We are probably most familiar with the cross in its simplest form: the Latin Cross. However, the cross symbol has many formats appearing in heraldry, freemasonry. and religion. Each format is interpreted many ways, and each change in format has multiple names and is interpreted to represent multiple ideas. This article will not explore those representations, as they could consume a large volume.

The cross was originally associated with executioners. When Emperor Constantine abolished execution by crucifixion in the 4<sup>th</sup> Century, the cross transitioned into a symbol of the Christian religion. Cross symbols were used during the crusades and have played a major role in heraldry. When an image of Christ (corpus) is shown nailed to a cross, it is called a crucifix.

Crosses are grouped into four main groups: Crux Immissa, Crux Commissa, Crux Decussata and Crux Simples.

The **Crux Simplex**, being a simple upright post, does not have the transverse beam found on other forms. The ancient Greek word for stake is stauros (n) and stauroo (v). This simple post was common for crucifixions until the Phoenicians added a cross beam to make a crux immissa.

The crux simplex evolved from a tree - infelix lignum or arbor infelix dedicated to the gods of the nether world, a non-fruiting tree, unproductive, valueless, and therefore considered suitable for crucifying criminals. A common crucifixion method was to bind the condemned person's wrists to a beam (*patibulum*) and then attach that beam to a tree or stipe, thereby forming a cross (crux composita or crux acuta).

The Crux Commissa is a 'T' shaped cross; commissa meaning 'joined' or 'attached'. The more widely known names are the Tau Cross (St. Anthony's Cross) and the Forked Cross (Y-shaped Cross).

The Crux Decussata comes from decus. Latin for 'distinction'. 'honour', 'glory' and 'grace'. The Roman numeral X is ten (decem). The Chinese and Japanese character for ten

also happens to be a cross.

There are two variations of the dimensions for a cross—sublimes and *humilis*:

**CRUX SUBLIMIS** - tall cross, where the victim was high off the ground. This would be used for people who had commanded a high rank in society (the **Latin Cross**, etc.)

**CRUX HUMILIS** - a low cross, where the victim's feet were close to the ground—the height and width are equal. To suit the shape and size of shields, heraldic crosses are often shown where the height and width are equal. (Most crosses appearing on buttons fall into this category.)

A Chrismon is a Christian symbol that represents aspects of the person, life or ministry of Jesus Christ. Most of the crosses in this article are Chrismons.

#### CROSSES IN HERALDRY

Because every minute aspect of the cross is symbolic, and crosses are used extensively in heraldry, we shall follow this article with a second article focused on the "Cross in Heraldry" and introduce the terminology for the various cross attributes and representations.
