Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
RSL Table, May 2018 Industrial Soil [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the
approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the
sample and meet quality control criteria. The presence or absence of the analyte cannot be
verified.
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
RSL Table, May 2018 Industrial Soil [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the
approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the
sample and meet quality control criteria. The presence or absence of the analyte cannot be
verified.
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
RSL Table, May 2018 Industrial Soil [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
pg/g = picograms per gram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte

JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy:  1)  Lower of DOEE/MCL (primary standards).  2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the
approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the
sample and meet quality control criteria. The presence or absence of the analyte cannot be
verified.
pg/l = picograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:

Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.

D = Dissolved

T = Total

N = Normal

FD = Field Duplicate

EN = Essential nutrient

HHRA screening values provided for detected compounds or compound sums where applicable.

Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.

J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte

J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.

JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.

U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
ug/l = micrograms per liter

J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
mg/l = milligrams per liter
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential Nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
pg/l = picograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential Nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
ug/l = micrograms per liter

J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential Nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
D = Dissolved
T = Total
N = Normal
FD = Field Duplicate
EN = Essential Nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
ug/l = micrograms per liter

Notes:

Bold values indicate detects.

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample and the numerical value has a high bias.

J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample and the numerical value has a low bias.

UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate and may or may not represent the actual limit of quantitation in the sample.

U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

D = Dissolved T = Total

N = Normal

mg/l = milligrams per liter

ug/l = micrograms per liter

Notes:
Bold values indicate detects.

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample and the numerical value has a high bias.

J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample and the numerical value has a low bias.

JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

JX = The analyte was identified by GC/ECD but not confirmed by GC/MS; the result value represents a probable false postitive result.

UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate and may or may not represent the actual limit of quantitation in the sample.

U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

mg/kg = milligrams per kilogram

ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
N = Normal
FD = Field Duplicate
HHRA screening values provided for detected compounds or compound sums where applicable.
RSL Table, May 2018 Industrial Soil [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
mg/kg = milligrams per kilogram
pg/g = picograms per gram
ug/kg = micrograms per kilogram

JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
N = Normal
FD = Field Duplicate
EN = Essential Nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
RSL Table, May 2018 Industrial Soil [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria.
The presence or absence of the analyte cannot be verified.
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Project Screening Criteria.
T = Total
N = Normal
FD = Field Duplicate
EN = Essential nutrient
HHRA screening values provided for detected compounds or compound sums where applicable.
Heirarchy: 1) Lower of DOEE/MCL (primary standards). 2) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte.
JN = The analyte was tentatively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the reported sample quantitation limit. The reported quantitation limit is approximate.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
mg/l = milligrams per liter
pg/l = picograms per liter
ug/l = micrograms per liter

Notes:

Bold values indicate detects. Highlighted values indicate exceedance of the Human Health Risk Assessment (HHRA) screening level.
Italicized values indicate exceedance of the Ecological Risk Assessment (ERA) screening level.
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
D = Dissolved
deg F = degrees Farenheit
mg/l = milligrams per liter
ms/cm = millisiemens per centimeter
mV = millivolt
ntu = nephelometric turbidity units
pg/l = picograms per liter

ppt = parts per trillion
ug/l = micrograms per liter
T = Total
N = Normal
FD = Field Duplicate
HHRA and ERA screening values provided for detected compounds or compound sums where applicable.
(a) The HHRA selected surface water screening level was chosen from the following hierarchy:
1) DOEE SW Class D (2013) 2) NRWQC, organism only (9/2017) 3) RSL Table, May 2018 Tapwater [ELCR = 1E-6, HQ=0.1]
(b) Chronic ESVs selected based on a hierarchy of water quality standards and benchmarks from DDOE WQS Criteria (DOH, 2014), USEPA Region 3 freshwater screening values (USEPA, 2006), and literature values (Suter and Tsao, 1996; Buchman, 2008).

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Human Health Risk Assessment (HHRA) screening level.
Italicized values indicate exceedance of the Ecological Risk Assessment (ERA) screening level.
Underlined values indicate exceedance of the BTV Statistic.
EN= Essential Nutrient
AVS = Acid Volatile Sulfide SEM = Simultaneously Extracted Metals
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

