

Covered Species

What area is covered by the plan?

The Multiple Species Habitat Conservation Plan (MSHCP) Section 10(a)(1)(B) Incidental Take Permit covers all non-federal (private, municipal, state) lands within Clark County and NDOT activities in areas within Clark, Nye, Lincoln and Esmeralda Counties south of the 38th parallel and below 5,000 feet in elevation.

What habitat types?

Conservation actions for the MSHCP focus on conservation of the habitat of covered species. Habitats for covered species are described and summarized within 12 ecosystem categories: alpine, bristlecone pine, mixed conifer, pinyon-juniper, sagebrush, blackbrush, salt desert scrub, Mojave desert scrub, mesquite/catclaw, desert aquatic, springs, and other ecosystems (sand dune, gypsiferous soil, rock outcrop, dry lake bed and playa, barren, agriculture, non-native grassland, urban).

What species are covered by the plan?

The MSHCP and Incidental Take Permit provide coverage for 78 species, two of which are listed under the Endangered Species Act (ESA): the threatened desert tortoise and the endangered southwestern willow flycatcher. Two additional categories are identified in the plan: evaluation and watch list. Species designated as covered under the MSHCP are those for which sufficient information was available to allow incidental take coverage and for which adequate management prescriptions exist to help protect them. Evaluation species are those for which additional information is required and management plans need to be developed. Watch list species are those with inadequate information to assess population range, status, conservation potential, or risk of extinction within Clark County. Take authorization for evaluation or watch-list species is not provided under the MSHCP Incidental Take Permit should any of those species become listed pursuant to the ESA.
