

Blue Lotus
Water Garden

Seasonal
Water Plant Nursery
2024 Catalogue

Open Daily Between
26 December and Mid-April
Address

2628 Warburton Hwy, Yarra Junction, Victoria

About our seasonal nursery

The Blue Lotus Water Garden is a family owned and operated business. We have been growing water plants and operating a plant nursery since 2004. We specialize in growing hardy and sub-tropical waterlilies (*nymphaea*) and temperate lotus (*nelumbo*), plus selected marginal and ornamental plants

Our waterlilies and lotus are produced from seed, rhizomes, tubers and corms that are mostly harvested from our extensive display garden at the end of each growing season. We pot up thousands of water plants every spring which we sell direct to the public through our retail nursery and to the landscape garden industry from late December to mid-April.

Cut lotus flowers

From 26 December to the start of April our retail nursery has daily stock of fresh lotus flowers and lotus seed pods used for floral decorations. We also provide lotus flowers and seed pods to the florist industry through selected wholesalers and the Melbourne Flower Market during the same period. For customers looking to purchase more than 10 flowers. We advise customers to place an order 24hrs prior to collection.

Open dates & times

Our retail nursery is open to the public from 26th December to mid-April each year. During this period the nursery is open daily between 10am-5pm.

Do we offer online sales or delivery?

No, we don't offer a delivery service or a mail order service for retail customers. Garden enthusiasts will need to visit our retail nursery in person. Wholesale customers will need to contact us to discuss their requirements.

About lotus and waterlily plants

Lotus and waterlily plants make a spectacular feature in any water garden. Not only are they beautiful, but also provide cover for fish and help to oxygenate and filter the water. Lotus and waterlilies are also easy to grow, all you need is plenty of sun, a water environment such as a pond, dam or waterproof planter and good loamy topsoil for the plants to grow in.

Lotus Plants (*Nelumbo*)

Nelumbo also known as Lotus are beautiful aquatic plants with large showy flowers and leaves that grow in many different climates. Lotus grow from a tuber, buried in loamy topsoil that is submerged under the water. The tuber sends up huge leaves and flowers well above the surface of the water between December and April. However, in winter the perennial (deciduous) lotus will go completely dormant and lose all their leaves and flowers. Then once the water temperature warms up again (late spring). The lotus plant will grow new leaves and flowers providing a magical display over summer. We have a great range of lotus plants suitable for most situations. Our potted plants come in larger than normal waterproof pots and tubs (around 30cm in diameter). Our lotus will make a great addition to any earth bottom pond, dam or lake. Many of our varieties are also suitable for decorative bowls, waterproof planters and smaller ponds.

Hardy Waterlily Plants (*Nymphaea*)

Hardy waterlilies are perennial (deciduous) or semi-evergreen aquatic plants that have evolved to thrive in temperate climates which means they are tolerant to cold and hot conditions. They grow from a rhizome which is buried in soil submerged under water. They have beautiful flowers and attractive leaves that either float on or stand slightly above the surface of the water. Most varieties flower between October and April and then go dormant during winter with some types losing all their leaves and others only losing half their leaves. We have a great range of hardy waterlilies which are sold as potted plants in wider than normal waterproof squat pots ranging in size from 15-30cm in diameter. Our hardy waterlilies will make a great addition to any earth bottom pond, dam or lake. Many of our varieties are also suitable for decorative bowls, waterproof planters and smaller ponds.

Sub-Tropical Waterlily Plants (*Nymphaea*)

Sub-tropical waterlilies are slightly more challenging to grow in Victoria and have a higher mortality rate than the hardy varieties. Unlike hardy waterlilies, sub-tropical varieties have evolved to grow in warmer climates and grow from a corm instead of a rhizome. These plants produce very colourful flowers and leaves between December and April (in Southern Australia), however go completely dormant during winter. We stock a range of cold-tolerant varieties suitable for most situations including earth bottom ponds or dams and decorative bowls or planters. However, we recommend the dormant corm is protected during winter from water birds digging them up and from severe frost if the water freezes over.