N = Normal
FD = Field Duplicate
HHRA and ERA screening values provided for detected compounds or compound sums where applicable.
(a) RSL Table, May 2018 Residential Soil [ELCR = 1E-6, HQ=0.1]
(b) Low Effect Ecological Screening Value
mg/kg = milligrams per kilogram
pCi/g = picocuries per gram
umol/g = micromoles per gram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Human Health Risk Assessment (HHRA) screening level.
Italicized values indicate exceedance of the Ecological Risk Assessment (ERA) screening level.
Underlined values indicate exceedance of the BTV Statistic.
EN= Essential Nutrient
AVS = Acid Volatile Sulfide SEM = Simultaneously Extracted Metals
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
HHRA and ERA screening values provided for detected compounds or compound sums where applicable.
(a) RSL Table, May 2018 Residential Soil [ELCR = 1E-6, HQ=0.1]
(b) Low Effect Ecological Screening Value
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Human Health Risk Assessment (HHRA) screening level.
Italicized values indicate exceedance of the Ecological Risk Assessment (ERA) screening level.
Underlined values indicate exceedance of the BTV Statistic.
BTV Statistic = Background threshold value statistic (95% upper tolerance limit) that is used to identify any COPCs for which concentrations are elevated relative to background.
EN= Essential Nutrient
AVS = Acid Volatile Sulfide SEM = Simultaneously Extracted Metals
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
HHRA and ERA screening values provided for detected compounds or compound sums where applicable.
(a) RSL Table, May 2018 Residential Soil [ELCR = 1E-6, HQ=0.1]
(b) Low Effect Ecological Screening Value
ug/kg = micrograms per kilogram

| | | | Depth | 0 - 0.5 ft |
| | | | Type | N |
| Analyte | Unit | HHRA Screening Levels (a) | | |
| 1,2,3,4,6,7,8-Heptachlorodibenzofuran | pg/g | | | **18.7 JN** |
| 1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin | pg/g | | | **75.2** |
| 1,2,3,4,7,8,9-Heptachlorodibenzofuran | pg/g | | | **1.58 JN** |
| 1,2,3,4,7,8-Hexachlorodibenzofuran | pg/g | | | **2.54 JN** |
| 1,2,3,4,7,8-Hexachlorodibenzo-p-dioxin | pg/g | | | **1.97 JN** |
| 1,2,3,6,7,8-Hexachlorodibenzofuran | pg/g | | | **3.55 JN** |
| 1,2,3,6,7,8-Hexachlorodibenzo-p-dioxin | pg/g | | | **3.64 J** |
| 1,2,3,7,8,9-Hexachlorodibenzofuran | pg/g | | | **0.301 JN** |
| 1,2,3,7,8,9-Hexachlorodibenzo-p-dioxin | pg/g | | | **3.96 J** |
| 1,2,3,7,8-PeCDF | pg/g | | | **1.25 JN** |
| 1,2,3,7,8-Pentachlorodibenzo-p-dioxin | pg/g | | | **1.65 JN** |
| 2,3,4,6,7,8-Hexachlorodibenzofuran | pg/g | | | **1.89 J** |
| 2,3,4,7,8-Pentachlorodibenzofuran | pg/g | | | **2.33 JN** |
| 2,3,7,8-Tetrachlorodibenzofuran | pg/g | | | **1.96 JN** |
| 2,3,7,8-Tetrachlorodibenzo-p-dioxin | pg/g | | | < 0.0415 U |
| Octachlorochlorodibenzofuran | pg/g | | | **23.6** |
| Octachlorochlorodibenzo-p-dioxin | pg/g | | | **1800** |
| Total HpCDD | pg/g | | | **175** |
| Total HpCDF | pg/g | | | **41.7 JN** |
| Total HxCDD | pg/g | | | **38.8 JN** |
| Total HxCDF | pg/g | | | **58.6 JN** |
| Total PeCDD | pg/g | | | **95.9 JN** |
| Total PeCDF | pg/g | | | **93.5 JN** |
| Total TCDD | pg/g | | | **10.4 JN** |
| Total TCDF | pg/g | | | **158 JN** |
| TCDD TEQ Bird | pg/g | | | **7.88** |
| TCDD TEQ Fish | pg/g | | | **5.32** |
| TCDD TEQ HH | pg/g | 4.8 | | **5.87** |

Notes:
Bold values indicate detects. Highlighted values indicate exceedance of the Human Health Risk Assessment (HHRA) screening level.
Italicized values indicate exceedance of the Ecological Risk Assessment (ERA) screening level.
Underlined values indicate exceedance of the BTV Statistic.
EN= Essential Nutrient
AVS = Acid Volatile Sulfide SEM = Simultaneously Extracted Metals
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
HHRA and ERA screening values provided for detected compounds or compound sums where applicable
(a) RSL Table, May 2018 Residential Soil [ELCR = 1E-6, HQ=0.1]
pg/g = picograms per gram

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
mg/kg = milligrams per kilogram
pCi/g = picocuries per gram

Notes:
Bold values indicate detects.
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects.
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate
ug/kg = micrograms per kilogram

