**Description of Investment**

Vehicle Operational Command Post (OCP) system (Sentinel)

The OCPC is designed for the 20th SUPCOMs non-tactical CONUS mission. It has the same communication capabilities as the OCPF (except CENTRIX), but is installed in a vehicle. The summary capabilities of the OCPC are: \* Bandwidth - 4096/2048kbps SCPC dedicated BW\* 2.4m Ku band auto pointing antenna\* 50-300 Users (with outrigger network extensions)\* 3 enclaves (SIPR, NIPR, Commercial)\* 40 Concurrent Voice Calls\* 66 VoIP phones (distributed across SIPR and NIPR)\* Up to 8 STEs DSN and PSTN reach back (except SIPR)\* ACU-1000 LMR for tactical and commercial radio systems\* NIPR and SIPR VTCBelow are the summary capabilities of the OCPC Vehicle: \* 2007 International 4300 SBA 4x2 (33,000lb GVWR)\* Conference Room\* Multiple operator positions\* Video Conferencing (42 plasma screen)\* Video Surveillance (4 vehicle mounted cameras, one 42 video master)\* Video recording and transmission capabilities\* DSS Satellite Receiver\* Emergency lights\* Vehicle/Network sustaining in-board generator\* 2 Drawer, Class 6 Legal Size safeCommanders Panel for network extension and video access.

**Description of Investment**

System supports the sole Navy undergraduate degree-granting higher education command. Hybrid network enclave serves as a dynamically variable resource for multifaceted teaching, education, and research activities in blended physical/virtual campus environment similar to four-year civilian universities. Functionality includes collegiate-level admissions outreach, curriculum development, course delivery, pedagogical research, extra-curricular activities, and intercollegiate sports. Produces approximately 50% of annual Navy officer accessions.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	ACQUISITION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

AcqBusiness provides a portfolio of enterprise business systems and web services capabilities that enable ASA(ALT) Program Managers and Program Executive Officers to effectively and efficiently perform the business of acquisition. AcqBusiness will access and use authoritative data from Army enterprise systems (e.g., GFEBs), but it will not duplicate the functionality they provide. AcqBusiness provides a portal environment where acquisition practitioners can access the enterprise business systems, web services and data resources they need to perform their jobs. The AcqBusiness environment is a Service Oriented Environment that will provide robust access control down to the individual and data item level; general collaboration, business intelligence and knowledge management tools; and enterprise, functional applications and services that are segregated from their supporting data. This approach and underlying architecture ensures the agility necessary to effectively keep pace with evolving technologies and maintain the functionality required as acquisition policy capability and need requires. AcqBusiness supports Army Acquisition Domain in 3 ways: 1) by providing a modern web-based enterprise business architecture/environment that provides for flexibility, universal access and efficiency in operations, 2) by filling capability gaps with automated enterprise solutions that are integrated through that architecture, and 3) by replacing legacy, stovepiped systems with new or reengineered heterogeneous tools that enhance usability and productivity. As the environment evolves, outdated legacy IT systems will be retired, thus driving down the cost of doing business and enhancing acquisition productivity and decision making.

<b>UII</b>	007-000003342	<b>Acronym</b>	AVCOM
<b>Name of Investment</b>	ADVANCED COMPONENTS OBSOLESCENCE MANAGEMENT		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

AVCOM is a commercially developed service so it is purchased as a service annually. Contractor is tasked to take Illustrated Parts Breakdown (IPB) technical orders and other forms of technical data and build Bill of Materials (BOMs). The BOMs are linked across all other weapon systems data that is loaded into the AVCOM tool. The Air Force has been contracting for the AVCOM service since the late 1990s. It is a tool used by engineers, logistics specialists and contractors on contract to perform in-depth DMSMS analysis (usually at the Air Logistics Centers) to proactively manage parts obsolescence. The obsolescence issue is that a manufacturer will decide to no longer build a part (due to changes in technology, markets, etc.). However, the Air Force may still need the part for future repairs so it must look for other options (e.g. buy enough parts to last the remaining life of the system, find another manufacturer of the same part, design a new part, etc.). AVCOM explores those options. Currently there are more than 50 Air Force systems in the database. New systems are continually being added but should be completed within five years. For parts in the database, specialists do market analysis surveys to determine how likely a part will become obsolete. Specialists log into the tool from their individual computers to perform analyses. The results of the analyses are summarized in the database and displayed in a format that helps the Air Force proactively manage the ever increasing obsolescence issues. The analyses have also corrected erroneous information in the Air Force Technical Orders and D200A API.

**Description of Investment**

The Advanced Information Technology Services Joint Program Office's (AITS-JPO) mission is to expedite the transition of new information technology into those operational information systems that support the Combatant Commands and our nation's warfighters. The AITS-JPO develops products in a customer-centric environment and supports several of the President's Management Agenda initiatives. The AITS-JPO along with the Combatant Commanders focuses a major portion of its efforts on Advanced Concept Technology Demonstrations (ACTDs) to pilot key capabilities essential to the ongoing transformation.

**Description of Investment**

The Advanced Research Center (ARC) is managed by the Army Space and Missile Defense Command (SMDC) as the executing agent of MDA. The ARC is a modular, multiple-experiment test bed that support technology research, development requirements, and experimentation activities. The costs reported in this Exhibit reflect MDA's proportionate share of the ARC IT operations support costs that are charged to MDA projects. The ARC houses part of the SMDC Distributed Center, a component of the DoD High Performance Computing Modernization Program (HPCMP). These assets are heavily used to support MDA research. The ARC participates in many national and local networks including MDANet, SDREN, DREN and provides point to point links to other approved local sites. Test bed users include government employees from the MDA, the Army PEO ASMD, the SMDC and resident and off-site contractors. The Simulation Center is a centralized resource for classified and unclassified supercomputer processing, parallel processing, data visualization, modeling, simulation, network communications, small-scale test bed support, and technical and administrative support.

**Description of Investment**

This investment provides the operating budget for the Air Force Chief Information Officer's headquarters activity. The mission of the AF-CIO is to promote the most effective and efficient application, acquisition and management of information technology resources.

The goals of the AF-CIO are to:

- Gain the greatest benefits of information technology by facilitating business process improvement and reengineering efforts.
- Base Air Force Information Technology (IT) investment decisions on sound business cases, as well as approved Air Force standards, and architectures.
- Ensure the availability of accurate, trusted, and protected information to the right person anytime, anywhere.
- Integrate CIO IT investment reviews and recommendations into the Air Force Planning, Programming, and Budgeting processes.
- Ensure Air Force personnel possess the information technology skills to accomplish their Air Force missions.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Air Force (AF) Nuclear Command, Control and Communications (NC3) systems provide assured communications between the President and strategic forces in nuclear environments for the following nuclear capabilities:

- \* Enable assured Command and Control (C2) of Force Application
- \* Provide Force Direction
- \* Provide communications for Emergency Action Message (EAM) delivery
- \* Provide AF Minimum Essential Emergency Communications (MEECN) capabilities
- \* Support integrated Weapon System communication

Operations include on-going nuclear mission accomplishment. Sustainment efforts include daily maintenance and upgrade modification of legacy and existing systems. Initiative includes Operations and Maintenance (O&M) related to AFGSC NC3 Lead Command and funding responsibilities:

- \* AF NC3 Sustainment Programs and Other Enabling Programs and Systems
- \* Assessment, Study and Evaluation Programs (includes CEP - Continuing Evaluation Program)
- \* High Altitude Electronic Magnetic Pulse (HEMP) Program
- \* NC3 Centralized Asset Management (CAM) Funding and Other O&M Funding
- \* Payments for Contracts and Services
- \* Service Life Extension Programs
- \* Sustainment Engineering
- \* Related projects include:
  - Cryptographic Modernization
  - Change Control Program
  - AFGCS Communication Coordination Center NC3 Programs
  - Parts Depot Programs
  - Technical Order and Checklist Development

**Department of Defense**  
**Fiscal Year (FY) 2016 IT President's Budget Request**  
**Section 351 Report**

- Training Programs
- Related IT Products, Services and Applications (i.e. testing, NC3 end-to-end monitoring, Help Desk capability, visualization, nodal analysis, and consolidated reporting)

AF NC3 MEECN systems include: Airborne Launch Control System (ALCS), Aircrew Alerting Communication Electromagnetic Pulse System (AACE), Defense Injection/Reception Emergency Action Message (EAM) Command and Control Terminal (DIRECT), Electromagnetic Hardened Dispersal Communications (EHDC), Hardened Intersite Cable System (HICS), Higher Authority Communications/Rapid Message Processing Element (HAC/RAMPE), Minuteman MEECN Program (MMP), Single Channel Anti-jam Man-Portable (SCAMP), Strategic Automated Command and Control System (SACCS), and NC3 AFSATCOM capabilities.

Other AF NC3 systems include: Line of Sight Radios.

Contracts include: Strategic Emergency Action Transmission System (SEATS).

**Description of Investment**

Agile Transportation for the 21st Century (AT21) is an umbrella program that integrates and governs end-to-end distribution process optimization initiatives including: continuous business process improvement, process visualization and dynamic transportation decision making. Using enabling technology, these initiatives equip operators with new insights to solve distribution pipeline challenges quickly and collaboratively yielding enhanced end-to-end delivery of forces and sustainment to the Warfighter while reducing taxpayer costs.

<b>UII</b>	007-000001045	<b>Acronym</b>	AMDWS V6.4
<b>Name of Investment</b>	AIR & MISSILE DEFENSE WORK STATION, V6.4		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	PROTECTION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The system name was changed to reflect the version currently in the field.

AMDWS operates on a ruggedized V2 Bullfrog Laptop 2E. The work station can be deployed in a shelter or as a stand-alone system. Computer displays provide access to the air picture, situation reports, enemy assessments, and friendly force status. AMDWS supports most common message and mapping formats. The AMDWS is a major component in the ADAM system, which is assessed to be a mission essential system.

It provides networked, distributed tactical information through the use of common protocols, standard formats, and standard data elements. It networks within the ABCS framework, the Joint Theater Air and Missile Defense (JTAMD) framework, via the Joint Data Network (JDN), and other joint tactical data information links (TADILS). The AMDWS integrates weapons, sensors, command, control, communications, and intelligence (C3I), to counter the entire spectrum of the threat to the defended area. The ADAM with AMDWS supports air defense commanders at all echelons. Computer displays will allow commanders and staff access to the joint correlated air picture, situation reports, enemy assessments, friendly force status, and maneuver control.

<b>UII</b>	007-000000072	<b>Acronym</b>	AFEMS
<b>Name of Investment</b>	AIR FORCE EQUIPMENT MANAGEMENT SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Air Force Equipment Management System (AFEMS) is an IT system that drives equipment logistical decisions, across all commands, from base to Air Staff level for \$40 billion in equipment inventory and is the only source for total visibility of all Air Force equipment. AFEMS consists of modules for Support Equipment, Classified Equipment Requirements Computation (CERC), Asset Inventory Management (AIM) and Equipment Requirements System (ERS). AFEMS provides on-line equipment information upon which the major commands and the system program managers initiate operational support actions. It provides the capability to accurately develop and forecast time-phased equipment requirements, both additions and reductions, for all categories and applications of support equipment. Categories/applications include but are not limited to centrally procured; non-centrally procured; war reserve material; test, measurement, and diagnostic equipment; fixed communications-electronics equipment; mission equipment and vehicles. It provides for worldwide equipment asset accountability and on-line closed loop asset visibility, from cradle to grave, of all Air Force assets regardless of location or application. In addition, AFEMS supports equipment budget, procurement plans, and Chief Financial Officer (CFO) reporting. The AIM module supports worldwide management of Information Technology (IT) assets from procurement through disposal. The classified CERC module (D039) is augmented by the sub-system ERS. ERS provides the tools necessary for MAJCOMs to manage equipment in an O&M and investment environment to support the Vehicle and Support Equipment budget programs.

<b>UII</b>	007-000100004	<b>Acronym</b>	AF MNS & E911
<b>Name of Investment</b>	AIR FORCE MASS NOTIFICATION SYSTEM AND E911		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Based on DoD 6055.17, AFI 10-2501, and findings and recommendations from AFD-100930-060, Air Force Follow-on Review, Protecting the Force: Lessons Learned from Fort Hood, <http://www.af.mil/shared/media/document/AFD-100930-060.pdf>, the United States Air Force (USAF) requires a state-of-the-art mass warning system to provide warning and response direction for all personnel and populace within ten (10) minutes of incident notification and verification. The core service shall allow Operators and Controllers of the system spread across multiple locations the ability to initiate and manage alerts supporting all personnel assigned to their respective subordinate units.

This system shall serve as an Air Force (Enterprise) Mass Notification System, providing rapid notification of time-critical/time sensitive alerts to the chain of command, as well as disseminates urgent information to the base populace in a timely manner. It has the capability to notify members in the Mass Notification System database, via a variety of electronic or telephone devices and media, of personnel recalls, real-world and exercise contingencies and incidents, and of natural or man-made disasters. Notifications can also be relayed via the Installation Notification and Warning Systems, e.g. Giant Voice and other connected systems. This system will consolidate and subsume existing At Hoc vendor systems currently deployed to the Air Force via numerous Major Command, Wing, etc, instantiations.

**Description of Investment**

This capability supports Strategic Center initiatives by providing science & capability insertion via modular algorithm/user interface/data processing improvements and hardware combined with software insertion for Centralized Aerospace Weather Capability fulfillment. It provides a funding vehicle for and infuses enhanced scientific algorithms into current and next generation models for use within the Air Force Weather Agency to support strategic, operational, and tactical customers. This capability provides the means to execute theater numerical weather prediction models and perform cloud processing/forecasting for customers supporting deployed and in-garrison missions.

**Description of Investment**

The ESD is a working helpdesk that supports 92,000 Information Technology (IT) users across the Army Medical Department. The ESD provides Tier 1 remote desktop support, to include software and technical assistance, and a 24/7 central point for reporting and tracking of IT incidents across the Enterprise. Helpdesk customer support is provided by email, phone or remote access. In addition to providing Tier 1 support to end users, the ESD provides management services such as metric reporting, quality assurance monitoring, knowledge base administration, and incident management.

**Description of Investment**

The Army Concept Development and Experimentation Campaign Plan (ACDEP) is an adaptive approach along two simultaneous, parallel and supporting experimental paths. The Concept Development path is developing a concepts-based, coherently joint Future Force over time using live, virtual and constructive experimentation to explore, test, and demonstrate Concepts and capabilities, using six foundational operational themes of the Army's Future Force for focus to reduce risk to soldiers and investments for the future through actionable recommendations informing DOTMLPF decisions. The Prototyping path experiments using operational units, experimental units, and CTC OPFOR to inform the future and spiral forward feasible Future Force capabilities to the Current Force to satisfy critical operational needs and test compelling technology. The ACDEP is completely nested in concept development and experimentation efforts of JFCOM and serves to integrate a broad Army community of practice including battle labs, operational units, research labs, and materiel developers. The ACDEP requires the Battle Lab Collaborative Simulation Environment (BLCSE) to fully immerge the combined arms team in a synthetic environment without leaving their respective installations. The results of this combined arms team can be evaluated at a considerable cost and time savings. This effort supports the Futures Center core mission function to design, develop and integrate into a joint warfighting environment, from concept to capability, all aspects of the future force. Develops and integrates Joint and Army concepts, architecture and DOTMLPF capabilities; validates S&T priorities; and leads future force experimentation.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

This effort is an enterprise integration effort. It reflects the shift in focus from strictly Army tactical architectures supporting the Army's Unit Set Fielding (USF) schedule to a network-centric, knowledge based force, composed of the integrated tactical and sustaining base architectures supportive of the Transformation Army and the Objective Force. The AEA provides the blueprint for the development of integrated architectures sharing a common infrastructure (composed of applications, information management, computing, network operations and communications), that enables the exchange of knowledge (domain information and expertise) from any where at any time from the sustaining base to the deployed forces. The AEA will ultimately provide the framework for the free exchange of accurate and timely information critical to situational understanding and the ability to act decisively. It is also the Army's component of the DoD Global Information Grid Architecture, and articulates how the Army will provide knowledge to forces operating in Joint, Inter-Agency, and Multi-national (JIM) environments. Under the Army CIO's Command, Control, Computers, and Communications/Information Technology (C4/IT) investment strategy, the AEA and associated standards and policies, is the framework/decision tool that links multiple systems capabilities to the warfighter's information (knowledge) requirements.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Funds mission support to ODCS, G4 requirements to manage, integrate, and synchronize Army Logistics Transformation to achieve the Army Vision's mandate of enhanced deployment, reduction of the logistics footprint, and reduction in logistics costs without jeopardizing readiness and Joint warfighting. Funds identification, development, and demonstration of solution sets to meet mobility, deployability, and sustainment challenges identified in Line of Operation Nine, Army Transformation Campaign Plan, and Maneuver Sustainment for the Objective Force. These requirements and initiatives represent critical components outlined in the Objective Force White Paper Functional Annex, and consist of a Joint Logistics Corporate Enterprise, Distribution Based Logistics, Demand Reduction, and Performance Based Logistics. Each is critical to the Army's development, and integration of, the Army Knowledge Enterprise Architecture and Objective Force Enterprise Architecture. Funds identification, insertion, and integration of technologies that improve logistics efficiency, reduce fuel, power and munitions requirements, and improve responsiveness from the sustaining base to the tactical battlespace. Funds enablers required for a common logistics operating environment, DII pilot projects as directed by OSD in conjunction with the Services, and development and demonstration of concepts for tactical logistics replenishment in the Unit of Action and Unit of Employment battlespace. Funds enablers linked to DoD's Future Logistics Enterprise, improved life cycle weapon system management, and reduction in total ownership costs.

**Description of Investment**

The Army National Guard (ARNG) Distributed Learning Program (DL Program, or DLP) provides multiple distributed learning methods and technologies that improve the readiness of Soldiers and units through the flexible delivery of standardized individual, collective, and self-development training at the point of need. The ARNG DLP supports training for Full-Spectrum Operations at ARNG home stations, supports command and control during routine and emergency operations, and provides DL resources for "shared use" by Joint, Interagency, and Intergovernmental organizations. The ARNG DLP operates over 330 fixed and mobile ARNG DL Classrooms with Internet connectivity nationwide. Each DL Classroom has networked computer workstations, audio/video equipment, and video teletraining capabilities. In collaboration with the U.S. Army Enterprise Lifelong Learning Center, the ARNG DLP also operates an online portal for Guard-specific training known as "GuardU." And the ARNG DLP produces online content for Guard-specific training, with emphasis on functional and readiness requirements.

**Description of Investment**

The Army Reserve Augmented Logistics Program (ARALP) supports Army logistics processes for Army Reserve units at 1100 locations within Continental United States (CONUS) and Puerto Rico. The Army Reserve Augmented Logistics Program provides sustainment and network capability for Standard Army Retail Supply System – 1 (SARSS-1), Standard Army Ammunition System – Modified (SAAS-MOD), Standard Army Maintenance System – Enhanced (SAMS-E), Unit Level Logistics System – Aviation Enhanced (ULLS-AE), Transportation Coordinator – Automated Information for Movement System II (TC-AIMS II), Property Book Unit Supply Enhanced (PBUSE), Battle Command Support – 3 (BCS-3), Combat Service Support (CSS) Automated Information Systems Interface (CAISI), Very Small Aperture Terminal (VSAT), and Global Combat Support System – Army (GCSS-A) as well as provides the infrastructure to support and assist in planning, scheduling, movement and distribution of units, equipment, and materiel in support of garrison and deployment operations. The Army Reserve Augmented Logistics Program enables the Army Reserve to successfully perform the Army’s logistics mission areas of supply, ammunition, maintenance, property accountability, transportation & distribution, finance & resource management. The Army Reserve Augmented Logistics Program provides technical and functional expertise to Army Reserve Soldiers to ensure all logistical processes and requirements are successfully accomplished. The Army Reserve Augmented Logistics Program is the primary enabler of the Army Reserve operating forces to guarantee logistics success across the Army Reserve structure and supports over 200,000 requests for support from Army Reserve Soldiers annually.

<b>DoD Segment</b>	FORCE TRAINING	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Army Training Information System (ATIS) provides a common operational picture (COP) of the training environment through integrated, interoperable training development, management, scheduling, and delivery capabilities. These capabilities will enable Commanders, leaders, Soldiers, and civilians to better understand, visualize, describe, direct, lead, and assess training requirements so they can more effectively plan, prepare, execute, and assess training. End result is an ATIS that enables Soldiers to train as they will fight, so they can effectively fight as they have trained.

<b>UII</b>	007-000000211	<b>Acronym</b>	ATRRS
<b>Name of Investment</b>	ARMY TRAINING REQUIREMENTS AND RESOURCES SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

ATRRS is the system of record for management of personnel input to training for the Total Army (Active Army (AA), Army National Guard (ARNG), U.S. Army Reserve (USAR), Department of the Army (DA) civilian, other Government agencies and civilian users. ATRRS is managed by Military Personnel Management (DAPE-MPT), HQDA, Army G-1, and is the repository for training requirements, programs, personnel data and training costs for use by training managers to schedule classes, fill seats, and train Soldiers. The ATRRS data base maintains information at the class level of detail on all courses taught by or for Army personnel. It produces reports, analyses, and selected data displays. ATRRS is an on-line system for by-name and SSN management of personnel input to training. A major product of the ATRRS is the Army Program for Individual Training (ARPRINT). The ARPRINT is the mission and resourcing document which provides training requirements and approved training programs. The Mobilization Training Planning System (MTPS), an ATRRS subsystem, functions as a planning system during peacetime for use in transitioning to new and increased training during mobilization. Its product is the Mobilization Army Program for Individual Training (MOBARPRINT). ATRRS serves as a source of accurate, timely and responsive training input data for the Planning Programming, Budgeting, and Execution System (PPBES). ATRRS support for the PPBES includes providing information to the Army Staff in responding to OSD, OMB, and Congressional inquiries. ATRRS includes the following modules: AcqNow, ACQTAS, AITAS, AITAS Non-DoD, AFAM, ASTRM, ARM-G, ARM-R, CHRTAS, ITCOP, LOA, Register-Now!, FAITAS, SMART, WATS, and UARS.

