italy and buried beside the aslies of Shelley and Keats. He was the original of the old Arctic voyager in Millais's "The NorthWest Passage.
TRENCH, AKCFImISHOP, was born in 1807 , and died in 1886. He becane Professor nf Theology it King's College, London in $\mathbf{~} 846$, and Dean of Westminster in 1856, and fually Archlishop of Dublin in 1864. Ile was a very popular writer both on theological and onl philological suhjects. His "Notes on the Parables "appeared in r841, "Notes on the Miracles" in 1846, and the "Study of Words" in 1851. Ile resigned his archbishopric in 1884 from ill health.
TRENT, COUNCIL OF, net in 1545 at Trent, in the Austrian Tyrol; but the wars in Germany caused it to be adjourned to Bologna in 1546. It was convoked again at Trent in 155x, but dispersed on the approach of the Lutherans. It was convoked a third time in 1560, and finished its labours in 1563. Its decrees are embodied in what is known as the Creed of Pius IV.
TKEPANG is an unsightly sea slug or 'sea cucumber,' otherwise known as beche de-mer. It is caught in the tropical waters off the Indian and Australian coastsby wading over mud banks at low water and groping in the sand with your bare toes I It is considered such a delicacy in the Celestial soup-kitchon that it brings the Macassar importers as much as £Ioo a ton.
TREVELYAN, SIR GEORGE, was born in 1838, a nepliew of Lord Macaulay, and entered Parliament in 1865 , becoming Lord of the Admiralty in 1869, and Secretary to the Admiralty in 1880. In 1882 he was appointed Chief Secretary for Ircland, and in 1885 Secretary for Scotland. Ife published the "Life and Letters of Lord Macaulay" in 1876.
TREVES, THE HOLY COAT OF, is kept in the Cathedral of St. Peter and St. Helena, and is said to have been taken to Treves by the Empress Helena. It is first referred to, as far as we know, in rio6 by an anonymous monk, and did not become a profitable investment till 1512. It is said to be a seamless coat, 'consisting of connected fragmentary particles of material." It was visited by nearly 2,000,000 pilgrims in the year of grace 189I; and we may hope that the pilgrims examined the really historic relics of the Roman occupation of the Moselle Valley which abound in and near the town.
TREVITHICK, RICHARD, the engineer, was born-in ${ }^{1771}$, the son of a Cornish anining engineer. Among his inventions were an improved punp, a high-pressure steamengine, and a road locomotive. The iclea of the latter was afterwards adopted and developed by Stephenson.
TRIBE. Tribal sentiment is the main origin of all customs, for primitive communities regard their nembers as one family, For instance, the Jews were all 'children of Israel, though many of them were not descendants of Jacob. The existenco of a primitive tribe depends on their abllity to form a body of customs strong enough ( $I$ ) to keep the come munity together, and (2) to protect it. As life became more settled, society passed from a tribal to a local claracter, and the common home became moro important than the common blood.
Tricolor is the three-coloured fag of France-blue, white, and red in equal vertical sections, the blue being next to the flag-staff.
TRICYCLES were invented about 1878 , and therefore they were mercly an adaptation of the bicycle for nervous perfomers or persons who wished to carry luggage.
TRILOGY is a Greek term for a series of three dramas in a connected story, but each complete in itself,
Trinity College, CAMBRIDGE, was founded by Henry VIII, in 1546, and has a wonderful list of
famous alumni, from Bacon and Newton down to Macaulay and Tennyson.
TRINITY, DOCTKINE OF rrHE, is not found in the Ond Testament, and the word "Trinity' does not occur in the New Testament.
Trinity house, or the Corporation of the Elder Brethren of the Holy and Undivided Trinity, was founded in 1518 by Sir Thomas Spert to promote commerce and navigation. They examine naval pupils in Christ's Hospital and the masters of Queen's ships, appoint Thames pilots, erect lighthouses, etc.
Tril'le Alliance has been the name of several political combinations in Europe. The most important were the alliance of Britain, Sweden, aud Holland against Louis XIV. in 1668, and that of Britain, France, and Holland against Spain in 1771, the year of Cardinal Alberon's greatest influence.
Trireme was the comnion war-ship in the Mediterranean during classical times, and took its name from its triple row of oars, though it had a large square sail.
Tritons, in Greek myth, were sea-gods with bodies half fish and half man. They are always represented with shell-trumpets.
TRIUMPH AT ROME was a magrificent procession granted by the semate to a victorious general, who entered the city in a four-horsed chariot, crowned with laurel, and preceded by his captives and spoil, and drove along the Sacred Road up to the Temple of Jupiter on the Capitol, where a bull was sacrificed.
TRIUMVIRATE, or 'union of three men,' was a private league between Pompey, Crassus, and Caesar, in 59 B.C., to carry out their own plans; and the term was also applied to a similar league between Augustus, Mark Antony, and Lepidus, in 43 B.C. The word has been used of similar combinations in modern history.
TKOGLODYTES, or 'CAVE-DwELLERS,' was the name given by the ancient Greeks to uncivilized tribes who lived in natural or artificial caves; and it is practically certain that in prehistoric days the primitive peoples of Europe did live in caves.
TROLLOPE, ANTHONY, the novelist, was born in 1815, and died in 1882. In 1841 he was appointed clerk to a Post Office surveyor, and thus acquired material for his early novels-" The Macdermots of Ballycloran " and "The Kellys and the O'Kellys," both of which were dead failures. His first success was "The Warden" in 1855, and "Barchester Towers" appeared in 1857, and "The Last Chronicle of Basset " in 1867.
TROUBADOURS were early poets in Provence, and were the inventors or adaptors of a species of lyric poetry which was devoted to stories of romantic gallantry, and which was very intricate in metre. They flourished from the ixth to the rith century, and spread from the south of France to the north of Italy, and to Catalonia and Aragon. Many of them were knights, and some of them seem to lave been women. (See TROUVERE below.)
Trout Fishing is productive of some very strange yarns, but there is perfectly trustworthy evidence that a trout of 25 lbs . weight was caught at Salisbury, and that one of 29 lbs . weight was caught in Loch Stenness. North American linke trout reach as much as 60 lbs., but they are generally remarkably poor sport and worse eating. The trout is really simply a species of salmon.
Trouvere was the name given in the north of France to correspond inore or less to the southern ' Troubadour' $(q, v$.$) , but there was considerable difference$ between the two, for the Trouverres produced work more of the epic and narrative character, while the softer southerns wrote amatory lyrics.
Troy was the home of Priam and Paris, to which the latter carried off Helen from Sparta. In 1870 Dr. Schliemann brought to light the actual stone walls of Troy, or at all events of a very ancient city which stood on the site of Troy as descrlbed by Homer in the " Iliad."
TRUCK SYSTEM was the abominable practice of paying the wages of workmen in goods instead of in money.

- The goods •ere generally either very bad or priced at absurdl; exorbitant rates. Theso evils were largely
abolished by an Act of 1833 , which was amended in 1887, and again in 1896.
TRUYFLES are a species of subterrancous fungus, and vary in size consiclerably, being sometimes tound as large as a cricket ball. They are hunted for by dogs or pigs trained to find them by scent and to scratcl them up. They grow abundantly in parts of England, Italy, Irance, ctc., but cannot be cultivated. The best English T. come from the chalk downs of Wiltshire and Hampshire.
TSETSE FLY is about half an inch long, and affects horses, cattle, dogs, and other animals in tropical countries, but mainly in Central Africa. It lias disappeared in other ylaces with the disappearance of big game, from which it seems to carry the poison in the shape of a tiny parasite; and, as the big game is shot off in Africa, the T. F. will probably disappear too.
TUILeries, PaLace or The, was begun by Catharine de Medici in 1564 . It was burned by the Communists in 1871 , and the remnants of it were removed in 1883 . Gardens now occupy the site.
TUlip MANIA was in the 17 th century, when the price of tulips in Holland was above that of gold and silver, £ 460 having been paid for a single bulb.
TUlloch, Principal, was born in r823, and died in 1886, after holding the principalship of St. Mary's College, St. Andrews, for 32 years. He was an influential leader in the Scotch Church, and a voluminous writer.
TUMULI are artificial nounds of earth or stone raised over a grave.
TUNDRAS are the frozen marshes that extend over the north of Russia and Siberia. They produce enough moss and lichen to support reindeer.
TUNNELS, The Longest, in the world are those through the Alps. The St. Gothard is of miles, and the Mit. Cenis is $7 \frac{1}{2}$ miles. The Hoosac Tunnel, U.S.A., is only $4{ }^{3}$ miles.
TUPPER, MARTIN, the verse-monger, was born in 1810, and began to publish his "Proverbial Philosophy" in 1838 , and such is the obtuseness and gullibility of a section of the British public, that his production brought him and his publisher about £ro,000 apiece.
TURBANS consist of two parts-a cap which fits tight to the head, and a shawl of cotton or linen wound round the cap and draped on to the neck.
TURBINE is a kind of horizontal water-wheel which is made to revolve by the escape below it of water falling from above.
TURENNE, MARSHAL, was born in 3611 at Sedan, and learned the art of war under his uncles, Maurice and Henri of Nassau. He commanded the arny of the Rhine from 1643 to the end of the Thirty Years' War, his greatest victory being at Nördlingen. His sictories during the disturbances of the Fronde led to the termination of the Civil War, and in $\mathbf{1 6 7 4 . 7 5}$ he conducted a brilliant campaign against Austria, winning the great battles of Mühthausen and Türkhein, but he was killed the same year.
TURGOT, the great statesman and financier, was born in 1727, and in 1761 was made Intendant of Limoges, where he made a conscientious and brilliant effort to innprove the country, and to rule with justice. Louis XVI. appointed hin Comptroller-General of Finance, and he at once entered on a great scheme of reform, especially trying to distribute nore fairly the burden of taxation, from which the privileged classes were practically exempt. He also established free trade in grain throughout the kingdom. But all those whose selfish interests were thus imperilled combined against him, and Louis was too weak to resist such pressure. Turgot was dismissed in 1776, and France drifted rapidly into the catacly sm of 1789 .
TURKEy, SULTAN OF. (See Abd-UL-HAMID 'THE DAMNED' above.)
TURKEYS were originally natives, not of Turkey or any country belonging to Turks, but of North America. They were introduced into Europe by a lioutenant of Sebastian Cabot's in the 16th century;
TURNER, J. M. W., the great painter, was born in 1775, and died in 1851. His father was a hair-dresser, and wanted his son to enter the same trade. In 2789
the boy entered the Royal Acadenty ats a student. and in 1797 he was elected an associate, and in 1802 an academician. For half a century, from 1790 to 1840, he produced an extriordinary succession of great pictures, which won him the reputation of heing the greatest painter of landscapes that has ever been known. He worked in threc styles. His early pictures, such as the "Garden of the Hesperides" and the "Sun Kising in Mist." resemble the work of Wilson and the Poussins. His second period produced pictures on the model of Claude's, such as the "blorning of the Chase, " and "Crossing the Brook." 1 lis third period was characterized only by minute and patient study of nature, and produced such immortal pictures as the "Bay of Baine," and "Childe Harold's Pilgrimage". After painting the "Fighting Temeraire "in 1839, his skill quite declined. By his will he left all his pictures to the nation, on condition of a suitable building heing erected for them within ten years, and they have been hung in part of National Gallery.
TURQUOISE. The real or Oriental turquoise is only found in mountainous parts of Persia, and owes its name to the fact that it was introduced into Europe via "Turkey.
TURTLE is a species of tortoise, and is found in all the seas of tropical or semi-tropical latitudes, but the 'soup' is made of the 'green 'turtle, which is from six to seven feet long and weighs from fifty to sixty stone. It is most abundant round the Island of Ascension. The 'tortoise-shell' of commerce is from the 'hawk's-hill 'turtle.
TWFED is really 'twilled ' cloth, and has nothing to do with the river 'Tweed,' though a great deal of Scotch 'tweed' is made in the basin of that river.
TWELFTH-NIGHT is the night of the twelfth day after Christmas, which corresponds to the Protestant festival of the Epiphany.
TWILIGHT is the 'reflection' of sualight from the higher levels of the atmosphere which are still lit by the sun after it has become invisible from ordinary lesels. Eren when the sun is in the zenith of a cloudless sky. 'one-fiftl' of the light on any given area of the earth's surface is reflected from other parts of the sky than that through which the beams reach directly to that area. When the sun is just above the horizon, more than two-thirds of the total light is thus reflected; and when the sun has sunk below the horizon, all the light comes in this way. The duration of twilight, however, varies greatlyfrom practically nothing at the Equator to continuous 'light' in the land of the 'Midnight Sun.'
TYLER, WAT, the leader of the rehellion of 138 s against the poll-tax, was an old soldier who had served in the French wars.
TYPEWRITEKS were invented about 1866 , the first important one being the Remington, invented hy C. L. Sholes of Milwaukee, U.S.A. In some kinds, e.g. the Remington, Hammond, English, etc., there is not a key for every character, unusual characters having special knobs; but in others, e.g. the Yost. Smith Premier, and Caligraph, there is a separate key for every character that the machine can write. The important points are-(1) Bringing the type into position, the Remington, Yost, Caligraph, etc., having it at the end of hars arranged circularly, and the Hammond, etc., having it on a wheel ; (2) inking it, by pad, as in the Yost, or by ribbon, as in the Smith Premier; (3) impressing it ; and (4) spacing the lines and letters.
There have been many curious and beautiful machines constructed from time to time to the order of various people, or for presentation. Perhaps the most elaborate typewriter ever produced was that made for the Czarina of Russia, by the Remington people. All parts of the machine ordinarily black were enamelled blue, and those portions of the framework usually outlined in gold were inlaid with motherof pearl. The keys were of African ivory, and the bright parts of solid gold. A similar machine was presented on her wedtling-day to the Duchess of York: and another was recently made to order for the Khedive of ligypt. The Cueen also possesses an extremely elaborate typewriter. It is a 'bar-lock,'
ivory-keyed, gold-plated throughout, and very beautifully engravect.

