Preface

For nearly five decades, we have been compiling a bibliography of the herpetology of Southwest Asia. For our purposes, this region encompasses the area between the Red Sea (including the Sinai Peninsula) and the Mediterranean Sea (including Cyprus) on the west and the Pakistan-Indian border region (including Jammu and Kashmir) on the east, and between the borders of the former Soviet Union on the north and the Gulf of Aden (including Socotra and Abd 'al Kuri) on the south. Thus it includes Turkey, Iran, and Afghanistan as the northern tier (the Iranian Plateau), Pakistan in the east, the entire Arabian Peninsula in the south, the countries of Mesopotamia and the North Arabian Desert, Israel, and the Levant. We have attempted to be comprehensive in our coverage of publications within this region. We have also included a miscellany of publications for the herpetofaunas of adjacent countries insofar as they bear on taxa also represented within our region. For these areas, our coverage is far less complete.

Although we have tried to see as many of the listed publications as possible, there is still a large portion we have cited from sources that we have not verified. To facilitate location of references by interlibrary loan and via the Internet, we have given the full names of authors where these are known to us. We have also provided the full names of journals wherever possible, although there are still many that we have either not seen or have not been able to locate. In the last section, Journals as Cited in References, we provide a complete alphabetical list of all journals and the abbreviations we have chosen to use. The latter were chosen, perhaps somewhat arbitrarily, but as much as possible to avoid ambiguity (thus, for instance, we do not use J. for Journal but Jour., Jahrb. for Jahrbuch, Jahresh. for Jahresheft, and Zh. and Zhur. for the Russian Zhurnal, which some publications allow in the anglicized version as Journal and abbreviate 'J.'). Furthermore, among the references, users will occasionally notice the presence of a series of 'x's, i.e., xxxxx, in place of expected bits of information such as pages, volume number, publisher, city where printed, etc. Clearly, at this time we were unable to provide the necessary specifics and the 'x's are meant to alert the user to unknowns in the citation.

We have collected references on all aspects of the biology of amphibians and reptiles and have tried to be complete, although systematics, distribution, and biogeography are our own particular interests. Owing to our areas of research, we have also included works on geology, paleontology, paleoclimatology, and geography that bear on biogeography of our region. We include some references on the biogeography of organisms other than amphibians and reptiles, as well as publications that refer to other aspects of ecology. Such references are far from exhaustive, however. We list a number of titles that deal with analyses of higher taxa that extend far beyond our geographic area as well as publications that describe techniques, particularly those useful in systematics or field herpetology. In short, we include works that have come to our attention that we believe would assist researchers conducting herpetological investigations in Southwest Asia. We have been less than diligent in keeping up with the popular literature on herpetoculture, although we have included those that, serendipitously, came to our attention. In some cases, we have only the title, or the reference is in other ways incomplete. We have included such publications to call attention to them with the expectation that we, or others, will eventually complete the citation. A few websites are included, for the most part those maintained by academic institutions and museums. We have made no attempt to be comprehensive with regard to websites owing to impermanence.

We have made every effort to be consistent in our use of diacritical marks, but we know there are gaps. This is particularly true for the many references in Turkish and to some extent Eastern European languages such as Hungarian, Czech and Slovak. The bibliography was prepared using Papyrus©, which includes nearly all of the Western European glyphs, e.g., á ä ç é è ñ ö ü, but assuredly not diacritical marks for all languages. To the extent possible, we have gone back and entered such elements as ě Ğ ğ ĺ ŋ ř Š Œ š and others, but time constraints

have made it impossible to recheck all foreign references when editing the final manuscript. We trust that our colleagues will forgive our shortcomings in this regard.

Keywords have been a particular concern. Without them, a bibliography of this size is of limited utility. First and foremost, we have tried to include keywords that indicate the countries and important geographic areas covered in each publication, and we have listed as keywords the taxa included in the work that occur in our area. In large, comprehensive works, e.g., Boulenger's catalogues, we have not recorded species that do not occur in Southwest Asia. We have tried to include keywords that describe the general subject matters of the reference. Obviously, we could only be inclusive for those works actually before us. Otherwise, we have had to list keywords based solely on the titles. The reader can look up keywords in the keyword index (pp. 429ff) and find the titles, listed by number, which include that keyword. Alternatively, users of the PDF version can utilize the search features of Adobe Acrobat© to search for works containing the keyword.

