Foreword

This series documents the scientific basis for the evaluation of aquatic resources and ecosystems in Canada. As such, it addresses the issues of the day in the time frames required and the documents it contains are not intended as definitive statements on the subjects addressed but rather as progress reports on ongoing investigations.

Research documents are produced in the official language in which they are provided to the Secretariat.

ABSTRACT

This report provides an inventory, current to March 2004, of species that have been reported from the Tarium Niriyutait Marine Protected Area (MPA) in the Canadian Beaufort Sea – Mackenzie Delta. Species found outside the MPA but in water of the same depth (<5m) nearby are also listed.

Espèces vivant dans la zone de protection marine de Tarium Niriyutait, dans la partie canadienne de la mer de Beaufort – delta du fleuve Mackenzie

RÉSUMÉ

Ce rapport dresse l'inventaire, en date de mars 2004, des espèces qui ont été signalées dans la zone de protection marine (ZPM) de Tarium Niriyutait, dans la partie canadienne de la mer de Beaufort – delta du fleuve Mackenzie. Les espèces présentes en dehors de la ZPM, mais dans des eaux de la même profondeur (<5 m) situées à proximité de cette zone ont également été incluses dans la liste.

INTRODUCTION

The [Tarium Niriyutait Marine Protected Area](#) (TNMPA) was established on August 25, 2010 (SOR/2010-190) to conserve and protect important beluga (*Delphinapterus leucas*) summering habitats in the Mackenzie Delta-Beaufort Sea region. This is the first MPA in Arctic Canada and consists of three discrete areas, Niaqunnuq, Okeevik and Kittigaryuit (Figure 1). Together, this MPA encompasses about 1,800 km² of shallow, coastal marine habitat that is heavily used by belugas in summer for a range of activities vital to their life history. To conserve and protect these whales the ecological integrity of these areas must be maintained. This requires that other species in these habitats also be maintained and conserved to provide belugas with the resources they require. As such, the conservation objective of the Tarium Niriyutait MPA is ‘to conserve and protect Beluga Whales and other marine species (anadromous fishes, waterfowl and seabirds), their habitats and their supporting ecosystem’.

This report is an early step in the process to learn about the use of habitats in the MPA by marine species. It provides an inventory, current to March 2004, of species that have been reported from each MPA sub-area (Table 1). Because these areas are mostly <5 m deep, access by larger research vessels has been limited. This has limited knowledge of the marine biota and increases the likelihood that a species’ absence from the MPA may be an artefact of the limited research effort. To address this gap, species that are present outside the MPA but within the southern Beaufort Sea at the same depth range as the MPA (i.e., <5 m) are also identified.

The list also includes species that have been reported from deeper habitats by the Northern Oil and Gas Action Program (NOGAP; Hopky et al. 1994e), and birds that occur in nearby coastal areas (Alsop 2002). These species have not been denoted as present (P) but have been listed to facilitate future additions.

METHODS

Reference materials pertinent to this study were identified by searches of the Arctic Data Compilation Appraisal volumes for the Beaufort Sea (Harwood et al. 1986; Norton et al. 1987; Wainright et al. 1987; Woods and Smiley 1987; Ratynski et al. 1988; Stewart and Ratynski 1994), and by searches of Fisheries and Oceans Canada’s WAVES bibliographic database. A listing of marine species from the region held by the National Museum of Canada was also obtained. The searches are current to March 2004.

The list is not intended to provide an exhaustive list of reference material, rather to identify whether a species is present in a particular area. Consequently, once a species’ presence was documented only references that added significantly to the information were included. Promising reference material that was examined but did not include pertinent information is cited in Appendix 1.

The species identified from each of the three areas of the MPA are listed in Table 1. The main taxonomic divisions (Phylum, Class, Order, Family, Genus and Species) are provided where available but not all super and sub classifications (e.g., subclass, infraclass, superorder, suborder, infraorder, etc.). To facilitate future name checks and additions the list follows the hierarchical organization used by the [Integrated Taxonomic Information System](#) (ITIS). Within each Kingdom the Phyla or Divisions are listed alphabetical rather than by phylogenetic sequence; as are the Classes within each Phylum; the Orders within each Class; Families within each Order; Genera within each Family, and Species within each Genus.

