CHAIRMAN'S PREFACE

It has been another year of progress and expansion for the Wellcome Trust. Expenditure in the current year will be £78.7 million compared with £64.1 million for the year ended 30 September 1990 — an increase of 23 per cent. It is anticipated that the Trust's income will continue to grow, at least in line with inflation, for the foresceable future. This strong financial position is in no small way due to the continued success of Wellcome plc.

The Trust's existing commitments to medical research continue to be maintained and in the past year many new initiatives have also been undertaken. Among those implemented in 1990 was the Hitchings-Elion Fellowship scheme which will enable up to fifteen United States' medical scientists to work in Britain each year. This new arrangement has been organized with the cooperation of the Fogarty Foundation and the Burroughs Wellcome Fund. It illustrates the importance the Trust attaches to increasing Anglo-American exchanges and also recognises the research activities of Dr George Hitchings and Dr Trudy Elion, who both won the Nobel Prize for Medicine in 1988 for their many years of creative work at Burroughs Wellcome. The results of their research have made a significant contribution to the prosperity of both Wellcome plc and the Wellcome Trust.

On the domestic front, the Trust has become very concerned about the level of salaries in medical research. In October 1989 it was decided to expand the prize studentship scheme so that up to sixty PhD students could receive a realistic stipend. Also, the Trust has enhanced the salaries of postdoctoral fellows and research assistants to a level which we believe will encourage them to stay in medical research. The Trustees are pleased that other medical research charities and the Medical Research Council have accepted the need for these improved PhD stipends.

The most important project that the Irust is undertaking at present is the refurbishment of the Wellcome Building. It will house the Trust's offices and the Wellcome Library of the History of Medicine, which will be linked by a tunnel to its very large book store in Bentley House on the north side of the Euston Road. The reconstruction of the Wellcome Building has required much planning and in the case of the exhibition 'Science for Life', a great deal of imaginative work. The Wellcome Building will, we hope, become a centre for medical science and history and form a focus for medical research in Britain when it is occupied in early 1992.

Two Trustees, Dr Helen Muir and Lord Swann, retired during the year. Helen Muir was a Trustee for eight years. She is a dedicated research worker and always showed the deepest interest in the Trust's affairs. Her contribution to medical research has been considerable and we will miss her participation in our activities at Park Square West.

Lord Swann retired on 1 March 1990 after seventeen years as a Trustee. Very sadly, he died suddenly on 22 September. Michael Swann was the most talented and congenial of men who gave great help to a wide variety of institutions, both within and outside the academic world. He made a telling contribution to the success and development of the Wellcome Trust. He is greatly missed by us all.

On 30 June, Sir Alfred Shepperd retired. He joined Wellcome Foundation Limited as Finance Director in 1972 and became its Chairman and Chief Executive in 1977. Sir Alfred led the Wellcome Group through its most exciting period of growth and also through its transition to public company status. He can quite rightly look back, with considerable pride, on what the Company has achieved over the past two decades. We at the Trust are most grateful to him. He has been succeeded by Sir Alistair Frame as Chairman of Wellcome plc and by Mr John Robb as Chief Executive. We wish them both every success in the years ahead.

It was recently announced that Dr Peter Williams, who has been Director of the Wellcome Trust for the past twenty-six years, will retire on 30 September 1991. He will be succeeded by Dr Bridget Ogilvie, who is the Director of Science Programmes at the Trust.

Never has the Wellcome Trust had a more active or demanding year. On behalf of the Trustees, I would like to thank everyone at the Trust and our panels of advisers and referees for the invaluable contribution they have all made.

R G Gibbs

INTRODUCTION AND POLICY

This report reviews the financial year 1 October 1989 to 30 September 1990, during which the Trust has had £63.0m available for its activities. This is an increase of £13.7m on the previous year. The policy statement for 1990/91 issued in October 1990 envisaged an expenditure totalling £78.7m for 1990/91 of which £72.7m will be available for the support of scientific research, and the history of medicine.

This is the last introduction (the sixteenth) to a Trust report that I will write before the appointment of a new Director. Even though I will be responsible for the period of the 1990/91 report, its introduction will be focused through the eyes of my successor Dr Bridget M Ogilvie. I therefore take this opportunity to express my personal views on the role of the Trust in medical research today. Before doing so may I congratulate Dr Ogilvie on her appointment. Having personally recruited her as the first Director of Science Programmes at the Trust it gives me great pleasure to pass on the mantle to her.

The Wellcome Trust is an independent organisation which creates its own policy. It must, of course, do this on the basis of knowledge of the state of the universities, the government and the National Health Service, and the changes taking place therein. Sometimes the Trust may have to react to these changes. Most of the time, however, its task must be to decide what is the best way to pursue Sir Henry Wellcome's stated purpose — to advance knowledge in the biomedical sciences and the history of medicine 'which may conduce to the improvement of the physical condition of mankind'. Thus, scientific quality and relevance to the physical condition of mankind is the first criterion for selection. Inevitably in a field like medicine a number of peripheral possibilities arise which must be resisted if the central objective is to be limited enough to be effective. The usual diversions are requests for funds to support the university system, the health care system and special groups of deprived people.

There are obviously sound reasons why help should be given to these three categories. However, once supported, they have an enormous appetite which would soon devour the resources of even such a relatively rich trust as the Wellcome. We have therefore taken the line that the university and health care systems must logically benefit as a spin-off from our central purpose rather than as central themes. Nevertheless the Wellcome Trust is now a very significant source of funding for universities. It also provides grants and has started to train researchers for health services research. We judge proposals from these sectors, like all others, on the merits of the scientific cases presented. This attitude means that we tend to leave to others the lobbying and negotiation that has been so active during the past year in relation to changes in the universities and health service, resulting from the early activities of the University Funding Council and in connection with the Health Services Act. There are enough voices from the universities and the medical world representing their case. The Trustees and their staff are therefore pleased to support the Association of Medical Research Charities and the academic committee convened by the Royal College of Physicians — and serve on these — without feeling obliged to take part in further political lobbying.

We note that the new pressures on the universities to be financially less dependent on government are pushing them to sources of funding that are less conducive to academic freedom than grants from an independent research council or a charitable foundation. It is difficult to believe that in today's political climate, commerce and government are not seeking advantage from the support of research when they make major contributions to universities. These motives are, of course, perfectly acceptable from the viewpoint of the prosperity of the country or the more equitable distribution of scientific activity over the realm. But when geographical distribution vies with academic suitability in determining where to place a research unit, we begin to use the wrong reasoning in deciding what to support. This is a danger that also besets disease-orientated charities trying to satisfy their donors' expectations that they will soon come up with a 'cure'.

One illustration must be the relocation of the activities of the Clinical Research Centre from Northwick Park, not to Hammersmith alone as was proposed originally, but to various sites around the country. It is reasonable to want more of our universities and hospitals to have their proportionate share of the government gold, but the best research or advances in patient care do not evolve from evenlandedness but from selectivity which often means the development of a 'critical mass.' The Wellcome Trust would therefore appear to be pulling against the general tenor of government policy as it continues to put excellence above short-term usefulness as the basis of its selectivity.

This policy is sustained at the Trust by maintaining a considerable scientific participation in the evolution of medical research. This is achieved firstly by the constitution of the Board of Trustees, of whom five out of seven are practising scientists; and secondly by the Director and most of the senior staff who are scientifically trained and maintain an interest and participation in the flow of science in the various fields. All of this in-house expertise is advised and supported by the active participation of more than 60 panel members and numerous expert referees.

It is against this background that the Trust has had to take a number of major decisions during the past year. The first was the replacement of two retiring Trustees with suitably qualified successors. Here the problem was to ensure that the Trust could attract the best people available and yet not so drown them in Trust work as to make it impossible for them to continue the very activities which would make them valuable as Trustees. One way to reduce their load has been to relieve them of the chairmanship of the Trust's scientific advisory panels – although they will still attend as members. Another solution, in the case of Sir David Weatherall, was provided by Downing Street in appointing him to the Regius Professorship of Medicine at Oxford from 1992, which will relieve him of certain onerous responsibilities. Sir Hans Kornberg who has succeeded Dr Helen Muir, had, of course, already passed over the Chairmanship of the Department of Biochemistry in Cambridge to Professor Perham. The other step has been to expand the establishment of scientific staff at the Trust by the appointment of scientific and senior scientific officers, who will become secretaries to the panels, and thereby enable the scientific programme directors to be relieved of some of their day-to-day routine.

Having established what needs to be done, the Trustees have evolved a comprehensive programme of support for the biomedical sciences and the history of medicine. The principal aim has been to train and develop the potential of talented research workers, and to provide whatever form of support will most successfully advance knowledge in medical science and the history of medicine. An important step towards this end has been the implementation of the Trustees' decision to enhance the salaries of postdoctoral non-clinical scientists funded by the Trust. This decision was announced in the last report, and its implementation, as hoped, has led to other organisations acknowledging the need for greater financial recognition of the importance of medical research.

The Trust continues to receive a large number of applications – a total of 1916 during the year of which 1155 were funded. However, one sometimes wonders whether the relentless pursuit for grants is beneficial for the system as a whole. An analysis of the time allocated to their research projects by principal investigators applying for grants averaged 16 hours per week by new lecturers and 9.8 hours for established academic staff. This was for requests of £92 000, on average, most of which goes towards salaries for staff. At a time when it is generally agreed that good quality staff are difficult to find, the question must be raised as to whether the provision of limited supervision to numerous assistants is the most productive way of doing research rather that making a major creative commitment oneself? This is a real question, not a rhetorical one, and the Trust's newly created unit for Policy Studies in Science and Medicine (PRISM) will be investigating this problem in due course.

News of recent awards

During the year, apart from the regular grants programme, special studies have been made of a number of new ideas, and individual awards outside the core programme have been made in response to special needs. Thus the Trust has given \$300 000 to the Royal Society of Medicine to computerise its library, which it is hoped will link even more closely to the Wellcome Institute for the History of Medicine library. The Trust has helped this important library for medical research on previous occasions with substantial grants. The Royal College of Physicians of Ireland also made a special plea for help with its library and was awarded \$20 000. The new Institute for Molecular Medicine in Oxford which the Trust, together with the Medical Research Council and Imperial Cancer Research Fund, had helped to create, was given core funding of \$200 000 per annum for five years so that it could get underway as quickly as possible. Also the Trust has agreed to fund the setting up of the European office of the Human Genome Organisation (HUGO). This will be located in Trust accommodation.

Workshops on osteoporosis, gene therapy and mathematical biology led to policy discussions about support for these fields. In the last case, special fellowships and scholarships were created and the first awards were made in July 1990.

A special review of the Trust's support for veterinary research was undertaken by Dr Bridget Ogilvie who visited all the UK veterinary schools. As a result, the Trustees decided to fund special training awards for this field (see page 95).

Note should also be taken of the progress of the developmental biology project in Cambridge. The building is now nearing completion, and during the year the various teams have received major awards from the Trust so that they will be able to staff the Institute when it is opened in June 1991 by the Duke of Edinburgh.

The second largest grant in the history of the Trust, £4m to Professor Roy M Anderson, FRS, at Imperial College, London was made during the year to fund the Wellcome Trust Parasitic Diseases and Biology of Helminths Research Unit.

Applications to the Trust for large sums of money for major developments are becoming more numerous. In the coming year the Trustees are faced with a number of requests to support developments of this type, far outstripping the funds available.

Feedback on grant applications

A high proportion of grant applicants, particularly those who have been unsuccessful, now request feedback after a decision has been made on their proposals. The provision of this information seems to be appreciated by the recipients but it must be emphasised that the sending of feedback with subsequent agreement to submit a new or revised proposal cannot be interpreted as an indication that support will be provided. The provision of feedback places a considerable and additional burden on the office staff and it is important therefore that the Trust receives in return information from applicants who have benefited from this process.

History of Medicine

In the history of medicine the Wellcome Institute has been much preoccupied with moving into temporary accommodation in Bentley House and in Tavistock Square. The major task of relocating and storing the library was undertaken during the early part of 1990 and much credit must go to Messrs Eric Freeman, Robin Price and Steven Emberton and all their assistants for its smooth achievement. A special meeting of the Trust's History of Medicine Advisory Panel was held in May from which evolved a forward-looking plan aimed at extending the public interface with the subject, especially among students and doctors. The decision to place the visual images of the iconographic collections held by the Trust on to a videodisc will create a valuable resource for the future. Also of note was the loan to the National Gallery of the painting by Adam Elsheimer of Saint Elizabeth tending the sick, which was used by the Trust for its 1990 Christmas card.

A hospital, with Saint Elizabeth of Thuringia attending to the patients. Oil painting on copper 27.0×19.5 cm by Adam Elsheimer (1578-1610) c.1598

The work of the Academic Unit of the Institute came up for special review and was highly commended.

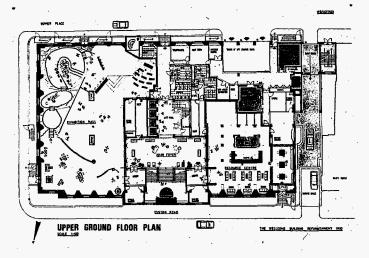

Centre for Medical Science and History

The Wellcome Building at 183 Euston Road, London, which is currently being refurbished. The hoarding around the building has a series of illuminated poster displays designed to heighten public awareness of the importance of medical research.

Finally, we must draw attention to the very hard work undertaken on the refurbishment of Bentley House and the Wellcome Building. These major developments, which will consolidate the Trust's in-house activities on opposite sides of the Euston Road, joined by a tunnel, have necessitated extremely hard work by Mr Denis Richardson, the project manager, and his team, who are to be congratulated on bringing the development of Bentley House to completion on time and within budget. It was an onerous task to create the capacity to store the Wellcome Library (on mobile shelving) as well as to provide racks for the pictures, manuscripts and archives owned by the Trust. The Wellcome Building, for which the contract for refurbishment has been given to Trollope & Colls (City), the firm which built the building in 1932, is now being redeveloped for its future use.

During the year major steps have been taken to create a Centre for Medical Science and History which is to be housed in the Wellcome Building when it reopens in 1992. The whole enterprise has been managed through a Centre Working Party chaired by the Director who up to now has assumed overall charge for the Centre. Dr Laurence Smaje has been transferred with effect from early October 1990 from the Directorship of the Physiology and Pharmacology Programme to take charge of the Centre, and Mr Steven Emberton who had earlier become the Public Activities Development Manager, will now work with Dr Smaje. The Centre will include an exhibition, 'Science for Life' being developed by Dr Paulette McManus in conjunction with the designers MET Studio. Regular committee meetings have been held to define the content of each section of the exhibition. Formulating these plans has been a stimulating exercise and we hope that the eventual product will be very attractive and informative.

Floor plan of the upper ground floor at the Wellcome Building.

The resources centre is aimed at providing information on the availability of grants and positions in medical research, and will be linked through JANET to all universities in the country. As the resource develops we believe that it will become an important support for medical research. In addition, the tropical videodisc and the iconographic disc will be accessible through the Centre. These are described in more detail on pages 129 and 132.

The third activity is a meetings programme using the excellent facilities being developed in the building. Some meetings will be generated internally to promote the interests of the Trust and the research community. Others will arise through the activities of the various organisations which may wish to use the facilities.

The Wellcome Trust is a busy place as it strives to be innovative in the support of medical research and medical history. This report gives details of the awards made during the year, each of which has received detailed scrutiny.

After twenty-six years at the helm I leave the Trust with a feeling of great satisfaction that it is now fulfilling Sir Henry Wellcome's great expectations and will continue to do so in the future.

P O Williams

FINANCE

The finances of the Trust are closely linked to the performance of its total investment portfolio. The investment portfolio managed by the Trust's Investment Managers whilst producing an income of £14.0m in 1989/90 was subject to the very considerable fluctuations in the international stock markets, particularly towards the end of the year when tension in the Middle East led to the very severe marking down of values on all the major international stock markets. As a result its market value at the end of the year was £237m (£223m 1986). The value of Wellcome plc shares during the year moved at times quite spectacularly. Having started the year at 664p, the price then rose to 780p in January, falling to 423p on the 24 August and closing the year at 476p. During the year the value of the distributions made by Wellcome plc showed a 34.6 per cent increase on the previous year's figures and, at £44.2m, represented some 70 per cent of the Trust's total income which amounts to £63m (£49.3m in 1989).

The expenditure during the year in support of medical research amounted to £54.6m, with a further £3.8m committed to the support of the history of medicine. The amount available for support in 1990/91 totals £72.7m.

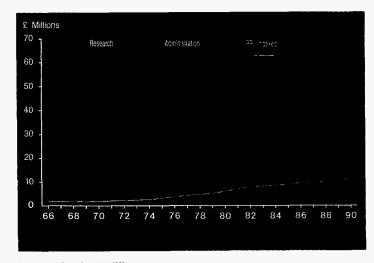

Figure 1. Annual expenditure 1966-1990

The Government has yet to indicate when the proposed new legislation on charities may be put before Parliament. The 1989 White Paper entitled Charities: A Framework for the Future still allows for representations to be made on behalf of the charity world and these continuing efforts will probably lessen the effect that any legislation might have on highly responsible charities such as the Wellcome Trust.

The single European market planned for 1992 still causes concern, as harmonisation of the fiscal treatment of foundations may well damage charities in the UK.

Wellcome plc

The company has seen a year of considerable change. Sir Alfred Shepperd retired as Chairman and Chief Executive on 30 June and was replaced by Sir Alistair Frame as Chairman and by Mr John Robb as Chief Executive. Mr Martin Brookman retired and was replaced by Mr John Precious as Group Finance Director. Mr Claude Matons also retired. Mr James Cochrane joined the Company as European Operations Director and Mr Keith Merrifield joined the Wellcome Board as International Operations Director after spending a number of years as Managing Director of Wellcome International Trading Ltd.

It is pleasing to note that Wellcome plc were again awarded the Queens Award for Export Achievement. The Trustees continue their regular visits to Wellcome plc establishments particularly to the research facilities at Beckenham in England and in North Carolina, USA.

ADMINISTRATION

Lord Swann

This note about Lord Swann was being written to commemorate his Trusteeship when we heard of his sudden death on 22 September 1990 only seven months after he ceased to be a Trustee. We extend our deepest sympathy to Lady Swann and their family.

Lord Swann became a Trustee in 1973. He succeeded Lord Murray of Newhaven and took on the role of representing the university interface of the Trust.

He also brought with him an important background of biological research from his work as Professor of Zoology in Edinburgh. He was the Principal of Edinburgh University at the time of his appointment but not long after becoming a Trustee he became Chairman of the BBC. This, of course, lessened his direct university involvement but brought to the Trust other useful connections.

Lord Swann also brought to the Trust an interest in the veterinary field, stemming from his chairmanship of the Joint Committee on

The Rt Hon the Lord Swann, FRS.

the use of antibiotics in animal husbandry and veterinary medicine, and so he was a natural successor to Professor Robert Thompson as Chairman of the Trust's Veterinary Panel. Along with the late Keith Sinclair, he stimulated the Trust's veterinary programme to grow and develop.

When he received a peerage in 1981 he added another dimension to the Trust by providing an ongoing contact with Parliament, thus broadening the political interface of the Trust. All of us at the Trust gained great pleasure from our association with him and miss his participation in our meetings.

Helen Muir

Helen Muir brought to the Trustees her background in biochemistry and cell biology and assumed responsibility for these fields alongside Michael Morgan from 1982 to 1990.

She took her role seriously and worked very hard on her panel papers to ensure that the best applications were selected for support. She undertook this considerable effort, against the background of her busy life as Head of the Kennedy Institute of Rheumatology. She gained many international and national honours for her work during the time of her Trusteeship, including being elected a Foreign Member in the class for Medical Sciences, by the Royal Swedish Academy of Sciences and an honorary DSc by Brunel University. During her time at the Trust many changes occurred in the size and style of its activities and in biochemistry, specially the development of the molecular and cellular approach to biomedical science.

Helen Muir was the first woman to be appointed to the Board of Trustees and she brought grace and elegance to our activities from which we all benefited.

I Helen Muir, CBE, MA, DPhil, DSc, FRS.

Dr C E Gordon Smith was awarded the George McDonald Medal in April 1990. This is awarded jointly by the Royal Society of Tropical Medicine and Hygiene and the London School of Hygiene and Tropical Medicine in recognition of outstanding research leading to the improvement of health in tropical countries.

Professor Sir David Weatherall was appointed as a Foreign Member of the National Academy of Science of the USA, a rare distinction for a practising clinician.

A list of the Trustees of the Trust is given at page 2.

Staff of the Trust

P O Williams, DSc(Hon), DM(Hon), FRCP, Director, Chairman of Board of Management Alison Grove, BA, Assistant to the Director Maura Juffkins, BSc, Publications Officer Jill Steward, Meetings Programme Manager (from July 1990)

The following staff hold honorary appointments;

The Director of the Trust, Dr P O Williams, was awarded the degree of Doctor of Medicine honoris causa by the University of Nottingham and was elected President of the Royal Society of Tropical Medicine and Hygiene from June 1991.

Dr Williams was pleased, on behalf of the Trust, to receive one of the first issue medals from University College London in recognition of the major contributions the Trust has made over the years.

The Director of the Trust, Dr P O Williams, receiving one of the three first issue gold medals from University College London on 27 October 1989. From left to right; Dr Billie Williams, Dr P O Williams, Judith A Way, Mr R G Gibbs.

Dr Bridget M Ogilvie

Member of Council and Deputy Chairman of the Fellowship Committee of the Institute of Biology Visiting Professor, Department of Biology, Imperial College of Science, Technology and Medicine, London

Dr D Gordon

Honorary Senior Lecturer in Medicine, St Mary's Hospital Medical School, London Honorary Consultant Physician, St Mary's Hospital, London

Dr M I Morgan

Honorary Senior Lecturer, United Medical and Dental Schools of Guy's and St Thomas's Hospitals, London

Member of the Horden Committee of the Biochemical Society

Dr R E Howells Visiting Professor at the London School of Hygiene and Tropical Medicine

Dr L H Smaje

Visiting Professor in Physiology and Biophysics, St Mary's Hospital Medical School President of the European Society for Microcirculation

The use of computer-based systems in the Trust continued to expand with a further 17 terminals and devices being linked to the main computer during the year, making a total of 67. In addition, the computer staff also support 26 personal computers, an increase of 17 on 1988/89, which are used for localised processing. Plans are underway for the transfer of the main computer to the Wellcome Building. Work continues towards a fully integrated grants administration and accounting system.

The Property Department has during the year supervised the successful renovation programme within Bentley House and is now very heavily committed to managing the major redevelopment of the Wellcome Building.

The number of personnel employed within the Trust during the year has increased to 141 from 129 and it is anticipated that, as we move towards the opening of the new Wellcome Building, the Centre for Medical Science and History, and the Information Resources Centre, staff numbers will continue to grow. The planning for the use of the new building and for the staffing and facilities required to support these new activities is now at an advanced stage.

James Howard

James Howard had been known to the Trustees for a very long time, initially because he had worked with Lord Swann in the department of Zoology in Edinburgh from 1966 to 1969.

He then moved to the Wellcome Laboratories in Beckenham, where over many years he contributed to the leadership of biological activities and the management of research.

When the direction of the laboratories took a new turn and a new research director was appointed, he felt the time had come to retire. He was invited to the Trust as a Programme Director to look after its Tropical and Infectious Diseases Programmes in succession to Bridget Ogilvie, who had become Director of Science Programmes. His personal stature, high level of scientific achievement and the respect in which he was held by fellow scientists made it possible for him to develop this programme even further. His knowledge of the Tropics was less great but he soon established close contacts with the Trust's Units overseas, which led to him encouraging their development. In particular, his wisdom was very important during the difficult phases of transfer of responsibility for the Indian and Jamaican Units and the planning and implementation of developments in Kenya. His thoughts on the future of Belem and for a closer association with the Francophile tropics will be of special importance in the next phase.

His company and good sense were enjoyed and valued and will be missed by many at the Trust. He has been succeeded by RE Howells, Professor of Parasitology at the Liverpool School of Tropical Medicine. Dr Howells was a member of the Trust's Tropical Medicine and Infectious Diseases Panel prior to his appointment.

Derek Metcalfe

Derek Metcalfe could be said to be the last of the original staff (excepting the Director) recruited before the Trust moved to Park Square West. He had thus seen the whole place grow from its small beginnings and his career had developed along with the Trust resulting in his appointment as Chief Administrative Officer in 1985. His special achievement was to make the grants programme an efficient and coherent entity. He developed and instilled discipline into the whole programme so that the many grants officers who came under his tutelage developed a great respect for his sense and integrity.

Having been so long with the Trust he knew all about it and, until a year before he retired, was responsible for a very wide range of administration. After his retirement at the end of June 1990, and with the growth of the Trust, it has been necessary for two staff to be appointed to take on his former role. One of these appointees is Mrs Linda Arter, who has become Head of Grants Administration. Linda has been trained by Derek and has proved a great success.

Unfortunately, Derek had suffered from ill health for a number of years and it was therefore agreed that he should retire a few years early. He is sadly missed.

Acknowledgements

The Trustees and their staff would like to express their thanks to the numerous expert advisers who assist the work of the Trust by refereeing applications, serving on committees and panels and advising on policy. The administration of the Trust would be impossible without their unstinting support.

SUPPORT FOR MEDICAL RESEARCH

During the year the Trust's commitment to medical research totalled £54.6m (£40.0m for 1988/89).

The following sections examine each scheme and panel in detail. The subsequent pages give an overview of the work of the Trust.

A total of 1916 applications were received (compared with 1591 for 1988/89). Of these 1155 were funded in part or in full, representing 60 per cent of requests. The total value of applications was \$143.9m (see Figures 2 and 3).

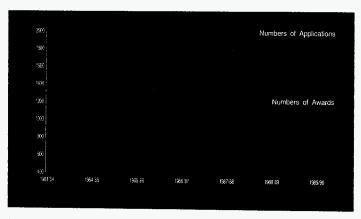

Figure 2: All applications 1983-1990 - numbers received and awarded.

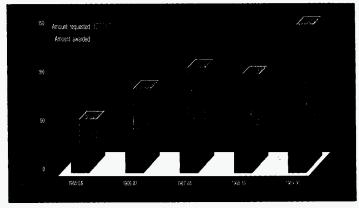

Figure 3: All applications 1985-1990 - amount requested and awarded.

During 1989/90 a total of £26.4m was awarded by the panels for short-term support. The allocation of funds by panel is shown in Figure 4.

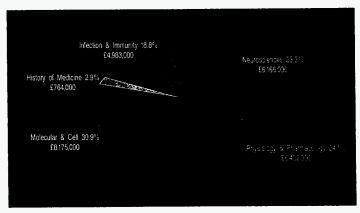

Figure 4: Distribution of short-term awards 1989/90 - in terms of amount awarded.

The Trustees policy is to set aside one-third of their income for longer-term support. An analysis, by panel, excluding the history of medicine, for 1990 onwards is given at Figure 5. (For details on expenditure for the support of the history of medicine see page 120).

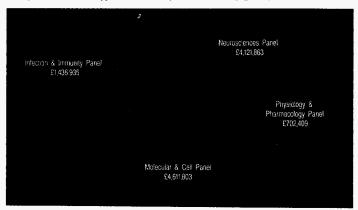

Figure 5: Longer-term awards - amount committed by panel: 1990 onwards.

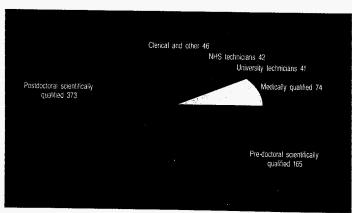

Figure 6: Research workers supported by the Wellcome Trust. Grants awarded during 1989/90.

The following awards are listed here as they do not fit conveniently under any of the Trust panel or interest group headings. They reflect the diversity of projects to which the Trust commits its funds.

Dr P Briggs

00003

Association for the Advancement of Science, London: for one year, for additional expenses towards the establishment of Science and Technology Media Fellowships (0348475902).

Joint National Survey of \$961 474
Sexual Attitudes and Lifestyles: by Julia Field, Social and
Community Planning Researth, London: Dr Anne Johnson,
University College and Middlesex School of Medicine, Jane
Wadaworth, St Mary's Hospital Medical School and Professor R M
Anderson, Imperial College of Science, Technology and Medicine

The Human Genome Organisation \$176 000
London: for one year, to help establish the European Office
of the human genome project (031575/Z90/Z9).

Dr Helen Kyle 274 657
Parliamentary Science and Technology Information
Foundation, London: for three years, for a Wellcome
Westminster Fellowship at the Parliamentary Office of
Science and Technology (93173027902).

PRINCIPAL RESEARCH FELLOWSHIPS AND SENIOR LECTURESHIPS

New appointments to the Senior Lectureship scheme ceased in 1986. 60 appointments have been made since the scheme started in 1978. Scientists who would previously have been eligible for support under the Senior Lectureship scheme can now apply for Senior Clinical, Basic Biomedical or Principal Research Fellowships.

The Principal Research Fellowship scheme was established in 1989 and five awards have been made to date. Its purpose is to fund individuals who are judged to be of readership or professorial status, but who do not hold an established post. Awards are intended to be for ten years in the first instance with a review after eight years. If this is satisfactory, support will continue on a five year rolling basis.

Principal Research Fellowship awards made during 1989/90;

Dr M E Akam

Department of Genetics, University of Cambridge: for five years, for the molecular analysis of pattern formation in insect and crustacean embryos (030385/Z91/Z).

Professor Brigid L M Hogan

Wellcome/CRC Institute, Cambridge: for five years, for a study of the molecular analysis of mammalian development (031048/Z91/Z).

Professor B K Park

Department of Pharmacology and Therapeutics, University of Liverpool: for five years, for a study of the mechanism in biochemical pharmacology, under *Professor* A M Brekenridge (012339/2002).

Professor B G Spratt

School of Biological Sciences, University of Sussex, Brighton: for five years, for an extension of a study of the molecular polemiology of penicillin resistance in Streptocous pneumoniae, under Dr P R Witeder, Department of Applied Biology, University of Hull

The Trustees were pleased to learn of the following honorary appointments and awards:-

To Principal Research Fellows;

Dr B K Park was appointed to a Professorship at the University of Liverpool.

at University College London (from 1 October 1990).

To Senior Lecturers:

Dr D A Eisner was appointed Professor of Veterinary Biology at the University of Liverpool
Dr M J G Farthing was appointed Professor of Gastroenterology at the University of London
Dr Sandra E File was appointed Professor of Psychopharmacology at the University of London
Dr M A Hanson was elected to a personal readership at the University of Reading
Professor S G Cull-Candy was elected to a personal chair in the Department of Pharmacology

The annual meeting of Principal Research Fellows and Senior Lecturers was held on 22 March 1990. The following spoke about their work:

Dr J K Aronson

Department of Clinical Pharmacology

University of Oxford

'Mechanisms for the regulation of Na/K pump numbers and activity in cell membranes'

Dr Sandra E File

Division of Pharmacology

United Medical and Dental Schools of Guy's and St Thomas's Hospitals, London

'Benzodiazepine dependence'

Dr J K P Sheehan

Department of Biochemistry and Molecular Biology

University of Manchester

'Mucus glycoproteins - fortress molecules under siege'

Dr R D Ward

Department of Medical Entomology

Liverpool School of Tropical Medicine

'Latin American perfumes - a tale of passion amongst the flies'

Dr G C Ford

Department of Biochemistry

University of Sheffield

'Design and redesign of a protein'

SENIOR BASIC BIOMEDICAL SCIENCE FELLOWSHIPS

The new scheme for Senior Basic Biomedical Science Fellowships was introduced by the Trustees in 1985, in response to representations about the shortage of support of this type. The fellowships are tenable for five years in the first instance, with the possibility of an extension of a further three years. During this year, awards made in the first round have been assessed, and a number of fellows have had their support extended. The Trustees hope that, in time, some of their Senior Fellows will be of such high quality as to be candidates for the Trust's Principal Research Fellowships.

During the year, ninety applications for these fellowships were received, and nine awards recommended. In the event, one successful candidate accepted an appointment in the United States of America, and the eight awards are noted below.

A number of holders of these fellowships have now moved to established positions in universities. Dr TR Hirst has moved to a Lectureship in the Department of Biology in Kent, and has successfully applied to the Trust for support of his programme of research in his new appointment. Dr CD A Brown has moved to a Lectureship in the Department of Physiological Sciences in the University of Newcastle upon Tyne, Dr Eva Hyde has been appointed to a Lectureship in the Department of Biochemistry in the University of Birmingham, and Dr H R Matthews has been appointed to a Lectureship in the Physiological Laboratory, at the University of Cambridge.

Figure 7

North America	3	16	21	16	12
Europe	3	5	4	3	5
Other countries		1	_	4	3
Number of awards	7	5	2	9	8

Dr I R P Arnold

Department of Genetics, University of Leeds: for five years, for nuclear magnetic resonance studies of riboneucleic acid, under Dr P G Stockley (03125972/91/2).

Dr C R M Bangham

Nuffield Department of Clinical Medicine, University of Oxford: for three years, for additional research assistance for a study of Cellular immune response to the Arthur T-lymphotrophic virus type-1, under Professor AJ McMithael, Institute of Molecular Medicine, University of Oxford (2010/2010).

Dr N H Brown

Department of Zoology, University of Cambridge: for five years, for a study of the structure and function of the PS2 integrin during embryogenesis, under Pnofesor J B Gundon (2013)15/22/9022.

Dr J M Crampton

Department of Medical Entomology, University of Liverpool: for three years, for further support of his study of mobile genetic elements in mosquitoes of medical significance, under Professor W W Madonald 103175ZP0ZQ.

Dr I D Forsythe

Department of Physiology, University of Leicester: for five years, for studies of the modulation of synaptic transmission in the CNS: regulation of calcium and potassium channels by presynaptic receptors, under Professor P R Stanfield (031501725022).

Dr Ursula A Gompels

Department of Medicine, University of Cambridge: for five years, for a study of the entry and spread of human herpesvirus-6; role in immunodeficiency, under Pnyfesor J G P Sissous (03)966Z90Z2.

Dr P I Ham

Department of Medical Entomology, University of Liverpool: for three years, for additional expenses for a study of the immune mechanisms of haematophagus vectors of filarial nematodes and other parasites (016970/2004).

Dr TR Hirst

Biological Laboratory, University of Kent, Canterbury: for additional equipment, for a study of biogenesis and molecular engineering of toxins responsible for cholera and related diarrhocal diseases (02215/270/A).

Dr A I King

Laboratory of Physiology, University of Oxford: for five years, for a study of spatial coding in the auditory system, under Professor C Blakemore (031316/2902).

Dr Lynne V Mayne

School of Biological Sciences, University of Sussex, Brighton: for eighteen months, for further support of her study of the isolation and characterization of the defective gene in Cockayne's Syndrome and studies on the role of this gene in DNA repair, under Dr R Vinten (05221127898).

Dr R Reynolds

Department of Biochemistry, Imperial College of Science, Technology and Medicine, London: for three years, for additional expenses for studies on oligodendrocyte migration, maturation and myclin production in vino and in vino, and their relevance to demyclinating diseases, under Dr G. P Wilkin.

Dr Eleanor M Riley

Department of Genetics, University of Edinburgh: for five years, for a study of the role of Tlymphocytes in the development of transmission blocking immunity of Pfalipprom malaria, under Dr R Carter (013032902).

Dr R D St Johnston

Department of Zoology, University of Cambridge: for five years, for a study of the localization of maternal determinants in Drosophila, under Professor J B Gurdon (03)3141/2791/2).

Dr J A Todd

Nuffield Department of Surgery and Clinical Medicine, University of Oxford: for five years, for a study of genetic susceptibility to autoimmune Type 1 diabetes, under Profesor P.J Morris (03127027092).

Dr R Williamson

The Laboratory, Plymouth (UK Marine Biological Association): for three years, for further support of his study of the equilibrium system in Cephalopods, under *Professor* Sir E.J. Denton (01518472912).

Dr D C Wraith

Department of Pathology, University of Cambridge: for five years, for additional salary costs for a study of T cell recognition and tolerance in autoimmunity, under Professor H Waldmann (019508/2500AL)

SENIOR RESEARCH FELLOWSHIPS IN CLINICAL SCIENCE

The Trustees are pleased to be able to report the continued success of the Senior Clinical Fellowship scheme. Fellows selected in the annual competition are offered personal support for five years, together with the expenses for their programme of research. They are free to concentrate on research into problems related to clinical science, and this intensive period of research in a clinical career has often proved to be the springboard to a senior academic position.

In the Trust's last report, we noted the appointment of four fellows to positions under the new appointment scheme for clinical academic staff. Another Fellow has moved to an appointment under this scheme: Dr A P Weetman of the University of Cambridge. Dr Weetman's tenure of this lectureship is to be short: the Trustees have learnt with great pleasure of his appointment as Professor of Medicine in Sheffield. Seven other fellows moved to established positions during the academic year 1989/1990. Dr D O Haskard, Dr C D Pusey and Dr R J Unwin were all appointed to Senior Lectureships at the Royal Postgraduate Medical School: Dr Janet M Allen moved from her fellowship at the Royal Postgraduate Medical School to a Lectureship in Physiology in Cambridge: Dr Swee Lay Thein was appointed to the staff of Professor Sir David Weatherall's MRC Molecular Haematology Unit at Oxford: Dr H M D Gurling took up a Senior Lectureship in Psychiatry at the University College and Middlesex Hospital School of Medicine: and Dr J A E Rees took up a Consultant and Senior Lecturer appointment in the University of Wales College of Medicine.