Notes:
Bold values indicate detects.
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate

mg/l = milligrams per liter
ng/g = nanograms per gram
pg/l = picograms per liter
ug/l = micrograms per liter

Notes:
Bold values indicate detects.
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J+ = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J- = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
N = Normal
FD = Field Duplicate

mg/kg = milligrams per kilogram
pg/g= picograms per gram
ug/kg = micrograms per kilogram

**Notes:**
CAS - Chemical Abstracts Service.
EN - Essential Nutrient.
NA - Not Available; no appropriate surrogate.
RSL - Regional Screening Level.
PSL - Project Screening Level.
USEPA - United States Environmental Protection Agency.
(a) USEPA Regional Screening Level Table. (Target Risk =1E-06; Target Hazard Quotient=0.1). May 2018.
https://www.epa.gov/risk/regional-screening-levels-rsls
Residential value used for sediment, industrial value used for soil.
(b) - Value for 1,4-dichlororobenzene.
(c) - Value for 2,3,7,8-Tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD).
(d) - Value for phenol.
(e) - Value for 4-nitroaniline.
(f) - Value for acenaphthene
(g) - Value for benzo(a)pyrene.
(h) - Value for pyrene.
(i) - Value for fluorene.
(k) - Value for 1,3-dichloropropene.
(l) - Value for chlordane.
(m) - Value for alpha-BHC.
(n) - Value for diethylphthalate.
(o) - Value for endosulfan.
(p) - Value for endrin.
(r) - Value for m-xylenes.
(s) - Value for manganese, non-diet.
(t) - Value for mercuric chloride.
(u) - Value for cyclohexane.
(v) - Value for Aroclor-1254.
(w) - Value for anthracene.
(x) - Value for total petroleum hydrocarbons (aliphatic medium). THQ of 1 used to account for uncertainty in toxicity data.
(y) - Value for total petroleum hydrocarbons (aromatic low).
(z) - Value for total petroleum hydrocarbons (aliphatic high).

**Notes:**

CAS - Chemical Abstracts Service.
DOEE - District Department of Energy and Environment.
EN - Essential Nutrient.
MCL - Maximum Contaminant Level.
NA - Not Available from this source.
PSL - Project Screening Level.
RSL - Regional Screening Level.
USEPA - United States Environmental Protection Agency.

(a) DOEE, Title 21 of the District of Columbia Municipal Regulations, Chapter 11, Water Quality Standards. Rule 21-1155. Groundwater Standards. Effective March 4,1994.
http://www.dcregs.dc.gov/Gateway/RuleHome.aspx?RuleNumber=21-1155
(b) National Primary Drinking Water Regulations. Maximum Contaminant Level (MCL). Accessed September 2017.
https://www.epa.gov/ground-water-and-drinking-water/national-primary-drinking-water-regulations
(c) USEPA Regional Screening Level Table. (Target Risk =1E-06; Target Hazard Quotient=0.1). May 2018. Value for tapwater.
https://www.epa.gov/risk/regional-screening-levels-rsls
(d) Selected screening level is the lower of the DOEE and the MCL, where available. Where neither is available, the tapwater RSL is selected.
(e) Value for total trihalomethanes. Applies to the sum of concentrations of bromodichloromethane, bromoform, dibromochloromethane, and chloroform.
(f) - Value for 2,3,7,8-Tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD).
(g) - Value for 1,4-dichlororobenzene.
(h) - Value for phenol.
(i) - Value for 4-nitroaniline.
(j) - Value for acenaphthene
(k) - Value for pyrene.
(l) - Value for chlordane.
(m) - Value for 1,3-dichloropropene.
(n) - Value for mercuric chloride.
(o) - Value for alpha-BHC.
(p) - Value for total petroleum hydrocarbons (aliphatic medium). THQ of 1 used to account for uncertainty in toxicity data.
(q) - Value for diethylphthalate.
(r) - Value for endosulfan.
(s) - Value for endrin.
(t) - Value for total petroleum hydrocarbons (aromatic low).
(u) - Value for m-xylenes.
(v) - Value for cyclohexane.
(w) - Value for total petroleum hydrocarbons (aliphatic high).
(x) - Value for polychlorinated biphenyls, low risk.
(y) - Value for benzo(a)pyrene.
(z) - Value for anthracene.
(aa) - Value for fluorene.
(ab) - Value for MTBE.
(ac) - Value for isopropanol.

| 1330-20-7 | Xylenes (total) | NA | NA | 19 | 19 | RSL |
| 7440-66-6 | Zinc | 26000 | 26000 | 600 | 26000 | DOEE |

**Notes:**
CAS - Chemical Abstracts Service.
DOEE - District Department of Energy and Environment.
EN - Essential Nutrient.
NA - Not Available from this source.
NRWQC - National Recommended Water Quality Criteria.
RSL - Regional Screening Level.
USEPA - United States Environmental Protection Agency.