A cautionary note: Synonymies cannot be constructed through use of the keyword index and bibliography alone. We have not been able to include all of the permutations of Latin names used in the citations. The bibliography will lead the user to the necessary titles, but the references themselves must be checked for accurate orthography of the taxonomic names. For many taxa, we have included the current names in brackets [] in the keyword index in those instances where the keyword taxon name is no longer current. We realize that in many instances the taxonomy is unsettled, and it should not come as a surprise that some users will not agree with our judgments. We can only take refuge in noting that we have tried to use the most recent interpretations found in the literature, certainly for groups where we lack the most up-to-date expertise ourselves. Taxonomy is a "moving target!" and phylogenetic reshuffling and the reorganization of species groups and clades at all levels are taking place more rapidly than ever before. Most notable are the reorganization of groups such as the rapid frogs, some of which are now referred to other family groups, the colubrid snakes, especially the former nearly ubiquitous genera *Elaphe* and *Coluber*, and so forth.

We continue both to edit existing references and to add new ones to this bibliography. In the forthcoming updates, we plan to publish these additions and corrections as addenda to the existing list. Although we tried to be inclusive through the year 2000, we have added many titles through 2009. However, we still have many unincorporated articles sitting on our desks, and we realize that this will always be so. On the other hand, and in response to inquiries by our colleagues, we wish to make our efforts available without further delay. We would be most grateful to receive correspondence correcting our mistakes and omissions. Particularly helpful are actual copies of papers so that we can personally verify citations and list keywords.

We thank the many people who have sent us reprints and references over the past decades. We could not have assembled this bibliography without the help of librarians at our respective institutions. They have searched out many obscure and ancient publications in many languages and made them available to us. We are, furthermore, especially grateful to Dr. Kraig Adler, Cornell University, for his hospitality to Alan Leviton and for opening his large and important personal library for checking references. Leviton also made extensive use of the library of the Smithsonian Institution, and we thank Dr. George Zug, Division of Amphibians and Reptiles, Smithsonian Institution, for his facilitation, friendship, and encouragement. We also want to express our appreciation of the work done by Dr. Michele L. Aldrich, the most extraordinary proofreader we have ever known, who went far beyond the call to duty; she scanned the whole work and pointed out numerous inconsistencies, which we have tried to correct before going to press. And last, but not least, both Dr. Aaron Bauer, Villanova University, and Ms. Hallie Brignall, the latter the Academy's managing editor of Scientific Publications, perused segments of the work, the former providing missing data, the latter searching for errors and more inconsistencies. We are grateful to all for their valiant attempts to keep us out of harm's way. Having said this, we also absolve all of our friends of any guilt for the errors we know persist in the work. They are our responsibility, and we alone bear the blame.

Finally, the authors of this bibliography are listed in the order determined by a "toss of a coin." Their contributions were equal though they placed emphasis on different areas. Initially, Leviton handled most of the publications for the 18th and 19th centuries and the geological literature whereas Anderson focused on the 20th century as well as regional geography, ecology and ancillary non-herpetological, neontological literature. Nonetheless, across the years there was considerable overlap in their activities as well as in addition of materials for the first decade of the 21st century. Both recognize and accept equal responsibility for the strengths and weaknesses of this compilation. Furthermore, both are committed to an ongoing effort to upgrade the bibliography, to cor-