Tips on Growing Lotus and Waterlilies

1. Lotus and waterlilies like still water environments such as a waterproof planter or bowl, pond, lake or dam.
2. Both plants need soil to grow in, NOT potting mix! Good quality topsoil or loamy soil (such as lawn soil or vegetable garden soil). If planting on the margins of a clay bottom pond or dam. It's helpful to tip a bit of topsoil into the pond or dam where you plan to plant your plant.
3. Both plants need a FULL sun position. The more sun, the more flowers you will get. Both waterlilies and lotus need a minimum of 6 hrs direct sun per day.
4. Both waterlilies and lotus have a horizontally spreading root system. The more space they have to grow, the happy the plants will be. If growing plants in a submerged pot in a pond or decorative waterproof planter, the wider the container the better. Pots should be a minimum of 30cm wide, and plants re-potted every 2 years.
5. Fertilize water plants twice a year when the plant is actively growing (late spring – mid summer). Use a good quality slow release granulated fertilizer or aquatic fertilizer tablet. Poke the tablet into the soil next to the plant or wrap 1 teaspoon of granulated fertilizer in tissue and poke into the soil.
6. If growing lotus or waterlilies in earth bottom pond or dam. After planting, place chicken wire around the plant to protect it from yabbies and water birds for the first 12 months.

NEW Lotus Plant – Red Dragon

Nelumbo nucifer

Type:

Perennial, hardy aquatic plant

Description:

Spectacular new and rare double red lotus, flowers range in size 15-25cm.
Petals start close to true red and fade to deep pink with age.

Suitable for:

Bowls/planters/ponds 60cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period:

Late January – March.

Growing Tips:

Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants - Yellows

Nelumbo nucifer

Name: Golden Lotus (NEW)

Type:

Perennial, hardy aquatic plant

Description:

New medium-large double flower with petals ranging in colour from pale - golden yellow with hints of light green. Flowers range in size from 15-30cm. This very special lotus produces large double flowers with up to 88 petals per flower. Prolific bloomer once plant is established.

Suitable for:

Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period:

Late January – March.

Growing Tips:

Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants - Reds

Nelumbo nucifer

Name: Mossman Red Lotus (NEW)

Type: Perennial, hardy aquatic plant

Description: New medium sized variety, showy single flower with rich red petals changing to deep pink with age. Blooms ranges in size from 15-23cm. This new lotus was bred at our facility in Far North Queensland. It produces the closest to red flowers of our dark pink varieties.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Holy Fire Lotus

Type: Perennial, hardy aquatic plant

Description: This is our favourite medium sized lotus. Will flower the whole summer. Produces medium single petal flowers with petals red fading to pink with age on the outside and cream on the inside.

Flowers range in size from 15-25cm.

Suitable for: Bowls/planters/ponds 60+cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

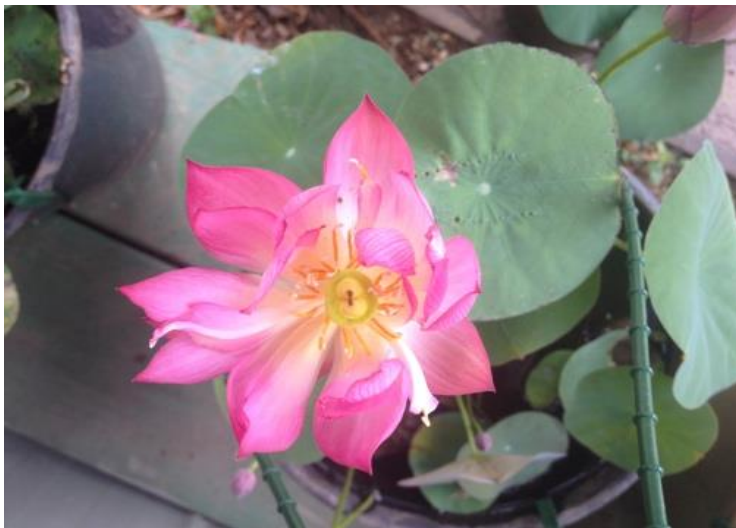

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Baby Range (small varieties)

Nelumbo nucifer

Name: Cochrane's Baby Pink Lotus

Type: Perennial, hardy aquatic plant

Description: Lovely small lotus, produces numerous pink flowers ranging in size from 8-15cm. Prolific flowering semi-dwarf or bowl lotus.

