2. *Hemidactylus karachiensis* [= *Hemidactylus turcicus*]

3. *Hemidactylus gleadowi* [= *Hemidactylus brookii*]

## Introduction

In the first edition of this work, the authors wrote an introduction stating the reasons and manner for compiling this bibliography. Everything they said at the time (30 December 2009) regarding the structure of the bibliography holds true to this date. Thus, here we quote the following from their earlier publications, the first dated 29 January 2010 and the bibliography Supplement I that followed on 1 June 2012. Although not much time has passed since the supplement appeared, we have managed to add several hundred new references as well as incorporate more than 1,000 corrections/updates to earlier records. Nonetheless, what we said before still pertains to this current effort to make this reference more widely available.

“For nearly five decades, we have been compiling a bibliography of the herpetology of Southwest Asia. For our purposes, this region encompasses the area between the Red Sea (including the Sinai Peninsula) and the Mediterranean Sea (including Cyprus) on the west and the Pakistan-Indian border region (including Jammu and Kashmir) on the east, and between the borders of the former Soviet Union on the north and the Gulf of Aden (including Socotra and Abd 'al Kuri) on the south. Thus it includes Turkey, Iran, and Afghanistan as the northern tier (the Iranian Plateau), Pakistan in the east, the entire Arabian Peninsula in the south, the countries of Mesopotamia and the North Arabian Desert, Israel, and the Levant. We have attempted to be comprehensive in our coverage of publications within this region. We have also included a miscellany of publications for the herpetofaunas of adjacent countries insofar as they bear on taxa also represented within our region. For these areas, our coverage is far less complete.

“Although we have tried to see as many of the listed publications as possible, there is still a large portion we have cited from sources that we have not verified. To facilitate location of references by interlibrary loan and via the Internet, we have given the full names of authors where these are known to us. We have also provided the full names of journals wherever possible, although there are still many that we have either not seen or have not been able to locate. In the last section, Journals as Cited in References, we provide a complete alphabetical list of all journals and the abbreviations we have chosen to use. The latter were chosen, perhaps somewhat arbitrarily, but as much as possible to avoid ambiguity (thus, for instance, we do not use J. for Journal but Jour., Jahrb. for Jahrbuch, Jahresh. for Jahresheft, and Zh. and Zhur. for the Russian Zhurnal, which some publications allow in the anglicized version as Journal and abbreviate ‘J.’). Furthermore, among the references, users will occasionally notice the presence of a series of ‘x’s, i.e., xxxxx, in place of expected bits of information such as pages, volume number, publisher, city where printed, etc. Clearly, at this time we were unable to provide the necessary specifics and the ‘x’s are meant to alert the user to unknowns in the citation.

“We have collected references on all aspects of the biology of amphibians and reptiles and have tried to be complete, although systematics, distribution, and biogeography are our own particular interests. Owing to our areas of research, we have also included works on geology, paleontology, paleoclimatology, and geography that bear on biogeography of our region. We include some references on the biogeography of organisms other than amphibians and reptiles, as well as publications that refer to other aspects of ecology. Such references are far from exhaustive, however. We list a number of titles that deal with analyses of higher taxa that extend far beyond our geographic area as well as publications that describe techniques, particularly those useful in systematics or field herpetology. In short, we include works that have come to our attention that we believe would assist researchers conducting herpetological investigations in Southwest Asia. We have been less than diligent in keeping up with the popular literature on herpetoculture, although we have included those that, serendipitously, came to our attention. In some cases, we have only the title, or the reference is in other ways incomplete. We have included such publications to call attention to them with the expectation that we, or others, will eventually complete the citation. A few websites are included, for the most part those maintained by academic institutions and museums. We have made no attempt to be comprehensive with regard to websites owing to impermanence.

“We have made every effort to be consistent in our use of diacritical marks, but we know there are gaps. This is particularly true for the many references in Turkish and to some extent Eastern European languages such as Hungarian, Czech and Slovak. The bibliography was prepared using Papyrus©, which includes nearly all of the Western European glyphs, e.g., á ä ç é è ñ ö ü, but assuredly not diacritical marks for all languages. To the extent possible, we have gone back and entered such elements as ě Ğ ħ ĩ ř Š š and others, but time constraints have made it impossible to recheck all foreign references when editing the final manuscript. We trust that our colleagues will forgive our shortcomings in this regard.

