DATA RECORD

CURRENT MEASUREMENTS

HECATE PROJECT

QUEEN CHARLOTTE SOUND

HECATE STRAIT

DIXON ENTRANCE

1954

File N 6-4

March 1, 1955.

INTRODUCTION

The current data presented in this record were obtained on three cruises into the Queen Charlotte Sound, Hecate Strait and Dixon Entrance area (Figure 1) and were observed as part of an overall exploratory oceanographic survey. The physical and chemical data record of these cruises has already been published (1).

The tabulated data are divided into two main divisions, Ekman Current Meter Observations (2) and Current Drag Observations. Observations of wind speed and direction are also recorded.

GENERAL

The data are presented as observed and no attempt has been made to interpret or adjust any values.

The entire record is in chronological order; Pacific Standard Time is used throughout. Station numbers do not occur consecutively and only serve to locate the approximate position of each with reference to Figure 1.

The period of observation at each station usually extends over four tidal cycles (50 hours) while the vessel was anchored, the observations being made hourly or half-hourly. Bathythermograph casts were made hourly at a majority of the anchor stations.

The general procedure followed when using the Ekman Current Meter was to allow two or three minutes, depending on the current velocity, between messenger times. The interval was measured with a stop watch.

The current drag observations were made using a crossed metal vane buoyed up with four-inch glass balls. The dimensions of one face of the vane being 1 1/2 feet square. One hundred feet of stray line was used and the current speed was measured over 30 or 50 meters of line depending on the strength of the current. This operation was also timed with a stop watch.

Observations of wind were made on H.M.C.S. Cedarwood using a wind meter which indicated both speed and direction. The anemometer is about 46 feet above the water line. On C.N.A.V. Ehkoli a hand-held indicator was used, care being taken to observe from a relatively unobstructed portion of the deck.

The presentation of data in this report is subject to modification and correction at a later date. The original data are on file at the Pacific Oceanographic Group at Nanaimo, British Columbia.

Explanation of Data Record Headings

1. Ekman Current Meter Observations

Time (P.S.T.) Mean time of release of the start and stop messengers.

Depth (m) Depth in meters of current meter as indicated by a meter wheel.

Speed (cm/sec) Speed of the current in centimeters per second.

Dir. (°T) The true direction towards which the current was flowing.

2. Current Drag Observations

Time (P.S.T.) Mean time of observation of the controlled drag.

Depth (m) Depth in meters of the centre of the vane below the surface.

Speed (cm/sec) Speed of the current in centimeters per second.

Dir. (°T) The true direction towards which the current was flowing.

Wind

Speed (knots) Speed of wind in knots

Dir. (°T) True direction from which the wind was blowing.

