Contents

Preface	vii
Notation	ix
Chapter 1. Simplicial Homology	1
§1. Definition and Some Properties	1
§2. Invariance of Homology	6
§3. Relative Homology	12
§4. Cohomology and Universal Coefficient Theorem	21
§5. Calculations	35
§6. The Euler Characteristic and the Lefschetz Theorem	51
Chapter 2. Cohomology Rings	59
§1. Multiplication in Cohomology	59
§2. Homology and Cohomology of Manifolds	69
§3. The Künneth Theorem	95
Chapter 3. Applications of Simplicial Homology	111
§1. Homology and Homotopy	111
§2. Characteristic Classes	131
§3. Group Actions	173
§4. Steenrod Squares	184
Chapter 4. Singular Homology	195
§1. Basic Definitions and Properties	195

§2. The Poincaré and Lefschetz Isomorphisms for Topological Manifolds	227
§3. Characteristic Classes: Continuation	252
Chapter 5. Čech Cohomology and de Rham Cohomology	263
§1. Sheaf Cohomology	263
§2. De Rham Cohomology	275
§3. The de Rham Theorem	289
Chapter 6. Miscellany	301
§1. The Alexander Polynomial	301
§2. The Arf Invariant	317
§3. Embeddings and Immersions	325
§4. Complex Manifolds	339
§5. Lie Groups and H -Spaces	344
Hints and Solutions	365
Bibliography	403
Index	411

Preface

This book is a natural continuation of the author's earlier book *Elements of Combinatorial and Differential Topology* (American Mathematical Society, Providence, RI, 2006), which we refer to as Part I here. (A corrected Russian version of Part I is available at <http://www.mccme.ru/prasolov>.)

In Chapter 1, we define simplicial homology and cohomology and give many examples of their calculations and applications. At this point, the book diverges from standard modern courses in algebraic topology, which usually begin with introducing singular homology. Simplicial homology has a simpler and more natural definition. Moreover, it is simplicial homology that is usually involved in calculations. For this reason, we introduce singular homology near the end of the book and use it only when it is indeed necessary, mainly in studying topological manifolds.

Homology and cohomology groups with arbitrary coefficients are expressed in terms of integral homology by means of the functors Tor and Ext. The properties of these functors are very important for homology theory, so we discuss them in detail.

We first prove the Poincaré duality theorem for simplicial (co)homology. This proof applies only to smooth (to be more precise, triangulable) manifolds. There is no triangularization theorem for topological manifolds, and the proof of the Poincaré duality theorem for them uses, of necessity, singular (co)homology. This proof is given in Chapter 4; it is very cumbersome.

Chapter 2 considers an important algebraic structure on cohomology, the cup product of Kolmogorov and Alexander. It is particularly useful in the case of manifolds. Multiplication in cohomology is related to many topological invariants of manifolds, such as the intersection form and signature.

One possible approach to constructing multiplication in cohomology is based on a theorem of Künneth, which expresses the (co)homology of $X \times Y$ in terms of those of X and Y and is of independent interest.

Chapter 3 is devoted to various applications of (simplicial) homology and cohomology. Many of them are related to obstruction theory. One of such applications is the construction of the characteristic classes of vector bundles. Other approaches to constructing characteristic classes (namely, the universal bundle and axiomatic approaches) are also discussed. Then, we consider the (co)homological properties of spaces with actions of groups; we construct transfers and Smith's exact sequences. We conclude the chapter with constructing Steenrod squares, which generalize multiplication in cohomology.

In Chapter 4, we define singular (co)homology and describe some of its applications; in particular, we obtain certain properties of characteristic classes. (Technically, it is more convenient to prove them by using singular cohomology, although the assertions themselves can be stated for simplicial cohomology.)

Chapter 5 considers yet another approach to constructing cohomology theory, namely, Čech cohomology and de Rham cohomology, which are closely related to each other. For the de Rham cohomology, we prove the Poincaré duality theorem. Then, we carry over the construction of de Rham, which was originally introduced for smooth manifolds, to arbitrary simplicial complexes.

The final Chapter 6 is devoted to various applications of homology theory, largely to the topology of manifolds. We begin with a detailed account of the Alexander polynomials, which we construct by using the homology of cyclic coverings; the Arf invariant is also considered. Then, we prove the strong Whitney embedding theorem. We also give a formula for calculating the Chern classes of complete intersections and discuss some homological properties of Lie groups and H -spaces.

The book contains many problems (with solutions) and exercises. The problems are based on the materials of topology seminars for second-year students held by the author at the Independent University of Moscow in 2003.

The basic notation, as well as theorems and other assertions, of Part I are mostly used without explanations; in some cases, we give references to the corresponding places in Part I.