Five new fellows were appointed, and these awards are noted below. The appointment of Dr K Marsh has added to the cadre of outstanding young clinical scientists working on problems of tropical medicine, supported by this scheme. Dr Marsh and Dr A V S Hill both work on problems related to malaria, and Dr R E Phillips on studies of HTLV1 in human disease.

The Trustees were pleased to note that the Squibb Poster Award for outstanding presentation of important scientific work in the field of gastroenterology had been won by Dr P J Ciclitira, a former Wellcome Senior Research Fellow in Clinical Science, for work supported by the Trust. He shares the award with research assistants who were supported on his grant.

Dr V K K Chatteriee

Department of Medicine, University of Cambridge: for five years, for a study of regulation of gene expression by TRH and thyroid hormone, under Professor D K Peters (03)159729022.

Dr A C Chu

Department of Medicine, Royal Postgraduate Medical School, London: for one year, for an extension, of his study of epidermal T cell interactions in physiological and disease states, under Professor Sir Colin Dollery (01882/T82IA).

Dr W O C Cookson

Nuffield Department of Clinical Medicine, University of Oxford: for additional equipment, for his study of the genetics of atopy and atopic asthma, under Professor Sir David Wealistrall (01945127504).

Dr K Marsh

Institute of Molecular Medicine, University of Oxford: for five years, for a study of Plasmolium fakiparum: the relationship between host-parasite interactions and morbidity in malaria endemic areas, under Professor Sir David Weatherall

803142/Z9022.

Dr Ruth Matthews

Department of Medical Microbiology, University of Manchester: for additional equipment, for a study of the cloning and characterization of the immunodominant antigen of Candida albicans: its role in the pathogenesis and immunology of candidosis, under Professor J P Burnie (0)50002009.

Dr Joanna Poulton

Department of Paediatrics, University of Oxford: for five years, for molecular genetic analysis of mitochondrial DNA in human disease, under Professor E R Moxon (031350Z91/Z).

Dr P I Ratcliffe

Nuffield Department of Clinical Medicine, University of Oxford: for five years, for a study of the control of crythropoietin gene transcription, under Professor Sir David Weatherall (031349/2002).

Dr J S Savill

Department of Medicine, Royal Postgraduate Medical School, London: for five years, for a study of cellular control mechanisms in the resolution and persistence of renal inflammation, under Profesor Sir Colin Dollery (03153027012).

Dr A K-L So

Department of Medicine, Royal Postgraduate Medical School, London: for additional expenses, for his study of the genetics of rheumatoid disease, under Professor Sir Colin Dollery (01535227898).

Dr D M St Clair

Department of Psychiatry, University of Edinburgh: for additional support to enable a workshop on 11q gene mapping to be set up in relation to his genetic studies of schizophrenia, under Professor J H Evans (01941/22901).

Dr D M St Clair

Department of Psychiatry, University of Edinburgh: for five years, for additional salary costs for genetic studies in schizophrenia, under Professor J H Evans (019441/IZ90A).

Dr J R Stradling

Osler Chest Unit, University of Oxford: for additional equipment for his study of sleep disordered breathing, under Dr DJ Lane (014181/290/Z).

RESEARCH TRAINING FELLOWSHIPS IN CLINICAL EPIDEMIOLOGY

This scheme is designed to provide medical graduates with research training on the application of epidemiological principles and techniques to problems in clinical research. Fellows normally receive support for a Master's Degree in epidemiology, as part of the Training Fellowship. In the year under review (1988/89 in parenthesis for comparison) 13 (12) nominations were received and 4(5) new awards were made. Applications under this scheme are now considered in parallel with Research Training Fellowships in Health Services Research. The dividing line between the subject matter of research in these two schemes is necessarily indistinct, and it has helped in the selection procedure for the interviewers to see applicants in the two schemes in parallel.

The Trust's Clinical Epidemiology Fellows have an excellent record in moving on to established positions where they can continue their research. For example, Dr S Wesseley received a Clinical Epidemiology Fellowship for studies in forensic psychiatry. He developed an interest in the epidemiology of post-viral fatigue syndromes, and his findings attracted considerable interest. He has now moved to a Senior Lectureship in psychiatry at King's College School of Medicine.

Dr Frances F M Cowan

Department of Genito-Urinary Medicine, University College and Middlesex School of Medicine, London: for additional expenses, for her study to examine the relationship between herpes simplex virus antibody status (using typespecific serological assays) and demographic characteristics, sexual behaviour and symptoms, under Professor M W Aller (094177288).

Dr J K Cruickshank

Diabetic Unit, Clinical Research Centre, Harrow: for a nine month extension of his study of the genetic basis of non-insulin dependent diabetes mellitus; its validation in populations of different ethnic groups and assessment with possible gene markers, under Dr R Mahher (01545172866A).

Dr Lelia Duley

Nuffield Department of Obstetrics and Gynaecology, University of Oxford: for two years, for an extension of her study of the epidemiology and clinical management of eclampsia, under Dr I Chalmers (01943/IZ289A).

Dr Judith R Glynn

Department of Epidemiology and Population Sciences, London School of Hygiene and Tropical Medicine, London: for eighteen months, for a study of the relationship between the severity of communicable diseases and the size of the inoculum, under Professor DJ Bradley, Department of Communicable and Topical Diseases

Dr Helen Rodgers

Department of Medicine, University of Newcastle upon Tyne: for two years, for a prospective case controlled study of stroke disability, under Professor OF W James (3)1205/239072.

Dr S O Shaheen

MRC Environmental Epidemiology Unit, University of Southampton: for three years, for a study of the relationship between respiratory infection during childhood and chronic airflow obstruction in adult life, under Professor D I P Barker (031453Z590Z).

Dr H C Williams

Department of Dermatology, United Medical and Dental School of Guy's and St Thomas's Hospitals, London: for three years, for an epidemiological study of factors affecting the prevalence and severity of atopic eczema in children of different ethnic backgrounds in London, and its relation to a parallel study in Jamaica, under Professor R J Hay (0320027602).

RESEARCH TRAINING FELLOWSHIPS FOR MEDICAL AND DENTAL GRADUATES

This scheme has expanded rapidly since its inception in 1982. The Trustees regard the research training of young medical and dental graduates as being of paramount importance, and have provided substantial additional funds for this scheme in 1989/90. This general scheme covers all clinical subjects including the Trust's former Research Training Fellowship schemes in surgery and pathology. A few selected subjects such as psychiatry and ophthalmology are covered by separate arrangements.

The Trust continues to note with disappointment the relatively few applications from surgeons, obstetricians and pathologists. Part of the reason for this deficiency may be the clinical training requirements in these specialities, and we are therefore investigating ways to promote research in these important areas of clinical science.

There is evidence that prospective fellows and their sponsors welcome the flexibility of the Trust's training fellowship schemes. Medical Graduate Fellowships are awarded in competition four times each year, and the length and type of support are flexible. Fellows sometimes receive research training at selected centres abroad, where this experience cannot be gained within the British Isles.

During the year, 24 new fellowship awards have been made. 13 awards were made during 1988/89.

Dr C Baynes

Department of Clinical Endocrinology, St Mary's Hospital Medical School, London: for one year, for an extension of his study of insulin sensitivity and lipoprotein metabolism in type 2 diabetes, under Dr R S Elkeles

Dr W M Bennet

Endocrine Unit, Royal Postgraduate Medical School, London: for one year, for a study of the effect of insulin on amino acid and protein turnover in muscle and whole body in patients with Type I diabetes, under Professor S R Bloom (0228527902.)

Dr Z Chen

Department of Surgery, University of Cambridge: for three years, for the development of new immunosuppressive drugs and regimens using allogencic and xenogencic models, under Profesor Sir Roy Cahnt (0.1054/2590Z).

Dr A P Cope

Department of Cellular Immunology, Charing Cross Sunley Research Centre, London: for three years, for a study of cytokine receptor expression in rheumatoid diseases, under Profesor M Feldmann (031202982).

Dr C R Darby

Nuffield Department of Surgery, University of Oxford: for two years, for a study of the induction of immune tolerance to transplanted major histo-compatability antigens in mice, under Professor P.J. Morris and Dr. Kathryn J. Wood

Dr R I O Davies

Osler Chest Unit, University of Oxford: for two years, for a study of the importance of obstructive sleep apnoca and snoring in the actiology of hypertension and cariovascular disease, under Dr J R Studling (2014272002).

Dr A S Duncombe

Academic Department of Haematology, Royal Free Hospital School of Medicine, London: for a two month extension of his study of the recognition by human monoclonal antibodies of non-HLA matched cell antigen macrow transplant pairs, under Dr Jane E Grandly, Department of Virology (Virology 106809278M).

Dr Fidelma Dunne

Department of Medicine, University of Birmingham: for three years, for the expression and function of parathyroid hormone related protein in the developing human fetus, under Dr D A Heath (02271/IZ990Z).

Dr J M Farrant

Liver Unit, King's College School of Medicine and Dentistry, London: for two years, for a study of the immunogenetics of primary sclerosing cholangitis, under Professor A L Eddletson

Dr G T Finnerty

Department of Physiology and Biophysics, St Mary's Hospital Medical School, London: for three years, for a study of the relationship of interietal spikes and scieures in experimental epilepsies, under Dr.J. G. R. Jefferys (20093025902).

Elaine Foster

Department of Biomedical Sciences, University of Sheffield: for three years, for a study to answer the question 'Is the poor localisation of dental pain due to convergence of sensory inputs in the trigeninal ganglion or trigeninal sensory nuclei?' under Dr M E Akkinson (009971/28972).

Dr M J Gili

Department of Medical Microbiology, St Mary's Hospital Medical School, London: for three years, for a molecular study of the pen B locus of Neiszeria genorthozar, under Professor C S F Easnont (2012/97/2002).

Dr E Hatchwell

Department of Biochemistry, University of Oxford: for three years, for the application of x-linked DNA probes in clinical research: physical mapping and analysis of translocations associated with incontinentia pigmenti, under Dr I W Craig (0.0975472892).

Dr R L Hayward

Department of Biochemistry, University of Edinburgh: for three years, for a study of induced phase changes in biological phospholipids, under Dr J P Bradshaw 01323279072.

TEI Hems

Department of Anatomy, University of Edinburgh: for one year, for an assessment of surgical techniques for repair of large and proximal nerves, under M A Glaby

Dr R Higgins

Nutfield Department of Surgery, University of Oxford: for one year, for a one year extension of his study of the preparation and characterization of new monoclonal antibodies directed against antigens on activated human T cells, under Dr M J Dallman (016827/2787/A).

Dr P J Illingworth

Department of Obstetrics and Gynaecology, University of Edinburgh: for one year, for an extension of his study of the role of inhibin and related peptides in the control of ovarian function, under Professor D T Baind (0182971ZBSRA).

Dr A Khwaia

Department of Haematology, University College and Middlesex School of Medicine, London: for two years, for a study of the effects of graullocyte-macrophage colonystimulating factor (GM-CSF) on neutrophil priming and mechanisms of GM-CSF receptor modulation, under Professor D C Linch (03228/278/VZ).

Dr A Levy

Medical Unit, Charing Cross and Westminster Medical School, London: for a one year extension of his molecular and biochemical studies in human pituitary tumours, under Professor S L Lightman (016058/2786/A).

Dr D J M Lewis

Department of Communicable Diseases, St George's Hospital Medical School, London: for three years, for a study of the characterization of the circulating T cell response after oral immunication with cholera toxin B subunit, and identification of the immunodominant B and T cell epitopes of CT-B, under Dr G E Griffin (031141/2902).

Dr Anneke Lucassen

Institute of Molecular Medicine, University of Oxford: for three years, for a study of the role of T cell receptor repertoire in susceptibility to multiple sclerosis, under Dr. J Rell 203070278972.

D J Premachandra

Department of ENT Surgery, Kent and Sussex Hospital, Tunbridge Wells, Kent for three months, for a study of the grafting of mastoid cavities with cultured autologous keratinocyte layers: a technique to eliminate post-operative otorrhoea, under RJ Sergeant and Professor J W Fabrs, Bland Meludoe Centre for Medical Research, East Grinstad (03)240/Z9072.

Dr C N Ross

Department of Medicine, Royal Postgraduate Medical School, London: for three years, for a study of T cell receptor specifically and gene usage in Goodpastures syndrome, under Dr C D Puscy (03090728972).

Dr S B Squire

Department of Virology, Royal Free Hospital School of Medicine, London: for two years, for a study of the pathogenesis of cytomegalovirus pneumonitis in allogeneic transplant recipients, under Dr Jane E Grandy 03117425002.

R W Stones

Department of Anatomy and Developmental Biology, University College London: for two years, for a study of the clinical and laboratory investigation of vasomotor control in the pelvic veins in women, under Professor G Buntsode (032106/Z090Z).

Dr M B Thylor

Department of Medical Microbiology, St Mary's Hospital Medical School, London: for a three month extension of his study of the invite culture of Pheumocytikis carinii and the use of cultured organisms for biochemical and immunochemical studies, under Professor C S F Eamon on 1884/128/18.

Dr P I T Vallance

Department of Pharmacology, St George's Hospital Medical School, London: for three years, for a study of membrane signal transduction mechanisms in human endothelial cells, under Professor TB Bollon @00591728972.

Dr P Venkatesan

Department of Microbial Diseases, University of Nottingham: for two years, for a study of the immunology of giardiasis in a murine model, under Dr R G Finth (022241/2902).

Dr N J Viner

Department of Rheumatology, University of Birmingham: for two years, for a study of the role of synovial antigen-presenting cells in inflammatory arthritis, under Dr J S H Gaston (03228027002).

A J Wakefield

Department of Surgery, Royal Free Hospital School of Medicine, London: for one year, for an extension of his development of an intestinal model to study graft survival and immunological mechanisms of transplant rejection, under Dr R E Pounder (016513/Z864).

Dr P J Winwood

Department of Medicine II, University of Southampton: for three years, for a study of the role of Kupffer cell-derived 97kD gelatinase in liver fibrosis, under Dr MJP Anthur (031161/Z99Z).

TRAINING FELLOWSHIPS IN HEALTH SERVICES RESEARCH

This pilot scheme of Training Fellowships in Health Service Research has continued to make progress. The table below (Figure 8) lists the number of nominations and awards since its inception in the academic year 1987/88.

These fellowships are open to graduates in a wide range of disciplines, including medicine, and the Trustees have been encouraged by the high quality of many of the applicants.

Health Services Research is a subject of increasing importance, and the Trustees' decision to introduce this scheme was in recognition of the need for well-trained research workers in this field. In the light of the success of the fellowships, they have agreed a limited programme of support for research projects in Health Services Research, and grants of this type will be available in the academic year 1990/91. The Trustees noted with interest the Government's proposals for research within the Health Service, in the White Paper Priorities in Medical Research (CM 902). They have expressed the hope that research develops its rightful place as an important arm of the National Health Service.

Figure 8

1987/88	1988/89	1989/90
4	7	10
2	2	4
	4 2	4 7 2 2

Dr Valerie Harper

Department of Obstetrics, University of Aberdeen: for three years, for a study of antenatal care in the Grampion Region: evaluation of new regional protocol and the utility of certain optional investigations, under Dr Drvis M Campbell and Dr I T Rusell, Health Service Unit

Dr M Marshall

Department of Psychiatry, University of Oxford: for three years, for an evaluation of the effectiveness of hostels and group homes incaring for people with chronic disabling mental illness: a prospective study, under Dr D Gath (0352427805)

Dr Susan M Wheeley

Regional Virus Laboratory, University of Birmingham: for two years, for a study of aspects of spread and the feasibility of containment of the hepatisi B virus (HBV) in a multi-ethnic inner city area, under Dr Elizabeth H Boxall and Dr DG Debelle, Centre For Community Health, Birmingham

Dr Charlotte M Wright

Department of Child Health, University of Newcastle upon Tyne: for three years, for a study of deprivation and growth: a community approach to intervention in failure to thrive in Newcastle, under Profesor A Ayusley-Green

MATHEMATICAL BIOLOGY FELLOWSHIPS AND SCHOLARSHIPS

The Trustees have received a number of representations about the shortage of researchers working at the interface between mathematics and biology. Mathematical biology is of increasing importance in many areas of the life sciences, and difficulties in attracting qualified staff in this subject had been noted in various areas of the Trust's interest: for example, research workers using non-invasive methods for studies of the brain (see page 43) have had some difficulty in attracting statisticians interested in developing methods for handling the large and complex data sets generated by these techniques.

A meeting was therefore held at the offices of the Trust where Trustees discussed the problem with a number of outside experts. In the light of those discussions, the Trust advertised a new scheme of support providing Postdoctoral Fellowships and Research Training Scholarships in Mathematical Biology. Fellowship support is flexible in type, designed to attract mathematicians to pursue independent studies applying their mathematical skills to a biological problem, and to attract postdoctoral biological scientists to develop their mathematical skills in relation to their biological interests. Fellowships are advertised with a tenure of up to five years. Research Training Studentships are also advertised for graduates with mathematical or biological degrees, wishing to study for a PhD degree at the interface. The possibility of support for four years is available, to allow graduates to fully develop their skills in areas not covered by their first degree.

Twelve applications for fellowships were received, and seven candidates were interviewed. One fellowship application was approved for support. Twenty applications for Research Training Scholarships were received, and four awards agreed. One award was subsequently withdrawn as the candidate decided to take up another offer.

This scheme will be advertised again in the year 1990/1991. The Trustees are most grateful to the experts who advised them on the development of this programme, both at the meeting held at the Trust and elsewhere in informal discussion. They are also particularly grateful to the outside experts who helped with the assessment of candidates in the first round of this new scheme.

MATHEMATICAL BIOLOGY SCHOLARSHIPS

Debbie L Benson

Centre for Mathematical Biology, Mathematical Institute, University of Oxford: for four years, for the study of pattern formation in the developing limb, under Dr P K Maini (0)2653759023.

M T Dovle

Department of Statistics and Modelling Sciences, University of Strathclyde, Glasgow: for four years, for a study of the impact of social/sexual mixing, second heterogeneity and age-structure, on sexually transmitted disease dynamics, under Dr S P Blythe and Dr D Greenhalph 022654529982.

R W Tegeder

Department of Pure Mathemathics and Mathematical Statistics, University of Cambridge: for three years, for a study of the mathematical models of cooperation in biology under Profesor P Whittle (0.32656729902).

MATHEMATICAL BIOLOGY FELLOWSHIP

Dr C G Phillips

Physiological Flow Studies Unit, Imperial College of Science, Technology and Medicine, London: for five years, for a study of the application of mathematics to biopolymer science and connective tissue research, under Professor J T Stuart, Department of Mathematics; Dr K H Parker and Dr C P Winkey (032609ZP072).

PRIZE STUDENTSHIPS

This scheme, in which exceptional students selected for postgraduate research training are paid a stipend equivalent to that of a research assistant, together with realistic laboratory expenses, has continued to attract good applicants.

An interim review conducted during the year led to the decision by the Trustees that awards would continue to be made to individuals and will not normally be transferable. Movement between institutions will be encouraged by ensuring that about 50 per cent of places are made available to nominees from a different institution.

It had been hoped to attract graduates from the physical sciences by making some awards for four years. The Trustees are disappointed to note that this approach does not seem to have been successful in attracting a significant number.

There were fewer withdrawals following award this year (9 as opposed to 18 during 1988/89) but whether this was because of the increased stipend is not known.

The significant amount of research being undertaken in polytechnics was recognised by allotting a number of nominations to the Committee of Polytechnic Heads of Biological Sciences. This body undertook preliminary screening of applications from polytechnics on our behalf and forwarded a restricted number to the Trust, several of which were awarded.

In the coming year, the scheme is to expand to 80 studentships. Nominations will also be invited from Wellcome Trust Units, Principal Fellows and postgraduate institutes; up to now applications have been largely confined to universities undertaking undergraduate as well as postgraduate teaching.

The Prize Studentship scheme, like all Trust schemes, is open to modification and the Trust will therefore be pleased to receive suggestions for improvement.

It should be emphasised that the Prize Studentships are not open to individual applications from candidates or supervisors. Instead, institutions are invited to nominate a specific number of candidates from which the Trustees will select a proportion for award. Full details of the scheme are sent to university registrars or their equivalent.

Recipients of the 1989/90 awards are detailed on the following pages.

S G Addinall

Department of Molecular Biology, University of Edinburgh: for three years, for a study of the regulation of cell division, under Dr W D Denathic, Mordam Research Institute, Edinburgh

G Anderson

Department of Anatomy, University of Birminghams for three years, for a study of intra-thymic factors regulating T-cell development, under Professor J.J. T. Owen and Dr. E.J. fonkinson

M Avere

Department of Genetics, University of Cambridge: for three years, for a molecular analysis of homeotic and segmentation genes in the crustacean Artenia salina, under Dr M E Akam (001700/2509/2.

Muriel M Bouvier

Department of Physiology, University College London: for three years, for a study of electrical properties of neurones and glial cells, under Dr D I Attaell (MASS/20072)

Collette J Bridgeman

Cell and Molecular Biology Laboratory, University of Sussex, Brighton: for three years, for a study of growth control by growth factors and their receptors in the human ageing disease, Werner's Syndrome, under Professor S Shall

Celia P Briscoe

Department of Biochemistry, University of Glasgow: for three years, for a study of the regulation of phospholipase D activity by receptor occupation, under Dr.M.J.O. Wakelan (20168827892).

D M Budget

Department of Computing, Imperial College of Science, Technology, and Medicine, London: for three years, for a study of the remote sensing of the myocardium, under Dr D M Monto

T D Bu

Department of Clinical Biochemistry, King's College School of Medicine and Dentistry, London: for three years, for a study of parathyroid hormone related peptide (PTHH) in the autocrine regulation of cell proliferation, under Dr C Moniz

Lucia Caravia

Department of Mechanical Engineering, University of Leeds: for three years, for a study of the tribology of compliant surface materials with particular application to cushion forms of total replacement joints, under Professor Doueson and Dr J Fisher (031715/25927).

M C Chow

Department of Biochemistry, Imperial College of Science, Technology and Medicine, London: for three years, for a study of leishmania promoter analysis by DNA transfection, under Dr Deborah F Smith (0359102902).

M G de Bono

Laboratory of Molecular Biology, Medical Research Council, Cambridge: for three years, for the molecular and genetic analysis of nematode development, under Dr J Hodekin (031705/29072).

L A De-Netto

School of Applied Sciences, Wolverhampton Polytechnic: for three years, for a study of the expression of the human gene for urate oxidase, under Dr M Conneck and Dr J P Neoptolemos, Department of Sungery, Dudley Road Hospital, Binningham (03169927902).

Iulie R Dunan

Department of Neuroscience, Institute of Psychiatry, London: for three years, for an investigation of the potential involvement of the amyloid pressurs protein (APP) in synaptic plasticity, under Professor B H Anderton and Dr I C Campbell (2017)97279023.

f Elela

Department of Medical Physics-Bloengineering, University College London: for three years, for a study of face and head modelling for simulated surgery, under D Linney (0310206Z900Z).

Magdalena Exner

Department of Psychology, University of Reading: for three years, for a study of the characterization of the individual differences in the behavioural response to dopamine receptor agonists, under Dr D Clark (03161627902).

Shelley G Folkard

Department of Pure and Applied Biology, Imperial College of Science, Technology and Medicine, London: for three years, for a study of the characterization of protective immunity against Ontheerea mitrofilariae, under Dr A E Bianco 8035027802.

Jackie Ford

Department of Biochemistry, University of Oxford: for three years, for studies of the biochemistry and biophysics of signal transduction as a model for hormone and drug action, under Dr A Watts (0.1591/ZPOZ).

A 5 Frame

Department of Science, Humberside College of Higher Education, Hull: for three years, for a study of AIR-carboxylase and drug design, under Dr G Mackenzie

Alison L Gibb

Department of Pharmacology, University of Oxford: for three years, for studies on the formation of the thiolester in complement proteins C3 and C4, under Dr Edith Sim

L I Goodstadt

Laboratory of Physiology, University of Oxford: for three years, for a study of the modulation of G-protein signalling in the heart, under Dr T Powell (031593/ZP90Z).

F A Goytisolo

Department of Biochemistry, University of Cambridge: for three years, for a study of histone Hi in chromatin structure and function, under Dr Jean O Thomas 03/1006Z9023.

R B Greaves

Department of Chemistry, University of York: for three years, for a protein engineering and molecular modelling study of dihydrofolate reductase binding mutants, under Dr R E Hubbard (03161522902).

Annette J Hale

Department of Biochemistry, University of Nottingham: for three years, for a study of the characterization and metabolic activity of osteoclastis solated from cultures of bone marrow taken from patients with Pager's disease, under Dr DJ Hosking (031611/2002).

R T Hannay

Laboratory of Physiology, University of Oxford: for three years, for a quantal analysis of synaptic transmission in the visual cortex and hippocampus, under Professor C Blakenore and Dr A U Larkman (031591/27902).

Carol A Harley

Department of Preclinical Veterinary Sciences, University of Edinburgh: for three years, for a study of the identification of proteins which interact with yeast NSF (SEC 18p): the membrane fusion apparatus of Sacchamonyes cerevisiae, under Dr A Boyd (031671/2902).

Lindsay J Hewlett

Department of Biochemistry, University of Dundee: for three years, for a study of the induction and organization of a novel endocytotic pathway on epidermal growth factor stimulated cells, under Dr C Watts (031566727072.

Wendy L Inglis

Department of Psychology, University of St Andrews: for three years, for a project entitled 'Is the damage to the nucleus tegmentipedunculopontinus in Parkinson's disease related to the loss of neurones from the substantia nigra? An investigation in the rat, under Dr P Winn (031644Z902).

S Jenkinson

Department of Pharmacology and Therapeutics, University of Leicester: for three years, for a study of the molecular mechanisms of lithium action and inostiol depletion on inositol polyphosphate second messengers in neuronal systems, under Professor S R Nahorski and Dr R A J Challiss (0316517/902).

L lennings

School of Applied Biology, Lancashire Polytechnic, Preston: for three years, for a study of the effects of histamine and related compounds on exocrine secretion in the in vitro and in vivo guinea-pig pancreas, under Dr I Singh and Dr R Il' Lea (031675/Z/90/Z).

Sarah A Johnson

Department of Environmental and Evolutionary Biology, University of Liverpool: for three years, for a study of the role of endogenous prolactin and growth hormone in the control of T-lymphocyte function, under Dr D M Eusor

Kristine A Koepke

Department of Biochemistry, University of Bath: for three years, for a study of site specific mutagenesis of retroviral integrase, under Dr M I Danson and Dr D W Hough

N E Le Brun

School of Chemical Sciences, University of East Anglia, Norwich: for three years, for studies of mono-nuclear iron sites in bacterioferritin from pseudonomads and various clinical isolates, under Professor A I Thomson and Dr GR Moore

D Mcalpine

Laboratory of Physiology, University of Oxford: for three years, for a study of the organization, development and susceptibility to hearing loss of the auditory brainstem, under Dr D R Moore (031596/Z/90/Z)

Helen-Corinna McKillen

Department of Physiology, University of Leicester: for three years, for a study of the regulation of ATP-sensitive potassium channels of mammalian skeletal muscle, under Dr N B Standen (031650/Z/90/Z).

S F Mucklow

Sir William Dunn School of Pathology, University of Oxford: for three years, for a study of the molecular characterization of a macrophage lectin-like haemagglutmin involved in stromalhaematopoietic interactions, under Professor S Gordon (031595/Z/90/Z),

H S Mudhar

Department of Biology, University College London: for three years, for a study of the ablation of Muller glial cells in the retinae of transgenic mice, under Dr W D Richardson and Professor M C Raff, Department of Zoology (031628/Z/90/Z).

M P Murphy

Department of Biochemistry, University of Cambridge: for three years, for a study of the role of cyclins A and B in the activation of cdc2- kinase in the eggs and oocytes of Xenopus lacris, under Dr M Carrington (031710/2/90/2)

R I Perrins

Department of Biochemistry, University of Bristol: for three years, for a study of the characterization, function and role of spinal cord neurones in a simple vertebrate, the amphibian tadpole, under Dr A Roberts

Anne Marie Picardo

Department of Cell and Structural Biology, University of Manchester; for three years, for a study of the molecular relationship between chromosomal and temperature dependent sex determination, under Dr P T Sharpe and Professor M W I Ferguson (032440/2/90/2)

N Pullen

Department of Biochemistry, University of Southampton: for three years, for a study of protein-protein interactions during visual signalling, under Professor M Akhtar

Emma Rhead

Department of Human Anatomy and Cell Biology. University of Liverpool: for three years, for a study of the identification of guanine nucleotide regulatory proteins involved in growth factor signal transduction, under Dr S R Pennington

Leslie L Ritchie

Department of Genetics, University of Glasgow: for three years, for a study of the molecular basis of mitochondrial disease, under Dr H T Jacobs and Professor R W Davies (031690/2/90/2).

Valery A Snell

Department of Biochemistry, University of Oxford: for three years, for a study of the role of cdc2+ in cell cycle control, under Professor P Nurse, Department of Microbiology (031598/Z/90/Z).

Kristina Stalev

Department of Anatomy, University of Cambridge: for three years, for a study of the regulation of proto-oncogenes during development and degeneration in the rodent forebrain, under Dr M V Sofroniew (031711/2/90/2)

C W Stephen

Department of Biochemistry, University of Dundee: for three years, for a study of the regulation of DNA replication in human cells, under Dr DP Lane (031365/Z/90/Z).

Helen R Taylor

Department of Pathology, University of Cambridge: for three years, for a study of the role of herpes simplex virus genes in pathogeneis and latency, under Dr S Efstathiou (931712/Z/90/Z).

Katherine P Topping
Department of Microbiology, University of Newcastle upon Tyne: for three years, for a study of the structural basis for scrotype-specific antibody recognition of protective streptococcal M protein epitypes, under Dr M Kehee and Dr Jane E Calvert, Division of Immunology

Irono M.C. Tracev

Department of Biochemistry, University of Oxford: for three years, for biochemical studies on animal models with genetic diseases, under Professor G K Radda (032469/Z/90/Z).

A V Turnbull

Department of Physiological Sciences, University of Manchester: for three years, for a study of the involvement of corticotrophin releasing factor in the hypothalamic responses to stress and injury, under Dr Nancy J Rothwell (031582/Z/90/Z).

V A Tysoe-Calnon

Department of Virology, Royal Free Hospital School of Medicine, London: for two years and four months, for a study of the cytomegalovirus glycoproteins and their antigenic sites, under Dr Jane E Grundy

A L Upton

Department of Physiology, University College London: for three years, for a study of the role of proteins of the lipoprotein/calpactin family in exocytosis, under Dr S E Moss and Dr B D Gomperts

E I Usherwood

Department of Medicine, University of Cambridge: for three years, for a study of the human T cells in persistent human virus infection, under Dr L K Borysiewicz

Nicola G Wallis

Department of Biochemistry, University of Cambridge: for three years, for a study of the protein domains and molecular recognition in multienzyme complexes, under Professor R N Perham m11713/7/90/21

A R Ward

Department of Human Anatomy, University of Oxford: for three years, for a study of the role of receptors in the control of release of peptides from dendrites of magnocellular neurones, under Dr I F Morris (031599/2/90/2).

M A Watson

Department of Genetics, University of Glasgow: for three years, for a study of the molecular mechanism of synapsis and strand exchange during site-specific recombination, under Professor D J Sherratt (031687/Z90/Z).

Deirdre M Williams

School of Biological Sciences, University of Sussex, Brighton: for three years, for a study of the central influence on the peripheral mechanical response of the human cochlea, under Professor I J Russell and Dr Ann M Brown (031649/Z/90/Z).

L lennings

School of Applied Biology, Lancashire Polytechnic, Preston: for three years, for a study of the effects of histamine and related compounds on exocrine secretion in the in vitro and in vivo guinea-pig pancreas, under Dr J Singh and Dr R W Lta (03405325905):

Sarah A Johnson

Department of Environmental and Evolutionary Biology, University of Liverpool: for three years, for a study of the role of endogenous productin and growth hormone in the control of T-lymphocyte function, under Dr D M Ensor

Kristine A Koepke

Department of Biochemistry, University of Bath: for three years, for a study of site specific mutagenesis of retroviral integrase, under Dr M J Danson and Dr D W Hough

N E Le Brun

School of Chemical Sciences, University of East Anglia, Norwich: for three years, for studies of mono-nuclear iron sites in bacterioferritin from pseudonomads and various clinical isolates, under Profesor AJ Thomson and Dr GR Moore 1005012, 2005.

D Mcalpine

Laboratory of Physiology, University of Oxford: for three years, for a study of the organization, development and susceptibility to hearing loss of the auditory brainstern, under Dr D R Moor (03159625962).

Helen-Corinna McKillen

Department of Physiology, University of Leicester: for three years, for a study of the regulation of ATP-sensitive potassium channels of manunalian skeletal muscle, under Dr N B Standen (2016)9829020.

S F Mucklow

Sir William Dunn School of Pathology, University of Oxford: for three years, for a study of the molecular characterization of a macrophage lectin-like haemagglutnin involved in stromalhaematopoietic interactions, under Professor S Gorden (031893/Z99Z).

H S Mudhar

Department of Biology, University College London: for three years, for a study of the ablation of Muller glial cells in the retinae of transgenic mice, under Dr H' D Richardsen and Professor M C Raff, Department of Zoology (2010)28220072.

M P Murphy

Department of Biochemistry, University of Cambridge: for three years, for a study of the role of cyclins A and B in the activation of cdc2-kinase in the eggs and oocytes of Nenopus lucvii, under Dr M Carnington (011702508/2).

R J Perrins

Department of Biochemistry, University of Bristol: for three years, for a study of the characterization, function and role of spinal cord neurones in a simple vertebrate, the amphibian tadpole, under Dr A Roberts (2016;2072707Z).

Anne Marie Picardo

Department of Cell and Structural Biology, University of Manchester for three years, for a study of the molecular relationship between chromosomal and temperature dependent sex determination, under Dr P T Sharpe and Professor M W J Fergusson (032440/Z902).

N Pullen

Department of Biochemistry, University of Southampton: for three years, for a study of protein-protein interactions during visual signalling, under Profesor M Akhtar (2013)12729021.

Emma Rhead

Department of Human Anatomy and Cell Biology, University of Liverpool: for three years, for a study of the identification of guaraine muckeotide regulatory proteins involved in growth factor signal transduction, under Dr S R Pennington (2016)27(593):

Leslie L Ritchie

Department of Genetics, University of Glasgow: for three years, for a study of the molecular basis of mitochondrial disease, under Dr H T Jacobs and Professor R W Davies

Valery A Snell

Department of Biochemistry, University of Oxford: for three years, for a study of the role of cdc2+ in cell cycle control, under Professor P Nurse, Department of Microbiology (03)598779972.

Kristina Staley

Department of Anatomy, University of Cambridge: for three years, for a study of the regulation of proto-oncogenes during development and degeneration in the rodent forebrain, under Dr M V Softonita (23171122022).

C W Stephen

Department of Biochemistry, University of Dundee: for three years, for a study of the regulation of DNA replication in human cells, under Dr D P Lane (03)553229072.

Helen R Taylor

Department of Pathology, University of Cambridge: for three years, for a study of the role of herpes simplex virus genes in pathogeneis and latency, under Dr S Efstathiou (01/11/2790/Z). Katherine P Topping

Department of Microbiology, University of Newcastle upon Tyne: for three years, for a study of the structural basis for serotype-specific antibody recognition of protective streptococcal M protein epitypes, under Dr M Kehoe and Dr Jane E Calvert, Division of Immunology (031655/27002).

Irene M C Tracey

Department of Biochemistry, University of Oxford; for three years, for biochemical studies on animal models with genetic diseases, under Professor G K Radda (032469/IZ/90Z).

A V Throbal

Department of Physiological Sciences, University of Manchester: for three years, for a study of the involvement of corticotrophin releasing factor in the hypothalamic responses to stress and injury, under Dr Nancy J Rothwell

V A Tysoe-Calnon

Department of Virology, Royal Free Hospital School of Medicine, London: for two years and four months, for a study of the cytomegalovirus glycoproteins and their antigenic sites, under Dr Jane E Grandy (031631/Z90Z).

A L Unton

Department of Physiology, University College London: for three years, for a study of the role of proteins of the lipoprotein/calpactin family in exocytosis, under Dr SE Moss and Dr B D Gomperts (031629/Z9002).

E J Usherwood

Department of Medicine, University of Cambridge: for three years, for a study of the human T cells in persistent human virus infection, under Dr L K Borysiavicz (00)709080022.

Nicola G Wallis

Department of Biochemistry, University of Cambridge: for three years, for a study of the protein domains and molecular recognition in multienzyme complexes, under Professor R N Perham (03171322902).

A R Ward

Department of Human Anatomy, University of Oxford: for three years, for a study of the role of receptors in the control of release of peptides from dendrites of magnocellular neurones, under Dr. J. F. Mortis (031599/2502).

M A Watson

Department of Genetics, University of Glasgow: for three years, for a study of the molecular mechanism of synapsis and strand exchange during site-specific recombination, under Professor D J Sharatt (0.31687/Z902).