<b>UII</b>	007-000004392	<b>Acronym</b>	AWRDS
<b>Name of Investment</b>	ARMY WAR RESERVE DEPLOYMENT SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

SYSTEM. AWRDS is an automated system designed to assist in the accountability, inventory, and transfer of Army Prepositioned Stocks (APS) from ASC to Army units. It supports rapid military deployment anywhere in the world.

BENEFIT: AWRDS provides the ability to: Build and maintain a database of Army Prepositioned Stock (APS) stock and equipment data in a unit set configuration for deployment, Provide visibility into containers, vehicles, trailers, and multi pack items on a real time basis in the form of reports, listings, or data sets for hand receipt preparation. This includes any Basic Issue Items (BII), Sets, Kits, and Outfits (SKO), and Components of End Items (COEI), Use Automated Identification Technology (AIT) to collect equipment data, track location of equipment and maintain changes in cargo configuration, Provide an automated handoff to the Army warfighter to include an electronic production of hand receipt documents and data files to populate the Warfighter's Standard Army Information Systems (STAMIS), Provide maintenance and equipment status for readiness reporting in accordance with AR 220-1, Unit Status Reporting, Provide equipment tracking at the UIC/National Stock Number (NSN)/Serial Number level and linking of secondary loads to the primary vehicle, Provide maintenance automation for repair of APS equipment, and requisitioning repair parts.

The Automated Battlebook System (ABS) supports APS deployment planning by providing the Army warfighter a user friendly, seamless, front-end interface with AWRDS, and provides information integrated from several sources. ABS is comprised of a preposition status module, equipment view module, battlebook section module, and linker view module. It contains information from AWRDS, Logistics Support Activity (LOGSA) (requirements and authorizations), 3rd Army (procedures), and Military Sealift Command (MSC) (ship data). It allows for hard copy or screen presentation at the users personal computer and the ability to download data for Army Warfighter's use. BattleWeb is the secure (SIPR) web based version of ABS and as such is an integral part of the AWRDS information database.

BattleWeb cannot exist without its parent element (AWRDS) providing the necessary infrastructure. Additional capabilities are: 1. Accountability inventory and transfer of Army Prepositioned Stocks (APS), 2. Foundation for rapid deployment anywhere in the world, 3. Parts, shipping, inventory, maintenance, 4. Provides automated identification technology.

<b>UII</b>	007-000005211	<b>Acronym</b>	AIE2
<b>Name of Investment</b>	AUTOMATED INSTALLATION ENTRY PROGRAM INCREMENT 2		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	PROTECTION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The purpose of Automated Installation Entry (AIE) Increment 2 is to establish a database of personnel authorized to enter an Army installation whose identity was vetted through the Defense Enrollment Eligibility Reporting System (DEERS) and/or other personnel data management sources and will be linked electronically to read and compare to the radio frequency tag installed on a properly registered vehicle. The successful linkage of a vehicle entering the installation with the credential presented by the operator will permit the automated entry of the operator/vehicle. The AIE Increment 2 system will enhance the initial AIE program by virtue of providing enterprise capabilities that include the ability for registration information at one facility to be available at other facilities to allow personnel authorized at the other facilities to enter without re-registration. This will allow interfacing among deployed AIE systems. The intent of AIE is to enhance security, reduce guard force requirements/costs, and improve or maintain gate through-put rates. The AIE Increment 2 program is an integrated system that is operationally situation and risk dependent. The system can increase the level of verification based on the Commanders level of Force Protection. The three configurations needed for access control are Traffic Lane Components, Guard Components, and Visitor Center Components. The component items within each configuration are installation mission dependent. The items for the various components consists of control software, automated & manual gate control, identification system, reader devices, color graphic displays, keyboards, computers, printers, and guard shelter. AIE is part of the Army's Access Control Point Program (ACPP). The basic systems hardware and software design are open architecture and compliant with physical security standards. Configuration for each site is based on regulatory guidelines and the requirements of the installation. AIE leverages the ACPP hardware and installation schedule.

**Description of Investment**

The Aviation Combined Arms Tactical Trainer (AVCATT) is a mobile, transportable, multi-station virtual simulation device designed to support unit collective and combined arms training. AVCATT provides six man modules re-configurable to any combination of attack, reconnaissance, lift and/or cargo helicopters. Supports institutional, organizational and sustainment training for Active and Reserve Army Aviation units worldwide in combined arms collective training and mission rehearsals. AVCATT is a mobile system that provides training today for Active and Reserve component aircrews deploying in support of the Global War on Terrorism (GWOT).

<b>UII</b>	007-000005218	<b>Acronym</b>	AMPS
<b>Name of Investment</b>	AVIATION MISSION PLANNING SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	FORCE APPLICATION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

AMPS is a tightly controlled, Flight Safety Certified mission planning/battle synchronization tool that automates aviation mission planning tasks and generates mission data for use in either hard copy for pilot knee boards or electronic formats for aircraft mission data loading. AMPS is created for use in Cavalry, Attack Helicopter, Combat Aviation, Combat Support Aviation, General Support Aviation, Assault Helicopter, Medium Lift Helicopter, Medical Evacuation, Theater Aviation, and Headquarters Aviation units.

AMPS V 7.5 will reside on new hardware (MILTOPE RLC-3G ruggedized laptop) and software. Core software has been upgraded from Windows XP to Windows 7 Army Gold Master with an new version of Portable Flight Planning Software 4.2. AMPS software is a combination of GOTS, COTS, program developed software and Free Open Source Software. AMPS is distributed at the Aviation Brigade, Battalion and Company echelons. At Battalion and above, AMPS is part of the integrated mission planning and preparation process. The mission planner utilizes AMPS to develop a mission through a logical sequence of operations. This sequence of operations aids the mission planner in completing essential tasks such as route planning, communications planning, and aircraft configuration, all of which are affected by inputs such as enemy situation, friendly situation, flight hazards, weather, and aircraft specifics.

Intelligence Preparation of the Battlefield, Operations Orders, and Signal Operating Instructions will normally be received through interfaces with the MCS. The AMPS system at the Company echelon can be used in a stand-alone mode to load mission data to aircraft systems. AMPS can also be used to communicate with other AMPS via Combat Net Radio, Local Area Network, or diskette to exchange mission and information files. AMPS is used to generate mission applicable data for use in either hard copy format (knee-cards) or electronic format for loading to aircraft mission computers via a Data Transfer System consisting of a Data Transfer Cartridge (DTC) or a Personal Computer Memory Card Interface Association (PCMCIA) card. Upon completion of the mission plan, the mission planner initiates a transfer of the pre-mission data to the Data Transfer Receptacle, where the DTC or PCMCIA card is loaded. Loading to the aircraft specific DTC or PCMCIA card is governed by an associated ICD. The AMPS is ground equipment with no items installed on the aircraft.

**Description of Investment**

BCOs are responsible for the day-to-day management, administration, operations and maintenance of existing base communications facilities and services, whether leased or government owned. This function includes administration of the base inside and outside cable plants, station records, station equipment, off-line devices, and plant-in-place records. They coordinate/consolidate requirements, to include MILCON and special projects and establish budgetary guidelines for shore activities. They act as liaison between Navy shore activities and any service or equipment contractor to ensure the base communications systems maintain the highest possible level of efficiency and effectiveness.

<b>UII</b>	007-000008609	<b>Acronym</b>	BLCI-USAFE
<b>Name of Investment</b>	BASE LEVEL COMMUNICAITONS INFRASTRUCTURE - USAFE		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

Base Communications is the enabler for every function from security to finance, from Command and Control (C2) to Logistics support and all in between. The Base Level Communications Infrastructure Initiative is not a single system but rather a composite of many voice and network ongoing projects that sustain the C2 abilities of the United States Air Forces in Europe (USAFE). By maintaining and sustaining the network each and every function can accomplish their mission. The bottom line is that Base Communications is the foundational enabler for every war fighter.

Through strategic planning and implementation of the Headquarters USAFE goals and the Air Force Information Technology Summit Initiatives, Communication and Information (C&I) systems will transform to a network-centric environment and provide real time access to the warfighter.

The A6 Director provides final approval authority for deployment of new or modified automated information systems, and modernization effort on voice and data networks. Through the USAFE Certificate to Operate (CTO) process the director authorization signifies the readiness of the USAFE network services to support the system being deployed and verifies technical compliance, integration and resource constraints are resolved.

The capital planning and investment process is accomplished through a dynamic synergy achieved between the planning entities and the resource control functions. Our program management and planning functions are housed together in the A6N Network Planning Division. A complete review of all ongoing programs is done every month in our Program Oversight briefing. Every other month we focus on program elements and on the other month we focus on resources, checking execution toward planned goals and ensuring that adequate resources are available to keep each project on course. This process keeps us aligned toward our strategic direction. Some major recent milestones are the continuation of our Server Consolidation Project and telephone modernization project. Both programs are ongoing with server consolidation complete for all Main Operation bases and the telephone modernization project now 50% complete. Two key planned projects are Server Consolidation for USAFE Geographically Separated Units, and 100% completion of our telephone modernization project.

**Description of Investment**

The Base Level Communication Infrastructure - AFGSC (BLCI - AFGSC) - AFGSC BLCI initiative supports AFGSC mission areas by providing Information Technology Services Management (ITSM). The BLCI includes systems, services and contracts related to such activities as enclaves, video conferencing (VTC) equipment/capabilities, classified and unclassified local area networks (LANs), postal, telephone, wireless communications, cable, and ADPE activities. The BLCI - AFGSC also includes network management, operation and maintenance of all communication and information products and services. The BLCI - AFGSC initiative supports AFGSC mission areas and support functions by providing a secure, interoperable and integrated communication environment where quality of service (QoS) meets or exceeds industry standards.

<b>UII</b>	007-000008600	<b>Acronym</b>	BLCI-ACC
<b>Name of Investment</b>	BASE LEVEL COMMUNICATIONS INFRASTRUCTURE - ACC		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

This Base Level Communication Infrastructure (BLCI), program supports computer base network infrastructure and is required to complete command and control connectivity to all key base facilities and manages connectivity to all key base facilities and organizations. It prepares bases for a downward-directed bandwidth intensive system for operations and support activities. Specifically included in the funding line for this program are the manpower, equipment, and services costs for providing and maintaining unclassified and classified network services, voice services, official mail, printing services, office automation, contractor support, software development and maintenance, and all other Information Technology (IT) requirements for the command. Additionally, day-to-day operational costs supporting the base communications and information organization, such as supplies, training, and TDY costs are included.

On-going goals are to provide specialized training, system engineering and implementation, and network security expertise enabling ACC to modernize and maintain its network infrastructure with a fully trained and certified workforce, thus enhancing the ability to perform core missions. Funding is also needed to establish reliable, secure remote network capabilities. BLCI finances infrastructure equipment and provides a vehicle to effectively manage and improve the reliability, security, and efficiency of the entire ACC network enterprise. This infrastructure provides the warfighter and wing command center full access to real-time command and control (C2) information during day-to-day operations and contingencies. This program provides significant reach-back capability supporting deployable forward footprint-push/pull information capability and proactive information protection countermeasures to support collaborative information exchange for Operations Noble Eagle, Iraqi Freedom, Enduring Freedom, and other Southwest Asian operations. ACC also has a plan in motion for the replacement of all Land Mobile Radios that will not comply with the upcoming National Telecommunications and Information Administration directive regarding bandwidth requirements. Although the budget for most major areas under this program is fairly stable and adequate, IT equipment requirements typically far exceed the budget, forcing us to rely on command fall-out to enhance real time Find-Fix-Track-Target-Engage-Assess communications to support the kill chain.

**Description of Investment**

This Base Level Communication Infrastructure (BLCI), program supports computer base network infrastructure and is required to complete command and control connectivity to all key base facilities as well as manages connectivity to all key base facilities and organizations. It prepares bases for a downward-directed bandwidth intensive system for operations and support activities. Primary goals are to provide specialized training, system engineering and implementation, and network security expertise enabling AETC to modernize and maintain its network infrastructure with a fully trained and certified workforce, thus enhancing the ability to perform core missions. Funding is also needed to establish reliable, secure remote network capabilities. Computer Network Security (CNS) and will finance infrastructure equipment providing a vehicle to effectively manage and improve the reliability, security, and efficiency of the entire network. This infrastructure provides the warfighter and wing command center full access to real-time command and control (C2) information during day-to-day operations and contingencies. This program provides proactive information protection countermeasures to support collaborative information exchange. The program includes three product areas:

- Network Management System/Base Information Protection (NMS/BIP) consolidates and standardizes network management operations and information assurance for Air Force bases worldwide. Provides layered defense information protection tools for each Air Force base to detect, deter, isolate, contain, reconstitute and recover from information systems and network security intrusions or attacks.
- Information Transport System (ITS) provides a high-speed, robust and high capacity base level network backbone.
- Telecommunication Maintenance System (TMS) provides an integrated, automated personal computer based management system that automates base-level voice communication administrative functions.

<b>UII</b>	007-000008602	<b>Acronym</b>	BLCI-AFMC
<b>Name of Investment</b>	BASE LEVEL COMMUNICATIONS INFRASTRUCTURE - AFMC		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Base Level Communication Infrastructure (BLCI) - AFMC initiative supports AFMC mission areas and support functions by providing a secure, interoperable, integrated digital communications environment where the quality of service meets or exceeds industry standards. We also provide network management, operation, and maintenance of all communication and information (C&I) products and services, as well as requirements generation and evaluation for input into the AFMC corporate IT requirements planning process. This support is reflected in our mission statement: "Provide secure communications and information services ensuring access to the right information anywhere, anytime to enable information superiority."

Through strategic planning and execution of the HQ AFMC objectives and AF IT Summit Initiatives, BLCI-AFMC will evolve AFMC communications and information services to a network-centric environment. This transformation promises to increase work force productivity across all AFMC mission areas and will provide a secure, reliable, and interoperable C&I infrastructure allowing real-time information access to the war fighter.

AFMC's Chief Information Officer (CIO) serves as the central focal point for the Command's software systems requirements and acts as the Command's liaison with the various organizations involved in IT acquisition. The CIO is the final approving authority for deployment of new or modified automated information systems, and IT modernization efforts on AFMC networks. Through the AFMC Certificate to Operate (CTO) process, the CIO authorization signifies the readiness of the AFMC network services to support the system being deployed. It also verifies technical compliance and integration issues are resolved and adequate resources are available to support and sustain the deployment.

The challenge for the CIO and HQ AFMC is to leverage information technology despite constrained resources to provide interconnected and interoperable networks.

**Description of Investment**

The base-level communications program funds communications and information services for users at Headquarters Air Force Reserve Command (AFRC), and all subordinate organizations to include, AFRC-hosted bases, AFRC organizations on other MAJCOM hosted bases; geographically separated units, and the Air Reserve Personnel Center. Specifically included in the funding line for this program are the manpower, equipment, and services costs for providing and maintaining unclassified and classified network services, voice services, official mail, printing services, office automation, contractor support, Reserve-unique software development and maintenance, and all other IT requirements for the command. Additionally, day-to-day operational costs supporting the base communications and information organization, such as supplies, training, and TDY costs are included.

Also, generally funded by the base communications Program Element Code, but specifically excluded from this report are costs associated with engineering and installation, video teleconferencing, and long-haul cost reimbursements to DISA, as these subjects are covered in separate CIRs.

Base level communications provides for the operational needs of virtually every base user, to include connectivity for combat and combat support systems and instrument landing systems/ATCALs in support of the flying mission, telephone switch.

**Description of Investment**

Provides operations and maintenance resources required to support AFSPC Headquarters, AFSPC Base-level communications, Wing command networks, and AFSPC geographically separated units (GSUs) around the world.

Funds, supports and maintains the following: Classified and unclassified local area networks (LANs), AFSPC personal computers, antennas, video teleconferencing (VTC) equipment/capabilities, official toll calls, Land Mobile Radios (LMRs), paging/cellular phone/wireless services and cable television. Provides for cable infrastructure projects including telephone switches, distribution systems, cables plants, and intrabase radio systems. Provides command and control maintenance support for secure/non-secure voice services. Customers include" National Command Authorities (NCA, Combined/Joint Operational Commanders (NORAD, USSTRATCOM, USNORTHCOM) and their forces, and AFSPC Commanders at all levels. Provides direct and indirect C4ISR support for Space Control and Space Application.

**Description of Investment**

Air Mobility Command (AMC) Base Level Communications Infrastructure (BLCI) program provides operations and maintenance (O&M) resources required to support AMC Headquarters, 12 AMC Air Force bases and geographically separated units. Program provides network management and operation and maintenance of communication and information (C&I) products and services. These services include telephone, computer and network services, Land Mobile Radios (LMR), and paging/cellular phone services. Additionally, the program supports the operation of the AMC MAJCOM Communication Coordination Center (M/CCC), and Network Control Centers (NCC) at each of AMC 12 bases.

**Description of Investment**

ANG Base Communications directly supports all flying wings located in all 50 states and 4 territories. Base Communications provide day-to-day communications services to over 107,000 airmen - 68 percent of whom are traditional Air National Guard members - flying nearly 1,200 aircraft. ANG Base Communications manages, operates, and maintains full spectrum C4 information systems providing peacetime active duty missions and training for the traditional Air National Guard members for wartime communications capabilities to all MAJCOMs. Additionally, these information systems and communication capabilities support the State's Adjutant General to respond to state and/or national emergencies under the Federal or State Emergency Management Agencies. This capability was extremely critical during the initial and follow-on phases of national response to the September 11, 2001 terrorist attacks.

Base Level Communication Infrastructure (BLCI) supports the infrastructure network connectivity, electronic storage, server services, desktop interfaces, application software for both unclassified and classified environments, worldwide Defense Switch Network (DSN) and commercial telephone, all wireless capabilities including UHF and VHF Radio, PDAs, radios, cell phones and satellite communications. BLCI provides the following mission capabilities:

1. Deployed Communications Support Team: The team establishes communications within 72 hours for a deployed flying squadron. They install and repair secure HF/UHF/VHF air-to-ground radios, computers, voice/data service, secure phones, and encrypted land mobile radios.
2. Network Control Centers: The centers operate both in-garrison and deployed plus provides applications services, boundary protection, Internet services, configuration management, intrusion detection, and infrastructure services.
3. Theater Deployable Communications (TDC) Team: TDC augments global reach communications teams supporting a deployed location and provides scalable base information infrastructure for initial and sustaining C4ISR.
4. Quick Response Photo and Video Documentation Team: The team supports incoming command, logistics, intelligence, and operations personnel with images of the operational environment.
5. Deployed Visual Information Support Center: The Center provides still and video imaging, production, and distribution to local customers and higher headquarters. They deploy with a digital presentation support system.

**Description of Investment**

Provides a wide-range of base level Command, Control, Information System and administrative telecommunication services. Provides the Operation and Maintenance (O & M) for Local Area Networks (LAN) on both secure and non-secure systems to include switches, routers, distribution system, and cable plant. O & M for personal computers (both desktop and lap top), official toll calls, commercial calls, Defense Switch Network (DSN), Defense Red Switch Network (DRSN), contracted switchboard administration and telephone maintenance, cellular phone service, Land Mobile Radio (LMR), pagers, Cable Television (CATV), and closed circuit television systems. Supports cable infrastructure maintenance projects including telephone switches, distribution systems, cable plant as well as weather, air traffic control, navigation, fire alarm and security systems. Provides for the operation of the PACAF Network Operations and Security Center (NOSC), and the Communications Support Processor (CSP) hardware and software contracts at Osan and Yokota AB. Provides funding for all postal operations throughout the pacific theater. Funds Joint Task Force-Full Accounting (JTF-FA) recovery operations in Laos and Vietnam to achieve the fullest possible accounting of Americans unaccounted for as result of the war in Southeast Asia. Funds numerous contracted professionals on the HQ PACAF staff, bench stock, cold weather gear, office supplies, fuels, Temporary Duty (TDY's), Air Force Engineering and Technical Service (AFETS), communication training classes, shipping and printing costs at all PACAF bases as needed. Sustains communication systems as described above at Diego Garcia.

**Description of Investment**

The BLSA is a government-sponsored Commercial Off The Shelf (COTS) application deployed at military and commercial installations throughout the world to provide an automated means to track and manage fuel supplies. The BLSA V2.0 software is designed to reside on Windows-based computer systems, using Windows 2000 or higher, of the hosting enclave. It provides an automated capability to manage installation fuel services by collecting user inputs and interacting with automatic tank gauges distributed at various locations on the installation. BLSA is recognized as the authoritative data source for all Base Level business fuels process.

**Description of Investment**

E-Biz produces auditable data for financial statements provided data from interfacing feeder systems is accurate and reliable. DFAS required a suite of business processes and supporting system(s) that integrate resource, accounting, financial, and other business functions into a comprehensive management information or enterprise resource planning system; reduce system operational costs; provide useful, timely, and accurate management and financial data; allow users to do analysis and reconciliation to ensure data accuracy; provide decision and planning tools for management; provide timely and accurate financial statements; establish and maintain detailed data for business, financial and program management purposes; permit personnel to enter data at the source, and; provide for multi-level and authentication security. In addition, the system is required to support functional requirements represented in A Guide to Federal Requirements for Financial Management Systems. The functional processes incorporated include, but are not limited to, Resource Management (Budget Formulation/Execution, Manpower), Business Management (Performance Measurement, Workload Management, Time and Attendance/Labor Reporting), Financial Management (Workcounts, Managerial Cost Accounting) and Core Accounting (Funds Control, Account Payable/Accounts Receivable, General Ledger, Financial Reporting).

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Classified Information Technology Support Services (CITSS) is a commercial-off-the-shelf, classified network providing standard office automation and decision support tools to approximately 100 government employees plus select on-site support contractors of the Defense Advanced Research Projects Agency's single physical site in Arlington, Virginia. Because DARPA's mission involves only advanced research, the CITSS has no immediate operational mission. The mission supported is the early identification of promising high-risk, high-payoff research ideas and their initial funding until work can be transitioned to a military or other federal organization in a more traditional research and development vein. The CITSS is government-owned and contractor-operated.