Latin nomenclature used by the earlier studies has been updated where possible with revisions from ITIS or the [World Register of Marine Species](#) (WoRMS). Where the Latin names have been revised, the revised name is included in the table with an explanatory note in the comments. The English and French names are from ITIS or Nelson et al. (2004), and the Inuvialuktun names are from the Inuvialuit Harvest Study (2003). In some cases, the same Inuvialuktun name is used to refer to several closely-related species. Many small species lack common names.

In the original studies the sampling locations were not always identified by map coordinates, sometimes only with dots on a map. Consequently, species have been listed as present if the coordinates or dot appeared to occur within the MPA. Because sampling effort within the MPA has been limited, species that were present within the 5 m depth contour but not necessarily within any of the MPA areas were noted separately. The absence of these species from a particular area may be a sampling artefact.

Species that have been identified within the region but not within the 5 m contour in the immediate area of the MPA have also been included in Table 1. Their absence from the MPA may also be a sampling artefact, or it may be related to environmental conditions. In either case, their inclusion should facilitate future additions to the list and comparisons with other areas. The list includes the names of all of the organisms identified from the region during NOGAP Subprojects B.Z.1 and B.Z.3, which were conducted between 1984 to 1988 (Hopky et al. 1994e). It also includes waterbirds and shorebirds that have been identified from the region in the vicinity of the MPAs (Alsop 2002).

For each species, the reference citations and associated area within the MPA and/or 5 m bathymetric contour are listed. Capture methods are listed when available. Brief notes on seasonal habitat use have been included with mammal and bird species. Seasonal habitat use outside the open water season by other species is poorly known due to the difficulty of sampling in winter.

ACKNOWLEDGEMENTS

Fisheries and Oceans Canada (DFO) funded this project. Don Cobb of DFO Winnipeg was the Scientific Authority and provided the MPA map. Mike Lawrence of North/South Consultants Inc. provided advice and materials. The manuscript benefitted from constructive reviews by Don Cobb, Jeff Higdon and Wojtek Walkusz.