Deirdre M Williams

School of Biological Sciences, University of Sussex, Brighton: for three years, for a study of the central influence on the peripheral mechanical response of the human ochlea, under Professor IJ Russell and Dr Ann M Brown (031649729072).

VACATION SCHOLARSHIPS

The Vacation Scholarship scheme was set up by the Trustees to encourage undergraduates to explore the possibilities offered by scientific research, both basic and applied. It has continued to attract a large number of good applicants and a total of 142 awards were made during the year at a cost of £113 180. This figure is 40 per cent higher than last year's and reflects the Trustees' view, based on the results of last year's analysis, that the scheme is catching potentially keen students at a crucial time in their development and giving them a real taste of laboratory work which has led in many instances to a research career.

Several organisations offer similar studentships and it is interesting to note that at least one further body, namely, the Council of Management of the Journal of Reproduction and Fertility, has decided to fund a limited number of equivalent grants following the example set by the Trust.

The benefits of this scheme are often two-way; the sponsor receiving as great a stimulus to future research as the student. Many of the results are written up and frequently the undergraduate is able to present his or her work at scientific meetings.

RESEARCH SUPPORTED THROUGH TRUST PANELS

Neurosciences	42
INFECTION AND IMMUNITY	55
Molecular and Cell	65
PHYSIOLOGY AND PHARMACOLOGY	77

NEUROSCIENCES PANEL

Professor Sir Stanley Peart, MD, FRCP, FRS, (Chairman, Wellcome Trustee)

J J B Jack, BM, PhD, (Wellcome Trustee), The Wellcome Trust

D Gordon, MA, MB, FRCP, (Scientific Secretary), The Wellcome Trust

This panel has been divided into two groups; the Mental Health and Neurosciences Group as detailed below and the Vision Research Group which is mentioned at page 100.

Mental Health and Neurosciences Group

Professor B H Anderton, PhD, Institute of Psychiatry, London

Professor D P B Goldberg, DM, FRCP, FRCPsych, University of Manchester

Professor Anita E Harding, MD, FRCP, Institute of Neurology, London

Professor M H Lader, DSc, MD, FRCPsych, Institute of Psychiatry, London

Professor D Lodge, BVSc, DVA, PhD, MRCVS, Royal Veterinary College, London

Professor J D McCulloch, PhD, University of Glasgow

Professor S R Nahorski, PhD, University of Leicester

Professor H P Rang, DPhil, BM, FRS, Sandoz Institute for Medical Research, London

Professor E O R Reynolds, MD, FRCP, University College London

T W Robbins, PhD, University of Cambridge

Staff members responsible

Anne Edwards, (Grants Officer) Margaret Hurley, BSc, (Grants Officer)

NEUROSCIENCE RESEARCH

As noted in the Trustees' last report, the Trust's Mental Health Panel and Vision Research Working Party were subsumed into the new Neuroscience Panel, which now considers all applications for research in basic and clinical neuroscience. For the purpose of consideration of grants, the Neuroscience Panel divides into two groups: the Mental Health and Neuroscience Grants Committee, and the Vision Research Working Party (see page 100): The Trustees hope that the research community will recognise, from the names assigned to these two groups, their continuing special interest in developing research in psychiatry, ophthalmology and the other clinical neuroscience subjects, on a solid foundation of high quality basic neuroscience research.

The two Grants Committees considered an unusually large number of applications, and the competition for support was severe. Grants totalling £6.2m were awarded, excluding longer-term support. This represented 28 per cent of the total requests.

The total number of applications for grants during 1989/90 was 288 of which 130 were awarded in part or in full.

Non-Invasive Studies of the Brain

The Trust's interest in development of research using the many techniques for non-invasive studies of the brain has been noted in preceding reports. During this year, a notable event was the opening of the Wellcome Biomagnetism Unit in the University of Glasgow, by Mr R G Gibbs, the Chairman of the Trust. This award, to Dr Andrew Weir and Professor Gordon Donaldson and their colleagues in the Department of Neurology in the University of Glasgow, and the Department of Physics and Applied Physics in the University of Strathclyde, was noted in the seventeenth report. A purpose-built wooden research building has been constructed, containing a magnetic shield of thick aluminium. This is now an unique facility in the UK for biomagnetic recordings in a clinical setting. The range of patients, and of clinical neuroscience skills, available in the Institute of Neurological Sciences at the Southern General Hospital in Glasgow will be complemented by the expertise in physics from the University of Strathclyde. The Trust noted with interest the plans to build the new Scottish Spinal Injuries Unit on the Southern General site: patients with spinal injuries will be studied in the research programme of the new Unit, and, in turn, the research will help in the handling of their difficult clinical problems.

In an earlier report, a meeting held at the Neurosciences Institute of the Neuroscience Research Programme in New York was noted. The Trust has maintained its contact with the Neurosciences Institute, and a further meeting was held in January 1990, where a small group of scientists were able to discuss further the continuing development of non-invasive techniques.

Mental Health Fellowships

The Trust has, for many years, provided Research Training Fellowships in Mental Health, primarily for clinical psychiatrists in training. Under the new panel structure, these fellowships are still available, and the annual competition continues to attract a number of excellent candidates. The Trustees note with pleasure the progress of former Mental Health fellows into senior positions in academic psychiatry.

NEUROSCIPHCE RESEARCH

List of grants awarded over £2000

LONGER - TERM SUPPORT

Professor D M Armstrong £23 936 Department of Physiology, University of Bristol: for additional funds, for a study of cerebellar zonation and movement control, with Dr Judy R Trott (019374/B/90/A).

Professor S G Cull-Candy Department of Pharmacology, University College London: for additional equipment for a patch-clamp analysis of glutamate-receptor channels in mammalian central nervous system (030827/Z/90/A).

Dr D T Delpy £20 847 Department of Medical Physics and Bioengineering, University College and Middlesex School of Medicine, London: for additional expenses, for an investigation of cerebral metabolism in newborn infants and animals by magnetic resonance and near infrared spectroscopy and imaging, with Professor E O R Reynolds, Department of Paediatrics, University College London and Professor W1McDonald, Department of Clinical Neurology, Institute of Neurology, London (018111/Z/99/A).

Dr C G Fairburn £71 340 Department of Psychiatry, University of Oxford: for three years, for an extension to his studies of the actiology. character, prevalence and course of eating disorders (018157/Z/92/A).

Professor A Guz Department of Medicine, Charing Cross and

Westminster Medical School, London: for five years, for a study of cortical control of breathing in man: normal and diseased, with Dr P A Kirkwood, and Professor T A Sears, both of the Department of Neurophysiology, Institute of Neurology, London (030724/7/90/7)

Dr T W Robbins £16 756 Department of Experimental Psychology, University of Cambridge: for two years, for additional research expenses for his study of the neuropsychology of Parkinson's and Alzheimer's diseases and related disorders: comparative functions of chemically-defined neural systems in rats, monkeys and man, with Dr J B Everitt, Department of Anatomy and Dr Barbara I Sahakian, Department of Psychiatry, Institute of Psychiatry (019407/Z/90/A)

Dr A I Weir £16 054 Department of Neurology, University of Glasgow for additional research expenses, for a study of magnetophysiological/electrophysiological comparison of central nervous system function in health and disease using thin-film planar SQUID gradiometer with Professor G B Donaldson, Department of Physics and Applied Physics, and Dr C M Pegram and Dr I Bone both of the University of Strathelyde, (017811/7/90/A)

EQUIPMENT

Dr G Heron £11 032 Department of Ophthalmic Optics, Glasgow College: for equipment for an investigation into anomalies of ocular accommodation, with Dr J R Pugh, Department of Physical Sciences, and Dr WN Charman, Manchester University Institute of Science and Technology, and Dr G N Dutton, Tennent Institute of Ophthalmology, Western Infirmary, Glasgou (031158/2/90/2).

Dr I F Iles Department of Zoology, University of Oxford: for equipment, for a study of cortical control of spinal reflex machinery in man (030856/Z/89/Z).

MAJOR AWARD

Dr J F Stein Laboratory of Physiology, University of Oxford: for additional equipment, for his study of systems analysis of visuomotor functions of posterior parietal cortex and cerebellum in monkeys, brain damaged patients and dyslexic children (018159/Z/90/A).

Dr A I Parker Laboratory of Physiology, University of Oxford: for additional equipment for the computer-aided analysis of physiological systems, with Professor C Blakemore and Professor D Noble (015678/Z/86/A).

Dr R Reynolds £60 570 Department of Biochemistry, Imperial College of Science, Technology and Medicine, London; for equipment, for an image analysis of data from studies on the normal and abnormal development of oligodendrocytes and their response to damage (031396/Z/90/Z). Department of Immunology: for two months, for studies on the treatment and pathophysiology of acute mountain sickness, with Dr A D Wright (030716/Z/89/Z).

£38 016 Dr Christine Dean Department of Psychiatry: for two years, for an adoption study investigating the effect of rearing children as opposed to bearing children on the prevalence of psychiatric illness (031094/7/90/7) in women

£50 957 Dr M I Moseley Department of Ophthalmology: for two years, for a study of the development of pupil responses to spatial structure: investigation of a new objective technique for measuring visual acuity in human infants, with Professor A R Fielder

University of Sussex, Brighton

University of Birmingham

Dr A R Bradwell

£43 655 Dr A J Parkin Laboratory of Experimental Psychology: for two years, for a study of remediation of memory deficits in organic amnesia (031915/Z/90/Z).

University of Bristol

£16 633 Dr W I Armitage Department of Ophthalmology: for one year, for a study of cryobiology of corneal cells

£60 809 Dr G L Collingridge Department of Pharmacology: for three years, for a study of excitatory amino acid receptors and calcium regulation in relation to synaptic plasticity in rat hippocampal neurones, with Dr I G Schofield, Department of Biochemistry (030683/Z/89/Z).

Professor D L Easty Department of Ophthalmology: for six months, for an extension of his investigation into the expression of NHC antigens in corneal cells and their relevance in transplantation, (016072/Z/86/A) with Dr B Bradley

Dr A Livingston Department of Pharmacology: for two years, for an extension of his investigation of the spinal action of analgesic drugs in sheep using intrathecal application, with Mrs A E (017982/Z/88/A). Waterman

£5000 Dr O T Phillipson Department of Anatomy: for additional research expenses, for his further studies of reticular afferents to the thalamus (017234/Z/87/B). in the rat

Professor I C Watkins Department of Physiology: for three years, for a study of synthesis and characterization of kainate receptor antagonists. (031252/Z/90/Z).

RESEARCH ASSISTANCE AND EXPENSES

£15 060

£11 018 Professor D A S Compston Department of Medicine: for additional research expenses for his study of complement mediated oligodendrocyte /030552/7/89/A). injury, with Professor P I Lachmann

University of Cambridge

684 040 Dr R I Keynes Department of Anatomy: for three years, for a study of the action of inhibitory glycoproteins in development and regeneration of the vertebrate central nervous system, with Dr G M W Cook

University of Wales College of Cardiff

Dr M H T Roberts £71 538 Department of Physiology: for three years, for a study of diencephalic and mesencephalic interactions with the antiociceptive nuclei of the anterior pretectum (030621/Z/89/Z).

£38 726 Professor S A Hodson Department of Optometry: for two years, for a study of the corneal swelling pressure (031948/Z/90/Z).

University of Wales College of Medicine, Cardiff

£17 612 Dr M I Owen Department of Psychological Medicine: for two years, for the identification of highly polymorphic microsatellite repeat polymorphisms on human chromosome 21 (031388/Z/90/Z).

Trinity College Dublin

90 000 Dr P Humphries Department of Genetics: for three years, for a study of autosomal dominant retinitis pigmentosa: characterization of localized genes

University of Dundee

£12 465 Dr I I Lambert Department of Pharmacology and Clinical Pharmacology: for additional equipment, for his investigation of the physiological properties of 5-HT3 receptors - a patch clamp study (018730/Z/88/A)

Dr P R Lowenstein Department of Anatomy and Physiology: for two years, for a study of plasticity of the developing visual cortex: synaptic stabilization and refinement of corticocortical connections during the postnatal development of the visual cortex of cats and ferrets

£62 103

University of Edinburgh

Dr R H Ashley £65 411
Department of Pre-Clinical Veterinary Sciences; for three years, for a study of location and function of calcium channels from brain microsomes (030649725872.

Professor A W Duggan
Department of Pre-Clinical Veterinary Sciences: for three years, for a study of the release, inhibition of release and inactivation of neuropeptides in the dorsal horn, with Dr A J Harmar, MRC Brain Metabelism Unit and Dr S M Fleetuved-Walker, Department of Veterinary Physiology (03)9006279022.

Professor Eve C Johnstone £68 814
Department of Psychiatry: for five years, for a research registrar training scheme in Edinburgh (031851/27002).

Professor J S Kelly

Department of Pharmacology: for research respects, to establish a psychiatric neuroimaging facility at the Royal Edinburgh Hospital, with Dr N H Oherman and Professor G Fink

(830828Z909A).

Dr D J Price £23 633
Department of Physiology: for three years, for an investigation into the development of conticcortical connections in the cat's visual cortex, with Dr Damira Carit (0)1897/E9902.

University of Glasgow

Professor A S G Curtis

Department of Cell Biology: for two years, for experimental investigations of neural function using novel microfabricated structures, with Professor C D IV Wilkinson, Dr Patricio Connolly and Dr J A T Dow

(03230875982).

Professor G M Teasdale 165 186
Department of Neurosurgery: for three years, for structural change and functional recovery after closed head injury, with Dr J T L Wilson, Department of Psychology, University of Stirling, Dr D J Wyper, Department of Neurosurgery Clasgon and with Dr D M Hadley, Department of Neurosurgery (034540-APOZ).

Dr AJ Todd

Department of Anatomy: for three years, for an ultrastructural and immunocytochemical study of neurones in lamina ll of rat dorsal horn

(%)127279923.

University of Strathclyde, Glasgow

Professor I G Marshall
Department of Physiology and Pharmacology: for two
years, for a study of the pharmacology and role in transmitter
storage, mobilization and release of the vesicular acetylcholine
uptake system, with Dr CB Prior, Dr S M Panons, Department
of Chemistry and Neuroscience, University of California, USA

University of Leeds

Dr K Appenteng £68 825
Department of Physiology: for three years, for an in vibro determination of the electrical geometry and synaptic connexions onto rat V motorneurones (0308577289/2).

Dr Anne E King £83 917
Department of Philosophy: for three years, for a study of amino acids and neuropeptides in somatosensory systems in the mammalian spinal cord (031104/250/2).

Dr C P Lucas £11 988
Department of Psychiatry: for fifteen months, for the
development an interactive video system for the assessment
of childhood psychopathology, with Dr I Brrg (31392/27902).

University of Leicester

DrJJA Scott
Department of Physiology: for two years, for an investigation of the changes in sensitivity of regenerated muscle-spindle primary afferents (0307)287.7872.

Professor M C R Symons
Department of Chemistry: for three years, for the construction of a low-frequency ESR spectrometer for in view studies-Mark II (203059/278972).

University of Liverpool

Dr R P Bentall
Department of Psychiatry: for three years, for a study of
the cognitive and motivational aspects of psychotic
symptomology
6010097/80972.

Professor R D Burgoyne £113 928
Department of Physiology and Pharmacology: for three
years, for a study of the molecular mechanisms of the NMDA
receptor stimulation of cerebellar granule cell differentiation
and survival (039993/ZB972).

Dr R Morris

Egyptiment of Veterinary Preclinical Sciences: for additional equipment, for a study of postsynaptic receptors mediating the actions of somatosensory primary afferents.

(0)905/IZ/R8M2

Dr G Williams £19 798
Department of Medicine: for one year, for a study of hypothalamic neuropeptide Y mRNA levels and feeding behaviour

University of Manchester

Dr M E Boulton E118 078
Department of Ophthalmology, Royal Eye Hospital: for three years, for a study of the effect of pO₂ on the production of, and response to, growth factors by retinal cells: its relationship to the vasoproliferative retinopathies, with Professor D McLood, Dr J B Weiss, Welfson Angiogenesis Unit, Hope Hospital, Salford and Professor J V Forrester, Department of Ophthalmology, University of Aberdeen (031399/2002).

Dr Ruth F Itzhaki £44 310
Department of Optometry and Vision Sciences: for two
years, for the development of a model system for Alzheimer's
disease involving aluminium treatment of cells in culture
(031154/Z990Z).

Dr I J Mitcheli £49 850
Department of Cell and Structural Biology: for two years, for a study of the role of excitatory amino acid receptors in the globus pallidus, with Professor A R Crossman (0318497270072).

Dr I J Murray £49 042
Department of Optometry and Vision Sciences: for two
years, for a study of visual changes in Parkinson's Disease,
with Dr J P R Dick, Department of Neurology, Charing Cross
Hospital and Medical School, London (039970A902).

University of Newcastle upon Tyne

Dr S S Bhattacharya

E73 549

Department of Human Genetics: for a one year extension
and for a contribution towards refurbishment of new
laboratory space, for his study of the isolation and
identification of candidate genes for X-linked retinitis
spiementosa and for other X-linked eventions.

University of Nottingham

Dr G W Bennett \$42.849
Department of Physiology and Pharmacology: for two years, for a study of the view detection of neuropeptide (TRH) release in CNS, with Dr R W Clarke (031076/25902).

Dr S J Hill £114 764
Department of Physiology and Pharmacology: for three
years, for a study of the expression of histamine H-receptor
subtypes in different cell lines: functional characterization
and modification by di

Professor C A Marsden

25678

Department of Physiology and Pharmacology: for four months, for a study of neurotensin-stimulated noisible phospholipid hydrolysis by dopamine in the brain, with Dr D A Kendall

(030870/Z897Z).

Dr V G Wilson

£15 915
Department of Physiology and Pharmacology; for one year, for studies of the effects of 'clonidine displacing substance' on second messenger generation in the brain, with Dr D A Kendall (022400/ZP0/Z).

University of Oxford

Dr Frances M Ashcroft
Laboratory of Physiology: for three years, for a study of
the role of metabolically modulated K-channels in the
response to cerebral ischaemia, with Dr D H Bergel
(031926/Z709Z).

Professor C Blakemore
Laboratory of Physiology: for two years, for a study of factors regulating the differentiation and connectivity of the neocortex studied in organotypic culture, with Dr P R Lowenistin, Department of Anatomy and Physiology, University of Dunder and Dr DJ Price, Department of Physiology, University of Edinburgh

Professor A J Bron £49 982
Nuffield Laboratory of Ophthalmology: for two years, for a study of human Meibonian gland secretion; invine 28539 and clinical importance, with Dr J M Tiffany (0312127802).

Dr C G Fairburn
Department of Psychiatry: for six months, for an extension
of his investigation of the nature of bulimic episodes: a
community based study (016712/0.897/2).

Professor M G Gelder £234 880
Department of Psychiatry: for five years, for research training posts in academic psychiatry (009576/2/79/h).

Dr J J B Jack £26 955 Laboratory of Physiology: for one year, for a study of the characterization and modelling of synaptic action in the mammalian necoortex (0)0000818972.

Dr R E Passingham

E121 795
Department of Experimental Psychology: for three years, for the control of movement by the basal ganglia: a study with PET, with Dr DJ Brooks, Department of Medicine, Royal Postgraduate Medical School, London (03194927072).

Dr R E Passingham £104 797
Department of Experimental Psychology: for three years, for a study of the mechanisms of motor learning: a study with monkeys (031593/2709/2).

Dr V H Perry
Department of Experimental Psychology: for additional
equipment for his study of the role of macrophages and
microglia in neurotoxin induced inflammatory responses in
the CNS, with Professor S Gordon, Sir William Dann School of
Pathology (03004)ZZ8898.

Dr V H Perry
Department of Experimental Psychology: for additional
expenses for his study of the role of macrophages and
microglia in neurotoxin induced inflammatory responses in
the CNS, with Professor S Gordon, Sir William Dunn School of
Pathology
(030042/Z88/A).

Dr M C Sharpe

£47 115 Department of Psychiatry: for three years, for a study of chronic fatigue syndrome: psychological characteristics and an evaluation of psychological treatment, with Dr K Hawton (031159/Z/90/Z).

Dr F Watt £45 666

Department of Nuclear Physics: for two years, for an extension of his study of neurodegenerative disorders

University of Reading

Dr M J C Crabbe

Department of Microbiology: for one year, for a study of expression, controlled mutagenesis and modelling of crystallins

Professor P J Lowry

Department of Biochemistry and Physiology; for three years, for a study of post-translational processing and intracellular compartamentalization of the human corticotropin releasing-hormone precursor, with Dr Glenda E Gillies, Department of Pharmacology, Charing Cross and Westminster Medical School and Dr P R Lowenstein, Department of Anatomy and Physiology, University of Dundee (031389/Z/90/Z).

University of Sheffield

Professor R C A Pearson

Department of Biomedical Sciences: for two years, for a study of biochemical correlates of anatomically defined suicide transport agent induced lesions affecting the neocortex of the rat brain, with Dr D M Bowen, Department of Neurochemistry, Institute of Neurology, London (031261/B/90/Z).

University of Southampton

Professor C Thompson

Department of Psychiatry: for eighteen months, for studies in the actiology of seasonal affective disorders (031996/Z/90/Z).

University of St Andrews

Dr M D Rugg

Department of Psychology: for three years, for an investigation of the brain regions and cognitive processes necessary for the generation of the 'P300' brain potential, with Dr R C Roberts, Department of Medicine, University of Dundee (031245/ZJ90/Z).

University of Stirling

Dr J T L Wilson £74 640

Department of Psychology: for three years, for structural change and functional recovery after closed head injury, with Professor G M Teasdale, Dr D J Wyper and Dr D M Hadley, all of the Department of Neurosurgery, University of Glasgow

LONDON

Charing Cross and Westminster Medical School

Professor S L Lightman

Neuroendocrinology Unit: for two years, for studies of a novel neuroendocrine measure of central oestrogen receptor status in puerperal psychosis, with DrS A Checkley, Department of Psychiatry, Institute of Psychiatry, London (031408/B/90/Z).

City University London

Dr Susan Golombok

£9700

£96 730

£49 913 Department of Social Sciences: for two years, for an investigation of children in lesbian families: a follow-up study, with Professor M L Rutter, Department of Child and Adolescent Psychiatry, Institute of Psychiatry, London (030876/7/89/7)

Imperial College of Science, Technology and Medicine

Professor I O Dolly

Department of Biochemistry: for three months, for an extension of his study of the interaction of dendrotoxin with sub-types of voltage-sensitive K+ channels in relation to its novel convulsive action, with Dr D G Nicholls (015291/Z/86/A).

Dr M B A Djamgoz

Department of Pure and Applied Biology: for additional expenses for a study of functional characteristics and organisation of amacrine cells in vertebrate retina (016611/Z/87/A).

Institute of Child Health

Professor P I Graham

Department of Child Psychiatry: for one year, for a neuropsychiatric study of childhood hemiplegia, with Dr R N Goodman (031170/Z/90/Z).

£35 667

£5000

Dr R Surtees

£29 956 Department of Child Health: for two years, for an extension of an investigation into the mechanisms of (016310/Z/86/A).

Institute of Neurology

Dr D M Bowen

Department of Neurochemistry: for two years, for a study of biochemical correlates of anatomically defined suicide transport agent induced lesions affecting the neocortex of the rat brain, with Professor R C A Pearson, Department of Biomedical Sciences, University of Sheffield (031261/A/90/Z).

Professor C D Marsden

Department of Clinical Neurology: for two years, for a clinical, pathophysiological and genetic study of hereditary essential tremor, with Dr L J Findley (031152/2/90/2).

Institute of Psychiatry

Professor B H Anderton

Department of Neuroscience: for additional expenses, for a study of gene expression and protein metabolism in motor neurone disease and excitotoxin-induced neurodegeneration, with Professor P N Leigh, Department of Neurology (030576/Z/89/A).

Professor B H Anderton

Department of Neuroscience: for additional expenses, for an investigation of an abnormal phosphorylation in the microtubule-associated protein tau in Alzheimer's disease (031410/Z/90/A)

Professor B H Anderton

£203 176 Department of Neuroscience: for three years, for an investigation of an abnormal phosphorylation in the microtubule-associated protein tau in Alzheimer's disease, with Dr N Totty, Ludwig Institute for Cancer Research, London (031410/Z/90/Z).

Dr S A Checkley

Department of Psychiatry: for two years, for studies of a novel neuroendocrine measure of central oestrogen receptor status in puerperal psychosis, with Professor S L Lightman, Neuroendocrinology Unit, Charing Cross and Westminster Medical School, London (031408/Z/90/Z).

Dr P Haiek

Addiction Research Unit: for two years, for a study of occasional smoking: nicotine intake determinants and stability, with Dr R West, Department of Psychology, Royal Holloway and Bedford New College, Egham (0307351Z/891Z).

Dr A J Holland

Department of Psychiatry: for additional research expenses, for a prospective study of clinical and biochemical changes associated with dementia in adults with Down's Syndrome, with Dr MJ Brammer, Department of Neuroscience

Professor P N Leigh

£15 584 Department of Neurology: for three years, for additional expenses for a study of the specificity, distribution, morphology and pathogenic significance of ubiquitinimmunoreactive inclusions in motor neurone disease, with Professor B H Anderton, Department of Neuroscience, Institute of Psychiatry, London (019175/Z/89/A)

King's College London (KQC)

Dr P A M Eagles

£8840 Department of Biophysics: for six months, for an extension of his structural studies on normal and abnormal filamentous (014657/Z/85/A). proteins in axoplasm

Professor P G Jenner

Department of Pharmacology: for two years, for a study of the interactions between D-1 and D-2 in the receptors in the production of motor behaviours in primates(031033/Z/90/Z).

London Hospital Medical College

Dr C Kennard

€2422

£15 333

£93 540 Department of Neurology: for three years, for an information processing analysis of reaction times in Parkinson's disease, with Professor Leslie Henderson, Department of Psychology, Hatfield Polytechnic

Queen Mary College

Dr D M Hunt

£5569 School of Biological Sciences: for additional research expenses, for his study of the molecular genetics of vision. with Dr I K Bowmaker, Department of Visual Science, Institute of Ophthalmology, London

Royal Free Hospital School of Medicine

Dr M E Appleyard

£30 888

£12 000

Department of Physiology: for two years, for a study of a novel role for acetylcholinesterase within the mammalian brain, with Dr I D Priddle, Institute of Molecular Medicine, (0308LL/Z/89/Z). University of Oxford

Dr C D Richards

£40 081 Department of Physiology: for one year, for a study of the action of anaesthetics on neuronal potassium channels (031244/Z/90/Z).

School of Pharmacy

Dr A Constanti

Department of Pharmacology: for one year, for a study of electricial and pharmacological properties of acutely isolated adult mammalian cortical neurones (030667/Z/89/Z).

St George's Hospital Medical School

Dr A M Davies

Department of Anatomy: for three years, for a study of the onset and specificity of neurotrophic factor dependency in the developing vertebrate nervous system (031122/Z/90/Z).

Professor Annette C Dolphin

Department of Pharmacology: for eighteen months, for an investigation into the molecular biology of long-term potentiation in the rat hippocampus, with Dr T V Bliss, Neurophysiology and Neuropharmacology Division, NIMR, London (018751/Z/88/A).

St Mary's Hospital Medical School

Dr Alison M Goate

£190 083 Department of Biochemistry and Molecular Genetics: for three years, for a study of the use of gene targeting to develop models for neurodegenerative disease, with Dr S D (030893/Z/89/Z).

M Brown

£243 481

Department of Biochemistry and Molecular Genetics: for three years, for an investigation of the frequency, nature and clinical significance of mutations in the prion protein gene, with Dr J Collingridge (03)976/2/90/2).

Dr Margaret B Lowrie £73 666 Department of Anatomy and Cell Biology; for three years, for a study of the target in the development of motoneurone dendrites

Professor R C A Pearson

Department of Anatomy and Cell Biology; for six months, for an extension to his study of neuronal hypertropy. axonal sprouting and changes in gene expression in the nervous system in response to injury or disease (018117/7/88/A)

Dr A Shiels

£39 087 Department of Haematology: for one year, for a study of structure and expression of the gene coding for major intrinsic cell-membrane protein of the vertebrate eye lens (032849/Z/90/Z).

University College and Middlesex School of Medicine

Dr S R Bolsover

Department of Physiology: for three years, for a digital imaging microscope facility for a study of localized calcium changes within cells, with Dr Lynn J Bindman, and Lillian Patterson, Department of Physiology, University College London

Dr S R Bolsover

Department of Physiology: for three years, for a study of intracellular calcium in growth cone function (031876/Z/90/Z).

Dr H M D Gurling

£31 509 Department of Psychiatry: for one year, for a molecular genetics study in schizophrenia (031527/Z/90/Z).

Professor A P Haines

Department of Primary Health Care: for six months, for a study of essential fatty acids and antioxidant nutrients in patients with age related macular change and matched controls (030894/Z/89/Z).

University College London

Dr D I Attwell

£21 539 Department of Physiology: for one year, for an extension to his study of electrical properties of retinal Muller cells (014983/Z/85/A).

Professor D A Brown

Department of Pharmacology: for fifteen months, for a study of dendrotoxin-sensitive K-channels in mammalian neurones

Professor A R Lieberman

£14 202

Department of Anatomy and Embryology: for six months, for a study of the regeneration of adult mammalian CNS axons into peripheral nerve grafts (031402/7/90/2)

Professor M C Raff

Department of Biology: for one year, for an extension of his study of the mechanisms of cell diversification in rat retina

Professor Gerta Vrbova

£119 210 Department of Anatomy and Developmental Biology: for three years, for an investigation into the survival and development of grafted embryonic motoneurones in the spinal cord of adult rats (031160/Z/90/Z).

Professor S M Zeki

£289 819

Department of Anatomy and Embryology: for three years, for a study of the mapping of visual functions in normal and pathological human brains, with Dr R S J Frackowiak, Institute of Neurology, London (030924/Z/89/Z).

UMDS Guy's and St Thomas's Hospital

Dr J V Priestley

Sherrington School of Physiology: for three years, for a study of primary afferent inputs to identified trigeminal 2nd order neurones (031(49/Z/90/2).

Zoological Society

Dr D H Abbott

£21 487

Gamete Biology Unit: for one year, for an extension of his study to determine the pheromonal signals which result in hypothalmic supression of reproduction and growth, with Professor I P Hearn (016289/Z/86/A).

Dr D H Abbott

£23 214

Gamete Biology Unit: for one year, for a study of the suppression of GnRH secretion in female naked mole-rats: a neuroendocrine basis for natural infertility, with Dr C W Coen, Department of Anatomy and Human Biology, King's College London (KQC), London

EXPEDITIONS

M J O'Byrne

£125 832

£4300

Royal Veterinary College, Hatfield, Herts: for three months, for an expedition to study the ways and means of improving health, production and welfare in the camel - Royal Veterinary College African Research Team 1990, under Professor L. E Lanyon, Department of Anatomy, Royal Veterinary College, London (031810/Z/90/Z),

SYMPOSIA

62000

£2000

Dr N Joan Abbott

Department of Physiology, King's College London (KOC): for a meeting on glial-neuronal interaction to be held in Cambridge from 4-7 September 1990 (032473/Z/90/Z).

Dr D Dawbarn

Department of Medicine (Care for Elderly), University of Bristol: for a contribution towards the Fifth International Symposium 'Molecular Sciences in Neurodegeneration and Regeneration' to be held at the University of Bristol in September 1991

Dr Jennifer Dennis

Behavioural Phenotypes Study Group, Park Hospital for Children, Headington, Oxford: for a behavioural (031834/Z/90/Z). phenotypes study group

£2000 Dianne Hayter Alcohol Concern, London: to enable Alcohol Concern to hold a symposium on 'The Review of Methodology of

Measuring Outcome of Treatment/Interventions' (031222/Z/90/Z).

€2000 Dr V Molony

Department of Pre-Clinical Veterinary Sciences, University of Edinburgh: for a symposium on somatic and visceral afferent systems: the Edinburgh connection

Dr F D Rose

£2000 Department of Psychology, Goldsmiths College, University of London: for a contribution towards the European Brain and Behavioural Society workshop on recovery of function following brain damage

4033169/7/90/71

RESEARCH TRAINING SCHOLARSHIPS

Sabrina Davis

Department of Pharmacology, University of Edinburgh: for six months, for an extension of her investigation of the possible role of N-methyl-D-asparate receptors in behavioural learning and memory, under Dr R (016142/2/86/A) G M Morris

Dr Carole M Hackney

Department of Communication and Neuroscience, University of Keele: for nine months, for an investigation into anatomical correlates of threshold recovery following kanamycin ototoxicity: a preliminary study, with Dr Hilary C Dodson, Department of Anatomy, United Medical Dental School of Guy's and St Thomas's Hospital, London and J R Walliker, Department of Clinical Physics, Guy's Hospital, London

UNIT

£266 954 Professor I McCulloch University of Glasgow: for one year, for an extension of

his study of the pathogenesis of senile dementia of the Alzheimer type, with Professor D N Brooks, Department of Psychological Medicine, University of Glasgow (0306077Z/91/Z).

UNIVERSITY AWARDS

Dr Helen Hodges

£128 818

Department of Psychology, Institute of Psychiatry, London: for five years, for a study of the mechanisms of recovery from ischaemic brain damage: topical and ectopic allografts within rat hippocampus, under Professor J A Gray (031409/Z/90/Z).

Dr Ianice M Kay

Department of Psychology, University of Exeter: for five years, for a cognitive neuropsychological investigation of word retrieval disorders and its potential for diagnosis and remediation, under Professor J R Eiser

£86 717 Dr I I Mitchell Department of Cell and Structural Biology, University of Manchester: for five years, for an experimental study of movement disorders, under Professor A R Crossman /n1/0417/R9/71

VISION RESEARCH TRAINING FELLOWSHIPS

Dr Usha Chakravarthy

Department of Ophthalmology, Queen's University of Belfast: for six months, for an extension of her study of the effects of ionising radiation on normal and abnormal retinal and choroidal blood vessels, under Professor D B Anher

S J Charles

Department of Pathology, University of Cambridge: for two years, for an investigation into clinical and molecular genetic studies in X-linked ocular albinism, under DrJ R W Yates 03226629022.

Dr R A Harrad

Physiological Laboratory, University of Cambridge: for three months, for an extension of his study of binocular function in amblyopia, under Dr R F Hess (01711)3287101.

Dr P S Hiscott

Department of Pathology, Institute of Ophthalmology, London: for additional research expenses, for a study of the behaviour of specific cell types in epiretinal membranes, under Profesor I Grieron 01000/28704

Dr Anne C Huribert

Laboratory of Physiology, University of Oxford: for one year, for a study of the detection and use of specular reflections as cues to object recognition by the human visual system, under Dr A J Parker (032305/ZP0/Z).

Dr M Katami

Department of Ophthalmology, University of Cambridge: for six months, for an extension of his study of mechanisms of corneal allograft rejection and the development of methods of immuno-suppression, under P G Watson (014812/289E).

Dr Janet Liversidge

Department of Ophthalmology, University of Aberdeen: for three years, for a study of processing and presentation of retinal automitigens: identification of the relevant in vivo uveitogenic epitopes and selection of potential immunoregulatory peptides, under Pinfessor J V Forrester (2022) and (2022) property (2022) pr

Dr P A R Meyer

Department of Ophthalmology, University of Cambridge: for three years, for an extension of his study of the immune aggregate deposition in the eye in vivo, under PG Watson 014227283G.

Dr J Prydal

Physiological Laboratory, University of Cambridge: for one year, for an extension of his study of preocular tear film thickness, under Profesor F W Campbell (0)7111/2/87/10.

Dr J S H Taylor

RESEARCH LEAVE FELLOWSHIP

Pamela J Shaw

Department of Neurology, University of Newcastle upon Tyne: for three months, for an extension to her study to characterise and quantify the distribution of the N-methyl-D-aspartate (NMDA) receptor complex in the motor system of normal human subjects and motor neurone disease patients, under Dr N E F Carlidge (0.0590c/828/M).

MENTAL HEALTH FELLOWSHIPS

Dr Ruth C Maxwell

School of Biological Sciences, University of Sussex, Brighton: for one year, for a study of isolation and in vitro growth of sensory neurons from assal epithelium: a model system for studying the cellular changes leading to Alzheimer's disease, under Dr Lynne V Mayne @3008728972.

Dr L Mynors-Wallis

Department of Psychiatry, University of Oxford: for three years, for an evaluation of brief psychological treatment for depressive disorders in general practice, under Dr D Gath

Dr H Series

Department of Psychiatry, University of Oxford: for three years, for the characterization of two distinct ascending serotonergic projections in rats by anatomical pharmacological and functional methods, under Professor M G Gelder, and Professor D G Grahame-Smith, Department of Clinical Pharmacology (0300172892).

Dr P C Sham

Department of Psychiatry, Institute of Psychiatry, London: for three years, for an investigation of genetic epidemiology in psychiatry: a family study on the roles of genes and obstetric complications in subtypes of psychosis, under Professor R M Murray (031010/Z889Z).

Dr Emily A Simonoff

Department of Child and Adolescent Psychiatry, Institute of Psychiatry, London: for six months, for an extension to a follow-up study of twins with conduct disorder (014492/86/A).

Dr J Turk

Department of Child Psychiatry, Institute of Child Health, London: for three years, for a study of hyperactivity, disorders of conduct and social functioning, and the fragile X syndrome - a possible association, under Professor P J Graham (03)000ZPSYL.