**Description of Investment**

The goal of the Clinical Enterprise Intelligence Program (CEIP) strategic initiative is to advance patient-centered healthcare delivery through integration of informatics and thus transforming our enterprise to a rapid learning organization. The CEIP platform is a combination of hardware, software and technologists that together deliver the ability to use enterprise clinical data. The collection of these capabilities enables CEIP projects. These capabilities are in the following: Program Management, Data Warehousing, Application Portal; Infrastructure and Operations; Application Support; Business Intelligence; Analytics. Types of projects enabled by this platform include clinical dashboards, reports, data feeds, ad-hoc data requests, and data-mart.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

The strategy of the CISWIP supports a suite of capabilities deployed to providers across all Medical Facilities and includes enhancements to local training, business process reengineering (BPR) and functional help desk support. CISWIP creates innovative training and education to support providers across all medical facilities, Sister Services and VA healthcare IM/IT communities.

CISWIP has 4 primary focus areas, all which correspond directly to enhancements at our MTFs and to serves as the Army training integrator and liaison for Army, Sister Services and VA healthcare IM/IT communities. CISWIP must improve the users' ability to capitalize on those capabilities through the following actions:

- (1) Clinical Workflow: Effectively insert technology into evolving clinical and business processes in order to decrease clinical documentation time and improve provider-patient experience.
- (2) Provider Choices: Purchase Commercial-Off-The-Shelf (COTS) software including Dragon NaturallySpeaking and As-U-Type.
- (3) Effective Governance: Establish multiple feedback systems to ensure (a) updates are communicated with the field, and (b) concerns and inputs from the field are solicited and acted upon.
- (4) Training, Help Desk Support and business process reengineering (BPR): Provide relevant and continuing training on new applications and a robust help desk support function for providers. Institute a strong BPR program that focuses on clinic workflow processes with available technology.

<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Coding and Compliance Editor (CCE) is a suite of COTS products integrated into a single MHS application designed to improve data quality, regulatory compliance, and medical claims within the MHS. CCE is an interactive tool that provides certified coders the capability to medically code a patient record to meet medical and regulatory compliance guidelines. Previously known as Patient Accounting System (PAS), however since the financial module was never completed, it is more appropriate for the initiative to be re-titled as CCE.

**Description of Investment**

CAS is the authoritative system for Air Force combat ammunition. CAS is a single integrated web-based system operating on the Global Combat Support System-Air Force (GCSS-AF) framework. It is an operational Air Force combat mission support system providing global munitions based situational awareness and response capability information to mission planners and the war fighter. CAS provides visibility of location, configuration, and status of all conventional munitions owned by or in the custody of the United States Air Force in support of mission planning, preparation, and execution.

**Description of Investment**

DISA's four Field Commands and seven Field Offices are forward deployed and co-located with the COCOMs (USJFCOM, USTRANSCOM, USSOUTHCOM, USSTRATCOM, USSOCOM, USCENTCOM, USNORTHCOM, USEUCOM, USPACOM, and USAFRICOM).

The Field Commands/Offices ensure that issues identified by Commanders are resolved in a time-sensitive manner and function as the focal point within DISA for theater-unique requirements. They maintain a proactive role with other Field Commands/Offices and COCOMs representatives while managing requirements from identification to delivery of DISA services. In addition, DISA's Continental U.S. Regional Operations Support Center (CONUS RNOSC) exercises centralized management of CONUS network operations and are responsible for the real-time operational direction, monitoring and control of the Defense Information Systems Network within CONUS.

**Description of Investment**

CACCTUS is a critical element in the ability to conduct Service specific Combined Arms Staff Training for all elements of the Marine Corps Air Ground Task Force (MAGTF). The CACCTUS contributes to the Marine Corps Core Competency of Combined Arms Operations, as outlined in Marine Corps Strategy 21, by providing an institutional means to effectively train Marine staffs and units in all aspects of effectively integrating combined arms assets. The Expeditionary Maneuver Warfare(EMW) Capability List (ECL) directs the development of training systems and infrastructure that incorporate combined arms staff trainers into regional training centers at all MEF HQ and MAGTFTC.

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The C2AOS/C2IS program provides human-facing applications that operators will employ in Joint Air Component operations, and web-enabled information services that expose operations data for use by applications. The C2AOS/C2IS Capability Definition Package (CDP) addresses Joint Air Component (JAC) integrated air, space, and cyber Battle Planning and Execution (ABP&E) mission capability. Theater Battle Management Core Systems-Force Level (TBMCS-FL) is the legacy System of Record (SoR) providing the majority of ABP&E capability to the Joint Force. TBMCS-FL programmatically is in sustainment; however, known technical and functional limitations and recurring security accreditation issues plague sustainment with high expense and slow responsiveness to warfighter needs. C2AOS/C2IS supports rapid delivery of upgraded and new mission functionality. This approach provides a software-based agility to meet warfighter needs through specifically focused mission software complementing adjustable workflows, data orchestration, data management, and record keeping provided by the host platform Information Technology (IT) operating environment. Other Joint Force Command and Control (C2) nodes supported by a modern, certified, and accredited IT operating environment could employ C2AOS/C2IS off-the-shelf or with minimal adaptation due to software compliance with Department of Defense (DoD) design standards. The Joint C2 (JC2) Objective Architecture cites Air Operations Center (AOC) Weapon System (WS) Increment 10.2, Navy Consolidated Afloat Network Enterprise Services (CANES), Army Battle Command System (ABCS), and Marine Common Aviation C2 System (CAC2S) programs as the respective service-provided compatible infrastructure and operating environments. C2AOS/C2IS contributes to the JC2 modernization strategy for DoD migration to services-based C2 capability.

**Description of Investment**

Funds for technical service to ensure systems and networks are accredited, vital information is protected; technical expertise in configuration management, systems acquisition, engineering and integration. Without funding, these functions will not be performed as United States Transportation Command (USTRANSCOM) does not have technical security professionals. Funding for hardware upgrade of Asynchronous Transfer Mode (ATM) switching networks and planned replacement of Barco projectors for Briefing and Display (B&D). The USTRANSCOM presentation systems are extensively used on a daily basis for high level briefings and presentations. Audio visual technology is constantly being improved to enhance the presenter's ability to project his information in the best possible way. To remain current with technology in future years, funds must be budgeted to cover these upgrades in the seven conference rooms located throughout USTRANSCOM. Configuration Management: Funding will produce design and code changes from the baseline system and provide testing and fielding for each of the subsystems. Funds are required to develop and maintain the Communication and Computer Requirements System (CCRS). Funding will provide for the database service and support as well as system improvements to satisfy future requirements.

**Description of Investment**

Commissary Advanced Resale Transaction System Replacement/Modernization (CARTS R/M) is a modernization of DeCA's point of sale (POS) hardware including all commissaries, server centers, and test bed. CARTS R/M will provide modernized POS hardware to help DeCA achieve its vision of providing its customers with an enhanced 21st century shopping experience. DeCA operates 245 commissaries (approximately 3,000 lanes) with approximately 18,000 employees. Commissaries are located in most countries where US military forces reside. CARTS R/M is currently in the Materiel Solution Analysis phase.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Product Office for Common software serves as the Army-wide manager for Defense Information Infrastructure Common Operating Environment (DII COE) and to integrate the ABCS foundation products, with emphasis on design and development of infrastructure software to support the execution of the various programs/Battlefield Functional Area application objectives. Specifically Common Software provides state-of-the-art software technologies and functionality that is used by numerous Army systems thereby eliminating the need for similar independent development and duplication of effort.

Common Software is not an ACAT program, it is not a chartered PM and it has no ORD in that it develops software to meet the common requirements of various program ORDs in order to eliminate duplication of effort and capture efficiencies. In addition, there is no end-item deliverable in that the software is delivered as part of each of the supported programs end item / delivered product.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

Computing infrastructure consists of both ashore and afloat infrastructure/network support. The ashore infrastructure mainly consists of the MSC Corporate Data Center (MCDC) and the MSC disaster recovery site (MDRS). The afloat infrastructure mainly consists of the MSC Afloat Network Operations Center (ANOC) and also the ANOC backup site (MDRS/BNOC).

**Description of Investment**

CAMPS is Air Mobility Command's (AMC) primary Command and Control (C2) planning and scheduling system that provides mobility mission planners with an integrated view for airlift and air refueling requirements management, planning, and scheduling of AMC/MAF air mobility resources to support peacetime, contingency, humanitarian, and wartime operations. CAMPS provides separate unclassified and classified requirements, planning, and scheduling capabilities, and also provides advanced user capabilities for operational planning and allocation management. CAMPS provides a joint capability to gather and manage mobility requirements for all Aerial Refueling Missions, Special Assignment Airlift Missions, and CENTCOM's airlift requirements. CAMPS Migration Completion Date (MCD) was achieved in Feb 02, and will continue development under the approved Mobility Air Forces (MAF) C2 Framework Capabilities Design Document (CDD).

<b>Lead Agent</b>	DEPARTMENT OF THE NAVY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	PROTECTION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Consolidated Emergency Response System (CERS) provides standardized capability for 911 emergency call taking and real time dispatch to first responders, improving response times to emergencies and increases the Marine Corps capability to save life, preserve property and maintain readiness. CERS includes computer aided dispatch (CAD) systems which are used by emergency call takers and dispatchers to capture pertinent data and provide real time information to first responders. An integrated and consolidated emergency response dispatch system will improve coordination of response resources, increase the chance of survival for sick or injured personnel, and decrease losses to facilities, equipment and other USMC property. CERS increases interoperability with critical response partners (on and off installation).

<b>UII</b>	007-000000505	<b>Acronym</b>	CAMS-FM/G081
<b>Name of Investment</b>	CORE AUTOMATED MAINTENANCE SYSTEM - FOR MOBILITY		
<b>Lead Agent</b>	U.S. TRANSPORTATION COMMAND		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Core Automated Maintenance System For Mobility (G081) is the central common source of all unclassified maintenance data for Mobility airlift aircraft. It accumulates, validates, processes, stores, and makes accessible to Air Force and AMC managers, the data necessary to keep AMC assigned and gained aircraft combat-ready. G081 is a centrally managed On-line Transactional Processing (OLTP) information system. The G081 system currently processes an average of 7 to 8 million on-line transactions per month on a mainframe computer in the Defense Information Systems Agency (DISA) Computing Services System Management Centers (SMCs) at Oklahoma City and Ogden. Worldwide logistics users connect to G081 at the DECC via the NIPRNET from desktop PCs (thick-clients) and from thin-client devices utilizing RF technology from the point-of-maintenance. AMC home and en route base locations access the central OLTP system, providing worldwide visibility of aircraft status, location and availability of all AMC assigned/gained (ANG and AFRC, AETC, USAFE, PACAF, airlift and tanker aircraft. G081 centrally stores, in real time, all information at the DISA SMCs needed to support the AMC global mission of its aircraft. G081 incorporates state-of-the-art technology to meet current and projected management information requirements using a wide array of communications channels. The G081 system was developed incrementally using spiral development based on the business processes needed to support the maintenance production environment. Web reports for system data can be reviewed via URL <https://amclg.okc.disa.mil>.

**Description of Investment**

The CSA is an Enterprise Hosting Environment that hosts Active and Reserve Navy applications, as well as other Departments of Defense and Homeland Security applications. The CSA provides NIPRNET/SIPRNET and NMCI-wide network connectivity to programs that are hosted in the CSA. The CSA allows authorized users access to connected systems and shared services with high levels of availability and security. The CSA is deployed at the following locations:• Space and Naval Warfare Systems Center (SSC) in New Orleans, Louisiana. (CNLA)• Space and Naval Warfare Systems Center (SSC) in San Diego, California. •(future CSA-C COOP Site) Space and Naval Warfare Systems Center Charleston, South Carolina (SSCLANT). (SPSC)The two locations provide mutual Continuity of Operations functions, as well as host Production, QA/Test, and Development Environments.

**Description of Investment**

CoreData Centers (CDC) and Installation Processing Nodes (IPN).

CDC - The backbone of the Joint Information Environment, CDCs are highly capable, highly resilient data centers providing standardized hosting and storage services to the enterprise within the Single Security Architecture now being implemented. CDCs also enable a significant reduction in the total number of DoD data centers by serving as consolidation points for computing and storage services currently hosted across hundreds of Component facilities.

IPN - A fixed DoD data center serving a single DoD installation and local area (installations physically or logically behind the network boundary) with local services that cannot (technically or economically) be provided from a CDC. There will be no more than one IPN per DoD installation but each IPN may have multiple enclaves to accommodate unique installation needs (e.g., Joint Bases).

<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Establishes a database of the oral health status (i.e., dental readiness) for active duty soldiers throughout the Army. CDS is a clinical scheduling system used at over 180 Army Dental Clinics, and about 1/3 of the USAF dental clinics. In addition to scheduling, the CDS is a tool used by the providers to enter their workload/procedure treatment codes and update the individuals dental readiness (used for deployment purposes). CDS is the primary dental readiness system that update the US Army MEDPROS system and the dental readiness within AKO.

<b>UII</b>	007-000005289	<b>Acronym</b>	CTC MOUT IS
<b>Name of Investment</b>	CTC MILITARY OPERATIONS ON URBAN TERRAIN INSTRUMENTATION SYSTEM (CTC MOUT IS)		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	FORCE TRAINING	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

CTC Military Operations on Urban Terrain Instrumentation System (CTC MOUT IS) is a subset of Urban Operations Training System (UOTS) to provide urban training solutions which fulfill various aspects of individual, collective, and combined arms training requirements. It supports both fixed permanent and non-permanent structures facilities and allows for addition or expansion to existing facilities and integration across sites and mission domains (Live, Virtual, and Constructive). The system is scheduled for fielding at the three Maneuver Combat Training Centers (MCTCs): the National Training Center (NTC), Fort Irwin, CA; the Joint Multinational Readiness Center (JMRC), Hohenfels, Germany; and the Joint Readiness Training Center (JRTC), Fort Polk, LA. The system will be the primary mode to capture and edit the video of platoon through brigade level MOUT training conducted at the three MCTCs.

The system supports both force-on-force and force-on-target training. The system contains the followings: Audio/Video instrumentation. Buildings are instrumented with cameras, microphones and infrared illuminators used to record video and audio during both daylight and night time operations. Speakers are installed to provide battle field effects. Exercise Control and After Action Review (EXCON/AAR). The exercise control software is used to navigate between the precision engagement buildings located at the site. The system provides the operator with the ability to activate/deactivate, expose, and conceal any of the devices instrumented in the buildings. The operator will set up mission parameters to support the specific training objectives for an exercise. The system provides the controls of targets, Battlefield Effect Simulations, and automatic weapons simulators. The system also provides the operator with a two way communication capability with the training area via microphones located at the operator workstations and at each camera box location. The system records the exercise audio and video, provides time tagging of events, video editing, and video presentation. The AAR facility instrumentation provides audience cameras, presenter cameras, projectors, viewing screens, and wireless presenter microphone. Camera coverage and microphones allow the recording of both the presenter and audience during the conduct of the AAR. The system has the capability to create a take home package for the exercise unit.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The DARPA Management Support System is a single, commercial-off-the-shelf, unclassified network providing standard office automation and decision support tools to the approximate 200 government employees plus on-site support contractors of the Defense Advanced Research Projects Agency's single physical site in Arlington, Virginia. Because DARPA's mission involves only advanced research, the DMSS has no immediate operational mission and is not on the Global Information Grid. The mission supported is the early identification of promising high-risk, high-payoff research ideas and their initial funding until work can be transitioned to a military or other federal organization in a more traditional research and development vein. The DMSS is government-owned and contractor-operated (GOCO).

**Description of Investment**

System name has been changed to reflect the version currently in the field.

The Data Products Development Environment Data Center provides the active US Army and Reserve units with network initialization data products required to sustain Real World, Training and Simulation operations. It uses standard commercial hardware/software packages and some custom applications to provide secure, reliable Web/Application and Database services to the US Army units and to collaborative engineering teams DOD-wide. The Data Products Development Environment Data Center uses standard commercial hardware/software packages and some custom applications to provide secure, reliable Web/Application and Database services to the US Army units and to collaborative engineering teams DOD-wide. The role of these Data Products Development Environment services is to provide a unified approach to network initialization for US ARMY Operational and Training Units.

**Description of Investment**

Decision Knowledge Programming for Logistics Analysis and Technical Evaluation (DECKPLATE) is the Aviation Data Warehouse (ADW) for the COMNAVAIRFORINST 4790.2A Naval Aviation Maintenance Program (NAMP). DECKPLATE ADW and Reporting System is the up-line reporting system that provides a single consolidated repository for current and historical naval aviation flight, maintenance and usage data for naval aircraft, engines, components, related support equipment, and personnel capability and qualification data for the purpose of reporting and logistic/engineering analysis. DECKPLATE acquisition plan is that it will replace all NALDA II legacy functionality. DECKPLATE is the authoritative data source for 19 years of detailed maintenance data and over 40 years of flight data. The system will provide enhanced user reporting and analysis capability allowing users to access, correlate and analyze data from multiple sources that includes Naval Aviation Logistics Command Management Information System (NALCOMIS) from both Organizational-and Intermediate-level maintenance activities. DECKPLATE provides an on-line, integrated life cycle logistics readiness and operational weapons systems database, and the tools to sustain critical support analysis and future data reporting requirements to support the planned interfaces between DECKPLATE and NAVAIR ERP.

**Description of Investment**

The Defense Civilian Pay System (DCPS) is the payroll system providing pay, leave, and entitlement computations, and financial accounting for DoD, Executive Office of the President, Department of Energy and the Department of Health and Human Services. DCPS serves approximately 900,000 civilian employees. Further, the DCPS application is used by the National Security Agency to process classified payroll in a NSA classified environment. DFAS and DCPS project staff competed against 18 Executive Branch agencies to become one of the Federal payroll service providers as part of the Office of Management and Budget and Office of Personnel Management ePayroll initiative. In October 2002, DCPS was selected as an ePayroll system provider. In addition to Department of Energy in 2004, the Environmental Protection Agency and a small group of Veterans Affairs employees have migrated to DCPS. Bonneville Power Agency (BPA), Broadcast Board of Governors (BBG), and the rest of the Department of Veteran's Affairs (VA) employees are schedule to migrate to DCPS.

**Description of Investment**

DOD's Defense Enterprise Hiring Solution - USA Staffing (DEHS) is associated with recruiting, identifying, evaluating, and selecting a candidate to fill a position. USA Staffing provides hiring lifecycle capability enterprise-wide across DOD that allows HR professionals to collaborate with Hiring Managers and create vacancies, develop competency-based assessments to evaluate applicants, craft streamlined job announcements and advertise them on USAJOBS, review applicants for qualifications, and certify and select the best qualified candidates. USA Staffing is the Office of Personnel Management (OPM) hiring software solution for Federal agencies that (1) is fully integrated with USAJOBS; (2) is fully compliant with all Federal hiring regulations; (3) meets the requirements mandated by the 11 May 2010 Presidential Hiring Reform Memorandum; and (4) meets all Federal IT security requirements. USA Staffing is a Government Off-the-Shelf (GOTS) product, developed and owned by the OPM, and obtained via an Interagency Agreement as a managed service between Defense Civilian Personnel Advisory Service (DCPAS) and OPM.

<b>UII</b>	007-000100115	<b>Acronym</b>	DHSS V-HOSTING
<b>Name of Investment</b>	DEFENSE HEALTH SERVICES SYSTEMS VIRTUAL HOSTING		
<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

DHSS will consolidate infrastructure by setting up and operating a virtual computing platform in a modified Infrastructure as a Service (IaaS) virtual environment that hosts multiple existing classified or unclassified federal data processing centers, including an electronic information management environment specifically suited for DHSS. Virtual Hosting of DHSS Web-based applications through a service provider utilizing AIX, VMW are Windows and LINUX clients, and physical Windows servers. This service provider shall provision, maintain, and administer operating systems, processing, storage, networks, and other fundamental computing resources and all related security requirements. The DHSS requirement for IaaS is such that the service provider shall provide modified Infrastructure as a Service (IaaS) managed services for the DHSS Development, Development-Test (Dev/Dev-Test), Production-Test (ProdTest), Demo-Training and Production (Prod) environments, to include implementation, provisioning, hosting, monitoring, reporting, maintenance, management, operational program management support, help desk, and administration of all processing, networks, Operating Systems, SAN Storage, SAN Backups and Archiving, all related security requirements, and other fundamental computing resources for all environments. DHSS shall not manage or control the underlying infrastructure, but will have control over the deployed applications. The service provider shall provide their mass storage solution and manage the presentation of tiers as a back office function using the service provider's standard storage solution. The storage solution will be sized so as to accommodate a proportionate amount of DHSS data in each storage tier, relative to the required high level of performance, with backups for that data to be stored in either the lowest available tier or to tape.

**Description of Investment**

The Defense Joint Military Pay System - Active Component (DJMS-AC) provides pay computation, leave, and financial accounting for Military Service members serving in the Army, Navy, and Air Force active duty and Junior Reserve Officer Training Corps (JROTC); providing payroll support to approximately 1.4 million Service members worldwide. Also included in the funding for DJMS-AC is support for the Saving Deposit Program. SDP is used to compute the interest earned on savings deposits (cash/allotments) made by members of the Armed Forces serving in a combat zone, e.g., serving under arduous conditions or in support of a contingency operation. Support for the SDP began in March, 1991 in accordance with the National Defense Authorization Act of 1991. AIMDS, ARS (ADOPT), and TAXMRI are sub-modules of DJMS-AC.

**Description of Investment**

DJMS-RC is a legacy payroll system that provides pay computation, leave and financial accounting for the reserve military members in the US Army, Navy and Air Force. Additionally, it supports pay for annual training and short periods of active duty. Army has expanded the scope to include all Guard/Reserve brought onto active Duty regardless of the length of time on active duty. DJMS-RC also supports the Reserve Officers Training Program and the Health Professional Scholarship Program. DJMS-RC was to have been replaced by DIMHRS.

**Description of Investment**

The Defense Medical Human Resources System – internet (DMHRSi) enables the Services to standardize and optimize the management of human resource assets across the Military Health System (MHS). DMHRSi is a Web-based system that enables improved decision making by facilitating the collection and analysis of critical human resource data. It standardizes medical human resource information and provides enterprise-wide visibility for all categories of human resources (Active Duty, Reserve, Guard, civilian, contractor, and volunteer medical personnel); improves reporting of medical personnel readiness and; streamlines business processes to improve data quality for management decision making and managing the business; provides Tri-Service visibility of associated labor costs and is source for personnel cost data.

<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Comprised of the infrastructure and services needed to provide seamless integrated sharing of electronic health data between the DoD, VA, other Federal agencies, and private sector partners that is viewable to DoD and VA providers through a joint viewer.