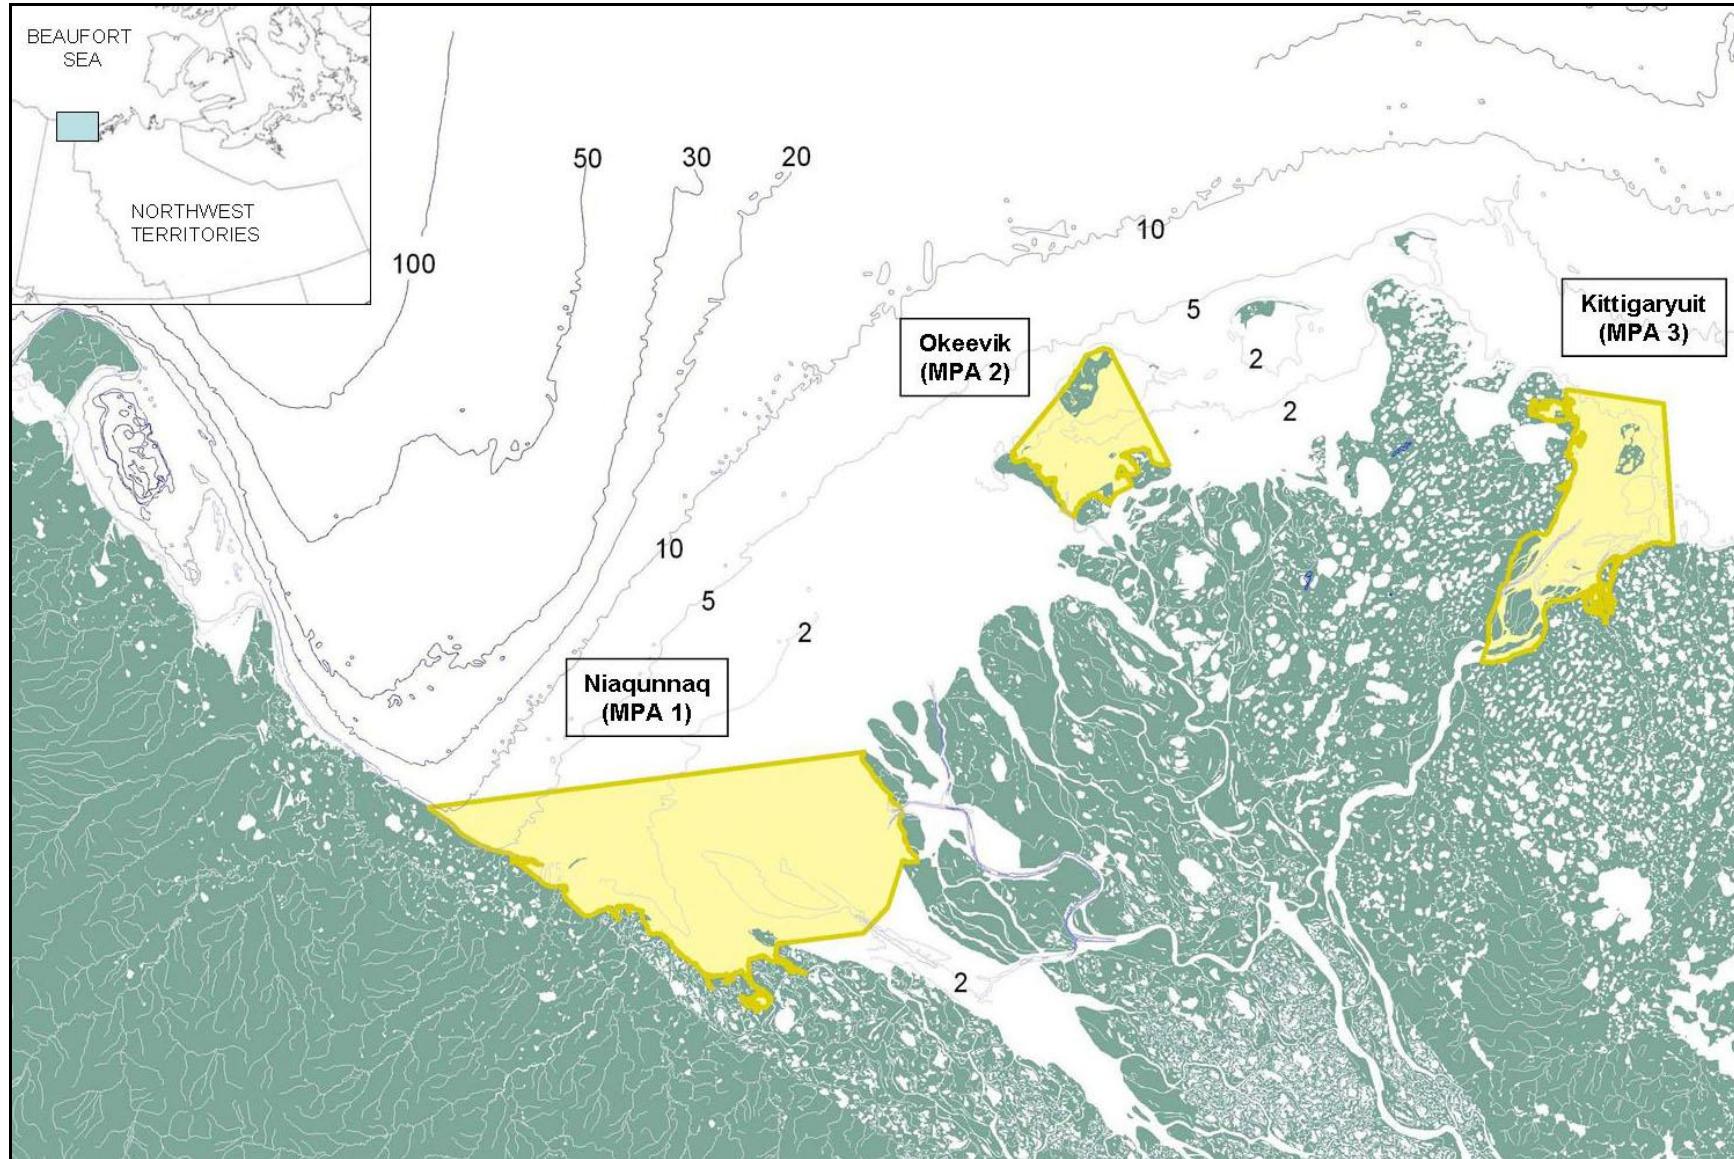

Figure 1. Map of the Tarium Niryutait Marine Protected Area (MPA) in the Canadian Beaufort Sea.