“Keywords have been a particular concern. Without them, a bibliography of this size is of limited utility. First and foremost, we have tried to include keywords that indicate the countries and important geographic areas covered in each publication, and we have listed as keywords the taxa included in the work that occur in our area. In large, comprehensive works, e.g., Boulenger’s catalogues, we have not recorded species that do not occur in Southwest Asia. We have tried to include keywords that describe the general subject matters of the reference. Obviously, we could only be inclusive for those works actually before us. Otherwise, we have had to list keywords based solely on the titles. The reader can look up key-

words in the keyword index (pp. 429ff [herein pp. 715]) and find the titles, listed by number, which include that keyword. Alternatively, users of the PDF version can utilize the search features of Adobe Acrobat® to search for works containing the keyword.

“A cautionary note: Synonymies cannot be constructed through use of the keyword index and bibliography alone. We have not been able to include all of the permutations of Latin names used in the citations. The bibliography will lead the user to the necessary titles, but the references themselves must be checked for accurate orthography of the taxonomic names. For many taxa, we have included the current names in brackets [ ] in the keyword index in those instances where the keyword taxon name is no longer current. We realize that in many instances the taxonomy is unsettled, and it should not come as a surprise that some users will not agree with our judgments. We can only take refuge in noting that we have tried to use the most recent interpretations found in the literature, certainly for groups where we lack the most up-to-date expertise ourselves. Taxonomy is a ‘moving target!’ and phylogenetic reshuffling and the reorganization of species groups and clades at all levels are taking place more rapidly than ever before. Most notable are the reorganization of groups such as the ranid frogs, some of which are now referred to other family groups, the colubrid snakes, especially the former nearly ubiquitous genera *Elaphe* and *Coluber*, and so forth.

“We thank the many people who have sent us reprints and references over the past decades. We could not have assembled this bibliography without the help of librarians at our respective institutions. They have searched out many obscure and ancient publications in many languages and made them available to us. We are, furthermore, especially grateful to Dr. Kraig Adler, Cornell University, for his hospitality to Alan Leviton and for opening his large and important personal library for checking references. Leviton also made extensive use of the library of the Smithsonian Institution, and we thank Dr. George Zug, Division of Amphibians and Reptiles, Smithsonian Institution, for his facilitation, friendship, and encouragement. We also want to express our appreciation of the work done by Dr. Michele L. Aldrich, the most extraordinary proof-reader we have ever known, who went far beyond the call to duty; she scanned the whole work and pointed out numerous inconsistencies, which we have tried to correct before going to press. And last, but not least, both Dr. Aaron Bauer, Villanova University, and Ms. Hallie Brignall, the latter the Academy’s managing editor of Scientific Publications, perused segments of the work, the former providing missing data, the latter searching for errors and more inconsistencies. We are grateful to all for their valiant attempts to keep us out of harm’s way. Having said this, we also absolve all of our friends of any guilt for the errors we know persist in the work. They are our responsibility, and we alone bear the blame.

“Finally, the authors of this bibliography are listed in the order determined by a ‘toss of a coin.’ Their contributions were equal though they placed emphasis on different areas. Initially, Leviton handled most of the publications for the 18<sup>th</sup> and 19<sup>th</sup> centuries and the geological literature whereas Anderson focused on the 20<sup>th</sup> century as well as regional geography, ecology and ancillary non-herpetological, neontological literature. Nonetheless, across the years there was considerable overlap in their activities as well as in addition of materials for the first decade of the 21<sup>st</sup> century. Both recognize and accept equal responsibility for the strengths and weaknesses of this compilation. . .”

“Alan E. Leviton and Steven C. Anderson  
30 December 2009”

### Preface to Supplement

“This Supplement to *The Herpetological Literature for Southwestern Asia: An Indexed Bibliography*, which appeared on 29 January 2010, consists of updated records that were included in the original publication and more than 450 new references, some of which had been missed earlier, others published since January 2010. We have also reprinted in this Supplement, a copy of the Preface to the January 2010 edition inasmuch as most of its contents are germane to the Supplement as well.