(a) - DOEE, Title 21 of the District of Columbia Municipal Regulations, Chapter 11, Water Quality Standards. Rule 21-1104, Standards. Effective 11/1/2013. https://www.dcregs.dc.gov/Common/DCMR/SectionList.aspx?SectionNumber=21-1104
(b) - USEPA, National Recommended Water Quality Criteria for Priority Pollutants. Value for Human Health for the consumption of organisms. Accessed 8/2018. https://www.epa.gov/wqc/national-recommended-water-quality-criteria-human-health-criteria-table.
(c) USEPA Regional Screening Level Table. (Target Risk =1E-06; Target Hazard Quotient=0.1). November 2018. Value for tapwater. https://www.epa.gov/risk/regional-screening-levels-rsls
(d) Selected screening level is the lower of the DOEE criteria, where available. If a DOEE criteria is not available, the NRWQC is used. Where neither is available, the tapwater RSL is selected.
(e) Value for trans-1,2-Dichloroethene.
(f) - Value for 1,3-dichloropropene.
(g) - Value for 1,4-dichlororobenzene.
(h) - Value for phenol.
(i) - Value for 4-nitroaniline.
(j) - Value for acenaphthene
(k) - Value for pyrene.
(l) - Value for chlordane.
(m) - Value for alpha-BHC.
(n) - Value for total petroleum hydrocarbons (aliphatic medium). THQ of 1 used to account for uncertainty in toxicity data.
(o) Value for diethylphthalate.
(p) - Value for endosulfan.
(q) - Value for endrin.
(r) - Value for total petroleum hydrocarbons (aromatic low).
(s) - Value for m-xylenes.
(t) - Value for mercuric chloride.
(u) - Value for cyclohexane.
(v) - Value for total petroleum hydrocarbons (aliphatic high).
(w) - Value for polychlorinated biphenyls, low risk.
(x) - Value for anthracene.
(y) - Value for benzo(a)pyrene.
(z) - Value for 2,3,7,8-Tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD).
(aa) - Value for fluorene.
(ab) - Value for isopropanol.
(ac) - Value for methyl tert-Butyl Ether (MTBE).

**Notes:**
All units are in micrograms per liter (μg/L).
Chronic ESV - Chronic Ecological Screening Value.
NV - No value.
(a) Chronic ESVs selected based on a hierarchy of water quality standards and benchmarks from DDOE WQS Criteria (DOH, 2014), USEPA Region 3 freshwater screening values (USEPA, 2006), and literature values (Suter and Tsao, 1996; Buchman, 2008).
(b) Hardness dependent criteria. Value presented has been adjusted by a mean hardness of 290 mg/L as $CaCO_3$ for the Waterside Investigation Area.
(c) Value for Hexavalant Chromium used.

| 2,3,7,8-TCDD | NV | |
| 2,3,7,8-TCDF | NV | |
| OCDD | NV | |
| OCDF | NV | |

Notes:
All screening values reported in milligrams per kilogram (mg/kg).
EN - Essential nutrient.
NOAA - National Oceanic and Atmospheric Administration.
NV - No value identified.
OMOE - Ontario Ministry of Environment and Energy
TCDD TEQ - Tetrachlorodibenzo-p-dioxin Toxicity Equivalency Factor
USEPA - United States Environmental Protection Agency.
(a) Low effect ESVs selected based on a hierarchy of freshwater values from NOAA SQuiRT tables (Buchman 2008), USEPA Region 3 freshwater sediment screening values (USEPA 2006), USEPA Region 5 Ecological Screening Levels (USEPA 2003), and USEPA Region 4 recommended ecological screening values (USEPA, 2018).
(b) Target standard from E.M.J Verbruggen, R. Posthumus, and A.P. van Wezel. 2001. Ecotoxicological Serious Risk Concentrations for soil, sediment, and groundwater. Risk limits are typically divided by 100 to derive the Target value.
(c) Value for endrin used due to structural similarities.
(d) Value for Total PCBs used for individual Aroclors without screening values.
(e) Upper Effects Thresholds (Buchman, 2008), based on median Study Area TOC (4.05%).
(f) Screening value is not available. Value for Benzo(a) pyrene is used due to structural similarities.