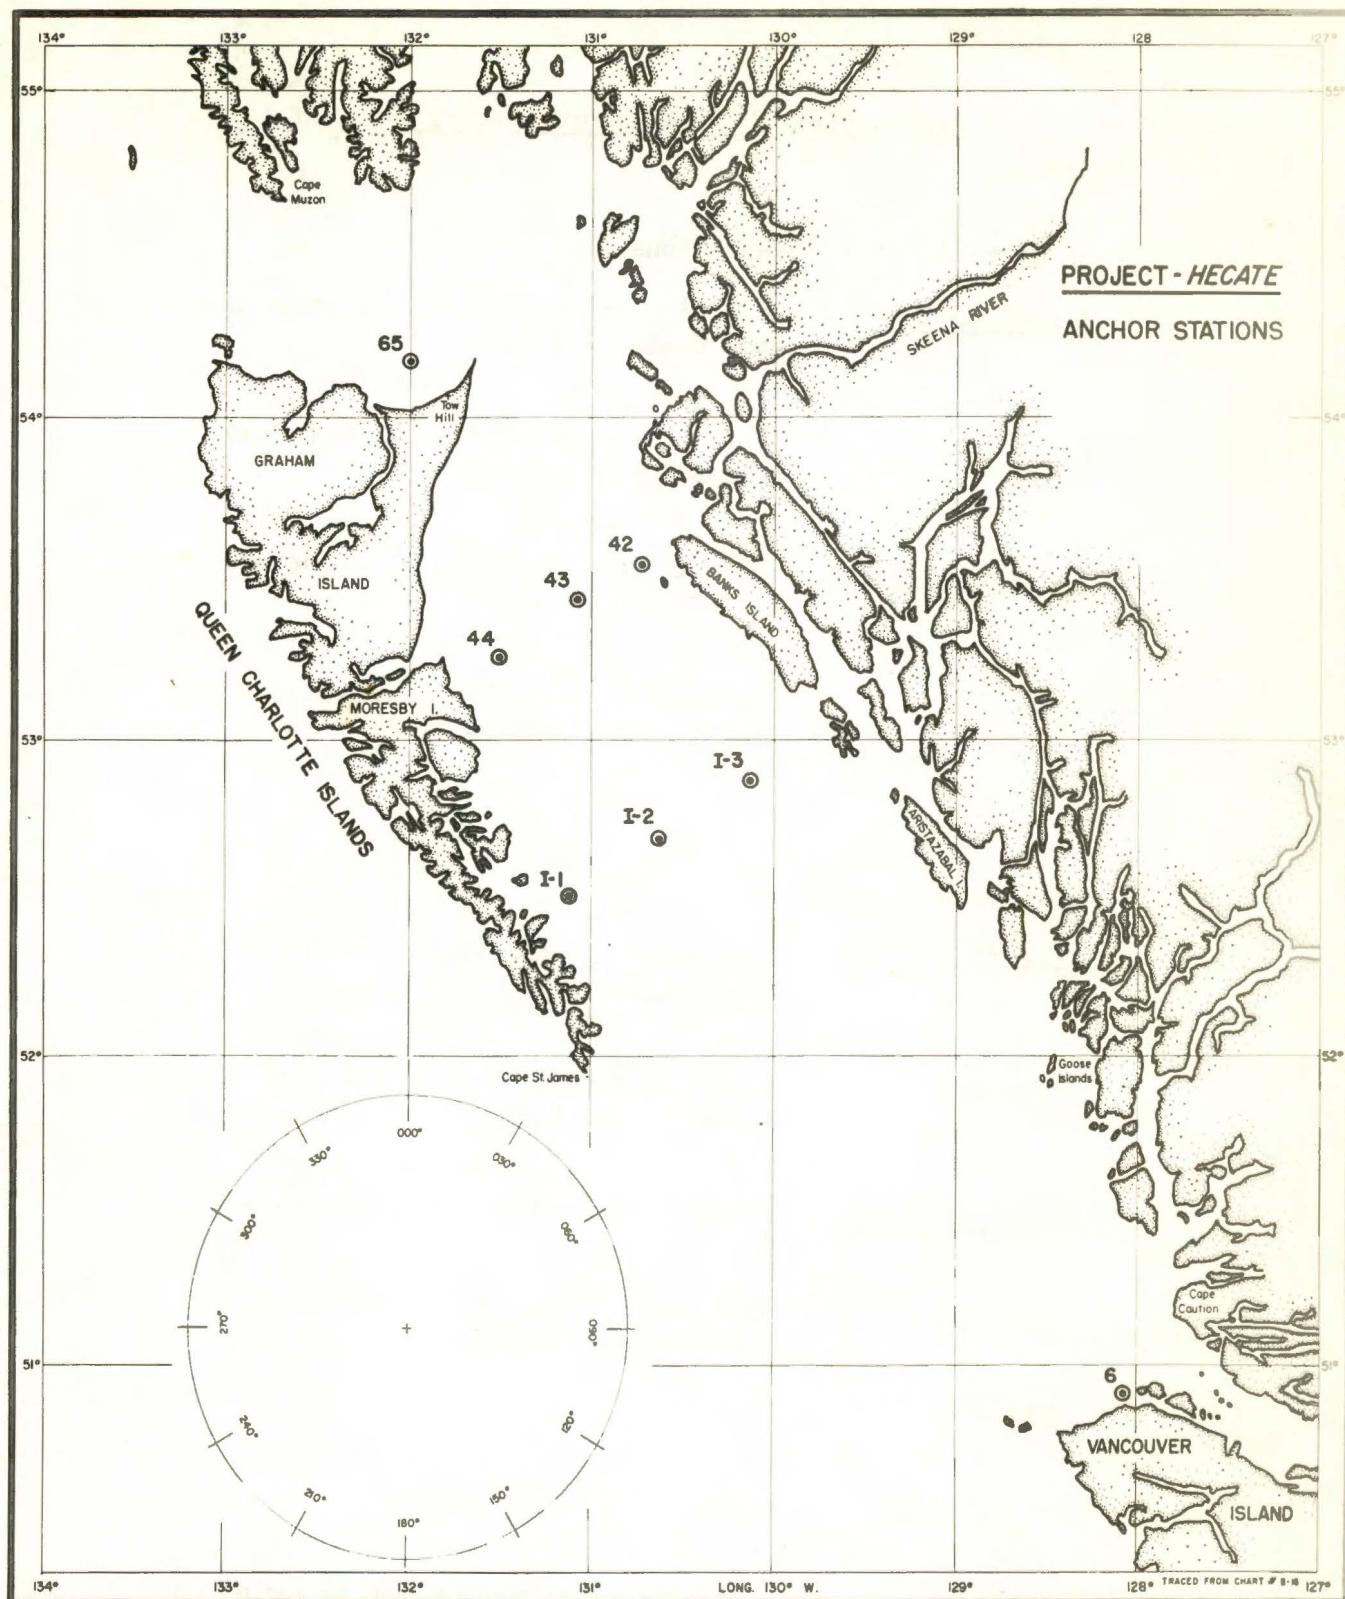

Figure 1

Chart showing the location of the
current measurements stations

-5-

H-54-1

Ship: H.M.C.S. Cedarwood

Station 44

Period: 0935 May 19 to 1129 May 21, 1954.

Position: $53^{\circ} 15.5' N$
 $131^{\circ} 30.3' W$

Depth: 11 fathoms

At this station the vessel was anchored bow
and stern, head about 170° .

Observations were made at 10 and 17 meters with
an Ekman current meter and at the surface, 5 and 10
meters with the controlled drag.

Station 43

Period: 1524 May 21 to 1658 May 23, 1954.

Position: $53^{\circ} 26.6' N$

$131^{\circ} 04.2' W$

Depth: 33 fathoms

At this station the vessel was anchored to a single anchor, the ship's anchor cable and bow anchor being used. Scope 2.0.

Observations were made at 10, 20, 30 and 50 meters using the Ekman meter and at the surface, 10 and 20 meters with the drag.

Southeasterly winds prevailed during most of the observation period and during the latter part the sea caused the vessel to roll quite heavily.

Station 42

Period: 2114 May 23 to 2138 May 25, 1954.

Position: $53^{\circ} 36.3' N$
 $130^{\circ} 43.8' W$

Depth: 100 fathoms

A single anchor and wire rope was used at this station, scope 2.0.

Observations were made at 20, 30, 50, 100 and 150 meters using the Ekman meter, and at the surface and 10 meters using the drag.

H-54-2

Ship: C.N.A.V. Ehkoli

Station 65

Period: 0515 July 17 to 1140 July 19, 1954.

Position: 54° 10' 30" N
132° 00' 00" W

Depth: 44 fathoms