“The Supplement is arranged in the same format as the original publication: (1) Bibliography; (2) Keyword Index; and (3) Journals. However, we have now added (4) an index to all authors, both senior and their co-authors, where applicable, covering all references included in both the original publication. Reference numbers below [9083] refer to references as they appeared in the January 2010 publication. References numbered [9083] and above are new references that did not appear in the original publication.

“In addition to the author index, we have also added many new references to the geology of the Eastern Mediterranean and Southwest Asia, especially for the Neogene, Holocene, and most recent Anthropocene (latest Holocene, where there is evidence that the extent of human activities have had a significant global impact on the Earth’s ecosystems (see P.J. Crutzen and E.F. Stoermer, 2000, IGBP [International Geosphere-Biosphere Programme] Newsletter 41)) inasmuch as we believe that it is incumbent for all of us to search for congruencies in biogeography between phylogeographic patterns and geologic history of the regions and, if not apparent, to offer thoughts on why the discrepancies exist.

“And, once again, we call the attention of our colleagues to the matter of diacritical marks and accents usually associated with languages other than English and the variables that render standardization of spellings difficult, if not impossi-

ble, to insure. Indeed, we are reminded of the explanation offered in the Preface to the volume, *A Manual of the Geology of India* by Henry B. Medlicott and William T. Blanford, published in 1879. For those interested, we have provided below (see over, p. viii) a quote of the paragraph they wrote in explanation of the difficulties specifically in dealing with Oriental place names and their English transliterations, but this applies equally to transliterations among Russian, Turkish, Italian, Slavic, Czechoslovakian, and other languages.

“Lastly, we are indebted to our colleagues, notably Kraig Adler, Michele Aldrich, and George Zug, for tolerating us in our search for items and for taking time to review what we have done. Of course, we have no intention of evading ultimate responsibility for errors of omission or commission, of which we are confident there are many. So, to the users of this work, please do let us know where we have erred. We will make every effort to correct the errors as well as add missing items.”

“Alan E. Leviton and Steven C. Anderson  
1 June 2012”

With publication of this second edition of the Southwestern Asian Herpetological Bibliography, the authors will bring to a close their efforts to maintain and update the work. However, to facilitate the activities of others, the authors, with the consent of the California Academy of Sciences, now place this work in the public domain as an open document accessible under terms of the *Creative Commons Legal Code*.

Before closing, once again we thank so many of our colleagues, most especially those mentioned above, for their support of this project. And at the risk of redundancy, we acknowledge each by name, Kraig Adler, Michele Aldrich, Aaron Bauer, Hallie Brignall, George Zug, and librarians at the California Academy of Sciences, Library of Congress, University of the Pacific, and the Smithsonian Institution’s National Museum of Natural History.

It is now time for us, the authors, to move on to other ventures and to complete projects that have long demanded our respective undivided attentions. But we hasten to add, if there are questions to which you, our colleagues, believe we might be able to respond, do not hesitate to contact one or both of us.

- [714] Audouin, Jean Victor. 1827. Explication sommaire des planches de reptiles (supplément), publiées par Jules-César Savigny, Membre des l'Institut; offrant un exposé des caractères naturels des genres, avec la distinction des espèces. Pages 161-263 in *Histoire Naturelle*, vol. 1. (Includes pls. 1-5.) *Description de l'Égypte, ou recueil des observations et des recherches qui ont été faites en Égypte pendant l'Expédition de l'Armée Française, publié par les ordres de sa Majesté l'Empereur Napoléon le Grand*. Imprimerie Impériale, Paris, France. (In French.)  
(According to a note on p. 120 and the "Table des Mémoires" (p. 337), Étienne wrote pp. 115-120 and Isidore, his son, wrote the remainder of the section on reptiles; the section entitled "Reptiles. — Supplément," pp. 161-184, 5 pls., was authored by Jean-Victor Audouin and the "Description des Crocodiles d'Égypte," pp. 185-264, was by Étienne Geoffroy St.-Hilaire. Tollitt (1986) dated all sections as 1827, but noted some evidence that pp. 115-120 might have been issued as early as 1809. A second edition was published by C.L.F. Panckouck, Paris, in 1829; in this edition, herpetology is in volume 24, pp. 1-140, 13 pls. (Zhao and Adler 1993:369))
- [715] Audouin, Jean Victor. 1829. Explication sommaire des planches de reptiles (supplément), publiées par Jules-César Savigny, Membre des l'Institut; offrant un exposé des caractères naturels des genres, avec la distinction des espèces. (This is a handbook or field guide, with keys, photographs, and text that includes information for identification, habitat and biology, and distribution. It attempts to include all species of amphibians and reptiles known as of 1997. It mentions subspecies, but does not distinguish them. Treatment of each species is brief and there is little mention of taxonomic controversies. The bibliography is far from complete.)