Notes:
SO - Soil
SE - Sediment
ug/kg - Micrograms per kilogram
PCB - Polychlorinated biphenyl
PCBc - PCB Congeners
PCBa - PCB Aroclors

**Table 4-47**
**Target Area Investigation Results**
**Benning Road Facility RI/FS Project**
**3400 Benning Road, NE**
**Washington, DC 20019**

| TA # | Name | Location | OA # | Results |
|---|---|---|---|---|
| 1 | Former Sludge Dewatering Area | Between Building 65 and Cooling Towers | 4 | Vanadium, PCBs, PAHs, and Dioxins largely surficial and shallow sub-surficial soil. Vanadium impacts extend outside of TA1 over a larger former Coal Pile Area footprint with PSL exceedances in surface soil at 14 locations and 2 two locations in shallow subsurface soil to 3 ft bgs. Total PCBs exceed their PSL at 4 surface soil and 4 subsurface soil locations to 5 ft bgs. TCDD TEQ exceeds its PSL at 5 surface soil locations. There are also several subsurface PSL exceedances for PAHs. Monitoring well MW-7 detected metals above PSLs[1]. |
| 2 | Benning Fueling Island | Located east of Building # 32 | 3 | ERI transect (WAS-5) and downgradient/cross-gradient monitoring well locations (MW-2, MW-5 and MW-6) did not indicate presence of NAPLs, TPH (only analyzed in MW-2A), or BTEX. Historically, USTs located at this area were removed and impacted soil reportedly excavated, and the cases were closed with District approval. (URS, 1999). |
| 3 | Former 15,000 Gal UST and 50,000 Gal AST (No. 2 Fuel Oil) | East of Generating Station, south of cooling tower unit 15 | 4,5 | A limited number of metals in soils and groundwater[1], and a limited number of PAHs in subsurface soils exceeded screening levels (these locations along Target Area 5 southern boundary so also noted under Target Area 5). ORO detected in surface soil below screening values. No BTEX exceedances in MW-8A/B. Dieldrin was detected in MW-08B slightly above its PSL. This target area is between Target Area 1 and Target Area 5 and some compound exceedances may be related to these Target Areas. |
| 4 | 2003 Salvage Yard Investigation & Former Timber Pole Storage Area | Salvage yard located west of Buildings # 75 and # 88 | 1 | PCBs, PAHs, and TPH largely in soil to 5 ft bgs, some extend to 10-15 ft bgs. PAHs as represented by BaP-TE exceed their PSL at 5 surface soil locations and 10 subsurface locations. DRO exceed its PSL at several surface and shallow subsurface soil locations. Total PCBs exceed their PSL at several surface and subsurface soil locations to approximately 3 ft bgs. |
| 5 | Former Cooling Towers – 1995 & 2017 Cleanup Area | Unit 15 and 16 cooling tower basins and surrounding soil | 4 | PCBs and TPH in soil to 6 ft bgs. Cooling tower superstructures were removed in 2013 and excavation of impacted soils was performed in 2017 along with removal of cooling tower concrete basins. In soil surrounding excavated area, DRO exceed its PSL at seven subsurface locations to 6 ft bgs. Total PCBs exceed their PSL at one surface soil location at former cooling tower #15 and at 8 surface soil locations at former cooling tower #16. Total PCBs exceed their PSL at 12 subsurface locations at former cooling tower #16 to 6 ft bgs. PAHs as represented by BaP-TE exceed its PSL at two shallow subsurface locations. Monitoring wells MW-8 and MW-11 detected metals[1] and dieldrin above PSLs. Note Target Area 3 (discussed above) is immediately south of Target Area 5. |
| 6 | 1991 Cleanup Area | Between Buildings # 41 and # 61 | | Several soil borings, and ERI transect (WAS-7) and a monitoring well (MW-13) completed in this area. No soil screening level exceedances. A limited number of metals in monitoring well groundwater exceeded screening levels[1]. GRO and MTBE exceed screening levels in Direct Push groundwater sample DP32 and in MW-13B (MTBE only) but this believed to be related to Target Area 18. |
| 7 | 1988 Parking Lot Cleanup Area | Parking lot located in the eastern portion of facility. | 1, 2 | Several soil borings, two ERI transects (WAS-8 and WAS-9) and a monitoring well (MW-15) completed in this area. Area was further sampled in soil during the Phase II event due to a Phase I PCB detection but no PSL soil exceedances were identified in Phase II. The PCB detections are potential residual from former PCB cleanup. MW-15 detected metals above PSLs[1]. |
| 8 | 1985 Excavation Area | Underground pipe leading from Kenilworth Transformer Shop (Current Building # 56) | -- | One soil boring (DP22) installed in this area. No soil screening level exceedances. Metals exceeded screening levels in direct push groundwater sample[1]. |
| 9 | Green Tag Storage Area | Storage Building #66 | 6 | Area was further sampled in the soil during the Phase II event due to a Phase I PCB detection and a TCDD TEQ detection but no PSL soil exceedances were identified in Phase II. The highest Phase II TCDD TEQ concentration was 19.7 pg./g at SUS18-1D. |
| 10 | Red Tag Storage Area | South of Building # 68 (PCB Storage Building) | 6 | PCB and Dioxins in surface and shallow subsurface soils. Total PCBs exceed their PSL at several surface and subsurface soil locations to 4 ft bgs. TCDD TEQ exceeds its PSL at 12 surface soil locations. Monitoring well MW-10 detected metals above PSLs[1]. |
| 11 | Building #68 (PCB Building) | Building #68 | | Total PCBs exceed their PSL at several surface and subsurface soil locations to 4 ft bgs. |
| 12 | Building #57 | Building #57 | 6 | PCBs and PAHs to 5 ft bgs. PAHs as represented by BaP-TE exceed their PSL at two surface soil locations and 16 subsurface locations to 5 ft bgs. Total PCBs exceed their PSL at 15 surface soil and 22 subsurface soil locations to 5 ft bgs. The maximum PCB surface soil detection is 8,800,000 μg/kg[2] at SUSDP21-3G. Most of the exceedances are grouped between Building #57 and the Anacostia Freeway at the Site boundary. |
| 13 | Bulk Storage ASTs and Loading Rack | East of the Generating Station Building | 5 | PAHs as represented by BaP-TE slightly exceed its PSL at one surface soil location. DRO exceed its PSL at one location; AST3A, collected during a sample event in 2012. During the RI investigation, no DRO exceedances of its PSL were identified. Three ERI transects (WAS-1, WAS-3, and WAS-5) and a monitoring well (MW-6) completed near this area; MW-6 detected metals above PSLs[1] but not BTEX. No BTEX or TPH exceedances in downgradient monitoring wells MW-2 and MW-3 (only MW-2A analyzed for TPH which was not detected). |

