

Supplementary data

A Comprehensive Phylogenetic and Bioinformatics Survey of Lectins in the Fungal kingdom

Annie Lebreton, François Bonnardel, Yu-Cheng Dai, Anne Imberty, Francis M. Martin, Frédérique Lisacek

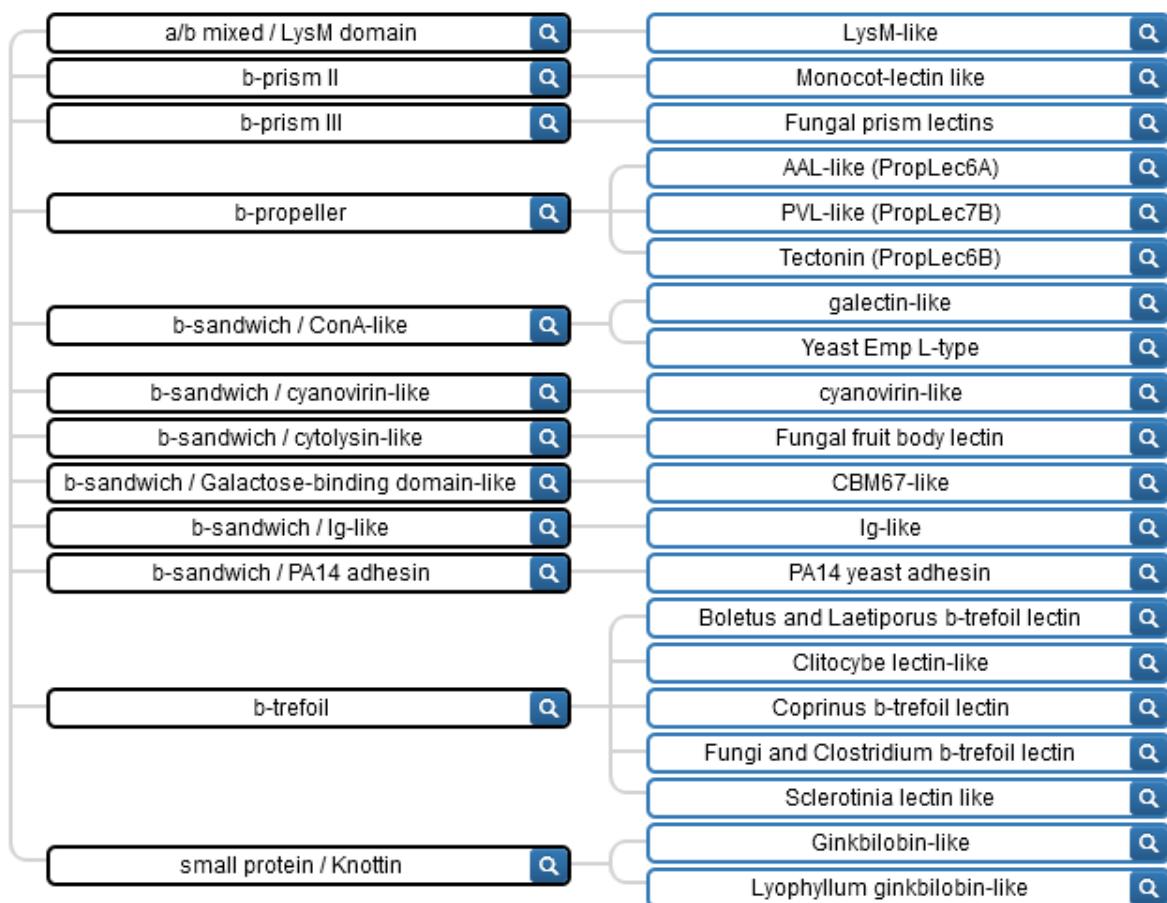

Figure S1: Distribution of lectin folds and classes of fungal lectin with 3D structures in Unilectin3D database.