(First mention of a probable ancient land connection of India with the Seychelles Islands and Southern Africa: "Certain animals, whose remains are found fossil in the Panchét rocks, are closely related to kinds hitherto only met with in South Africa and Australia, in rocks of about the same age; and in the existing fauna of India there are many indications of relationship, and some cases of identity, with the South African and Seychelles fauna, pointing to a common origin, and therefore to a former communication between the two regions." - [2369] Cuvier, Georges. 1817. Cuviers und Oken's Zoologien neben einander gestellt. *Isis von Oken (Jena)* 1:1145-1185.  
("Isis oder Encyclopadische Seitung von Oken" is the full journal title. Band 1, Heft 8 includes nos. 144-148. The article offers a comparison between Oken's scheme of classification and included taxa of the animal kingdom with one published by Cuvier in 1812 (Ann. Mus. Hist. Nat. Paris, 1812, vol. 19). On p. 1183, right column, under Cuvier, "Hemidacty.", (possibly abbreviated because of constraints imposed by the typesetter's column width, although the next name, "Platyduct." is similarly abbreviated and there are no obvious constraints of word length imposed by column width) is listed but there is no parallel listing among the genera in Oken's column. The name *Hemidactylus* should probably be cited as *Hemidactylus* Cuvier in Oken 1817 (in Cuvier 1817 he uses the French vernacular, "Hemidactyles" only) or perhaps even "Hemidactylus" Gray 1825, which seems to be the first unequivocal use of the Latinized suffix.  
For additional discussion of the topic, see Zhao and Adler, 1993, p. 183. Also, based on a careful examination of the pagination, Adler (pers. commun.) noted that following col. 1176, the columns that appear on the following pages are (a) either unnumbered, (b) only a single folio number appears on the page, or (c) column numbers are repeated in separately numbered sections (i.e., 8(146):1161-1168, 8(147):1169-1176, 8(zu 147):2 unnumbered columns and no folio number, folio number only 1178, unnumbered page or columns; 8(148):unnumbered, folio numbers only 1780-1782; 8(zu 148):columns unnumbered, folio number only 1183-1184, folio and columns unnumbered.)

- (The general work provides useful details on equipment and precautions needed to work in extreme arid conditions, including sections on transportation, biological hazards (mosquitos, scorpions, spiders, leeches, aquatic animals such as sharks, rays, stone fish, etc., poisonous plants, mammals, snakes, and diseases, such as malaria, trachoma, etc.), and climatic hazards, and emergency treatments. Appendices include (1) Useful Arabic phrases and words; (2) International words used for radio communications for each letter in the alphabet; (3) Ground to air signals (emergencies); (4) Classification and description of venomous and nonvenomous snakes (by John Gasperetti). Gasperetti's list is incomplete but it covers most of the commonly met species. Gasperetti also provides a list of Arabic names for some of the common species and notes limitations on their use.)

(A guide written "as much in hope of dispelling the lamentable prejudices entertained in India against some of the most beautiful and harmless of God's creatures, as to afford an elementary treatise for the study of an interesting branch of natural history by which the weariness of Indian service may be mitigated.") (Nicholson, Preface)  
Most records are from southern India, the eastern Himalayas, Burma [Myanmar], and the Malay Peninsula. Only the one record for Afghanistan is indexed here. Nicholson uses the generic "India" for most of his other records except those that are clearly from southern India or the Himalayas, which he carefully states. Because India, which at the time included what is now Pakistan, is used in its more generic context, it is not possible to show what, if any, of his citations are meant to include snakes found in the area covered by us in this bibliography.  
Nicholson introduces the genus name *Naga* for *Naja*, stating in the footnote [p. 104] "Usually written *Naja*; as the word is probably derived from *na-g*, I prefer to write it as *Naga*." He includes descriptive material and the species *N. tripudians*, which is also described in some detail. Thus, the name *Naga* is a valid name but clearly a synonym of *Naja*.)

