

PRODUCT INFORMATION

Alpine rear seat entertainment: brilliant colors are *de rigueur*. The latest generation of monitors.

Children bored? Parents on edge? All that is now a thing of the past! Alpine's latest monitors ensure top-quality entertainment in the back seats.

The **PKG-2000P** is a flipdown monitor with an integrated, space-saving DVD player. The package includes a remote control and a cordless headset. The monitor's 10.2" display has a resolution of 1.15 million pixels and, as with all **Alpine** units, guarantees razor-sharp images. The **PKG-2000P** can be controlled directly from the rear seats or from the driver's seat. One feature which deserves special mention is the "Auto Play" function, which starts the main movie automatically without passengers having to spend time scrolling through the DVD menu. The **PKG-2000P** also reproduces signals from external audio/video sources, such as a video iPod or a camcorder. The built-in FM modulator enables the sound to be reproduced by way of the vehicle's audio system. The A/V input on the front panel permits the connection of additional peripheral units, such as a game console or a digital camera.

The options are many and varied: the **Alpine** unit can be connected to a rear seat entertainment system, for example, for the enjoyment of children or adults in the back seats. Always having his iPod on board with him, the driver can of course treat passengers to a private view of his collection of photographs.

High definition pictures are also supplied by the new **PKG-850P**, an 8.5" flipdown monitor with a resolution of 1.15 million pixels. Thanks to two A/V inputs and one A/V output, the **PKG-850P** can be configured on an individual basis. The package includes an infrared headset and a remote control.

Alpine has developed further attractive solutions for individual expansion of the rear seat multimedia system. The range includes the **TME-M780** 7" monitor and the **TME-M680** 5.8" screen. Both of these headrest monitors feature high-resolution displays which ensure sharp pictures, perfect contrast and gorgeous colors. An extra screen can be added to the two monitors by means of a **TME-MX80EM** add-on kit – for an affordable price. **TME-M780** and **TME-M680** can be combined with an Alpine DVD control unit and enhanced with the addition of a game console, for example, or the **TUE-150DVB** mobile DVB-T tuner.