**Table 4-47**
**Target Area Investigation Results**
**Benning Road Facility RI/FS Project**
**3400 Benning Road, NE**
**Washington, DC 20019**

| TA # | Name | Location | OA # | Results |
|---|---|---|---|---|
| 14 | Former Railroad Switchyard | Adjacent to southern property boundary and east of Building # 32. | -- | This area was further sampled in the soil during the Phase II event due to a Phase I PCB detection but no PSL soil exceedances were identified in Phase II. ERI transect (WAS-5) and downgradient monitoring well location (MW-5) did not indicate presence of NAPLs or petroleum constituents in groundwater but detected metals and PCE (believe to be related to Target Area 19) above PSLs [1]. |
| 15 | Generating Station Transformers | West of the Generating Station | -- | Several soil borings and three monitoring wells (MW-2, MW-3, and MW-4) installed in this area. A limited number of metals in soils and monitoring well groundwater [1], and naphthalene in MW-2 exceeded screening levels. Resample of MW-2 in 2016 did not detect naphthalene. All transformers and associated containment areas were demolished and removed from the site. |
| 16 | Print Shop | Southern portion of Building # 32 | -- | Several soil borings, an ERI transect (WAS-5) and a monitoring well (MW-5) completed in this area. A limited number of metals in soils and groundwater exceeded screening levels [1] as did PCE (believed to be related to Target Area 19) in groundwater. |
| 17 | Storm Drain System | Across the site | -- | Primarily related to PCBs, PAHs, and metals in storm drain media. Eight water samples and four residue samples were collected from the storm drain system. A limited number of PCBs, metals, PAHs, TPHs, and pesticides were detected in the storm drain media. The low levels of constituents in storm drain samples are attributable to urban runoff and historical residuals. |
| 18 | Kenilworth Fueling Island | Approximately 105 feet west of Building # 56 | 3 | Direct push groundwater sample events in 2014 and 2016 were performed to delineate the MTBE concentrations in groundwater. MTBE was detected in 45 of 75 direct push UWZ samples but the PSL for MTBE was only exceeded in three of these UWZ samples. MTBE was detected in 11 of 25 UWZ monitoring well samples but not above its PSL. MTBE was detected in 28 of 43 direct push LWZ samples but the PSL for MTBE was only exceeded in six of the LWZ samples. MTBE was detected in 15 of 24 LWZ monitoring well samples and exceeded its PSL in MW13B. The largest MTBE detection of 1,100 ug/L was collected in 2017 from immediately north of the Site boundary. Butyl alcohol, tert- was detected above its PSL in MW-09B and above its PSL in a direct push LWZ groundwater sample at DP58. |
| 19 | PCE and Naphthalene in Groundwater | Southeast area of Site and adjacent to southern portion of former power plant where chlorinated solvents were stored and used. | 7 | For UWZ monitoring wells, PCE, TCE, and VC were detected above their PSLs in 16, 8, and 1 samples, respectively, out of 25 samples. PCE exceeded its PSL in MW01-A, MW-05-A, and MW09-A. TCE and VC exceeded their PSL in MW09-A. Cis-DCE was also detected in the UWZ but at concentrations below its PSL. The maximum concentrations of PCE, TCE, and cis-1,2-dichloroethylene detected in groundwater during the Phase I PCE direct push sample event to further characterize the PCE concentrations were 470 µg/l, 26 µg/l, and 23 µg/l, respectively, all in sample DPWB730-35N. Levels of PCE, TCE, and cis-1,2-dichloroethylene in groundwater diminish rapidly with increasing distance north of Benning Road. For LWZ monitoring wells, PCE and TCE were detected in 7 and 4 samples, respectively, out of 24 samples. PCE exceeded its PSL in MW01-B and MW-05-B. TCE exceeded its PSL in MW01-B. VC and cis-DCE were also detected in the LWZ but at concentrations below their PSLs. Within the south-central area of the Site, the groundwater samples from the LWZ exhibited little or no PCE contamination. Naphthalene in MW-1A exceeded screening levels but resample of MW-1 in 2016 did not detect naphthalene. |
| 20 | PAHs in Soil | Parking Lot west of Buildings #56 and #57 | 2 | PAHs largely to 5 ft bgs, some locations extend to 11 ft bgs. PAHs as represented by BaP-TE exceed their PSL at 7 surface soil locations and 26 subsurface soil locations. The maximum BaP-TE detection is 898,000 µg/kg from 2 to 3 ft bgs at SUSDP-196W; this is also the maximum BaP-TE detection in all Phase I and Phase II soil samples. The horizontal extent of PSL exceedances are bounded to the west and north by samples. To the west along the southern boundary, the MWATA and highway infrastructural prevent further sampling, just offsite, to bound the western edge of the PSL exceedances. |
| -- | Former Transformer Shop | Buildings #38 and 39 | 6 | A review of historical aerial photos revealed the former transformer shop Buildings #38 and 39. The absence of samples in these areas was identified as a data gap in the Phase I Site characterization. Soil samples collected in this area during the Phase II sample event did not detect PSL exceedances except for arsenic which is below background levels in soil. |