An extraordinarily curious machine was that made by the 'llammond Courpany for Ll Hung Chang. It was fitted with twenty sets of claaracters-eighteen hundred in all-each of which, as no cies were vailable, hatl to be engraved by hand. Apropos of this remarkable machlne, its introduction into Pekin was promptly followed by the appearance in London of an enterprising Celestial bent upon forning a company for placing typewriters on the Chinese maket. According to this gentleman, it is quite possib e to write the Chinese language, or at all events a sort of modified phonographic version of it, with as few as 250 characters. J'lse machines le proposed to manufacture, and for which the asserted there would be a ready sale in the Flowery Kingdom, were to have heen about five times the width of an ordinary typewriter, and the sale price was to have been one thousand pounds apiece. The English capitalists, however, failed to 'hite,' and China still does its writing in the old-fashioned way.
TYPHOONS can only rise in hot, danp, still air, and therefore are not found outside the tropics; but as they always work from the Equator owing to the motion of the earth, they are most destructive ahout latitude $20^{\circ}$.
TYRE AND Sidon. The Ploenicians almost always built their cities either on some rocky island near to the coast or on some headland joined to the mainland only by a long and narrow isthmus. This secured safe anchorage for their vessels, and a barrier against the harharous inhabitants of the mainland. Thus, the word Tyre means 'a rock,' and the place was a rocky island; the word Sidon means "a fishery, and the place was an island close to the sloore. The same characteristic features are found in the great Phoenician colonies, e.g. Cadiz and Carthagena. The old town of Tyre was destroyed by the Moslems about inoo A.D., and a similar fate befell Sidon about a cen. ury later. The sites of both arestill inhahited, but nei. her is any longer of the least importance in cominerce.

UGANDA was first visited by Speke and Grant in r 860 , but under King Mtesa and his successor, Mwanga, the Christians were persecuted, Mwanga putting Bishop Hannington to deatl.
UHLAND, JOHANN, the German poet, was born in 1787. He practised law in Stuttgart, and in 18ig was elected a member of the Würternberg Assembly. He was Professor of German Literature at Tübingen. living latterly in studious retirement there, His European famerests on his lyrics and ballads, though he wrote dramas, etc.
UKASE is a Prussian edict or order, legislative for administrative, emanating from the Government. Ukases have the force of law till annulled by subse. quent decisions.
ULRICI. HERMANN, the German philosopher, was born in 1806 . In 1834 lie became Professor of Philosoplyy at Halle University. His chief works are" A History of Greek Poctry." " Shakespeare's Dramatic Art," "The Fundamental Principle of Philo. sophy," "God and Nature," "Body and Soul," etc.
ULTRAMONTANISM, the views of that party in the komish Church who place an absolute authorlty, in matters of faith and discipline, in the Pope's hands; as Lopposed to the party who place the national churches (e.g. the Gallican) in partial independence of the Roman curia, making the Pope subordinate to the statutes of an Oecumenical Council. According to Ultramontanism, the Pope is to he considered the source of all jurisdiction in the Church. The Vatican Council of 1870 established the views of Ultramontanism as virtually dogmas of the Church.
ULy'SSES (in Greek ODY:SSEUS), King of Ithaca, was one of the heroes of the Trojan War. In returning home, after the slege of Troy, he visited North Africa, Sicily, and the island $A$ Ea, and after adventures there passed the const of the Sirens and the clangers of Scylla and Charybdis, and, having stayed seven years with the nymph Calypso, arrived at Ithaca to find his substance wasted by suitors for his
wifc's hand. IIs adventures are written fully $\ln$ Ilomer's "Odyssey." Penelope was his wife and Telemachus his son.
UNCIAL L.ETTERS are of large size, and are used in ancient Latin and Greek mannscripts. l"ley wero compounded between the capital ind small letters, and wore ennployed between the rd or 4th and the roth centuries.
UNDINE was a water-spirit of the feminine sex, resembling in claracter the sylphs or spirits of the air, and corresponding somewhat to the naiads of classical mythology. According to Paracelsus, when an Undine married n mortal, and bore a child, she received a soul. Au Undine is the heroine of a famous romance by De la Motte Fouqué.
Undulatory Theorv, in Physics, is the theory which regards light as a mode of motion generated by molecular vibrations in the luminous source, and propagated by mindulations in the ether, presumed to pervade all space, occupying the intervals which separate the molecules. When these undulations act on the nerves of our retina, they produce in us the sensation of light. The only other theory of light which can be opposed to this is called the "Material Theory," and supposes that light consists of material particles, emitted from the source, and projected in straight lines in every direction with a velocity which is uniform at all distances, and is the same for all intensities of light. The former theory is nowgenerally accepted by plysicists.
UNION FLAG. (See JACK.).
UNITARIANS are distinguished as a religious sect, by the denial of the doctrine of the Trinity. They inay be divided into two classes - (I) Orthodox Unitarians, who accept the general articles of the Christian creed (except the doctrine just mentioned), suclı as the miracles and resurrection of Christ, and the plenary Inspiration of Scripture; (2) the progressive Unitarians, whose creed is purely rationalistic. They consider Christ a mere man, and reject generally the whole supernatural element in Christianity. This class forms the majority. Unitarian views have been more or less held in all ages of the Church, but they came prominently forward at the Reformation period, being first tolerated in Poland under tle younger Socinus, and in Transylvania under his friend Blandatra. But in 1658 Unitarians were banished from Poland, and dispersed in Germany and England, but even in England full toleration was not granted till 1813. There are many Unitarians in America.

UNITED KINGDOM in the Jubilee year of Queen Victoria presents some extraordinary contrasts with itself in 1837, in such matters as extent of empire, trade, population, etc. The area of the empire is roughly in,000,000 square miles, which is nearly three times as large as Europe. The population of it is about $400,000,000$, which ineaus that one person out of every four that are alive upon the face of the earth is a subject of Queen Victoria. Of every 100 square miles in Europe she rules over 3 , of every 100 in Asia 10, of every 100 in A frica 19, of every 100 in America 24, and of every 100 in Australasia 60. The proportion of her subjects is 6 per cent. in America, II per cent. In Europe, 18 per cent. in Africa, 35 per cent. in Asia, and 40 per cent. in Australasia. In the latter area I person in every 3 is a native of the United King. dom, but the proportion is much less elsewhere-t.g. 1 in 74 in British America, I in 523 in British Africa, and I in 2548 in British Asia. Compared with other empires of the earth it is 40 times as large as the Italian, 10 times as large as the German, 4 times as large as the French, 3 times as large as the U.S.A., nnd about one-third larger than the Russian. The Uuited Kinglom has colonies nearly 100 timesi its own area, while the French colonies are only a dozen times as large as France, the German only 5 times the size of Germany, the Russian only $3 \frac{1}{2}$ times the size of Russia, and the Italian only $2 \frac{1}{2}$ times the size of Italy; and during Queen Victoria's reign the increase of empire has been a 'Scotland+Ireland 'every year. For thls extraordinary result the geography of the country is mainly responsible.
The Britlsh lsles lie on the castern edge of the Atlantic between $50^{\circ} \mathrm{N}$, and $6^{\circ}{ }^{\circ} \mathrm{N}$. This latitucle
guarantees a temperute climate, and the presence of water on cvery side further protects them from extrenes and from sudden changes of temperature. The eastern edge is the one towards which the soutlo-west Anti-Trades blow from off the warm Culf Strcam, which ensures abundance of rain, especially along the west coast.
This position is also the centre of the land of the world. More than 40 out of the 55 million square miles of land are north of the Equator, and England is practically the centre of them. This gives unigue advantage for commerce.
Proximity to Europe is better than contact would have been. The islands are near enough to Europe to make full use of it, and far enough away fron it to be free from its wars and pestilences.

The coast is extremely long in proportion to the area, and is well supplied with good harbours. The average proportion of coast to area in Europe is I mile to 200 square miles; in Great Britain it is 1 to 20 . No place in the islands is more than 70 miles from sea. Great Britain has a series of harbours most conveniently near together vis-a-vis-the Clyde and the Forth, the Solway and the Tyne, the Mersey and the Humber, the Severn and the Thames.
UNIVERSITY EXTENSION is a direct method of culture, extending means of higher education to persons of all classes, and of both sexes engaged in regular occupations. Courses of lectures are given by specialist graduates of the universities, and each lecture is preceded or followed by a class in which the students are orally examined by the lecturer, who also corrects written papers done at home. The movement began in 1872 at Cambridge, and was definitely established at Oxford in 1885. Dublin University is associated with Cambridge in the work, and the Scotch Universities are trying it too.
URANUS, in Astronomy, one of the primary planets, the seventh from the sun, discovered by Sir Willian Herschel in 1788. It is admitted to have four satellites which differ from the other planets, primary and secondary (except Neptune's satellite), in the direction of their motion, this being east to west ; and they move in planes nearly perpendicular to the ecliptic.
URBAN, the name of eight Popes, of whom the most notable, Urban I1. (ro88-99), in a council at Rome, excommunicated his rival Clement III. and his supporter, the Emperor Henry IV. By his energy he extended the power of popedom, and he instigated the first crusade, when Jerusalem was taken. Urban VI. ( $1378-89$ ) so exasperated the Cardinals by his reforming zeal, that they caused a schism in the Church by electing Clement VII. The two Popes continued to excommunicate each other until Urban died, under circunstances which snggested poisoning. Urban VIII. (1623.44) was more of a temporal prince than a spiritual one, for he extended the pover of the Church by raising armies, building fortresses, and entering into an alliance with France against Austria and Germany. He condemned Galileo and Jansen, though he had a reputation for learning.
U'IILITAKIANISM, the general name for those sciools of morals which clefine virtue as utility; but it is specially applied to Jeremy Bentham's school, of which the most recent exponent is Stuart Mill, but there are other developments of the same principle in ancient and modern schools of morals.
UTOPIA was the name invented by Sir Thomas More, from the Greek one topos (no place), and applied to his imaginary island described in his work of 'Utopia." published in 1515 . The Utopians liad attained great perfection in laws, politics, etc. He represents the place as having been discovered by a companion of Amerigo Vespucci.
UTRECHT, PEACE OF, included a series of separate treaties agreed upon by the powers which had been engaged in the war of the Spanish Succession. On April 1 rth, 1713 , the States-General, Prussia, Portugal, and Savoy, signed separate treaties with lrance, whicla the Emperor refused, and his diffurences with France were settled the next year by the treaties of Rastadt and Baden, By the treaty with England,

France xecognized the H:moverimi successlon, engaged never to unite the crowns of firance and Spain, and ceded Nova Scotia, N'ewfoundiand, St. Kitt's' and Iludson's Bay and Straits, while Cibraltar and Minorca were ceded on lehalf of Spain. L.ouis Nilv. recognized the title of the King of I'russia, who received part of Spanish Guclderland and the sovereignty of Ne:ffhatel, and renounced the principality of Orange. woy and Nice were restored to the Duke of Savoy, who was recognized as the presumptive heir to the Spanish Monarchy; mud Plilip $V$. was recognized at the conclusion of the treaties.