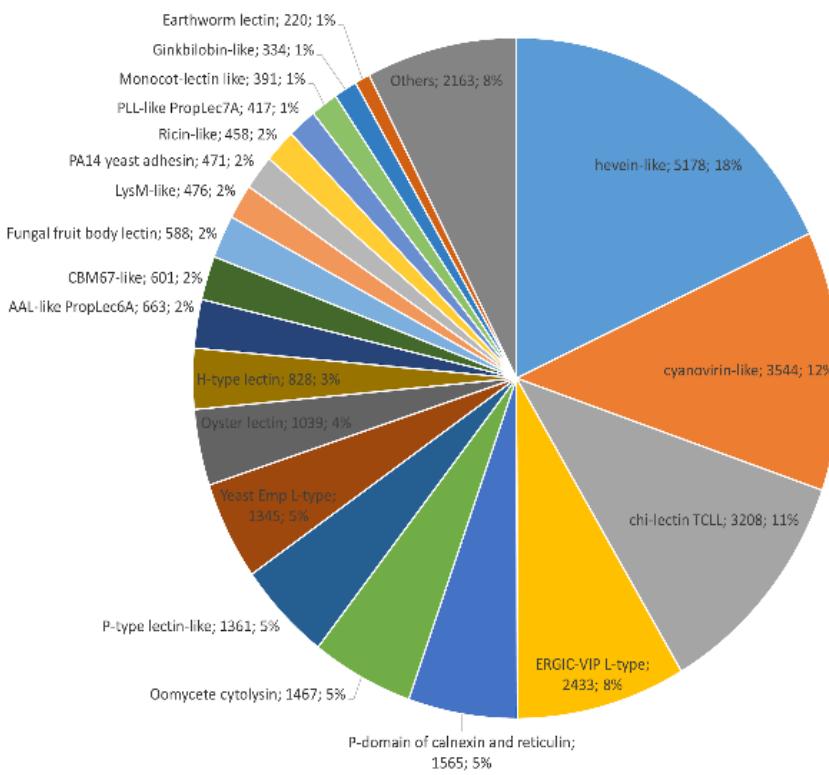

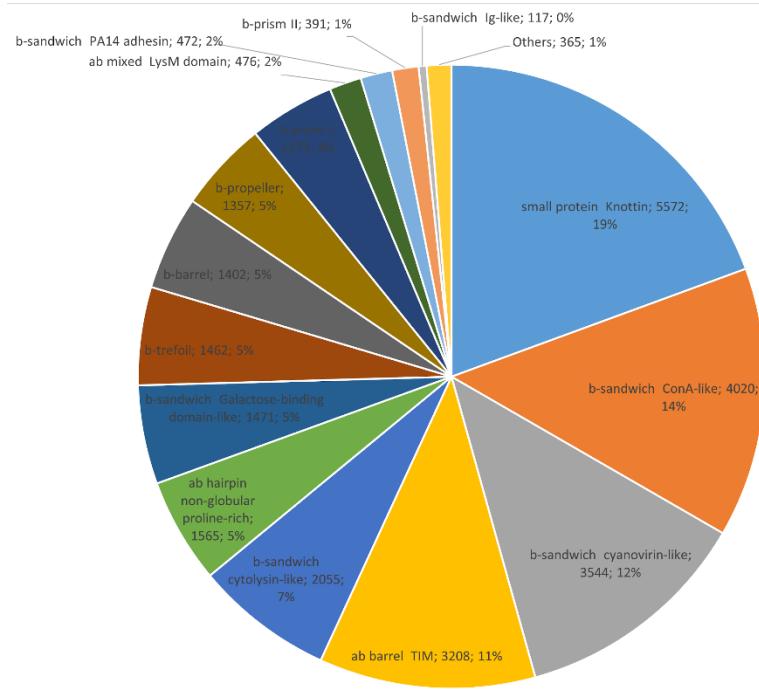

Figure S2: Distribution of folds (left) and classes (right) of predicted lectin sequences in MycoLec. Only lectin sequences with a similarity score > 25% were used.