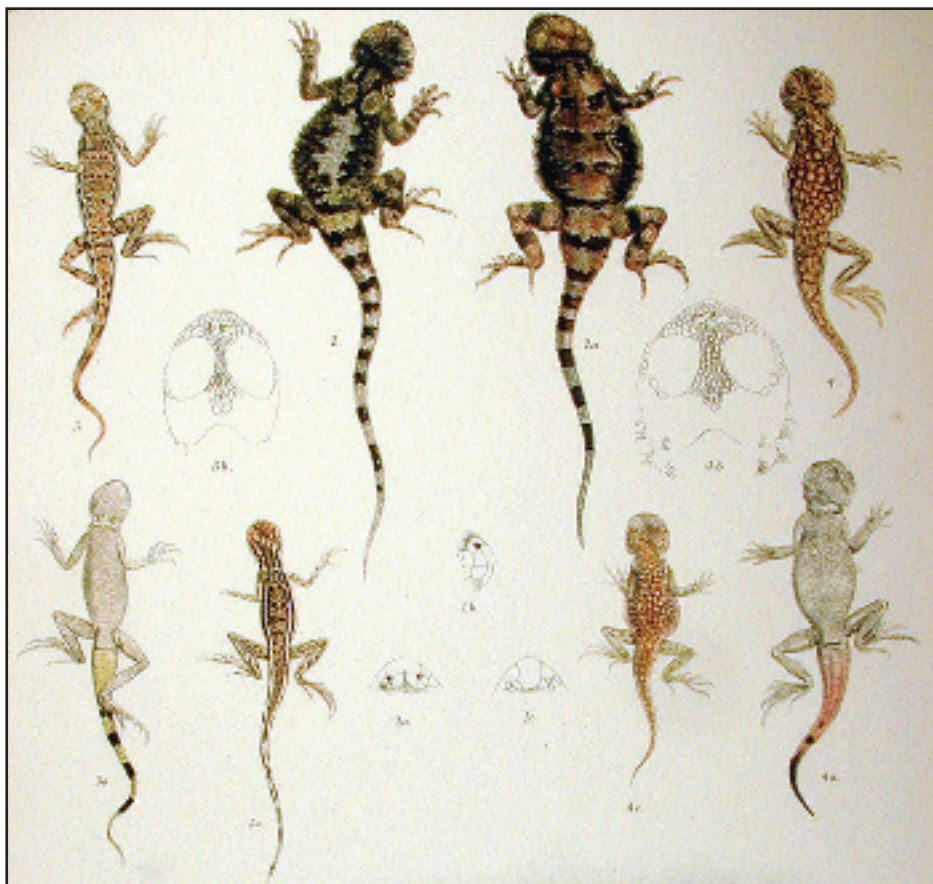

rect known and emergent errors, to expand it as new materials appear in press, and to respond positively to our colleagues whom, we hope, will take time to bring to our attention errors of commission and/or omission. Updates, including both corrections and additions, will be issued on an irregular basis. Also, to facilitate the work of others, we ask our many friends and colleagues, if you find this work useful, to cite it or mention it in the acknowledgments and literature-cited sections to encourage wider distribution. And, to repeat what we said a moment ago, we beg you to send us your comments, however complimentary or pithy, corrections, updates, and additions, which we will both gratefully acknowledge and incorporate in our planned supplements. In addition to the printed version, this bibliography is available online at <www.calacademy.org/research/scipubs> as a downloadable PDF file.

In closing, we apologize in advance to our colleagues that, much to our regret, we are unable to respond to requests for copies of most of the papers in this bibliography inasmuch as few have been scanned and we lack the clerical assistance necessary to do more.

(This is a handbook or field guide, with keys, photographs, and text that includes information for identification, habitat and biology, and distribution. It attempts to include all species of amphibians and reptiles known as of 1997. It mentions subspecies, but does not distinguish them. Treatment of each species is brief and there is little mention of taxonomic controversies. The bibliography is far from complete.)

- [2217] Cuvier, Georges. 1817. Cuviers und Oken's Zoologien neben einander gestellt. *Isis von Oken (Jena)* 1:1145-1185.
 ("Isis oder Encyclopadische Seitung von Oken" is the full journal title. Band 1, Heft 8 includes nos. 144-148. The article offers a comparison between Oken's scheme of classification and included taxa of the animal kingdom with one published by Cuvier in 1812 (Ann. Mus. Hist. Nat. Paris, 1812, vol. 19). On p. 1183, right column, under Cuvier, "Hemidacty.," (possibly abbreviated because of constraints imposed by the typesetter's column width, although the next name, "Platyduct." is similarly abbreviated and there are no obvious constraints of word length imposed by column width) is listed but there is no parallel listing among the genera in Oken's column. The name *Hemidactylus* should probably be cited as *Hemidactylus* Cuvier in Oken 1817 (in Cuvier 1817 he uses the French vernacular, "Hemidactyles" only) or perhaps even "Hemidactylus" Gray 1825, which seems to be the first unequivocal use of the Latinized suffix.
 For additional discussion of the topic, see Zhao and Adler, 1993, p. 183. Also, based on a careful examination of the pagination, Adler (pers. commun.) noted that following col. 1176, the columns that appear on the following pages are (a) either unnumbered, (b) only a single folio number appears on the page, or (c) column numbers are repeated in separately numbered sections (i.e., 8(146):1161-1168, 8(147):1169-1176, 8(zu 147):2 unnumbered columns and no folio number, folio number only 1178, unnumbered page or columns; 8(148):unnumbered, folio numbers only 1780-1782; 8(zu 148):columns unnumbered, folio number only 1183-1184, folio and columns unnumbered.)
 We are indebted to Dr. Kraig Adler for providing insightful comments on the works of Oken, Cuvier, and others.

