"Magnat's new speaker series The Quantum 800 series consists of a three-way and two-way floor-standing speaker (807 + 805 respectively), a shelf speaker (803), centre speaker (816) and the Omega 250 LTD subwoofer. The top class components in this home cinema system can be freely combined. For our test we opted for two 805 and 803 speakers as well as a sub and centre speaker. The result is as brilliant as one would expect from the beautifully reflective coating of the elegant speakers. Driven by a powerful AV receiver, the sextet fills large rooms effortlessly with sound. Liveliness and sound fidelity are outstanding, while the powerful woofer generates the necessary kick - almost literally, as the ground seems to tremble at full volume. Typical movie

soundtracks pose little challenge to the set. Its full strengths are revealed when playing music or when operated at high volume. The fact that the quality of workmanship and configuration of these top class speakers, which are also available in black and white finishes, is also excellent, almost goes without saying. However: The pleasure doesn't come cheap. Our setup cost € 3,550..."

- + Level stability and resilience
- + Equally suited for music and movies
- + Clear reproduction from the centre channel
