

# Land Snails from Nelson/Marlborough Conservancy

These snail species were among those collected in pitfall-flight-intercept traps in Nelson/Marlborough Conservancy in the summers of 2003/04 to 2005/06. They represent a small sample of the (probably) 2000 species occurring in New Zealand, of which only about 500 have been named. It is thought that New Zealand may have 3–5 times the snail diversity of most other countries in the world,

when calculated on a per unit area basis.

Names such as 'Punctidae SPP2K n. sp. 50' refer to the 'Species 2000 List' of currently unnamed species.

Scale bar = 1 mm.