DMIX program will acquire the capabilities necessary to securely and reliably exchange standardized, normalized, and correlated health data with all partners through standard data/information exchange mechanisms. This allows users in different places and different organizations to access, use, and supplement health data (technical interoperability) that has a shared meaning so users (assisted by computers) are able to make care decisions (Semantic Interoperability – Level 4). DMIX manages the data exchange capability from legacy data stores in order to prepare for the transition to the modernized Electronic Health Record platform being acquired by DoD Healthcare Management System Modernization (DHMSM). DMIX consists of a family of capability initiatives supporting the seamless exchange of standardized health data among DoD, VA, other Federal agencies, and private providers as well as benefits administrators. The DMIX program provides the capability for health care providers to access and view complete and accurate patient health records from a variety of data sources thereby allowing healthcare providers to make faster and higher quality care decisions. DMIX was established in accordance with the joint memo from USD(C) and USD(AT&L) titled "Joint Memorandum on Major Defense Acquisition Program and Major Automated Information System Program Resource Transparency in Department of Defense Budget Systems" dated June 27, 2013.

In addition, Joint Electronic Health Record Interoperability (JEHRI) and Virtual Lifetime Electronic Record (VLER) Health (to include Exchange (Query and retrieve “Pull” methodology), and Direct (Point to Point “Push”) transport mechanisms), are part of the DMIX program as a direct result of the Acquisition Decision Memorandum (ADM) signed January 2, 2014 by the Under Secretary of Defense for Acquisition, Technology and Logistic (USD AT&L). Use of the health data may be done via legacy systems, clinical mobile applications and system agnostic viewers such as the Joint Legacy Viewer (JLV). Customers include the MHS, VA, other federal agencies and over 200,000 medical care practitioners.

<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Defense Property Accountability System (DPAS) has been chosen as the standard DoD-wide property accounting system. DPAS is an integrated system for capturing financial and physical control over real and personal property. The system supports inventory tracking and financial reporting for all property regardless of the funding authority under which the assets were acquired. The Defense Logistics Agency (DLA) implemented the DPAS in FY 1999.

DFAS incorrectly reported Defense Working Capital Funds (DWCF) under PE 0901527BD in its FY09 budget submission. This error has been corrected and all funding is now reported within the appropriate DWCF PE, 0901527DBD.

**Description of Investment**

Deliberate and Crisis Action Planning and Execution Segments (DCAPES) is the mission critical Command and Control (C2) system that enables the Air Force to posture, present, plan, source, mobilize, deploy, account for, sustain, redeploy and reconstitute Air Expeditionary Forces (AEF). As the sole Air Force feeder system to the Joint Operational Planning and Execution System (JOPES), it provides the President, SECDEF, CJCS, and CINCs capability to automatically orchestrate operations, logistics, manpower, and personnel plans across the AF (and Reserves) thereby ensuring combat and support forces are resourced and available for employment by the Joint Forces Air Component Commander (JFACC). The Air Forces Global Reach Mission relies critically on DCAPES translating strategy, integrated operational plans and guidance into time-responsive, comprehensive, and executable projection of our AEF Forces. DCAPES data and data manipulation capability allows Air Force planners and commanders to maintain over 3000 Operational Plans (OPLANS) synchronize between the 4 DCAPES Global Command and Control (GCCS) Strategic Server Enclaves (SSEs) and their peer JOPES SSEs. Over 5700 Air Force planners and commanders rely daily on the DCAPES capability to accomplish their assigned mission.

<b>UII</b>	007-000001766	<b>Acronym</b>	DOD EOPF
<b>Name of Investment</b>	DEPARTMENT OF DEFENSE ELECTRONIC OFFICIAL PERSONNEL FOLDER		
<b>Lead Agent</b>	DEFENSE HUMAN RESOURCES ACTIVITY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Department of Defense Electronic Official Personnel Folder (DoD eOPF) initiative directly supports the management of Human Resources (HR) records for civilian employees in accordance with the Office of Personnel Management (OPM) Guide to Personnel Recordkeeping (GPR). The eOPF is an OPM HR technology service mandated by the Office of Management and Budget (OMB) for all Executive Branch agencies to eliminate paper Official Personnel Folders (OPFs) by December 2013. The OPM business case aligns eOPF under the HR Line of Business sub-functions: HR Management, Benefits Management, Personnel Management, Information & Technology Management, and Records Retention. The documents in employee OPFs are essential to HR business operations such as merit promotion, non-competitive placements, position management, and retirement, benefits and entitlements processing. Today, a hardcopy OPF can only be accessed by one person at a time and is often not locally available. These limitations impact processing time and HR operations efficiency. Through on-demand Web-based access to personnel folders, eOPF enables 24/7 concurrent direct access to personnel information by HR staffs, managers, and employees from any authorized location. All of the records associated with Federal employment history, benefits, and entitlements are collected and maintained in the eOPF. Some of these records are auto-populated through an interface with the Defense Civilian Personnel Data System (DCPDS). The eOPF allows HR staffs to electronically transfer personnel records from one agency to another when employees move between agencies. In addition, eOPF records for separating employees can be electronically transferred to the National Personnel Records Center (NPRC) for preservation. These attributes of eOPF will improve the efficiency of HR operations. In addition, the enhanced records access and transfer feature in eOPF, will eliminate the time and cost of shipping hardcopy OPFs between locations. The eOPF also supports the elimination of the resources such as equipment and facilities associated with maintaining paper records. The Defense Civilian Personnel Advisory Service is centrally funding DoD eOPF implementation and sustainment with the DoD Components are funding eOPF back-file conversion and day-forward document scanning. The majority of the other Federal agencies are already benefiting from the use of eOPF. The efficiencies to be derived make eOPF an essential investment for the DoD.

**Description of Investment**

The Depot Maintenance Systems Integration (DMSI) solution provides consolidated, standardized, global information to support Depot Maintenance (DM) processes at the Air Force Materiel Command (AFMC) Air Logistics Centers (ALCs) to include maintenance, supply, financial and cost analysis functional areas. DMSI deals with planning, scheduling and tracking of workload of maintenance operations on end items and aircraft undergoing repair. DMSI consists of six functional components and the DM Consolidated Operational Database (DMCODB) which serves as a single, integrated, logically centralized database for all operational data used or generated by the DMSI components. The DMSI components include the AFMC Labor Standards Data System (ALSDDS), Depot Maintenance Material Support System (DMMSS), Exchangeables Production System (EPS), Inventory Tracking System (ITS), Job Order Production Master System (JOPMS) and Programmed Depot Maintenance Scheduling System (PDMSS).

<b>Lead Agent</b>	DEFENSE FINANCE AND ACCOUNTING SERVICE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

The Desktop Management Initiative (DMI) will contract with a commercial service provider to obtain efficient, effective, and economical desktop management and associated services across the DFAS enterprise. This service will standardize the desktop environment in terms of hardware and software, and bring consistency to the helpdesk function. Ultimately, this service will allow DFAS to focus on its core competency of finance and accounting, and improve customer satisfaction.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The DFAS Teleservices initiative was created to support the DFAS Cleveland PBX (Private Branch Exchange Telephone switch), ACD (Automated Call Distribution) Call Center system, other pheriphal telephony servers, and to include pagers and cell phones. This initiative provides funding for the center site telephone 'dial-tone' service, Call Center services, telephony equipment maintenance, and civilian workyears.

DFAS incorrectly reported Defense Working Capital Funds (DWCF) under PE 0901527BD in its FY09 budget submission. This error has been corrected and all funding is now reported within the appropriate DWCF PE, 0901527DBD.

**Description of Investment**

Distribution Process Owner Secure Enclave (DSE)/Common Computing Environment (CCE) provides the basic infrastructure consolidation environment to host USTRANSCOM and TCC Command and Control (C2) Applications. DSE/CCE implementation fuses the number of physical servers, facilities, and support personnel, while improving computing utilization and facilitating on-demand provisioning for increased scalability. This environment includes the hardware requirements for USTRANSCOM systems and programs of record. It provides common platform services, which improves security, provides access control, and disaster recovery. Additionally, DSE/CCE provides opportunities to leverage a certified and accredited enterprise development and deployment environment responsive to dynamic customer/mission demands in an agile fashion. Provides hardware and software licensing, operational resources, integration and sustainment activities for USTRANSCOM DSE/CCE.

**Description of Investment**

EBUS provides direct support to all of DoD and to Federal Civilian Departments/Agencies, and also interfaces with 26+ commercial Value-Added Networks (VANs) and thousands of private sector vendors, contractors, and transporters/carriers (+20,000 trading partners). The EBUS gateway provides for the exchange of ANSI X12 and follow-on types of logistics transactions (i.e. XML) and transaction sets between DoD components and their trading partners. EBUS accomplishes translation services to allow for the exchange of non-ANSI based logistics data.

**Description of Investment**

DOD EMALL is an internet ordering system which provides a single entry point for DOD, Federal, Industry (as agents for government) and Allied Nation purchasers to research, compare, and acquire off-the-shelf, finished goods and services from the commercial marketplace and government sources. DOD EMALL provides an advanced, web-based application of choice for global sourcing contingency operations, and rapid response to warfighter demands where buyers use purchase/government credit cards or MILSTRIP for payment. DOD EMALL production is hosted at DISA DECC Ogden, UT. COOP, Test and Development sites are hosted at DISA DECC Mechanicsburg, PA.

**Description of Investment**

AFMC's "parent initiative" for DITIL (Vers. 1) "Network Distribution" Service Category's sub-category of "Network Distribution Services". NETWORK DISTRIBUTION SERVICES scope includes all routing and switching at the local or regional (lan, ican, man) level. Cable plant at the local or regional (lan, ican, man) level. Domain control at the local or regional level providing access control and directory services. Spectrum management. DNS services. This includes the ability to route, switch, distribute, and manage signals, data, and information using networks, and/or communication links. Subcategories include: Routing and Switching and Domain Control. NETWORK DISTRIBUTION scope includes the ability to route, switch, distribute, and manage signals, data, and information using networks, and/or communication links(This is commonly associated with Local, Campus or Installation-Campus area Networks (LAN, CAN or ICAN)).

**Description of Investment**

The Electronic Document Access (EDA) program supports simplification and standardization of DOD methods to interact with commercial and government suppliers in the acquisition of catalog, stock, as well as made-to-order and engineer-to-order goods and services initiatives to increase the application of Electronic Business/Electronic Commerce (EB/EC) across the Department of Defense (DoD). The EDA is a web-based system that provides secure online access, storage, and retrieval of contracts, contract modifications, Government Bills of Lading (GBLs), DFAS Transactions for Others (E110), vouchers, and Contract Deficiency Reports to authorized users throughout the DOD. EDA provides for the online creation of Contract Deficiency Reports (CDRs) and the CDR Workflow. EDA replaces the manual process of distributing paper copies by providing a single, read-only "electronic file cabinet". EDA also interfaces with Wide Area Workflow (WAWF) providing automated upload of key contract data elements to pre-populate invoices; uses PKI Technology for identifying and authenticating users; supplies pre-built and customizable search queries; while the Operational Support Team (OST) provides 24/7 help desk support for users.

**Description of Investment**

The EMPRS is the Navy's personnel records management system and is the repository for Official Military Personnel (OMPF) images. Provides records storage and management for both active-duty and reserve personnel, and provides decision support for the Selection Board process, Mobilization, Causality Assistance, Distribution, and Entitlements. It is a stand-alone hybrid system of electro-mechanical, photographic, manual, and automated processes.

**Description of Investment**

Provides Enterprise Engineering and Installation services in support of AF Engineering and Installation Governance Structure approved upward as well as downward directed requirements of communications infrastructure i.e. Base Information Technology Infrastructure (BITI), cutover between copper cable and fiber cable runs between facilities at base level locations. Provides support to MILCON (Military Construction) projects at all command bases and Geographically Separated Units (GSU). Provides engineering and technical support capability to integrate, engineer, furnish equipment, and materials, implement, install, test and provide maintenance for a wide ranges of infrastructure systems. Project challenges are to keep pace with the technological advancements and demands in communications. To meet communications requirements of the future data handling infrastructure of fiber optic cable transport to faster end equipment to meet those demands as new facilities to house new missions and upgrade of facilities and the communications infrastructure to meet mission needs.

**Description of Investment**

ENBOSS is used to provide engineering and base operations support at U.S. Army Reserve Regional Support Commands and installations, throughout the life cycle of each facility, from acquisition through disposal. The system uses an integrated suite of software applications developed for OCAR -ARIMD which includes the following core modules: EMAAR (Engineer Management Automation Army Reserve), and RISER (Resource Information System, Engineer Reserve). ENBOSS supports 205,000 Army Reserve soldiers located in 3,600 facilities worldwide providing integrated automated business applications for military construction, facilities operations and maintenance, real property/real estate, and environmental stewardship. ENBOSS combines the use of GOTS and COTS to provide a single portal of base operations tools for the Army Reserve. ENBOSS is considered a system; that is, a combination of hardware and software solution with a user interface.

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

ETIMS, including the electronic TO Viewer (eTOV) and the Command Publishing System (CPS) listed on the E/APL (Evaluated/Approved Products List), is the designated Air Force enterprise system for managing Technical Order (TO) libraries, managing the distribution and printing of paper TOs, and managing, storing and distributing electronic TOs (eTO). The currency of TO configuration data in ETIMS is dependent on data from the Joint Computer Aided Acquisition and Logistics Support (JCALS) system. ETIMS/JCALS currently support 40,000 eTOs, 20,000 eTools, 70,000 paper TOs and >3,000 TO libraries across the AF enterprise. Deployed world-wide via the Air Force Portal 28 Feb 08, ETIMS addressed 35 of 68 high level requirements for delivering the capabilities and closing the gaps identified in the 17 Aug 06 Technical Order Management Increment 1 Capability Development Document (CDD). ETIMS provided the immediate needed warfighter capability to manage and electronically distribute both paper and electronic technical orders (eTOs) to improve readiness, reduce safety of flight risks, and achieve the first step towards the Air Force Technical Order CONOPS: Provide user friendly, technically accurate, and current digital technical data at point of use from a single point of access for all technical data users. ETIMS is an integration of commercial-off-the-shelf and custom developed software with Global Combat Support System-Air Force (GCSS-AF) services and Defense Logistics Agency On-Demand printing and distribution. ETIMS also addressed AF Audit Agency's eTO Report of Audit, F2008-0002-FC2000, Oct 07 regarding implementation, distribution, cataloging, and viewing of digitized TOs. ETIMS sunset ATOMS in 2008, AFTOX in 2010, and plans are underway to address five additional CDD requirements to fully sunset JCALS by 2015. ETIMS supports the 2012-13 DoD Strategic Management Plan, Business Goal #6, Key Initiative #3.

**Description of Investment**

Enterprise Blood Management System (EBMS) maximizes force readiness as an integrated system of worldwide enterprise automated information solutions for management of blood donor processing, blood banking and transfusion services. The Department of Defense will utilize the solutions in CONUS and OCONUS Military Treatment Facilities. The automated information solutions will be in compliance with the Food and Drug Administration regulations and AABB standards as applicable. EBMS supports military medical surveillance system that includes a functional capability for data collection, analysis, and dissemination of information linked to public health programs via laboratory testing for infectious diseases.

**Description of Investment**

The Enterprise Business Solution (EBS) is the overarching program for the business-driven modernization of DeCA's resale supply chain and non-resale asset management processes. EBS will be a System of Systems (SoS) consisting of a cohesive set of defined and prioritized program increments. Each program increment will deliver a sub-system with specific business capabilities.

**Description of Investment**

- The Enterprise Business System (EBS) is a business mission system providing the Information Technology (IT) that facilitates the implementation of the Air Force Research Laboratory's (AFRL) centralized business processes that embodies Research, Development, Testing and Evaluation of the activities across AFRL, as defined by the Managed Business Team.
- The EBS supports the business requirements of AFRL by providing standard business processes via a centralized tool suite for the entire EBS user community including Headquarters Staff, and ten Technical Directorates (TDs) which comprise the AFRL. EBS relies on financial execution information from the Web Comprehensive Cost and Requirement System (WebCCaR) and supplies program data to the Defense Technical Information Center (DTIC) via the Unified Research and Engineering Database (URED).
- EBS consolidates integrated capabilities into one cohesive system and thereby alleviates the burden of each TD maintaining their own disparate business systems. Additionally, EBS integrates AFRL business process, improves integrity, reporting efficiency and management of critical business information within AFRL.
- The mission of the EBS is to provide and sustain information technology solutions to support AFRL enterprise business process.
- EBS is aligned to Acquisition Segment (510 4 000) and Line of Business is General Science & Innovation (109).

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	INSTALLATION SUPPORT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Enterprise Environmental, Safety, and Occupational Health Management Information System (EESOH-MIS) is an enterprise, web-architected, relational database system designed to replace independent stove-piped systems created in several different development environments, ranging from client-server applications to MS Access databases. It supports base-level and headquarters CE functions in day-to-day operations of environmental systems and environmental compliance.

EESOH-MIS provides direct CE environment management support to active AF, ANG, and AF Reserve in garrison and expeditionary settings. Interfacing with other systems, it represents a single enterprise application hosted on the GCSS-AF framework. It enables standardized business processes, supporting cradle-to-grave data tracking and reporting at shop level in a process-centric, menu-driven, upward management tool.

EESOH-MIS integrates several separate AF-wide environmental, reporting, and tracking systems, as well as numerous individual databases. When fully implemented, HazMat will replace the Air Force Environmental Management Information System (AF-EMIS) and Hazardous Materials Management System (HMMS); Cleanup will replace the Air Force Restoration Information Management System (AFRIMS).

These capabilities are required to meet legal requirements, policy, and technical requirements of the Air Force in the joint functional concepts of Net-centric ESOH Risk Management and Focused Logistics. EESOH-MIS will reduce the ESOH management and reporting burden placed on the shops by decreasing the time required to comply with ESOH laws and policies. Use of a single database structure and standardization of business practices will ensure data integrity, security, and proper data stewardship.

**Description of Investment**

The objective of the Air Force Enterprise Information Management (EIM) program is to modernize and enhance Air Force business operations and decision-making processes in support of combat operations.

The EIM suite shall be comprised of an integrated set of Commercial Off-the-Shelf (COTS) products/solutions and services, providing the capability to support:

- Workflow
- Document Management
- Records Management
- Content Management
- Interoperability with Air Force Information Management Tools (IMT)
- Interoperability with standard AF/DoD Collaboration Tools
- Knowledge management

EIM is an ACAT 1AC program, which is currently in milestone B of the acquisition lifecycle. EIM is an integrated suite of tools are deployed on the enterprise and supports business intelligence and decision support systems.

Initial BPA acquisition is complete, and integration with the GCSS-AF framework in support of pilot activities is ongoing.

**Description of Investment**

The Enterprise Local Area Network (ELAN) Systems is information technology infrastructure that connects all DFAS sites around the world and provides core services such as email, file, print, fax and data communications. ELAN or "agency IT Infrastructure" provides the essential foundation for DFAS to conduct its mission areas. ELAN is aligned with the ITILOB and DITIL. IA investments are handled as a separate initiative but through the same management team. Looking forward, ELAN will continue to as the agency consolidates, transforms and aligns other IT Infrastructure related functions into the ELAN.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The SATCOM Gateway Program Office will implement the Right-Sizing Initiative, which will modernize, consolidate and converge transport and service delivery for 46 SATCOM Gateways using military and commercial satellite terminals for outbound transport, and the DISN core for intrasite transport between adjacent sites, service and information enclaves and supporting DECCs/EDCs, resulting in a resilient and secure JIE architecture. This Initiative will baseline all SATCOM Gateway joint sustainment efforts, technical refresh and other programmed upgrades from all satellite programs and projects in the DoD SATCOM environment that will access the SATCOM Gateways. The SATCOM Gateways support the entire Department - Strategic and Tactical Users – with an estimated 4 million users (including the President, SECDEF, SECSTATE, CJCS, all of the Combatant Commanders, Military Service Departments, Federal Agencies and other authorized users in the Intelligence Community, First Responders, etc.). The equipment footprint includes military and commercial satellite earth terminals, baseband and encryption suites for serial and IP transport and services (Voice, Video and Data), management and control, and security in accordance with National Security Systems and the transport of National Security Information. There will be an established and approved SATCOM JIE architecture that will synchronize with the JIE terrestrial transport environment, and will use the established Tactics, Techniques and Procedures to support operations.

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Enterprise Supply Chain Analysis, Planning and Execution (ESCAPE) initiative system has been approved by SAF/A6 to further the definition, design, acquisition, implementation and delivery of warfighter enterprise planning capabilities. The ESCAPE initiative will use the Service Development and Delivery Process (SDDP) as the guidance to focus the diverse skill sets required to deliver improved supply chain planning capability. This initiative has garnered senior-leader support and has the potential to deliver supply chain planning capability to the AF within the next few years. The ESCAPE initiative supports eLog21 transformational goals by seeking to modernize disjoint supply chain legacy planning capabilities under a single enterprise materiel solution, should the initiative progress through Ste 3/4 of the SDDP. The overall objective of the initiative is to provide enhanced capabilities for :

- Demand Planning
- Inventory Planning (including the Readiness Based Sparing capability)
- Supply Planning
- Exception Management
- Analytics

The ESCAPE initiative will evaluate the results and determine the feasibility to modernization and simplify the legacy APS portfolio. This will reduce sustainment costs and improved warfighter responsiveness through a variety of benefits.

**Description of Investment**

FAMIS is the core financial accounting system for the DISA Computing Services Directorate (CS), and the Telecommunication Services/Enterprise Acquisition Services (TSEAS) Defense Working Capital Fund (DWCF) Business Areas. FAMIS addresses Federal, DOD, DWCF-CSD and DWCF TSEAS requirements by: (1) Recording financial transactions from both direct entry and via automated batch interfaces with both internal and external critical feeder systems; (2) Providing the ability to inquire on a specific item (e.g., receivable document, customer account, payable document, vendor account, general ledger account, or directorate budget); and (3) Producing monthly financial statements in a variety of formats for internal and external distribution.