**Operational Areas (OA):**

| | |
|---|---|
| 1 | Timber Pole Storage Areas |
| 2 | Equipment Laydown Areas |
| 3 | Vehicle Fleet Servicing Areas |
| 4 | Coal Pile Area |
| 5 | Fuel Oil Storage Area |
| 6 | Transformer Operations Areas |
| 7 | Chlorinated Solvent Storage and Usage Area |

**Notes:**

TA - Target Area
ERI - Electrical Resistivity Imaging
TEQ - Toxicity Equivalent
DRO - Diesel Range Organics
VC - Vinyl Chloride
MW - Monitoring Well
ORO - Oil Range Organics
ft bgs - feet below ground surface
DCE - Dichloroethene
PSL - Project Screening Level
TCE - Trichloroethylene
PCE - Tetrachloroethylene
UWZ - Upper Water-Bearing Zone
NAPL - Non-Aqueous Phase Liquid
GRO Gasoline Range Organics
PCBs - Polychlorinated Biphenyls
MTBE - Methyl Tertiary-butyl Ether
BTEX - Benzene, Toluene, Ethylbenzene, and Xylenes
SVOCs - Semi-Volatile Organic Compounds
TPHs - Total Petroleum Hydrocarbons
LWZ - Lower Water-Bearing Zone
PAH - Polycyclic Aromatic Hydrocarbon

1. Metals were frequently detected in surface and subsurface soils above screening levels but only vanadium was greater than site specific background levels. For the UWZ, several metals exceed their screening levels but were below site specific background levels. For the LWZ, several metals exceed their screening levels but were below site specific background levels with the exception of dissolved cadmium and total vanadium which do not have a site specific background comparison. Also, cadmium was only detected three times in 32 UWZ and LWZ samples with only one detection slightly above its PSL.
2. Maximum PCB surface soil detection is 8,800,000 µg/kg at SUSDP21-3G is a re-analysis; initial detection was 2,500,000 µg/kg.