Flowering Period: December – March.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$49

Name: Cochrane's Snow White Lotus

Type: Perennial, hardy aquatic plant

Description: Available as a small or medium lotus. Produces numerous single white flowers ranging in size from 10-25cm. Can produce up to 20 blooms a season. Perfect for half wine barrels, bowls and other waterproof planters.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: Late December – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$49

Lotus Plants – Pinks and Multi Colours

Nelumbo nucifer

Name: Mrs Perry Slocum Lotus

Type: Perennial, hardy aquatic plant

Description: This is our most popular and best-selling large (dam) lotus. Has outstanding large double-petal pink flowers followed by large green seed pods.

Petals are pink with splashes of yellow and cream. Flower fades to light yellow/pink with age. Blooms range in size from 20-35cm.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

OUT OF STOCK

Name: Green Magic Lotus

Type: Perennial, hardy aquatic plant

Description: This show stopping variety was produced through the Blue Lotus Water Garden breeding program. A small to medium sized lotus. Produces unique 3 coloured flowers (pink, white with a touch of green on the petals). Blooms range in size from 8-15cm.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: Late December – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Pinks and Multi Colours

Nelumbo nucifer

Name: Perfect Pink Lotus

Type: Perennial, hardy aquatic plant

Description: Fantastic medium – large lotus that produces even pink single petal flowers. Blooms range in size from 15-25cm. Does best in larger bowls & planters over 80cm in width.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Pink Fire Lotus

Type: Perennial, hardy aquatic plant

Description: Beautiful variety produces large double flowers with lots of petals. Blooms have bright pink petals with touches of cream. Flowers range in size from 15-25cm. Prolific flowering after 2 years.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Pink Beauty Lotus

Type: Perennial, hardy aquatic plant

Description: Lovely double petal flower with numerous light to medium pink petals. Flowers range in size from 15-25cm. Very showy soft pink flowers.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Pinks and Multi Colours

Nelumbo nucifer

Name: Pink Tulip Lotus

Type: Perennial, hardy aquatic plant

Description: Fantastic medium lotus with light pink tight curved petals. Flowers range in size from 10-20cm. Very similar shape flower to “Angle Wings’ except pink.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Sacred Hindu Lotus

Type: Perennial, hardy aquatic plant

Description: Large lotus with variable pink petals that have a slight twist. Blooms range in size from 15-23cm. Flowering starts a little later than other large lotus. Plant set’s red seed pods after flowering with edible seed. Very suitable for dam plantings.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Carolina Queen Lotus

Type: Perennial, hardy aquatic plant

Description: Spectacular large single pink lotus with large showy flowers that stand well above the leaves. Petals are deep pink outside and fade to yellow at the base on the inside. Blooms range in size from 20-30cm. This large and vigorous variety is very suitable for dams and lakes.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Pinks and Multi Colours

Nelumbo nucifer

Name: Pink Glow Lotus

Type: Perennial, hardy aquatic plant

Description: Very productive medium size lotus with flowers that exude a unique pink glow. Petals generally light pink with deep pink tips. Blooms range in size from 15-25cm. Great for bowls & waterproof planters.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Cherished Lotus

Type: Perennial, hardy aquatic plant

Description: Medium sized lotus with double pink flowers with splashes of white on inner petals. Blooms range in size from 10-20cm in size. A prolific flowering medium size lotus. Sets more flowers than other double-pink varieties. Great for bowls & waterproof planters.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Crimson Crown Lotus

Type: Perennial, hardy aquatic plant

Description: Medium – large unusual pink lotus with extended pink stigmas that protrude from the stamen. Has a unique crown-like formation in the centre of the double-pink flower. Flowers range in size from 15-23cm.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Pinks and Multi Colours

Nelumbo nucifer

Name: Jodie Lotus

Type: Perennial, hardy aquatic plant

Description: Another one of our show-stoppers. Flowers are medium to large light pink in the centre graduating to darker pink petals on the outside. Flowers range in size from 15-25cm.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Hot Lips Lotus

Type: Perennial, hardy aquatic plant

Description: Medium-large single flower lotus. Petals are cream to light pink with magenta highlights on the tips. Blooms range in size from 15-25cm.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Makayla Lotus

Type: Perennial, hardy aquatic plant

Description: Medium lotus with showy cream petals that have pink highlights and veins. Very vigorous grower, young leaves are deep maroon in colour before turning green with age. Flowers can reach diameters of 25cm when open.