**Description of Investment**

Provides funding for Navy/USMC deployed, tactical and shipboard communicating requirements. The resources are to support several command with MPN - Military billets to support IT functions. Supports travel, supplies, CIVPERS, contracts, and parts for, Extremely High Frequency, Ultra High Frequency, High Frequency, and Fleet Network Operations Center. All part of Satellite Communications. Commercial cost, Satellite Antenna Maintenance, INMRSAT cost, Fixed Submarine Broadcast band and transmitter, and Joint Tactical Ground Station. All are contracts for equipment and maintenance support. Cable infrastructure repair, cable upgrade at Naval Station Norfolk, AICATEL Microwave radio repair. Supports travel, supplies, CIVPERS, contracts, and parts for Extremely High Frequency, Ultra High Frequency, High Frequency, and Fleet Network Operations Center. All part of Satellite Communications.

<b>UII</b>	007-000006185	<b>Acronym</b>	FBCB2
<b>Name of Investment</b>	FORCE XXI BATTLE COMMAND BRIGADE AND BELOW		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

FBCB2 provides Situation Awareness (SA) and Command and Control (C2). The FBCB2 system consists of integrated suites of hardware, installation kits and/or system software, application software, integrated logistics support, and training packages. Elements are installed on weapons platforms and vehicles or deployed with individual dismounted soldiers. The FBCB2 inter-operates with and complements other Army Battle Command Systems (ABCS). FBCB2 can be employed in its traditional terrestrial role as part of the Army Battle Command System (ABCS) of products using EPLRS and SINGCARS radio networks on the lower tactical internet (TI) or it can function as part of the FBCB2 Blue Force Tracking System which uses L-band satellite systems to provide an over-the horizon capability to link units and supporting operation centers. The FBCB2 system will be installed on weapons platforms, vehicles and aircraft at BDE and below echelons.

FBCB2 supports lower echelon battle command requirements including near real-time Situational Awareness (SA); a shared common picture of the battlefield; Command and Control (C2) messaging, and integrated logistics reports and displays. A shared common picture of the battlefield is achieved through graphical displays showing friendly units, enemy units, control symbols and targets of interest on a digital map background. The primary FBCB2 application functional area that interactively provides these capabilities to the user, through a GUI interface, is Battle Command OPS (BCOPS), the online user mode. Critical administrative and management support functions, including security management are provided via the Security Officer Applications and the System Admin functional areas. FBCB2 platforms in both terrestrial and BFT L-band modes currently are in use supporting units in Operation Enduring Freedom and Operation Iraqi Freedom as well as supporting CONUS training and other operations around the world.

NOTE:

All FBCB2 systems are regitered under this number - Force XXI Battle Command Brigade and Below-Blue Force Tracking Network Operations Center, V6.5, Force XXI Battle Command Brigade and Below-Blue Force Tracking Network Operation Center SECRET with CENTRIXS-ISAF Extension, V6.5, Force XXI Battle Command Brigade and Below, V6.5 and Force XXI Battle Command Brigade and Below, V6.4.4.

**Description of Investment**

GAFS-R suite of modules maintain the accounting records for the Air Force customers. GAFS-Base Level, GAFS-R Datamart, GAFS-DTS and CTHR process or maintain travel transactions, funding, commitments, accounts receivable,accounts payable, collections, disbursements and produce financial reports for Air Force. GAFS-DTIM allows users to do transaction lookup, pre-validation, voucher processing and also provides the capability to postexpenses automatically from specific Dept. of Treasury Forms. CPAIS receives, verifies, reports and transfers accounting information related to payrolls processed by DCPS and interfaces transactions to GAFS-Base Level.CPAB receives DCPS Gross Pay Reconciliation Files for the Air Force Departmental Reporter and produces an Air Force readable format. CPAB also verifies, reports and transfers accounting information from DCPS payrolls to CPAIS.

<b>UII</b>	007-000000879	<b>Acronym</b>	GATES
<b>Name of Investment</b>	GLOBAL AIR TRANSPORTATION EXECUTION SYSTEM		
<b>Lead Agent</b>	U.S. TRANSPORTATION COMMAND		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

GATES is a single automated system serving management of both aerial port and surface port operations for the Department of Defense (DOD) transportation, worldwide. Its support is mission-critical since the ports sustain global air and surface movement of personnel and materiel and serve as the entrance into or departure from the country where located. Serving peacetime and contingency operations, GATES support includes processing and tracking cargo and passenger information to speed their timely arrival and know their location at all times (i.e., in-transit visibility (ITV)). GATES also aids DOD's capability to bill for cargo and passenger movement. It is a financial feeder system providing manifest information to the Airlift Service Industrial Fund Integrated Computer System (ASIFICS), a billing system belonging to the Air Force. And in the near future, GATES will also feed the Cargo and Billing System (CAB), a billing system belonging to the Military Surface Deployment and Distribution Command (SDDC). GATES surface port function will include capability formerly provided by the SDDC Worldwide Port System (WPS). WPS was designed to support the water port operations of DOD by providing cargo management, documentation, and accountability to water port and regional commanders while providing ITV to higher echelons. An effective command and control (C2) tool, GATES promotes more effective resource management. The system interfaces with multiple data engines both internal and external to the DOD. It generates standard and ad hoc reports, supports scheduling and forecasting, and provides message routing and delivery service for virtually all transportation data."

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

"GCDS leverages commercial Internet technology and best practices to accelerate the delivery of DoD Web content and applications across the NIPRNet, SIPRNet, and CX-I. GCDS' global platform of hundreds of specially-equipped servers helps the DISN withstand the crush of daily requests for rich, dynamic, and interactive content, transactions, and applications. When delivering on these requests, GCDS detects and avoids DISN problem spots and vulnerabilities to ensure mission critical software downloads flawlessly, and applications perform reliably. Additional GCDS Benefits:

- Improve delivery of mission content to Warfighters globally
- Capacity on-demand to meet peak loads – without added IT infrastructure
- Increase user adoption by improving user experience and minimizing response times
- Reduce infrastructure costs, while meeting mission requirements
- Receive top notch 24x7 service and support from commercial and government experts"

<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

On 23 January 2006, the Joint Requirements Oversight Council (JROC) approved the GEMSIS Initial Capabilities Document (ICD). GEMSIS is intended to provide capabilities for integrated spectrum operations across the entire Department of Defense (DoD) in addition to interoperability with Federal, State, and local government spectrum agencies, and coalition forces. GEMSIS is envisioned as a net-centric emerging capability providing commanders with an increased common picture of spectrum situational awareness of friendly and hostile forces while transparently deconflicting competing mission requirements for spectrum use. This capability will enable the transformation from the current preplanned and static assignment strategy into autonomous and adaptive spectrum operations.

**Description of Investment**

Global Information Grid Systems Engineering & Support involves the definition and implementation at various aspects of evolving the GIG. Provides critical GIG foundation technologies and programs through the application of precise, short-term, technical, engineering, and integration expertise. Efforts under this project support critical GIG technologies and programs through the establishment of strategies and the implementation planning to apply those strategies. Support end-to-end reviews of solutions, programs and services to ensure consistent architecture and standards. Develops systems architecture constructs for the GIG and its components. Provides engineering guidance based on new technologies from industry. Mitigates risks and takes advantage of cross-program synergies.

**Description of Investment**

GoArmyEd is an Army Continuing Education System program that provides the virtual gateway to request Tuition Assistance (TA) online, anytime for classroom, distance learning, and online college courses. GoArmyEd is a dynamic online portal that automates many of the paper-based processes historically conducted in-person at Army Education Centers. GoArmyEd includes automated registration tools that enforce TA policies and procedures. GoArmyEd is used by users to pursue their post secondary educational goals; Army Education Counselors to provide educational guidance to authorized Ed Center Users; and Colleges to deliver degree and course offerings and to report student progress.

**Description of Investment**

The objective of this project is to provide a network to support all of Health Affairs/Tricare Management Activity's office automation needs. This includes systems management, project management, integration services, engineering, help desk, training, operations and maintenance support, and IT continuity of operations planning for over 2,000 headquarters level users and program managers in the Pentagon, Falls Church, VA, and Aurora, CO.

<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Health Artifact and Image Management Solution (HAIMS) enables the DoD and the VA healthcare providers to have global access and awareness of artifacts and images (A&I) generated during the healthcare delivery process. HAIMS will provide the new capability for users throughout the MHS to be aware and have access to A&I that have been registered with the central “system”, currently on local workstations and Military Treatment Facility (MTF) Picture Archive and Communications Systems (PACs). As patients move through the continuum of care from Continental United States to Theater and then return to DoD sustaining bases facilities, healthcare A&I moves seamlessly and simultaneously with the patient. This advances several MHS strategy initiatives such as achievement of paperless record, global access of Wounded Warrior scanned documents, and an alternative to finding storage space for paper records of merging MTFs. HAIMS will supply access to VHA and other external A&I both inside and outside the Military Health System (MHS) Electronic Health Record (EHR).

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

HEIS is an enterprise wide initiative that is used to capture costs that may cross Military Health System Health Information Technology (MHS HIT) components. HEIS is not a specific program. Includes funding common to multiple or all MHS systems/programs and cannot be associated with any one individual MHS HIT initiative. This Related Technical Activities (RTA) initiative represents the funding resources needed for oversight and support management functions to ensure investments meet identified mission requirements and goals. HEIS includes funding for Information Management division and efforts; and Program Executive Officer, Defense Health Clinical Systems (PEO, DHCS) operating budget staff salaries, contract support, rent, training and travel. Activities may also support portfolio management; common IT services activities, such as the Identity Authentication Services (iAS) which provides a variety of Public Key Infrastructure (PKI)-based identity authentication services in support of various web-based applications as well as user registration and identity authentication; IT acquisition program oversight activities; maintenance for Health Information Portability and Accountability Act (HIPAA); and occasionally serves as the holding account for funding for initiatives that are approved for initiation but are waiting for official documentation to be stood up or to be assigned to a specific progra office; as well as DoD's fair share funding which is transferred to Department of Health and Human Services' program management support for Federal Health Architecture Line of Business (FHA LoB).

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

HFGCS is DoD's worldwide high power, HF command and control (C2) network providing Beyond Line Of Sight interoperable voice and data communications for strategic, tactical, reconnaissance and air mobility forces. HFGCS is the primary HF C2 platform used by the USAF, President, White House Communications Agency, Mystic Star, executive DoD officials, other Services, State Department, and National Science Foundation. HFGCS passes reconnaissance and intelligence data; provides flight following; flight emergency calls; time-critical Emergency Action Message and Force Management broadcasts; weather; and HF data. HFGCS supports operations Iraqi Freedom, Enduring Freedom, and other Southeast and Southwest Asia operations, air bridges for Europe, AFRICOM, System of the American Air Forces and Pacific region for many long-haul C2 requirements. HFGCS uses commercial off the shelf radios, antennas, control system, and interface equipment to link deployed users from 13 worldwide, strategically located, radio stations to a Central Network Control Station (NCS) at Andrews Air Force Base, MD. The program uses Contractor Depot Maintenance (CDM) to sustain system components.

Acquisition funds, managed by 547 Aircraft Sustainment Squadron (ACSS) at OC-ALC, Tinker AFB, OK, are used to implement modernization and expansion requirements identified by mission owners and validated through the HFGCS System Manager and USAF Lead Command Representative, HQ AMC/A6CC. Sustainment funds are centrally managed by AFMC and support CDM, Interoperability Testing, Information Assurance support, and antenna maintenance support. Participating Major Commands are AF Space Command, USAF Europe, and Pacific Air Forces, Air Combat Command, and Air Mobility Command. Organizational level maintenance agreements are in effect with the US Navy and United Kingdom. In accordance with JCS Memo, dated 22 Jan 1993, directing consolidation of High Frequency Radio Communications and designating USAF as lead military department, HFGCS supports the Navy HF Consolidation effort at nine HFGCS stations.

The current baseline, HFGCS Version 4.0 was installed in FY06. HFGCS Version 5.0, installed in FY09/10, provides a second NCS capability, upgrades HF Email, and provides remote access functionality for special users. Future HFGCS versions include automated EAMs, network and security modifications, remote console and control voice, IPv6, PKI, and architecture upgrades.

<b>Lead Agent</b>	DEFENSE LOGISTICS AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The mission of the Defense Logistics Agency (DLA) Integrated Data Environment (IDE) is to improve supply and distribution processes by sharing data needed to implement improved DLA business processes and to develop supply chain visibility applications to improve operational decision-making.

The DLA IDE Program objectives are to make information visible, interoperable, and accessible for authorized users (via machine-to-machine interfaces) from a single point of entry; improve the quality of information through use of authoritative sources and coordinated application of business rules; and to support DLA, United States Transportation Command (USTRANSCOM), and Department of Defense (DoD) transformation efforts. The DLA IDE supports the data sharing requirements of both DLA and USTRANSCOM, with the latter in context of the IDE/Global Transportation Network (GTN) Convergence (IGC) Program. IDE will provide a single point of access for sharing: 1) DLA-managed data and non-DLA-managed data (i.e., data managed by the Military Services/Agencies) required by DLA programs and 2) DLA-managed data needed by external DLA customers and commercial trading partners.

The overarching deficiency addressed by the IDE is the limited capability to integrate and share logistics information, which restricts DLA and DoD in providing high quality logistics support and distribution services to the warfighter.

IDEAS provides a single, integrated, and transparent solution which seamlessly supports all contracting specialist/officer functions, interfacing mission partner requests, and contractor fulfillment functions. The web-based solution provides correct business functions, presents relevant information, operates at a higher reliability with lower costs than existing systems, and is adherent with all required laws, regulations, and policies. It shares consistent data, services, and processes across business functions and systems applying the tenets and principles of net-centricity through the use of procurement data standards.

<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Integrated Logistics System - Supply (ILS-S) is a suite of components that provide Agile Combat Support Strategic Goals and the AF Core Competencies of "Technology-to-warfighting" and "Integrating Operations" by providing direct supply support to active Air Force units, the Air Guard, and the AF Reserve, during peace and war, at fixed main bases, bare bases and forward locations. Until the system is replaced, it remains the mission-critical application to sustain the combat readiness of the deployed force and to maintain the operational readiness of the current force. ILS-S is a non-ACAT program tasked with the operations and sustainment of the existing retail supply system until it is subsumed into the Expeditionary Combat Support System (ECSS) in FY16. The components that make up ILS-S are:

- 1) Standard Base Supply System (SBSS) - originally developed in the 1960's, SBSS is a Unisys mainframe system that provides core business processes for standard base level inventory accounting and ordering management for the Air Force.
- 2) The Air Force Supply Central Database (AFSCDB) - an Oracle-based query and reporting system that consolidates information from 300 plus individual SBSS databases into a single on-line analytical processing (OLAP) database.
- 3) The Standard Asset Tracking System (SATS) - a subsystem that adds Automated Information Technology (AIT) to the SBSS using portable devices and radio frequency (RF) communications
- 4) The Enterprise Solution - Supply (ES-S) - a set of applications developed utilizing the GCSS Framework to provide Enterprise Asset Visibility and Enterprise Asset Order Management from data in both retail (SBSS) and wholesale (Stock Control System - SCS) supply systems. ES-S includes several enterprise capabilities, such as:
  - a) Single sign-on access to multiple SBSS accounts
  - b) A legacy query and sourcing system that helps find mission critical parts (MICAPS) and supplies from information within the SBSS
  - c) Visibility of Government Furnished Material at commercial vendor's facilities (Commercial Asset Visibility-Air Force)
  - d) Tools to provide Global Logistics Support Center (GLSC) managers with vital capabilities to systematically identify and expedite critical logistics support actions to maximize enterprise weapons systems availability

**Description of Investment**

IMDS-CDB is a Unisys Mainframe based, DMS/RDBMS database information system designed to support all maintenance activities for base-level aircraft, engines, trainers, support equipment, test equipment, missiles, munitions and communications-electronics. The consolidated database server is located at Defense Information Systems Agency (DISA), Area Command Oklahoma City, Tinker AFB, OK. With the exception of Air Mobility Command, IMDS-CDB is the operational Maintenance Management Information System used by base-level maintainers and is vital for effective and efficient management of weapons systems worldwide, IMDS-CDB also provides wartime readiness and operational support of aircraft, trainers, simulators, communications-electronics, and support equipment maintenance activities at these worldwide operating bases. IMDS-CDB automates aircraft history, aircraft scheduling, and air crew debriefing processes, and provides a common interactive interface for entering and retrieving base-level maintenance data for other logistics management systems.

<b>Lead Agent</b>	DEPARTMENT OF THE NAVY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	CORE MISSION TBD	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

ICOP provides significant steps toward a net-centric, web-enabled, enterprise-based open architecture consistent with the Department of Defense (DoD) Distributed Common Ground Station (DCGS) Family of Systems (FoS) design, and will support multiple, simultaneous, worldwide operations. ICOP systems will operate as the Fleet's unit level common ground station for multiple Intelligence, Surveillance and Reconnaissance (ISR) data types. It will support a wide range of ISR activities, including collection, posting, processing, exploitation, dissemination and use.

**Description of Investment**

This initiative funds the Information Technology (IT) and Education Technology (ET) activities of the National Defense University and its component organizations which include: The National War College, the Eisenhower School (formerly Industrial College of the Armed Forces), the Joint Forces Staff College, the Information Resources Management College, the Institute for National Strategic Studies, CAPSTONE and Pinnacle General Officer Courses, a research center, and six special programs. The IT program funds the NDU local area network (LAN) for two campuses, Internet access, e-mail and voicemail, software licenses, hardware, telephone, database and web support, video conferencing, network security, and user training. The ET program funds hardware and software for students and approximately 145 learning centers and conference rooms ranging from a 600 seat auditorium to 15 person classrooms equipped with Internet connectivity, centralized controls and projection capability. The ET program also funds an on-line learning management system and support for development of subject matter objects, experiential learning materials, and collaboration tools for use in both resident classrooms and distributed learning applications. Primary IT services (Help Desk, Network Operations, Applications and Database Support, Wargaming, etc.) are provided by contractors operating under a performance based contract to NDU. Some Audio-Visual services are provided by a separate support contract.

**Description of Investment**

System name has been changed to reflect the version currently in the field. JADOCS is a PC-based joint mission management software application that provides the warfighter with a timely, accurate, detailed battlespace view for planning, coordination, and execution of targets. It provides a suite of tools and interfaces for horizontal and vertical integration across battlespace functional areas. JADOCS is also a major segment of the intelligence application package for Theater Battle Management Core System (TBMCS) functionality at wing and squadron level. JADOCS interfaces with a wide range of Army and Joint Battle Command Systems using the JARV and Horizon Communications Servers.

<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

United States Africa Command (USAFRICOM) requires an enterprise network in order to provide enterprise net-centric services that enable USAFRICOM to reach a joint information environment (JIE). All locations with USAFRICOM enterprise users support multiple Department of Defense (DOD) agencies and organizations that retain the requirement to pull their agency and organization-specific services. In order to enable multiple DoD elements in a single geographic location to continue to utilize their individual net-centric services, a Joint Enterprise Network (JEN) has been implemented. The JEN meets DoD and NSA requirements, maximizes the utilization of DoD information technology (IT) investments in a given region without compromising Designated Approving Authority (DAA) positions. This project is intended to allow for the engineering, implementation and deployment of a secure, robust, and standards-based IT infrastructure that leverages a world-class governance framework in order to provide operational net-centric services, consolidated IT service support, a common NetOps architecture and redundant transport and connectivity for information systems (IS) classified up to the secret level in support of the US AFRICOM mission.

<b>Lead Agent</b>	DEFENSE HUMAN RESOURCES ACTIVITY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Joint Personnel Adjudication System (JPAS) enables the Intelligence community (DoD workforce - Military and Private Industry) to know the current eligibility and access level of persons under their control. JPAS is the DoD system of record for clearance information. It captures personal identifying information (PID) and manages clearance needs by providing a means to request investigations and determine investigation types by directly interfacing with OPM. JPAS consists of Joint Clearance ad Access System (JCAVS), the means by which Security Managers submit security clearance requests and verify statuses and Joint Adjudicative Management System (JAMS), by which Adjudicators track adjudications (investigations) and grant eligibility.

JPAS is the DoD personnel security migration system that replaces manpower and paper intensive legacy systems. JPAS supports a component based architecture and achieves virtual consolidation of the nine Central Adjudication Facilities.

**Description of Investment**

Joint Precision Airdrop System-Mission Planner (JPADS-MP) is employed with conventional or guided delivery systems by C-130 and C-17 aircraft to satisfy improved airdrop accuracy requirements for ground forces. Through the use of advanced weather and delivery system modeling and calculations software and collection of near-real time on-site weather data collection JPADS-MP significantly improves conventional high altitude ballistic airdrop computed air release points (CARP) and when employed with U.S. Army guided delivery systems JPADS-MP provides a high altitude Launch Acceptance Region (LAR). JPADS-MP consists of mission planning system (MPS) software and mission support equipment carried aboard C-130 and C-17 aircraft to execute precision airdrop operations. JPADS-MP includes the MPS laptop for ground and in-flight computations, a GPS Re Transmission Subsystem (GPS-RTS) which includes an Antenna Controller/Amplifier and GPS transmit antennas . the Ultra High Frequency (UHF) Dropsonde Receive Subsystem (UHF DRS) which includes a UHF dropsonde receiver, and GPS dropsondes. Air Combat Command is the lead organization and manages daily operations.

<b>Lead Agent</b>	DEFENSE INFORMATION SYSTEMS AGENCY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

The JSC mission is to ensure the Department of Defense's effective use of the Electromagnetic (EM) spectrum in support of national security and military objectives. The JSC serves as the DoD technical center of excellence for EM spectrum matters in support of the Unified Commands, Joint Staff, the Department of Defense Chief Information Officer (DoD-CIO), Services, and Defense Agencies. The JSC supports the Electronic Protection missions of Information Warfare as they relate to spectrum supremacy. It is responsible for developing and maintaining DoD standard information systems that support DoD spectrum related activities and processes. Specifically, the JSC designs, develops, and maintains DoD automated spectrum management systems, evaluation tools, and databases employed by the Unified Commands, Services, and Defense Agencies. The JSC provides technical assistance to DoD activities in support of spectrum policy decisions and ensuring the development, acquisition, and operational deployment of systems that are compatible with other spectrum dependent systems operating within the same electromagnetic environment. The JSC is the DoD focal point for technical spectrum related support, Electromagnetic Environmental Effects, and EM interference resolution assistance to operational units including deployable support to Combatant Commands Joint Task Forces.