Valentine, ST., a saint of the Roman calendar, said to have been niartyred in 306 A.D. The custon of choosing valentines on his day (1Feb. 14th) has been only accidentally associnted with his name. On St. Valentine's Eve young people of both sexes met and drew, by lot, one of a number of names of the opposite scx, whereby each gentlenan got a lady, and cach lady a gentleman, as a valentine. The gentlemen were bound to the service of their valentine for in year. A similar custom prevailed in the Roman Lupercalia, to which the more modern custom has been, with probability, traced. St. Valentine's Day is very little regarded now.
Valhalla, in Northern mythology, the palace of immortality, inhabited by the souls of heroes slain in battle. The name is applied figuratively to any edlfice wbich is the final resting-place of many of the herocs or great men of a nation, and specifically to an edifice built by Ludwig I. of Bavaria, near Ratisbon.
Valkyrias, in Nortbern mythology, the 'choosers of the slain.' or fatal sisters of Odin, who, mounted on swift horses and holding drawn swords in their hands, presided over a battle-field, selecting those destined to death and conducting them to Valhalla, where they ministered at the feasts held there, serving mead and ale in skulls.
Value and Price. The value of anything is what can be got in excliange for it ; and the price of it is the amount of 'money' that can be got in exchange for it-money being both a standard of value and a medium of exchange. Some articles have a monopoly value, because their supply cannot be increased, e.g. the pictures of a dead artist. Others can be increased, but not without increasing the cost of production, e.g. agricultural produce, when poorer land has to be worked to supply the demand. Others, again, can be increased to any amount, not only without a raising. but actually with a lowering, of price, e.g. textiles. The value of money itself is really |regulated by exactly the same laws as regulate the value of other mineral produce, but governments have practically put an artificial value on it by ignoring the effect of the discoveries of gold-in Australia, South Africa, and North Anserica-on the economic value of a gold coinage.
VAMBERY, HERMANN, the Hungarian traveller and scholar, was born in 1832. After studying in his own country he went to Constantinople, and lived by tcaching French. In 1858 he published a TurkishGermandictionary. In 186r. 54 , disguised as a dervish, he explored Persia and Turkestan, and visited Khiva, Itokhara, and Samarcand. Inie6s he became Professor of Oriental Languages at the University of Budapest ; and he has written some valuable lingristic works. $11 i s$ writings include "Travels in Central Asin," "Wanderings and Adventures in Persia," "History of Bokhara." "Islam in the Ninetecnth Century." "The Origin of the Magyars," "Story of Itmugary"," cte.
VastplkE, a superstition of Eastern origin, existing amone the Slavonic and other races on the Lower Danube, it is a ghost possessing a human body. which leaves its grave at night and sucks the blood of living persons, especially the young and healthy. Dead wizards, heretics, and other outcasts beconc vampires, as does any one killed by a vampirc. On the discovery of a vampire's grave the corpse must be disinterred, thrust through with a white-thorn stake and burned.
VANBRUGIf, Sir JOHN, the Inglish archltect and
dramatist, was born about sCC6. He entered the army, and became known as it man ol faslion. His first play, "The Relapse," was prodnced at Drury. Lance, and was followed by " The Provoked Wife" mad "Acsop." How he obtained his knowledge of architecture is not known, lut in 1 zoz lic desisned Cirstle Howard, the IEarl of Carlisle's seat; and in i 706 he was occupied with the eruction of Blenlecint lalace; ancl le buitt mansions for many of the nobility. His plays are admirable in ciramatic conception and wit, and Sir Joshua Reynolds praised his arclitectural work.
VANCOUVER, GEORGE, the Jigglish navigator, was horn about s758. Ile accompanied Cook in his second and third voyages ( $5772-74$ and $5776-79$ ) ; was made first lieutenant in 1780 , and served in the West Indies till 8789 . Ile was in command of the expeditlon to take over Nortka from the Spaniards in 1791، when he also visited the Cape, Australia, and New Zealand. He spent the three summers of 1792.94 in surveying the coast up to Cook's Inlet, wintering at the Sandwich Islands; and on his return home visited the west coast of South America. He reached England in 1795, and published a narrative of his travels. Vancouver Island was maned after him. He died in 1798.
VANDALS were a German confederation, probably allied to the Goths, who occupied the country south of the Baltic, between the Oder and Vistula. Afterwards they descended to Silesia، and subsequently occupied Pannonia, Moravia, and Dacia. In 4o6, in conjunction with a German host, they ravaged Gaul, and from there went to Spain. They seized Seville and Carthagena, and led by Genseric crossed to Africa, founded a kingdom, and revived the maritime glories of Carthage. Genseric also conquered Sicily, Sardinia, and Corsica, and sacked Rome in 455. He concluded his long reign in peace in 477 , and IInnneric, his sou, succeeded him ; but the kingdom of the Vandals was overthrown in 534. by Belisarius, the general of the Eastern Emperor Justinian.
VANDERBILT, CORNELIUS, the American capitalist, was born in 1794 , and died in 5877 . He amassed his wealth in shipping and railroads, and his cldest son. William ( $\mathrm{r} 82 \mathrm{I}-1885$ ), was supposed when he clicd to be the wealthiest man in the world. The Vanderbilt University (Methodist Episcopal) was founded by Cornclius.
VANDYCK, SIR ANTHONY, was probably, with the exception of Titian, the greatest of all portraitpainters. He was born in 1599 at Antwerp, and studied under Van Balen and Rubens, after which he went to Genon, Venice, and Rome. Charles I. invited him to England, and showered benefits upon him, for which the painter, in return, executed many portraits and some inythological and historical paintings. He married Mary Rutbven, the Earl of Gowrie's daughter. Vandyck excelled in the knowledge of 'chiaroscuro,' but he sometimes anused limself by engraving and etching.
VANE, SIR HENRY, the English statesman and writer, was born in 1612. He completed his edncation at Geneva, where he becance a puritan and a republican, and as his opinions were unfavourably received in England, he emigrated to Boston in $\mathbf{1 6 3 5}$, and was elected Governor of Massachusetts in 1636 . In 1637 he returned to England, was knighted, entered P'arliament. and became T'reasurer of the Navy. Ile took the side of Parliament in the Civil War, and was a leader of the Long Parliament. Ile also supported the Solemn League and Covenant. Ile opposed the King's execution, and in 1656 was imprisoned by Cromwell for a pamphlet he wrote. On his release he opposed both Cromwell and his son. After the Restoration he was imprisoned, and finally, after the rising of the Fifth Monarchy Party in 1661, was tried for high treason, and beheaded in 1662 . His theological works were claaracterized by excessive mysticism. Ilis followers were called Vanists.
VASE is an ancient omament. The most numerous which lave come down to us are the Etruscan vases, fonnd in Greek cities as well as in Etruria. The olclest style of Greck vases came from Corinth and the isfancls of Thera and Melos, and those of the late
style were discovered inostly in Lower Italy (Apulin and Lucania), being probably made there itn the 4 th and 3 rd centuries J.C. The Greeks and Komans used clased metal vases, and cameo (gliss) vases were very populir in Ronnc. The fanoms lortland vase is of thiskincl. Since the isth century the Venetian glass art hins been wonderfully perfected, and porceInin vases of great beaty have been made in lndia, China, and Jipan.
VATICAN reccived its name from the hill on which it stands. It is the largest palace in modern Rome. The present building was begun by Pope Eugenius 111. ( $1145-53$ ), and was enlarged by many of his suc. cessors, up to the time of tlie last, Pope l'ius IX. The frescoes on the ceiling of the Sistine Chapel, painted by Michael Angelo, are of world-wide fane, and also those painted by Raphael in the apartments known as kaphacl's 'stanze.' The 'Library' was first constituted by Pope Nicholas V. (1447-55), and was added to by Leo $X$., Pius IV., Pius V., and other popes. The manuscript collection is the best part.
VAUBAN, SEBASTIEN, Marshal of France (the greatest military engincer of that country), was born in 1633 , became Governor of Lille in 1668 , CommissionerGeneral of Fortifications in 1677, and Marshal of France in 1703. He erected 33 citadels, and directed 53 sieges,
VEDAS (from the Sanskrit root via, meaning 'know') are the oldest of the 'Shastras' or sacred writings of the Brahmans, and the oldest compositions in the Sanskrit language. Their date is unknown, but it has been fixed between 1400 and 1600 E.C. There are four of them-The Rig, Yajur, Sama, and Atharva Vedn, and all are believed to be inspired. The religious system of the Vedas is at bottom monotheistic, though it derives a polytheistic appearance from the various names by which the deity is called, according to his different attributes and manifestations. Each Veda is divided into three parts-(I) The "Sanhita," a collection of hymns and prayers; (2) "Brälunana,", relating chiefy to ritual ; (3) the "Jnāna" or "U Upanishado," the philosophical part of the work.
VEGETATION OF EUROPE depends on soil and climate, and it may be roughly classified under three heads-(I) The Arctic Region, (z) the Mediterranean, and (3) the Intermediate.
The Arctic Region is practically the Tundras, and produces ouly mosses and lichens. (1) These produce sufficient food for reindeer, (2) height has the same effect on the upper slopes of the Alps as latitude has on these low Tundras.
The Mediterranean is the region of dry, sunny peninsulas and islands. (i) The characteristic plants of the peninsulas have leaves or roots specially suited to drought. Laurels and other evergreens have thick leaves in which to store water, and vines have long roots with which to draw up water from great depths. (z) The claracteristic plants of the islands and of he coast-lands of the peninsulas are fruits, e.g. Malrese oranges, Sicilian lemons, Corfu citrons, Barcelona nuts, Greek currants, Almerian grapes, 'Sultana' raisins, Turkish figs, Servian plums, Tuscan olives.
Between the Arctic mosses and the Mediterranean evergreens there is the Intermediate region, which is more or less a region of deciduous trees and the ordinary graius and the vine. (1) The chief trees are the oak, beech, and ash; the chief grains are wheat, oats, and rye ; (z) the vine is grown very largely-for wine-on the sunny slopes throughout Central Europe, e.g. at Tokay, Epernay, Reims, etc.; (3) fibres, such as flax and hemp, flourish on the sites of old forests throughout this region, which have been manured for centuries with the fibrous mould of the fallen leaves, c.g. in Russia and the Low Countries.

Vendetta is a blood-feud, the practice of the nearest of kin executing yengeance on the murdcrer of in relative. In Corsica, it is considered a duty, and when the murderer is not forthcoming, his relatives are even made to suffer. The practice also exists in Sicily, Sardinia, and Calabrin, as well as among the Drıses, Circassians, Arabs, etc.

VENDOME, L,OUIS, DUKE Or, the famous general of Louis XIV., was born in X654. and in 1702 com mandod the French arny in the War of the Spanish Succession. Having distinguished bimself in Italy. Tyrol, and Belgiun, the Duke of Burguady wasplaced over himp and their disagreentent caused the defeat of the lirench at Ouclenarde ( 1708 ). He died in 1712.