Dr A J Wood

Department of Psychiatry, University of Oxford: for one year, for a study of the molecular genetic mechanisms which regulate cation transport in manic-depressive psychosis, under Professor M G Gelder (030914728972).

POSTDOCTORAL RESEARCH FELLOWSHIPS

Dr S M Fleetwood-Walker

Department of Veterinary Physiology, Royal (Dick) School of Veterinary Studies, University of Edinburgh: for two years, for a study of the role of Neurotkinin A (NK A) - containing primary afferents in nociception in the spinal dorsal horn, under Professor C R House, Department of Pre-Clinical Veterinary Sciences and with Dr A J Hannar, AIRC Brain Metabolism Unit and Dr J A Russell, Department of Physiology

Dr C A Ingham

Department of Pre-Clinical Veterinary Sciences, University of Edinburgh: for three years, for a study of morphological changes in the rat neostriatum after removal or blockage of dopamine input, with Profesor HJ Evus, MRC Human Genetits Unit and Dr P A T Kelly, Department of Clinical Neurosciences (03191/12902).

Dr D G Lewis

Department of Physics, University College of Swansea: for three years, for an investigation into the development and application of novel methods for the in vive analysis of body-elements, under Profesor | Dutton (0.31975/ZPWZ).

Dr R A Shiells

Department of Physiology, University College London: for three years, for a study of whether glutamate receptors linked to second messengers mediate synaptic transmission from rods to on-bipolar cells in dogfish retirua, under Professor R C Woldge (2000/07/28/12).

SENIOR LECTURERSHIP - MENTAL HEALTH

Dr D H Skuse

Department of Child Psychiatry, Institute of Child Health, London: for six months, for an extension to his study of the limits to growth: new perspective on the environmental constraints upon physical and psychological development, under Profesor P | Graham (012306/D83A).

LECTURESHIP - MENTAL HEALTH

Dr A L Stein

Department of Psychiatry, University of Oxford: for additional expenses, for his study of the infants of mothers with an eating disorder: a controlled study, under Professor M G Gelder 0077162880A.

LECTURESHIPS

Dr M J Parkes

Department of Biochemistry and Physiology, University of Reading: for three months, for an extension to his studies in reproductive physiology (013478/284/B).

Dr Judith A Pratt

Department of Physiology and Pharmacology, University of Strathclyde, Glasgow: for additional expenses, for her study of mechanisms of action of benzodiazepines (014393/289A).

ROYAL SOCIETY OF EDINBURGH FELLOWSHIP

Dr J R Seckl

Department of Medicine, University of Edinburgh: for additional expenses, for his molecular biological studies of corticosteroid receptors and steroid metabolism in brain, under Professor C R IV Educads (019332/288A).

INFECTION AND IMMUNITY PANEL

C E Gordon Smith, CB, MD, FRCP, FRCPath, (Chairman, Wellcome Trustee), Wellcome Trust

Professor R M Anderson, PhD, FRS, Imperial College of Science, Technology and Medicine, London

G E Griffin, PhD, FRCP, St George's Hospital Medical School, London

W E Gutteridge, PhD, ScD, C Biol, FIBiol, Wellcome plc, Beckenham

Professor R E Howells, PhD, FIBiol, Liverpool School of Tropical Medicine

R P Lane, PhD, ARCS, London School of Hygiene and Tropical Medicine

Professor I McConnell, PhD, BVMS, MRCPath, FRSE, University of Edinburgh

- # Professor E R Moxon, MB, FRCP, University of Oxford
- # Professor E H O Parry, OBE, MD, FRCP, Distance Learning Programme, Wellcome Tropical Institute, London

M Elaine Rose, OBE, ScD, MRCPath, FRCVS, AFRC Institute for Animal Health, Houghton Laboratory

J J Skehel, PhD, FRS, National Institute for Medical Research, London

Staff members responsible

- # J G Howard, MD, PhD, FIBiol, FRS, (Scientific Secretary),
- * R E Howells, PhD, FIBiol, (Scientific Secretary),
- ★★ Rebecca Fitt, BA, (Grants Officer)
 C D J Sainty, BA (Econ), (Grants Officer)
- # Until June 1990
- ★ From June 1990
- ** From October 1989

(019094/Z/90/A).

INFECTION AND IMMUNITY

The Infection and Immunity Panel took over responsibility in October 1989 for all aspects of the clinical and basic science of these subjects, including relevant immunology. The programme subsumes the major part of the Trust's activities previously considered by the Veterinary, Tropical Medicine and Infectious Diseases sections; the majority of which were in these subject fields.

Applications for awards in infection and immunity are reviewed by a panel of ten external scientists representing the many and diverse subjects covered by this programme, including two veterinarians. In addition to their essential role in the assessment of grant requests, panel members provide valuable advice on policy issues and research fields requiring special attention. During the year the Panel's expenditure amounted to £6.6 million, including longer-term support, equivalent to 12.3 per cent of the Trust's overall research support expenditure.

187 project grant applications were considered by the Panel and 57 per cent were funded. The \$5.0 million allocated to project grants represented 39 per cent of the total amount requested.

Eleven proposals for Wellcome programme grants were considered by the Panel during the report period, from which the Trustees made four awards. One award was for £4 million, to Professor R M Anderson at Imperial College London for the support of a new research Unit in parasitic diseases and the biology of helminths. The Unit will focus on diseases caused by parasitic worms. These parasites, which are amongst the most common of human infections, add significantly to the public health problems in the Third World where the human immune system can provide only a weak level of protection against them. The total cost of the five longer-term awards was £5.9 million.

In February 1990 a workshop on the 'Molecular and Physiological Basis of Vector Parasite Interactions and its Epidemiological Implications' was held at the Dormy House Hotel, Broadway. 49 scientists from the UK and overseas attended this successful meeting, which was organised by Dr R P Lane, Professor D H Molyneux and Jilly Steward. The workshop was jointly funded by the Wellcome Trust and the UNDP/World Bank/WHO Special Programme for Research and Training in Tropical Diseases.

Dr AH Fairlamb was awarded a personal chair in Molecular Parasitology, at the London School of Hygiene and Tropical Medicine from 1 August 1990. Dr Fairlamb is currently in receipt of funding for a study of trypanothione surrogates: a series of chemical compounds which may provide a lead to treatments for leishmaniasis and trypanosomiasis.

Dr M AJ Ferguson was awarded the Colworth Medal for 1991, which is awarded by the British Biochemical Sciety for work of an outstanding nature to a biochemist under 35 years of age. Dr Ferguson is a lecturer in the Department of Biochemistry at the University of Dundee. He holds a Wellcome Trust longer-term award for research into the role of glycoconjugates in parasite survival and host-parasite interactions.

Dr J G Howard, who was Scientific Secretary to the Tropical Medicine and Infectious Diseases
Panel prior to becoming Programme Director for Infection and Immunity, retired in June 1990.

The Trustees were pleased to learn that Dr M Elaine Rose, who is a member of the Trust's Infection and Immunity Panel and the Veterinary Interest Group, was awarded an OBE in the Queen's Birthday Honours list.

List of awards over £2000

LONGER - TERM SUPPORT

Professor R M Anderson

E3 998 614
Department of Pure and Applied Biology, Imperial
College of Science, Technology and Medicine, London:
for five years, for the Wellcome Trust Parsitic Diseases and
Biology of Helminths Research Unit, with Dr D A P Bundy,
Dr R M Maizels, and Dr ME Selkirk, Department of Biochemistry
and Dr Debordh F Smith

(03128372972).

Dr R M Batt £288 906
Department of Medicine and Animal Husbandry, Royal
Veterinary College, North Mymms, Herts: for five years,
for an investigation of the molecular interactions between
damage and repair of the intestinal microvillar membrane,
with Dr J R Saunders, Department of Genetics and Microbiology,
University of Liverpool (03102478902).

Dr Jenefer M Blackwell E891 364
Department of Medical Parasitology, London School
of Hygiene and Tropical Medicine: for four and a half
years, for a study of the genetic regulation of immune
response to infection with, and vaccination against,
mycobacterial and leishmanial diseases—studies in mice and
man, with Dr S D M Brown, Department of Biothemistry and
Molecular Genetics, St Mary's Hospital Medical School, London
and Dr H M Dockrell, Department of Clinical Sciences

Dr M J Doenhoff £250 000 School of Biological Sciences, University of North Wales, Gwynedd, Bangor; for five years, for a study entitled 'Why are schistosome vaccines not fully protective?': An immunological, pharmacological and haematological analysis of factors controlling migration of schistosome larvae through skin and lung tissue (03150/Z5902).

Professor K T Douglas 273 087
Department of Pharmacy, University of Mauchester: for additional research assistance for four years, additional research expenses and equipment for his study of rational drug design in trypanosomiasis — molecular recognition and mechanism-based inhibitors for trypanothione reductase, with Dr A H Fuirlands, Department of Medical Pansistology, London with the programment of Medical Pansistology, London (1998).

School of Hygiene and Tropical Medicine

Professor C A Hart

E125 050
Department of Medical Microbiology, University of
Liverpool for five years, for an investigation of the molecular
interactions between damage and repair of the intestinal
microvillar membrane, with Dr.J. R. Saunders, Department of
Centils and Microbiology
0302408002, 0302408002,

Dr T R Hint

6350 000
Biological Laboratory, University of Kent, Canterbury:
for five years, for a study of biogenesis and molecular
engineering of toxins responsible for cholera and related
diarrhoeal diseases, with DrR FL James, Department of Surgery,
University of Leiester and Dr CE Hormaeche, Department of
Puthology, University of Cambridge

(03221572012).

EQUIPMENT

Dr Jane E Grundy

E73 609
Department of Virology, Royal Free Hospital School
off Medicine, Londom for one year, for a study of alterations
in three dimensional cell structure and intracellular
localisation of macromolecules associated with particular
physiological and disease states, with Dr Gillian E Francis,
Department of Haenatology, Dr T Courn, Department of Anatomy,
Dr A Akban, Department of Immunology and Dr P Amlot,
Department of Immunology (2019/472902).

Professor P J Guillou 860 265
Academic Surgical Unit, St Mary's Hospital Medical
School, London: for one year, for a study of leucocyte
activation markers in surgical patients at high risk of
morbidity and mortality from sepsis, with Professor H C
Thomas, Department of Meditine and Dr P J M Openshoux,
Openation of Medicine (0315207/9002)

MAJOR AWARDS

Professor I McConnell 16809 Department of Veterinary Pathology, University of Edinburgh: for two years, for additional research expenses and equipment for his study of the molecular pathology of ruminant lentivirus infections, with Dr D Sargani and Dr N Watt (057227898). Professor Sond Tabaqchali E9520
Department of Medical Microbiology, St
Bartholomew's Hospital Medical College, London: for
three years and six months, for additional equipment for her
study of the molecular cloning and genetic analysis of
virulence determinants and key antigens from Clostridium
(018434ZB80A).

£17 412

£11 020

£54 866

RESEARCH ASSISTANCE AND EXPENSES

University of Aberdeen

Dr A J P Brown £156 378 Department of Genetics and Microbiology: for three years, for a study of the control of gene expression during morphogenesis in Candida, with Professor G W Gooday and Dr N A R Gow (031097/Z/90/Z)

University College of Wales, Aberystwyth

Professor J Barrett

Department of Biological Sciences: for one year, for a study of transmembrane signalling in parasite helminths

University of Bath

Dr R V Bront

Department of Biochemistry: for additional expenses, for his studies of calmodulin related systems in cestodes and the cestocidal properties of calmodulin antagonists (phenothiazines) (016198/Z/87/A).

Dr M J Danson

Department of Biochemistry: for additional expenses, for a study of dihydrolipoamide dehydrogenase from African trypanosomes; a target for drug development (030668/Z/89/A).

Dr R S Eisenthal

Department of Biochemistry: for three years, for additional expenses for a study of the molecular characterization of the sugar transporter of African trypanosomes: A drug-targeting strategy, with Dr G D Holdman and Dr P Towner (018401/Z/88/A).

University of Birmingham

Dr D Catty

Department of Immunology: for one year, for a study of the mechanisms of host protection against Pneumocystis carinii (032246/Z/90/Z),

Dr S Knutton

Institute of Child Health: for three years, for a study of the pathogenesis of Campylobacter diarrhoea, with Mr H Goossens, WHO Centre for Enteric Campylobacter, St Pieters Hospital, Brussels and Dr P H Williams, Department of Genetics

Dr C W Penn £42 039

School of Biological Sciences: for two years, for a study of the surface structure and pathogenicity of Helicobacter pylori, with Dr T S J Elliott, Department of Bacteriology

University of Bristol

Professor F J Bourne

Department of Veterinary Medicine: for 11 months, for an extension of his study of the role of tsetse fly lectins in the epidemiology of sleeping sickness in West Africa (017961/Z/88/A).

Dr N I Maitland

Department of Pathology: for one year, for a study of tissue specific control of human papilloma virus gene expression, with Dr A R Clarke, Department of Biochemistry (032166/2/90/Z).

University of Cambridge

Dr M Carrington £92 385

Department of Biochemistry: for three years, for a study of the expression and role in variable surface glycoprotein turnover of the glycosyl phosphatidylinositol specific phospholipase C of Trypanosoma brucei

Dr B T Grenfell £80 950

Department of Zoology: for three years, for a study of the mathematical models of the epidemiology and control of the lymphatic filiariasis (031093/Z/90/Z).

Dr I B Kingston £19 697

Department of Parasitology: for one year, for an extension of his study of the genetic control of cuticular collagen in Ascaris lumbricoides

Professor P J Lachmann

£3303 Department of Pathology: for two years, for studies of the role of late acting complement components and specific anti-Neisserial antibodies in the pathogenesis of Neisserial disease, with Dr Augela Orren (030682/Z/89/A).

Dr R W F Le Page

Department of Pathology: for three years, for a study of the molecular biology of the pentose phosphate pathway in Trypanosoma brucei, with Dr H P Voorheis, Department of Biechemistry, Trinity College Dublin (030792/Z/89/Z).

Dr A C Minson

Department of Pathology: for three years, for a study of the characterization of glycoprotein H of herpes simplex virus (031091/Z/90/Z).

Dr J H Sinclair £124 788

Department of Medicine: for three years, for a study of the mechanisms of persistant human cytomegalovirus (HCMV) infection - analysis of HCMV gene expression and regulation in peripheral blood mononuclear cells, with Professor 1 G P Sissons (031877/Z/90/Z),

Professor J G P Sissons

Department of Medicine: for two months, for an extension of a study of the role of human cytomegalovirus in suppression and modulation of immunity (014297/Z/85/A).

Frere Hospital, South Africa

Dr 11 G Strang

Department of Medicine, Cape Province: for two years, for a comparative study of bacteriology, serology and DNA probing in diagnosing TB pericarditis, with Dr WI McKenna, Department of Cardiological Sciences, St George's Hospital Medical School, London (031463/Z/90/Z).

University of Warwick, Coventry

Professor N I Dimmock

£28 861 Department of Biological Sciences: for 23 months, for an extension of a study of the mechanisms of neutralization of influenza virus

Professor N J Dimmock

Department of Biological Sciences: for two months, for a study of monoclonal antibodies which function as T cell receptors

Trinity College, Dublin

£49 090 Dr C I Smyth

Department of Microbiology: for three years, for a study of the CFA/II fimbriae enterotoxigenic Escherichia coli of human origin, with Dr D C Coleman (031811/2/90/2).

University of Edinburgh

£76 859 Dr Mary Norval

Department of Bacteriology: for three years, for a study of the immune responses to orf virus and orf-vaccinia recombinants, with Dr D McEwan Jenkinson, Department of Physiology, University of Glasgow and Dr HR P Miller, Department of Pathology, Moredun Institute, Edinburgh

Dr Patricia M Preston

Department of Zoology: for four months, for an extension of her study of macrophage-derived tumour necrosis factor/cachectin in the pathogenesis of and protective immunity to bovine tropical theileriosis, with CGD Brown, Centre for Tropical Veterinary Medicine

University of Glasgow

Professor G H Coombs

Department of Zoology: for five months, for a study of the characterization of alpha-ketobutyrate-synthesizing enzymes in anaerobic protozoan parasites (032347/Z/90/Z).

Dr J G Coote

Department of Microbiology: for three years, for additional expenses for an analysis of the cell invasive properties of Bordatella pertussis adenylate cyclase toxin, with Dr R Parton, Department of Microbiology and Professor J H Freer (031517/Z/90/A).

Dr I G Coote

Department of Microbiology: for three years, for an analysis of the cell invasive properties of Bordetella pertussis adenylate cyclase toxin, with Dr R Parton and Professor J H Freer

Dr M W Kennedy

Department of Zoology: for four months, for an extension of a study of the genetic control of the immunological repertoire in experimental and human ascariasis, with Dr D A P Bundy (016753/Z/87/A).

Dr D P Leader

Department of Biochemistry: for three years, for a study of vaccinia virus protein kinase (031113/B/90/Z).

Professor R S Phillips

Department of Zoology: for six months, for an investigation of the biology of antigenic variation in Plasmodium chabaudi, and of the biochemistry and the molecular biology of the antigens involved, with Professor A Tait, Molecular Parasitology Unit

Professor R S Phillips

£3515

Department of Zoology: for three years, for an extension of his investigation of the biology of antigenic variation in Plasmodium chabaudi and of the biochemistry and the molecular biology of the antigens involved (031111/Z/90A).

University of Strathclyde, Glasgow

Professor R H Burdon

Division of Biology: for six months, for an extension of a study of the surface antigen genes of Texoplasma gondii

University of Surrey, Guildford

Dr A D T Barrett

Department of Microbiology: for one year, for a study of the molecular basis of flavivirus pathogenesis, with DrPD Minor, National Institute for Biological Standard and Control, Potters (031988/Z/90/Z). Bar

University of Leeds

Dr P M Hawkey

Department of Microbiology: for three years, for a study of the molecular biology of netilmicin resistance in Serratia marcescens, with Dr I Heritage and Dr P M Bennett, Department of Microbiology, University of Bristol (031272/Z/90/Z).

Dr R E Isaac

Department of Pure and Applied Biology: for one year, for an investigation into PCR-derived DNA probes for G protein-coupled receptors in parasitic helminths, with DrD (031986/Z/90/Z). Coates

University of Liverpool

£53 455 Professor R E Howells Department of Parasitology: for 16 months, for a study

of drug pharmacokinetics and efficacy in the chemotherapy and chemophrophylaxis of falciparum malaria (030775/Z/89/A).

Professor H H Rees

Department of Biochemistry: for three months, for a study of lipid components of the epicuticle in filarial nematodes

€5312

PKH Tam

£13 340

Department of Child Health: for one year, for a molecular biological investigation into the relationship between Cytomegalovirus and Hirschsprung's disease, with Professor D Van Velzen and Dr W G V Quint, Department of Molecular Biology, SSDZ Laboratories, Delft, The Netherlands

Dr P C Turner

£11 457

Department of Biochemistry: for three years, for additional research expenses for his molecular studies on feline calcivirus, with Dr M J Carter, Department of Virology, Medical School, University of Newcastle mon True 1030544/A/89/A).

University of Manchester

Dr W N Hunter

£135 453

Department of Chemistry: for five years, for an investigation into the structural characterization of trypanothione reductase

University of Newcastle upon Tyne

Dr R A L Brewis

£5000 Royal Victoria Infirmary for six months, for a study of pneumonia in Ethiopia (031047/Z/90/Z).

Professor C R Madelev

£60 872 Department of Virology: for two years, for a longitudinal study of Human Herpes Virus 6 and Cytomegalovirus

infections in renal transplant patients using the polymerase chain reaction, with Dr J S M Peiris, Dr C E Taylor and Dr M 1 Carter

Dr D E Minnikin

Department of Chemistry: for three years, for the detection of specific lipids in clinical specimens for the rapid diagnosis of mycobacterial disease, with Dr PA Jenkins, Mycobacterium Reference Unit, University Hospital of Wales, Cardiff and Dr N F Lightfoot, Public Health Laboratory Service, Newcastle upon Tyne (030923/Z/89/Z).

University of Nottingham

Professor J F Peberdy

25001

Department of Botany: for three months, for an evaluation of protoplasts as a model system for the assessment of anticytoskeletal drugs in Aspergillus

Professor D Wakelin

£127 356

Department of Zoology: for three years, for an analysis of T cell- and cytokine-mediated immunity in cocidiosis. with Dr M Elaine Rose, Agricultural and Food Research Council, Huntingdon (031118/2/90/2)

Professor D Wakelin

£48 619

Department of Zoology: for one year, for functional and genetic studies of murine mucosal mast cells (016609/Z/87/A)

University of Oxford

Dr A V S Hill

£57 445 Nuffield Department of Clinical Medicine: for two years, for a study of genetic susceptibility to malaria in East Africa. with Dr K Marsh, Institute of Molecular Medicine and Dr C I (032251/2/90/2)

Dr I M Hopkin

Osler Chest Unit: for additional research expenses, for his study of Pneumocystis carinii: DNA hybridisation in the diagnosis of pulmonary colonisation and opportunistic pneumonia, with Professor S I G Semple, Department of Medicine. University College and Middlesex School of Medicine, London (030136/Z/89/A).

Dr I S Kroli

23000

Department of Paediatrics: for three years, for a study of superoxide dismutase by Haemophilus influenzae and its role in pathogenicity in upper respiratory and systemic infections (032148/2/90/2)

Dr C I Newbold

£2900

Institute of Molecular Medicine: for one month, for a study of the role of parasite derived red cell surface antigens in the pathology of and immunity to malaria infection, with Dr K Marsh

Dr T E A Peto

£7788 Nuffield Department of Clinical Medicine: for four months, for a study of the development of iron chelators as antimalarials (031129/Z/90/Z),

Dr G L Smith

£88 503

Sir William Dunn School of Pathology: for three years, for a study of vaccinia virus protein kinase (031113/A/90/Z).

University of Salford

Professor D H Molyneux

£12 058 Department of Biological Sciences: for six months, for an extension of his studies on development and transmission of Bartonella bacilliformis in sandflies, with Dr H Guerra, Instituto de Medecina Tropical, Universidad Peruana Calyetano Heredia, Lima, Peru and Dr A G Taylor, Division of Microbiology, Public Health Laboratory Service, London (018709/Z/88/B).

University of Sheffield

Dr S L Kelly

£18 115

Department of Pharmacology and Therapeutics: for eight months, for an investigation of the cytochrome P450 system of Aspergillus fumigatus and the activity of antifungal azole compounds (031092/2/90/2).

University of Stirling

Dr M I North £139 636 Division of Biochemistry and Cell Biology: for three years, for a study of the release of hydrolases by Trichomonas vaginalis, with Professor G H Coombs, Department of Zoology, University of Glasgow and Dr L Tetley, Electron Microscopy Centre,

University of Glasgow

Dr M I North Division of Biochemistry and Cell Biology; for two years.

(030656/2/89/2).

\$26 123

for a study of the characterization of cysteine proteinases of parasitic protozoa, with Professor G H Coombs, Department of Zoology, University of Glasgow (031201/7/90/2)

University of York

Dr F R Hall

£124 157 Department of Biology: for three years, for a study of the characterization of proteases and protease genes of Theileria annulata, with Mrs J Fletcher, Centre for Tropical Veterinary (031219/Z/90/Z). Medicine, Roslin

LONDON

Charing Cross Sunley Research Centre

Professor M Feldmann

Department of Cellular Immunology: for one year, for a study of the role of the immune system in the pathogenesis of gastritis and peptic ulcer (possible role of infection by Campylobacter pylori), with Dr M Londei, Department of Medicine, Dr J M Holton, Department of Medical Microbiology, University College and Middlesex School of Medicine, London and Dr C Haworth, Department of Haematology

Imperial College of Science, Technology and Medicine

Professor R M Anderson

Department of Pure and Applied Biology: for three months, for an extension of his genetic analysis of the antigenic basis for cross immunity between Schistosoma bovis (014877/Z/85/C). and Schistosoma haematobium

£12 723 Professor Elizabeth U Canning

Department of Pure and Applied Biology: for four months, for a study of human microsporidioses (032693/Z/90/Z).

Dr R M Maizels

Department of Pure and Applied Biology: for three

months, for an extension of his study of the biology of parasitic nematodes: Characterization of antigenic products (016262/Z/86/D). and their interaction with the host

London Hospital Medical College

Dr Lucinda M C Hali

£105 550

Department of Medical Microbiology: for three years, for a study of mosquito acetylcholinesterase genes and insecticide resistant variants (031998/A/90/Z).

Dr K W Taylor

Department of Biochemistry: for three months, for an

extension of his study of the effect of diabetogenic virus on the function of human and rodent islets of Langerhans (015942/Z/86/A).

London School of Hygiene and Tropical Medicine

Dr M I Allday

£143 833

Department of Clinical Sciences: for three years, for a study of molecular interactions in EBV infected cells, with (031943/7/90/7) Dr Dorothy H Crawford

Dr A H Fairlamb

£47 375 Department of Medical Parasitology: for two years, for a study of trypanothione surrogates; new leads to drugs for leishmaniasis and trypanosomiasis, with DrSL Croft, Electron

Microscopy Laboratory and Professor E M Kosower, School of Chemistry, Tel-Aviv University, Israel (031558/B/90/Z).

Dr A H Fairlamb

Department of Medical Parasitology: for five years, for an investigation into the structual characterization of trypanothione reductase (031588/B/90/Z).

Professor R J Hay

Department of Medical Microbiology: for a comparative study of classical and African forms of histoplasmosis using immunological and recombinant DNA techniques (016779/Z/87/A).

Professor G A T Targett

Department of Medical Protozoology: for six months, for an extension of his study of the biochemical and immunological characterization of natural and synthetic peptides associated with transmission-blocking immunity in Plasmodium falciparum malaria (030293/Z/89/A).

£102 090 Dr D C Warhurst

Department of Medical Protozoology: for three years, for a study of protein synthesis inhibitors as potential antimalarial drugs (032156/B/90/Z).

£12.400 Professor P G Smith

Department of Epidemiology and Population Sciences: for three months, for studies of the immunoepidemiology of infectious diseases

Natural History Museum

Dr D Rollinson £96 435 Department of Zoology: for three years, for a study of the phylogenetic relationships of schistosomes based on rDNA sequence analysis, with Dr VR Southpate and Dr A I G Simpson, Division of Parasitology, National Institute for Medical Research. (030643/2/89/2)

Royal College of Surgeons of England

Dr R R B Russell £6281 Hunterian Dental Research Unit: for three months, for an extension of his genetic analysis of degradative enzymes of oral spirochaetes (015377/Z/R6/A)

Royal Free Hospital School of Medicine

Dr Jane E Grundy £92 104 Department of Virology: for three years, for a study of cytomegalovirus infection on the expression of HLA antigens and cell surface adhesion molecules

Royal Postgraduate Medical School

Professor Beverly E Griffin £159 292 Department of Virology: for three years, for a study of the production of infectious papova viruses, their structures and the role of myristylation in the virus life cycle (030647/Z/89/Z).

School of Pharmacy

Professor I D Phillipson Department of Pharmacology: for two months, for an extension of his study of quassinoids as potential antimalarial drugs (015992/Z/86/A),

St Mary's Hospital Medical School

Dr L Frv £10 000 Department of Dermatology; for two years and two months, for additional research expenses for his study of the isolation of streptococcal antigen specific and autoreactive T cell clones from psoriatic lesions, with Dr Barbara S Baker (019065/7/89/ID)

University College and Middlesex School of Medicine

Dr R S Tedder Department of Virology: for additional research expenses, for his studies of the epidemiology of human hernes virus type 6, with Dr Ruth B Ferns (018666/Z/88/A).

United Medical and Dental Schools of Guy's and St Thomas's Hospital

Professor R J Hay \$136.943 Department of Dermatology: for three years, for the characterization of immunoreactive antigens of Histoplasma capsulatum and Cryptococcus neoformans

Universiti Sains Malaysia

Dr Mary J Cardosa 230 000 Department of Medical Microbiology, Penang: for one year, for a study of the role of the dimeric and monomeric forms of dengue virus NSI in the pathogenesis of dengue haemorrhagic fever (030636/2/89/7).

RESEARCH TRAINING SCHOLARSHIP

Dr H A O Ondolo

Tropical Child Health Unit, Institute of Child Health, London: for three years, for a study of the cultural and ecological determinants of mortality differentials in infants in the Nyanza Province of Kenya, under Professor GJ Ebrahim (031220/Z/90/Z).

SYMPOSIA

£7008

£2000 Professor G H Coombs Department of Zoology, University of Glasgow: for a symposium on biochemical protozoology as a basis for drug design to be held at the University of Stirling, 26-29 August 1990, with Dr M I North, Division of Biochemistry and Cell Biology, University of Stirling (031228/Z/90/Z).

Dr I M Crampton Royal Entomological Society of London: towards the cost of the Royal Entomological Society of London Symposium - 1991 - Insect Molecular Science, with Dr P Eggleston, Department of Genetics, University of Liverpool (032353/Z/90/Z).

Dr Harlyn O Halvorson Marine Biological Laboratory, Woods Hole, Massachusetts, USA: for three years, for a contribution towards the costs of the 1990, 1991 and 1992 Woods Hole Course on The Biology of Parasitism.

Dr I J Johnstone 634 800 Department of Genetics, University of Glasgow: for a meeting entitled Caenorhaditis elegans; lessons for the study of parasitic nematodes and vice versa to be held at Dormy House in October 1990.

66000 Dr J Nokes Department of Biology, Imperial College of Science, Technology and Medicine, London: for a contribution towards the costs of 'Modern approaches to the epidemiology and control of infectious diseases' - A short intensive course, 3-21 September 1990 (032795/Z/90/Z).

UNIVERSITY AWARDS

£82 249 Dr Barbara S Baker Department of Dermatology, St Mary's Hospital Medical School, London: for three years, for a study of the isolation of streptococcal antigen-specific and autoreactive T cell clones from psoriatic lesions, under Dr L Fry

£186 874 Dr G I Bancroft Department of Clinical Tropical Medicine, London School of Hygiene and Tropical Medicine: for five years, for a study of the role of cell mediated immunity in resistance to Cryptococcus neoformans, under Professor K P W J McAdam with Professor R I Hay, Department of Dermatology, United Medical and Dental Schools of Guy's and St Thomas's Hospitals, London (031071/2/90/2).

RESEARCH LEAVE FELLOWSHIPS

Dr M W Kennedy

Department of Zoology, University of Glasgow: for three years, for a study of the molecular genetics of Ascaris antigens, stage-specificity and variability within the parasite population, under Professor R S Phillips (031559/Z/90/Z).

Professor E R Moxon

Department of Paediatrics, University of Oxford: for one year, for a study of the cell biology of invasiveness and cytotoxicity during infections caused by encapsulated bacteria, under Professor Sir David Weatherall, Nuffield m31059/2/90/Z3. Department of Clinical Medicine

TROPICAL FELLOWSHIPS

Dr M L Blaxter

Department of Pure and Applied Biology, Imperial College of Science, Technology and Medicine, London: for three years, for a study of the expression of cuticle gene products of parasitic nematodes in transgenic Caenorhabditis (032122/Z/90/Z) elegans, under Dr R M Maizels

Dr D Jefferies

Department of Biological Sciences, University of Salford: for one year, for additional expenses for the development of a system for the introduction of plasmid constructs into Trypanosoma brucei, under Professor D H Molyneux and Professor M Steinert, Department de Biologie Moleculaire, Universite Libre de Bruxelles, Brussels, Belgium (017028/Z/87/A).

Department of Veterinary Parasitology, University of Liverpool: for three years, for a study of the isolation and identification of chemical attractants in Simulium, under Dr A I Tives and Professor J H Tumlinson, Department of Biochemistry, University of Arizona, Tuscon, Arizona, USA (031509/ZJ90/Z).

Dr A Suhrbier

Department of Biology, Imperial College of Science, Technology and Medicine, London: for three years, for the identification of T cell epitopes in vaccine candidates. under Professor R E Sinden, Department of Pure and Applied Biology and Dr A Saul, Queensland Institute of Medical Research, Australia

INFECTIOUS DISEASES FELLOWSHIPS

Dr D W K Acheson

Department of Medicine, University of Manchester: for one year, for an extension of his study of the structure and function of shiga-like toxin II, under Professor LA Timberg 007133/27040.

Dr K Mars

Institute of Molecular Medicine, University of Oxfordator for one month, for an extension of his study entitled 'the identification and characterisation of neoantigens on Plasmodium falsiparam infected rat blood cells', under Physics Sir David Weatherall (1965/87/286C).

TROPICAL OVERSEAS FELLOWSHIPS

Dr A Akinsola

Department of Medicine, Obafemi Awolow University, Ile-Ife, Nigeria: for one year, for a study of the immunopathogenesis of liarial-induced glomentonocphrisis, under Dr R M Maizels, Department of Pure and Applied Biology, Imperial College of Science Technology and Medicine, London 000357789812.

Professor R A L Bayoumi

Department of Genetics, University of Edinburgh: for one year, for a study of the genetic basis of chloroquine resistant Plasmodium falciparum in rural castern Sudan, under Dr D E Amot (03231429082).

Dr S Kumar

Department of Zoology, University of Nottingham: for one year, for an extension to his investigation into the immunology, biochemistry and molecular biology of the infective (L3) larva of Newtor americanus, under Dr DI Prichard (018292/DR88).

Dr L Santos-Argumedo

National Institute for Medical Research, London: for one year, for an extension to his study of the role of phosphotyrosyl proteins in B-lymphocyte activation, under Dr R M E Parkhouse (2003/32/28/M).

POSTDOCTORAL FELLOWSHIPS

Dr D V Holberton

Department of Zoology, University of Nottingham; for three years, for studies of cytoskeleton proteins from Clardia: their gene sequences, structure, interactions and antigenicity, under Professor D Blackelin and with Dr M N Marsh, Department of Medicine, University of Manchester and Professor Ame Tenguen, Gastro-Interstinal Unit, University of Edinburgh @0037278975.

Dr W M Spice

Department of Medical Parasitology, London School of Hygiene and Tropical Medicine for three years, for an investigation of mucolysis by Emanueba histolytia, under Professor G A T Targett, Department of Medical Protocology (031530/Z9022).

LECTURESHIP IN TROPICAL MEDICINE

Dr C R Davies

Department of Medical Parasitology, London School of Hygiene and Tropical Medicine: for three years, for a study of virulence polymorphisms in the epidemiology of Lerishmania peruviana, under Dr C M Dye and with Dr Jenefe M Blakwell and Dr H Guera, Instituto de Medeina Tropical, Universidad Peruma Cayetone Herdia, Lima, Peru 00089728987.

MOLECULAR AND CELL PANEL

I Helen Muir, CBE, DSc, FRS, (Chairman, Wellcome Trustee), Kennedy Institute of Rheumatology, London

Professor J J T Owen, MA, MD, FRS, (Deputy Chairman), University of Birmingham

Professor R J Cherry, MA, PhD, University of Essex

Professor A Colman, MA, DPhil, University of Birmingham

Kay E Davies, BA, PhD, University of Oxford

Professor M A Ferguson-Smith, FRS, FRSE, University of Cambridge

R F Irvine, PhD, Institute of Animal Physiology and Genetics Research, Cambridge

Professor D C Linch, MB, FRCP, University College and Middlesex School of Medicine, London

Professor A J McMichael, MB, PhD, FRCP, University of Oxford

Professor T F Slater, DSc, FRSChem, FIBiol, Brunel University, Middlesex

J R Tata, DSc, FRS, National Institute for Medical Research

Jean O Thomas, MA, ScD, FRS, University of Cambridge

Staff members responsible

M J Morgan, BA(Mod), PhD, (Scientific Secretary)

I G Scott, PhD, (Scientific Officer) R J Blake, BA, (Grants Officer) Laura Chambers, (Grants Officer) S A Herst, BSc, ACIS, (Grants Officer)

MOLECULAR AND CELL

In the summer of 1989 a major re-organisation of the Trust panel structure took place resulting in the demise of the Biochemistry and Cell Panel and the establishment of the Molecular and Cell Panel which, in addition to the former responsibilities of the Biochemistry and Cell Biology Panel became responsible for the clinical, veterinary and tropical interests which use the tools of molecular and cell science in their investigations. A major consequence of this re-organisation, coupled with a realisation in the scientific community that the Wellcome Trust is a major funder of research in this area, was a greatly increased number of grant applications such that the work load almost doubled. This was also reflected in an increased number of meetings from four to six per annum.

Panel membership was adjusted to take account of this change in responsibility and now includes both basic and clinically qualified scientific advisers. The Trust has also established a series of special interest groups to look after the concerns of groups such as clinical researchers which were formerly the business of the Clinical Panel.

The total number of applications for grants, excluding longer-term support, during 1989/90 was 301, of which 151 were awarded in part or in full.

The panel was able to meet 31 per cent of the £26.4m total request for the year. The total amount awarded was therefore £8.2m.

The following three awards for longer-term support are of particular interest. In two instances scientists have been assisted in their objective of relocating from foreign bases back to the UK. Thus Professor Adrian Bird leaves the Institute of Molecular Pathology in Vienna to take up the Buchanan Chair of Genetics at the University of Edinburgh. The Trust has provided funds to help refurbish his laboratory space and to help establish his research group. Professor Bird is well known for his studies on methylation of DNA and its role in the regulation of gene expression. Professor Jonathan Lamb presently at the University of Stanford is taking up the Chair of Immunology at St Mary's Hospital Medical School and has been provided with assistance to establish his laboratory and to set up a research group. Professor Lamb has made a fundamental contribution in establishing atopy on a scientific basis.

