Angelcare ac401 baby monitor instruction manual

Angel care baby monitor ac401 instructions.

Angelcare baby monitor.

An Angelcare nanny is not your typical nanny. Instead of monitoring your baby's sounds remotely, the Angelcare monitor allows you to monitor your baby's actual breathing movements. When the monitor stops detecting movement, possibly because the baby is not breathing, an alarm sounds. Although the Angelcare monitor requires a little more work to set up and use than a traditional baby monitor, the process doesn't take much time. Prepare the sensor support. The sensor must rest on a completely flat and solid surface. If the base of the crib does not have this type of surface, place a thick sheet of plywood between the base of the crib and the mattress, covering the entire size. This will ensure that the sensor pad maintains sufficient contact with the mattress and baby's movements. Install the sensor pads under the mattress. With the printed side up, place the sensor under the mattress in the center of the crib. There should be no bedding between the mattress and the sensor pad. Fasten the sensor with a zipper. The sensor cable should go under the mattress and along the floor out of reach of the child.

Install the baby device. Connect the sensor cable and the power adapter cable to the baby unit. Plug the other end of the AC adapter into an electrical outlet. Also, put batteries in the device to provide a backup battery in case of a power outage. Install the older device. Connect the AC adapter to the parent device and plug the other end into a power outlet. Insert the batteries that came with the device. Before using the monitor, allow the device to charge for 15 consecutive hours according to the Angelcare monitor user manual. Child and parent unit settings. Turn on both devices. Program the desired functions. All functions can be found under the "Menu" button. You can view the different options by pressing the "Up" and "Down" arrows. Option canb "The Angelcare baby monitor is not a conventional baby monitor. Instead of just tracking your baby's sounds from a distance, the Angelcare baby monitor allows you to track your baby's actual breathing movements. If the baby monitor stops detecting movement, it may be because the baby is not breathing, an audible signal. While setting up an Angelcare monitor takes time and a little more work than a traditional baby monitor, the process doesn't take long. Prepare the cot for the sensor pad. The sensor pad should be placed completely on a flat, solid surface. If the bottom of the crib does not have such a surface, place a thick sheet of plywood between the base of the crib and the mattress to cover all dimensions. This ensures that the touchpad has good contact with the mattress and the baby's movement Place the sensor pads under the mattress. Place the sensor pad, printed side up, under the cot mattress in the center of the carrycot. There should be no padding between the mattress and the sensor pad. Secure the touchpad with a cable tie. The sensor cable must be routed under the mattress and along the floor so that it is out of the child's reach. Set up a kindergarten. Connect the converter and power supply cord to the crib. Plug the other end of the power adapter into a power outlet. Also, insert batteries into the device as a backup battery in case of a power failure. Set the parent partition. Plug the power adapter into the parent unit and the other end into a power outlet. Insert the batteries that came with the device. Before using the monitor, allow the device to charge continuously for 15 hours according to the Angelcare monitor user manual. Set up a kindergarten and a parent service. Turn on both devices. Program the desired functions. All functions can be found under the "Menu" button. You can see the different options by clicking "Up" for an alarm clock. The pre-chime should sound after 15 seconds and the full chime after five seconds. Place your hand back on the crib mattress and wait for the alarm to go off and the green light to flash again. If your Angelcare monitor is malfunctioning, refer to the Troubleshooting section of the Angelcare User Guide, make any appropriate changes, and retest the monitor until you are sure it is working properly. Although batteries are not included in the baby kit, it is recommended that you purchase your own batteries and use them in the event of a power outage. The Angelcare Monitor is not a medical device. The Angelcare Monitor should not be used as a substitute for proper parental supervision. Do not place the receiver near wireless devices or microwave ovens as this may interrupt signal transmission. Model AC401-AES 59FR 29EN 2 Programmed for sound and motion monitoring. The sensor mat will activate an alarm if no movement is detected. 01mf11_User_guide_AC401_NA_12009.indd 1 08/07/2015 03:33 PM Page 2 SUMMARY OF WARNINGS.....