VENICR. The Crusades (rog6-122r) groatly increased the wealth and power of the Vence....s by giving employment to their shipping. In 1204 the Doge Enrico Dandolo conquered Constantinople; and at the Division of the Byzantine Empire, Venice received much territory, but they lost mainland pos. sessions soon after. In 1405 their General, Malatesta, won Verona, Padun, etc., and the Venetian fleet defeated the Turkish flect, subjugating all the towns on the Dalmatian Coast in 1421. At the close of the isth century Venice was the centre of the commerce of Europe; but its power was gradually superseded by that of the Portuguese.
VENTRILOQUISM was so called from the crroneous idea that the sounds proceeded from the abdomen, whereas they are formed by the ordinary yocal organs -the larynx, palate, tongue, and lips. The art consists in drawing a long breath and then slowly and gradually breathing it out, dexterously modifying and diminishing the sound of the voice, moving the lips as little as possible, and by various contrivances diverting the attention of the audience. Therefore practice alone is necessary to carry the art of illusion to perfection.
VENUS, the goddess of love, called Aphrodite by the Greeks. In the"lliad"she is described as the daughter of Zeus (Jupiter) and Dionē, but Hesiod represents her as the offspring of Urănus, born amidst the foanı of the sea. She received the apple from Paris, as being the most beautiful goddess. The myrtle, rose. poppy, apple, and other fruits; the dove, sparrow, swan, swallow, ram, hare, and tortoise were sacred to her. The venus de Medici (supposed to be a copy of a statue of her by Praxiteles) was the most celebrated statue of her in ancient times, and later, the one by Canova.
VERDI, GUISEPPE, the operatic composer, was born in 1814. He brought out "Oberto, Conte di San Bonifazio"." in 1839, and later, with great success, his "Nabuco," followed by " Ernani," "Rigoletto," " 11 Trovatore," " La Traviata," "Montezuma," etc,, and "Otello" in 1886.
VERNE, JULES, the popular romancer, was born in 1828. He studied law for a time, and then started to write short pieces for the stage. In 1863 he published "Five Weeks in a Balloon," which he has since worked with success. His popular books are"Twenty Thousand Leagues under the Sea," " Round the World in Eighty Days," etc.
VERNET, JEAN, the French painter (grandson of Claude Vernet, and son of Antoine Vernet, who were both painters too), was born in 1789. His father was his first master, and his battle pieces soon won favour at the Inperial Court, and from 1888 -1834 he was director of the Frencli Academy in Rome. I.ouis Philippe then commissioned him to paint galleries of the Museum at Versailles; then from 1840 to 1845 he travelled. In 1853 he followed the Frenclo ariny to Varna, and on his return to Paris produced his last great picture, "The Battle of the Alma." He died in 1863.
VFRONESE, PAUL (the popular niane of Paolo Cagliara), the Italian artist, was born in 1528 . He was a contemporary of Titinn and Tintoretto, and was noted as a colourist, and as having a rich, fertile imagination. Among his masterpieces are-"The Marriage at Cana" (now in the Lourre), "The Rape of Europa," "' Adoration of the Magi,"" "Consecration of St. Nicholas and St. Helena," and "The Vision of the Invention of the Cross."
Veronica, Saint, according to legend, met Christ bending under the Cross, and offered him her veil to wipe the sweat from his brow, when the divine features were miraculonsly impressed on the cloth. The veil is said to be preserved in St. Peter's, Rome. VESPASIAN, TITUS, Emperor of Rome, was born in
the country of the Sabines in A.D. 2. After scrve ing in Germany and Britain, as commander of in Airica. In A. D, 66 he reduced nearly all Galitee when the rebellion of the Jews arose f and lie was preparing to attack Jerusalem when Nero died. In A.D. 69 the army elected him Enmperor, and he at once reformed its discipline and puritied the senatorial and equestrian orders. He favoured arts, letters, and learned men, particularly Pliny and Josephus, and he erected the huge amphitheatre still celebrated under the nane of the 'Coliseum.' He clied A.D. 79.
Vhisuvidus has had many violent eruptions, the worst being when Herculaneun and Ponpeii were buried in A.D. 79, and one in 1631 when 18,000 lives were Iost. There have been violent eruptions also in 1867-68, 187\%, 1878. 1879, and 1885. A wire-rope railway, opened in r880, traversed by one carriage, takes visitors near the crater.
VICTOR EMMANUEL II. (King of Sardinia from 1849. 2861, and King of Italy from $186 \mathbf{1}$-1878) was born in 1820, and married the Archduchess Adelaide of Austria. He distinguished himself as commander of the Savoy brigades against Austria. In spite of his difficulties with Austria, he kept up the principle of representative government in Sardinin, and, with his minister Cavour's help, he did much good to his kingdom. He took part in the Crimean War; and renewing the contest with Austria, was present at the battles of Magenta and Solferino. He won Lombardy, Parma, Modena, and Tuscany, and Garibaldi won Southern Italy; so that he took the title King of Italy in 1861. In 1866 Austria ceded Venetia too: and on the withdrawal of the French garrison from Rome ( 1870 ), the city annexed itself to Italy. The King died in 1878.
VICTORTA CROSS was instituted at the close of the Crimean War in 1856 . It is granted to soldiers and sailors of any rank, and very occasionally to women. It is a Maltese Cross, with a royal crown in the centre, surmounted by a lion, and the words "For Falour" indented on a scroll below the crown. According to Rudyard Kipling, the V. C. is prized because, when all is said and done, courage of mind is the finest thing any one can hope to attain to. A weak or undisciplined soul is apt to become reckless under strain (and this is being afraid the wrong way about), or to act for its own immediate advantage. For this reason the Victoria Cross is jealously guarded; and if there is any suspicion that a man is playing to the gallery or out pot-hunting for medals, as they call it, he must head his charges and rescue his wounded all over again as a guarantee of good faith.

Men are taught to volunteer for anything and everything, going out quietly after, not before, the nuthorities have filled their place. They are also instructed that it is cowardly, it is childish, and it is cheating to neglect or scamp the plain work inmediately in front of them, the duties they are trusted and paid to do, for the sake of stepping aside to snatch at what to an outsider may resemble fame or distinction.

The Order itself is a personal decoration, and the honour and glory of it belongs to the wearer; but he can only win it by forgettine himself, his own honour and glory, and by working for something beyond and outside and apart. And that is the only way you ever get anything in this world worth the keeping.
Victoria I., Queen of Great Britain and Ireland and Empress of India, was born in 1819, and crowned in 1838, though she ascended the throne in 1837 . IIer first Jubilee was celelorated in 1887, and her second in 1897, when there was the gorgeons procession on 22ud June and the uniquely magnificent Review of the British Fleet at Spithead afterwards. Her Majesty is an authoress, having written " Leaves from the Journal of our Life in the HIghlands" (8868), publishing a second volume, "More Leaves froni the Jourual of a Life in the Highlands," in 1884. A remarkable feature of lier reign has been the clevelopment of the Colonies.
Vigfusson, GUDBRAND, the Scandinavian scholar,
was horn in 1827 in Iceland. Ile was educated at the Leikiavik Iligh School and Copenhagen University. Itis first work, "Tinnatel," on the clironology of the Sagas, was published in 1855, followed by " Biskupa Sügur " (Lives of the Icelandie Bishops) and "Lyr* byggja Saga." In 1866, at Oxford, he started his dictionary based on ancient Icemandic poctry. ILe died in 1889, before completing "Origines Islandine," his last work.
Villars, Claudiz, DUC DE, one of the greatest generals of Louis XIV., was born in 1653 . He fought under Turenne, Condé, and Luxembourg, and in the War of the Spanish Succession. In 1709 he fought against Marlborough and Eugene at Malplaquet, and in 1714 negotinted the Peace of Rastadt. In 1733, as Marshal-General of France, he fought against Austria in Italy. He died in 1734.
VINCENT, JOHN, EARL OF ST., the naval commander, was born in 1734. In 1794 he commanded a squadron in the West Indies, reducing Martinique, Guadeloupe, and St. Lucia; and in 1797 he defeated twenty-seven Spanish ships off Cape $\$$. Vincent, with a squadron of fifteen sail. He died in 1823 Admiral of the Fleet.
Vinci, LEONARDO DA, the great painter, was born in 1452. He was also a sculptor, architect, civil and military engineer, and scientific inventor. Flis grentest painting, "The Last Supper," was finished 1499. In 1502 he becane chief engineer and architect of the Pope's army. Some of his other pictures are the famous " La Gioconda " (in the Louvre), " Madouna and Child," "The Adoration of the Magi," "The Virgin of the Rocks," etc.
Vine needs a dry climate, because rain spoils the bloou on the fruit, and its roots are long and therefore adapted to dry soil. It is a native of Central Asia, but is cultivated from about $55^{\circ} \mathrm{N}$. latitude to the Equator, and in S. latitude to about $40^{\circ}$. France is probably the greatest vine.growing country in the world. Tltz vine was introduced into Europe by the Phoenicians,
Violation of Tombs. Shakespeare's curse on the man who moved his bones has saved him from the fate which befell both Dante and Milton. Milton's coffin was opened by a publican, a pawnbroker, a surgeons and a coffin maker in 1790 , when the publican knocked out one of the poet's teeth with a stone, The others tore out some of the hair and stole some of the bones. Elward the Confessor's tomb has twice been opened since his death, so has William Rufus's. The dust of Henry II. and of Richard I. was scattered at the French Revolution. Edward I,'s tomb was opened in 1771. Richard 1I.'s body was dug up by Henry IV. Henry IV.'s own tomb was opened in 1832. Charles I.'s coffin was opened by George IV. when Prince Regent.
VIRCHOW, RUDOLF, the German pathologist and an. thropologist, was borll in 1821. He made discoveries about inflammation, ulceration, tuberculosis, etc., and has written some well-known books, c.g. "Cei. lular Pathology," etc.
VIRGIL, the epic, didactic, and pastoral poet of Rome, was born in 7o B.C. His " Eclogues " (pastoral poems), "Georgics," and the " Aeneid" (on the fortunes of Aeneas) are well known.
VISHNU is the second god of the Ilindu triad. the others being Bralıma and Siva. In the early Vedas he appears as a manifestation of the sun, and it was not till later that he was considered the supreme delty: He cured moral and physical disorders.
VOLAPUK (meaning 'world-speecli') was the name of a universal language invented by Johann Schleyer of Constance. The orthography is phonetic, and several of the vocables are nodified English words. A number of periodicals are written in it.
VOLCANOES. The volcanoes of Europe are mostly extinct, but there is a group of active ones in Italy, and Iceland is in a very disturbed state.

The chief Icelandic cone is Iekln, which is rather higher than Ben Nevis; and the ashes are sonmetimos carried by the wind over the seven or eight hundred miles that separate it from Ben Nevis. Iceland is also covered with hot springs.
Italy las three active cones-Etma, Vesuvlus, and Stromboli, Etha-which is twice as high as Bors

Nevis-is nuch the largest and highest volcano in Europe. Vesuvius, which is not lialf the height of Etna, is the only active volcano on the mamlamd of Europe. Its first eruption was also its worst ; Herculaneum and Ponpeli, with 200,000 inlanbitants, were buried in it, and remained urdiscovered for 1500 years. Stromboli is a cone in the Lipari Islands, about the height of Skiddaw.

There are extilict volcanoes in many parts of Europe, and the districts are always important, because volcanic soil is very fertile. The Auvergne district of France and the Cyclades, especially Milos and Santorin, are typical volcanic areas.
VOLTA, AlESSANDRO, the It alian natural philosopher (1745-1827), made his fame by two treatises in which lie described a new electrical machine. He invented tho electrophorus and electroscope.
VOLTAIRE, FRANÇOIS DE, the philosophical writer and satirist, was born in $\mathbf{1 6 9 4}$. Hfis fame rests chiefly on his novels, "Zadig," "L'Ingénu," etc., and his histories, "Siécle de Louis XIV.," etc.
VOLUNTEERS first received a charter of incorporation from Henry VIII. under the title Honourable Artillery Company of the City of London. About 1857 the Victoria Rifies and some other corps were formed, and in 8660 the National Rifle Association was formed in fonnection with them. In 1895 the number of volunteers was 231,704.
VULCAN, in Roman mythology, was the god who presided over fire and the working of metals, and who patronized handicraftsmen.
VUlGate, the Latin translation of the Bible still used in the Romish Church, is the edition published by Clement VIII. in 1593. It existed in the early period of the Church, but St. Jerome made a new one between 385 and 405 A.D. Finally both the new and old translations were combined.