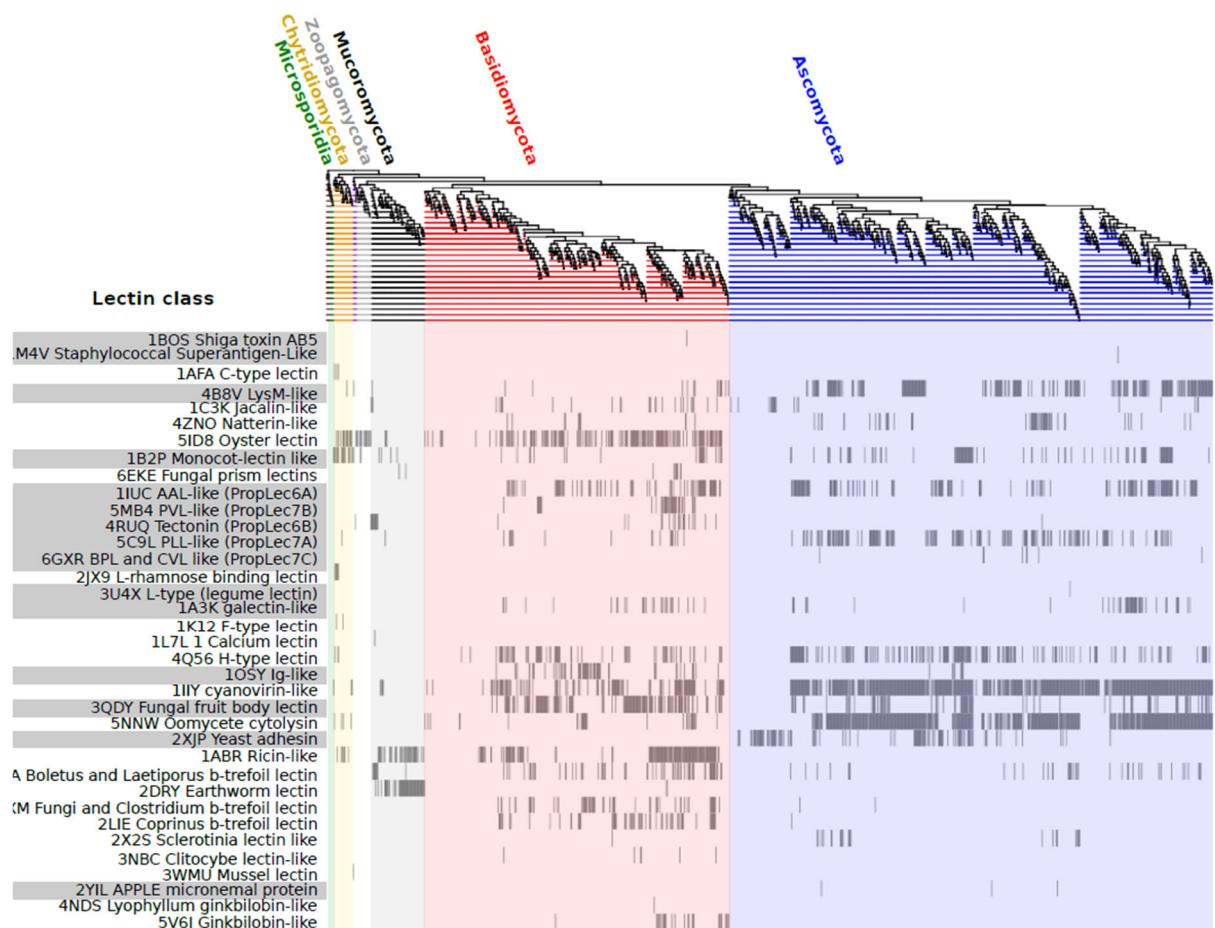

Figure S3: Distribution of predicted lectins by species in MycoLec. Each vertical line corresponds to a fungal strain organized according to their phylogenetic relationship as displayed by the tree. Left, Clustering of lectin classes. Lectins with a similarity score > 25% were used to detect the presence of the different lectin classes found in the MycoCosm genomes.

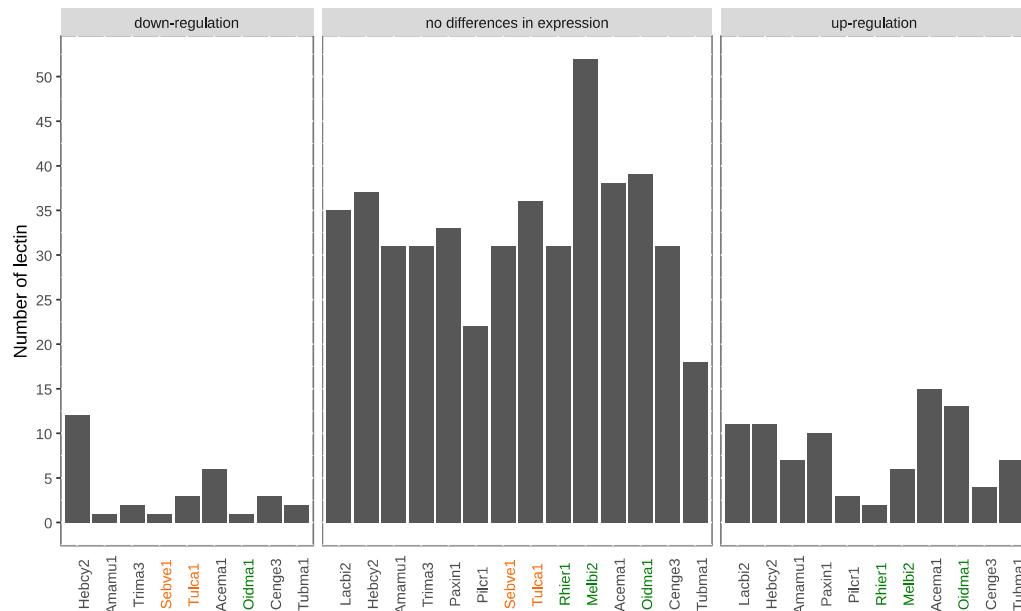

Figure S4: Impact of mycorrhization of 14 fungal strains with their corresponding host plant on lectin expression. Each bar corresponds to a strain annotated by a tag used in the MycoCosm database to refer to the specific strain and genomic assembly. Tags are colored according to the mycorrhizae type: grey ectomycorrhizae, green ericoid mycorrhizae, orange orchid mycorrhizae.