Table 1. Species reported from the Tarium Niryutait Marine Protected Area, or from nearby shallow coastal waters of the Canadian Beaufort Sea (<5 m depth). Taxa without species listed as present (P) were reported from other areas of the southern Beaufort Sea by the Northern Oil and Gas Action Program (NOGAP; Hopky et al. 1994e) or by Alsop (2002: birds). Organization of the table is discussed in text.

Family Ichneumonidae					P	Neuston tows (Hopky et al. 1994a: 5 m).
Superfamily Scolioidea						
Family Formicidae						
Order Lepidoptera						
Family Microlepidopterae						Not listed in ITIS.
<i>Microlepidoptera sp.</i>						Not listed in ITIS.
Family Gracillariidae						
Order Megaloptera						
Family Corydalidae						
Order Neuroptera						
Family Hemerobiidae						
Order Plecoptera				P		Bongo tows (KAVIK-AXYS Inc. 2004a: 5 m).
Family Perlodidae				P		Bongo nets (Hopky et al. 1994c: MPA3).
Order Thysanoptera	Halliday, 1836					
Family Thripidae	Stephens, 1829					
Order Trichoptera			P		P	Adults in bongo tows--terrestrial drift? (KAVIK-AXYS Inc. 2004a: MPA2, 5 m).
Family Hydropsychidae	Curtis, 1835					
Family Limnephilidae	Kolenati, 1848					
Phylum Brachiopoda				P		In benthic grabs (Hopky et al. 1994d: 5 m).
Phylum Chaetognatha				P		In neuston tow (Hopky et al. 1994a: 5 m).
Class Sagittoidea	Claus and Groben, 1905					

SCIENTIFIC NAME AND TAXONOMIC HIERARCHY	AUTHORITY	MARINE PROTECTED AREA				COMMENTS AND (REFERENCES)
		Niaqunnaq (MPA 1)	Okeevik (MPA 2)	Kittigaryuit (MPA 3)	<5 m depth (5 m)	
Order Aphragmophora						
Family Sagittidae	Claus and Groben, 1905					
<i>Parasagitta elegans</i>	(Verrill, 1873)				P	Bongo nets (Hopky et al. 1994a-c: 5 m). Identified as genus <i>Sagitta</i> , which is now a junior synonym of <i>Parasagitta</i> .
<i>Pseudosagitta maxima</i>	(Conant, 1896)					Identified as genus <i>Sagitta</i> , which is now a junior synonym of <i>Pseudosagitta</i> .
<i>Sagitta sp.</i>	Quoy and Gaimard, 1827					This genus has been revised and taxa originally identified as <i>Sagitta</i> have been assigned to various other genera.
Order Phragmophora	Tokioka, 1965					
Family Eukrohniiidae	Tokioka, 1965					
<i>Eukrohnia sp.</i>	Ritter-Zahony, 1909					
<i>Eukrohnia hamata</i>	(Mobius, 1875)				P	In bongo net (Hopky et al. 1994b+c: 5 m).
Phylum Chordata						
Subphylum Tunicata (= Urochordata)						
Class Appendicularia						Cl. Larvacea is now considered an invalid junior synonym of Cl. Appendicularia.
Order Copelata						
Family Fritillaridae	Lohmann, 1896				P	In bongo nets (Hopky et al. 1994: 5 m).
<i>Fritillaria borealis</i>						
Family Oikopleuridae	Martens, 1830				P	In bongo nets (Hopky et al. 1994c: MPA3).
<i>Oikopleura sp.</i>

<i>Cylichna alba</i>	Brown, 1827				P	In benthic grabs (Hopky et al. 1994d: 5 m).
<i>Cylichna occulta</i>	(Mighels and C.B. Adams, 1842)					
Family Haminoeidae	Pilsbry, 1895					Listed in NOGAP as F. Atyidae.
<i>Haminoea solitaria</i>	(Say, 1822)					
Family Retusidae	Thiele, 1926					