**Description of Investment**

The Joint Tactical Information Distribution System (JTIDS) funds ongoing system level engineering of the existing Link 16 system for joint interoperability and development of the next generation Link 16 system, the Multifunctional Information Distribution System (MIDS). System level engineering responsibilities include Link 16 spectrum and joint enhancements. Designed for tactical combat applications and environments, MIDS will provide a highly jam-resistant, secure digital (voice and data) information distribution system, enabling rapid integrated communications, navigation, and identification among tactical and command and control warfare elements.

**Description of Investment**

Resources integration of cyberspace and Information Operations (IO) for Army's support to full spectrum operations. Provides full spectrum IO support during operations, exercises, and developmental activities to Army and joint warfighters. Provides full spectrum cyberspace operational advantage to Army, Land Component, and Joint Task Force commanders to protect their information and information systems; and affect adversary information and their information systems. Provides Combatant Commanders with IO planning, field support, and a deliberate IO planning and execution capability to build partner nation military capacity and to conduct and integrate IO across the full spectrum of military operations.

**Description of Investment**

Lean BPM provides the means to identify, track, and control changes to individual application source code and hardware entities, thus managing and monitoring an entire development cycle for Program of Record systems managed by NETPDTC. NETPDTC Lean BPM Services. The major function of NETPDTC Lean BPM Services to date has been the automation of the Execution Management Framework (EMF). EMF is the over-arching and strategically aligned IM/IT service delivery process developed by NETPDTC. Lean BPM is also used extensively to provide configuration/change management (CM) support for NETC applications developed and managed by NETPDTC N6 as the IT Service Provider. The tool is also used for tracking workflow through our core end-to-end business processes including formal Training Project Plans (TPPS), Human Performance Resource Requirements (HPRR), and Impaired Training Equipment Reports (ITERs).

<b>DoD Segment</b>	ACQUISITION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Livelink application is an web enabled integrated document management, workflow, knowledge management and collaborative work environment. This application provides a rapid desktop access to information required to perform daily business processes which include: automated workflows, dynamic search, information archiving and retrieval in a collaborative web environment. It also allows for the distribution of application rights through the use group permission sets. The key components of Livelink are that it is a Web-based COTS, uses an Oracle database, can be used without customization and is fully functional at initial deployment.

<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Logistics Information Warehouse (LIW) is designated by the Army CIO G6 as the primary system (hardware, software, and user interface) for the accessing, acquiring, and delivery of materiel data.

**BENEFITS:** As such, LIW provides enterprise-accepted and trusted information for analysis, aggregation, and reuse, as an Army enterprise-level repository (data store) and retrieval system to facilitate accurate choices and rapid decision making. Specifically, LIW will provide all required data structured in a way that allows for querying and reporting, e.g., equipment authorizations, equipment on-hand, new procurement schedules, RESET production schedules and in-transit visibility from origin and distribution to final destination, in support of the information needs of the Army Materiel Command (AMC) and other command logistics managers. This includes data from all sources designated as authoritative, as well as system derived data and appropriate reference data. This data will be used in support of materiel sourcing and distribution and other Materiel Enterprise missions. It enables Command visibility of business intelligence and resulting metrics for critical logistics components enabling enterprise-level analytics to be performed in support of the equipping mission within the Army's ARFORGEN processes. LIW supports the tenants of Mission Command by logistically empowering the Commander to successfully integrate and synchronize logistics information with warfighter functions in time and space to maximize potential for mission success."

**Description of Investment**

Supports the management, processing and maintenance of AMC automated logistics systems. Users span all of DOD. Funds USAMC personnel/contractor costs associated with systems management and maintenance, site licenses, and office automation hardware/software acquisition and maintenance. Also supports processing services provided under the Logistics Modernization Program, and technical and functional support for sustainment of fielded tactical ADP LOG systems.

**Description of Investment**

LIMS-EV is the A4/7 Business Intelligence (BI) gateway providing a single, standardized data exploitation capability for reporting and analytics across all A4/7 business areas. LIMS-EV provides a single entry point on the Air Force Portal that hosts a variety of BI capabilities in a flexible, dynamic web based environment. This capability supports all types of reporting and analysis requirements using scorecards, and dashboards as well as predictive analysis capabilities to all levels of users: strategic, operational, and tactical. LIMS-EV is planned to be a persistent initiative within the Expeditionary Combat Support System (ECSS) and shall become an important component of ECSS as the Air Force transforms its legacy systems into an enterprise capability.

**Description of Investment**

The Maintenance Figure of Merit (MFOM) System is a suite of web-based applications designed to provide the necessary data upgrades and improvements to support material and readiness reporting for both ashore and afloat users. The MFOM System provides several integrated functions. First, the system provides web-based tools that allow the user to capture equipment maintenance deficiencies quickly and efficiently into an electronic format. The data are automatically integrated and used to support follow-on maintenance reports thereby eliminating duplication and reducing maintainer workload. Second, the system provides the integrated maintenance data to port engineers and shipyards to better prioritize and plan required maintenance activities during in-port availability periods. Third, equipment maintenance data are integrated into a classified model that uses specific algorithms to compute an equipment readiness value. The MFOM System aggregates all individual equipment values and deficiencies into an overall readiness value displayed at the unit, Battle Group, or Fleet level.

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

AFMC management and the Air Force Sustainment Center are committed to reengineering the business processes and standardizing operations to adapt to best commercial practices in order to take advantage of commercial Maintenance, Repair, and Overhaul (MRO) solutions. To that end, the MRO initiative, co-chaired by AFSC/LGP and AFMC/A4N, serves as the mechanism to determine standard business process and business rules, required data inputs/outputs/interfaces, product data relationships, operational system impacts, and estimated cost/footprint reductions. The MRO initiative will focus on business process reengineering and adaptation. The MRO will also evaluate how the operational systems environment could transition to a MRO environment.

The MROi is currently executing the AF directed Service Development and Delivery Process (SDDP), and achieved SAF/US(M) approval of the Step 1 deliverable, Performance Reference Model (PRM) in December 2012. The MROi PRM defined the organic depot maintenance problem in sufficient detail such that a plan for implementing capabilities to solve the problem can be developed and implemented. The MROi Step 2 analysis and corresponding deliverable, Business Reference Model (BRM), then established a plan to implement the capabilities across the Doctrine, Organization, Training, Materiel, Leadership, Personnel, Facilities (DOTMLPF) spectrum to satisfy the needs of the depot maintenance community.

The MROi will continue executing SDDP and conducting the associated materiel solution analysis to identify a solution to support enterprise depot maintenance planning, scheduling, and execution activities.

**Description of Investment**

Marine Corps Enterprise IT Services (MCEITS) is the framework for realigning, collapsing and consolidating the Marine Corps IT environment. It realigns the current environment of applications, databases, networks and facilities into an integrated, layered architecture for the delivery of capabilities based on a common infrastructure and shared services across the enterprise. It supports IT portfolio management and addresses technology, processes, standards, workforce and governance and satisfies the IT objectives contained in Navy-Marine Corps strategies and central to net-centric operations and warfare.

<b>Lead Agent</b>	DEPARTMENT OF THE NAVY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The system provides digital marketing, database marketing, leads management, and fulfillment services using a leased data center environment procured on behalf of the USMC Recruiting Command. Rackspace provides hardware and OS level support for all systems while management and operation of all applications is outsourced in support of USMC Recruiting Command marketing efforts. The environment consists of three logical environments; two are located in the Irving, TX data center and one is located in the Herndon, VA data center. The system maintains a centralized marketing database which contains information from key sources including USMC's system of record (MCRISS), Call Center and Data Entry Vendors, the website, all marketing promotions and responses, a robust prospect universe and demographics, and other information supplied by vendors responsible for marketing initiatives.

**Description of Investment**

Resources fund the Information Management(IM)/Information Technology(IT), Planning, Policy, modernization, operations, and maintenance costs of the MDA General Services IT infrastructure within the MDA Special Purpose Processing Nodes (SPPN) in Huntsville, AL and Colorado Springs, CO and MDA IT users. The infrastructure consists of the Unclassified and Classified IT infrastructure and information systems necessary for the accomplishment of the MDA's General Services (administrative) network mission of MDA and support the mission systems of MDA as required. Support to the MDA user including all IT backoffice and Huntsville based frontoffice support. The General IT Services mission critical function consists of IT support services required to operate and maintain the classified and unclassified IT infrastructure. This includes IT operations and maintenance, help desk services and hardware maintenance and software licensing in support of BMDS mission, research and test efforts as well as MDA business processes. This mission critical function also funds planning, programming, budget and execution support and Federal and DoD IT compliance reporting. The funding supports operations and maintenance of new facilities in Huntsville, Alabama; Dahlgren, Virginia; and Fort Belvoir, Virginia. This function provides the infrastructure necessary for planning and coordination of the Director's RDT&E, operation and maintenance, and upgrade initiatives for the Ballistic Missile Defense System (BMDS).

<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

This funds DoD directed projects to enable MDA to maintain compliance with Federal Laws such as the Federal Information Security Management Act (FISMA), DoD Directives and Policies. An increasing number of IT projects are mandatory to be compliant with DoD Joint Information Environment (JIE) initiatives to continue to operate within the DoD Global Information Grid (GIG). The expanding global mission of the Missile Defense Agency is adding to the demand for additional IT capacity to facilitate collaboration, data transfer, sharing and storage of RDT&E test data of the BMDS.

**Description of Investment**

This project provides for creation of enterprise IM/IT plans, policies and processes including configuration control, change management, IT life-cycle asset management, enterprise architecture planning, and performance metrics for IM/IT capital planning and business reengineering. Develop, implement, and promulgate IM/IT policies and processes to ensure economical management of information resources in accordance with statutes and DoD policy. Manage Foreign Military Sales Implementation, Command Group Automation Projects, General Services upgrades to meet DODAF GIG Requirements. Work with Customers on mission or test IT automation projects Business function automation projects, and new buildings and building expansion.

<b>UII</b>	007-000001171	<b>Acronym</b>	MOCAS
<b>Name of Investment</b>	MECHANIZATION OF CONTRACT ADMINISTRATION SERVICES		
<b>Lead Agent</b>	DEFENSE CONTRACT MANAGEMENT AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	ACQUISITION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Mechanization Of Contract Administration Services (MOCAS) is a fully integrated business system that supports the Contract Management functions performed by the Defense Contract Management Command (DCMC) and the Contract Payment function performed by the Defense Finance and Accounting Service (DFAS). The system is comprised of 4,252 programs representing about 2.2 million lines of code. The core MOCAS applications are supported by CINCOMs Total Information System (TIS) which provides the required database management facilities within the mainframe MVS environment. Additional distributed applications make up the remainder of the MOCAS system. The MOCAS system can be divided into nine distinct subsystem structures. These include Contract Maintenance, Material Control, Financial Management, Contract Management, Quality Management, Program and Technical Support, Management Information, System Support, and Operations Support. Each of these subsystem structures supports specific business functions within DCMA and DFAS.

Mechanization Of Contract Administration Services (MOCAS) is a fully integrated business system that supports the Contract Management functions performed by the Defense Contract Management Command (DCMC) and the Contract Payment function performed by the Defense Finance and Accounting Service (DFAS). The system is comprised of 4,252 programs representing about 2.2 million lines of code. The core MOCAS applications are supported by CINCOMs Total Information System (TIS) which provides the required database management facilities within the mainframe MVS environment. This acquisition initiative is for the technical refresh of the MOCAS database operating platform.

DFAS incorrectly reported Defense Working Capital Funds (DWCF) under PE 0901527BD in its FY09 budget submission. This error has been corrected and all funding is now reported within the appropriate DWCF PE, 0901527DBD.

<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Medical Communications for Combat Casualty Care (MC4) is a ruggedized system-of-systems containing joint software applications fielded to tactical medical forces throughout the combat zone, the U.S., and contingency operations worldwide. MC4 integrates Defense Health Information Management System (DHIMS) Theater Medical Information Program-Joint (TMIP-J) software, and other Army-unique applications, onto commercial and government-off-the-shelf technology, providing the tools needed to digitally record and transfer critical medical data from the foxhole to medical treatment facilities worldwide. Deployable medical forces use the MC4 system to gain quick, accurate access to patient histories and forward casualty resuscitation information.

The system also provides units with automated tools facilitating patient tracking, medical reporting, and medical logistical support. Combatant commanders use the MC4 system to access medical surveillance information, resulting in enhanced medical situational awareness. Most importantly, MC4 is helping deployed Service members. By equipping deployed medical units with automated resources, MC4 helps ensure Service members have a secure, accessible, lifelong electronic medical record, which results in better-informed health care providers and easier access to Veterans Administration medical benefits. The MC4 system comprises seven Army-approved line items that can be configured to support Army levels 1-4 and DOD roles 1-3 of the health care continuum. Future MC4 enhancements will be accomplished through minor system upgrades and major planned upgrades. The MC4 program completed a successful full-rate production decision review on July 21, 2005. With 10 years of experience managing the DOD's first battlefield medical recording system, MC4 remains the most widely-used, comprehensive information management medical system on the battlefield. By accomplishing this mission, MC4 is providing the Army's solution to Presidential and Congressional objectives, set-forth by Title 10 in 1997, which called for a medical tracking system for all deployed Service members.

<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Medical Electronic Data for Care History And Readiness Tracking (MED-CHART) System currently consists of seven inter-connected application modules supporting individual mission areas. The modules available include the following:

- Automated Voucher System (AVS)
- Dental Classification (DenClass) System
- Health Readiness Reporting (HRR)
- Line of Duty (LOD) Module
- Reserve Component Reporting (RCReports)
- AMMEDD Temporary Transfer and Alignment Inter/Intra-State (ATTAIN)
- Occupational Health (OccHealth) Module

These modules have a multitude of missions in support of the ARNG and USAR readiness and in support of the Reserve Components' medical and personnel communities.

The system is a joint effort among the Army National Guard (ARNG) and US Army Reserves (USAR) Surgeons' Offices and G-1 sections. The system supports these organizations, as well as providing access to contracted health-care providers, occupational health workers, mobilization site (MOBSite) personnel and others.

MED-CHART is hosted at the ARNG Data Center with all relevant inherited controls from the data center and the ARNG network infrastructure and oversight. MED-CHART also interfaces with the Army Knowledge Online (AKO) identification and authentication services to authenticate users to certain modules. The main physical components of the system are the web and database servers and the network support equipment that allows MED-CHART to serve data to its users.

**Description of Investment**

MODS provides the Army leadership with a responsive and reliable human resource and readiness information management data system for all categories of military and civilian medical and support personnel. It is designated by the Chief of Staff of the Army as the official Army database system for the management of individual medical readiness, immunizations, and congressionally mandated Pre/Post Deployment Health Assessments, Post Deployment Health Re-Assessments and Periodic Health Assessments. MODS, consisting of multiple functional components, provide a critical integrated system to manage the AMEDDs personnel, logistics, education, performance management and tracking, and Army individual and unit medical readiness programs. It is also the official Army system for the management of the multi-million dollar AMEDD Special Pay programs for healthcare providers.

**Description of Investment**

The Medical Systems Clinical Workflow program consists of clinical systems trainers and the Tri-Service Workflow (TSWF) team. The clinical trainers provide training on standardized medical systems within MTFs. The TSWF team analyzes new technologies for integration into clinical practice at the requirements stage. The workflow team also develops education and training programs for integration of new technologies into clinical workflows while helping deploy and train workflows in MTFs. Both the trainers and the TSWF team work hand-in-hand toward ensuring optimum provider productivity when utilizing standard medical systems.

The MSC Next Generation Wideband system will provide ships at sea with satellite connectivity to MSC's Afloat Network Operations Center (ANOC). It is the replacement for MSC's legacy Bandwidth Efficient Satellite Transport (BEST) system.

<b>Lead Agent</b>	U.S. TRANSPORTATION COMMAND		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The MAF flight planning system is at least 20 years out of date. Industry best practices includes cost indexing, which takes numerous variables into account, such as fuel cost, cost of landing and overflight fees, cost of late arrivals, etc. The Advanced Computer Flight Plan (ACFP) system only accounts for cost of fuel used when optimizing. The use of cost indexing will increase efficiency by at least 2%. The MAFPS also takes other DOTMLPF attributes into account and will add efficiencies in processing and aircraft dispatch. Current enterprise flight planning capability cannot address future international airspace requirements due to limitations of its architectural solution. MAFPS takes advantage of modernized international civilian air traffic control systems to provide fuel efficiencies and mission velocity.

**Description of Investment**

AMC Command and Control (C2) provides AF share of life cycle program management for designated AMC C2 systems in support of United States Transportation Command (USTRANSCOM), Air Mobility Command (AMC), Combatant Commands and programs that directly support the President of the United States. AMC C2 is a compilation of several C2 systems as follows: Advanced Computer Flight Plan (ACFP), Consolidated Air Mobility Planning Sys (CAMPS), Deployed Satellite Comm (DSATCOM), Defense Redswitched Network (DRSN), Wing Local Area Network (Wing LAN) and the Fuel Efficiency Program.

DRSN provides secure command and control switches which offer high-quality secure voice and conferencing capabilities to the senior decision makers and staff of the President, Secretary of Defense, the Combatant Commanders (COCOMs), Major Commands (MAJCOMs), other Government departments and agencies, and Allies.

CAMPS provides mobility mission planners separate unclas and classified planning and scheduling capabilities unique to AMC and USTRANSCOM. It also provides advanced user capabilities for transportation planning and allocation management.

DSATCOM consists of the Hardsided Expandable Light Air Mobile Shelters (HELAMS) (27) and Intra-Theater Communications (ITC). HELAMS provide rapidly deployable, self-contained, and self-sustaining C2 and ITV systems to establish initial en route mobility support, on-arrival operation, and near term sustainment of various in-theater and forward airfield operational scenarios.

WING LAN implements standardized and robust intra-building LAN infrastructure at AMC bases and en-route locations. WING LAN includes intra-building networking infrastructure, email/gateways, file servers, communications servers, initial technical training, and installation support for unclass, classified and RF LAN capability.

ACFP generates wind-optimized flight plans for AMC aircraft thereby giving an aircraft fuel cost avoidance and speeding planning. The ACFP program involves manpower and funds required to contract services for system operations and maint.

Fuel Efficiency Program will provide software solutions to increase fuel efficiency of AMC tanker and airlift platforms by accurately planning fuel loads for aircraft and ensure proper power settings, altitudes, and descent profile adjustments in flight.

**Description of Investment**

MFCS is used in M1064 and STRYKER mortar carriers. It provides on-board fire control ballistics computation, automated weapon pointing, position location, navigation, and digital connectivity with the Fire Support Network. The MFCS is used by active components of the US Army and National Guard. The MFCS processes fire missions sent from the Fire Direction Center and provides gun orientation information used to aim the weapon.

**Description of Investment**

Multi-Media Communication System (MMCS) is a Enterprise communications platform, rapidly deployable anywhere in the world to provide LANDWARNET connectivity for enhanced voice, and SIPR/NIPR video and data communications. It is a lightweight, robust, mobile and scalable communications system with the latest technology that meets the operational requirements for command, control and communications in response to an increasingly evident world of natural disasters and military operations

Multi-Media Communication System (MMCS) is a VSAT-based Enterprise communications service, provided by PM DWTS, that is rapidly deployable anywhere in the world to provide LANDWARNET connectivity for enhanced voice, and SIPR/NIPR video and data communications. It is a lightweight, robust, mobile and scalable communications system with the latest technology that meets the operational requirements for command, control and communications in response to an increasingly evident world of natural disasters and military operations. The MULTI-MEDIA COMMUNICATION SYSTEM/SECURED (MMCS/SIPR) maintains communications by satellite links to more than 40 remote sites, at worldwide locations, using both dedicated Single Channel Per Carrier (SCPC) frequencies and Time Division Multiple Access (TDMA). Over these links the Net Operations Center (NOC) Secure Internet Router Protocol (SIPRNET), secure Video Teleconferencing, Voice over IP (VoIP) and analog phone lines for Secure Telephones (STE III). In support of the remotes sites, the NOC provides email services by installing, configuring and maintaining domain controllers and email servers for the MMCS.ARMY.MIL domain. MMCS supports the Army's mission of combat readiness (Shoot-Move-Communicate) by ensuring that the warfighter is sufficiently equipped with highly serviced and maintained equipment. The MMCS provides network monitoring to ensure the MMCS network meets and maintains all Army and DOD security requirements and maintain Department of Defense Information Technology Security Certification and Accreditation Process (DITSCAP) certification. The MMCS management is required to, at the Army's approval, research and acquire and install necessary upgraded hardware and software and to provide required equipment and/or software for remote sites. The MMCS is staffed with qualified technicians to maintain the NOC and assist remote sites with troubleshooting network and hardware problems. The MMCS is operational 24/7 with minimal downtime for routine system maintenance.

<b>UII</b>	007-000005525	<b>Acronym</b>	MUSE/AFSERS
<b>Name of Investment</b>	MULTIPLE UNIFIED SIMULATION ENVIRONMENT/AIR FORCE SYNTHETIC ENVIRONMENT FOR RECONNAISSANCE & SURVEILLANCE		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	FORCE TRAINING	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

SYSTEM: The Multiple Unified Simulation Environment/Air Force Synthetic Environment for Reconnaissance and Surveillance (MUSE/AFSERS) is comprised of a combination of single and rack-mounted Personal Computers (PCs) running the Windows 7 and Windows Server 2008 R2 operating systems. MUSE/AFSERS computers generate synthetic representations of ISR products produced by manned and unmanned aircraft systems (UAS) operations. The components are a surrogate ground preprocessor, air vehicle and data link simulations, and a multi-purpose visualization system used for payload and sensor scene generation. While the MUSE/AFSERS resides at the AMRDEC SED facility it is an isolated test/development network.

The MUSE/AFSERS will also connect to tactical simulation test networks as well as Modeling and Simulation (M&S) Federations and utilizes Distributed Interactive Simulation (DIS), High Level Architecture (HLA) and legacy aggregate level protocols. For MUSE/AFSERS to connect to the hosting test network, a test plan and Authority to Connect (ATC) are developed, and MUSE/AFSERS follows the security requirements of the hosting locations accreditation while MUSE/AFSERS connected to the hosting locations test network. MUSE/AFSERS outputs are compliant with applicable DoD standards and are continually tested against actual ground ISR processors to ensure interoperability with over 40 systems within DoD, providing the capability to stimulate complex end-to-end processes across a global environment. The MUSE when used by the United States (US) Air Force is re-designated as the Air Force Synthetic Environment for Reconnaissance and Surveillance (AFSERS).

