

ALPHACOOL – THE COOLING COMPANY

## Alphacool Cape Corp Coolplex HF Metall

### What is it?

The Alphacool Cape Corp Coolplex HF Metal is the first reservoir from Alphacool which has a base and top made completely out of brass and also has the Lighttower water effect.

### Highlights

1. Base and top made of brass
2. Lighttower water effect
3. Three sizes and two colours
4. Many connection options

### Variants:

---

#### Chrome

## Technical Specification

Technical Data	Cape Corp Coolplex HF Metall 10	Cape Corp Coolplex HF Metall 15	Cape Corp Coolplex HF Metall 25
Dimension (LxWxH):	49 x 49 x 117 mm	49 x 49 x 154 mm	49 x 49 x 259 mm
Material	brass, acryl glass		
Threads	5x G1/4"		
Mounting	2x universal mountClip-On		
Color	available in deep black and chrome

## Article Texts

---

### Up to 50 words

The Alphacool Cape Corp Coolplex HF Metal is available in sizes 10, 15, and 25, and the colors chrome or deep black. The base and top are brass. An inlet and outlet are both located at the side of the base and underneath, as well as one inlet in the top. Clip-on brackets are included for installation.

### Up to 125 words

Base and top of the Alphacool Cape Corp Coolplex HF Metal are made of pure brass, giving it a unique look. The Lighttower water effect, well-known from the Eisbecher series, is also used here. An inlet and outlet are located on the side as well as under the base. There is also an inlet in the top, though using this means the Lighttower effect will not work. Installing the reservoir in the case is done with two clip-on brackets, which are fastened to the case with just one screw each. This makes positioning the reservoir much easier. The Cape Corp Coolplex HF Metal just needs to be clipped on and fastened. The Alphacool Cape Corp Coolplex is available in three sizes: Metal 10, 15, and 25, and in chrome or deep black.

### Up to 250 words

With the Alphacool Cape Corp Coolplex HF Metal, you get a reservoir in elegant brass. The base and top are both made of solid nickel-plated brass, creating a uniquely elegant look. Another optical highlight is the Lighttower water effect, well-known from the Alphacool Eisbecher. Small openings in the riser pipe let streams of water spray sideways against the reservoir's acrylic glass and run down. Changing the flow rate can create different effects. If you'd rather not use the water effect, you can simply fill the reservoir past the rising pipe. The base has two options for connecting both the inlet and outlet – on the side of the base or directly underneath it. This gives you different options for setting up your system the way you want it. You can also pass the water into the reservoir through its top, though this setup does have some disadvantages. The included clip-on brackets make installation a cinch. The brackets are simply screwed in at the desired place with an M4 screw. The reservoir just needs to be clipped on. When the Cape Corp Coolplex HF Metal is at the desired height, the clips can be fastened to hold the reservoir in place. It doesn't get any easier than that. The Alphacool Cape Corp Coolplex HF Metal is available in Chrome and Deep Black versions, as well as in three sizes: Metal 10, Metal 15 and the large Metal 25. There's a version to fit any system.

## Up to 500 words

With the Alphacool Cape Corp Coolplex HF Metal, you get a reservoir in elegant brass. The base and top are both made of solid nickel-plated brass, creating a uniquely elegant look in your computer. The Cape Corp Coolplex HF Metal doesn't get its good looks from various gimmicks, but rather from its simplicity and the materials used.

And yet, the Cape Corp Coolplex HF Metal still features an optical highlight that has become virtually essential to the Alphacool Series. The Lighttower water effect is included here too. The streams of water coming sideways out of the riser pipe hit the transparent Plexiglas of the reservoir, creating a unique fountain effect that changes at every flow rate. If you'd rather not use the water effect, you can simply fill the reservoir past the riser pipe.

The base has two options for connecting both the inlet and outlet – on the side of the base or directly underneath it. This gives you different options for setting up your system the way you want it. You can also pass the water into the reservoir through its top, though this setup does have some disadvantages. This setup means going without the Lighttower water effect, and of course that air will enter the cooling loop when it is switched off.

The included clip-on brackets make installation a cinch. The brackets are simply screwed in at the desired place with an M4 screw. If your case doesn't have holes in the right places, you can simply drill those in. The reservoir just needs to be clipped on. When the Cape Corp Coolplex HF Metal is at the desired height, the clips can be fastened to hold the reservoir in place. It doesn't get any easier than that.

The Alphacool Cape Corp Coolplex HF Metal is available in Chrome and Deep Black versions. Alphacool also carries three different sizes. From the extremely compact Metal 10 to the medium Metal 15 up to the expansive Metal 25, you choose the right version to fit your unique system.
