INTRODUCTION

The Macleay collection was started around 1790 by Alexander Macleay (1767-1848). He collected insects. He caught specimens himself and acquired others by exchange among his friends; but probably the major part of his collection resulted from purchases at auctions of historic collections. In this way Macleay obtained specimens originally collected by Captain Cook's naturalists, Surgeon General White, Charles Sturt and Sir Stamford Raffles as well as many other less well known figures (Fletcher, 1920).

Alexander Macleay brought his collection to Australia in 1825-26 when he was appointed the first Colonial Secretary. His son, William Sharp Macleay (1792-1865), helped his father collect and after William Sharp inherited it, he enlarged it considerably. When he died the collection passed to his cousin, Sir William Macleay (1820-1891), the first President of the Linnean Society of New South Wales.

Sir William Macleay decided to expand the collection to include all branches of the Animal Kingdom as well as anthropological and geological specimens. He employed collectors all over the world and amassed a huge collection that overflowed from his large house at Elizabeth Bay, Sydney, into a museum-building 115 × 36 feet in the garden. When this became full, and having no heir, he decided to offer the entire collection to the University of Sydney. The Senate accepted Sir William's gift in 1888 and the Government contributed £16,000 to erect a Museum building in the University grounds. The collection was moved in 1889, and the building was opened to the public in 1890.

Sir William Macleay died in 1891. The curator he had appointed, George Masters, died in 1912. In 1917, the University started to use part of the building for other purposes. The collection became neglected and its space was severely curtailed as described by my predecessor (Anderson, 1965). In the last few years, however, some attention has been given to the Museum and the following table gives an idea of what remains.

An account of the history of the Macleays was given by J. J. Fletcher in his Presidential Address to the Linnean Society of New South Wales, 14th June, 1920. This account was completed after Fletcher's death from his notes by A. B. Walkom (Fletcher, 1929). The story of Sir William Macleay's collecting trips has been told by D. N. S. MacMillan in his book "A Squatter Went to Sea" (1957).

So far as I can discover, the only lists of type specimens in the collection that have been published are:

- (i) COPLAND, S. J., 1945, 1946.—Catalogue of Reptiles in the Macleay Museum, Parts 1 and 2. *PROC. LINN. SOC. N.S.W.*, 70: 291-311; 71: 136-144. These papers dealt in detail with three species of lizards.
- (ii) HAHN, D. E.—A list of the designated type specimens in the Macleay Museum: Insecta. Duplicated at the University of Sydney, 1962. This listed about 2,000 type specimens.

TABLE 1

*An estimate of the number of specimens in the Macleay Museum,
University of Sydney, in January, 1968*

Specimen	Total	Approximate Number of Types
Coelenterates . . .	300	—
Sponges . . .	200	3
Corals . . .	250	—
Annelids . . .	100	—
Insects . . .	1,000,000	2,000+
Shells . . .	50,000	150
Other molluscs . . .	300	—
Echinoderms . . .	500	—
Fishes . . .	9,000	75
Amphibians . . .	1,000	7
Reptiles . . .	2,000	60
Birds . . .	9,000	12+
Mammals . . .	1,500	8
Anthropological . . .	2,000	Many
Fossils . . .	200	Some

I propose to publish lists of the other type specimens in the Macleay Museum. This will be done in the following order: Fishes; Amphibians; Reptiles; Birds; Mammals; and Shells.

This paper contains a list of the fishes of the Macleay Museum from which new species were described.

THE FISH TYPES

Nearly all the fish types in the Museum were described by Sir William Macleay. The original descriptions were published in the *Proceedings of the Linnean Society of New South Wales*. Most of them were reprinted at Sydney in 1881 by F. W. White, in the "Descriptive Catalogue of Australian Fishes" (Vols. I and II).

The bulk of Sir William Macleay's type specimens are in the Macleay Museum, although about 40 are in the Australian Museum, Sydney (Whitley, 1957).

Macleay collected fishes from specially chartered vessels such as the "Galatea" and the "Peahen" which dredged up and down the coast of New South Wales (Fletcher, 1929), and the "Chevert" which sailed into New Guinea waters (MacMillan, 1957). Macleay also acquired unusual fish from the Sydney Fish Market and from friends.

The following list includes all the fishes that I can find in the Museum that Macleay described as new species. Most of his names have since been

superseded, some many times. Further types may lie unrecognised in the Macleay Museum. The fish are stored in bottles in 70% alcohol.

The classification in the list is based on that given by D. S. Jordan, "The Genera of Fishes and a Classification of Fishes" (1963) and the family numbers are Jordan's. The F numbers are the Macleay Museum Register numbers.

The data for each type in the list that follows is arranged in the following order:

Family name/Family number/Scientific name under which described/Kind of type/

Acknowledgements

Much of this list was compiled by the previous curator of the Macleay Museum, Mrs. J. E. Anderson, to whom I am deeply indebted. Mrs. Anderson labelled the types, which were not designated by Macleay, either Cotype or Holotype and I have used her suggestions in the list. I am grateful to Dr. F. H. Talbot and Mr. G. P. Whitley who checked the list and made many helpful suggestions. I am also grateful to Miss K. J. Smith who spent many hours checking the references. The errors that remain are my responsibility.