## IV

WACE, the Norman poet, was a native of the Channel Islands, and his long romances are among the best exmmples of Norman language and literature,
WADDINGTON, WILLIAM HENRY, the Frenchstates. man, was born in 1826, the son of a naturalized English cotton merchant. He was educated at Rugby, where he played in the School Football XV,, and at Cambridge, where he rowed in the University boat. He travelled in Western Asia, and was returned to the National Assembly in 1871 . He was Minister of Publie Instruction in 1873. Minister of Foreign Aftairs in 1877, and Ambassador in London from 1883 to 1892.
WADE, GENERAL, the military engineer, was born in 1668, and got his first commission in the Engineers in 1690, rising eventually to be Lieutenant-General of Ordnance and a Member of the Privy Council. After the Rebelliun of 1715 he commanded the forces in Scotland, and to him is due the construction of the great military roads through the Highlands, which have ever since been the basis of communication: In the Rebellion of 1745 he was in command of the forces in Yorkshire, and lie was the first general who was evaded by the Pretender on his fanous march south. He died on Valentine's Day, 1748.
WADY is an Arabic word for a 'river' or 'river-valley.' In Spain it survives in the form Guad-, which is found in so many of the names of Spanish rivers, e.g. Guadalquivir.
WAFERS for fastening papers together, or for sealing letters, are made gencrally of fine wheat flour.
WAGES depend theoretically on custom or competition, but the introduction of 'sliding-scales' and the spread of co-operative production are bringing them into lines of practical justice in the matter of division of profits. The difference in the rate of wages in different trades is due to several causes-such as ( r ) the pleasantness or inpleasantness of the work, ( 2 ) the ease or difficulty of learning it, (3) the constancy or inconstancy of employment, (4) the amount of responsibility, etc. For instance, mining is an 'unpleasant' trade, because it is both unhealthy and dangerous; cooking is more difficult than chopping sticks; making artificial fowers is a 'season' trade; driving an express train and making up a medicine
are tasks ofgreat responsibility. (See Machinery abuve.)
Wagner, WiliIzlm, the celebrated composer, was born in 1813, and educated at Leipzig and Dresden. Ir rom 1834 he fulfilled nusical engagenents at Magdeburg. Riga, and Königsberg; and in 1835-4x he went to J'aris and London, and wrote his operas, "Rienzi" and "The Flying Dutchnian." Their success got him the conductorship of the Royal Opera at Uresden in 1843 ; but having foined the insurrection in 1848 he left Germany until 1864. His "Tannlıäuser " ippeared in 1845, and "Lohengrin" In 1850 . At Barreuth in 1876 his famous tetralogy "Der Ring des Nibelungen was first performed. It consists of "Das Rheingold," "Die Walküre," "Siegfried," and "Gotterdammerung." "Parsifal" was his last work. Ile died in 1883. He wrote a book on his musical views, called "Oper und Drama."
WAGRAM, BATTLE OF, was fouglit on July sth-Gth, 1809, when Napoleon inficted a very severe defeat on the Austrians within sight of the towers of Viema. Wainwright, Thomas Griffiths, litteratcur, forger, and poisoner, was born in 1\%94, and left an orphan at a very early ige. He got a commission in the Guards, and began to write miscellaneous articles for the " London Marrazine" and other periodicals of the day. He married on £200 a year, and, being unable to live on that amount, he first committed a forgery in 1824 , and then commenced his polsoning experiments, aided by his wife. His favourite poison was strychnine, and his victims included his uncle, his mother-in-law, his sister-in-law, etc., the latter's life having been insured for $\mathrm{fl}_{18,000 \text {. He was trans- }}$ ported for the forgery to Tasmania, where he died in 1852. He was the original of 'Varney' in Lord Lytton's " Lucretia."
WAKEFIELD, GILBERT, the famous divine, was born in 1756, and died in 1801. He took Anglican Orders as a Fellow of Jesus College, Cambridge, but resigned them because he had become a Unitarian. He was a bitter controversialist. His correspondence with Mr. Fox was published in 1813.
WALCHEREN EXPEDITION was one of the most disastrous failures in modern warfare. It was planned in 1807, when Britain, Prussia, Russia, and Austria were all in arms against France; but it was not carried out till Napoleon had overwhemed Prussia, reduced Russia to neutrality, and was erushing Austria. The idea was excellent-to sail up the Scheldt and surprise Antwerp, which was at the time the chief naval station and arsenal of the Frencl. Its fortifications were greatly in need of repair, and the garrison had been reduced to about 2000 invalids and coastguards. The commander of the expedition, however, though a brother of Pitt's, was a consummate fool, and wasted a month-in spite of precise orders from Lord Castlerengh-at Flushing. In the meantime 30,000 men under Bernadotte had been collected for the defence of Antwerp; and to attack it under such circumstances would have been simply gross waste of human lives. Consequently; Lord Chatham retired, leaving a garrison of 15,000 men on Wilcheren Island, where 7000 died-most of them from malaria-and $35 e 0$ were permanently disabled.
WALDENSES were a Christian sect, originated by Peter Waldo, a citizen of Lyons. About 1170 he collected followers (by preaching), who were often confounded with the Albigenses, and shared their fate. Their chief stronghold was, and still is, in the Cottion Alps, where, since 1848 , they have enjoyed the same religious rights as the Romanists. Wialdo's design was to reform the clergy and preach to everg. one in his native tongue ; but his followers gradually separated thenselves altogether from the Romish Church. The spiritual teachers of the Waldenses now come from the acidemies of Calsinistic Churches.
WALKER, FREDERICK, the English painter, was born in 1840 . In 1858 he became in student at the Royal Acadenyy, and began designing for wood engrovers; and from 1860 to 1864 he supplied the "Cornhill Magnzine" with illustrations. His best oil pictures are "The Bathers" and "By the Plough." and his first was "The Lost Path." Ile reproduced
some exquisite water-colours from his drawings. He clied in 1875 .
WALKER, KEv. GEORGE, who took part in tho fimmous Sicge of Londonderry (r689). was born in Ireland of English parents. Ite studice theology at Glasyow University. After the Sicge he went to London, and was made J Jishop of Derry; but he accompanied william 111: in lhis Irisl canpaign, ancl was kilied at the Battle of the Boyne, x69o.
WALKER. WILLIAM, the filbuster, was born in 882 s, in the State of Tennessec, and studied medicine nt Edinburgh, after which he became a Journalist in U.S.A. It r 8 z3 he tried to found a new republic in Lower California, but failed. Ife helped the Democrats ayainst the Legitunists in Nicaragua, ancl ereatually became P'resident of Nicaragua, and his government was recognized by the United States, thouglinis aim was to extend the slave area sonthward. In 1860 he was tried by court-martial, and shot at Trujillo.
Walking-Sticks are of very ancient use, even as ormaments, and obviously must have been used ns a help to walking for ages previous to their use for ormanent. The pastoral staff, the monarcli's sceptre. the magician's wand, and the constable's baton are all evolutions of the Walking-Stick. Those used by pilgrims in the Middle Ages were generally hollow, and relics and other valuables-especially seeds, the eggs of silk worms, and other things, the export of which was forbidden by the Chinese, Turks, Greeks, etc.-were thus safely carried. Doctors of later times frequently carried snuff or other supposed disinfectants in similar hollow walking-sticks, and less useful personages carried swords, etc.
Wallace, AlFred, the naturnlist, was born in 1822, and spent many years travelling in South America and the Asiatic Islands. His books, "Travels on the Amazon and Rio Negro". and "The Geographical Distribution of Animals," etc., were written on his travcls. Before Darwin published his book, Wallace's "Speculations on the Origin of Species", came out, and later his "Darwinism: an Exposition of the Theory of Natural Selection, with some of its Applications." He differs from Darwin in contending that man's higher faculties have been developed under a higher law, which has cone in imperceptibly, and that the Darwinian theory does not oppose, but supports, the belief in man's spiritual nature. Wallace wrote on social questions also, and against compulsory vaccination.
Wallace, Sir William, the Scottish hero, was probably born about 1270. Blind Harry (or 'Harry the Minstrel') wrote the most detailed account of him. In 1209 he won the victory at Stirling, and was proclaimed Guardian of the Kingdom: but in 1298 Edward I. utterly defeated him, excluding him also from the peace granted to the Scottish Council of Regency in 1304. Wallace was executed in $\mathbf{3 0 5}$, and the meinorinh to him on Abbey Craig serves as a Scottish Vallalla.
WALLENSTEIN, ALBRECHT VON, Duke of Friedland, and leader in the Thirty Y'ears War, was born in 1583, and assassinated in r634. He raised an army to assist the Emperor against the Lower Saxon I.eague, and he conquered Silesian: but he som began to consider his own interests first, and, having treated unsuccessfully for himself with the Swedish King, he had secret negotiations with Fravee aud the '"erman princes. This icd to his death. "Wallenstein "is one of Schiller's best dramatic poems.
WALLER, EDMUND, the poet, was born in r6o5, and was connected ly blood with the Cromwells. He was educated at Eton and King's College, Cambridge, and was afterwards a member of Parliament. He married a famous heiress, Ann Banks, but she died very soon, leaving lim free to devote his attentions-unsuccessfully-to I-ady Dorothy Sidney and Lacly Soplia Murray. The former fady he sang of as "Sacharissa" and the latter as "Amoret." He was not quite as bad as Clarendon palnts him, but he was certainly a coward, and cowards elicl not shiue in the age of Cromwell. His poems were published in $\mathbf{6} 45$. and he died in 1687. He was a water-drimker, even at the court of Charles 11.

Walloons is the name given to tho mixed Kelto. Romanle inlanbitants of the Ardennes region, whero they held their own when the rest of Gaul was overrull by the Teuton conquerors. The word Walloon is colnected with the word Welsh, which means - forcigucr. They were fanous mercenaries in the 'Thisty Years' War.
WALI. P'APERS of the common kind are printed by roller machines very similar to those used in calicoprinting, but the better kinds are printed by hand from blocks made of wood. The pattern is cither cut into the wood or cut out in felt and then fixed to the wood. The modern system of paper-langing only cane into nise, with the invention of the papermaking machiue, at the beginning of the sgth century.
Walnurs for pickle or ketclup must be picked miripe, ancl ouly old trees are of any yalue as timber.
Walpole, Horace, Earl of Oxford, was born in ${ }^{1717}$. In $174 x$ he entered the 11 ouse of Commons, and sat for various constituencies till 1768. Besides his antiquarian taste, he was an author. His works. were numerous, but his fame rests upon his "Letters" and "Memoirs," Both are valuable, as slowing in detail the evanescent traits of contemporary history. He also wrote the romance of "The Castle of Otranto." He died in 1797.
WALPOLE, SIR ROBERT, the great Whig statman, was born in 1676 . He entered Parliament in 1700 , and by 1702 was an active member of the Whig party, He was First Lord of the Treasury and Chancellor of the Exchequer, both in 1715 and 172 I . During his administration from 1721 to 1742 , the Hanoverian succession was firmly established. He was the least corrupted of the leaders of both factions, in an age famous for venality and lax morals. He died in 1745 . WALPURGA. ST:, was a famous abvess of the 8 th century. Her day is May rst, and that was how slie cane to be comected with all the strange popular superstitions about witches on broom-sticks (not a comfortable position 1), and sacrifices of billy-grats on litll tops. The best known of the 'witch-hills' is, of course, the Brocken, the scene of the Witches' Sabbath in Goethe's "Faust."
WALSINGHAM, Sir Francis, was bom in 1536, and, after taking his degree at Cambridge, travelled on the continent till the accession of Elizabeth. Lord Burghley discovered his abilities, and took him into diplomatic service, where he became one of the most insidious of Mary Stuart's foes. Babington's conspiracy was 'got up' by spies in the pay of Walsinglam. W.'s daughter, Irances, was the wife successively of Sir Philip Sidney, the Earl of Essex, and Richard de Burgh (Earl of Clanricarde).
WALTON, IZAAK, author of the falnous book, "The Complete Angler,", was born in 1593. He was in the drapery trade until he was fifty. In $\mathbf{x} 66$ he married a relative of Archbishop Cranmer, and through that connection became intimate with some distinguished ecclesiastics, whose biographical inemoirs he wrote. He died in 1683.
Waltz is a dance of Bohemian origin. The valse à duux temps is much danced on the continent, but the trois temps is more popular in England.