In recognition of his seminal discoveries on calcium transients in single cells and the application of novel approaches, Professor Cobbold at the Department of Biochemistry, University of Liverpool has also been provided with long-term support for his research group. Such major project grants are intended to provide the principal investigators with sufficient funds so that they do not need to spend so much time applying for smaller short-term grants.

It is likely that by the time this report is published the Wellcome and Cancer Research Campaign Institute of Cancer and Developmental Biology in Cambridge will have opened its doors to the principal investigators who will we hope have established their research groups. The official opening will take place in the summer of 1991. As part of the setting-up phase of the Institute, the Trustees considered applications from Dr Michael E Akam (Department of Genetics, University of Cambridge) and Professor Brigid L M Hogan (Department of Cell Biology, Vanderbilt University, USA) to provide Principal Research Fellowships for their own support and long-term support for their staff who are to establish research programmes within the Institute. Dr Akam will be investigating the developmental genetics in the fruit fly Drosophila melanogaster and the locust. Professor Hogan will be establishing a major programme (in collaboration with Dr Martin Evans) on the molecular genetics of development in the mouse. (Professor Hogan has unfortunately now decided to stay in the United States.)

It is a special pleasure to be able to report such a major "reverse brain drain" which returns to the UK scientific community such outstanding scientists.

Summer Schools

Two Summer Schools were held in conjunction with the biochemistry department at the United Medical and Dental Schools of Guy's and St Thomas's Hospitals. The first, on Molecular Parasitology was directed by Drs Julian Crumpton, Debbie Smith, and Murray Selkirk; the second on DNA related methods in human genetics: YAC cloning in genome analysis was directed by Dr William Brown, Dr David Bentley and Dr Tony Monaco. The participants came from all over the world and both courses were heavily over-subscribed.

Meetings

Two one-day meetings were organised on topics of some immediate interest to the clinical and molecular genetics community. The first on malignant hyperthermia was organised to assist in the co-ordination of the search for the gene responsible for this life threatening condition which is revealed during anaesthesia. The second meeting on gene therapy was of particular interest as it highlighted the need for this interdisciplinary topic to be served by annual meetings of a workshop type. The Trustees have agreed therefore to support a further meeting on gene therapy in May 1991.

Dr I Helen Muir retired at the end of September as a Trustee and as the Chairman of the Molecular and Cell Panel. Helen's warm, but firm chairmanship was appreciated by all who served on this Panel and its predecessor, the Biochemistry and Cell Panel, and I am sure they would wish to join with us in wishing her a happy and long retirement.

List of grants awarded over £2000

LONGER - TERM SUPPORT

Dr J I Bell £594 134
Institute of Molecular Medicine, University of Oxford:
for five years, for a study of the genetics of autoinnume
@0244275967.

Professor A P Bird £803 071
Department of Genetics, University of Edinburgh: for five years, for a study of the significance of DNA methylation and of non-methylated CpG islands for genome organization and function (031581/Z91/Z).

Professor B Burchell £15 228
Department of Biochemical Medicine, University of Dundee: for one year, for continued studies of the molecular pathology of drug-induced illness and related inherited hepatic diseases (017214/2781/8).

Dr P H Cobbold

Department of Human Anatomy and Cell Biology,
University of Liverpool: for five years, for a study of single
cell signalling (03250071912).

Dr J R Lamb
Department of Immunology, St Mary's Hospital
Medical School, London: for five years, for a study of the
cellular and molecular basis of the induction of T cell anergy
in the regulation of allergic diseases, with Dr Robyn E O'Hohir
2021/2021/15.

Professor Sir David Weatherall £1 000 000 Institute of Molecular Medicine, University of Oxford: for five years, for core funding for the Institute of Molecular Medicine (031813/290/2).

EQUIPMENT

Dr D A Hartley

£36 311 Department of Biochemistry, Imperial College of Science, Technology and Medicine, London: for three years, for a study of the molecular and cellular biology of slit, a Drosophila gene implicated in axonal pathfinding and neural pattern formation

Dr A P Jackson Department of Biochemistry, University of Cambridge: for one year, for studies of 1) the function of clathrin lightchain polymorphism: a direct test in vivy; and 2) biochemical functions of Drosophila toll protein and the generation of embryonic dorso-ventral polarity, with Dr N J Gay Professor R N Maini

£40 837 Charing Cross and Westminster Medical School. London: for one year, for research into molecular medicine at Charing Cross and Westminster Medical School, with Professor Iulia C Buckingham, Department of Pharmacology, Professsor A Guz, Department of Medicine, Professor M Feldmann, Charing Cross Sunley Research Centre, London and Dr S E Humphries, Charing Cross Sunley Research Centre, London (030917/Z/89/Z).

RESEARCH ASSISTANCE AND EXPENSES

University of Birmingham

Dr A H Barnett £14 820

Department of Medicine: for two years, for a study to assess the contribution of the class II HLA region genes to susceptibility to insulin dependent diabetes using a transracial approach - Chinese study (031177/Z/90/Z).

Dr R Coleman

Department of Biochemistry: for three years, for a study of the development and use of hepatocyte couplets in hepatobiliary and hepatotoxicity studies, with Dr I K Chipman, Dr P McMaster, Queen Elizabeth Hospital, Birmingham (030949)7/89/71

Dr Alicia J El Haj

£21 335 School of Biological Sciences: for one year, for a study of the regulation of gene expression in response to mechanical loading in bone cells (030779/Z/89/Z).

Dr I P Trayer £91 669

Department of Biochemistry: for three years, for a study of the molecular mechanisms of cellular regulation processes with Dr Eva I Hyde, Dr R Jefferis, Department of Immunology and Dr S P Young, Department of Rheumatology (030748/Z)89/Z).

University of Bristol

Dr A P Halestrap £84 945

Department of Biochemistry: for three years, for a study of the molecular mechanisms of monocarboxylic acid transport across the plasma membrane of erythrocytes and other cells, with Dr MJA Tanner (031194/Z/90/Z).

Dr S E Halford

£73 997

Department of Biochemistry: for three years, for a study of DNA-assembly at synapsis by resolvase (030926/Z/89/Z). Dr C H Holmes

Department of Obstetrics and Gynaecology: for two years, for a study of the expression of complement regulatory proteins in normal human pregnancy and in pregnancy pathologies, with Dr P Morgan, Department of Medical Biochemistry, University of Wales College of Medicine, Cardiff and Dr M J A Tanner, Department of Biochemistry (032197/Z/90/Z).

Department of Pharmacology: for three years, for a study of the role of altered G-protein mRNA levels in agonistinduced desensitization of hormone-stimulated adenylate cyclase activity (031215/Z/90/Z).

Dr Hilary Muirhead

£72 038

Department of Biochemistry: for three years, for a detailed kinetic and structural study of the control and catalysis of the allosteric enzyme pyruvate kinase, with Dr H Gutefreund and Dr A R Clarke (031940/Z/90/Z).

Strangeways Research Laboratory, Cambridge

Dr Gillian Murphy

Department of Cell Physiology: for three years, for an

assessment of the role of two newly discovered matrix metallo-proteinases and a specific inhibitor in connective tissue destruction (032299/Z/90/Z).

University of Cambridge

Dr M E Akam

£36 193

110 682

Department of Genetics: for nine months, for the molecular analysis of pattern formation in insect and crustacean embryos (030585/2/89/2).

Dr A Martinez Arias

Department of Zoology: for two years, for cellular and biochemical studies of the function of the wingless gene product of Drosophila, with Dr M Bate and Dr F Gonzalez (01228962/90/21

Dr I M Edwardson

£24 941

Department of Pharmacology: for one year, for a study of the insertion of a newly-synthesized protein into the plasma membrane of a new cell-free system (031842/Z/90/Z).

Dr N I Gav

Department of Biochemistry: for additional expenses, for studies on the biochemical functions of homeobox and dorsal group gene products during early embryogenesis of Drosophila (017955/Z/88/A).

Professor I A Hughes

Department of Paediatrics: for three years, for a study to

classify androgen insensitivity disorders by clinical, biochemical and genetic analysis

£116 781 Dr R I lackson

Department of Biochemistry: for three years, for an investigation of the novel mechanism of initiation of picornaviral RNA translation: determinants specifying the internal ribosome entry site of cardio-, entero- and rhinoviruses (032330/Z/90/Z).

Dr M H Johnson

Department of Anatomy: for two years, for an analysis of the effects of cryoprotectant and low temperature on the oncyte of the mouse

Dr Y W Loke €8171

Department of Pathology: for three months, for bridging support, for his study of the cellular constituents of the endometrial and decidual stroma and their relevance to (016641/2/87/B). implantation

Dr A C Minson

£26 853 Department of Pathology; for one year, for an extension to a study of the genetic response controlling normal cell proliferation, with Dr J Milner (016513/Z/87/A).

Dr L C Packman

Department of Biochemistry: for three years, for automated synthesis of oligonucleotides and oligopeptides, with Dr P I F Henderson

Dr Margaret S Robinson

Department of Clinical Biochemistry: for four years, for a study of the diversity and targeting of adaptors (031732/Z/90/Z).

Dr C W Taylor

£116 210

£44 358

Department of Pharmacology: for three years, for a study of the mechanisms underlying oscillatory changes in intracellular concentration, with Dr MJ Berridge, Department (010960/7/89/7). of Zoology

Dr A P Weetman

Department of Medicine: for three years, for a study of the autoreactive T cell repertoire in Autoimmune Thyroid (031605/Z/90/Z). Disease

University of Wales College of Medicine, Cardiff

Professor G H Elder

£38 667 Department of Medical Biochemistry: for eighteen months, for a study of the molecular genetics of porphyria cutanea tarda and related disorders, with Professor P Jordan, School of Biological Sciences, Queen Mary College, London

Professor G H Elder

Department of Medical Biochemistry: for six months, for an extension of a study of the molecular pathology of acute intermittent porphyria, with Dr N Kalsheker

University of Essex, Colchester

Dr G S Bailey

Department of Chemistry and Biological Chemistry: for two years, for an investigation of tissue kallikrein: Design of specific inhibitors, with Dr MT Wilson and Dr GR Moore, School of Chemical Sciences, University of East Anglia, Norwich (031371/7/90/2)

University of Warwick, Coventry

Dr R W Old

£79 403

(016279/Z/86/A).

£55 236

Department of Biological Sciences: for three years, for a study of retinoic acid, retinoic acid receptors and their target genes in development of the nervous system, with Dr Elizabeth A Jones (032290/Z/90/Z).

University of Dundee

£46 728 Professor C P Downes

Department of Biochemistry: for two years, for an identification and characterization of a phosphatidylinositol synthase in turkey erythrocyte membranes (030681/Z/89/Z).

University of Durham

£42 516 Dr D L H Williams

Department of Chemistry: for three years, for an investigation of reactions of nitric oxide with haems and related reactions with reference to the mechanism of vasodilation, with Dr A R Butler, Department of Chemistry, University of St Andrews and Dr F W Flitney, Department of Biology and Pre-Clinical Medicine, University of St Andrews (032173/Z19072).

University of Edinburgh

£3640 Dr D K Apps Department of Pre-Clinical Veterinary Sciences: for one

year, for biochemical and immunological analysis of the secreted proteoglycans of bovine adrenal chromaffin cells, (031010/Z/89/Z). with Dr I Haywood

Dr W D Donachie

Department of Molecular Biology: for two years, for an investigation of post-transcriptional regulation of cell division gene expression (030947/Z/89/Z).

£87 048

Dr R S Havward

£91 375 Department of Molecular Biology: for two years, for a

study of the interdependent regulation of the genes encoding the major subunits of RNA polymerase in Escherichia coli (830733/2/89/2)

Dr H Kacser

£72 856

Department of Genetics: for three years, for a control analysis of biological systems, with Dr HM Saure, Department of Biological Sciences, University College of Wales, Aberystwyth

Professor M H Kaufman

Department of Anatomy: for one year, for the genetic basis of dievnic triploidy in the LT/Sv strain mouse, with Dr ID West, Department of Obstetrics and Gynaecology (032409/2190/2).

Dr Millicent Masters

£6248

Department of Molecular Biology: for two years, for a study of Exoli genes required for plasmid maintenance: characterisation of penB and its product and identification of further pen genes, with Dr R D Orejas, Centro de Investigaciones Biologicas, Instituto Maranon, Madrid (031563/Z/90/Z)

Dr S W Walker

Department of Clinical Chemistry: for additional expenses, for a study of membrane phosphoinositide metabolism in steroidogenesis and cell growth in cultured zona fasciiculata/reticularis cells from bovine adrenal cortex (019198/7/88/A)

Dr I D West

Department of Obstetrics and Gynaecology: for three years, for In situ hybridization studies for prenatal diagnosis and analysis of mosaicism and polyploidy in human and mouse conceptuses, with Professor D T Baird (030616/7/89/7)

University of Glasgow

Dr R L P Adams

£74 119 Department of Biochemistry: for three years, for a study of site specific methylation and the control of gene expression

with Dr J P Goddard

Dr I H Brock

£45 788

Department of Bacteriology and Immunology: for two years, for a study of transferrin as an autocrine or paracrine growth factor during the immune response (030620/Z/89/Z).

Dr H V Smith

Department of Bacteriology: for one year, for an extension to the study of the allergenicity of house dust mites in relation to atopic diseases, with Dr MJ Colloff, Department of Zoology (018208/Z/88/A)

Dr M J O Wakelam

Department of Biochemistry: for three years, for a study of the mechanisms of hormonal regulation of phospholipase D activity in Swiss 3T3 cells, with Dr M A I Ferguson, Department of Biochemistry, University of Dundee (031280/Z/90/Z). University of Leeds

Dr S Baumberg

§17 471

\$5000

Department of Genetics: for one year, for a study of the effect of changes in DNA supercoiling on genes of streptomycin biosynthesis in Streptomyces griseus (030257/2/89/21

Dr P G Stockley

Department of Genetics: for one year, for a study of the structure determination of the HIV tar region (030868/Z/89/Z).

Dr A I Turner

£33 803

Department of Biochemistry: for three years, for a study of the structure, function and biosynthesis of glycolipid membrane anchors on mammalian proteins, with Dr NM

University of Leicester

Dr I D Cavieres

Department of Physiology: for three years, for a study of pre-steady state kinetics of immobilized Na. K-ATPase (031578/Z/90/Z).

Dr D R Critchlev

Department of Biochemistry: for three years, for a study of alpha-actinin: An analysis of the structure of the protein, and the gene(s) encoding the skeletal muscle isoform(s) (031961/Z/90/Z).

Professor E Cundliffe

Department of Biochemistry: for three years, for studies of DNA gyrase and promoters responsive to changes in DNA topology in the novobiocin-producer, Streptomyces sphaeroides

(030767/7/89/7)

Dr A Maxwell

Department of Biochemistry: for one year, for a study of the over-production of a GroEL-like protein in quinolineresistant bacteria, with Dr Angela Mehlert, Department of Biochemistry, University of Dundee (031441/Z/90/Z).

Dr P A Meacock

\$80.063

Leicester Biocentre: for three years, for an analysis of a new eukaryotic cytoplasmic transcription system (030692/Z/89/Z).

Dr Elisha Orr

£20 148

Department of Genetics: for two years, for a study of the structure and functions of the yeast myosin II, with Dr CR Bagshau, Department of Biochemistry and Dr A J Rowe, Electron Microscope Laboratory (032359/Z/90/Z).

Dr Elisha Orr

Department of Genetics: for additional equipment, for a study of the roles of cytoskeletal novobiocin proteins in Saccharomyces cerevisiae (030128/Z/89/A).

Dr A J Rowe

£20 042

Department of Biochemistry: for one year, for a study for the preliminary characterization of a newly discovered RNA from vertebrate muscle thick filaments, with Dr lemifer M Varley

Dr A I Rowe

£30 125

Department of Biochemistry: for three years, for an investigation of subcellular localization of newly defined species of contractile proteins in muscle and yeast and of bacterial virulence-related antigens, by means of cryoultramicrotomy, with Professor GJ Boulnois, Department of Microbiology and Dr Elisha Orr, Department of Genetics (032129/Z/90/Z).

Dr I Sampson

Department of Biochemistry: for two years, for a study of the generation and analysis of polymorphic loci that can be used to study linkage in the canine genome, with Professor A I leffreys, Department of Genetics (030972/Z/89/Z).

Dr P H Williams

Department of Genetics: for two years, for a study of structure function analysis of haemolysin B and its interrelationship with mdr and other members of a novel family of membrane translocators

University of Liverpool

Dr P C Turner

Department of Biochemistry: for three years, for a study of altering the processing specificity of the U7 small nuclear ribonucleoprotein particle

University of Manchester

Dr Joan M Braganza

Department of Gastroenterology: for equipment, for a pilot study of the BT PABA/PAS test in tropical pancreatitis (019256/ZJ89/A)

Dr M J Dixon

£87 797

PRRP2

Department of Cell and Structural Biology: for three years, for a molecular genetic analysis of a candidate gene for non syndromic, autosomal dominant, orofacial clefting, with Dr P I Scambler, Department of Biochemistry and Molecular Counties St Mare's Haspital Medical School, London, Dr R M Winter, Kennedy Galton Centre, Clinical Research Centre, Harrow and Dr S E Holden, Kennedy Galton Centre, Clinical Research (032344/Z/90/Z). Centre, Harrow

Professor M E Grant

£22 503

Department of Biochemistry and Molecular Biology: for one year, for an extension of a study of microfibrillar structures of elastic tissues, with Dr C A Shuttleworth (014339/Z/85/A).

Dr M J Humphries

£53 342

Department of Biochemistry and Molecular Sciences: for two years, for a study of chondrocyte-cartilage collagen adhesion: ligand specificity and receptor identification, with Professor M E Grant and Dr Shirley R Ayad (0307617Z/89/Z). Dr M J Humphries €20 000 Department of Biochemistry and Molecular Biology: for one year, for an investigation of the adhesion-promoting

and cation-binding activities of the LDV adhesive recognition sequence, with Dr A Brass (031960/Z/90/Z).

Dr A G Lowe

£16 171

£28 777

£10 986

Department of Biochemistry and Molecular Biology: for one year, for an extension to his study of the effects of temperature and pressure on nucleoside transport in human erythrocytes

Dr I K P Sheehan

Department of Biochemistry and Molecular Biology: for one year, for a study of the molecular biology of the human cervical mucin core proteins, with Dr R P Boot-Handford (031939/Z/90/Z).

Dr T Strachan

Department of Medical Genetics: for six months, for an extension to a study of the molecular genetics of congenital adrenal hyperplasia, with Dr P A Dyer and Professor R Harris (017182/Z/87/A1.

University of Newcastle upon Tyne

£107 655 Dr T Jowett

Department of Biochemistry and Genetics: for three years, for studies of the cloning, characterization and mutation of genes involved in early development of the zebra fish Brachydanio rerio, with Dr P W Ingham, Department of Zoology, (031318/Z/90/Z). University of Oxford

Dr Louise V B Nicholson

£10 776

£38 028

Muscular Dystrophy Group Research Laboratory: for one year, for the production of monoclonal antibodies to amino and carboxy termini of dystrophin using synthetic peptides, with Professor J B Harris (032307/Z/90/Z).

Professor R H Pain

Department of Biochemistry and Genetics: for two years, for a study of alpha 1 antitrypsin Z variant: the molecular basis of the associated secretion defect (031100/Z/90/Z).

Dr C P F Redfern

£27 022

£21 344

Department of Dermatology: for one year, for a study of somatic mutation and clonality in skin disease, with Professor S Shuster and Dr Celia Moss (031800/Z/90/Z).

Dr E I Thomas

Department of Obstetrics and Gynaecology: for one year, for a study of the cellular origins and control of cell function in endometriosis, with Dr C P F Redfern, Department of Dermatology and Dr B H Hirst, Department of Physiological Sciences (030789/Z/89/Z).

Dr S I Yeaman

Department of Biochemistry and Genetics: for two years, for a study of primary biliary cirrhosis: reactivity and possible pathogenicity of antimitochrondrial autoantibodies, with Dr Margaret F Bassendine, Department of Medicine and Professor O F W lames, Department of Medicine (0.50855/7/89/7)

University of Nottingham

Dr R E Glass £79 373
Department of Biochemistry: for three years, for a genetic investigation of the multifunctional vitamin B12-dependent homocysteine transmethylase 0011682-0972.

Professor F W Hemming £40 697
Department of Biochemistry: for one year, for an investigation of abnormal glycosylation of fibronectin by cultured skin cells of tuberous sclerosis patients and possible cell biological consequences, with Dr Zhila Ellis 602140627902.

Dr P J Scotting £86 839
Department of Biochemistry: for three years, for a study
of the role of the homeobox genes in neural development
during chick embryogenesis 6030801/Z89/Z1.

University of Oxford

Dr Judith P Armitage £91 423 Department of Biochemistry: for three years, for a study of the control of bacterial flagellar rotation by environmental stimuli

Dr G K Brown 266 852
Department of Biochemistry: for three years, for a study of the human pyruvate dehydrogenase complex: genetic and biochemical studies of patients with genetic defects of the Ela subunit (0.14237/psyr.)

Professor A J McMichael £33 870
Institute of Molecular Medicine: for three years for a
FACscan for analytical cell sorting, with Dr J M Austyn,
Nuffield Department of Sungery and Dr J I Bell 601679725972.

Professor P J Morris

£50 685
Nuffield Department of Surgery: for one year, for a study of genetic mapping of murine susceptibility genes for insulindependent diabetes mellitus, with Dr J A Todd, Nuffield Department of Surgery and Clinical Meditine; and Dr L Wiker and Dr L Peterson of the Department of Cell Immunology, Merck, Sharp, and Dehun; New Jersey, USA, (\$3068528587).

Portsmouth Polytechnic

Dr K Firman 243 562
Department of Biological Sciences: for two years, for a recombinational analysis of the DNA specificity domains to type IC restriction and modification endonucleases (032396/Z9902).

Dr G G Kneale

£43 631

Biophysics Laboratories: for two years, for a structural and
mutagenic analysis of the FD gene 5 protein, with Dr CNaw,
SERC Synchrotron Laboratory, Daresbury, Warnington

University of Reading

Dr D S Leake £89 742
Department of Biochemistry and Physiology: for three years, for a study of the oxidative modification of low density lipoproteins by macrophages in relation to atherosclerosis (0315972902).

University of Sheffield

Dr P C Engel

Department of Molecular Biology and Biotechnology:
for two years, for a study of inhorn errors of fatty acid
oxidation as a cause of sudden infant death syndrome (SIDS):
the molecular biology of the ACADM deficiency, with
Dr Diana Curtis, Department of Medical Genetics (2009)2228972,

Dr Amyra Treffry

E68 331
Department of Molecular Biology and Biotechnology:
for three years, for studies on the function and assembly of
ferritin using FAB fragments produced by generating a large
combinatorial library of the ferritin immunoglobulin
repertoire cloned in phage lambda, with Profesor Pauline M
Harrison

(0.2008/ZDPOZ).

University of Southampton

Dr T P Fleming £6185
Department of Biology: for three years, for additional expenses for a study of the development of epithelial tight junctions using the mouse preimplantation embryo as a model system (019306/2590/A).

LONDON

Birkbeck College

Dr P J Sadler

278 781

Department of Chemistry: for three years, for NMR studies of the metal-binding sites of serum albumin (032119/Z90/Z).

Charing Cross and Westminster Medical School

Dr D A Lane £22 780
Department of Haematology: for one year, for an extension to his detection of a tendency towards thrombosis: the hypercoagulable state (016655/27870).

Charing Cross Sunley Research Centre

Dr S E Humphries \$86 837
Arterial Disease Research Group: for three years, for a determination of the mechanisms whereby variation in the apolipoprotein (APO) AI-CIII-AIV gene cluster determines scrum APO AI and HDL-cholesterol concentration (abu0727907)

Imperial College of Science, Technology and Medicine

Dr D A Hartley £115 688
Department of Blochemistry: for three years, for a study
of the molecular and cellular biology of slit, a Drosophila
gene implicated in axonal pathfinding and neural pattern
formation (030851/Z897Z).

Kennedy Institute of Rheumatology

Dr Elizabeth M Andrew

Division of Clinical Immunology: for three years, for a study of the development of and relationships between 'natural' anti-phosphatidyl choline and 'haemolytic' anti-erythrocyte autoantibodies in New Zealand Black hupus mice, with Professor R N Maini; Professor A D B Maleolm and Dr Gurynach A Haynes, both of the Department of Biochemistry, Charing Cross and Westminster Medical School (000000278972).

King's College School of Medicine and Dentistry

Dr M F Scully
Thrombosis Research Unit: for two years, for a study of
the structural and functional properties of the cell receptor
for urokinase type plasminogen activator
(030866928972).

King's College London (KQC)

Professor H Baum £9562
Department of Biochemistry: for six months, for an extension to a study of the isolation and purification of vascular adenosine diphosphatase with studies of its physiological role (015089/Z886/A).

Dr P J Butterworth £65 342 Department of Biochemistry: for three years, for an investigation of plasma membrane transport of Piin liver and of its role in regulating metabolism (0.0669/12/89/2).

Dr P A M Eagles £82 072
Department of Biophysics: for three years, for studies to clone and sequence the cDNA coding for kinesin in mammalian liver (030751278972).

Professor Hannah J Gould
Department of Biophysics: for two years, for a study of
the mechanism of erythroid cell differentiation and globin
switching, with Dr G Felenfeld, Laboratory of Molecular Biology,
National Institutes of Health, Beltesda, Maryland, USA and
Dr J Allan, Division of Biomolecular Science: @00853278875.

Dr R K Patient
Department of Biophysics: for two years, for a study of transcription factor localization during amphibian development, with Dr B J Sutton, Division of Biomolecular Science and Dr NHK Holder, Department of Anatomy and Human Biology (202138/Z8972).

Professor N A Staines 547 857 Department of Biophysics, Cell and Molecular Biology: for one year, for an extension of a study of the natural history of DNA-binding produced in the course of systemic lupus crythematosus in humans and mice, with Dr D A Ismberg, Department of Rhemandology and Immunology, University College and Middless School of Medicine, London 001289728780.

London Hospital Medical College

Dr H L J Makin £24 431
Department of Chemical Pathology; for one year, for an extension of his metabolism of 5E.7E isomers of vitamin D: studies on a new non-renal metabolite and its relation to the calcaemic response (017534/2767/A).

Royal Free Hospital School of Medicine

Dr J F Hancock £85 546 Academic Department of Haematology: for three years for an investigation of the molecular genetics of factor II deficiency (031182/Z/002).

Dr R M Hardisty £6973 Katherine Dormandy Haemophilia Centre: for three months, for a study of the mechanisms of platelet activation and their disorders, with Dr Allison H Goodall(016594IZBRIA).

Professor J A Lucy £65 781
Department of Blochemistry and Chemistry: for three
years, for a study of surface exposure of phosphatidylserine
as a control factor in myoblast fusion (031810/2002).

Dr S J Perkins 54146
Department of Biochemistry and Chemistry: for three
months, for a study of the molecular modelling of the
components of the complement cascade (016548/ZB/IA).

Royal Postgraduate Medical School

Dr R I Lechler E24 923
Department of Immunology: for one year, for an analysis of the expressed repertoire of HLA-D region gene products, and their recognition by T cells, using DNA-mediated gene transfer (015941/2786/A).

Professor L Luzzatto
Department of Haematology: for three years, for a study
of the relationship between the fucosyltransferases encoded
by the Lewis (Le) blood group gene and the X gene, with
Professor Winifred M Walkins, Clinical Research Centre, Harrow,
Middlesey, Dr Ywone Edwards, MRC Human Biochemical
Genetics Unit, University College London and Dr Sue Powey, MRC
Human Biochemical Genetics Unit, University College London
(2016)77229021.

Dr C D Pusev

\$8198 Department of Medicine: for additional expenses, for a study of T lymphocyte responses to autoantigenic components of glomerular basement membrane, with Professor C T Dollery, Department of Clinical Pharmacology (619178/7/88/A)

Dr C D Pusey

£48 712 Department of Medicine: for two years, for a study of the role of T lymphocytes in experimental autoimmune glomerulonephritis in the rat, with Dr R I Lechler, Department of Immunology

Dr I N Thompson

Department of Surgery: for three years, for a study of the cellular and molecular biology of peritoneal fibrinolysis, with Dr K A Fleming, Nuffield Department of Pathology and Bacteriology, University of Oxford and Dr Elizabeth M Thompson, Department of Histopathology (031338/Z/90/Z).

Royal Veterinary College

Professor G E Goldspink

£141 946 Unit of Veterinary Molecular and Cell Biology; for three years, for a study of the molecular mechanisms involved in myosin heavy chain gene regulation in skeletal muscle (030645/2/89/2)

St Mary's Hospital Medical School

Dr P | Scambler

Department of Biochemistry and Molecular Genetics: for two years, for a study of chromosome mediated gene transfer of human chromosome 21q22 sequences: creation of a mouse model for Down's Syndrome, with DrR HLovell-(931323/Z/90/Z).

St George's Hospital Medical School

Dr M J Clemens

£133 232 Department of Cellular and Molecular Science: for three years for a characterization of cukaryotic RNA species with extensive double stranded structure (031488/Z/90/Z).

University College and Middlesex School of Medicine

Dr P M Brickell

Department of Biochemistry: for three years, for a study of the role of nuclear retinoic acid receptors in chick limb and face development, with Dr Cheryl Tickle and Professor L. Wolpert, both of the Department of Anatomy and Biology (031791/2/90/2)

Dr D S Latchman

Department of Biochemistry: for two years, for a study of the tissue specific RNA splicing protein Smn: regulation of expression and role in the control of alternative RNA splicing (030747/7/89/2)

Dr T Lund

Department of Immunology: for three years, for an analysis of the influence of MHC Class II genes on IDDM using transgenic animals, with Dr Anne Cooke, Department of Pathology, University of Cambridge and Dr Elizabeth Simpson, Clinical Research Centre, Harrow

University College London

Professor P H W Butterworth

Department of Biochemistry: for three years, for a study of the molecular mechanisms involved in myosin heavy chain gene regulation in skeletal muscle (030645/IJ/89/Z),

Dr S E Moss

£111 688 Department of Physiology: for three years, for a study of

molecular cloning of the gene for the p68 calcium-binding protein (031546/Z/90/Z).

Dr P S Quinn

\$148 591

\$69.303

Department of Experimental Pathology: for one year, for an extension of the use of enveloped viruses to study the transport of newly synthesised lipids to the plasma membrane, with Dr D Allan /019039/7/RR/A1

Dr E B Robson

£60 627

Department of Genetics and Biometry: for three years, for a study of the localisation and cloning of the chromosome Il-linked gene for tuberous sclerosis, a genetically heterogeneous disorder, with Professor M Bobrow, Paediatrie Research Unit, UMDS of Guy's and St'Thomas's Hospital, London (031550/Z/90/Z).

Professor A W Segal

Department of Medicine: for three years, for structural and functional studies of p47 of the neutrophil oxidase

United Medical and Dental Schools of Guy's and St Thomas's Hospitals

Professor M Adinolfi

Paediatric Research Unit: for one year, for cloning of alphaiduronate-sulphate-sulphatase gene and studies on Hunter Disease, with Professor F B Giannelli and Dr D R Bentley (030850/2/89/2).

Dr D M Kemeny

£10 939

Department of Medicine: for one year, for a study of the development of allergic disease in babies (016305/Z/86/A).

Dr D M Kemeny

Department of Allergy and Respiratory Disorders: for two years, for a study of the role of CDB + T cells in the regulation of rat IgE responses, with Professor T H Lee (030676/2/89/2). Professor F S Walsh

Department of Chemical Pathology: for additional equipment, for a study of cellular analysis of skeletal muscle

development Dr C Mathew

Division of Medical and Molecular Genetics: for three years, for an investigation of the development of gene amplification procedures for the preimplantation diagnosis of Duchenne muscular dystrophy, with Professor M Bobrow, Paediatric Research Unit

Zoological Society

Dr H D M Moore

£98 810

for three years, for a characterization of the role of a serine protease inhibitor and other sperm acrosomal antigens involved in human sperm-egg interactions: Development of an immunocontraceptive vaccine, with Dr D S Latchman, Department of Biochemistry, University College and Middlesex School of Medicine, London (031905/7/90/7).

SYMPOSIA

(016181/B/86/Z).

Professor M Bobrow

£5000 Paediatric Research Unit, United Medical and Dental Schools of Guy's and St Thomas's Hospital, London: towards expenses for the Malignant Hyperthermia Meeting to be held on the 23 September 1989 at Guy's Hospital Medical School, London (03(017/Z/89/Z).

Professor M Feldmann

Charing Cross Sunley Research Centre, London: for a contribution to a symposium on T cell activation in health and disease: Discrimination between immunity and tolerance. to be held at Trinity College Oxford

Professor W G Hill

Institute of Animal Genetics, University of Edinburgh: for a congress on 'Genetics Applied to Livestock Production' to be held in Edinburgh on 23-27 July 1990 (031083/Z/90/Z).

Professor I B Gurdon

Department of Zoology, University of Cambridge: for the inaugural scientific meeting of the Wellcome/Cancer Research Campaign Institute to be held in July 1991 Dr I Kendrick-Iones

CERRO

University of Cambridge: for an international workshop on the Dynamics of Cellular Motor Proteins to be held at Robinson College, Cambridge on the 12 - 18 September 1990

Dr Bernadette Modeli

€2000

Department of Obstetrics and Gynaecology, University College London: for the 5th International Congress on Early Fetal Diagnosis (Recent Progress and Public Health Implications) to be held in Prague from 8 to 14 July 1990 (031966/2/90/2).

Dr H D M Moore

Zoological Society, London: for a conference on 'Biotechnology and the Conservation of Genetic Diversity'

Dr I Helen Muir

£5000

Department of Biochemistry, Kennedy Institute of Rheumatology, London: for The Kennedy Institute's 25th Anniversary Symposium (031487/2790/2)

UNIVERSITY AWARD

Dr S I Perkins Department of Biochemistry and Chemistry: for three years, for a study of molecular modelling and functioning of medically-important plasma proteins, with Professor J A

Lucy; Dr K B M Reid, MRC Immunochemistry Unit, University of Oxford and Professor D Chapman, Department of Protein and Molecular Biology (031096/2/90/2).

UNIT

Professor J B Gurdon

£301 004

University of Cambridge: for additional expenses, to set up the Wellcome Trust and Cancer Research Campaign Institute of Cancer and Developmental Biology(018138/Z/91/A).

RESEARCH LEAVE FELLOWSHIPS

Dr C C Ford

School of Biological Sciences, University of Sussex, Brighton: for one year, for a study of replication and mitosis in cell-free extracts from Xenopus eggs, with DrR T Hunt, Department of Biothemistry, University of Cambridge annual 2002.

Dr Julia M Goodfellow

Department of Crystallography, Birkbeck College London: for three years, for a study of molecular modelling of macromolecular interactions (030797/2/89/2).

Dr D I S Hulmes

Department of Pre-Clinical Veterinary Sciences, University of Edinburgh: for three years, for a study of the structural aspects of proceding an processing and cross-linking in extracellular matrix assembly, with Dr R A Crowther, MRC Laboratory of Molecular Biology, Cambridge and Dr L W Fisher, Borne Research Branth, National Institute of Dental Research, Bethesda, Maryland, USA (031089/2002).

POSTDOCTORAL RESEARCH FELLOWSHIPS

Dr I A Armour

Department of Genetics, University of Leicester: for three years, for a molecular analysis of spontaneous mutation in human DNA, under Dr PH Williams and Professor AJJeffreys (0325872/902).

Dr R M Aspden

Department of Orthopaedics, University of Aberdeen: for eleven months, for a study of the effects of impact loads on articular cartilage (052895/25902).

Dr A D Bates

Department of Biochemistry, University of Leicester: for three years for a study of DNA supercoiling: conformation, thermodynamics and their effects on protein-DNA interactions

Dr I Gabrielle M Brons

Department of Surgery, University of Cambridge: for one year, for a study of unoncolonal antibody treatment in pancreatic ister cell grafting using the dog model, under Professor Sir Roy Calor, Department of Surgery, and with Professor H Waldmann, Department of Pathology (03)833/Z0902.

Dr Jane H Gould

Department of Biological Sciences, University of Warwick, Coventry: for one year, for an analysis of ricin A chain's interactions with ribosomal components by mutagenesis of, and expression of ricin A chain in. Satcharomyces cerevisse, under Professor R Whitenbury (2017)

Dr J T Hancock

Department of Biochemistry, University of Bristol: for three years for a study of cloning, sequencing and site-directed mutagenesis of the flavoprotein of the oxygen radical producing enzyme of phagocytes, with Dr G Banting

Dr Catherine M Kielty

Department of Biochemistry and Molecular Biology, University of Manchester: for three years, for a study of type VI collagen microfibrils: structure and role in cell-matrix interactions, under Professor ME Grant and Dr MJ Humphries, and with Dr K E Kadler and Dr A Brass (022080Z780Z).

Dr Patricia L Lakin-Thomas

Department of Botany, University of Cambridge: for three years, for a study of the role of inositol metabolites in light-induced phase-shifting of the Neurospora circadian oscillator, with Dr.M.A. Tester and Dr.D.E. Hanke (03)259727022.