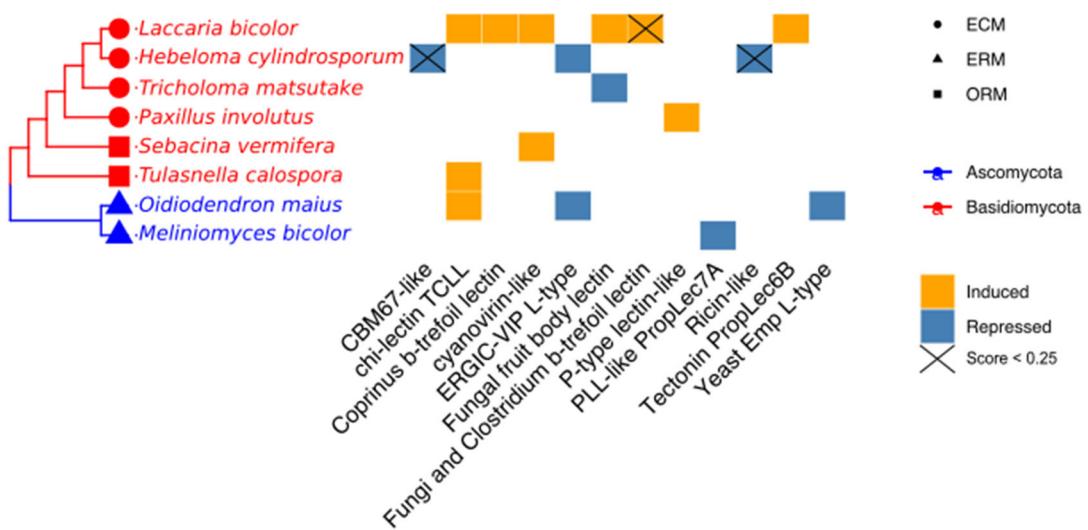

Figure S5: Differential expression of lectins within mycorrhizal fungi upon plants interaction. Lectins with invariable expression are not represented. Three species are ericoid mycorrhizae (ERM), two are orchids mycorrhizae (ORM) and the other are ectomycorrhizae (ECM).

Table S1: Fungal species investigated in the exploration of the lectins induced and repressed during their mycorrhization with a compatible plant host. ECM: ectomycorrhizae, ORM: orchids mycorrhizae, ERM: ericoid mycorrhizae

| JGI ID | Fungal species | Plant host | Analysis Method | Mycorrhizae type | Ref |
|--------|-----------------------------------|-------------------------------------|-----------------|------------------|--------------|
| Amamu1 | <i>Amanita muscaria</i> | <i>Populus tremula tremolooides</i> | CLC | ECM | ¹ |
| Hebcy2 | <i>Hebeloma cylindrosporum</i> | <i>Pinus pinaster</i> | CLC | ECM | ¹ |
| Paxin1 | <i>Paxillus involotus</i> | <i>Fagus sylvatica</i> | CLC | ECM | ¹ |
| Pilcr1 | <i>Piloderma croeus</i> | <i>Quercus robur</i> | CLC | ECM | ¹ |
| Oidma1 | <i>Oidiodendron maius</i> | <i>Vaccinium myrtillus</i> | CLC | ERM | ¹ |
| Sebve1 | <i>Sebacina vermifera</i> | <i>Arabidopsis thaliana</i> | CLC | ORM | ¹ |
| Tulca1 | <i>Tulasnella calospora</i> | <i>Serapias vomeracea</i> | CLC | ORM | ¹ |
| Melbi2 | <i>Melinomyces bicolor</i> | <i>Vaccinium myrtillus</i> | CLC | ERM | ² |
| Rhier1 | <i>Rhizoscyphus ericaceae</i> | <i>Vaccinium myrtillus</i> | CLC | ERM | ² |
| Tubma1 | <i>Tuber magnatum</i> | <i>Quercus robur</i> | CLC | ECM | ³ |
| Cenge3 | <i>Cenococcum geophilum</i> | <i>Pinus sylvestris</i> | CLC | ECM | ⁴ |
| Acema1 | <i>Acephala macrosclerotiorum</i> | <i>Pinus sylvestris</i> | HISAT/ DESeq2 | ECM | ⁵ |
| Lacbi2 | <i>Laccaria bicolor</i> | <i>Populus tremula x alba</i> | HISAT/DESeq2 | ECM | ⁶ |
| Trima3 | <i>Tricholoma matsutake</i> | <i>Pinus sylvestris</i> | CLC | ECM | ⁵ |

Table S2: Lectin content in the predicted proteomes of the Agaricomycetes fungal class sorted by ecological niche.