SCIENTIFIC NAME AND TAXONOMIC HIERARCHY	AUTHORITY	MARINE PROTECTED AREA				COMMENTS AND (REFERENCES)
		Niaqunnaq (MPA 1)	Okeevik (MPA 2)	Kittigaryuit (MPA 3)	<5 m depth (5 m)	
<i>Retusa</i> sp.	Brown, 1827					
<i>Retusa obtusa</i> (=pertenuis)	Montagna, 1807					
Order Gymnosomata	Blainville, 1824					
Family Clionidae	Gray, 1840					
<i>Clione</i> sp.	Simpson, 1900				P	In bongo nets (Hopky et al. 1994c: 5 m).
<i>Clione limacina</i>	(Phipps, 1774)				P	In bongo nets (Hopky et al. 1994b: 5 m).
Order Neogastropoda	Rafinesque, 1815					
Family Buccinidae						Some species listed in NOGAP as F. Neptuneidae.
<i>Buccinum</i> sp.	Linnaeus, 1758					
<i>Buccinum angulosum</i>	Gray, 1839					
<i>Buccinum glaciale</i>	Linnaeus, 1758					
<i>Buccinum tenuie</i>	Gray, 1839					
<i>Colus</i> sp.	Roding, 1798					
<i>Colus togatus</i>	(Morch, 1869)					
<i>Neptunea</i> sp.	Röding, 1798					
<i>Neptunea heros</i>	(Gray, 1850)					
<i>Volutopsius</i> sp.	Morch, 1857					
Family Cancellariidae	Forbes and Hanley, 1853					
<i>Admete couthouyi</i>	(Jay, 1839)					
Family Muricidae						
<i>Boreotrophon clathratus</i>	(Linnaeus, 1767)					
Family Conidae						
<i>Curtitoma incisula</i>	(Verrill, 1882)					
<i>Oenopota</i> sp.	Morch, 1852					Listed in NOGAP as F. Turridae.
<i>Oenopota cf. cinerea</i>	(Møller, 1842)					Listed in the original as <i>Oenopota incisula</i> , which is no longer accepted. The species is currently placed in the genus <i>Curtitoma</i> .
					P	In benthic grabs (Hopky et al. 1994d: 5 m).

SCIENTIFIC NAME AND TAXONOMIC HIERARCHY	AUTHORITY	MARINE PROTECTED AREA				COMMENTS AND (REFERENCES)
		Niaqunnaq (MPA 1)	Okeevik (MPA 2)	Kittigaryuit (MPA 3)	<5 m depth (5 m)	
<i>Propebela arctica</i>	(Adams, 1855)				P	Benthic grabs (Wacasey et al. 1977: 5 m). Listed in the original as <i>Oenopota arctica</i> , which is no longer accepted. The species is currently placed in the genus <i>Propebela</i> .
<i>Propebela turricula</i>	(Montagu, 1803)					Listed in the original as <i>Oenopota turricula</i> , which is no longer accepted. The species is currently placed in the genus <i>Propebela</i> .
Order Neotaenioglossa						
Family Capulidae						Listed in NOGAP as F. Trichotropididae.
<i>Trichotropis</i> sp.	Broderip & Sowerby, 1829					
<i>Trichotropis bicarinata</i>	(G.B. Sowerby I, 1825)					
<i>Trichotropis borealis</i>	Broderip & G.B. Sowerby I, 1829				P	In bongo nets (Hopky et al. 1994c: 5 m).
Family Naticidae	Guilding, 1834					
<i>Lunatia (=Polinices) pallida</i>	(Broderip & Sowerby, 1829)					
<i>Natia clausa</i>	Broderip & Sowerby, 1829					
Family Turritellidae						
<i>Tachyrhynchus erosus</i>	(Couthouy, 1838)					
Order Nudibranchia	Blainville, 1814					
Family Chromodorididae						Listed in NOGAP as F. Echinochilidae.
<i>Cadlina laevis</i>	(Linnaeus, 1767)					Formerly <i>Echinocila laevis</i> .
Family Dendronotidae	Gray, 1857					
<i>Dendronotus frondosus</i>	(Ascanius, 1774)					
Family Eubranchidae						