Other applications of MUSE are referred to as the TENCAP MUSE (TM), and the Intelligence, Surveillance and Reconnaissance Trainer (ISR-Trainer), Institutional Mission Simulator (IMS) and its derivatives, Portable Institutional Mission Simulator (PIMS). MUSE also includes a high fidelity asymmetric warfare mission rehearsal tool known as the Vignette Production and Rehearsal Software (ViPRS). However, the architecture, software, and interfaces for all versions and components are identical. MUSE/AFSERS acts as the bridge between the war fighter and the simulation environment in various operations, exercises, tests, and integration events. Benefits: listed throughout.

No further capabilities nor functionalities than what is already listed.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	MDAP
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The DoD National Airspace System (NAS) Modernization Program is a Mission Essential Acquisition Category 1C program to modernize 44 DoD radar approach control facilities, over 130 air traffic control towers, and two training sites. This joint DoD and Federal Aviation Administration (FAA) program procures digital airport surveillance radars; air traffic control automation systems that processes and displays airfield and weather information, radar and flight data; operator consoles; and voice communication switches to control radios and telephone circuits. These systems replace aging 1960's and 70's equipment that is increasingly difficult to support due to diminishing manufacturing sources. Further, because the Federal Aviation Administration is moving to advanced systems that are two generations ahead of DoD systems, the current DoD equipment is no longer technically viable and does not meet requirements for interoperability and the ability to handle increased volumes of air traffic (a goal of the FAA's Capital Investment Program). This lack of interoperability and inability to handle increased traffic conflicts with the requirement to meet a 23 Aug 1993 DoD-FAA memorandum of agreement which states the FAA determines the standards for NAS equipment and ATC facilities, and that the DOD shall equip facilities providing services to civil users so that the ATC service is transparent to the user. In addition to this, the systems being procured enhance flight safety through the provision of traffic conflict alert and enhanced minimum safe altitude warnings, weather detection and display to controllers, and enhanced radar detection of aircraft not found in current DoD systems.

**Description of Investment**

National Capital Region-Integrated Air Defense System (NCR-IADS) is an integrated USAF connectivity center and US Army layered air defense artillery for point defense of the National Capital Region. The NCR-IADS provides tactical C2 execution for the Joint Task Force/Joint Forces Air Component Commander (JTF/JFACC) under the Operation Noble Eagle (ONE) mission. The NCR-IADS is currently fielded and operational. It was developed in response to an urgent need request for enhanced air defense of the NCR per SECDEF direction through a joint rapid acquisition cell. The Air Force portion of the NCR-IADS architecture consists of the following major systems: The Air Force Joint Air Defense Operations Center (JADOC) Suite (AFJS), the Enhanced Region Situation Awareness (ERSA), and the Air Force Forensics Suite (AFFS, which was determined to be PIT on 13 Oct 10).

<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Air Force is the Executive Agent (EA) over the the National Military Command Center (NMCC) and the Air Force District of Washington performs this mission through the 844th Communications Squadron located at the Pentagon. The mission as the EA requires provision of highly reliable facility systems, security services and operations and maintenance of Command and Control (C2) Communications systems. Chairman Joint Chiefs of Staff Instructions (CJCSI) direct all NMCC facility systems to operate at specific levels of reliability and provide for complete redundancy in the event of a facility outage. The 844 CS, in conjunction with the Pentagon Building Services office, designs, installs, tests and maintains Electrical, HVAC, High-Altitude Electromagnetic Pulse (HEMP) and Chemical-Biological-Radiation detection/protection systems. The Facilities Branch also funds NMCC physical security services (Guard Post manning) provided by the Federal Protective Service. While the 844 CS, provides Operations and Maintenance (O&M) over 77 critical NMCC C2 communications systems is provided under a performance-based contract with Lockheed-Martin, Inc, the 844 CS is not the program manager over these systems with the exeception project management of the Northstar system. Northstar is currently not a formal acquisition program, however, efforts are underway to insert Northstar into the formal acquisition life-cycle. NMCC systems provide real-time critical intelligence and operational information to DoD decision makers. The LM contract includes maintenance of Defense Red Switch Telephone switches, NMCC Multimedia and Cable Television Distribution, Missile Warning data collection systems, Emergency Action Messaging dissemination systems and Nuclear Threat Conferencing systems. Additionally, the 844 CS also provides Secure Voice and Data Communication capabilities to Office of the Secretary of Defense, Joint Chiefs of Staff, Combatant Commanders and key DoD and Executive Branch personnel. The contractor provides a full range of services including project management and configuration management services for C2 systems.

**Description of Investment**

The NAVAIR Depot Maintenance System (NDMS) is a Depot production system that supports the resources, required to perform depot level maintenance, repair, modification of aircraft, engines, components and other aeronautical equipment and to perform manufacturing and prototyping operations. The main objectives of NDMS are to: 1) improve business performance in the depots while reducing depot unit repair costs, 2) increase depot response times to increase weapon and system availability, and 3) standardize data and information systems to reduce the Automated Data Processing/Information Technology (ADP/IT) cost to improve information accuracy, consistency, and availability for management decision making. NDMS supports the functions of acquiring, developing, implementing, and/or providing interfaces between selected migration and legacy systems. MRP II is the core business process/system in NAVAIR 6.0 that provides the resources required to perform depot level maintenance, repair, modification of aircraft, engines, components, and other aeronautical equipment and to perform manufacturing and prototyping operations. The key customer for NDMS is the 10,800 Depot level artisans who provide Engine, Aircraft and Component support for the Navy warfighter, Navy Inventory Control Point/ Defense Logistics Agency (NAVICP/DLA), Executive Office of the President; Homeland Security (US Coast Guard, and US Customs); National Aeronautics and Space Administration (NASA); National Oceanic and Atmospheric Administration (NOAA); US State Department; and the US Department of Agriculture's Forestry Service.

**Description of Investment**

Extremely accurate passive positioning, navigation, and precise timing system. Consists of a ground control segment, a space system of 24 satellites, and an unlimited number of individual user receiver that translate the satellite signals into positioning and timing information on a worldwide basis and under all weather conditions. Program funds a share of Army user equipments and a share of engineering development of user equipment/weapons systems and the integration of equipment into Army aircraft.

**Description of Investment**

Navy Cash is an evolution of the Automated Teller Machines-At-Sea (ATMs-At-Sea) program which began installing ATMs on board ships in 1988. Navy Cash program is partnership between the US Navy and the US Treasury. Navy Cash replaced the cash-based economy on board ship with a stored-value-card, electronic-funds-transfer system in 2001. Navy Cash combines stored value chip technology and a magnetic strip to virtually eliminate the need for Sailors and Marines to carry cash. On the ship, a chip based, secure, electronic purse provides for a cashless environment and provides cardholders with electronic access to their personal funds in checking and savings accounts ashore. Off the ship, the magnetic strip on the back of the card provides a branded pre-paid debit feature for access to the funds in Navy Cash accounts and can be used at more than 23 million MasterCard® acceptance locations and more than 1 million ATMs in over 210 countries and territories worldwide.

**Description of Investment**

NAVSEA Intranet is a web-based application that is used for collaboration, enterprise search, content management, and social computing. NAVSEA Intranet is accessible from both inside and outside of NAVSEA and is authorized to process Controlled Unclassified Information (CUI) with the exception of Naval Nuclear Propulsion Information (NNPI) or documents marked NOFORN. It is used for unclassified information, including business sensitive and For Official Use Only (FOUO) lists, data and documents. Users include NAVSEA business units, including headquarters, Field Activities, Affiliated PEOs, and contractors.

<b>Lead Agent</b>	DEPARTMENT OF THE NAVY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	IT MANAGEMENT	<b>GIG Architecture Category</b>	RELATED TECHNICAL ACTIVITIES (RTA)

**Description of Investment**

NAVSEA 04 PMO-IT has the responsibility for maintenance, modernization and improvement of the IT systems which support shore maintenance, modernization, repair, logistics & readiness for ships and submarines across the Navy. The Navy Maritime Maintenance Enterprise Solution (NMMES) Initiative funds the sustainment of deployed systems, as well as the modernization and selected technology refreshment of ship maintenance and national systems. These existing core ship shore maintenance systems, which are integral to shore ship repair activities, reside in the naval shipyards, regional maintenance centers, ship repair facilities, SUPSHIPS, and other industrial activities throughout the world. The present capabilities for this aging Family of Systems continue to require a challenging level of maintenance support. They require information assurance upgrades, selective modernization and/or enhancement to address technological obsolescence and to remove cumbersome work practices to gain efficiencies; and continual protection of Naval Nuclear Propulsion information. These efforts are required to minimize the risk of systems failure that may directly prevent the fleet from operating at its full potential due to interruptions of the Intermediate and Depot level maintenance activities. These NMMES managed systems support over \$6.5B yearly in ship maintenance and modernization and a military/civilian workforce of over 40,000 personnel supporting worldwide operations.

**Description of Investment**

NMEMO is a Navy Medical initiative that is used to capture costs that support local Military Treatment Facilities (MTF) CONUS, East and OCONUS, Europe. NMEMO is not a specific program/project or capability. Includes funding common to MTF IT activities and cannot be associated with any one individual MHS HIT initiative. This Related Technical Activities (RTA) initiative represents the funding resources needed for local IT support to meet identified mission requirements and goals. NMEMO includes operating budget staff salaries, contract support, supplies and travel.

**Description of Investment**

Part of the portfolio of critical enterprise services provided to Warfighter, Business, and Intelligence end-users on the Secret Internet Protocol (IP) Data network and the Sensitive but Unclassified (SBU) IP Data network to support their and their mission partners evolving mission needs and transition to the Joint Information Environment. This portfolio of services allows more than two million authorized Department of Defense (DoD) users to collaborate across Components/Combatant Commands/Joint Staff/Agencies using a suite of web-accessible Enterprise Collaboration capabilities supporting anticipated and unanticipated DoD and other users. The portfolio includes a resilient and flexible access control infrastructure that enables secure information sharing using tools such as a web-enabled enterprise collaboration capability that can be used from the end-users desktop/mobile device and/or a conference room configured with or without overhead projection and a camera.

The Defense Enterprise Collaboration capability provides text collaboration via chat room and instant messaging as a standalone service and instant messaging within web-conferencing sessions; audio and video services; application sharing/broadcasting; whiteboard; session management; and presence and awareness capabilities accessible from anywhere, at anytime, using a web-enabled device.

The portfolio provides the user with the flexibility to couple the Enterprise Collaboration services with the other enterprise services in the portfolio in varying ways that allows unprecedented access to web and application content and trusted information in a secure environment supporting the users' dynamic and evolving missions.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE AWARENESS-ENVIRONMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Naval Integrated Tactical Environment Subsystem (NITES) is a set of meteorology and oceanography forecast, database, and decision aid tools tailored for specific platforms and uses. Five variants exist to support a variety of operators and platforms. TESS/NITES is an evolutionary acquisition program that has fully embraced incorporation of commercial off-the-shelf (COTS) software where practical and a hardware architecture that is based on maximum use of IT-21 compliant components. These initiatives provide for increased functionality and reduced cost of maintaining and upgrading hardware/software thereby reducing ownership and life cycle costs.

**Description of Investment**

NETCOM/9th ASC became a direct reporting unit (DRU) assigned to the Army Chief Information Officer (CIO/G6) on Oct. 1, 2002. NETCOM/9th ASC became the operational executive agent for Army-wide network operations and security: the single point of contact for Army network development and protection, offering seamless C4 information management of common-user services in support of the combatant commanders and Army service component commanders. As such, the mission of NETCOM/9th ASC entailed the provision of technical control and support for Director of Information Management operations; the operation and management of the Army's total information infrastructure; and the management and defense of the Army frequency spectrum.

**Description of Investment**

The Network Infrastructure and Operational Support Investment include costs for three DCMA IT services: the Centralized Service Center, Network Infrastructure, and Network Operations Support. The Centralized Service Center directly supports end user requests and incidents for standard DCMA issued software and equipment. This service also supports the delivery of position based deployment of assets. The Network Infrastructure is the service delivery mechanism for DCMA data center specific hardware, software, and data transmission lines. This service provides the network backbone for all DCMA computers and applications and the speed and reliability is dependent on multiple components working together. Those components include: Network Interface Controls, Repeaters, Hubs, Bridges, Switches, Firewalls, Routers, Modems, Internet Access Points, Gateways, Data Center Management Software, DISA and commercial Data Circuits, and all other specific Data Center Equipment or monitoring software. The Network Operations Support is the primary support for designing, managing, monitoring, and operating the Network Infrastructure. The security of the network is the prime responsibility of this service followed by speed and reliability. All cybersecurity related network operation functions are procured under this service.

<b>UII</b>	007-000005851	<b>Acronym</b>	NGRMS
<b>Name of Investment</b>	NEXT GENERATION RESOURCE MANAGEMENT SYSTEM		
<b>Lead Agent</b>	DEFENSE LOGISTICS AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	FINANCIAL MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

NGRMS will modernize multiple antiquated legacy systems and processes used to formulate, justify, present and defend the entire Department of Defense Budget in the Office of the Under Secretary of Defense (Comptroller) (OUSD(C)) to meet Title 10 and Title 31 mission and reporting requirements. It will support the DoD Strategic Management Plan (SMP) Business Goal 5: Strengthen DoD Financial Management. Specifically, the Desired Capability is tied to Performance Measure 5.5.1-2U: Percent DoD Statement of Budgetary Resources Appropriations Received. Additionally, the Desired Capability provides direct support to DoD Strategic Objective 5.5-2U/2V: Improve Financial management and increase efficiencies in headquarters and administrative functions, support activities, and other overhead accounts.

The business objectives of NGRMS are as follows: 1) Foster an efficient and effective environment for the formulation, justification of the Defense budget; 2) Improve budget management processes through increased exchange and reconciliation of budget information; 3) Improve efficiency with reduced cost utilizing a single, unified budgetary data model; 4) Improve customer satisfaction with timely budgetary data resources provided to management for reviews and decisions; and 5) Increase ability to accommodate emerging business practices.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

This system provides critical seamless C2 communications to top DoD and Executive level government officials (including the SECDEF & President) traveling throughout the continental United States on a variety of US Government Aircraft including the National Airborne Operations Center (NAOC) (E-4B), USSTRATCOM ABCNP / CINC support aircraft (E-6B) and Air Force One/SAM (VC-25A). Without the system, the government would not have a robust CONUS travel communication network without significant gaps in reception.

<b>UII</b>	007-000005082	<b>Acronym</b>	NPES
<b>Name of Investment</b>	NUCLEAR PLANNING AND EXECUTION COMMAND & CONTROL SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

NPES is a classified, Management Information System (MIS) supporting decision-making for crises involving global strategic operations. NPES is the nation's only survivable automated command and control system for Nuclear Command and Control Communication (NC3), adaptive planning, automated message processing, reconstitution support, battle damage assessment, and force direction and status accounting. It supports the US President; Secretary of Defense and combatant commanders for strategic war plan execution in the critical phases of global conflict. The system is deployed in a variety of environments, including fixed command centers, airborne command posts, and mobile command centers. The decision-oriented information contained within NPES is derived from a variety of National and Nuclear Commander's reports, as well as near real-time data. NPES configuration is nearly identical at all sites and on all platforms, allowing maximum savings on equipment and software. Program and NPES provide decision-makers with near real-time comprehensive information to comply with national command directives regarding the command and control of strategic forces. The Integrated Strategic Planning and Analysis Network (ISPAN) A&I Program provides USSTRATCOM the ability to conduct OPLAN 8010 missions. NPES provides the ability to conduct adaptive planning and will be the mobile execution command and control node of ISPAN. fdsfdssda NPES is a management information system intended to support information analysis and decision making during peace time and crises involving stategic nuclear operations. The National Command Authority (NCA) receives the information during the critical phases of nuclear conflict. (Source: SWPS Master Architecture, 15 Apr 97, para 7.2.11).

**Description of Investment**

The OIG IT Support initiative is a comprehensive program that provides technical support to the OIG DoD headquarters and field locations, relative to technologies and capabilities such as computer hardware, software, operating systems, application systems, printers, scanners and multi-function copiers/fax/scanners/printers. This initiative also includes comprehensive support for all OIG DoD file servers and network equipment for the purpose of file sharing, document processing, project tracking and management, along with the use of standard systems such as the Defense Travel System and the Defense Civilian Payroll System.

<b>UII</b>	007-000100210	<b>Acronym</b>	OPMEDSPT
<b>Name of Investment</b>	OPERATIONAL MEDICINE SUPPORT		
<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	COMMAND & CONTROL	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Due to the unique nature of the operational environment, the Military Health System must modernize the following capabilities: medical command and control (MC2); medical situational awareness (MSA) (aggregation of operational medical data at a classified level, denying the enemy access to data which could reveal operational plans); Defense blood management; assemblage management; and data interoperability with the pending EHR solution and operational allies.

The clinical needs of the operational community are to be met by the pending EHR solution, but there are functional needs, outside the capture of clinical data, to inform decision making regarding the ability of the MHS to meet the needs of the medically ready force, to support the joint warfighter and share data with line systems.

It will support mission delivery and execution through the maximization of information technologies, driving standards compliance to ensure non-EHR capabilities will effectively consume the data created through the use of the pending EHR solution in the operational environment, and to allow the solution to share data with these other capabilities, eliminating the need for one to one interfaces, their limitations and cost.

Along with the need to modernize those non-clinical capabilities, this enterprise's risk mitigation strategy also supports ongoing missions and clinical needs in the operational environment until sufficient testing of pending solutions can be accomplished in environments indicative of the operational environments, tactical, mobile and dismounted. TMIP-J (MSAT, TMDS, DCAM, TRAC2ES, AHLTA-T, MCC (formerly AHLTA-Mobile), Single Sign On, MMM, SAMS, and TC2) is the "umbrella" system for these solutions and the functional capabilities they support and achieves Full Operational Capability (FOC) in FY15. While the modernization of the operational environment clinical solutions (AHLTA-T, MCC (AHLTA-Mobile) and TC2) is planned to take place under the auspices of the pending EHR solution, there is currently no such plan for the non-EHR capability modernization activities. The Operational Medicine project was created to ensure the MHS is able to meet the needs of the joint warfighter, line and higher level headquarters for MC2, MSA, Defense blood management and assemblage management.

**Description of Investment**

The PES-A is an Information Technology (IT) Enterprise infrastructure acquisition program that provides integrated support to the Army Human Resources (HR) community. This program is critical to the execution of the day-to-day operations for the Active Army and its components in terms of strength accounting, personnel movement, assignment actions, career management, training, recruiting, reenlistment, and mobilization. PES-A provides the hardware, network, and connectivity capabilities that serve as the technical foundation for core Army HR systems, applications, and services supporting the Warfighter. These systems include the Enlisted, Officer, and General Officer Selection Boards, the Soldier's Management System (SMS), the Wounded Warrior System, and the Defense Casualty Information Processing System (DCIPS). PES-A supports the readiness and well-being of Army personnel enabling efficient and effective management of Soldiers world-wide. This integrated infrastructure serves as the "backbone" for applications to ensure that crucial data and information is available at all times to Soldiers, Army Leaders, the Department of Defense, and ultimately, Congress.

<b>UII</b>	007-000000204	<b>Acronym</b>	RF-ITV
<b>Name of Investment</b>	RADIO FREQUENCY IN-TRANSIT VISIBILITY		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

Radio Frequency In-Transit Visibility (RF-ITV) is a mission essential information system that supports Joint operations. RF-ITV uses Radio Frequency Identification (RFID) and Satellite Tracking System (STS) devices to support the dissemination of In-Transit Visibility (ITV) information required by the Department of Defense (DoD), coalition partners, and allies of the United States. By using RFID tags on shipments of supplies and equipment, the RF-ITV system traces the identity, status, and location of cargo from origin (depot or vendor) to destination. It also receives near real-time position reports for conveyances equipped with various STS. Data from these two technologies is combined, processed, and accessed via web-based maps and reports to provide global logistics support to the Joint Force. The multi-tiered architecture extends to over 35 countries where location visibility information is collected, centralized, and distributed to many DoD logistics systems through standard Service Oriented Architecture (SOA) based Extensible Markup Language (XML) web services.

The RF-ITV architecture brokers data to many high profile systems including Integrated Data Environment (IDE) Global Transportation Network (GTN) Converged (IGC), Battle Command Sustainment Support System (BCS3), Central Command (CENTCOM) Logistics Common Operating Picture (LogCOP), Global Combat Support System - Joint (GCSS-J), Asset Visibility (AV) and over 30 existing Joint and 4 Coalition, inbound and outbound, interface customers.

<b>UII</b>	007-000003961	<b>Acronym</b>	RIS
<b>Name of Investment</b>	RADIO INTEGRATION SYSTEM		
<b>Lead Agent</b>	U.S. SPECIAL OPERATIONS COMMAND		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

RIS is a tactical, rapidly deployable radio communication capability for Special Operations Forces, Joint Special Operations Task Forces (JSOTFs), Forward Operating Bases (FOBs), and Theater Special Operations Commands (TSOCs). RIS provides the SOF Commander and small teams with on-the-move C2 communications between infiltrated/operational elements and higher echelon headquarters. The RIS system supports maximum cross flow of information during mission execution via distributed access to required SOF headquarters radio nets (Command, Fires, Air, Maritime, Coalition, Combat Search and Rescue, etc.). RIS interfaces, enhances, and combines multiple single channel radios into one integrated C2 suite that enables SOF combat commanders to exercise reliable, effective, and efficient C2 functions in real time while in extremely fluid and dangerous contingency operations. The RIS system integrates these radio nets that operate in HF, UHF/VHF LOS, and TACSAT/DAMA bands. RIS also provides deployed forces an interface to other SOF systems such as the Tactical Local Network (TACLAN), SCAMPI (not an acronym), and the SOF Deployable Node-Lite (SDN-Lite).