- Wandering Jew' Legend is neither ancient nor very widespread, being mainly confince to the northwestern countries of Europe, and not found in them till the end of the Middle Ages. Of course, Cain was a 'Wandering Jew' in oue sense, aud the Arabs make Saniri, the mechanic of the Golden Calf, a wanderer; but the modern legend is entirely connected with the Crucifixion, the insult having been offered to Jesus on lis way to the Cross. The original story is found in Matthew Paris's "Historia Major" (dated about 1260 A.D.), where he is called Cartaplikhs. Three hundred years later the story was revived, and the 'Wandering Jew' himself was said to have been seen by the Bishop of Sleswick in Haunlurg. He hacl been a sloemaker, and his name was Alasinerus, He lad struck Jesus and said, ' Go on, go on faster 1" To which Jesus hacl answered, "I go, but thon shalt wait till I return."' He appears ngain at lirussels in 1640 as 1 sanc 1 aquedom, and has varions other mames lu differeut places; e.g. Butta-
cleus. Ho was not popular in England, but visited Ifull once-in 1769 . The grood Yorkslilremen at once put him under lock and key, but he disappeared. The visit was authenticated by no less than four clergyinen.
WAPENSHAW was a periodical gathering of the people of any given area of Scotland. It was originally a sort of review of troops, every man laving to produce lis arms in a proper condition; but in later times it became simply a meetiug for athletic sports.
WAPENTAKE is the local Yorkshire name for the divisions of the country, and corresponds to the word ward in other northern counties, and to the word lundreds in other parts of England; e.g. 'Chiltern Hundreds.
WAR is a great evil from the commercial point of view. In the first place, it utterly disorganizes commerce while it lasts; it causes immense waste of human life as well as of property, which reacts on commerce afterwards; it generally involves even in time of peace a conscription, which withdraws for a time all able-bodied men from their work; it always involves very heavy taxes, which are a grievous burden on the labour of the country; it leads to all sorts of absurdities, such as difference of railway gauge in different countries and the artificial check of walls and fortifications on the natural expansion of cities, From the moral point of view, war is often a beneficent scourge.

If we compare the wars of modern times with the wars of the past, the characteristic which strikes us first and most forcibly is the difference in their length and duration. The time spent by the Greeks before Troy, the prolonged campaigns of the Crusades, and, coming to later times, the "Wars of the Roses," the " Seven Years' War," and even the Peninsular War, were measured by years and not by months or weeks, as is the case in wars of modern times. The Franco-Prussian, the Russo-Turk, the Japan-China wars were all over and decided in a space of time which would hardly have sufficed for the preliminary skirmishes of a war in the Middle Ages. And the -most recent war-that on which our eyes and uninds have been fixed during the last few weeks-is only another instance of this characteristic of modern warfare.
Science will tell us that we owe this relief from a continuous state of warfare to its inventive power, but the question we should like to ask of Science (or of anybody who will answer it)' is this- What have we gained by the change?

We owe a great deal to Science. It has obliterated distance, facilitated locomotion, rendered a hundred services to the spread of comfort and luxury, but is it not true that the price has been "the pound of flesh"? The enormous armaments, or huge fleets which are maintained by all civilized nations at immense expense, which are maintained on a war basis for years together, this burden alone is, from an economic point of view, as bad or worse than a prolonged war fought out in the good old-fashioned style of "'summer campaigns and winter feasting." But it is the nervous strain which is the heaviest debt that humanity pays to modern Science. The war-cloud hangs like a nightmare upon the life of nations, and communicates itself in strange feelings of terror to individual citizens. We feel it less in our sea-girt islands than men do on the continent of Europe, but we feel the strain sufficiently to sympathize with our Continental neighbours. Is it not more terrible to live under the constant dread of an impending shock which may destroy an empire it has taken centuries to build, or ruin a prosperity it has taken decades of thrift and industry to securemore terrible this than to face the possibilities of even a prolonged combat in which there was much to excite the imagination and much to satisfy the natural fighting instincts of humanity, in which there were chivalrous deeds to be done and knightly honours to be gained under the eye of some feudal chieftain or of some heroic king?

War is no longer the growth of the dominion of the strong; it is a cataclysm which threatens strong and weak together, and the nervous stmin which
scientific warfare creates even in times of peace, is the bitterest tax whiclt we have to pay for our civilization.
Warmeck, PERKin, a Flemish Jew's son, was the 'pretender' whom Margaret, Dowager-Duchess of Jurgundy, recognized as her nephew, Richard of York, who had been murdered in the Tower. Warbeck made many attempts to gain the English throne, but he was executed in 1499 .
Warburton, William, D.D., the English prelate, was born in 1698 . He was brought up to the law but took deacon's orders in 1723. In 1727 lie wrote the "Causes of Prodigies and Miracles"; but his first important work, the "Alliance between Clurch and State" was published in 1736. His great work, "The Divine Legation of Moses" was assailed in many quarters. In 1246 he became preacher to the society of Lincoln's Inn, and Bishop of Gloucester in 1759.
Ward, Genievieve, the actress, was born in New York, but was trained in Paris. She appeared under the name of 'Madame Guenabella' at Covent Garden Theatre as a singer, but changed from the lyric to the tragic stage in 1872. Her first great success in London was in "Forget-Mc-Not."
WARD, MRS. IUMPHREY, the authoress of the tedious homily of "Robert Eismere," is a daughter of Thomas Arnold, who was the son of Dr. Arnold of Rugby, and the brother of Matthew Arnold. She is Secretary of "University Hall Settlement." She published "David Grieve" in 18g2, "Marcella" in 1894, and its sequel, "Sir George Tressady," in 1896.

WARMING. Warm-blooded animals require for health a certain temperature of body which varies very slightly. If the extemal temperature becomes too high, that of the body can be regulated by perspiration, etc. ; if the external temperature becomes too low, that of the body can be raised by exercise. As, however, men are too busy to be always taking such exercise, and as the various pursuits of business men keep them more or less stationary, artificial aids to warmth have to be adopted-clothing, houses, and fires.
WARNER, SUSAN, the American authoress, was bom in 1819, and published her first novel, "The Wide, Wide World," in 185I, under the nom de phume of "Elizabeth Wetherell." It proved the most successful of all American stories except the immortal "Uncle! Tom's Cabin." She published "Queechy" in 1852, and died in 1885.
WARRANT-OFFICERS are of three classes-gunners, boatswains, and carpenters, and under ordinary circumstances the rank of gunner is the highest to which ordinary seamen can rise. The pay varies from 5s. 6d. to 9s. a day, and there may be extras for performing special duties. Most of the warrantofficers of the present day are highly educated and very efficient, and their numbers have been raised from one of each class for each ship to four or five, and a certain proportion of them are appointed to command torpedo boats. They are occasionally raised to the rank of lieutenant, and are more often allowed to assume that rank on their retirement. In the Navy they rank with, but before, midshipmen; they can rise to a pension of $£ 150$ a year, and their widows are also entitled to a pension.
WARTON, JOSEPH, the headmaster of Winchester College from 1766 to 1793, was a friend of Dr. Johnson and a member of the famous Literary Club. His " Odes" marked the reaction against Pope's poetical school, and his "Essay on the Writings and Genius of Pope" marked an important departure in literary criticism. In it there is the distinction between the poetry of reason and that of fancy:
WARTON, THOMAS, the brother of the above, was also a member of the Literary Club. His great work was the "History of English Poetry," which appeared between 1774 and 1781, and which procured him the doubtful honour of the Poet Laureateship on the death of Whitehead.
WARWICK CASTLE was one of the castles that were built by Alfred the Great's famous daughter, Ethelfleda, the Lady of the Mercians; to protect her
possessions Mrainst the Danes; but nothing remains of her origrinall buildimg. The ofdest existing portions are the Cilesar's Tower aud Guy's tower, the later being as late as I39t. Its great hall was destroyerl by fire in 187 r . It is one of the very few feudal residences which are still inhabited.
WAKWICK' 'HEKMNG-MAKER' was born in 1428, the eldest son of the Earl of Sulisbury: Ile gained his nanse by the enonnous Inflisence which he had on the fortunes of the rival parties during the Wars of the Koses. It was he who gave the order to 'spare the people, but slay their leaders -which lad sucla treniendous effect on the social politics of Henry V11.'s reign. He was killed on Barnet field in I471. partly through the treachery of his son-in-law Clarence -'perjured Clarence.' Lord Lytton's "Last of the Baruns "o is not serious history; but does give some islea of the spirit of the age.
Washingron, Geokge, the hero of American Inde. pendence, and fatser of the Republic, was born in 1732. His great-grandfather, Joln Washington, emigrated from England in 1657. In 1751 Washington became Adjutant-General of Virginia Militia, and though he was forced to capitulate to a superior Irrench army in 1754, he made a splendid Cormmander-in-Clief during the War of Independence. When the peace was signed in 1783, he retired, refusing all reward except the payment of his personal expenses. In 1789 he was elected the first Yresident of the Republic, and again in 1793, resigning in 1797; but when further trouble with France threatened, he became Lieutenant-Gencral of the Forces. He died in 1799.
Wasp-Stivgs are inflicted by the ovi-positor organ, which is not possessed by the males at all.
Waste Lands, ie. uncultivated lands which cannot be cultivated profitably, are of very great extent, even in the British Isles. Of the total area-about $7^{8,000,000}$ acres-only 48,000,000 acres are arable or improved pastrre. The waste lands are generally mountains in Scotland, and bogs in Ireland, and claalk dowus in England. A large area of waste land has been reclaimed in recent times, especially by the Duke of Sutherland, who between 1870 and 1880 spent nearly 6200,000 in reclaiming land In Sutherlandshire alone; but at present agricultural science has not been taken to such a pitch of perfection as to make rectamation a financial success. Drainage, irrigation, cultivation, etc., must all make great strides before success can be even hoped for; but progress has certainly been made, especially in the choosing of appropriate seed.
WASTE PRODUCTS are products for which at present we have no use. Many of the large fortunes of todlay are being made by the utilization of 'waste products: and this will be more and more the case as scientific knowledge is increased. For instance, 'waste silk ' is now a really valuable material ; rags make paper, coal dust makes briquettes, slag is made into bricks, etc. Besides these obvious instances, there are innumerable others less well known, and the number is increasing daily. Thus waste-silk becomes the raw material of the spun-silk industry; and imperfect cocoons become the raw material of the artificial flower industry in Venice, Italy being now the largest producer of cocoons in the world after China. So, the parings of horns and hoofs and other 'waste' animal products make prussiate of potash.
Watch. Till: was first invented at Nurnberg in the end of the 15 thi century, and Dr. Hooke invented the spiral hair-spring for it about 1658 . Cheap watches are now made by machinery in Switzerland, France, Gerinaty, England, and the United States.
WATER IN WOODS varies from a percentage of 26 in willow and 28 in mountain ash to 45 in red pine and $48 \frac{1}{2}$ in larch. Thls, of course, causes a great difference of weight between green and seasoned wood. For instance, a cubic foot of ash weighs about 58 lls . green and 50 lbs . seasoned ; pine weighs about 45 lbs , green and 3 r lbs. seasoned.
WATER IN FOODS varies froin a percentage of 5 ln sugar, 13 in rice, and 15 in oatmeal or butter, to 74 in poultry, 78 in eggs, and 9 I in cabbage, etc.