Dr Sarah Newbury

Department of Biochemistry, University of Dundee: for three years, for a study of the role of mRNA stability in the control of Drosophila development, under Dr A Flavell

Dr V J Norris

Department of Genetics, University of Leicester: for one year, for a voltage-gated analysis of calcium transport in E coli characterization of transport minus mutants and cloning of transport genes, under Dr P H Williams and with Dr R I Norman, Department of Medicine (03)562/2709/2.

LECTURESHIP

Dr J P Banga

Department of Medicine, King's College School of Medicine and Dentistry, London: for two years, for the characterisation of the human thyroid microsomal auto-antigen (018519/2/86/A).

PHYSICLOGY AND PHARMACOLOGY PANEL

★ Professor Sir Stanley Peart, MD, FRCP, FRS, (Chairman, Wellcome Trustee), Wellcome Trust

J J B Jack, BM, PhD, (Deputy Chairman, Wellcome Trustee), Wellcome Trust

Professor T B Bolton, BVetMed, PhD, St George's Hospital Medical School

Professor G J Dockray, PhD, University of Liverpool

Professor C R W Edwards, MD, FRCP, University of Edinburgh

Professor A Guz, MD, FRCP, Charing Cross and Westminster Medical School, London

Professor D J Jenkinson, PhD, University College London

H R P Miller, PhD, BVMS, Moredun Institute, Edinburgh

Professor K M Spyer, DSc, Royal Free Hospital School of Medicine, London

Professor J D Swales, MD, FRCP, University of Leicester

Staff members responsible

L H Smaje, MB, PhD, (Scientific Secretary) Mary Phillips, PhD, (Scientific Officer)

- ★ Siân Doughty, (Grants Officer)
- * Kathryn Drake, BA, (Grants Officer)
- # Elizabeth Shaw, BSc, (Grants Officer)
- ★ From October 1989
- # Until October 1989

PHYSIOLOGY AND PHARMACOLOGY

The revised panel structure was outlined in the last report where it was announced that the existing seven panels were to be reduced to four; this has now been in operation for a year. The expansion of the range of responsibility to cover both basic science and human and veterinary clinical science, whilst helpful in emphasising the unity of biomedical science, has meant that panel members have had to deal with a wide range of subjects: from broken teeth in sheep and bone disease in horses via epidemiology of diabetes in India through immunology and molecular biology of endocrine and vascular disease to the biochemical control of the opening of cell membrane channels. This difficult task has been performed conscientiously and with good humour by our expert panel members to whom the Trust and the scientific community owe a great debt of gratitude.

Another factor increasing the work load has been the number of applications received, 271 in 1989/90 as opposed to 186 in the previous year. The success rate in competing for funds was 33 per cent of amount requested as opposed to 37 per cent last year (these figures exclude longer-term support). In order to find time to properly discuss the number of applications now being received, meetings are starting earlier and finishing later and the July meeting was held over two days. Next year the number of meetings has been increased to five, and two of these are scheduled over two day periods. The pressure on the referees, panel members and the administrative structure of the Trust is considerable.

One issue that gave rise to concern during the year was the condition of osteoporosis. This is becoming a major problem in our ageing population and may give rise to fractures. 50 per cent of cases result in a need for long-term institutional care at great cost to the individual and the community. The panel was receiving a number of applications for studies in osteoporosis, some of which seemed to imply very long-term studies. A special working group was consequently set up with the brief to explore what ought to be the Trust's policy, in view of the fact that the Medical Research Council was also considering the matter. A paper suggesting that an effective treatment is possible appeared at about the time the working group met, thereby simplifying its task. It was agreed that no special initiative was needed and that applications should continue to be accepted and judged on their own merits. A careful watch on the situation will be maintained.

Toxicology is a subject which was identified by the Trustees for special development as long ago as 1978. A scheme of Advanced Training Fellowships in Toxicology was introduced in 1986/87. This scheme together with a protected budget for toxicology was handled by the Physiology and Pharmacology Panel. An increasing number of grant applications were in the biochemical area however and it was decided that in future applications should go to the most appropriate panel, whether this were Physiology and Pharmacology or Molecular and Cell, while fellowships will continue to be administered by the Physiology and Pharmacology Panel. Only 11.5 per cent of project grant applications in toxicology were successful compared with nearly three times as many in physiology and pharmacology. It is not clear whether this is due to an inadequate budget or to poor applications. The new arrangements should clarify this. Furthermore, applications for Advanced Training Fellowships in Toxicology suffered a sharp decline this year. Only four applications were received, none of which was considered suitable. A working group consisting of Trust advisors, external advisors including industry, and Trust staff met to discuss this situation and concluded that training ought to start earlier than the postdoctoral level. The Trustees have agreed to this and a special scheme of Prize Studentships in Toxicology has been agreed.

List of grants awarded over £2000

LONGER - TERM SUPPORT

Professor R J Flower
Department of Biochemical Pharmacology, St
Bartholomew's Hospital Medical College, London: for
five years, for investigations into lipoprotein biochemistry,
cell biology and pharmacology (0311372992).

EQUIPMENT

Dr A J Levi £19 800
Department of Physiology, University of Bristol: for six months, for an investigation of intracellular sodium and contraction in rabbit ventricular mycocytes (2017)23/2789/23.

Professor M J Rennie £98 500
Department of Anatomy and Physiology, University of
Dundee: for studies of human metabolism using stableisotope tracers: further studies of rissue protein turnover and
development of new approaches to fat, glycogen and RNA
turnover

Dr D Claire Wathes \$16 808
Department of Anatomy, University of Bristol: for one

year, for a study of oxytocin and fertility in domestic ruminants and man (031032/ID90/Z).

Dr S J White E7426
Department of Physiology, University of Leeds: for additional expenses, for his electrophysiological investigation of transport of sodium, and potassium by renal collecting duct in primary culture (0197002/2090A).

RESEARCH ASSISTANCE AND EXPENSES

University of Aberdeen

Professor C Kidd
Department of Physiology, Aberdeen: for three years, for a study of the effects of raised pressure and increased gas density on human cardiovascular function, with Dr F Bouser-Riley, Dr J M Rawles, Department of Medicine and Dr R Habissworth, Department of Cardiovascular Studies, University of Leeds (2008)7728921.

Dr J A S Ross £19 771
Department of Environmental and Occupational
Medicine: for one year, for a study of the influence of
compression in a helium and oxygen environment upon
pulmonary oxygen toxicity, with Dr P W Johnston, Department
of Pathology and Dr F Bowser-Riley, Department of Physiology
oxorruspass.

University of Bath

Dr J Westwick
School of Pharmacy and Pharmacology: for three years,
for the examination of interleukin 8 induced cosinophil
infiltration of airways and their reactivity to spasmogens

0.0353/275902.

University of Birmingham

Dr Mary Keen
Department of Pharmacology: for three years, for an
investigation of the relationship between agonist binding and
response for adenylate cyclase coupled receptors in closed
cell lines

- CII oto

Dr C J Lote
Department of Physiology: for three years, for a study of
real mechanisms determining aluminium excretion and how
these can be modified, with Dr MP Osborne and Dr SD Comis

(2012)37279972.

Dr Janice M Marshall
Department of Physiology: for six months, for a study of
peripheral vascular responses in sickle cell disease, with
Dr I M Franklin, Department of Haematology (032628/27902).

Dr S J Publicover
School of Biological Sciences: for three years and one month, for an investigation into the mechanisms of myofibril and sarcolemma breakdown in experimental myopathy magastragery2.

Dr Margaret E Smith
Department of Physiology: for one year, for a study of
corticotropin receptors in skeletal muscle (030800Z/89/Z).

University of Bristol

D C C Bartolo

136 491
Department of Surgery: for one year, for a study of ambulatory monitoring of somatic and visceral anorectal function, with Dr V Barley, Bristol Radiotherapy and Ontology Center

100 800 870-750-7

Dr F Carswell \$100 000
Department of Child Health: for two and half years, for a study of maternal allergen exposure during pregnancy and cord blood leE, with Dr lean M Golding \$81431Z90Z1.

Dr M A Geeves 264 551
Department of Biochemistry: for three years, for a study of the use of rapid pressure perturbation to study elementary events in muscle contraction, with Dr K W Randatung, Department of Physiology (030589/Z89/Z).

Dr A J Levi £10 300
Department of Physiology: for one year, for a study of
spatial inhomogeneity of intracellular sodium and digitalis
inotropy in cardiac muscle, with Dr J G Schofield, Department
of Biochemitry (03295/Z7902).

Dr S J W Lisney £51 120
Department of Physiology: for two years, for a study of
axon reflexes involving small myclinated (A) cutacous
sensory nerve fibres (0)9860/Z89/Z.

Dr K W Ranatunga 270 312

Department of Physiology: for three years, for a study of the transformation of contraction speed, myosin-composition and gene expression in rat muscle after cross-reinnervation, with Dr L Hall and Dr M A Genes (2009)7828892.

University of Buckingham

Dr K L Shephard £78 196
Department of Biological Sciences: for three years, for hydration mechanisms in mammalian airway mucus, with Dr E Alton, National Heart and Lung Institute, London (031337/2902).

University of Cambridge

Dr A V Edwards

Physiological Laboratory: for three years, for a study of the role of neuropeptides in the control of salivary function, with Dr D A Tithen, Department of Veterinary Physiology, University of Sydney, NSW, Australia

(0.0105627892.)

Professor K T Khaw
Clinical Gerontology Unit: for three years, for a study of
the determinants of osteoporosis and hip fracture: a
prospective population study
(031473/27002).

Dr V L Low

Physiological Laboratory: for three years, for a study of Ca²⁺ induced monophosphate accumulation in normal and sickle cell anaemia red cells (0306997Z/897Z).

£106 388

Dr E K Matthews £116 883
Department of Pharmacology: for three years, for an investigation using dynamic laser-light spectroscopy of single secretory cells 0011677/2002.

University of Wales College of Cardiff

Dr J G Jones £34 147
Department of Biochemistry: for two years, for an investigation of problems associated with mixed blood-filtration as method of assessing the rheological properties of crythrocytes and leukocytes, with Dr C A J Wardnop, Department of Haematology (030691/Z89872).

University of Wales College of Medicine, Cardiff

Dr M A McPherson E8895
Department of Medical Biochemistry: for six months, for an extension of an examination of submandibual fluid neystic fibrosis, with Dr M C Goodchild, Department of Child Health (0189547287M).

University of Dundee

Dr H J McArdie £86 153 Department of Child Health: for three years, for a study of zinc uptake by the placenta and transfer to the developing fetus (031973/25/02).

Royal (Dick) School of Veterinary Studies, Edinburgh

Professor R E W Halliwell

Department of Veterinary Clinical Studies: for three
years, for a study of the isolation and functional properties
of canine mast cells proteinases

(0/0208/ZB8/A).

University of Edinburgh

Dr D K Apps 255 533
Department of Pre-Clinical Veterinary Sciences: for three years, for a study of ion channels in chromafiling nanule membranes, with Dr R H Ashley, Department of Chemistry and Dr J H Phillips (032084/IZ/00Z).

Professor C R House £124 862
Department of Pre-Clinical Veterinary Sciences: for three years, for optical studies of mammalian fertilization

(030666728972).

Department of Pre-Clinical Veterinary Sciences: for two years, for single-channel studies of a nematode acetycholine receptor (030905/28072).

Dr Patricia M Warren £57 705 Department of Respiratory Medicine: for two years, for studies of the dynamic ventilatory response to hypoxia in humans @3184279922.

University of Exeter

Dr J E Tooke £7618 Clinical Microvascular Laboratory: for four months, for an extension to a study of the hormonal modulation of issue fluid balance (017512/7/8714).

Professor D J Woollons £53 982
Department of Engineering Science: for three years, for a study of dual-sensor diagnostic anti-tachycardia pacernakers, with Dr D B Shaw, Department of Cardiology and Dr M Hornood (0309714/28912).

University of Glasgow

Dr W R Ferrell \$30 897
Autonomic Physiology Unit: for one year, for an investigation of the effect of joint disease on synovial and bone blood flow, with Dr WJ Angerson, Department of Surgerson, Department of Surgerson, Department of Surgerson, 2012, 2827,29027.

Professor J C McGrath \$16 865 Autonomic Physiology Unit: for one year, for studies of vascular responsiveness employing on-line image analysis of microvascular networks, with Dr V A Moss 00191122002.

Dr J P Renton £4345
Department of Veterinary Surgery: for two and half years, for additional expenses for in vivo and in vitor studies of the process of maturation and fertilization of canine ova 6098579728940.

Dr G L Smith

Autonomic Physiology Unit: for three years, for an
investigation of the process of controlling Ca²⁺ release from
the sarcoplasmic reticulum of mammalian smooth muscle
(201377270922.

University of Strathclyde, Glasgow

Professor J R Parratt £53 610
Department of Physiology and Pharmacology; for two
years, for a study of platelet involvement in the early stages
of experimental myocardial ischaemia (000094728972).

Dr R M Wadsworth

Department of Physiology and Pharmacology; for two
years, for additional expenses, for a study of the effect of
ageing on noradrenaline release and on neuro-transmission
in a human artery, with Dr PJ W Stott, Department of Geriatric
Medicine, Stobbill General Hospital, Glasgow (1912)927878814.

KEM Hospital, India

Dr C S Yajnik £19 200
Pune: for one year, for a study to characterize and investigate diabetes among Indians in Pune (032476/APOVZ).

Lancashire Polytechnic

Dr J Singh £12 230 School of Applied Biology: for eight months, for an extension of a study of the cellular mechanism of action of phorbol ester on secretagogue-evoked secretory responses in pancreatic acinar cells (014732/ZRS/A).

Dr J Singh
School of Applied Biology: for 15 months, for an investigation into the evidence for a non-cholinergic, non-adrenergic nervous control of rat lacrimal secretion, with Dr R W Lea (018130/Z88/A).

Dr J Singh £46 433
School of Applied Biology: for three years, for a study of
the mechanism of action of magnesium on secretagogueevoked anylase secretion in rat pancreatic acinar cells, with
Dr R W Lta (31425/27972).

University of Leeds

Dr M Hunter £46 398
Department of Physiology: for one year, for a study of the role and regulation of potassium transport in renal epithelia

Dr F Karim £3890 Department of Physiology: for one year, for a study of adenosine and coronary functional hyperaemia (031759/Z90Z).

Professor J F B Morrison E55 474
Department of Physiology: for three years, for a study of receptors in the lower urinary tract in patients with urodynamic abnormalities, with Dr D E Neal, Department of Unology, University of Neucasile upon Tyne (03)3344270022.

Dr C H Orchard £78 388
Department of Physiology: for three years, for the shorterm regulation of contractility in cardiac muscle

Dr H W Symonds
Department of Animal Physiology and Nutrition: for
two years, from extension of a study of the pharmacological
action of alpha 2 agonists in stimulating the excretion of
copper in the bile of sheep

(017739/Z/87/A).

Professor D W Wray £20 000
Department of Pharmacology: for 17 months, for additional equipment for an investigation of the structure and function of calcium channels using peptide-specific antibodies (01861/19/88/A).

University of Leicester

Dr M R Boarder £5319

Department of Pharmacology and Therapeutics: for one year, for a study of the stimulation of phosphatidic acid production by bradykinin in adrenal chromaffin cells

Dr M R Boarder £78 764

Department of Pharmacology and Therapeutics: for three years, for receptors for ATP (P2 receptors) on endothelial cells derived from different vascular beds; characterization of binding and second messengers (030882/7/89/7)

I S Budd £53 417 Department of Surgery: for two years, for a study of

endothelial cell seeding of vascular grafts (031030/Z/89/Z).

University of Manchester

Professor P H Adams £42 069 Department of Medicine: for two years, for a study of the

characterization of the acid base transport systems in a human colon cancer cell line (Caco-2) grown as a polarised monolayer, with Dr D C Gleeson, Department of Gastroenterology and Dr R F T McMahon, Department of Pathological Sciences

(032893/ZJ90/Z),

Dr R I Balment

Department of Physiological Sciences: for six months, for an extension of a study of the role of oxytocin and vasopressin in the physiological regulation of renal sodium excretion, with Dr Mary L Forsling, Department of Physiology, University College and Middlesex School of Medicine, London

Dr R J Balment

Department of Physiological Sciences: for two years, for a study of adrenal steroid modulation of the renal action of peptide hormones (031417/2/90/2).

Professor R D H Boyd £67 862

Department of Physiological Sciences: for three years, for patch clamp and microelectrode studies of ion transport in isolated human placental villi, with Professor R Green and Dr P D Brown

Dr G I Sandie

£63 159 Department of Medicine: for three years, for a study of corticosteroid-induced cation conductances in colonic epithelia (031335/Z/90/Z).

Dr M C Steward

£72 726 Department of Physiological Sciences: for three years, for NMR studies of water and non-electrolyte transport across secretory epithelia (031052/Z/90/Z).

University of Newcastle upon Tyne

Dr P G Blain

Respiration and Exercise Laboratory: for respiratory impairment and disability with Dr J E Cotes, Dr D J Chinu and C Elliott (031066/Z/90/Z).

University of Nottingham

£118 686 Dr E Joan Bassey

Department of Physiology and Pharmacology: for three years, for controlled studies on the effects of feasible exercise regimes on bone density in women, with Professor W A Wallace, Department of Orthopaedic and Accident Surgery and Dr D I Hoskino, Department of Medicine (031762/7/90/7)

Dr Shelia M Gardiner

Department of Physiology and Pharmacology: for three months, for a study of the involvement of the central pressor action of pentides of the hypothalamo-pituitary-adrenal axis in the development of adrenal regeneration hypertension in the rat, with Professor T Bennett

Dr I A Macdonald £96 137

Department of Physiology and Pharmacology: for three years, for an investigation of dietary and endocrine factors affecting the control of thermogenesis in man, with Dr S P Allison, Dr R B Tattersall, Professor M I Rennie, University of Dundee and Dr N K Fukagawa, Department of Medicine, Beth Israel Hospital, Boston, USA (032230/2/90/2)

University of Oxford

Dr Frances M Ashcroft £65 000

Laboratory of Physiology: for three years, for patch-clamo and fluorescence studies of pancreatic Beta-cells (032219/Z/90/Z).

Dr J C Ellory £36 298

Laboratory of Physiology: for two years, for a study of the role of passive cation transport in sickle cell disease, with Dr A C Hall (030720/2/89/2).

Dr T D R Hockadav Sheikh Rashid Diabetes Unit, Oxford Radcliffe Infirmary: for one year, for a study to characterize and

investigate diabetes among Indians in Pune (032476/B/90/Z). Professor M K Sykes

Nuffield Department of Anaesthetics: for one year, for a study of extra-corporeal carbon dioxide removal using haemofiltration circuits (03(157/Z/90/Z).

Dr Ann G Taylor

Laboratory of Physiology: for three months, for additional expenses for a study of combined functional and ultrastructural studies on the role of microtubules in the water permeability response to vasopressin in isolated perfused collecting tubules (019603/Z/89/A).

Dr D A Terrar

Department of Pharmacology: for six months, for a study of actions of cardiac glycosides in normal and low potassium solutions (031262/Z/90/Z).

Dr R D Vaughan-Jones

Laboratory of Physiology: for three years, for a study of the effect of acidosis and hypoxia on pH, Ca2+ and Na+ regulation in carotid body type I cells of rat and rabbit, with Dr C S Peers, Department of Pharmacology, University of Leeds (032304/Z/90/Z). University of Sheffield

Dr R I Levin £81 926 Department of Biomedical Sciences: for three years, for

a study of enterotoxin stimulated secretion in undernourished intestine with Professor B L Brown, Department of Human Metabolism and Clinical Biology and Dr P C Engel, Department of Molecular Biology and Biotechnology

University of Southampton

Dr C I Garland

£5130 Department of Physiology and Pharmacology: for a study of the mechanism of neuromuscular transmission in rabbit and human cerebral arteries

Professor N R Saunders £96 479

Department of Physiology and Pharmacology: for three years, for a study of the effects of hypercapnia on barrier permeability in the developing and adult brain (030836/Z/89/Z).

University of St Andrews

Dr F W Flitney

Department of Biology and Preclinical Medicine: for three months, for an extension of an investigation of invosin filament architecture in decapod crustacean muscles

Sunderland Polytechnic

Dr I M Sneddon

School of Pharmacology: for three years, for a study of the transport and metabolism of L-arginine in nitric oxide producing mammalian cells under basal and stimulated conditions (032204/Z/90/Z).

LONDON

Charing Cross and Westminster Medical School

Dr L. Adams

Department of Medicine: for one year, for an extension of a study to determine how different ventilatory stimuli interact in the genesis of the sensation of breathlessness, with (018183/Z/88/A). Professor A Guz

Professor Julia C Buckingham

Department of Pharmacology: for three years, for a study of the post-natal development of the hypothalamo-pituitaryadrenal axis in the rat, with Dr Glenda E Gillies (031812/ZP07Z).

£110 346

Dr W A Seed

Department of Medicine: for two years, for a study of mechanical factors involved in the development of coronary atherosclerosis, with Dr T J Pedley, Department of Applied Mathematics, University of Leeds and Dr L DR Smith, Department of Cardiology, St Thomas's Hospital, London (031290/ZP0/Z). Dr Nancy A Curtin

£16 446

Department of Physiology: for two years, for a study of power for locomotion: force and movement by muscle fibres. from the lamprey, with Dr Thelma L M Williams, Department of Physiology, St George's Hospital Medical School, London (032092/Z/90/Z).

Chelsea College of Science and Technology

Professor A Howe

£5356

Department of Physiology: for three months, for an extension of a study of chemoreceptor reflexes from the

Imperial College of Science, Technology and Medicine

Dr J M Squire

Biophysics Section: for three years, for a study of the ultrastructure and extent of the glycocalyx on endothelial cell surfaces, with Professor CC Michel, Department of Physiology and Biophysics, St Mary's Hospital Medical School, London (031983/Z/90/Z).

Institute of Urology

Department of Renal Medicine: for one year, for an extension of a study of the role of endothelium-derived relaxant factor (EDRF) in pathological glomerular filtration; a study to investigate EDRF in early diabetic nephropathy and cyclosporin nephrotoxicity, with Dr J Westwick, School of Pharmacy and Pharmacology, University of Bath (017515/Z/8714).

King's College School of Medicine and Dentistry

Dr W N Gardner

Department of Physiology: for two months, for an extension of his study of respiratory control mechanisms in hypnocapnic man (013947/Z/84(A).

King's College London

Dr T I B Simons

£73 375 Physiology Group: for three years, for a study of zinc

transport across cell membranes

Department of Physiology: for six months, for an extension of a study of the mechanism and control of acetylcholine release at the Torpedo neuromuscular junction

Professor D L Yudilevich

£5000

Department of Physiology: for five months, for an extension to a study of the isolation of microvascular endothelial cells from human placenta, with Dr J D Pearson, Section of Vascular Biology, Clinical Research Centre, Harrow (014376/7/86/A)

PHYSIOLOGY AND PHARMACOLOGY

Staff members responsible

Dr D Gordon, MA, MB, FRCP, (Scientific Secretary)
Sandra Carpenter, (Grants Officer)

Professor J D Swales, MD, FRCP, University of Leicester

CLINICAL INTEREST GROUP

The main function of this Group is to review clinical research generally within the Trust, and to ensure that the interests of clinical research are served by the various advisory panels which were restructured during 1989/90, and where clinical and basic scientists jointly select applications of the highest merit.

The Group awards Research Training Fellowships for Medical and Dental Graduates (see page 32) and Senior Research Fellowships in Clinical Science (see page 29), and surveys the progress of those on the latter scheme. It is also responsible for dealing with new initiatives, that are singularly clinical.

Intercalated BSc Degrees in Clinical Science

The Trustees, as a matter of policy, do not generally provide support for Intercalated BSc Degrees for medical students. However, they have agreed some limited funding for an experimental Intercalated BSc Degree in Clinical Science, based at St Mary's Hospital Medical School, the Medical Faculty of Imperial College. This course is taken as a extra year during the undergraduate clinical course, and is designed to expose clinical students to the methods and practice of clinical research at a time when they may be stimulated to follow these interests after qualification. This experiment is regularly reviewed.

TROPICAL MEDICINE INTEREST GROUP

TROPICAL MEDICINE INTEREST GROUP

The Tropical Medicine Interest Group was established in 1989 to develop policy and consider the special problems of tropical medicine which override the scientific subject interests of the advisory panels of the Trust. This Interest Group will concern itself with such matters as recruitment and careers; the interviewing of candidates for tropically-related fellowships; consideration of the progress and annual budgets of the overseas Units and the case for further development. In the year under review expenditure on tropical fellowships and overseas units was £1.5 million.

A meeting of the Directors of the Tropical Units was held at the Trust in May 1990 at which the following papers were given;

Wellcome Research Unit, Vellore, India

Professor V I Mathan

'Physiology and epidemiology in designing ORS' and

'From a research grant to a national centre: A joint endeavour of the Wellcome Trust and the Christian Medical College'

Dr B S Ramakrishna

'The colon in diarrhoeal diseases'

Wellcome Parasitology Unit, Belem, Brazil

Professor R Lainson

'The leishmaniases of Amazonian Brazil', 'Visceral leishmaniasis: An overview' and 'Cutaneous and mucocutaneous leishmaniasis'

Dr D W Macdonald

'Canid reservoirs: Foxes and dogs as maintenance and reservoir hosts'

Dr J J Shaw

'Monoclonal antibodies and parasite identification', 'Monkeys as laboratory models in studies on the immunohistopathology of Dermal Leishmaniasis - Dr T F Silveira'

Tropical Metabolism Research Unit, University of the West Indies, Jamaica

Dr M H N Golden

'The pathogenesis of severe malnutrition'

Dr T E Forrester

'Pregnancy induced hypertension in Jamaica'

Wellcome Research Unit, Bangkok, Thailand

Dr N I White

'Studies on malaria, melioidosis and sexually transmitted diseases'

Wellcome Trust Research Laboratories, Nairobi, Kenya

Dr W M Watkins

'Pharmacokinetics and parasitological studies of antifolate antimalarial drugs'.

Dr P P Nunn

'The impact of Human Immunodeficiency Virus (HIV) on tuberculosis in Kenya'

Dr C F Gilks

'The clinical spectrum of AIDS in Kenya

Dr K Marsh

'A video film of Kilifi studies in progress'

Dr G Pasvol

'Studies of severe falciparum malaria at Kilifi'.

UNITS

Wellcome Trust Research Laboratories, Nairobi, Kenya

For the Trust's unit in Kenya, the past year has been one of exceptional vigour and productivity in research. Two research programmes on AIDS are underway in Nairobi. The first is an in-depth clinical delineation of the disease (Dr C F Gilks and Professor D A Warrell). The second concerns the impact of HIV infection on tuberculosis (Dr P P Nunn, Dr R J Brindle and Professor K P W J McAdam).

Dr W M Watkins, the Unit Director, has successfully integrated the research programmes based in Nairobi and at Kilifi on the coast, with those of the Kenya Medical Research Institute (KEMRI). Dr Watkins' own research programme concerns drug pharmacokinetics and parasite resistance in the chemotherapy and prophylaxis of Plasmodium falciparum malaria. This has involved close collaboration with Professors A M Breckenridge (Department of Pharmacology and Therapeutics, University of Liverpool), R E Howells (then at Liverpool School of Tropical Medicine) and Dr P Winstanley, an MRC supported clinical research fellow based at Kilifi.

By the beginning of the report period, the coastal research unit at Kilifi had brought into service a new laboratory/office unit and paediatric ward provided by the Trust. The Unit has continued its programme of research into severe *P. falciparum* malaria in children which was initiated early in 1989. Dr Geoffrey Pasvol who was responsible for developing the coastal unit during this period returned to the UK in May 1990, and took up the Chair of Infectious Diseases and Tropical Medicine at St Mary's Hospital Medical School on 1 October 1990. Dr Kevin Marsh replaced Dr Pasvol as leader of the clinical research team, composed of Drs Charles Newton, Peter Winstanley and Mr Peter Warn (medical technologist). During the year Dr Marsh was awarded a Wellcome Senior Clinical Research Fellowship.

The Trustees were pleased to learn that Dr Watkins was appointed a Chief Research Officer within the Kenyan Medical Research Institute. This is their most senior grade of research officer and is on the same grade as their Director, Dr Davy Koech.

Dr J G Howard and Professor R E Howells visited Nairobi and Kilifi in March 1990.

Unidade de Estudos Especiais da Wellcome, Belém, Brazil

This Unit was established in 1965 to study the ecology and epidemiology of human leishmaniasis in the Amazonian region of Brazil. During the past quarter century the Unit's Director, Professor R Lainson FRS and his long-term collaborator Dr JJ Shaw have become the foremost authorities on the biology of New World leishmaniasis. They have published many major contributions to the indentification and taxonomy of leishmanial parasites, sandfly vectors and animal reservoirs as well as the delineation of four distinct clinical types of the disease in man.

During the period of this report certain of the Unit's research activities entered a period of consolidation to ensure their completion by the time of Professor Lainson's retirement in 1992. The research work of the Unit will be concentrated on visceral leishmaniasis but a major effort will be directed to organising the remarkable collection of cryo-preserved parasite material in the Unit, and the associated records, to ensure their survival after 1992.

The Trust is examining ways in which opportunities afforded by the special location of this Unit can be developed in the future.

Wellcome/Mahidol University/Oxford Tropical Research Programme, Bangkok, Thailand

Dr NJ White has been Director since August 1986. The major emphasis of the Unit's work continues to be on the pathophysiology and clinical pharmacology of severe *Plasmodium falciparum* malaria.

Work is organised predominantly as a co-ordinated series of short, defined, projects. Laboratory studies include metabolic, haematological and immunological aspects associated with clinical investigations. Field stations at Kanchanaburi and Mae Sot function in areas of high disease incidence. Current emphasis is on falciparum malaria in pregnancy and in children and double infection with Puivax.

A clinical study on septicaemic melioidosis is underway at another field station at Ubon Ratchatani with laboratory studies on the antibiotic sensitivity of *Ps.pseudomallei*. Research on sexually transmitted diseases now concentrates on the bacteriology of inguinal buboes.

During the period of this report the Director, Dr N J White visited Cho Quan Hospital, Ho Chi Minh City, Vietnam to explore the opportunity for establishing clinical research projects into malaria and other infectious diseases there. Funds have now been provided for pilot studies.

Wellcome Trust Research Unit, Vellore

The work in Vellore which was first supported in 1957 came under the Directorship of Professor V I Mathan in 1976. Its original remit was to investigate tropical sprue, but this was subsequently broadened to include diarrhoeal diseases of local importance. The work undertaken involves pathological, microbiological, biochemical and physiological approaches. Field studies in nearby villages have established the striking prevalence of intestinal pathogens (bacteria, viruses and parasites) in an apparently healthy rural population. The basis of this apparent resistance to overt infection, known to be associated with mucosal changes in the intestinal tract, is a major objective of the Unit's research. Long-term epidemiological studies on the prevalence and duration of the phenomenon are in progress.

On 1 April 1990 the Unit was recognised by the Indian Council of Medical Research (ICMR) as an ICMR Advanced Centre. The Trust's financial responsibility for the Unit ceased on that date but some support will continue to be provided to help with the transitional phase.

The Trustees were pleased to learn that Professor Mathan has been elected a Fellow of the Indian National Science Academy.

Trace Element Research Group (TERG), Tropical Metabolism Research Unit (TMRU), University of the West Indies, Kingston, Jamaica

This Unit is associated with the University of the West Indies on the Mona Campus, Jamaica. Dr M H N Golden is Director of both the Trust-funded TERG and of the TMRU. This latter appointment is supported jointly by the Trust and the University as are two other scientists there, Dr Sally Grantham-McGregor and Dr T E Forrester.

The TERG investigates the role of defective antioxidant defence in the genesis of the stunted height and retarded mental development of malnutrition states, the role of intestinal helminths in retarded growth, and metabolic abnormalities leading to hypertension in pregnancy. The Unit operates an integrated programme of clinical, laboratory and field studies. It has been notably successful in developing strategies for identifying and treating malnourished children at the community level.

Following a visit by an advisory group from the Trust in April/May 1990 it was decided that the Trust should terminate its direct financial responsibility for TERG and the TMRU. A contribution of \$5340 000 has been made to the University to help to maintain the momentum of the research of the TMRU. This decision ends a very long period of association between the Trust and the TMRU in Jamaica. A wide variety of support has been provided and Dr Golden has played a significant role over the past 17 years in developing its research programme and administration. He will be returning to the Department of Medicine and Therapeutics at the University of Aberdeen early in 1991, where he holds a Wellcome Senior Lectureship. We wish him and his wife Dr Barbara Golden, who worked in the Unit with Trust support, every success in this new phase of their research.

VETERINARY MEDICINE

This year a number of changes were made in the way in which the Trust supports veterinary research. Some of these changes were foreshadowed in the Trust's eighteenth report but came into effect during 1989/90.

Lord Swann retired as a Trustee on 28 February 1990. He had been a Trustee since October 1973 and had chaired the Veterinary Medicine Panel until it was disbanded in September 1989. He chaired the first meeting of the Veterinary Interest Group in November 1989. Lord Swann's special interest in and enthusiasm for veterinary research was appreciated by all those who worked with him at the Trust. We were sad to hear of his sudden death on 22 September 1990. He is succeeded by Dr CE Gordon Smith, Deputy Chairman of the Trustees, as chairman of the Veterinary Interest Group.

Following the death of Dr K B Sinclair in April 1989, who was responsible for the Trust's Veterinary Programme for the decade 1979-1989, Dr Bridget M Ogilvie took charge of the veterinary research programme. Her appointment coincided with the Trustees' decision to alter the arrangements for decision-making on grants. All grants, whether they concern basic science, clinical or veterinary medicine are now considered by one of the four subject-related panels. Membership of these panels reflects all of these interests, and the Trustees are advised on the particular problems of special subject areas by Interest Groups.

In 1989/90, under this new arrangement, grant requests in the veterinary area were as successful in obtaining funds as any other. The success of veterinary applications illustrates that the new arrangements for decision-making do not discriminate against research with a veterinary purpose. Two-thirds of the successful grants were in the area of infection and immunity with the remainder distributed between the other three panels. In the previous three years, awards were divided about 50:50 between infection and immunity and the other three subject areas. Over the past decade, the percentage of funds in the veterinary area awarded to the veterinary schools has dropped from about 80 per cent to between 50 and 60 per cent and in the 1989/90 funding year, 56 per cent of awards went to the schools.

The Veterinary Interest Group adjudicated on applications for scholarship and fellowship awards. The previous report described changes in the Trust's Research Training Scholarships designed to attract veterinary graduates into research. These changes were implemented in January 1990 and the response has been most heartening. There were 27 applicants, many more than in any previous year. 16 applicants sought a three-year PhD award; 10 applied for one of the new four-year awards, which enable the recipients to retain and develop their clinical interests by spending 30 per cent of their time undertaking higher clinical training and 70 per cent on research leading to a PhD; and one applied for the new five-year award, which funds an individual to obtain a PhD in three years in a non-veterinary school laboratory followed by a two-year fellowship in a veterinary school laboratory. The calibre of the six successful candidates was exceptional, and two awards were for three years, three for four years and the single application for a five-year award was also successful. Two awards for postdoctoral fellowships were also made, one for five years and one for three years.

The Veterinary Interest Group had advised that the Project Development Grant available in 1989/1990 in veterinary medicine should be used to fund projects to develop immunological reagents for use in dogs and cats and the awards are detailed below.

On the advice of the Veterinary Interest Group the Trustees had agreed to increase the funds available for the support of veterinary undergraduates wishing to intercalate a year of research training. Although funds were available for 20 awards, in the event only 11 awards were necessary, as most students obtained support from their local authority.

To emphasise further the Trust's commitment to the support of veterinary research, there were two new initiatives this year. Firstly, a leaflet which describes training, fellowship and travel awards in veterinary medicine made by the Agricultural and Food Research Council, the Horserace Betting Levy Board and the Wellcome Trust, has been produced by the Trust and sent by the Royal College of Veterinary Surgeons to all of its UK members. It is available for distribution in each veterinary school.

Secondly, the Trustees have provided funds for the biennial award of a Wellcome Trust Medal for Veterinary Research by the Association of Veterinary Teachers and Research Workers. The first medal will be awarded in 1991 and will be accompanied by a prize of £500 in memory of Dr K B Sinclair, from funds provided by the Trust and his friends and colleagues.

List of grants awarded over \$2000

UNIT

Professor A Tait £52 605
Molecular Parasitology Unit, University of Glasgow:
for additional expenses, for research on the molecular genetics
of parasites of veterinary and medical importance
@06248279JM.

RESEARCH ASSISTANCE AND EXPENSES

Veterinary Schools in the UK £3150: towards the costs of a careers day at each of the Veterinary Schools over the next three years (032829/ZP0ZZ).

University of Bristol

Professor W P H Duffus \$120 000
Department of Veterinary Medicine: for two years, for a study of the production of monoclonals against canine Iga subisotypes and canine Iga for studies on antibody-dependent autoimnume disease and hypersensitivity, with Dr C R Stokes and Dr C J Elson, Department of Puthology

University of Cambridge

Professor H Waldmann £178 940
Department of Pathology: for four years, for a study of
the development of therapeutic anti-dog leucoyte
monoclonal antibodies: identification of antibody
specificities by immunofluorescence and the FACSAN, with
Dr S P Cobbild (03219427002).