- [6656] Oken, Lorenz. 1817. Cuviers und Okens Zoologien neben einander gestellt. *Isis von Oken (Jena)* 1:1145-1185. (In German.)
- ("Isis oder Encyclopadische Zeitung von Oken" is the full journal title. Band 1, Heft 8 includes nos. 144-148. The article offers a comparison between Oken's scheme of classification and included taxa of the animal kingdom with one published by Cuvier in 1812 (*Ann. Mus. Hist. Nat. Paris*, 1812, vol. 19). On p. 1183, right column, under Cuvier, "Hemidactyl." (possibly abbreviated because of constraints imposed by the typesetter's column width, although the next name, "Platydict." is similarly abbreviated and there are no obvious constraints of word length imposed by column width) is listed but there is no parallel listing among the genera in Oken's column. The name *Hemidactylus* should probably be cited as *Hemidactylus* Cuvier in Oken 1817 (in Cuvier 1817 he uses the French vernacular, "Hemidactyles" only) or perhaps even "Hemidactylus" Gray 1825, which seems to be the first unequivocal use of the Latinized suffix.
- For additional discussion of the topic, see Zhao and Adler, 1993, p. 183. Also, based on a careful examination of the pagination, Adler (pers. commun.) noted that following col. 1176, the columns that appear on the following pages are (a) either unnumbered, (b) only a single folio number appears on the page, or (c) column numbers are repeated in separately numbered sections (i.e., 8(146):1161-1168, 8(147):1169-1176, 8(zu 147):2 unnumbered columns and no folio number, folio number only 1178, unnumbered page or columns; 8(148):unnumbered, folio numbers only 1780-1782; 8(zu 148):columns unnumbered, folio number only 1183-1184, folio and columns unnumbered).
- We are indebted to Dr. Adler for his comments relating to the *Isis von Oken* and the classification scheme contained therein.)

Pages 3-56 in *Zoographia Rosso-Asiatica, sistens Omnium Animalium in Extenso Imperio Rossico*, vol. 3. (Includes 7 pls.) Caesarea Academie Scientiarum, Petropoli [=St. Petersburg], Russia. (In Latin.)  
(The following is quoted from Zhao and Adler (1993:392): "Herpetology is on on [sic] pages 3-56, 7 plates, in the section [of the book, *Zoogeographia Rosso-Asiatica* . . .] entitled "Animalia Monocardia seu Animalia Frigidi Sanguinis." The date of publication of this volume has been in dispute; it was printed in 1811, but not generally offered to the public until 1831, hence the frequent citation of both dates. Stresemann (1951), however, presented evidence that copies were made available in 1827 in a way that satisfies the requirements of zoological nomenclature, a view accepted by us. For an opposing view, see Svetovidov (1976). An atlas intended to illustrate Pallas's book, entitled "Icones ad Zoographiam Rosso-Asiaticam," was issued in Petropoli in (1831-) 1834 (-1842), containing one plate of frogs. Darevsky and Mertens (1973) commented on two additional, but unpublished, plates of turtles.")

(This dissertation is a collection of individual papers previously published elsewhere, including papers published jointly with others, or currently in press, plus an introduction summarizing the findings and conclusions. This appears to constitute a publication; it carries the ISBN no. 91-628-3419-3, and seems to be in a format that indicates distribution. In addition to the introduction, it consists of 6 papers: Rastegar-Pouyani, 1998, 1999, 1999 in press, 1999 submitted, Rastegar-Pouyani and Nilson, 1999 submitted, and Macey et al., 1998. The paper by Rastegar-Pouyani (1999; *Asiatic Herpetological Research*, vol. 8) contains two new taxa, *Trapelus agilis khuzistanensis* Rastegar-Pouyani, 1999 and *Trapelus agilis pakistanensis* Rastegar-Pouyani, 1999.)
- [7200] Rastegar-Pouyani, Nasrullah. 2000. Taxonomic status of *Trapelus ruderatus* (Olivier) and *T. persicus* (Blanford), and validity of *T. lessonae* (De Filippi). *Amphibia-Reptilia* 21([31 March]):91-102, figs. 1, 2-3[maps], tables 1-2.