Suitable for: Bowls/planters/ponds 60cm width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Whites and Creams

Nelumbo nucifer

Name:

Cream Lutea Lotus

Type:

Perennial, hardy aquatic plant

Description:

Extra-large single creamy white lotus. Petals range in colour from white at the tips to light yellow at the base. Flowers can reach diameters of 40cm when fully open. Very large showy white/creme flowers. Best suited to larger earth bottom ponds and dams.

Suitable for:

Bowls/planters/ponds 90cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period:

Mid December – Mid April.

Growing Tips:

Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Lotus Plants – Whites and Creams

Nelumbo nucifer

Name: Snow White Lotus

Type: Perennial, hardy aquatic plant

Description: Medium lotus that produces numerous single white flowers ranging in size from 10-25cm. Can produce up to 20 blooms a season. Perfect for half wine barrels, bowls and other waterproof planters.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: Late December – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Name: Giant Snowball Lotus

Type: Perennial, hardy aquatic plant

Description: Spectacular lotus that produces double-white blooms that appear as a ball before fully opening. Petals often have a slight twist. Blooms range in size from 15-25cm. Needs more room than other varieties to do well.

Suitable for: Bowls/planters/ponds 80+cm width x 30cm depth or larger. Best grown in earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$79

Name: Angle Wings Lotus

Type: Perennial, hardy aquatic plant

Description: Lovely medium-large sized single white lotus. Flower petals are creamy white curved with pointy tips. Flowers range in size from 15-25cm. This variety is suited to ponds and dams where you only want a medium height lotus. Also does well in wide bowls.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Best grown in earth bottom ponds, dams & lakes.

Flowering Period: January – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$65

Cold Hardy Waterlilies – Beginners Range

Nymphaea

Name: David Waterlily (NEW)

Type: Perennial, hardy aquatic plant

Description: This lovely medium sized waterlily produces flowers with shades of red, pink with a trace of orange that deepen with age. Blooms are 8-12cm in size and leaves are green-purple.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: October – April.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$32

Name: Chromatella Waterlily

Type: Perennial, hardy aquatic plant

Description: Beautiful small waterlily with light yellow flowers that range in size from 8-12cm. Leaves are variegated purple-green. This variety tolerates less sun than others. Best waterlily for beginners.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: October – March.

Growing Tips: Needs full sun, minimum 4-6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$32

Name: Walter Pagels Waterlily

Type: Perennial, hardy aquatic plant

Description: Lovely medium sized waterlily that produces white flowers that have a slight pink hue. Blooms range in size from 12-14cm and leaves are green-olive.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: November – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$32

Cold Hardy Waterlilies – Pinks and Reds

Nymphaea

OUT OF STOCK

Name: Joanne Pring Waterlily

Type: Perennial, hardy aquatic plant

Description: Lovely mini pink waterlily with leaves that turn from bronzy to green with age. Smallest of our pink waterlilies, flowers more in the second year. Produces numerous pink flowers 8-10cm.

Flowering Period: November – March.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: N/A

Name: Fire Opal Waterlily

Type: Perennial, hardy aquatic plant

Description: This is a stunning waterlily. Our best pink for bowls and ponds. Produces rich pink double petal flowers. Blooms range from 12-16cm in size. Leaves are bronze turning green with age.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: November– March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions

Retails from: \$49

OUT OF STOCK

Name: Lily Pons Waterlily

Type: Perennial, hardy aquatic plant

Description: Beautiful large waterlily with many medium pink petals. Blooms range in size from 15-18cm. Leaves are bronze turning green with age. Outstanding performer in dams and lakes. Leaves sit flat on water and never pile up on each other.