This work was financially supported by the Russian Foundation for Basic Research (project nos. 05-01-01012a, 05-01-02805-NTsNIL_a, and 05-01-02806-NTsNIL_a).

Notation

$H_k(X; G)$, the k -dimensional homology group of X with coefficients in G ;
 $H^k(X; G)$, the k -dimensional cohomology group of X with coefficients in G ;
 $\text{Hom}(A, B)$, the group of homomorphisms $A \rightarrow B$;
 $A \otimes B$, the tensor product of the Abelian groups A and B ;
 $\text{Tor}(A, B)$, see p. 29;
 $\text{Ext}(A, B)$, see p. 29;
 $\text{Coker } \alpha$, the cokernel of the homomorphism α (see p. 15);
 $[M^n]$, the fundamental class of the manifold M^n ;
 $\chi(X)$, the Euler characteristic of X ;
 $\Lambda(f)$, the Lefschetz number of the map f ;
 $\sigma(M^{4n})$, the signature of the manifold M^{4n} ;
 ε^k , the k -dimensional trivial vector bundle;
 $w_k(\xi)$, the k th Stiefel–Whitney class of the bundle ξ ;
 $c_k(\xi)$, the k th Chern class of the bundle ξ ;
 $p_k(\xi)$, the k th Pontryagin class of the bundle ξ ;
 Sq^i , the Steenrod square.

Titles in This Series

- 84 **Charalambos D. Aliprantis and Rabee Tourky**, Cones and order, 2007
- 83 **Wolfgang Ebeling**, Functions of several complex variables and their singularities (translated by Philip G. Spain), 2007
- 82 **Serge Alinhac and Patrick Gérard**, Pseudo-differential operators and the Nash–Moser theorem (translated by Stephen S. Wilson), 2007
- 81 **V. V. Prasolov**, Elements of homology theory, 2007
- 80 **Davar Khoshnevisan**, Probability, 2007
- 79 **William Stein**, Modular forms, a computational approach (with an appendix by Paul E. Gunnells), 2007
- 78 **Harry Dym**, Linear algebra in action, 2007
- 77 **Bennett Chow, Peng Lu, and Lei Ni**, Hamilton’s Ricci flow, 2006
- 76 **Michael E. Taylor**, Measure theory and integration, 2006
- 75 **Peter D. Miller**, Applied asymptotic analysis, 2006
- 74 **V. V. Prasolov**, Elements of combinatorial and differential topology, 2006
- 73 **Louis Halle Rowen**, Graduate algebra: Commutative view, 2006
- 72 **R. J. Williams**, Introduction the the mathematics of finance, 2006
- 71 **S. P. Novikov and I. A. Taimanov**, Modern geometric structures and fields, 2006
- 70 **Seán Dineen**, Probability theory in finance, 2005
- 69 **Sebastián Montiel and Antonio Ros**, Curves and surfaces, 2005
- 68 **Luis Caffarelli and Sandro Salsa**, A geometric approach to free boundary problems, 2005
- 67 **T.Y. Lam**, Introduction to quadratic forms over fields, 2004
- 66 **Yuli Eidelman, Vitali Milman, and Antonis Tsolomitis**, Functional analysis, An introduction, 2004
- 65 **S. Ramanan**, Global calculus, 2004
- 64 **A. A. Kirillov**, Lectures on the orbit method, 2004
- 63 **Steven Dale Cutkosky**, Resolution of singularities, 2004
- 62 **T. W. Körner**, A companion to analysis: A second first and first second course in analysis, 2004
- 61 **Thomas A. Ivey and J. M. Landsberg**, Cartan for beginners: Differential geometry via moving frames and exterior differential systems, 2003
- 60 **Alberto Candel and Lawrence Conlon**, Foliations II, 2003
- 59 **Steven H. Weintraub**, Representation theory of finite groups: algebra and arithmetic, 2003
- 58 **Cédric Villani**, Topics in optimal transportation, 2003
- 57 **Robert Plato**, Concise numerical mathematics, 2003
- 56 **E. B. Vinberg**, A course in algebra, 2003
- 55 **C. Herbert Clemens**, A scrapbook of complex curve theory, second edition, 2003
- 54 **Alexander Barvinok**, A course in convexity, 2002
- 53 **Henryk Iwaniec**, Spectral methods of automorphic forms, 2002
- 52 **Ilka Agricola and Thomas Friedrich**, Global analysis: Differential forms in analysis, geometry and physics, 2002
- 51 **Y. A. Abramovich and C. D. Aliprantis**, Problems in operator theory, 2002
- 50 **Y. A. Abramovich and C. D. Aliprantis**, An invitation to operator theory, 2002
- 49 **John R. Harper**, Secondary cohomology operations, 2002
- 48 **Y. Eliashberg and N. Mishachev**, Introduction to the h -principle, 2002
- 47 **A. Yu. Kitaev, A. H. Shen, and M. N. Vyalyi**, Classical and quantum computation, 2002

