

Figure S1 - Prediction layout shown by the DeepBryo app when activating the option to show bounding boxes (blue) and the structure-level identification numbers (squares with dark background). ID numbers can be used to filter the output table.

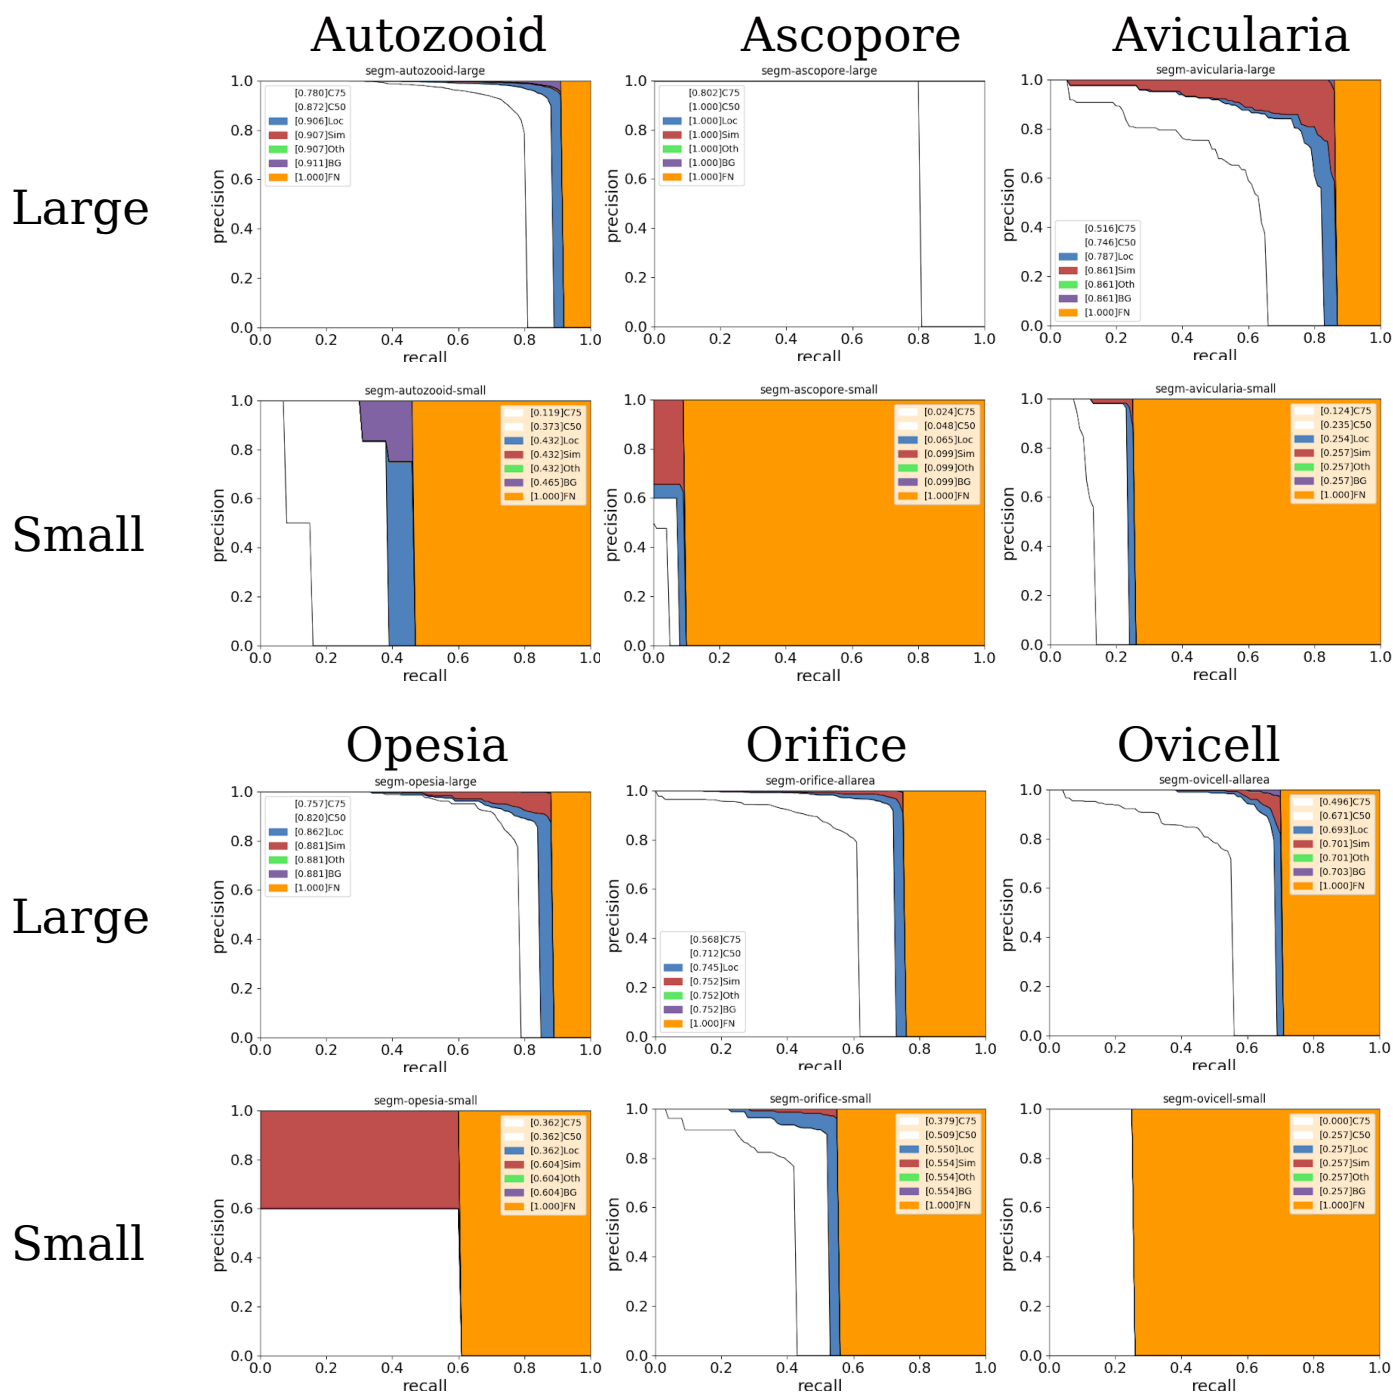

Figure S2 - Precision-recall (PR) curves for all six classes of objects, broken down according to structure size (small vs large). The area in white defines the PR curve for an IoU value of 0.5. By adding the blue area (Loc), it becomes the PR curve while ignoring localization error (IoU of 0.1). By adding the area in red (Sim), it becomes the PR curve while ignoring classification errors (e.g. mistaking an ovicell as an autozoid). By adding the area in purple (BG), it becomes the PR curve including false positive errors. Finally, the area in orange (FN) represents the false negatives.

Glossary

Autozoid: essential unit of a bryozoan colony. Equipped with a polypide devoted to feeding and other somatic functions.

Avicularium: a specialized zooid with a reduced, non-feeding polypide and a mandible with mechano-sensory capabilities. Involved in the defense against predators and cleaning of the colony.

Ascopore: frontal pore which operates as an inlet to the ascus, a flexible sac pertaining to the plumbing system of ascophoran-grade cheilostome bryozoans.

Encrusting: growth mode in which the colony expands like a sheet adpressed to the surface of the substratum.

Kenozooid: a specialized zooid that lacks a polypide. Involved in many structural functions, such as space-filling, attachment, and colony support.

Opesia: opening below the frontal membrane in anascan-grade cheilostome bryozoans lacking a calcified frontal shield.

Polymorphism: variation in zooid morphology reflecting division of labor within the colony.

Orifice: opening in the frontal shield of autozooids through which the lophophore can be extruded.

Ovicell: brood chamber found in cheilostomes.

Table S1 – List of Bryozoa Cheilostomatida taxa included in the dataset used to train/validate the instance segmentation model.