London School of Hygiene and Tropical Medicine

Professor G A T Targett E68 033
Department of Medical Protozoology: for three years, for a study of feline immunoglobins, under Dr D A Denham

EXPEDITIONS

M J O'Byrne E2000 Royal Veterinary College, Hatfield, Herts: for three months, for an expedition to study the ways and means of improving health, production and welfare in the camel— Royal Veterinary College African Research Team 1990, under Professor L E Lanyon, Department of Anatomy, Royal Veterinary College, London

VETERINARY RESEARCH TRAINING SCHOLARSHIPS

A Anderson

Department of Veterinary Pathology, University of Edinburgh: for four years, for studies on the pathogenesis of inflammatory joint disease induced by lentiviruses in sheep, under Dr G D Harkiss (032111/2902).

Iulia A Beatty

Department of Veterinary Pathology, University of Glasgow: for three years, for a study of cellular immunity to feline immunodeficiency virus, under Dr M J Browning

Cherida D Hopper

Department of Veterinary Medicine, University of Brittol: for two years, for an extension of her study of the opizootology of feline T-lymphotropic lentivirus infections, under Dr D A Harbour (01826527884).

M A Mannan

Department of Veterinary Basic Sciences, Royal Veterinary College, London: for one year, for a study of steroidogenesis and its control during ovarian follicular development, under Dr P J O'Shanghnesy 0023012902).

Laura E McCann

Department of Veterinary Medicine, University of Bristol: for two years, for an extension of her study of diseaso of lambs in early lambing flocks, under Dr K L Morgan (0)320-27880A.

Joanna S Price

Department of Human Metabolism and Clinical Biochemistry, University of Sheffields for three years, for a study of cytokines, oestrogens and bone cell biology, under Professor R G G Russell 801921/23022.

I K Ramsey

Department of Veterinary Pathology, University of Glasgow: for three years, for a study of the cellular receptor for feline leukaemia virus, under Professor O Jarrett 6032104220022.

D H Shearer

Department of Veterinary Medicine, University of Bristol: for three years, for a study into the aspects of the pathogenesis of chronic staphylococcal skin disease in dogs, under Dr T J Gruffydd-Jours and Dr C R Stokes (2007)278973.

K C Smith

Department of Infectious Diseases, Animal Health Trust, Newmarket, Suffolk: for four years, for studies on the pathogenesis of abortigenic infection by equid herpesvirus I (EHV-I) in the pregnant pony mare, under Dr J A Mumford and Dr N Edington, Department of Veterinary Pathology, University of London, and with Dr W R Allen, Equine Fertility Unit, Thoroughbred Breeder's Association, Cambridge (2018) 2018 (2018)

D L Williams

Department of Veterinary Basic Sciences, Royal Veterinary College, London: for four years, for an investigation of the normal canine cornea and changes influencing the homing and accumulation of leukocytesin in chronic superficial keratitis, under Dr SD Carington (201958/279072).

VETERINARY RESEARCH FELLOWSHIPS

Dr K C Chang

Unit of Veterinary Molecular and Cell Biology, Royal Veterinary College, London: for five years, for a study of the regulation of skeletal muscle myosin genes in horse, jug and dog, under Professor G E Goldspink (0.81808/27902).

Dr Annelise I Goecke

Department of Physiology, King's College London (KQQ): for six months, for an investigation of potassium and water transport in bovine and ovine colon, under Dr R J Nafadin (8)1933/299/2).

Dr S McOrist

Department of Veterinary Pathology, University of Edinburgh: for three years, for molecular studies of the intracellular bacteria of the proliferative enteropathies of pigs, under Dr G H K Lawson (032178/29072).

Joanna S Price

Department of Anatomy, University of Bristol: for two years following her research training scholarship, for a study of cytokines, osetrogens and bone cell biology, under Professor A E Goodship, Department of Orthopaedic Surgery (2019/218992).

INTERCALATED SUPPORT

G Evans

Department of Veterinary Medicine, University of Bristol: for one year, for an Intercalated BSc in Anatomical Science, under Professor P M Keen, Department of Pre-Clinical Veterinary Studies (0328/112902).

Julie Harris

Department of Veterinary Medicine, University of Bristols for one year, for an Intercalated BSc in Zoology, under Professor PM Keen, Department of Pre-Clinical Veterinary Studies (032673/27902).

lane Hartland

Department of Veterinary Pathology, University of Edinburgh: for one year, for an Intercalated BSc in Pathological Sciences, under Professor A Igo, Department of Prr-Clinical Veterinary Sciences (032035/2002).

Angela Nuack

Department of Veterinary Medicine, University of Glasgow: for one year, for an Intercalated BSc in Parasitology

A D Radford

Faculty of Veterinary Science, University of Liverpool: for one year, for an Intercalated BSc in Molecular Biology, under Dr R S Jones, Department of Anaesthesia (032684/Z90Z).

Sharon Redrobe

Department of Veterinary Basic Sciences, Royal Veterinary College, London; for one year, for an Intercalated BSc in Physiology, under Professor D Lodge (2015)

Hattie Symes

Department of Veterinary Basic Sciences, Royal Veterinary College, London: for one year, for an Intercalated BSc in Physiology, under Professor D Lodge (03260027002).

VISION RESEARCH WORKING PARTY

Professor S M Zeki, PhD, FRS, (Chairman), University College London

Professor A C Bird, MD, FRCS, Institute of Ophthalmology, London

Professor J V Forrester, MD, FRCSEd, University of Aberdeen

Professor R W Guillery, FRS, University of Oxford

R F Hess, PhD, University of Cambridge

T D Lamb, PhD, University of Cambridge

Professor Sir Stanley Peart, MD, FRCP, FRS, Wellcome Trustee

Professor K H Ruddock, PhD, DIC, ARCS, Imperial College of Science, Technology and Medicine, London

Staff members responsible

D Gordon, MA, MB, FRCP, (Scientific Secretary)

Anne Edwards, (Grants Officer) Margaret Hurley, BSc, (Grants Officer)

VISION RESEARCH WORKING PARTY

This group now functions as a grants committee of the Neuroscience Panel. The Trustees retained the old title for the group to emphasize the Trust's uninterrupted support for research in all aspects of vision, including ophthalmology, optometry and neuro-ophthalmology.

The Working Party considered a wide range of grant applications and was encouraged by the standard of proposals submitted for consideration. It is noteworthy that the Trust now supports research in almost all the academic departments of ophthalmology in the UK.

The report of the work of the Neuroscience Panel (at page 42) notes the Trust's interest in research using techniques for non-invasive studies of the brain. The award noted below to Professor S Zeki and his colleagues has led to a definition, using positron emission tomography, of centres responsible for colour processing in the human visual cortex. This work has already been published in the scientific journals, and has attracted wide interest in the popular press both at home and abroad.

Vision Research Fellowships

These training fellowships continue to be available under the new panel structure. The annual competition invites applications from young workers in ophthalmology, optometry, neuro-ophthalmology, and the related sciences who wish to begin or advance their research training. The Trustees have been particularly encouraged by increasing numbers of young ophthalmologists of high quality wishing to obtain a serious training in research. Support has also been agreed for a scheme to allow secondment for research of clinical trainees in ophthalmology of the Institute of Ophthalmology.

The Trustees were particularly pleased to learn of the appointment of Dr Susan Lightman, a former Vision Fellow, to the new Duke-Elder Chair of Ophthalmology at the Institute of Ophthalmology.

SUPPORT FOR OTHER RESEARCH OVERSEAS

EUROPEAN PROGRAMME 104
OTHER OVERSEAS AWARDS 112
TRAVEL GRANTS 116

EUROPEAN PROGRAMME

This year has been dominated by the dramatic and revolutionary changes occurring in Eastern Europe. The Trust has responded in a number of ways with the objective of creating a climate conducive to the free exchange of postdoctoral scientists between the UK and Eastern Europe. The model that is being used is the one that has served well for the rest of Europe. Recognising the special needs of this region, the Trustees have agreed to make additional funds available for 1990/91. A total of £1.3m was awarded in grants during the year.

The arrangements that existed previously with the International Cultural Institute in Hungary and the Postgraduate Medical Federation in Prague have been terminated. In future scientists will be expected to approach the Trust directly. The usual pattern will be for them to have made contact with a suitable laboratory in the UK so that the head of the laboratory and the intending fellow will make a joint application to the Trust for a visiting fellowship.

A new arrangement has been agreed with the Norwegian research councils which will enable scientists from all universities and biomedical institutes (including the veterinary school) in Norway to compete for travelling fellowships to the UK. Our previous arrangement with the Anders Jahre Fond (Olso, Norway) remains, but only covers visits to and from the University of Oslo.

RESEARCH ASSISTANCE AND EXPENSES

Professor H Davson
Stherrington School of Physiology, United Medical and
Dental Schools of Guy's and St Thomas's Hospital,
London: for two years, for an extension of a study on the
exchange of solutes of neurological interest in the central
nervous system and the mechanism of secretion of the CSF,
with Dr B Zlokovic, Department of Physiology, University of
Belgrade

EUROPEAN INTERLABORATION COLLABORATION

Dr V Crunelli £4848
Department of Visual Science, Institute of Ophthalmology, London: for two years, for an analysis of the late ipsp in the cat lateral geniculate nucleus, with Dr Nathalie Letesche, Department of Visual Neurostience, University of Pand M Curit, Paris, Frame.

Dr V Crunelli

Department of Visual Science, Institute of
Ophthalmology, London: for three years, for behavioural
state-dependent modulation of amino acid receptor mediated
transfer of retinal and sensory information through the
thalamus, with Dr G Juliasz, Department of Comparative
Physiology, Eotoes Lonand University, Budapest, Hungary

Dr C P Sibley
Department of Child Health, University of Manchester
for three years, for a study of the mechanism and control of
sodium transport across the rat placenta, with Dr J Smlit,
Department of Pharmacology, Charles University, Prague 2,
023571(229-22,
023571(229-22)

Professor M Feldmann £15 000 Charing Cross Sunley Research Centre, London: for three years, for a study of the role of Teells in the pathogenesis of human insulin dependent diabetes mellitus, with Dr.S K Kontiainen, University of Helinki, Finland (03250727022). Professor J M Mitchison

Spoon

Department of Zoology, University of Edinburgh: for three years, for a study of cell cycle controls in glycolysis, with Dr B Novak, University of Budapest, Hungary

000931238923.

Dr Bernadette Modell 454 720 Department of Community Health, London School of Hygiene and Thopical Medicine: for four years, for a study of the haemoglobinopathies in the Azerbaidejan SSR, with Dr A M Kulier, Academy of Medical Genetics of USSR, Moscow, USSR (1914)

Dr C D Richards
Department of Physiology, Royal Free Hospital School
of Medicine, London: for three years, for an aralysis of
anaesthetic action on channels gated by excitatory amino acids
in collaboration, with Dr Ingenar Jacobsen, University of
Goteborg, Sweden and Dr Gillian Pweek (03124729942).

AUSTRIA

FELLOWSHIP

Alison I North

Department of Zoology, University of Oxford: for two years, for a study of the contractile unit of smooth muscle cells under Dr.J. V Small, Austrian Academy of Sciences, Salzburg (03)1587,9072. BULGARIA

FELLOWSHIPS

Dr L Kasakov

Institute of Physiology, Solia: for six months, for a study of the mechanisms of release of sympathetic cotransmitters, under Professor G Burnstock, Department of Anatomy and Developmental Biology, University College London(032326/Z90/Z).

Professor N V Naoumov

Clinic of Gastroentenology, Sofia Medical Academy: for four months, for a study of the subcellular localization of hepatitis B viral antigens and DNA in liver of HBsAg carriers. under Dr R Williams, Liver Unit, King's College of Medicine and Dentistry, London

Dr S Nonchev

Institute of Molecular Biology, Sophia: for one year, for an analysis of homeobox gene function in murine embryogenesis, under Dr R Krumlauf, Laboratory of Eukaryotic Molecular Genetics, National Institute for Medical Research, London (018651/Z/88/A).

CZECHOSŁOVAKIA

Dr H Urbancova

FELLOWSHIPS

Dr R Bilek

Research Institute of Endocrinology, Prague; for one year, for a study of the structure and distribution of novel pyroglutamyl-peptides related to TRH, under DrD G Smyth, Laboratory of Peptide Chemistry, Medical Research Council, London (031334/7/90/7)

Institute of Clinical and Experimental Medicine. Prague: for three months, for a study of plasma membrane and cytoskeletal changes associated with scatter factor stimulation of endothelial cells, under Dr R M Warn, School of Biological Sciences, University of East Anglia, Norwich

Institute of Molecular Genetics, Prague: for one year, for a study of new methods of detecting and quantifying cellular chemotaxis, under Dr G A Dunn, MRC Muscle and Cell Motility Unit, Kings College, London (032395/Z/90/Z).

WELLCOME CZECHOSLOVAK FELLOWSHIP

Dr R Hovorka

Third Medical Clinic of Internal Medicine, Charles University, Prague: for one year, for an extension of his investigation to develop a computer-based system to assist in the pathophysiology and management of diabetes mellitus, under Professor E Carson, Centre for Measurement and Information in Medicine, City University, London (019151/Z/88/A).

DENMARK

WELLCOME CARLSBERG FELLOWSHIPS

Dr P Kofod

Royal Veterinary and Agricultural University. Fredriksberg: for one year, for a study of organocobalt(III) complexes of macrocyclic ligands as models for vitamin B12 (cobalamin) chemistry, under Dr P Moore, Department of Chemistry, University of Warwick, Coventry (032316/Z/90/Z).

L.J. Muzs

Royal Veterinary and Agricultural University, Copenhagen: for equipment, for a study of the maturation and fertilization of equine gametes in vitro utilising co-culture with endometrial tissues, under Dr WR Allen, Equine Fertility Unit, Thoroughbred Breeder's Association, Cambridge (018665/7/88/A)

FINLAND

WELLCOME SIGRID JUSELIUS FELLOWSHIP

Dr P H Groop

Department of Medicine, Helsinki University Central Hospital: for one year, for a study of microalbuminuria. insulin resistance and sodium-lithium countertransport activity insulin dependent diabetic patients; the effect of angiotensin converting enzyme inhibition, under Professor G C Viberti, Unit for Metabolic Medicine, United Medical and Dental Schools of Guy's and St Thomas's Hospital, London (0316047219072).

EAST GERMANY

FEI LOWSHIP

Dr J O Habeck

Institute of Pathology, Chemnitz: for three months, for immunohistochemical and ultrastructural studies of the human carotid body in cases of hypertensive and chronic hypoxaemia, under Dr D I Pallot, Department of Anatomy, University of Leicester (012631/7/90/7)

FRANCE

FELLOWSHIPS

Dr B Arveiler

Institute of Biological Chemisty, University of Strasbourg Medical School: for one year, for an investigation of the reverse genetic mapping of human chromosome II. under Dr D I Porteous, MRC Clinical Cytogenetics Unit, University of Edinburgh

Dr Helen C Bodmer

Department of Genetics, Institute of Biological Chemistry, Strasbourg: for one year, for a study of the induction of tolerance to myelin basic protein and resistance to experimental allergic encephalomyelitis in transgenic mice, under Dr Diane Mathis and Dr C Benoist (032350/Z/90/Z).

F B Cornelis

Centre d'etude du Polymorphis me Humain, Paris: for one year, for a study of the mapping susceptibility genes for rheumatoid arthritis, with PCR-based probes, under Dr J 1 Bell, Institute of Molecular Medicine, University of Oxford (031370/7/90/7)

Dr E Keicher

Laboratory of Physiology, University of Nice: for one year, for a study of oH regulation in amphibian oocytes, under Dr W Meech, Department of Physiology, University of Bristol (031072/Z/90/Z).

M C Taylor

Department of Medical Parasitology, London School of Hygiene and Tropical Medicine: for two years, for an investigation of post-transcriptional processing signals in the variant surface glycoprotein messenger RNA of Trypanosoma brucei, under Professor P Borst, Netherlands Cancer Institute, Amsterdam (012340/7/90/7)

Dr H I I Wildschut

Department of Obstetrics and Gynaecology, University of Amsterdam Medical Centre: for one year, for an extension of his study of risk assessment of pre-term birth. under Dr lean M Golding, Department of Child Health and Obstetrics, Royal Hospital for Sick Children, University of Bristol

(031499/Z/90/Z).

HUNGARY

FELLOWSHIP

Dr Gabriella Csicsai-Szabo

Department of Biochemistry, University Medical School of Debrecon: for one year, for a study of conzumatic degradation of articular cartilages; isolation and characterization of the fragments in comparison with proteoglycan fragments isolated from arthritic cartilages, under Dr TE Handingham, Department of Biochemistry, Kennedy Institute of Rheumatology, London (93249129902).

WELLCOME HUNGARIAN FELLOWSHIPS

Dr P A Somogyi

International Cultural Institute, Budapest: for one year, for an analysis of RNA pseudoknot structure in a ribosomal frame-shifting signal, under Dr S C Inglis, Department of Pathology, University of Cambridge (8000/172/892).

Anne-Marit Sponaas

Department of Clinical Medicine, University of Oxford: for one year, for an extension to her studies to identify T cell epitipes of processed influenza nucleoprotein in individuals carrying differing HLA haplotypes, under Dr G Petranyi, National Institute of Haematology and Blood Tiamfiction, Budapest

Dr Zsuzsanna Varga

Veterinary Medical Research Institute of the Hungarian Academy of Sciences, Budapest: for three months, for an extension of her identification and study of the pathologic role of mycoplasma strains isolated from geese, under Dr.J. M. Bradbury, Veterinary Field Station, University of Europeol.

R Kelly

Department of Genetics, University of Leicester: for two years, for a study to analyse the regulatory interactions controlling the expression of a mysosin light chain gene in mouse myogenesis, under Dr Margaret Buckinghan, Department de Biologie Moleculaire, Pasteur Institute, Paris (20118278925).

D O'Callaghan

Department of Medical Microbiology, St Mary's Hospital Medical School, London: for one year, for an extension of his studies on the molecular topology and immunogenicity of hybrid LamB proteins, under Dr M Hofinng, Department of Biotechnology, Pastear Institute, Paris (1985) 278-881.

Dr Anne L Savage

Department of Biochemistry, University of Cambridge; for one year, for an investigation of the desensitization of vasopression VI receptor, under Dr G Guillon, Center de Pharmacologie Endocrinologie, University of Montpellier.

GREECE

FELLOWSHIPS

Dr A Dinopoulos

Department of Veterinary Medicine, University of Thessalonikas for two months, for a study of a transient population of cells in the subcortical white matter of the rat, under Dr JG Pannavdas, Department of Anatomy and Development Biology, University College Lendon (031778/Z902).

Dr G Papadopoulos

Department of Veterinary Medicine, University of Thessalonika: for three months, for a study of the development of monoaminetgic innervation of the cerebral cortex, under Dr J G Pamarekas, Department of Anatomy and Development Biology, University College London (031779/Z9072).

HOLLAND

FELLOWSHIPS

Jacqueline A Dempster

Department of Biology, University of York: for three years, for a study to isolate, purify and characterize vasopression-responsive water channel proteins from renal collecting ducts, under Professor C H van Os, Department of Physiology, University of Nijmeçen (031982-982).

Dr R G Feldman

Department of Medicine, University College London: for two years, for an investigation of the antibody response to the Group B Streptoceccus Type III capsular polysaccharide, under Profesor B J M Zogers, Department of Pediatric Immunology, University Childrens Hospital, Utrelit 6318628026.

ITALY

FELLOWSHIPS

Professor F Capasso

Department of Experimental Pharmacology, University of Naples: for four months, for a study of Paf formation by mammalian intentine. Effects of some intestinal secretagogues, under Dr A Bennett, Department of Surgery, King's College School of Medicine and Dentistry, London

Dr Elisa Gionti

Department of Biochemistry, University of Naples: for ten months, for a study of the regulation of muscle actin gene expression in amphibian embryogenesis, under Dr TJ Mohan, Laboratory of Development Biochemisty, NIMR, London (03262)/Z9972. Dr Y W Loke, Department of Pathology, University of Cambridge

Dr A Nazzaro

Dr M L Sampietro
University of Milan: for one year, for an analysis of the
genetic factors involved in the persistence of fetal
haemoglobin synthesis, under Dr Sueve Lay Then, Nuffield
Denantment of Clinical Medicine, University of Oxford

Department of Obstetrics, University of Naples: for five

months, for an investigation using in vitro assays for

trophoblast attachment and invasion of decidua, under

POLAND

FELLOWSHIPS

Dr D C Gorecki

Medical Academy of Warsaw: for one year, for a study of the application of antibodies and of dystrophin DNA probes to an analysis of dystrophin gene expression in developing muscle and brain of the mdx mouse mutant, under Pofessor E A Bamard, MRC Molecular Neurobiology Unit, Cambridge MRC Centre (03)244279072.

Dr M Grabinski

Wroclaw Medical Academy: for one year, for a study of the quality of follicle stimulating hormone in physiology and ovulatory disorders; modulation by ovarian steroids, under Professor D C Anderson and Dr W R Robertson, Department of Medicine, University of Manchester (03119020002).

Dr Janusa Marcinkiewicz

Institute of Microbiology, Cracow: for nine months, for a study of molecular mechanisms in the regulation of contact hypersensitivity to the trinitrophenyl hapten, under Dr B M Chain, Department of Biology, University College London (2019)2279922.

SPAIN

FELLOWSHIP

Dr Luis M Corrochano

University of Seville: for one year, for a study of the evolutionary origin of amimoacyl-tRNA synthetases, under Dr S Brenner, MRC Molecular Genetics Unit, Cambridge MRC Centre (033258/290/2).

HPS

Dr P Radwan

Clinic of Gastroenterology, Medical Academy of Lublin: for three months, for a study of the consequences of T cell activation and its modulation in ulcerative colinis, under Dr D P Javell, Gastroenterology Unit, University of Oxford 032194279022.

Dr Halina Wedrychowicz

University of Poland: for one year, for a characterization of the immune response to surface and excretory/secretory antigens of the sheep parasite Osteragia circumcineta, under Phyfessor P H Holmes, and Professor A Tait, Molecular Parasitology Unit, University of Clasgow (031211270072).

SWEDEN

WELLCOME SWEDISH FELLOWSHIPS

Dr R F Cowburn

Department of Biochemistry and Molecular Genetics, St Mary's Hospital Medical School, London: for one year, for an extension of his study of secondary messenger systems in Alzheimer's diseased brain, under Profesor B Winblad, Department of Geriatric Medicine, Karoliniska Institute 008059 28834.

Dr Julia R Davies

Department of Physiology, St George's Hospital Medical School, London: for one year, for an extension of her study of the nature of the macromolecules in airway mucus and the control of their secretion into the tracheal lumen, under Dr 1 Cartstelt, Department of Physiological Chemistry, University of Lund, Koniteration (018026-2884).

Dr Maria G Masucci

Department of Tumor Biology, Karolinska Institute: for one year, for a study of HLA antigen expression on Burkitt's tymphoma cells, under Professor A B Rickinson, Department of Canter Studies, University of Binningham 022457239022.

SWITZERLAND

Dr M A Cohen

Department of Chemistry, University of Exeters for one year, for an investigation of protein folding prediction from the primary amino acid sequence under Professor S. A Benner, Organic Chemistry Laboutory, Zurith (03288/27072).

Dr P Lackie

Department of Zoology, University of Oxford: for one year, for a study of the distribution of polysialic acid of the neural cell adhesion molecule N-CAM and its role in cell-cell interaction during kidney development and carcinogenesis, under Dr. J. Reth, Department of Cell Biology, University of Bush

Dr Sabina Rak

Department of Lung Medicine, University of Lund: for one year, for a study of the interaction between inflammatory cells in the blood and airways of asthmatics, under Professor A B Kay, Department of Allreys and Clinical Immunology, National Heart and Lung Institute, London (032408727072).

Dr I S Riddeli

Department of Physiology, University College London: for one year, for an extension of combined functional, morphological and pharmacological studies of spinal neuronal pathways from group II afferents to motoneurones, under Dr Elebieta Jankowska, Department of Physiology, University of Gothenhum (00056627884).

Dr C R Pryce

FELLOWSHIPS

Department of Anthropology, University College London: for one year, for an extension of his investigation into the regulation of maternal behaviour in the common marmoser: Effects of (1) female sex steroids (2) vaginalcervical stimulation and (3) parity, under Professor R D Martin, Institute and Museum of Authropology, University of Zurith-Irchel (01837/Z788A). USSR

FELLOWSHIPS

Dr A Chanturiya

Department of Neurochemistry, Institute of Biochemistry, Kierv for seven months, for a study of the reconstitution of exocytosis in artificial bilayer membranes, under Dr M J Whitaker, Department of Physiology, University College London (0323972902).

Dr K K Ebralidze

Laboratory of Molecular Organisation of Chromosomes, Institute of Molecular Biology, Moscow: for three months, for a study of the structure of active nucleosomes, under Professor C Craue-Robinuo, Biophysics Laboratorics, Portsmouth Polytechnic (2020/2022/2022)

Dr E M Kobrinsky

Institute of Biological Physics, Moscow: for one year, for a study of the role of different signal transducing GTP binding proteins in various aspects of the response of calcium currents to GTP analogues, under Professor Americe C Dolphin, Department of Pharmacology, St George's Hospital Medical School, London (0312672902).

Dr V P Zagorodnyuk

Institute of Physiology, Kiev: for six months, for a study of the development of autonomic innervation in the guincapig and rabbit gastrointestinal tract, under Professor G Barnstock, Department of Anatomy and Developmental Biology, University College London (031264/Z0092).

Dr I B Zhulin

Laboratory of Biochemistry, USSR Academy of Sciences, Saratov: for one year, for a study of motility and chemotaxis in Azopirillum brasilense, under Dr Judith P Armitage, Department of Biochemistry, University of Oxford (0321002002).

WEST GERMANY

FELLOWSHIPS

Dr P R Clarke

Department of Blochemistry, University of Dundee: for two years, for a study of the role of the tyrosine phosphatase that acts on cdc2 kinase in the control of the cukaryotic cell cycle, under Dr E Karsenti, European Laboratory of Alokuda Biology, Heidelburg (032261627002).

Dr F Engelbrecht

Department of Pathology, University of Tubingen: for one year, for a study of the immunochemical characterization of the surface and cuticular antigens of Outhorera volvulus, under Dr D W Taylor, Department of Pathology, University of Cambridge (00999728997).

Dr Claudia Ettlinger

Institute of Plant Physiology, University of Regensburg: for one year, for a study of the regulation of nerve Na + — K + — ATPase activity in experimental diabetes, under Professor D R Tonlinson, Department of Pharmacology, St. Barthelomew's Hospital Medical School, London (19139967289A).

Martha J Liley

Institute of Biotechnology, University of Cambridge: for two years, for studies of the two dimensional organisation of oligonucleotide derivatised phospholipid films, under Dr W Knoll, Polymerforchung, Max Planck Institut, Mainz (031187127902).

OTHER OVERSEAS AWARDS

Scientists from parts of the world not covered by the Trustees' Tropical and European programmes may, in special circumstances, apply to the Trust for support. In general, the Trustees only consider applications from scientists in developed countries (other than Australia, New Zealand and Japan for which special schemes exist) if they are already in the UK, funded by another agency, and wish to extend their stay to complete a research project. Exceptionally, the Trustees may be willing to accept an application from a fellow elsewhere, but only if he/she is nominated by and is well known to a sponsor in the UK.

Hitchings-Elion Fellowships

This new scheme, which will enable postdoctoral scientists from the United States of America to spend up to two years in the UK and then one year back home, was announced in the last report. Discussions on the detailed plans have now reached fruition and applications have been solicited for the first round of fellowships, the deadline for applications being 20 January 1991. It is expected that these fellowships will be taken up in the autumn of 1991. The Trustees are grateful for the enthusiastic support of the Fogarty International Center of the National Institutes of Health which will be advising them on the suitability of candidates, and the Burroughs Wellcome Fund which will be responsible for administration while fellows are in the USA.

Australia

During the year two further Australian Scientists were awarded Wellcome Australian Senior Research Fellowships; Dr PJ Goadsby for his characterization of central neural pathways involved in migraine and Dr M W Parker for his study of crystal structures of detoxifying enzymes and membrane associating proteins. A total of 14 awards have been made under this scheme since it was set up in 1984.

The Trustees were particularly pleased to learn that Dr D L Healy, one of the first Wellcome Australian Senior Research Fellows, was appointed to a Chair in obstetrics and gynaecology at Monash University, Melbourne from 1 January 1990.

New Zealand

During 1990 the Wellcome Trust and the Royal Australasian College of Physicians agreed to set up a scheme to award a Senior Research Fellowship in Medical Science to New Zealand Nationals. The tenure of each fellowship will be for five years and will be held in a New Zealand university department. These awards are open to candidates who are either medically or scientifically qualified, aged over 32 years, and who wish to make their career in New Zealand. It is anticipated that suitable candidates will not be available every year.

The total sums committed for the support of overseas awards (excluding the European and Tropical programmes) amounted to £936 000 (£622 000 for 1988/89).

AUSTRALIA

ALISTRALIAN SENIOR RESEARCH FELLOWSHIPS

Dr P J Goadsby

Department of Neurology, The Prince Henry Hospital, Little Bay, NSW: for five years, for a characterization of central neural pathways involved in migraine, under Professor I W Lauce (03/18/12/902).

Dr M W Parker

St Vincents Institute of Medical Research, Fitzroy: for five years, for a study of crystal structures of detoxifying enzymes and membrane associating proteins, under Professor T | Martin 001987279022.

FELLOWSHIPS

Dr I G Colebatch

Department of Neurology, Prince Henry Hospital, Little Bay, NSW: for ix months, for a study of the functional anatomy of essential termor: studies with positron emission tomography, under Dr R S J Frackoviak and Professor C D Manden, Department of Clinical Neurology, Institute of Neurology, London (03000720902.)

Dr Frances A Edwards

Department of Pharmacology, University of Camberra: for one year, for an investigation of nicotinic receptor channels in the central nervous system of patch-clamp recording, under Professor Deduhwun, Department of Pharmacology, University College London (20185325002).

CHINA

FELLOWSHIPS

Dr C Q Cao

Academy of Traditional Chinese Medicine, Beijing: for one year, for a determination of neuronal circuitry in the dorsal horn of the spinal cord, under Professor A G Brown, Department of Pre-Clinical Veterinary Sciences, University of Edinburgh (032444/Z/90/Z).

Professor G G Dodson

Department of Chemistry, University of York: for one year, an extension of X-ray structural studies on monomeric insulin, with Dr Wanzhy-Li, Institute of Biophysics, Beijing

Professor Cai Wen Qin

Department of Histology and Embryology, The Third Military Medical College, Chongquing: for one year, for a study of the role of endothelial cells of umbilical and placental vessels in the regulation of blood flow, under Professor G Burnstock, Department of Anatomy and Developmental Biology, University College London (032480/2/90/2)

Professor Ming-Cai Qui

Tianjin Medical College: for one year, for a study of the role of bone growth factors in the pathophysiology of fluorosis, under Professor D C Anderson and Dr P T Sharpe, Department of Cell and Structural Biology, University of Manchester

Dr Yi Sun

Institute of Virology, Chinese Academy of Medical Sciences, Beijing: for one year, for an analysis of herpes simplex virus type 2 (HSV2) mutants which fail to synthesise and synthesise an aberrant form of the glycoprotein gG2. under Professor J H Subak-Sharpe and Dr S M Brown, Institute of Virology, University of Glasgow

Dr X-C Teng

Institute of Hepatology, Beijing General Hospital: for one year, for an extension of his investigation of the fine specificity for hepatic lectin of activated T cells, clonally expanded from peripheral blood and liver tissue, in autoimmune chronic active hepatitis, under Professor A L W F Eddleston, Liver Unit, King's College School of Medicine and Dentistry, London (019200/Z/88/A).

Dr J Wu

Department of Physiology, Jilin Medical College: for one year, for a study of neuronal pathways onto spinal motoneurones and the neurotransmitter role of indoleamines, catecholamines and peptides, under Professor D I Wallis, Department of Physiology, University of Wales College of Cardiff (0.32445/2/90/2)

Dr I X Yao

Institute of Physics, Academia Sinica, Beijing; for one year, for an investigation of direct methods for macromolecular crystal structures, under Professor M M Woolfson, Department of Physics, University of York (018668/Z/88/B).

INDIA

FELLOWSHIPS

Dr A V Kurpad

Department of Physiology, St John's College, Bangalore: for one year, for a study of the sympathetic nervous system and energy metabolism; mechanisms and site of thermogenesis, under Dr M Elia, Dunn Clincial Nutrition Centre, MRC, Cambridge (032370/Z/90/Z).

Dr S Tripathi

Tata Institute of Fundamental Research, Bombay: for three months, for a study of the effect of sodium and caesium ions on the water permeability of gramicidin pores, under Dr S B Hladky, Department of Pharmacology, University of Cambridge (831512/Z/90/Z).

ISRAEL

Dr Z Arad

Israel Institute of Technology, Haifa: for one year, for a study of the effects of hyperthermia on blood flow and nutrient exchange in the ovary and reproductive tract of the domestic fowl, under Dr J H Brackenbury, Department of Veterinary Anatomy, University of Cambridge (031569/Z/90/Z).

Dr Roni Laiwand

The Hebrew University, Jerusalem: for one year, for electrophysiological studies on central cholinergic and cholinoceptive neurone/neuroblastoma hybrid cells, and on synpatic connections between them, in vitro, under Professor D A Brown, Department of Pharmacology, University College London (031478/Z/90/Z),

FELLOWSHIPS

Professor Y Milner

The Hebrew University, Jerusalem: for one year, for a study of mutated yeast PKCs and their characterization, under Dr E Orr, Department of Genetics, University of Leicester (032143/Z/90/Z).

JAPAN

FELLOWSHIPS

Dr T Arai

First Department of Internal Medicine, Gunma University School of Medicine: for one year, for a study of the mechanisms of activation of the human mannose binding protein gene, under Dr J A Summerfield, Department of Medicine, St Mary's Hospital Medical School, London (032481/Z/90/Z).

Dr Izumi Hide

Hiroshima University: for one year, for a study of the mechanism of exocytotic secretion in cosinophils, under Dr B D Gomperts, Department of Physiology, University College London

Dr Shin-Ichiro Kitano

Department of Physiology, Tokyo Women's Medical College: for one year, for a study of neural mechanisms controlling induced airway hyper-reactivity, under Professor J G Widdicombe, Department of Physiology, St George's Hospital Medical School, London

Dr H Matsuo

The First Department of Internal Medicine, Nagasaki University School of Medicine: for one year, for a study of T cell responses to recombinant gamma and epsilon subunits of human acetylcholine receptor in myasthenia gravis, under Professor I Newsom-Davis, Institute of Molecular Medicine, University of Oxford (031502/Z/90/Z).

NIGERIA

FELLOWSHIPS

Professor B Oluwakayode Osuntokun

University College Hospital, Ibadan: for nine months, for cross-cultural epidemiological studies of dementias of the elderly. Development and testing of research protocol, under Professor D K Peters, Department of Medicine, University of Cambridge (032453/7/90/7)

TRAVEL GRANTS

The Wellcome Research Travel Grant Scheme is intended to provide support for postdoctoral scientists and clinically qualified workers who wish to make a short visit to an overseas centre in order to further their research or attend a workshop or symposium in a relevant subject area. The scheme also provides for contributions towards the travelling expenses of younger workers who have been offered research fellowships tenable for at least a year in institutions overseas.

During the year there has been a substantial increase in the number of applications, and the Trustees made 483 awards (438 in 1988/89) at a total cost of £246 000.

Special Travel Grants (CANZUSA)

The Trust operates five special schemes relating to research workers in Canada, Australia, New Zealand, South Africa and the USA. The schemes are jointly sponsored by the Trust and collaborating agencies overseas, to provide for short-term (up to three months) working visits by experienced research workers. The Trustees made awards totalling £24 000 during the period under review £45 000 during 1988/89).

SUPPORT FOR THE HISTORY OF MEDICINE

1989/90 saw exciting new horizons open up for the History of Medicine Programme. At the same time there was a marked increase in the number of grant applications received, especially for the support of larger-scale and longer-term work. Among these was a successful application (from Essex University) for a university award, the first-ever in this field. A precondition of this type of support is an undertaking by the university to provide the grant holder with a permanent post at the end of five years. At a time when new academic posts are so few and far between this has an obvious appeal both to universities and to the Trust, for the continued advancement of the history of medicine as an academic subject depends above all on its becoming an established study in a greater number of places. Moreover, many able scholars have now received training in the subject and too many of these are experiencing difficulty in progressing beyond temporary appointments. Improving the prospects for an academic career in the history of medicine is consequently one of the Trustees' foremost current priorities.

At the same time, the Trustees are keen that interest in the subject should not be confined to academics. The new Centre for Medical Science and History, due to open in 1992, promises to play an important role in reaching that wider audience, through audiovisual and other techniques.