Higginbotham & Co., Madras, India. [6] + 118 + [1] pp., 3 pls. (A guide written "as much in hope of dispelling the lamentable prejudices entertained in India against some of the most beautiful and harmless of God's creatures, as to afford an elementary treatise for the study of an interesting branch of natural history by which the weariness of Indian service may be mitigated." (Nicholson, Preface) Most records are from southern India, the eastern Himalayas, Burma [Myanmar], and the Malay Peninsula. Only the one record for Afghanistan is indexed here. Nicholson uses the generic "India" for most of his other records except those that are clearly from southern India or the Himalayas, which he carefully states. Because India, which at the time included what is now Pakistan, is used in its more generic context, it is not possible to show what, if any, of his citations are meant to include snakes found in the area covered by us in this bibliography. Nicholson introduces the genus name *Naga* for *Naja*, stating in the footnote [p. 104] "Usually written *Naja*; as the word is probably derived from *na-g*, I prefer to write it as *Naga*." He includes descriptive material and the species *N. tripudians*, which is also described in some detail. Thus, the name *Naga* is a valid name but clearly a synonym of *Naja*.)

- [6215] Oken, Lorenz. 1817. Cuviers und Okens Zoologien neben einander gestellt. *Isis von Oken (Jena)* 1:1145-1185. (In German.) ("Isis oder Encyclopadische Zeitung von Oken" is the full journal title. Band 1, Heft 8 includes nos. 144-148. The article offers a comparison between Oken's scheme of classification and included taxa of the animal kingdom with one published by Cuvier in 1812 (*Ann. Mus. Hist. Nat. Paris*, 1812, vol. 19). On p. 1183, right column, under Cuvier, "Hemidacty.," (possibly abbreviated because of constraints imposed by the typesetter's column width, although the next name, "Platyduct." is similarly abbreviated and there are no obvious constraints of word length imposed by column width) is listed but there is no parallel listing among the genera in Oken's column. The name *Hemidactylus* should probably be cited as *Hemidactylus* Cuvier in Oken 1817 (in Cuvier 1817 he uses the French vernacular, "Hemidactyles" only) or perhaps even "Hemidactylus" Gray 1825, which seems to be the first unequivocal use of the Latinized suffix. For additional discussion of the topic, see Zhao and Adler, 1993, p. 183. Also, based on a careful examination of the pagination, Dr. Adler (pers. commun.) noted that following col. 1176, the columns that appear on the following pages are (a) either unnumbered, (b) only a single folio number appears on the page, or (c) column numbers are repeated in separately numbered sections (i.e., 8(146):1161-1168, 8(147):1169-1176, 8(zu 147):2 unnumbered columns and no folio number, folio number only 1178, unnumbered page or columns; 8(148):unnumbered, folio numbers only 1780-1782; 8(zu 148):columns unnumbered, folio number only 1183-1184, folio and columns unnumbered.) [NB. We are indebted to Dr. Kraig Adler for his comments on the *Isis von Oken* and the scheme of classification contained therein.]

(In Latin.)
(The following is quoted from Zhao and Adler (1993:392): "Herpetology is on on [sic] pages 3-56, 7 plates, in the section [of the book, *Zoogeographia Rosso-Asiatica* . . .] entitled "Animalia Monocardia seu Animalia Frigidi Sanguinis." The date of publication of this volume has been in dispute; it was printed in 1811, but not generally offered to the public until 1831, hence the frequent citation of both dates. Stresemann (1951), however, presented evidence that copies were made available in 1827 in a way that satisfies the requirements of zoological nomenclature, a view accepted by us. For an opposing view, see Svetovidov (1976). An atlas intended to illustrate Pallas's book, entitled "Icones ad Zoographiam Rosso-Asiaticam," was issued in Petropoli in (1831-) 1834 (-1842), containing one plate of frogs. Darevsky and Mertens (1973) commented on two additional, but unpublished, plates of turtles.")