SCIENTIFIC NAME AND TAXONOMIC HIERARCHY	AUTHORITY	MARINE PROTECTED AREA				COMMENTS AND (REFERENCES)
		Niaqunnaq (MPA 1)	Okeevik (MPA 2)	Kittigaryuit (MPA 3)	<5 m depth (5 m)	
<i>Eubranchus pallidus</i>	(Alder & Hancock, 1842)				P	In benthic grabs (Hopky et al. 1994d: 5 m).
Order Thecosomata	Blainville, 1824					
Family Limacinidae	Blainville, 1823					
<i>Limacina sp.</i>	Bosc, 1817				P	In bongo nets (Hopky et. al. 1994b), benthic grabs (Hopky et al. 1994d: 5 m) and larval fish stomach (Chiperzak et al. 2003b: 5 m).
<i>Limacina helicina</i>	(Phipps, 1774)					
Phylum Nemata (nematodes, round worms)		P		P		Formerly Ph. Nematoda. In benthic grabs (benthic grabs (F.F. Slaney and Co. Ltd. 1975: 5 m; Hopky et al. 1994d: 5 m; KAVIK-AXYS Inc. 2004a: MPA2).
Phylum Nemertea (proboscis worms)				P		In benthic grabs (Hopky et al. 1994d: 5 m).
Class Anopla						
Order Heteronemertea						
Family Lineidae						
<i>Cerebratulus sp.</i>	Renier, 1804				P	In benthic grabs (Hopky et al. 1994d: 5 m)
<i>Heteronemertea sp.</i>					P	In benthic grabs (Hopky et al. 1994d: 5 m). Not in ITIS. May refer to the Order Heteronemertea rather than to a Genus.
Class Enopla						
Order Hoplonemertea						
<i>Hoplonemertea sp.</i>					P	In benthic grabs (Hopky et al. 1994d: 5 m). May refer to the Order Hoplonemertea rather than to a Genus.
Phylum Phoronida (horseshoe worms)						

SCIENTIFIC NAME AND TAXONOMIC HIERARCHY	AUTHORITY	MARINE PROTECTED AREA				COMMENTS AND (REFERENCES)
		Niaqunnaq (MPA 1)	Okeevik (MPA 2)	Kittigaryuit (MPA 3)	<5 m depth (5 m)	
Phylum Platyhelminthes (flatworms)						
Class Cestoda (tapeworms)						
Class Trematoda (flukes)					P	Horizontal tows (F.F. Slaney and Co. Ltd. 1975: 5 m).
Order Azgiida						
Family Hemiuridae					P	In larval fish stomachs (Chiperzak et al. 2003a-c: 5m).
<i>Brachyphallus</i> sp.	Odhner, 1905					
<i>Brachyphallus crenatus</i>	(Rudolphi, 1802)					
<i>Lecithaster</i> sp.	Luke, 1901					
Phylum Porifera (sponges)						
Class Demospongiae	Sollas, 1885					
Order Haplosclerida	Topsent, 1928					
Phylum Priapula (priapulans)					P	Formerly Ph. Priapulida. In benthic grabs (Hopky et al. 1994d: 5 m).
Family Priapulidae	Gosse, 1855					
<i>Halicryptus</i> sp.	von Siebold, 1849				P	In benthic grabs (Wacasey et al. 1977: MPA1, 5 m; Hopky et al. 1994d: 5 m) and fish stomachs (Atkinson and Percy 1991: 5 m).
<i>Halicryptus spinulosus</i>	von Siebold, 1849	P				
<i>Priapulus</i> sp.	Lamarck, 1816					
<i>Priapulus bicaudatus</i>	Danielssen, 1868				P	In benthic grabs (Hopky et al. 1994d: 5 m).
<i>Priapulus caudatus</i>	Lamarck, 1816				P	In benthic grabs (Hopky et al. 1994d: 5 m).
Phylum Rotifera (rotifers)						
Class Euratatoria						
Order Flosculariacea	Harring, 1913					
Family Conochilidae	Harring, 1913					
<i>Conichilus</i> sp.	Ehrenberg, 1834				P	Bongo nets (Hopky et al. 1994c: 5 m).