WATER COLOURS are a mixture of colouring suls. stances (in the form of a fine powder) with grma arabic or some other soluble gum. When they are 'moist' there is also honey or glycerine in them. Of courses all water-colours dry quickly, which makes then adapted to rapicl work ; and, even when the colour is opaque (i.e. Chinese white is mixed with light colours to give then body), the result is more trans. parent than any oil-painting. It was in Englankl that water-colour painting was first really developed into an art-in the hands of Girtin and Turner. In the illumination of the old missals the water-colours were all opaque.
Waterfalis are of two great kinds-IIgluland and Lowland. The ilightand falls are only found in valleys composed of hard rock, for wherever the rock is soft, the water soon wears out a ravine; and they are generally pretty and picturesque, but the volume of water is generally very small, though the height of the fall may be considerable. Moreover, these 'mountain' or 'Highland "falls change in vol me very greatly, almost running dry in summer and beconing a muddy torrent in winter. Lowland alls are not nearly so common, ausl not often very ligh, but their volume of water is sometimes enormous. They occur generally where a large river 'drops: from a high rocky plateau to a lower-and perhaps softer-one. If the rocks are the saine harthess from top to , bottom of the fall, the fall will become really a succession of falls. But where the lower strata are softer than the ingher-as at Niagarathey will get worn awny, and the fall will be perpendicular or even overhanging. By degrees the overhanging portion gets too heavy, and drops into the whirlpool below. Among the great falls of the world are the Grand Falls of Labrador (2000 feet), the Kukenam Fall in Guiana ( 1500 feet), the Victoria falls on the Zambesi ( 400 feet), and Niagara ( 69 feet). Besicles these there are several well-known falls of very great "aggregate " height, but they take more than one plunge. For instance, the Yosemite Fall takes three plunges in 2660 feet; the Rosario Fail in Guiana takes two plunges in 2000 fcet ; the Sutherland Falls in New Zealand take three in 1904 fcet; and Foyers, the highest in the United Kingdom, takes two in 205 feet.
Waterford, Louisa, Marchioness of, was born in 1818, and died in 1891. She was ranked by so great an authority as Mr. G. F. Watts as one of the real artists of the century-on the strength of her pictures "Spring" and "Chiristmas" and her book ilnstrations. A large number of her drawings were exhibited in London in r8ge.
Waterloo, The Battie of, was fought onl June 38th, 1815. Wellington had collectcd 50,000 infantry, 12,400 horse, and about 150 guns on the low ridge which crosses the Charleroi Road, II miles south of Brussels. Of this collection only one-third were British, and of that one-third many were raw levies; the other twothirds were mainly Dutch-Belgians, and sympathized more or less witly the French. About 85,000 men were deployed along the main ridge, which was not entrenched, and as many more formed a second line. Abont 14,000 were kept in reserve in two groups, and 6000 held the important advanced posts of Hougomont, La Haye Sainte, Papelotte, etc. $A$ bout 4000 horse were held in reserve, and the rest were posted on the left flank and behind the centre and right. One-third of the gunswere kept in rcserve, one-third were in action in the very front, and the remaining third supported the rear of the centre and right. The right was strong as long as, but only as long as, the Iougomont post was held, hut the left was weak; but that was the side towards which the Prussians were approaching from Wavre.

The French were about 6i,ooo strong altogether, and occupied a similar ridgeopposite. In front were 31,000 foot, in two lines, with 1700 horse on cach flank. In the rear of the centre was in rescrve of 10,000 (horse, foot, and guns), and behind that was another reserve of Ir,ooo, composed of the Imperial Guard, About 5200 horse were massed, in two bodies, behind the nuatr line of foot. Of the guns-
about 250 in number altogether- 84 were placed im front of the main line of foot, about 100 were held in reserve, and the rest were with the cavalry behind the right and left centre. The men were all veterans, and all French.

Heavy rain had been falling for hours, but ceased abont $4 o^{\prime}$ clock in the morning, and Wellington expected the battle to beggin every minute. Napoleon waited till nearly mid-clay, however, because he was told that the guns could not be noved till the ground had dried a little; and the delay sealed his fate. thongll it also clelayed the arrival of the Prussians by several hours.

The hottest fighting took place for the possession of Hougomont and La Haye Sainte. The former was held by the British throughout the whole day, but the latter was captured by Ney about $6 \mathrm{p} . \mathrm{m}$.
The Imperial Guard charged in two columins abont 7.30 p.m. One column was shattered by the English guards, and the other by Adan's light brigade, supported by the guards.

The allies lost about $22,500 \mathrm{men}$, of whom 7000 were Prussians ; the French lost 32,000 , including prisoners.

The most critical moment of the day was about two o'clock, when the flight of a Belgian brigade left Picton's weak division to bear unsupported the attack of the heavy French columns, but the Household Brigade and Ponsonby's came to the rescue.
WATER-POWER is a very convenient, though an inaccurate, name for the transmission power of water, i.e. the utilization of falling water by mechanical appliances for inclustrial purposes. This is one of the most ancient of all engincering contrivances, having been in use on the Nile and on the Euphrates for irrigation centuries before the birth of Christ; but the first real hydraulic machinery was made in Alexandria about 120 B.C., when Ctesibius and Hero invented siphons, force-pumps, etc.
WATER-SUPPLY is a matter of vital inportance in these days of huge cities like London and Glasgow. The sun converts the sea-water into vapour, and the winds carry this vapour inland, where it is condensed again into water-but fresh water. The quality of this 'fresh' water depends upon the soil into whicl it falls, and from which it dissolves all sorts of elements. Whatever the ordinary quality, it ought to be filtered, in case of occasional or accidental impurity. Further, if the water contains hard properties, such as magnesia or carbonate of lime, it requires to be softened. On the score of health, there is little to choose between hard and soft water; but hard water is the pleasanter to drink, and soft is the better for ordinary use, especially in manufactures. Soft water is also more liable to cause lead-poisoning.
The distribution of the water is done in one of two systems-the intermittent and the constant. The former requires that every house shall have a reservoir large enougli to collect during the time of flowsay three hours out of the twenty-four-enough to supply the house for the rest of the day. Its advantages are-(i) that a more unifom pressure can be maintained, and (z) that a low district cannot 'rob' water from a higher district. Its disadvar::- تres are-(I) the number of turncocks and attend its that are needed, (z) the chance of delay in turni:ng on the water in case of fire, and (3) the fouling of the cisterns.

On the 'constant 'system cisterns can be entirely dispensed with, but the disadvantages are great-for instance ( $\mathbf{r}$ ) careless people will leave taps running, (2) the bursting of a main may leave whole strects without a drop of water, (3) the heavy drain of the mains at certain hours causes high-lying districts to be sacrificed to low-lying. In the best regulated cities there are, however, 'zones of level,' so that one level cannot be sacrificed to another; and the domestic supply is provided both from a service. pipe (for drinking and cooking) and from cisterns (for other purposes).

The distribution should be carefully regulated under the three heads of domestic, municipal, and industrial purposes. For domestic and ordinary municipal purposes (such as road-watering, drainflushing, fires, etc.), an average of twenty-fivo gallonis
a day ought to les ample; and the only difficulty is to guarantee the supply. Isut in industrial centres the average may be twice as great. In nearly all cases there is a considerable anlount of wastenanounting in Philidelphia in 1890 to about sixty yullons per head of population-an appalling amount; and sonte very ingenious instruments lave been ilivented-one by Mr. G. F. Deacon of Liverpoolfor detecting waste.

The charge is cither by meter, according to the quantity consumed-which is the only fair way of charging for industrial purposes-or by rate on the value of the houses. The london water-supply is probably unique for cost and badness,
WATKIN, SIR EDWARD, the faddist, was born in 18r9, and was brought up in his father's counting. house in Salford. In 1845 he becane secretary io the Trent Valley Railway Company, and since then has been director or manager of several important raihvays, including the South-Eastern, one of the worst railways in England. He was made a baronet in 1880, He is a supporter of the Channel Tunnel and numerous other fads, inclinding the erection of an English Eiffel Tower on the Wembly Park Estate, near Harrow.
WArling STREET was the great Roman road from Dover through Canterbury and London to Chester, with branches to York and Carlisle. It was the line of division between the Danes and the Saxons in Alfred the Great's fanous treaty with Guthrum, and it is still the boundary between the counties of Warwick and Leicester. Numerous traces still remain of it, including portions of highway and a street in London.
WATT, JAMES, the celebrated improver of the steamengine, was born in $\mathbf{1 7 3 6}^{7}$. In 1757 he was appointed mathematical instrument maker to Glasgow University, living within its walls till 1763 , when he moved into the town, and acted as civil engineer till 1774. Then he joined the firm of Boulton \& Watt at Soho, Birmingham, till 1800 , in order to give his inventions practical form. He was a Fellow of the Royal Societies of London and Edinburgh. He invented or improved other mechanical appliances besides the steam-engine, including a letter copying press.
Watteau, JEan, the Frencli painter, was born in 1684. In 1702 he went to Paris and eamed his bread as a decorative painter, but he gradually won fame, and in 1717 was received at the Academy, and enrolled as a painter of fetes galantes, or pleasure parties, balls, etc., subjects in which he excelled.
WATTS, GEORGE FREDERICR, R.A., the democratic English artist, was bom in 1820 . He first exhibited at the Royal Academy in 1837. In 1842 he won prizes from the Commissioners for the decoration of the liouses of Parliament, for his cartoon of "Caractacus," and or "Alfred Inciting the Sazons to Maritime Enterprise." Some of his best pictures are "Sir Galahad." "Love and Death," "Happy Warrior," "Hope," ". The Angel of Death. "etc. He has also painted portraits of Tennyson, Milais, Lord Leighton, Cardinal Manning, Browning, etc. He is probably the greatest idealist in contemporary British Art, having specialized in ideal subjects. He has presented some of his most celebrated pictures to the nation; c.g. "The Court of Death." which he gave to a pauper cemetery. He lias refused three offers of a baronetcy.
WATTS, DR, ISAAC, the hymn-writer, was bom in 1674, the son of a Southampton schoolmaster. For thirty-six years he lived in Sir Thomas Abney's house at Theobalds. He was practically a dwarf and an invalid, but his senmons were rery fanous. Anongst the yards of bald metrical 'prose' and irritating platitudes that he wrote are some really magnificent hyinns, such as "There is a Land of "ure Delight," "Jesus shall Reign where'er the Sun," "When I Survey the Wondrous Cross," "O God, our Help in Ages Past." etc. He was given his D. D. degree by the University of Edinburgh in $1 ; 28$, and died in 1748.
WATTS, THEODORE, the poet and critic, was born in 1836. He was an intimate friend of Tennyson. Browning, and Rossetti, and has written some beau-
tiful sonnets and other poems; e.g. "The Burden of the Armada"; but unfortunately his devotion to periodical literature seems to have monopolized his powers so entirely that his fame will never be equal to his deserts. His prose is as good as his poetry, and he has an immense range of subjects.
WAUGH, EDWIN, the Lancashire poet, was born in 1817, and died in r890. He was apprenticed as a boy to a bookseller, and afterwards devoted himself to literature, becoming president of the Manchester Literary Club. Mis first sketches of Lancashire life appeared in the "Manchester Examiner," and antong his best prose works are the "Besom Ben Stories," "The Chimney Corner," and "Tufs of Heather." 11 is poetry, however, is better than his prose. His "Lancashire Songs" were first collected in 1859.
Wares are agitations of surface water owing to wind, and are very slightly progressive as a rule. During heavy gales the wares of the Atlantic are from 24 to 36 feet high, half being above and half below the ordinaty sea level. In a terrific storm they may increase to 45 feet, in which case they will measure about 200 yards from crest to crest, and may be driven along at a rate of nearly thirty miles an hour.
Wax is the name given to certain substances of very different origin-animal, vegetable, and mineral; c.g. bees'-wax, palm-wax, and ozokerite. The bees'wax is of an impure yellowish colour in the natural state after it has been collected from the boiled honeycomb, and therefore for many purposes it has to be bleached. Only solar bleaching will suit wax that is going to be made into candles, but wax can be bleached for other purposes by chemicals. Wax was very important in 'classical " times for facing the writing tablets and for modelling, and the latter use has been perpetuated by establishments like Mndame Tussaud's, and in tailor's' dummies.' So-called 'wax' candles are very generally made of such cheap substitutes as stearin and cerosin on the continent, but in Great Britain most are made of paraffin.
WAYLAND THE SMITH, the hero of the Teutonic sagas, was a mythical demi-god corresponding to the great Hephaestus and Daedalus. He was apprenticed to the famous smith Mimir, and married a Valkyrie. Sir Walter Scott has immortalized ' Wayland Smith's Cave" in "Kenilworth" as the old monu* ment near the White Horse in Berkshire. The smith was said to have manufactured a feather robe, in which he could fly. The various old legends about him have been collected and woven into an artistic unity in Sinurock's "Wieland der Schmied," which appeared in 1835.
Ways and means, Comsittee of, considers any proposal about old or new taxes and ciuties, and votes sums of money from the Consolidated Fund to maintain the annual services.
Wazipis are an Afghan hill tribe that inhabit the highlands along the western frontier of the Punjab.
WEALTH is really anything which has an exchange value, and is in the form., the amount, and the place in which it is wanted. But wealth in ordinary parlance is used in the sense of income, and the distribution of it in Great Britain is interesting. The number of Incomes from firs to $£ 500$ a year is about 350.000 , from £500 to $£ 1000$ about 32,000 , from $£ 1000$ to $£ 5000$ about 20,000 , and over $£ 5000$ about 3000 . That is to say, the enormous fortunes are in the hands of a very few, and the spread of municipal socialism has been greatly speeded by the operations of private concerns of a huge size. It seems curions that so many people should make material wealth their ideal and goal in life, when they must know that it is limited in supply, and that, if they get it to excess, some one else must go without it. On the other hand, all the wealth which is ' not made with hands.' is not limited; and the more each of us has-c.g. of knowlelge, tcisure, health, etc.- the more we can give to or share with our neighbours.
According to the list which Mr. H. S. MacLaughlan prepared for the "Contemporary Review," thirty two millionaires died in the ten years $1887 \cdot 1896$, leaving an aggregate personalty of $<51,670,000$. The follow. ing list gives their names, the source of their wealtl, and the amount 'in thousandse' Tho list only
includes two landowners because of the delicate distinctions between realty and personalty in the United Kingdons. Territorial magnates like the Duke of Devonshire or the Duke of Bedford have comparatively small personalty :-

