Botanical Garden Teplice

The Botanical Garden Teplice was established by the Teplice City Council in 2002 as an independent public body and fully funded by the Teplice City Council. From the garden's total area of two hectares almost a half is dedicated to the open-air display of plants. The exhibition greenhouses cover 2,400 m² of land and the storage greenhouses, which are not open to the public, cover 1,750 m². Each one of our four greenhouses is dedicated to a distinct climatic zone.

The Xeric Greenhouse

Vast areas of the Earth are covered with plant communities which have adapted to the long periods of drought. We have selected some especially attractive ones: Central America, primarily Mexican half deserts, dry mountain areas of South America, western parts of South Africa and arid South of Madagascar. These main areas are supplemented with several smaller ones – a show of flora from the Galapagos Islands, Arabia and rare vegetation of the Socotra Island which is situated in the Arabian Sea between Yemen and Somalia.

The Tropical Greenhouse

This is the most spacious. It covers an area of over 1,000 square meters and stands almost 16 meters high. A lively waterfall, two flowing brooks, a copy of the ruins of a Mexican pyramid, a glazed case with orchids and other rare plants, a pond and aquariums enhance the interior. All plants exhibits are displayed – as in other greenhouses – by their geographical origin and include collections from tropical America, Asia, Australia, Africa and northern Madagascar.

The Subtropical Greenhouse

The Andes of Chile, the Himalayas and subtropics of the south-eastern Asia, New Zealand, mountains and eastern part of South Africa with winter rains – that is all we try to introduce in the subtropical greenhouse. The subtropical exposures are diversified in a show-case with quite cold-loving carnivorous plants and orchids and a patio created by a column down which water flows with a star pergola inspired by the travels around Mexico.

The Rock Garden Greenhouse

The Rock Garden Greenhouse is the newest construction subsequent the whole exhibition complex. There are dedicate to plants from the mountain areas of Europe (incl. Canary Islands), Asia, North America, New Zealand and South American (incl. the Chilean desert Atacama).

The Open-Air Display

The outdoor exposure is spread on the area of 1.5 hectares and during one day in the botanic garden you can travel almost all around the world. As well as the greenhouse exposure the whole area is divided to the individual regions on the Earth from the geographic point of view.

Desiderata 2023–2024

Based on the Convention on Biological Diversity (CBD, Rio de Janeiro 1992) the Index seminum is exclusively intended for the institutions operating in research, education and nature protection areas. Conditions coming from the Nagoya Protocol must be fulfilled for scientific purposes. Any material acquired from these seeds is not allowed to be used for commercial purposes.

Our botanical garden is a part of the IPEN network (= International Plant Exchange Network). You can find us under the institution code **TEBLI**. More information, see <https://botanischetuinutrecht.nl/data/ipenlist.php>

Non IPEN-members have to return the „Agreement on the supply of living plant material for non-commercial purposes“. IPEN members do not have to sign the agreement.

Phytosanitary regulation

Please check the import conditions in your country and see below.

EU countries

We issue plant passports for countries within EU. The minimal number of items is not limited.

Non-EU countries

We are providing phytosanitary certificates after the 31st May, when all requests from non-EU botanical gardens are available. Minimum order is 10 packets of seeds due to the demanding phytosanitary controls.

Information

All Seeds are result of open pollination. Hybridization may occur.

Nomenclature of plants is mainly based on:

www.worldfloraonline.org

<http://apps.rhs.org.uk/horticulturaldatabase/HortGenera.asp>

Abbreviations:

O – plant is cultivated outdoors

G – plant is cultivated in greenhouses

Please, place your order at the website:

<https://indexseminum.bgci.org/catalogue/teplice-botanical-garden>

or send the requests to the address:

botanika@botanickateplice.cz

You can write the desired list in an e-mail message or use the table below.

Please, limit your request to 30 items, deadline is 31st May 2024.

DESIDERATA 2023–2024

Mailing address:

Botanická zahrada Teplice
Josefa Suka 1388/18
415 01 Teplice
Czech Republic

Via e-mail (preferably):

botanika@botanickateplice.cz

Your address:

Legibly write or type numbers of desired seeds in boxes below (limit 30 items):

IPEN member: Yes/No

Phytosanitary certificate (non-EU members): Yes/No

In the future, please send the Index Seminum to the following e-mail address:

Agreement on the supply of living plant material for non-commercial purposes leaving the International Plant Exchange Network

Against the background of the provisions and decisions of the Convention on Biological Diversity of 1992 (CBD) and in particular those on access to genetic resources and benefit-sharing, the garden is dedicated to promoting the conservation, sustainable use, and research of biological diversity. The garden therefore expects its partners in acquiring, maintaining, and transferring plant material to always act in accordance with the CBD and the Convention on the International Trade in Endangered Species (CITES).

The responsibility for legal handling of the plant material passes on to the recipient upon receipt of the material. The requested plant material will be supplied to the recipient only on the following conditions:

1. Based on this agreement, the plant material is supplied only for non-commercial use such as scientific study and educational purposes as well as environmental protection. Should the recipient at a later date intend a commercial use or a transfer for commercial use, the country of origin’s prior informed consent (PIC) must be obtained in writing before the material is used or transferred. The recipient is responsible for ensuring an equitable sharing of benefits.
2. On receiving the plant material, the recipient endeavours to document the received plant material, its origin (country of origin, first receiving garden, „donor“ of the plant material, year of collection) as well as the acquisition and transfer conditions in a comprehensible manner.
3. In the event that scientific publications are produced based on the supplied plant material, the recipient is obliged to indicate the origin of the material (the supplying garden and if known the country of origin) and to send these publications to the garden and to the country of origin without request.
4. On request, the garden will forward relevant information on the transfer of the plant material to the body charged with implementing the CBD.
5. The recipient may transfer the received plant material to third parties only under these terms and conditions and must document the transfer in a suitable manner (e.g. by using the documentation form).

I accept the above conditions.
