Plant Care Guide

Cacti/Succulents: Bright, direct light if possible. During growing season, water at least once per week. Allow soil to completely dry down between waterings – dry periods are necessary. Use a balanced fertilizer at $\frac{1}{4}$ strength at each watering during growing season if desired.

Foliage Plants: In general, bright indirect light is recommended. Allow to dry down between waterings, but not completely. Fertilize during growing season with balanced fertilizer.

Light Requirement Key:

Low = can survive without direct light

Medium = needs bright, indirect light

High = Direct light

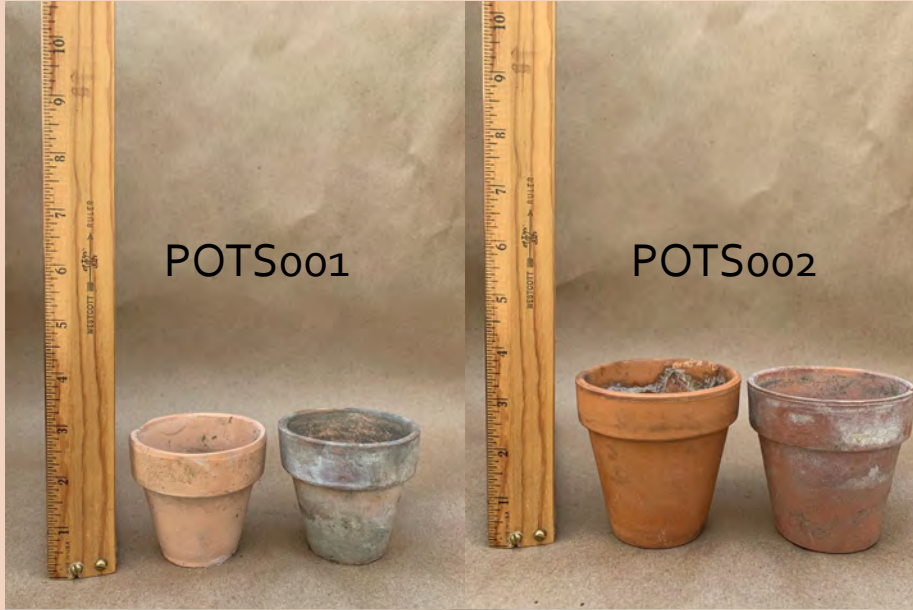

Water Requirement Key:

Low = dry periods between watering

Medium = Allow top inch to dry

High = Do not allow soil to dry, prefers high humidity