| Baron Hermann de Stern, funacier, | L3.544 |
| :---: | :---: |
| IIugh M'Calmont, stockbroker, | 3, 195 |
| Sir A. 13. Walker, Bt., brewe | 2,876 |
| John Ryland, Manchester | 2,574 |
| Sir Robert Loder, Bt., Russia | 2.500 |
| Junius S. Morgan, banker, | 2,022 |
| And. Montague, landowner, | 1,992 |
| Fk. Clarke [lills, chemical, | 1,942 |
| Sir Ch. Booth, 13t., distiller, | 1,907 |
| Lord Wolverton, Glyn's Bank, | 1,820 |
| Earl of Derby, ground landlord, | 1,802 |
| W. 11. Sinith, newsagent, | 1,764 |
| C. H. Strutt, cottonspinner, | 1,62x |
| Duke of Cleveland, mineral royaltie | I, 440 |
| C. R. M. Talbot, mineral royalties, | 1,399 |
| Baron Hirsch, financier, | 1,372 |
| Nathaniel Clayton, engine-builde | 1,364 |
| Duke of Sutherland, mineral roy | 1,275 |
| Roger Cunliffe, bill discounter, | 1,184 |
| Samuel Fielden, cottonspinner, | 1,170 |
| Algernon Peckover, banker, | r,163 |
| S. H. Thompson, banker, | 1,133 |
| Christian Alhusen, chemical, | 1,128 |
| John Bullough, machinist, | r,09r |
| Henry Page, maltster, | 1,078 |
| Sir Arch. Urr-Ewing, Bt., dyer | 1,077 |
| Sir William Pearce, Bt., shipbuilder, | 1,069 |
| Sir Richard Wallace, Bt., landowner, | 1,055 |
| H. A. Brassey, contractor, | 1,042 |
| Sir John Hardy, Bt., ironmaster, | 1,023 |
| Sir William Miller, Bt., merchant, | 1,023 |
| Sir Gilbert Greenall, Bt., brewer, | 1,01 |

Weather Wismom. (See Rainbow above.) A rosysky at sunset means fine weather, in the morning strong wind. A high dawn also indicates wind, a low dawn fine weather. Hard-edged, oily-looking clouds also indicate wind, and generally the softer the clouds look the less wind there will be. Soft clouds, however, are generally forerunners of rain. Light, delicate-tinted clouds at great heights mean always fine weather ; gaudy, strong-coloured clouds at low heights mean wind and rain. Owls and other nightbirds are 'noisy' before fine weather, and sea-birds fly out early and far; parrots are ' noisy' before rain, and long-flighted birds, e.g. rooks and swallows, hang about home and fly up and dows near the ground. Sugar hardens before frost or fine weather, and gets soft before rain or snow.
WEBER, KARL, BARON VON, the German composer, was born in 1786. In r8co he wrote his opera "Waldmädchen " (Wood-Maiden), which was performed at Chemnitz and Freiberg; and in 1803 he went to Vienna, and met Haydn and the Abbe Vogler. In 181.3.16 he was director of the opera at Prague, and he then settled in Dresden, where he founded and directed the German opera. In 1820 he brought out his best work, "Der Freischütz," at Berlin, and in 1822 "Euryanthe" was performed at Vienna. In 1826 "Oberon" was performed at Covent Garden Theatre, London, and was enthusiastically received; but Weber died that year.
Webster, DANiEL, the American statesman, was horn in 1782, In 1813 he was returned to Congress by the Federal Party in New Hampshire, and from that time hè distinguished himself as statesman and orator. He was Senator in 1828, and in 1841 Secretary of State, when he helped to arrange the Ashburton Treaty of $\mathbf{1 8 4 2}$. He was opposed to the admission of Texas as a slave State and to the Mexican War. In 1850 he became Secretary of State for Foreign Affairs, and died in 1852 . His speeches, State papers, and correspondence have been published. He was the greatest American orator.
Webster, NOAH, the lexicographer, was born in 1758, and served under his father in the War of Indes pendence. After graduating at Yale Coliege in 1778 , he took to teaching, and between 1283 and 1785 publlshed his fannous "Grammatical Institute of the

English Langulage," the spelling.book part of which was an immedtate and immense success. In fact, he and his fanily lived for twenty years on the royalties off that one book-though he got less than one cent. per copy. He published his "Philosophical and Practical English Grammar " in 1807, and his famous Dictionary about 20 years later.
Weuding Ceremonies are of very various kinds in different grades of national civilization and in different climates, and most of thenn contain relics of very old customs. Originally marriage was a capture, then a matter of purchase; it is always a matter of sexual intercourse or of living together. Religious rites did not exist in connection with marriage amongst the ancient Jews, but were gradually added to give sanction, as the early Church regarded marriage simply as a concession to human weakness. The modern ceremonies usually contain some symbols of these old customs. For instance, the bridegroom 'captures' the bride by taking her hand, for which he needs the help of a best man; he 'buys' her with a ring; rice is thrown as a symbol of fertility; knots and favours are symbolical of indissoluble unity: presents are the survival of the setting up of a new establishment when payments were made "in kind '; broken glass is strewn in front of the bride to warm her against thinking that her life is to be all a bed of roses; the little figures on the wedding cake represent Jupiter, the pontifex, the flamen Dialis, and the ten witnesses; Friday is the luckiest day of the week for a wedding because it is the day of 'Frija,' the goddess of 'friendship' and love.
WEDGWOOD, JOSIAH, the celebrated potter, was born in 1730 . He was in his brother's factory, but having to submit to the amputation of a leg (the result of small-pox), he left it, and went to Stoke, where he won a reputation for ornamental pottery. In 1759 he set up a manufactory of his own at Burslem, and began to make the cream-coloured ware for which he is famous. His reproduction of the Portland Vase is famous. He practically created the Staffordshire Potteries' trade.
WEDMORE, PEACE OF, was the famous treaty made by Alfred the Great with the Danes, by which he gave up to them the eastern portion of his kingdom, on condition that they should become Christians and vassals to him. It was apparently an act of weakness, but really a most wise one, as it gave him time to consolidate his own part of the kingdom, and to develop both his army and his navy. The wisdom of the policy was shown by his son's complete conquest of England, and the submission to him even of Scotland and Wales as 'their father and lord.'
WEDNESDAY is Woden's-day, the day of the god of battle-rage. The Romans called it the day of Mercury.
WEEDS do harm to a garden in two ways; they exhaust the soil and they choke the plants. The most fertile source of a weed plague is a dirty hedge, and the easiest way of getting rid of most weeds is to have them up before they seed. Perennial weeds, such as couch grass, are more difficult, and really require careful digging up by hand so as to extract the root.
WEEK was probably to start with simply a convenient 'quarter' of a lunar month, and had nothing ceremonial or religious about it. Indeed, the Creation as recorded in the Book of Genesis was completed in 'six' days, but the number 'seven' was symbolical. The seven-days' week was imported from Alexandria into Greece, along with the names of the days, and into Italy about the time of Christ. The Greeks had previously divided the month into three sets of ten days, and the Romans into sets of eight days-three-and-a-half sets making the lunar month. The Jews, Arabs, and early Christians did not name the days, but numbered them from the Sabbath, as the Greeks, Slavs, and Finns still do. Most Quakers do the same, as they disapprove of the heathen names in ordinary use.
Weights and measures were originally derlved from the common objects in use-c.g. the palm, the foot, the cubit (or lower arm) ; so too a 'yard' was literally 'any walking•stick,' and a 'gallon' was 'any
ordinary pot-bellied jus,' ${ }^{\text {a ' furlong' was ' any ordinary }}$ furrowlong, etc. Henry VII. Made a stand ard yard of ${ }^{36}$ Inclies, but the standard kept in the Ifouses of Parlinment was lost in the fire of 1834 , and had to be replaced. A cubic 'foot' of water weighed a talent, and as the 'foot' varied a little in size, the talent varied also. The Alexandrine silver talent was divided into sixty parts, and cach part weighed $x$ lb., and Ib . weight of silver was the original form of what we now call $£$ I.
WEISMAN, AUGUST, the famous biologist, was born in 1834 , and studied medicine at Gottingen. In 1860 he was appointed physician to the Arch-Duke Stephen of Austria, and this appointment gave him time for zoological study, the first result of which was his treatise on "The Development of the Diptera." He so injured his sight by his close microscopical work that he had to abandon it, and turned his attention to the variability of organis!n, studying specially caterpillars and other insects which exlibit metamorphosis. The results appeared (in English) in $\mathbf{1 8 8 2}$ under the title of "Stucies in the Theory of Descent." But his famous work is his "Essays on Heredity and Kindred Biological Problems," in which he answers the question: " Llow is it that a single cell of the body can contain within itself all the hereditary tendencies of the whole organism?" He denies that characteristics acquired by the individual are transmitted to offspring, and that death is a primary attribute of living matter. The Protozoon, or one-celled organism, multiplies ad infinitum by sub-division, in which there is no process analogous to death. There is unlimited persistence of the individual. Death is the penalty paid for complexity of structure. Heredity is secured by the transference from one generation to another of a definite chemical and molecular substance; and variations are due to sexual conjugation, not to environment nor to use or disuse of organs.
Welbeck Abbey, the seat of the Dukes of Portland, is in Nottinghamshire, and it was to the fifth Duke that it owed the construction in 1864 of the semiunderground picture-gallery, ball-room, and ridingschool.
Welding cannot be done until the iron or steel has been raised to a' white' heat. (See TEmpERATURE AND Colour above.)
Wellesley, Richard, MarQuis, the brother of the great Duke of Wellington, was an excellent classical scholar, and showed great skill in governing India, the foundations of British Indiabeing securely laid during his administration. He cleared out the French from the Peninsula, and crushed Tippoo Saib, and-with the aid of his brother-quelled the great Mahratta rebellion. He became Lord-Lieutenant of Ireland in 182 I .
WELIINGTON, ARTHUR, DUKE OF, was born in 1759 . In $1794-95$ he served in Flanders, and then in 1796 went to Bengal just as war was declared against Tippoo Saib. In 1799 he was appointed to the.administration of Mysore, and, becoming major-general in 1802, commanded to help the Mahrattas, and aftervards to subdue them. After being in England from 1805 to 1809 , he took chief command in the Peninsula, opening the campaign with the famous passage of the Douro and the victory at Talavera In $18 \times 0$ the battle of Busaco was followed by the well-known defence of the lines of Torres Vedras, and in 18 y he won the battle of Salamanca. In 88 x 3 he became field-marshal, and in 1814 routed Soult's best troops at Toulouse ; and soon after Napoleon abdicated, In 1855 he won Waterloo, and, returning to England, became Premier in 1828, having entered Lord Liverpool's cabinet in 1829 . In 1832 his life was endangered because of his opposition to reform; but he was in office, under Sir Robert Peel, in 1834-41, and again in 1846. He died in $\mathbf{1 8 5 2}$. Napier wrote a history of his Peninsular campaigns, and Gleiga a history of his life. (See Waterloo above.)
Wellington College was founded in 1853 in memory of 'the great Duke,' and offers ninets scholarships to the sons of deceased officers. Successful competitors are educated for $£ x 0$ a year.
WELLS, CHARLES JEREMIAR, the strangcly neg-

## GENERAL KNOWLEDGE.

lected poet, was born in 5800 , and was a schoolfellow of Keats. In 1824 he produced the almost unread, but magnificent, dramatic poem of "Joscpla ancl his Brethren." According to no less a critic than Mr. Sivinburne, the heroinc, Pliraxanor, is second only to Shakcspeare's "Cleopatra." He diod in 1879.