- [8818] Wiegmann, A. F. A. 1834. Amphibien. Pages 433-522 in *Beiträge zur Zoologie, gesammelt auf einer Reise um die Erde, von Dr. F.J.F. Meyen, M.d.A.d.N.* (Includes pls. 52-61.) *Reise um die Erde ausgeführt auf dem königlich Preussischen Seehandlungs-Schiffe Prinzess Louise, commandirt von Captain W. Wendt, in den Jahren 1830, 1831 und 1832*, 3. Sander'schen Buchhandlung zu Berlin, Breslau und Bonn, Germany. (In German.) (See comments by Bauer & Adler (2001) on the order in which the different printings of the Meyen reports appeared. The volume cited here, according to Bauer and Adler, though stating on the title pages of each of the parts as appearing in the "Acta Acad. Caes. Leop. Carol. Nat. Cur. Vol. XVII. P.I." actually appeared before it appeared in the *Acta*. The pages in the volume bear dual pagination numbers, e.g. "436 (186)," the first as it appears in the full volume, the second the already assigned pagination for the *Acta*. Thus, Wiegmann's Amphibian section is numbered 433-435 (actually these pages are unnumbered) followed by 436 (186)-522 (268). In a like manner the reptile and amphibian plates are dually numbered, LII (XIII)-LXI (XXII). No Southwest Asian records are included.)

Herpetological Literature for Southwest Asia 1758 to 2009

Keyword Index

Listing created 30 December 2009

NOTE: The Keyword Index includes several categories that will enable the user to determine how reliable each of the bibliographic citations is. The following should be used to confirm the quality of each reference: CITATION VERIFIED: confirms that the authors have seen the reference and have confirmed its accuracy; CITATION INDEXED: confirms that the authors have both seen the reference, confirmed its accuracy, and have done the taxonomic indexing; for unverified citations or ones not seen, as of this printing, the authors have not included the list of taxa treated in the publication in the Keyword Index unless stated in the article's title. We will expand both the listing of references verified and indexed in Supplements we plan to issue periodically.

‡ indicates taxa described from the fossil record.

Herpetological Literature for Southwest Asia 1758 to 2005

Journals

Listing Created 22 December 2009

The following is a list of the journals that cited in the bibliography; we have included the set of abbreviations that we have found useful in our work. Not only do journal names change from time to time, but there are few, if any, standards for abbreviations. Editors of journals frequently impose their concepts of "standards," which may or may not be commonplace within a discipline or even within the journal itself.

- S N R [S N R]
 Abhandlungen Akademie der Wissenschaften und Literatur Mainz, mathematisch-naturwissenschaften Klasse [Abh. Akad. Wiss. Lit. Mainz, Math.-Naturw. Kl., Wiesbaden]
 Abhandlungen aus dem Gebiete der Naturwissenschaften Verein in Hamburg [Abh. Geb. Naturw. Ver. Hamburg]
 Abhandlungen der Bayerischen Akademie der Wissenschaften [Abh. Bayerischen Akad. Wissen.]
 Abhandlungen der Deutschen Akademie der Wissenschaften in Berlin, mathematisch-naturwissenschaftlichen Klasse [Abh. Deutsch Akad. Wissen. Berlin, math.-naturw. Kl.]
 Abhandlungen der königliche Gesellschaft der Wissenschaften zu Göttingen [Abh. k. Gesell. Wissen. Göttingen]
 Abhandlungen der mathematisch-physikalische Klasse der Koniglich Bayerischen Akademie der Wissenschaften [Abh. K. Bayerischen Akad. Wissen., math.-phys. Kl.]
 Abhandlungen der Naturwissenschaftlichen Verein Hamburg [Abh. Naturw. Ver. Hamburg]
 Abhandlungen der Senckenbergischen Naturforschenden Gesellschaft [Abh. Senckenberg. Naturf. Ges.]
 Abhandlungen und Berichte aus dem Museum für Natur- und Heimatkunde und dem Naturwissenschaftlichen Verein in Magdeburg [Abh. Ber. Mus. Nat. Heimatk. u. Naturw. Ver. Magdeburg]
 Abhandlungen und Berichte aus dem Museum für Naturkunde und Vorgeschichte und Naturwissenschaften Verein zu Magdeburg [Abh. Ber. Mus. Naturk. Vorgesch. Naturw. Verein Magdeburg]
 Abhandlungen und Berichte für Naturkunde und Vorgeschichte, Museum für Kulturgeschichte Magdeburg [Abh. Ber. Naturk. Vorgesch., Mus. Kulturgesch. Magdeburg]
 Abhandlungen und Berichte für Naturkunde, Magdeburg [Abh. Ber. Naturk. Magdeburg]