In 1992 there is also the prospect of much closer co-operation between Britain and the other countries in the European Community. The Trust's support for the history of medicine has until now been concentrated within the British Isles but it now seems propitious for support to be extended geographically. Thought is therefore now being given to bringing The Netherlands within the framework of the programme. Such a move would build on established links between British historians of medicine and those in a range of countries on the Continent which have grown up over the years, particularly through the many Wellcome grants awarded to scholars from overseas for periods of study at British centres. These links are now starting to give rise to bilateral initiatives of an increasingly ambitious character. The Wellcome Unit for the History of Medicine at Cambridge University, for example, has entered into a long-term scheme for reciprocal conferences and exchanges with the CSIC history of medicine institute in Barcelona, Similarly, the Unit at Glasgow University has plans to take advantage of its new Director's involvement in the history of medicine in Germany. Links with East Central Europe, by contrast, have up until now inevitably been scanty. To rectify this, the Trustees have decided to make available a few short-term visiting fellowships to enable younger historians of medicine in the newly-emergent democracies to form contacts among their counterparts in Britain and to catch up with Western literature.

In last year's report mention was made of plans to bring together a group with the history of twentieth-century medical science as its focus, to be based at the Royal College of Physicians under the direction of Sir Christopher Booth, the College's current Harveian Librarian. This group, made up of scientists and historians, has made an encouraging start with a programme of seminars and its own newsletter. Twentieth-century medical science is meanwhile featuring more often among the research projects put forward to the Trust for support.

During the year the amount allocated by the Trustees for research in the history of medicine was £3 393 000 (compared with £2 581 000 in 1988/89). £1 816 000, 54 per cent, was expended internally, in maintaining the work of the Trust's principal investment in this field, the Wellcome Institute for the History of Medicine. £464 000 was devoted to supporting the five History of Medicine Units — a considerable increase on the previous year, now that two of the Units once again have directors and their programmes are recovering momentum accordingly. And £1 013 000 (£613 000 in 1988/89) was awarded in grant support.

Support for each of the Units is now on a 'rolling' basis and renewal is dependent on the outcome of a rigorous, periodic scrutiny by a panel specially appointed for the purpose. In 1989/90 the Unit at Manchester University, after three years in existence, was reviewed under the new system. The report was full of praise for the productivity of this team and the wide range of activities in which it is engaged. The review group particularly noted the introduction of what the Trust intends should be the second of two national courses (the other being at the Wellcome Institute) for medical or other students opting to study the history of medicine for a BSc degree during an intercalated year.

WELLCOME UNITS FOR THE HISTORY OF MEDICINE

University College London

Director Dr W F Bynum

This Unit is virtually coterminous with the Academic Unit of the Wellcome Institute and its activities are covered in the report on the latter (see page 128).

University of Cambridge

Director Dr R K French

This Unit continues to grow in both staff numbers and research activities. The problem of accommodation for research fellows, administration and visitors has been solved by the University's provision of four extra rooms in the building the Unit currently occupies.

At the suggestion of the Trust the Unit's administrative back-up has been allotted to a part-time graduate administrator (Dr J P Williams) and a part-time secretary. This rearrangement has the effect of giving the Unit, a sub-department of History and Philosophy of Science, a greater degree of autonomy. The Unit is now also responsible for the presentation of Historical lectures and exhibitions (the first is on the history of Cambridge medicine) at the Clinical School at Addenbrooke's Hospital.

The Unit has three core staff members: the Director, Dr French, Dr A R Cunningham and Dr Harake Kamminga. The number of research fellows is variable, and reached a peak of seven in 1989. With resident research associates the number of active members of the Unit, excluding visitors, was then twelve. Four of the retiring research fellows have now gone into university teaching while Dr Johanna Geyer-Kordesch has been appointed Director of the Glasgow Unit.

During the year under review a major conference was held in Cambridge on the History of Medical Ethics (April 1990), and the first in an international joint series of conferences with CSIC Barcelona. on Medieval Medicine in the Latin West.

The informal series of books with Cambridge University Press continues, with the appearance of volumes on medicine in the seventeenth and eighteenth centuries. The Unit also continues with its extensive undergraduate teaching and the following degree courses of MPhil in the History of Medicine, MLitt and PhD are being undertaken.

University of Glasgow

Director Dr Johanna Geyer-Kordesch

Until the new Director, Dr Johanna Geyer-Kordesch, came into post on 1 March 1990, this Unit was administered by Dr Marguerite Dupree.

Dr Dupree continued her teaching (using material relevant to the history of medicine) for the course 'Computing for Historians' and her membership of the teaching committee of DISH (Design and Implementation of Software in History) Project and its History Computing Laboratory, as well as her supervision of research students. She has been invited to offer an honours course, 'Disease, Medicine and Society in Britain 1750-1948' for undergraduates in the Department of Modern History in 1991/92, and has joined the editorial board of Social History of Medicine.

Dr Geyer-Kordesch has continued her work for the Cambridge Medical Ethics Forum, together with Dr Harake Kamminga (Cambridge). She organised an international symposium on the 'Future of Medical Ethics' in the grounds of Ampleforth Abbey in Yorkshire with international participation and financial support from the King Edward's Hospital Fund.

Dr Dupree and Dr M A Crowther of the Department of Economic History are co-holders of a Wellcome Research Grant for research into 'The Role of Medical Societies in the Development of the Scottish Medical Profession circa 1700-1939' for two years beginning 1 January 1990. Dr Jacqueline Jenkinson is research assistant for the project. She has already presented a paper on the subject at the annual conference of the Society for the Social History Medicine.

The Units research focuses on European medicine in the eighteenth century (in particular the Scottish Enlightenment), natural law and medicine, the history of medical ethics, women and medicine, voluntary hospitals in Scotland in the nineteenth and twentieth centuries, the development of the medical profession in Scotland in the late nineteenth and twentieth centuries, medical societies in Scotland since 1700, and the history of case histories. The staff of the Unit has published and given public lectures and conference papers on these subjects in the course of the last year. Plans to develop research in eighteenth–century Scottish medicine, psychiatric history in Scotland and the history of biomedical science in twentieth–century Scotland have been made.

The Unit has been successful in initiating a series of six lectures in the Medical Faculty's new curriculum for medical students in their third (clinical) year. It has also been invited to teach a modular course on the history of public health for the Department of Public Health. Close links with the Institute of Law and Ethics in Medicine are about to be formalised.

University of Manchester

Director Dr J V Pickstone

In January 1990 the Unit's work was reviewed by a panel of the Trust's History of Medicine Committee. The report was very favourable and the Unit has now been awarded support for a further period. It continues to be part of the University's Centre for the History of Science, Technology and Medicine, and benefits from this close association with historians of physical sciences and technologies. This relationship strengthens the Unit's general programme, which is focused on the history of medicial science and on the social history of medicine in industrial societies.

In October 1989, Dr Stephen Jacyna joined the Unit from Glasgow; he is completing a major study of medical education in nineteenth century Edinburgh and maintains his interest in neurosciences. At the end of the year Dr David Cantor and Dr Paolo Palladino, both already associated with the Unit, were awarded Wellcome Research Fellowships. Their respective projects on rheumatology and on British and American genetics, further increase the Unit's strength in recent history of medical sciences.

The size and expertise of the Unit has allowed for the creation of a new degree programme for medical students who wish to study the history of medicine intensively for one year, usually before beginning their clinical studies. For the initial year, the Wellcome Trust is funding five medical students and one dental student. It has been agreed that in future years students from other medical schools will be able to transfer to Manchester for their intercalated year and gain a Manchester degree.

The Unit is also supporting a second new teaching programme, linked to Manchester's recently re-organised School of Biological Sciences. Among the wide range of degrees now offered by the School is a BSc in Life Sciences with History of Science and Medicine, to which Unit staff contribute about one-third of the courses. For biology students who are also interested in history Manchester University is now a prime choice.

Three postgraduates supervised within the Unit gained PhDs. Its resources for postgraduate training, however, are not fully exploited and it is keen to attract some new postgraduates, as well as postdoctoral fellows and visiting scholars.

From its inception in 1986, indeed from its pre-history as a research group at UMIST, the Unit has played a regional role—in archive retrieval, as a provider of lectures, and as a source of informal advice. This regional aspect takes on a new dimension with the appointment of Dr Michael Worboys, of Sheffield City Polytechnic, to undertake research for two days per week, based at the Manchester Unit. This cost-effective development, funded by the Trust, is of a sort to allow concentration of research and postgraduate training, while also facilitating the diffusion of teaching in history of medicine. A second route to this end has been happily demonstrated by the recent appointment of Dr Keith Vernon, after completing three years as a Wellcome Research Fellow in the Unit, to a teaching post in the history of medicine at Lancashire Polytechnic, Preston. Dr Vernon will continue as an associate of the Unit, carrying out research on the history of microbiology.

The Unit is keen to expand its international links and has recently 'twinned' with the distinguished Department of History and Sociology of Science at the University of Pennsylvania.

University of Oxford

Director Dr R M Smith

During the year under review this Unit has continued as a productive centre of research and teaching in the history of medicine. On 1 January Dr R M Smith assumed the Readership in the History of Medicine and the Directorship of the Unit, Dr P Weindling having ably acted as interim Director from 1 October 1988.

Six historical dissertations were completed by pre-clinical medical students and three postgraduate doctoral dissertations. Currently members of staff in the Unit supervise 15 doctoral candidates in the history of medicine and related fields.

A major publication this year was Dr P Weindling's Health, Race and German Politics Between National Unification and Nazism (October 1989). A further book of his Darwinism and Social Darwinism in Imperial Germany: The Contribution of Oscar Hertwig (1849-1922), is scheduled for publication in late 1990. The following are in press and scheduled for publication early in 1991: Dr M Pelling and Dr R M Smith (eds.) Life, Death and the Elderly in Historical Perspective and Dr R M Smith (ed.) Regional and Spatial Demographic Patterns in the Past. Dr Smith continues to be co-editor of the journal Social History of Medicine.

Major research areas include medical practice in early modern London, medicine and the old Poor Law, ageing and the care of the elderly in medieval and early modern European society, comparative European historical epidemiology, German eugenics and public health, the origins of modern immunology, the League of Nations Health Organization, the history of tropical paediatrics and medieval Islamic medicine.

The following is a list of all awards made during 1989/90.

LIBRARIES

Dr C Barry £20 000 Royal College of Physicians of Ireland, Dublin: for the restoration and preservation of the Royal College of Physicians of Ireland's Library and paintings (2012)0220023. Sir David Innes Williams £300 000 Royal Society of Medicine, London: towards the computerisation of the library of the Royal Society of Medicine (0324705072).

TRAVEL GRANTS

Dr Barbara L Brookes £270
Ashwell, Herts: for a visit to Edinburgh University Archives to obtain information on Duncan Macgregor and Frederic Truby King, and to give a paper at the 'New Zealand Past and Present' conference

Dr Mary J Chamard £750
Port Alberni, British Columbia, Canada: for a visit to
the Wellcome Institute for the History of Medicine, London
for research on a book entitled London's Fongotten Health Service
The Dispensaries, 1770-1948 (03099782892).

Dr K E Collins \$250
Wellcome Unit for the History of Medicine, University
of Glasgow: for a visit to Antwerp, Belgium to attend the
32nd International Congress on the History of Medicine

Dr R J Cooter \$500 Wellcome Unit for the History Medicine, University of Wanchester: for a visit to the University of Victoria, Canada to attend meetings of the Canadian Historical Association and the Canadian Society for the History of Medicine, and for a visit to the University of British Columbia

Dr Mary E Fissell \$470 Wellcome Unit for the History Medicine, University of Manchester: for a visit to Baltimore, USA to attend the annual conference of the American Association for the History of Medicine (031646/Z90/Z).

Dr J Henderson 2250 Department of History and Philosophy of Science, University of Cambridge: for a visit to Leuven, Belgium to attend the International Economic History Association Conference (03270/279/22). Dr C O'Grada

Department of Economics, University College Dublins
for a visit to the Contemporary Medical Archives Centre at
the Wellcome Institute for the History of Medicine, London
to work on the Maric Stopes correspondence (2015) 11/2709/23.

Dr Naomi H Pfeffer

Department of History, University of Essex: for a visit to Madrid, Spain to attend a colloquium on "The role of the state and of public opinion in sexual attitudes and demographic behaviour since the eighteenth century"

10.7210/2009/2007

Professor I. Pyenson

S750
Department of History, Université de Montrèal,
Canada: for two months, for a visit to the Wellcome Institute
for the History of Medicine, London, and the University of
Oxford to study archives relating to the discipliens of the
history of medicine and science during 1900-1940

Dr A Scotti
Department of Philosophy, University of Bologna,
Italy; for a visit to the Wellcome Institute for the History
of Medicine, London in connection with his production of
a catalogue of the alchemic and medical manuscripts of
Czechoslowskia (2016-25/2002)

Dr Elizabeth G Winchester
Academie Unit, Wellcome Institute for the History of
Medicine, London: for a visit to Kolymbari, Crete to attend
the EMBO International Workshop on the Molecular and
Developmental Biology of Drosophila, to interview leading
scientists in the field
031769/290/2.

SYMPOSIA AND SEMINARS

1990/91

Dr Janet Browne \$500 British Society for the History of Science: for a conference entitled 'The Scientific Revolution: Science, Technology and Medicine in the Early Modern Period' to be held at Keble College, Oxford in July 1990 (031662/Z990Z).

Dr G Crossick £1000
Department of History, University of Essex: for a
workshop on the social history of medicine to be held at the
University of Essex (000912/Z89/Z).

Dr C Cullen £3000
The Needham Research Institute, Cambridge: for the Sixth International Conference on the History of Science in China, to be held in Cambridge in August 1990
antistaszawaza.

Professor W R Lee £1250
Department of Economic and Social History,
University of Liverpool: for a seminar series: The changing
discase panorama: disease, medicine and society in western
Eurone' to be held at the University of Liverpool during

Professor P Thompson \$4400
Department of Sociology, University of Essex: for a course on oral history techniques for historians of medicine, to be held at the University of Essex in September 1990 (032318720022).

Professor T E D Van Der Grinten £1000 Leiden Congress Bureau, The Schlerlands: for the First European Congress on the History of Psychiatry and Mental Health Care, to be held in The Netherlands in October 1990

RESEARCH ASSISTANCE AND EXPENSES

Dr Brigitte A Askonas £1000 Institute of Molecular Medicine, University of Oxford for one year, for a series of interviews with leading immunologists (03134422W22.

Dr N Black 276 021 Department of Community Health, London School of Hygiene and Tropical Medicine: for three years, for a study of the history of hepatitis B policy in the UK from the 1960s to the 1980s, with Dr Virginia S Berridge, Department of Public Health and Policy and Dr P M Strong 03128729023.

D R Brothwell £22 810
Institute of Archaelogy, University College London: for one year, for support for the MSc course in Archaeology and Ancient History at the Institute of Archaeology, London

Professor M Bury £33 523
Department of Social Policy and Social Science, Royal
Holloway and Bedford New College, University of
London: for eighteen months, for a study of the development
of geriatrics as a medical speciality, with Professor Margot
Jeffery (03237827002).

Judi Caton £507 London Museums Service, Barbican, London: for one year, for a survey of pathological collections in London

Dr Ann R David
Manchester Museum, University of Manchester: for two
years, for a study of diseases and remedies in ancient Egypt
using the evidence of papyri and human physical remains
(031001/Z789/Z).

Dr P Garnham
University of Oxford: for one year, for a renewal of two
fellowships at Green College for Wellcome Trust-supported
research workers in the history of medicine (0189777288/A).

Dr A Hollman £1000
East Sussex: for three years, for a biography of Sir Thomas
Lowis 0000007/897/

Dr G Kearns £14 552
Department of Geography, University of Liverpool: For one year, for a study of the letter books of William Henry Duncan MD, with P Laxton (030665/228972).

Dr D J Keene £4260
Centre for Metropolitan History, Institute of Historical
Retearch, University of London: for eighteen months, for
additional costs of a study of the social geography of the
plague in seventeenth-century London (019204/Z884A).

Professor W R Lee
Department of Economic and Social History,
University of Liverpool: for fifteen months, for a study of
urban mortality and change in Germany, 1870-1913

622292/2002.

Dr I S L Loudon £750
Wellcome Unit for the History of Medicine, University
of Oxford: for one year, for an extension of his study of
maternal mortality and maternal care, 1850–1950
01562827860A.

Jean Loudon
Wantage, Oxfordshire: for one year, for completion of an index of biographical notices in British medical journals and related sources 1750-1850 (0324472802).

Dr G T Pollock 2300 University of Warwick: for one year, for a study of the evolution of quarantine and its influence on international health cooperation (01/21/27/072).

Dr B H Tolley
School of Education, University of Nottingham: forward
months, for a history of Nottingham University Medical
School
(000890/Z892).

UNIVERSITY AWARD

Dr Catherine Crawford

DP Catherine Crawford

Department of History, University of Essex: for five years, for 1) Forensic medicine in France, 1750-1850, 2) Law and medicine in the eighteenth and nineteenth centuries: comparative case studies, under Dr Ludmilla J Jordanows.

(8)23145/Z9902.

FELLOWSHIPS

Dr Poonam Bala

Department of History, School of Oriental and African Studies, London: for one year, for a study of imperialism and medicine in metropolitan Bombay, 1820-1935, under Professor DJ Arnold (02174/Z9072).

Dr Helen M Dingwall

Department of Scottish History, University of Edinburgh: for three years, for a professional, social and economic history of the medical profession in Edinburgh, 1600-1726, under Dr M Lynth (0216472992).

Dr Mary I Dobson

Wellcome Unit for the History of Medicine, University of Oxford: for three years, for an epidemiological history of southern and eastern Britain, 1600-1800, under Dr R M

Dr D Gentilcore

University of Cambridge: for three years, for a study of the systems of healing in early modern southern Italy, 1600-1900, under Dr A R Cunningham, Welkenne Unit for the History of Medicine (031019728972).

Dr O P Grell

Department of History and Philosophy of Science, University of Cambridge: for eighteen months, for an extension of his study of the Dutch Republic and the development of English medicine, c.1590-1642, under Dr. R. Frauk

Dr Debbie Kemmer

Department of Economic and Social History, University of Edinburgh: for three years, for a study of the decline in infant mortality in early twentieth-century Scotland, under Profesor M Anderson (03290/25002).

Dr P Kreager

Department of History, University of Oxford: for cighteen months, for an early population analys: An historical introduction, under Profesor E A Wrigley (03)0007289/23.

Dr A H Maehle

Wellcome Institute for the History of Medicine, London: for three years, for a study of pharmacological and toxicological research in eighteenth-century Britain, under Dr W F Bynnm (0304022902).

Dr Ornella Moscucci

Wellcome Institute for the History of Medicine, London: for three years, for a study of childbirth in twentieth-century Britain, under Dr W F Bynnm (032137/2/90/2).

Dr A I Newman

Wellcome Unit for the History of Medicine, University of Oxford: for two years, for a study of Persian anatomical knowledge in the medieval period, under Dr R M Smith (03)1009/Z/89/Z).

Dr P Palladino

Wellcome Unit for the History of Medicine, University of Manchester: for three years, for a comparative analysis of the development of genetics in Britain and the United States, 1919-1939, under Dr.J. Hanwood (022188729023.

RESEARCH LEAVE FELLOWSHIP

Dr W F Bynum

Wellcome Institute for the History of Medicine, London: for four months, for a study of medicine in the modern world (031067/25902).

RESEARCH SCHOLARSHIPS

P D Bartlett

Faculty of Laws, University College London: for two years, for standards of committal of paupers to nineteenthcentury lunatic asylums, under Professor W L Twining (0328527902).

Sandra Cavallo

Wellcome Institute for the History of Medicine, London: for seven months, for an extension of her study of the founding and functions of the voluntary hospitals in eighteenth-century England, under Dr WF Bynna.

M Harrison

Wellcome Unit for the History of Medicine, University of Oxford: for one year, for a study of public health and medical research in India, under Dr P J Weindling and Dr Margart Pelling (031882/2902).

Lara V Marks

Wellcome Unit for the History of Medicine, University of Oxford: for six months, for an extension of her study of immigrant women's health in the East End of London. 1810-1930, in particular Jewish and Irish women, under Dr I S L Loudon and Dr Anne R Summers (01726072671A).

Dr A C Power

Wellcome Institute for the History of Medicine, London: for one year, for an MSc in the History of Medicine (taught course), under Dr W F Bynnm (032141/259072).

F Salmon

Wellcome Unit for the History of Medicine, University of Cambridge: for one year, for a study of medicine and natural philosophy in thirteenth and fourteenth century Europe, under Dr R K French (0320/0427892).

Sonia Uyterhoeven

Wellcome Unit for the History of Medicine, University of Cambridge: for three years, for a study of experimental physiology at Cambridge University, 1870–1914, under Dr A R Cunningham 032237229021.

M W Weatherall

Wellcome Unit for the History of Medicine, University of Cambridge: for three years, for a study of scientific medicine in twentieth-century Cambridge, under Dr R K Fruth (0.2258/27902).

STAFF

Management Committee

E J Freeman, BA, ALA, (Chairman) W F Bynum, MD, PhD S E Emberton, MBIM

Academic Unit

W F Bynum, MD, PhD, Head of Academic Unit
D E Allen, MA, PhD, Honorary Lecturer (part-time), History of Biology
L I Conrad, PhD, Medical Historian (Arabic Medicine)
Lindsay P Granshaw, MA, PhD, Medical Historian (Twentieth-century Medicine)
C J Lawrence, MB, PhD, Medical Historian (Clinical Medicine and Wellcome Museum)
M R Neve, MA, PhD, Medical Historian (Human Biology)
V Nutton, MA, PhD, Medical Historian (Classical Medicine)
R J Palmer, BA, PhD, ALA, Medical Historian (Renaissance Medicine and Curator of Western Manuscripts)
R Porter, MA, PhD Medical Historian (Social History)
Christine Stevenson, MA, PhD, Assistant Editor
A Wear, MA, PhD, Medical Historian (Early Modern Medicine)

Library

E J Freeman, BA, ALA, Librarian
R M Price, MA, ALA, Deputy Librarian
N M W T Allan, MA, PhD, ALA, Curator (Orientals Manuscripts and Printed Books)
D Brady, BA, Assistant Curator (Iconographic Collections)
Lesley Hall, BA, Senior Assistant Archivist (Contemporary Medical Archives Centre)
Katherine Hooper, MA, DipLib, Assistant Curator (Early Printed Books) (Until 21/9/90)
Patricia Hully, BA, FLA, Editor, Current Work in the History of Medicine
Jeannette Lake, BA, ALA, Head (Modern Medicine and Bibliographical Services)
R J Palmer, BA, PhD, ALA, Curator (Western Manuscripts)
W M Schupbach, MA (Cantab), MA (Lond), Curator (Iconographic Collections)
Julia Sheppard, BA, Archivist (Contemporary Medical Archives Centre)
Brenda Sutton, BA, DipLib, Head (Reader Services)
H J M Symons, MA, ALA, Curator (Early Printed Books)
D Wujastyk, BSc, DPhil, Associate Curator (South Asia — Oriental Manuscripts and Printed Books)

Administration

S E Emberton, MBIM

WELLCOME INSTITUTE FOR THE HISTORY OF MEDICINE

The major event in the life of the Institute this year was its evacuation from the Wellcome Building. This complicated operation was completed successfully between January and March 1990. Temporary accommodation for the Library was established at 200 Euston Road (Bentley House); the Academic Unit and Administration moved to the fourth and fifth floors of Tavistock House South; and accommodation for Wellcome fellows and visiting scholars was found in the Rockefeller Building, courtesy of University College London. The Library re-opened for public use on 23 April 1990. Staff are to be congratulated on the generally good-humoured and professional way in which they faced the inevitable strains and stresses of a difficult and disruptive period.

During the year Mr Stephen Emberton had to withdraw from the administration of the Institute as his duties as Public Activities Development Manager for the planned Wellcome Centre increased. His replacement in a new administrative structure for the Wellcome Institute has yet to be appointed.

The Library

A period more disruptive to ordinary library life and routines could scarcely be imagined. Three months' closure and the exigencies of temporary accommodation produced effects on the public service which will take time to repair. The need to move hardware and to employ key staff on other duties contributed to some delays in the implementation of the Automated Library System, while gaps and delays occurred in the ongoing routines of acquisitions and cataloguing.

On the positive side, and following a major policy reappraisal by the Trustees' advisory panels and committees, a number of major projects were begun. Substantial funding over two years was earmarked for sorting and processing the very large reserve stock of prints and drawings in the Enfield Library Store. A major project to produce a videodisc catalogue of up to 55 000 images from the Iconographic Collections was begun in partnership with Media Projects International Ltd. When complete, this disc facility will ease greatly the lives of picture researchers and other image-seekers, as well as lighten the work of staff. The Trustees also agreed to finance a retrospective conversion to machine-readable form of the manual record of the Library's holdings of books printed before 1851. This project will be undertaken in partnership with OCLC in Dublin, Ohio.

Bentley House, 200 Euston Road, began its life as the Library's principal store as well as the interim location for the public reading room. Experience of the building promises well for its principal use when connected to the main Wellcome Building by a service tunnel under Euston Road.

The Library's acquisitions for this year include a drawing of a professor (at present unidentified) giving clinical instruction to students, probably in a Paris hospital around 1820.

A professor giving clinical instruction to medical students, probably in Paris around 1820. The drawing shows the development of metropolitan hospitals from the hostels and hospice of the early eighteenth century to place of undertaked teaching and research in the years after the French Revolution.

Per and link drawing, 14 × 20 cheat antibulated be foun-Heart Maria (1771 — 1847).

The Academic Unit

The Academic Unit has managed to continue its formal teaching commitments through University College London and to run its wider academic programme from a variety of locations. A record number (28) of Intercalated BSc students read for the History of Medicine degree. The closure of the Library put special burdens on both the students and their teachers, especially in connection with their projects; in the end, the quality of both projects and examination papers was better than average, and five students achieved First Class Honours. Bursaries from the Wellcome Trust were available for more than half the students. In addition, members of the Unit teach courses for other science and arts undergraduates as well as postgraduate seminars for the MSc programme. The latter is offered through the London Centre for the History of Science, Technology and Medicine.

Three theses were examined: Lesley Hall's PhD thesis, T H Turner's MD thesis, and Bernard Brais's MPhil thesis. Each is being revised for publication as a monograph. Five new research students and three new research fellows joined an existing group of 17 students and fellows already in residence. Three scholars from abroad spent periods of sabbatical working through the Unit. The esprit in the new Postgraduate Centre in University College has been excellent, although, as usual, there are more bodies than desks. In addition to the Wellcome Trust, funding was provided by the King's Fund, the Special Trustees of the Westminster Hospital Group and the Fulbright Commission.

Staff research productivity remains at a very high level. Among several volumes and more than 50 papers may be noted the collection of essays edited by Vivian Nutton, *Medicine at the Courts of Europe, 1500-1837* (Routledge, 1990), based on a symposium organised in 1986 by the Institute and the Herzog August Bibliothek, Wolfenbuttel, Germany.

The Institute's programme of seminars and symposia has been maintained, with only a modest diminution in scale. The Research Seminar for 1989-90 had as its theme Medical Lives and Practice, and now meets in the Library's Reading Room in Bentley House. Six all-day symposia were held, including one on Meteorology and Medicine in conjunction with the History Section of the Royal Meteorological Society. During the development of the Wellcome Building alternative venues have had to be found, including the King's Fund Centre in Camden Town and the National Hospital, Queen Square. Other themes included the Popularisation of Science, History of Medical Ethics, History of Hysteria, Infant and Child Care and Mortality, 1850-1940, and Palaeopathology and Medical History.

Other notable events included two public lectures; that by Professor Richard Lovell of the University of Melbourne offered a fascinating preview of his forthcoming biography of Lord Moran, whose papers are in the Institute's Contemporary Medical Archives Centre. Dr Robert Kark, Rush Presbyterian, St Luke's Medical Center, Chicago, gave the first Amalie and Edward Kass Lecture, a new biennial series endowed by the Kass children. It was a moving occasion, as many of Edward Kass's British friends gathered to pay their respects to him. His death three months later deprived the Institute of a loyal friend.

The informal faculty exchange arrangements with the Institute of the History of Medicine, Johns Hopkins University were continued, with Dr W Bynum spending a month in Baltimore. A similar scheme has been started with the Department of the History of the Health Sciences, University of California at San Francisco, with Dr Roy Porter representing the Institute. Staff at the Unit gave a number of external lectures abroad including Canada, Holland, Australia, France, Spain, Portugal and the United States.

WELLCOME TROPICAL INSTITUTE

Professor Eldryd Parry completed his five year contract as Director of the Wellcome Tropical Institute at the end of September 1990. The Tropical Institute had been originally created to modernise and develop the Wellcome Museum of Medical Science when it was taken over from the Wellcome Foundation Ltd. During the five years of his directorship a series of moves for the museum and latterly for its offices caused disruption of its work until, ultimately with the development of the Wellcome Building complex, the Trustees decided to disband it as a separate entity. The Wellcome Tropical Institute Museum will be the resource from which the Wellcome Tropical Videodisc Project is developed.

Professor Parry's special interest in Distance Learning is now being continued from a base at the London School of Hygiene and Tropical Medicine, with continuing support from the Trust for the next two years.

The Tropical Historical Library and Archive, started before his appointment, is now absorbed into the Wellcome Institute for the History of Medicine. This will be the resource for the history of tropical medicine activities now being encouraged by the Trust alongside the videodisc development.

Professor Parry's great experience of Africa has meant that the Distance Learning Programme, developed by him and his colleague Charles Engel in the Tropical Institute, has been adopted in a number of countries in Africa, notably Ethiopia, Zimbabwe, Ghana and Tanzania. There are now texts on the following subjects available: Acute respiratory infections; Anaemia in infancy; Anaemia in Pregnaucy; Burns; Diarrhoea in children; Drainage of the pleural cavity; Epidemiology; Malaria; Management; Obstructed labour; Red eye and common blinding diseases; Sexually transmitted diseases; and Surgical emergencies.

Tropical Diseases Videodisc Project

During the year it was agreed to fund the development of an interactive videodisc to replace the Museum of the Wellcome Tropical Institute. The contents of the Museum together with new material from a variety of other sources will be placed on a combination of videodisc and computer. This will make the collection portable and produce a more versatile resource for teaching and learning. \$760,000 was allocated during 1989/90 to the project by the Trustees.

The Trustees see this as a cooperative project facilitated by the Trust rather than an initiative that is exclusive to the Trust. This philosophy is in line with the fact that much of the visual material in the former Museum has been donated to the Trust, free of charge, by many scientists over the years.

The project is led by Dr J A Longstaffe who is Director of the Computers in Teaching Initiative Centre for Medicine in the University of Bristol. A team of computer programmers and systems designers led by Dr M Whittlestone and Professor D Ingram, Professor of Medical Informatics at St Bartholomew's Hospital Medical School, will provide the bulk of software infrastructure and specify the necessary hardware. Dr P Harkin, University of Leeds, will develop a tutorial authoring system which will enable university staff to produce their own interactive learning modules using the visual and computer databases. A group of doctors and programmers led by Dr J Poyser at the University of Sheffield will develop a computer programme which will use computer games' philosophy to generate problems of diagnosis and case management to challenge and train users by constructing an unlimited series of simulated patients from the database.

Dr S Lucas, Department of Pathology, University College and Middlesex School of Medicine, will provide a definitive archive of illustrations of pathological and histological material appropriate to tropical medicine.

Two-thirds of tropical medicine concerns problems of maternal and child health. The Institute of Child Health, University of London (Dr R Richardson and Dr Jann Marshall) has therefore agreed to contribute to the project by allowing access to the valuable slide archive at the Hospital for Sick Children and its Teaching Aids at Low Cost centre and will produce tutorials in this important area of tropical medicine.

The first year of the project will largely consist of building the archive and developing the computer software to the point where the project can receive material from others and the development of tutorials can start. As the project develops, it is planned to involve many other individuals from the university system to extend the scope of this large and ambitious venture.

WELLCOME TRUST FILM UNIT

During the year Anthony Palmer undertook to make a film entitled *The Welltome Legacy*. This film, now complete, gives a synopsis of the objectives of Sir Henry Wellcome's will and the fulfilment of its purpose by his Trustees. It uses the following three major projects to illustrate the scientific work of the Trust;

- the developmental biology unit in Cambridge
- the care and study of the premature infant at University College London
- the joint KEMRI and Wellcome Trust Unit at Kilifi in Kenya which is working on malaria.

A scene from the film The Wellcome Legacy. Dr Kevin Marsh, leader of the clinical research team at Kilift where the team is researching into severe Plasmodium falciparum malaria in children.

Other parts of the film show the growth of the Trust and the care and use of Sir Henry Wellcome's collections. It runs for 25 minutes and is an excellent production.

Two of the Trust's earlier films on the history of sleeping sickness have received awards. Entebbe Encounter was awarded Best Camera at the 1990 International Visual Communication Association Festival, and The Sleep of Death was awarded a certificate for creative excellence at the US Industrial Film and Video Festival.

The use of these films and some of those on more biological topics has been examined by several university departments and many copies have now been sold at cost price or given away to suitable institutions.

The importance of film material as an archive for the history of medicine has also been examined through a fellowship to Dr M Clark to catalogue films on the cardiovascular system, and more recently to extend this catalogue to cover a wider subject base. Dr Clark has also produced a book entitled Medical, Biomedical Science and History. A Catalogue of Films and Videos Available for Purchase. It gives details of the films made by the Trust film unit and its predecessor, the film unit of the Wellcome Foundation Limited. Many of these films are available on video.

The activities of the film unit now continue on a contractual basis with Frontrunner Films, a company established by Anthony Palmer.

MEDALS AND PRIZES

The Wellcome Prize in Physiology

The Wellcome Prize in Physiology was instituted in 1986 and is intended to encourage young physiologists to bring their work to general notice. The prize, which is biennial, is in the form of a lecture, an award of £500 and a medal.

The award for 1990 has been made to Dr AY King, University Laboratory of Physiology, Oxford. His lecture, given at the Semi-Annual General meeting was titled "A map of auditory space in the mammalian brain: neural computation and development".

Association of Military Surgeons of the United States of America

The Sir Henry Wellcome Medal and Prize, instituted by Sir Henry Wellcome in 1916, is awarded annually by the Council of the Association of Military Surgeons of the United States of America, Washington, D.C. The recipients are Medical Officers of the Armed Forces of the United States of America or the US Public Health Service. The medal and prize are awarded for an essay or report on original research dealing with military applications of medicine.

The medal and prize for 1990 was awarded to Captain Charles M Evans, Jr, MD, PhD. Captain Evans is Chief of the Tumour Biology Section of the National Cancer Institute at the National Institutes of Health in Bethesda and a captain in the Commissioned Officers Corps of the US Public Health Service. His prize winning essay was entitled 'Leukoregulin: a new biotherapeutic cytokine in the search for more effective antiviral pharmacological agents'.

SUBJECT INDEX

Alcohol Concern 51

A	-1L
abdomen, chemoreceptor reflexes 83	allergens
Aberdeen, University 34, 47, 52, 58, 76, 79, 86, 94, 100	house dust mites 70
Aberystwyth, University College of Wales 58, 70	maternal exposure during pregnancy, and cord blood
abortogenic infection, equid herpesvirus 198	IgE 80 allergic diseases
acetylcholine	in babies 74
receptor	encephalomyelitis, resistance to experimental 107
myasthenia gravis 115	T cell anergy in regulation of 67
nematode 80	alpha 2 agonists, excretion of copper in bile of sheep and 81
release, at Torpedo neuromuscular junction 83	alpha-iduronate-sulphate-sulphatase gene, and Hunter
vesicular acetylcholine uptake system 46	disease 74
acetylcholinesterase, role in mammalian brain 49	alpha-ketobutyrate-synthesizing enzymes, in anaerobic
acid base transport systems, in colon cancer cell line 82	protozoan parasites 59
acquired immune deficiency syndrome	aluminium
Kenya 92	excretion, renal mechanisms 79
see also human immunodeficiency virus	in model of Alzheimer's disease 47
actin gene expression, muscle, amphibian	Alzheimer's disease 49, 51
embryogenesis 109 alpha-actinin 70	abnormal phosphorylation in microtubule-associated
activity, regulation of nerve muscle contacts by 85	protein tau in 49
adaptors, diversity and targeting 69	aluminium in model of 47
adenosine, and coronary functional hyperaemia 81	cellular changes leading to 53 neuropsychology 44
adenosine diphosphatase, vascular 73	secondary messenger systems, brain 110
adenosine triphosphate	amacrine cells, in vertebrate retina 48
ATP-sensitive potassium channels	amblyopia, binocular function in 52
arterial smooth muscle 86	America see Brazil; Latin America; Peru; United States of
regulation in muscle 38	America
receptors, on endothelial cells 82	American Association for the History of Medicine 124
adenylate cyclase	amino acids
activity 68	receptors, and synaptic plasticity in hippocampal
coupled receptors, agonist binding and response,	neurones 45
closed cell lines 79	turnover, diabetes type 1 32
adoption, and psychiatric illness in women 45	amino imidazole ribotide-carboxylase, and drug design 37
adrenal	aminoacyl-tRNA synthetases 109
chromatin cells, stimulation of phosphatidic acid	amnesia, organic, memory deficits, remediation 45 amphibians
production by bradykinin in 82 cortex 70	actin gene expression, muscle, embryogenesis 109
function, in preterm infants 85	amphibian development, transcription factor
hyperplasia, congenital 71	localization 73
regeneration hypertension, rat 82	neurones, spinal cord, role in amphibian tadpole 38