Notes:

PCB = Polychlorinated biphenyl

SVOC = Semivolatile organic compound

TCDD =TEQ - Dioxin Toxic Equivalence

VOCs - Volatile organic compounds

$K_{oc}$ (L/kg) = Soil organic carbon/water partition coefficient

$D_{i,a}$ (cm2/s) = Diffusivity in air (25$^{o}$C)

$D_{i,w}$ (cm2/s) = Diffusivity in water (25$^{o}$C)

Kd = Soil-water partition coefficient

S (mg/L) = Solubility in water (20-25 oC)

H' = Dimensionless Henry's law constant (HLC[atm-m3/mol]*41) (25 $^{o}$C)

λ= half life used to calculate degradation rates

Notes:

Contaminant Mass Flux (kg/yr) = (Groundwater flux [$m^3/s$])*(Concentration [µg/L])*(60 [sec/min])*(60 [min/hr])*(24 [hr/day])*(365 [day/yr])*(0.000000001 [kg/µg)*(1000 [L/$m^3$])

N/A - Not Applicable

For non-detected concentrations, detection limit is used.

For duplicate samples the higher of the parent and duplicate concentrations is used.

ug/L = microgram per liter

kg/year = kilogram per liter

$m^3/s$ = cubic meter per second

Notes:

Dilution Attenuation Factor (DAF) = (Groundwater flux [$ft^3/s$])/7Q10[13.9 $ft^3/s$)

N/A = Not Applicable

For non-detected concentrations, detection limit is used.

For duplicate samples the higher of the parent and duplicate concentrations is used.

Refer to the HHRA and ERA Appendices for the screening level sources and determination process.

ug/L = microgram per liter

$ft^3/s$ = cubic feet per second

HHRA = Human Health Risk Assessment

ERA = Environmental Risk Assessment

Highlighted cells indicate exceedance of the HHRA or ERA Screening Levels in the estimated surface water concentratior

CONCRETE PAD
TOP OF CASING TO GROUND SURFACE: 4-inches
PAD DIMENSIONS: 2 ft x 2 ft
HEIGHT ABOVE GROUND: Flush

GROUT AROUND CASING
MATERIAL: Bentonite-Cement Mixture
MIX RATIO OF SOLIDS: 60 lbs bentonite powder: 40 lbs cement
MIX RATIO SOLIDS:WATER: 3:1

LOW PERMEABILITY SEAL
MATERIAL: Fully Hydrated Bentonite Chips
HEIGHT ABOVE FILTER PACK: 2 ft

WELL CASING
MATERIAL: Schedule 40 PVC
INTERNAL DIAMETER: 2-inches
JOINT TYPE: Threaded
LENGTH: See Table 2-4

BENTONITE SEAL

FILTER PACK
TYPE OF FILTER: #2 Sand
HEIGHT ABOVE SCREEN: 2 ft

WELL SCREEN
SCREEN MATERIAL: Schedule 40 PVC
LENGTH: See Table 2-4
SLOT SIZE: 0.010-inches

DEPTH TO THE BOTTOM OF WELL: See Table 2-4

DIAMETER OF BOREHOLE: 8-inches (upper), 6-inches (lower)

WELL ANNULUS: 4-inches

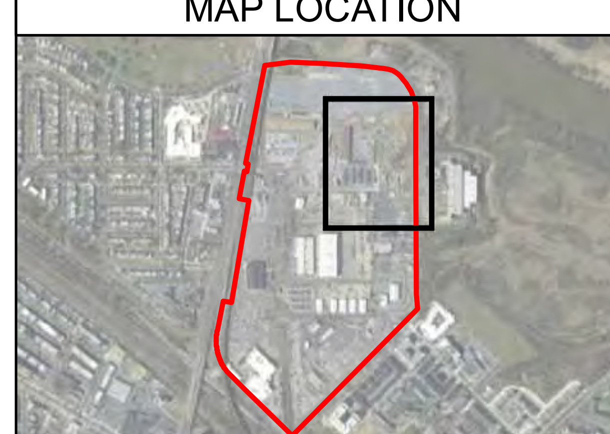
MAP LOCATION



LEGEND

- < 6.3 mg/kg Hex Chromium (Cr6) and 180,000 mg/kg Total Chromium (Cr)
- COOLING TOWER SOIL EXCAVATION AREA
- GROUP LOCATION

NOTE
UNITS ARE MG/KG.
Note - there is no history of using chromium at the Site, such that it is likely that the form of chromium present in soil is trivalent. To verify this assumption, soil sample results shown here were collected and analyzed for both total chromium and hexavalent chromium at the Pepco Site and Anacostia Park Site. The percent of hexavalent chromium was calculated in several ways, both including and excluding non-detected results, and based on the combined Pepco Site and Anacostia Park datasets. The calculated averages range from less than 1% to about 1.5%. Based on the assessment, the total chromium is evaluated as trivalent chromium in with a PSL of 180,000 mg/kg.