Suitable for: Bowls/planters/ponds 80cm width x 30cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: November – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions

Retails from: N/A

Cold Hardy Waterlilies – Pinks and Reds

Nymphaea

OUT OF STOCK

Name: Mayla Waterlily

Type: Perennial, hardy aquatic plant

Description: Lovely double petal vivid fuchsia pink flowers with long orange stamens. Blooms range in size from 12-15cm. Leaves are bronze turning green with age. Needs lots of room such as a dam or large pond. Leaves sit flat on water and never pile up on each other.

Flowering Period: November – March.

Suitable for: Large bowls/planters. Grows best in earth bottom ponds, dams & lakes.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: N/A

Name: Rembrandt Waterlily

Type: Perennial, hardy aquatic plant

Description: Stunning deep pink-red flowers with lovely green leaves. Blooms range in size from 8-14cm. New leaves are bronze then turn green with age. Prolific bloomer, ideal for bowls and smaller ponds.

Suitable for: Bowls/planters/ponds 40cm+ width x 25cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: November – March.

Growing Tips: Needs full sun, minimum 6 hrs per day. Plants are tolerant to frost and hot conditions.

Retails from: \$39

Name: Perry's Baby Red Waterlily

Type: Perennial, hardy aquatic plant

Description: Elegant small waterlily with rich red cupped flowers with bronze-green leaves. Flowers range in size from 7-12cm. Great for bowls and small ponds.

Suitable for: Bowls/planters/ponds 40cm width x 20cm depth or larger. Also earth bottom ponds, dams & lakes.

Flowering Period: November – March.

Name: Lime Zinger Taro (*Colocasia esculenta elena*)

Type: Perennial marginal plant.

Description: Attractive lime green foliage plant with large heart shaped leaves that have purple veins and tuberous root system. The plant generally grows 1m – 1.5m in height.

Growing Tips: The plant likes wet feet and rich loamy soil. Prefers a filtered sun or part shade position away from hot afternoon sun. Will tolerate light frost as plant goes dormant in winter. Cut back dead foliage after the last frost. Fertilize in spring and summer with slow release granulated fertilizer. Suitable for decorative bowls and margins of ponds/dams/gardens where the soil remains moist.

Retail: from \$25

Trees

Name: Persian Silk Tree (*Albizia julibrissin*)

Type: Perennial – deciduous tree.

Description: Beautiful ornamental medium sized tree that has a broad crown of green feathery leaves and wispy pink/rose flowers during summer. The tree generally reaches a height of 10-15m.

Growing Tips: Silk trees are both drought tolerant and frost tolerant. They prefer a full sun position in well-drained soil. Water regularly in summer for the first year until roots are established. Fertilize young trees once in spring.

Retail: from \$25

Name: Giant Ornamental Banana Tree (*Ensete ventricosum*)

Type: Evergreen (perennial in cooler areas).

Description: Impressive, quick growing, cold tolerant banana with huge leaves with red stalks up to 3m long. Trees can reach a height of 6m with trunk base of 1m in diameter. They are ornamental only. They rarely produce fruit in cooler areas and fruit is not palatable with large seeds.

Growing Tips: The plant likes regular watering and free-draining soil. They prefer a full sun or filtered sun position away from strong wind. Is frost sensitive but will tolerate light frost once established. Cut back dead foliage after the last frost of the season. Fertilize in spring with slow release fertilizer. Suitable for very large decorative planters.

Retail: Limited stock available, priced from \$35

Name: Ornamental Musa Banana Tree (*Musa sikkimensis*)

Type: Evergreen (perennial in cooler areas).

Description: Attractive, lush, quick growing cold hardy banana that looks similar to the tropical varieties. It features thinner trunks with a canopy of green leaves. It can grow to 4m tall. They are ornamental only and rarely produce fruit in cooler areas and fruit is not palatable with large seeds.

Growing Tips: The plant likes regular watering and free-draining soil. They prefer a full sun or filtered sun position away from strong wind. Is frost sensitive but will tolerate light frost once established. Cut back dead foliage after the last frost of the season. Fertilize in spring with slow release fertilizer. Suitable for very large decorative planters.