TITLES IN THIS SERIES

- 46 **Joseph L. Taylor**, Several complex variables with connections to algebraic geometry and Lie groups, 2002
- 45 **Inder K. Rana**, An introduction to measure and integration, second edition, 2002
- 44 **Jim Agler and John E. M^cCarthy**, Pick interpolation and Hilbert function spaces, 2002
- 43 **N. V. Krylov**, Introduction to the theory of random processes, 2002
- 42 **Jin Hong and Seok-Jin Kang**, Introduction to quantum groups and crystal bases, 2002
- 41 **Georgi V. Smirnov**, Introduction to the theory of differential inclusions, 2002
- 40 **Robert E. Greene and Steven G. Krantz**, Function theory of one complex variable, third edition, 2006
- 39 **Larry C. Grove**, Classical groups and geometric algebra, 2002
- 38 **Elton P. Hsu**, Stochastic analysis on manifolds, 2002
- 37 **Hershel M. Farkas and Irwin Kra**, Theta constants, Riemann surfaces and the modular group, 2001
- 36 **Martin Schechter**, Principles of functional analysis, second edition, 2002
- 35 **James F. Davis and Paul Kirk**, Lecture notes in algebraic topology, 2001
- 34 **Sigurdur Helgason**, Differential geometry, Lie groups, and symmetric spaces, 2001
- 33 **Dmitri Burago, Yuri Burago, and Sergei Ivanov**, A course in metric geometry, 2001
- 32 **Robert G. Bartle**, A modern theory of integration, 2001
- 31 **Ralf Korn and Elke Korn**, Option pricing and portfolio optimization: Modern methods of financial mathematics, 2001
- 30 **J. C. McConnell and J. C. Robson**, Noncommutative Noetherian rings, 2001
- 29 **Javier Duoandikoetxea**, Fourier analysis, 2001
- 28 **Liviu I. Nicolaescu**, Notes on Seiberg-Witten theory, 2000
- 27 **Thierry Aubin**, A course in differential geometry, 2001
- 26 **Rolf Berndt**, An introduction to symplectic geometry, 2001
- 25 **Thomas Friedrich**, Dirac operators in Riemannian geometry, 2000
- 24 **Helmut Koch**, Number theory: Algebraic numbers and functions, 2000
- 23 **Alberto Candel and Lawrence Conlon**, Foliations I, 2000
- 22 **Günter R. Krause and Thomas H. Lenagan**, Growth of algebras and Gelfand-Kirillov dimension, 2000
- 21 **John B. Conway**, A course in operator theory, 2000
- 20 **Robert E. Gompf and András I. Stipsicz**, 4-manifolds and Kirby calculus, 1999
- 19 **Lawrence C. Evans**, Partial differential equations, 1998
- 18 **Winfried Just and Martin Weese**, Discovering modern set theory. II: Set-theoretic tools for every mathematician, 1997
- 17 **Henryk Iwaniec**, Topics in classical automorphic forms, 1997
- 16 **Richard V. Kadison and John R. Ringrose**, Fundamentals of the theory of operator algebras. Volume II: Advanced theory, 1997
- 15 **Richard V. Kadison and John R. Ringrose**, Fundamentals of the theory of operator algebras. Volume I: Elementary theory, 1997
- 14 **Elliott H. Lieb and Michael Loss**, Analysis, 1997
- 13 **Paul C. Shields**, The ergodic theory of discrete sample paths, 1996
- 12 **N. V. Krylov**, Lectures on elliptic and parabolic equations in Hölder spaces, 1996
- 11 **Jacques Dixmier**, Enveloping algebras, 1996 Printing

For a complete list of titles in this series, visit the
AMS Bookstore at www.ams.org/bookstore/.

The book is a continuation of the previous book by the author (*Elements of Combinatorial and Differential Topology*, Graduate Studies in Mathematics, Volume 74, American Mathematical Society, 2006). It starts with the definition of simplicial homology and cohomology, with many examples and applications. Then the Kolmogorov–Alexander multiplication in cohomology is introduced. A significant part of the book is devoted to applications of simplicial homology and cohomology to obstruction theory, in particular, to characteristic classes of vector bundles. The later chapters are concerned with singular homology and cohomology, and Čech and de Rham cohomology. The book ends with various applications of homology to the topology of manifolds, some of which might be of interest to experts in the area.

The book contains many problems; almost all of them are provided with hints or complete solutions.