At this station the vessel was anchored to one anchor using steel wire rope, scope 1.4.

Observations were made at 10, 20, 30, 50 and 75 meters using the Ekman meter and at the surface with the drag.

-45-

H-54-3

Ship: H.M.C.S. Cedarwood

Station I-3

Period: 1931 August 30 to 2158 September 1, 1954

Position: 52° 53' N

130° 08' W

Depth: 128 fathoms

At this station the vessel was anchored singly,
using a steel wire rope, scope 1.4.

Observations were made at 10, 20, 50, 100 and
200 meters using an Ekman meter and at the surface with
a drag.

Station I-2

Period: 0130 September 2 to 0446 September 4, 1954

Position: 52° 40.0' N

130° 40.0' W

Depth 75 fathoms

The method of anchoring at this station was the same as at I-3, scope 1.4.

Observations were made at 10, 20, 30, 50 and 100 meters using an Ekman meter and with a drag at the surface.

Station I-1

Period: 1130 September 4 to 1440 September 6, 1954

Position: 52° 31.2' N

131° 07.7' W

Depth: 48 fathoms

At this station the vessel was anchored to a single anchor, the ship's anchor cable and bow anchor being used.

Observations were made at 10, 20, 30, 50 and 75 meters with an Ekman meter and at the surface with a drag.

Station 6

Period: 0815 September 7 to 2224 September 7, 1954

Position: 50° 54.7' N
128° 04.6' W

Depth: 16 fathoms

The method of anchoring at this station was the same as at I-1, scope 3.0.

Observations were made at 10, 20 and 25 meters using an Ekman meter and at the surface with a drag.