Retail: Limited stock available, priced from \$35

Ornamental Plants

OUT OF STOCK

Name: Canna Lily (*Canna x generalis Hybrids*)

Type: Perennial plant.

Description: Canna lilies are beautiful tropical looking plants that can grow almost anywhere. They come in a variety of sizes from dwarf types that grow to 60cm to tall types getting to 2m tall. The flowers grow up through tightly furled leaf bases and come in all colours except blue, green and black. They flower from spring to autumn. Foliage may be green, purple, burgundy, bronze or variegated.

Growing Tips: Cannas like a full sun to filtered light position. They prefer a rich moist soil. Water regularly during dry periods. Fertilize in late winter – early spring. Frost tolerant as plant goes dormant in winter. Cut back all foliage to just above ground level in late autumn. Suitable for medium-large decorative planters.

Name: Bougainvillea (*Bougainvillea*)

Type: Evergreen (Perennial in cooler climates)

Description: Attractive thorny shrub that can become vigorous climbers. They have vivid flowers which are actually a modified leaf and come in shades of pink, red, orange, white, purple with tiny white centre. They flower from late spring to early autumn. Plants can grow from 1m-12m high depending on the type.

Growing Tips: These plants like a full sun position and well drained soil. They like hot conditions and are drought tolerant once established. They are sensitive to frost but will tolerate light frost. Fertilize in spring before they flower.

Retail: Limited varieties available, priced from \$35

Name: Tuberous Begonia (*Begonia tuberhybrida*)

Type: Perennial plant.

Description: These types of begonias have soft and delicate foliage with spectacular multi-coloured single and double flowers that are rose or carnation like. They flower from late spring to early autumn.

Growing Tips: Best grown in pot with good quality potting mix. They like filtered light not direct hot sun. Keep soil moist but don't over water. These plants are frost sensitive but go dormant in winter. When the plant dies back in late autumn/early winter, remove the tuber from the pot, dry it and store in a dry dark place until the end of winter. Re-pot in late winter/early spring using premium potting mix and slow release fertilizer. Re-apply fertilizer again in mid-summer.

Retail: Limited varieties available, priced from \$19

Name: Begonia Bossa Nova (*Begonia bolivienis*)

Type: Perennial plant.

Description: Beautiful trailing begonia with dark green leaves and masses of slender flowers. The range of colours includes reds, oranges, pinks and whites. They flower from late spring to early autumn.

Growing Tips: Best grown in pot or hanging pot with good quality potting mix. They like bright filtered light and will tolerate direct morning sun. Keep soil moist but don't over water. These plants are frost sensitive but go dormant in winter. When the plant dies back in late autumn/early winter, remove the tuber from the pot, dry it and store in a dry dark place until the end of winter. Re-pot in late winter/early spring using premium potting mix and slow release fertilizer. Re-apply fertilizer again in mid-summer.

Retail: Limited varieties available, priced from \$19

Ornamental Plants

Name: Perennial Hibiscus (*Hibiscus x hybrids*)

Type: Perennial plant.

Description: Spectacular shrub with large showy flowers with varieties ranging in colour from reds, pinks, whites and combinations. Leaves can be green or burgundy depending on type. Shrubs grow to a height of 1.5-1.8m tall. Flowering occurs during summer – early autumn.

Growing Tips: This plant grows in moist, well-drained soil. It needs full sun position to flower well. It's frost tolerant as it goes dormant in winter. Cut back dead, woody material to 15cm above ground at the start of spring and fertilize well with slow release fertilizer. Add more fertilizer when flower buds appear.

Retail: Limited varieties available, priced from \$25

OUT OF STOCK

Name: Bromeliad (*Bromeliaceae*)

Type: Evergreen

Description: These exotic beauties come in a range of vivid colours, shapes and sizes. Ideal for tropical style gardens.

Growing Tips: These plants like a bright defused light position or part shade and well-drained soil. Keep well watered during summer. Protect from harsh sun and frost. Fertilize with liquid fertilizer or slow release fertilizer pellets. Flowers will last up to 6 months.