<b>UII</b>	007-000000231	<b>Acronym</b>	RCRP
<b>Name of Investment</b>	READINESS AND COST REPORTING PROGRAM		
<b>Lead Agent</b>	DEPARTMENT OF THE NAVY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

RCRP provides a full range of capabilities to satisfy the readiness and logistics business needs of NECC operating forces. The RCRP initiative creates a near real time, capability based readiness reporting system for NECC based on Mission Essential Tasks (METs). RCRP provides NECC Forces a standardized, enterprise-wide capability to: measure, display and report the readiness status of NECC Force PESTO (Personnel, Equipment, Supply, Training, Ordnance) resources to DRRS-N (Defense Readiness Reporting System-Navy); Support adaptive force packaging by granulating NECC's capabilities and supporting resources to the level required to provide the necessary visibility and supporting readiness picture; Stimulate cost-wise behavior and shape future investment by providing a capability for future resource planning based on resource priority in the context of capabilities; Provide metrics-based planning support Improve the balance of readiness and cost by tying readiness to cost. RCRP enables the central management and/or aggregation of PESTO resources while providing Commanders at all levels within NECC the ability to visualize the readiness of its unit at several levels to respond to mission needs. RCRP is currently in phase II of spiral development. RCRP is deployed on both NIPRNet and SIPRNet, and is utilizing Navy authoritative data sources for PESTO information. The initial releases of RCRP are limited to manual data import/load techniques derived from Navy Training Information Management System (NTIMS), NFELC TOA, TFMMS, and DRRS-N as authoritative data sources. Plans for future releases are to automate data transactions with these authoritative data sources as well as to incorporate additional Navy PESTO authoritative data resources such as TFMMS, PFOM, MFOM, OFOM, NSIPS, NTMPS, OIS, NAVICP, EDE (NTMPS / CeTARS, NIRM, TWMS, RHS, DCPDS, MMRS, PRIMS), SNAP / Microsnap / R-SUPPLY, PRMS Database and GFM. The RCRP system is hosted at DISA DECC Mechanicsburg.

**Description of Investment**

The Recruiting Services Network (RSN) is the communications infrastructure for the Army Accessioning - Integrated Automation Architecture (AA-IAA); it supports all communications requirements within the Army accessioning mission for the Active Army, Army National Guard and Army Reserve. In addition, the RSN supports communications requirements for the recruiting-accessioning processes of the sister DoD recruiting services (Marine Corps, Navy, Air Force), the US Military Entrance Processing Command, and DA G1 job assignment and training seat reservation processes.

Note: This investment was formerly known as the Army Accessioning - Integrated Automation Architecture - Recruiting Services Network (AA-IAA-RSN).

<b>UII</b>	007-000001622	<b>Acronym</b>	REMIS
<b>Name of Investment</b>	RELIABILITY AND MAINTAINABILITY INFORMATION SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

REMIS (Reliability and Maintainability Information System) provides a single, primary Air Force database to collect, edit, validate, process, store, and report data on reliability and maintainability, trend analysis, failure prediction, and weapon system availability. REMIS consists of an integrated database containing weapon system and related equipment inventory, operational status, utilization, configuration management, TCTO (Time Change Technical Order) data, and reliability and maintainability analysis data -- current and historical -- and crosses weapon systems, equipment types, commands, and other data systems. REMIS was in the process of incrementally migrating its functionality to the GCSS-AF IF per direction/approval of AF/A4M. In Nov 07 AF/A4IS (Portfolio Manager) directed a stop to all further migration efforts to GCSS-AF IF after Increment 4 -Spiral 1 (migrated Aug 08). This was due to a development hard freeze on "Legacy" baselines by ECSS by Feb 09. This hard freeze action was rescinded by AF/A4I in late Jan 09 timeframe. REMIS functionalities are planned (FY16) to be absorbed into an Air Force enterprise level product under the Expeditionary Combat Support System (ECSS). On-going minor development/modernization projects are in support of customer-approved IT/NSS requirements.

<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

RESERVE COMPONENT AUTOMATION SYSTEM INFRASTRUCTURE (RCAS-INFRASTRUCTURE ) is focused on the timely refreshment of the Reserve Components (RCs) IT infrastructure in order to maintain operational reliability of the RCs mobilization planning and unit administration functions. In addition, RCAS-INFRASTRUCTURE is focused on satisfying organizational IT and security mandates. The software portion of this system is contained in the investment titled RCAS.

**Description of Investment**

The SCAMPI program is the Special Operations Forces (SOF) -wide C4I satellite and terrestrial telecommunications architecture that enables garrison and deployed SOF to access the SOF Information Environment (SIE). SCAMPI provides real-time, secure voice, data, full-motion video, and video teleconferencing capabilities for all SOF forces. SCAMPI disseminates information between Headquarters (HQ) USSOCOM, SOF deployed forces, component commands and major subordinate units, the Theater Special Operations Commands (TSOCs), and selected government agencies and activities directly associated with the special operations community. SCAMPI also extends connectivity to global C, KU, and X-Band satellite services to deployed SOF units; provides rapid secure communications to SOF Special Mission Units, and enables access to other government agencies and SOF specific information services.

**Description of Investment**

The C2SD Software Development Lab provides a closed network environment for developers and engineers to develop, test code and share data as well as integrate and collaborate with other lab facilities. This provides the enabling infrastructure for migration to Net-Centric Enterprise Services. Test of the Command and control systems will improve commanders to maintain top sight over the battlefield; collaborate with superiors, peers and subordinates over live data; and communicate their intent. The systems and network environment support SEC, PEO C3T, PM MC and PM FBCB2 engineers for systems of systems test and integration. Lab environment setup of a full ABCS suite of systems used primarily for test and integration events to reduce risk in systems providing Army, Joint and Coalition Commanders with critical planning and situational awareness capabilities and for successful execution of combat operations. This lab is located in Buildings 6009 (Rooms 156, 162, 162A, 163, 163A), 6007 (Room F1-101), and 6010 (Room 215) at Aberdeen Proving Ground, MD.

**Description of Investment**

The SIPRNET Infrastructure program provides the Marine Corps with a SIPRNET infrastructure to support secure communications. The program addresses critical enterprise vulnerabilities and shortfalls in lifecycle of Enterprise Network infrastructure, network operations (NetOps), and network security (computer network defense). This includes enterprise, base, and local network infrastructure and integrated NetOps capabilities from the enterprise through the COMMARFORs.

<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Software solution with no user interface:

The Single Stock Fund - Middleware (SSF/MW) is an AIS Program/ that supports Army's SSF through a custom application which consolidated the National and tactical Army Working Capital Fund Supply Management Army (AWCF-SMA) into a single stock fund.

**BENEFITS:** SSF is an Army initiative that tears down logistics and financial ownership barriers and improves logistics support. SSF is a re-engineering initiative that is aimed at improving warfighter support with worldwide asset visibility and access to stocks. By consolidating wholesale and retail levels it provides for seamless financial and inventory management across the Army, accomplished by integrating logistic and financial automated information systems using the SSF Middle-ware hardware and software solution. It provides for the seamless and transparent ability to change supply, maintenance and financial transactions as a cost effective method of implementing the SSF smart business practice for the Army because it consolidates, simplifies, and streamlines.

The main benefits are: Transparency to the end user; Ability to quickly implement or modify business rules in one place, saving time and money since multiple system are not required to make costly and time consuming changes to legacy systems; Savings from improved inventory management and ability to enable total visibility of stocks at depots and tactical SSAs. Directly benefits the Army by not repairing-to-excess and repair-and-return-to-inventory. National Maintenance is now a supply transaction which directly benefits Army combat readiness by reducing maintenance downtime; and Streamlines the supply and financial systems, establishes a predictable credit policy and ensuring solvency of the AWCF.

There are no additional capabilities other than the ones identified in the JCA tabs.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Special Operations Forces, Command, Control, Communications, Computers and Information Infrastructure (SOFC4IIN) program funds the acquisition of commercial leased and government provided long haul, wideband telecommunications circuits both terrestrial and satellite. These circuits support the garrison SOF C4I requirements for USSOCOM, Service Components and Theater Special Operations Commands (TSOCs). SOFC4IIN supports remote data and voice capabilities, CDR USSOCOM L-Band (INMARSAT) airtime, Iridium handsets/SIM cards and day-to-day management of deployed, Service Component/TSOC equipment and costs associated with receiving services from the Defense Information Systems Agency (DISA). Funding for this investment also provides: (1) operational airtime for deployed tactical terminals and enables SOF Information Environment (SIE) secure worldwide communications to strategic SCAMPI (not an acronym) nodes; (2) voice/video/data transport and terrestrial circuits to locations where DISA circuits are not available; (3) Remote data, video and voice capabilities for SOF Deployable Node (SDN) Family of Systems (FoS), Intelligence, Surveillance and Reconnaissance (ISR)/Full Motion Video (FMV)/Remote Piloted Aircraft (RPA) airtime and bandwidth.

**Description of Investment**

The Standard Accounting and Reporting System (STARS) is a general fund accounting and reporting system used by the Department of Navy (DON) Major Commands. The system provides the capability to record and execute budgetary and accounting events from funds allocation to disbursement. STARS also serves as a primary reporting source of DON funds status and execution for departmental reporting purposes. STARS is a fully integrated system, combining financial management services which include funds distribution, accounting, reporting, and statistical information using batch and online automated data retrieval capabilities. STARS consists of two major modules: (1) STARS HQ, Headquarters Command Level Accounting, and (2) STARSFL, Field Level Accounting (8 Regional Databases).

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The STEP investment is driven by Combatant Command (COCOM) operational requirements validated by the Joint Chiefs of Staff and is linked with Defense Information Systems Agency (DISA) core strategic goals including the Campaign Plan. STEP capabilities directly support DoD's transformational initiatives and goals by: (1) enabling effective communications for the warfighter through early implementation of Net-Centric capability; (2) enhancing the capability and survivability of space systems and supporting infrastructure; and (3) continuing to develop joint interoperable Networks and Information Integration (NII) architecture. The STEP program supports the COCOMs Command and Control (C2) and Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) SATCOM requirements in addition to new and emerging COCOM and service validated requirements. Further, DISA is able to leverage the network and equipment at these sites to support world-wide operations for Expeditionary Forces and Overseas Contingency Operations (OCO). STEP employs standardized equipment, maintains equipment baseline and DISN service delivery for all Teleport systems and sustains the network by replacing End-of-Life (EOL) Transmission Security (TRANSEC), Communication Security (COMSEC), switches, routers, and baseband equipment. A key component to the STEP success is the Program's ability to quickly and accurately react to new emerging requirements and lessons learned, and perpetuate these changes accurately and rapidly to ensure mission success in all user environments. This reconfiguration is standardized across all sites to ensure a baseline configuration and maintain operational functionality. STEP is able to keep pace with the user community requirements and capabilities as they migrate and adopt emerging technology to accommodate their respective mission needs, and STEP keeps synchronized and at pace with the evolving Teleport technology architecture. For future planning and with the fielding of MET terminals, STEP sites will have multi-band (X, C, and KU) capabilities.

<b>UII</b>	007-000005100	<b>Acronym</b>	SCS
<b>Name of Investment</b>	STOCK CONTROL SYSTEM		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The intent/purpose of the SCS program is to support world-wide Air Force readiness and sustainability to the war fighter by providing faster, more accurate allocation and movement decisions regarding Air Force material. The SCS operational mission is to manage depot-level supply activities and provide enhanced processing of stock control transactions and management information at USAF and USMC inventory control points. The SCS's primary asset management functions are to provide current asset visibility, maintain balances, process requisitions, and provide status to worldwide customers. The high-level asset management functional areas contained in the SCS are requisitioning, item management data, inventory, due-in/receipts, materiel returns (excess), controlled issue of items, depot support, miscellaneous supporting functions, and reutilization and dispositioning.

SCS is an on-line and real-time data system that is in a steady state life cycle phase. The SCS will eventually be replaced by the Expeditionary Combat Support System (ECSS), a COTS Enterprise Resource Planning (ERP) solution, which is being implemented as the Information Technology (IT) enabler of the Seamless Supply Chain Management/Single Supply System effort. The ECSS ERP solution and subsumed SCS functionality will be compliant with the Global Information Grid (GIG), reside on the Global Combat Support System - Air Force (GCSS-AF) Integration Framework (IF), and will manage most of the Air Force's logistics enterprise operations, both horizontally across and vertically within the logistics domain. As an interim effort, SCS has implemented Graphical User Interface (GUI) Windows-type screens, is web enabled, is web accessible via the Af Portal, and has separated business applications from data. Additionally, the wholesale SCS business processes are being re-engineered as part of the logistics transformation effort to provide greater interoperability, efficiency, and effectiveness.

The current SCS is composed of both the following modernized and unmodernized Data System Designators (DSDs) or subsystems:

- D035A, Item Manager Wholesale Requisition Process (IMWRP)
- D035B, Wholesale Management and Efficiency Reports (WMER)
- D035C, Reportable Asset Management Process (RAMP)
- D035D, Special Support Stock Control (SSSC)
- D035E, Readiness Based Leveling (RBL)
- D035G, Redistribution and Disposition System (RDS); formerly, the D067 legacy system.

<b>UII</b>	007-000001929	<b>Acronym</b>	SPOT-ES
<b>Name of Investment</b>	SYNCHRONIZED PREDEPLOYMENT AND OPERATIONAL TRACKER - ENTERPRISE SUITE		
<b>Lead Agent</b>	DEFENSE HUMAN RESOURCES ACTIVITY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HUMAN RESOURCE MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

SPOT-ES encompasses the functionality prescribed in DoDI 3020.41, Contractor Personnel Authorized to Accompany the U.S. Armed Forces (CAF), 3 Oct 05. It's also a web-accessible, Joint database that serves as the central repository for all contingency contractors, providing by-name accountability and tracking capability from pre-deployment processing through movements in theater and redeployment. SPOT-ES oprates on both the classified (SIPERNET), and unclassified (NIPRNET) networks to document and track personnel visibility. It offers secure access for contractor companies to maintain their contingency contract and employee data in a single source for Government access, consolidation and reporting with customizable views for different user types. SPOT-ES connects to the Defense Manpower Data Center (DMDC) for automated validation of contractor identity and is the only application that associates each contractor deployee record with a specific DoD/Government agency or organization. SPOT-ES has been proven in OEF/OIF, JTF Katrina and is planned for use in peacetime exercises as well as in military operations and homeland support missions.

Budget information is entered under this (SPOT-ES DITPR ID 6501) as the parent for the Joint Asset Movement Management System (JAMMS), Synchronized Pre-deployment and Operational Tracker-Secret Internet Protocol Router Network (SPOT-SIPR), and Total Operational Picture Support System (TOPSS) which they will all be combined into a single system under SPOT-ES.

**Description of Investment**

System Integration is an umbrella program that: Provides system engineering and integration support to USTRANSCOM's Air Component [AMC] global air mobility C4 systems to ensure interoperability with the Defense Transportation Systems (DTS), Air Force and DoD systems enhancing the JDDE. Efforts under this program guide system modernization and integration from an enterprise perspective. It funds the development and modernization of operational, system, and technical architecture views at the enterprise, system, and process levels. It funds the analysis, design and development of the AMC corporate data structure, which ensures data quality and standardization as well as interface management. This includes AMC C2/ITV and business system interfaces with Global Transportation Network (GTN) and Theater Battle Managment Core Systems (TBMCS). Provides funding for the AMCADRE system. AMCADRE includes architecture products, Key data integration tools include the Mobility Enterprise Information Service (MEIS), data dictionary, data models, business rules, and the Interface Design Document manager and EDQM data analysis tool. Provides funding for AMC's data quality and metrics effort that supports the Tanker and Airlift Control Center (TACC) and Intransit/Visability (ITV) fusion cell. It funds architecture planning efforts, such as analysis of enterprise requirements, modeling and simulation, and transition of future technologies into AMC systems.

**Description of Investment**

The Tactical Air Control Party-Modernization (TACP-M) Program provides data communications, accurate targeting, and battlespace awareness capabilities required to plan, request, coordinate, and control Close Air Support (CAS) missions in support of aligned Army ground forces. These capabilities support emerging joint Digitally-aided Close Air Support (DaCAS) standards that reduce CAS response times and reduce the potential for targeting errors that can lead to fratricide and collateral damage. They enable TACPs to conduct data communications with Air Force and Army C2 nodes, Army fire support networks, and strike aircraft conducting CAS missions. They also provide TACPs with access to tactical video transmissions from targeting pods and Remotely Piloted Aircraft (RPAs), Army Blue Force situation awareness networks, and emerging networking waveforms needed to support Army ground maneuver forces. TACPs are aligned with Army units IAW the Memorandum of Agreement for Army/Air Force Liaison Support and provide critical support needed to ensure the Army successfully accomplishes assigned missions during overseas contingency operations and Irregular Warfare (IW) operations. .

**Description of Investment**

The TEO provides operating funds for the 689 Combat Communications Wing, the 3rd and 5th Combat Communications Groups, and eight Combat Communications Squadrons all of which are tenant units on non-AFSPC installations.

Combat Communications units use Theater Deployable Communications (TDC) equipment to provide secure and non-secure data and voice communications services to Air Force, joint, and coalition war fighters supporting combat and non-combat deployments across the entire spectrum of Air Force Operations including: Air Expeditionary Wing (AEW) build-up; command and control; intelligence, surveillance and reconnaissance; air control; disaster support; accident response; humanitarian relief; and defense support to civil authorities. Combat Comm is the only Air Force provider of communications services and network extension capability coupled with SATCOM reach back available any to any COCOM supporting any mission set, anywhere on the globe. Mission support ranges in size from 10-15 people to the standup of an AEW supporting 3,000 deployed personnel.

Combat Communicators provide full network management, information assurance, and inter and intra-base transmission capability for every system they deploy. Air Force Active duty Combat Comm units belonging to AFSPC also provide Deployable Air Traffic Control and Landing Systems (DATCALs) necessary to establish and operate airfields in a deployed environment. 689 CCW recent accomplishments include comm support during troop withdraws from Iraq following Operation Iraqi Freedom in FY2011, on-going operations in Afghanistan for Operation Enduring Freedom, Haiti earthquake relief and support to AFRICOM for bare base standup at Seychelles.

Additional operations support is required for unique deployable communications missions provided by the 689 CCW. These missions include mobile Full Motion Video downlink teams supporting Unmanned Aerial Vehicle (UAV) surveillance; Hammer ACE quick reaction small communications package teams supporting aircraft incidents and Nuclear/Biological/Chemical responses; and specialized communications teams used to augment the U.S. Secret Service.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The purpose of ANG Combat Communications Tactical Equipment Operations (TEO) is to provide sustainment of deployed Aerospace Expeditionary Forces (AEF) with a robust and sustaining communications infrastructure. TEO is a worldwide deployable force that provides a full range of Information Technology (IT) services to the deployed warfighter. In combat operations, the Joint Task Force commander needs ready access to the status of subordinate forces from all involved services. This requires interoperability between all AF elements, the JTF commander, the forces from other services and CONUS/theater command and control centers. Combat communications systems provide capable, well defined and executable services, immediately available to support the combatant commander.

The requirement and expectation of the ANG to establish and sustain combat communications forces is identified in the periodically updated SAF Program Guidance Letter (PGL). Current guidance dictates 24 combat communication squadrons, 2 joint communications support squadrons and 8 groups totaling approximately 5,000 personnel. These professionals support current operations, conduct training operations for new accessions, provide daily equipment maintenance, and provide staff support for operations, planning, and management.

ANG TEO units are under the deployment control of active MAJCOMs. Worldwide customers include the unified commands, Department of Defense (DoD) agencies, all military services, and designated foreign governments. They respond to major contingencies, combat, and disaster relief missions. TEO provides government phone service extension -- secure and non-secure voice, message, and data communications as required. TEO systems link field operations to required mechanized support systems, databases, and networked applications.

TEO contributes to the successful employment of Theater Deployable Communications (TDC) systems supporting military operations worldwide including the Global War on Terrorism and several other deployments including military exercises.

**Description of Investment**

The TCAC program, consisting of the AN/UYQ-83 Remote Analysis WorkStation (RAWS), AN-MYQ-9 Transportable Workstation (TWS) is the focal point of RadBn SIGINT operations. TCAC provides automated processing, analysis and reporting functions of the RadBn in order to fulfill its mission of providing timely, accurate SIGINT/EW support to MAGTF combat operations. TCAC is capable of directing and managing the technical and operations functions of other RadBn SIGINT/EW assets and providing communications connectivity for data exchanges with these systems, the IAS and national databases. The system provides processing of EW information, including ES and EA data collected by the VMAQs EA-6B aircraft. The system is capable of correlating, fusing, and evaluating radar emitter identification and location data from the EA-6B with other National and theater sources.

**Description of Investment**

A computing device for routing calls from one telephone to another, generally as part of the Public Switched Telephone Network (PSTN). The switch looks at incoming dialed telephone numbers to determine the destination address in order to select the correct paths or circuits for the call. It is used to provide, establish, and customized services such as call waiting, call forwarding, caller ID. Other services, such as voice mail and billing may be provided with additional external computers. Telephone switches are usually owned and operated by a telephone service providers or Local Exchange Carriers (LECs) and located on their premises, but sometimes individual commercial businesses or Government activities will house their own switch, called a PBX, or Private Branch Exchange.

<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	INSTALLATION SUPPORT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Defense Video & Imagery Distribution System (DVIDS) transports broadcast-quality High Definition / Standard Definition video, 2-way data, stories, stills, audio and data, from various DVIDS satellite communication (SATCOM) ground satellite terminals worldwide to the DVIDS Operations Hub. DVIDS Operations Hub services will maintain uplink and downlink services to all current and future Government equipment (portable SATCOM terminal systems) granted access to the DVIDS integrated network. Publically released content types captured and or produced by deployed Public Affairs / Combat Camera personnel shall be transported via commercial/Government satellite, fiber, physical media or Internet Protocol (IP) to personnel at the DVIDS Hub and distributed by satellite, fiber, Internet Protocol (IP) or Tape/Digital Video Disk (DVD). The Government's content shall be organized, reviewed, edited, and packaged. The Contractor shall market to US and international audiences and distribute all product types. The capabilities and the expertise required to execute these missions fall into eight interrelated service areas and do not currently exist in the US Army or the Department of Defense. Chairman, Joint Chiefs of Staff Instruction (CJCSI) 6250.01C designates DISA as the DOD agency with primary responsibility to control provisioning for telecommunications and information technology requirements. DISA (Defense Information Systems Agency) does not have a contract vehicle capable of meeting this entire requirement (documentation on file), but does have the capacity to provide full time satellite capacity which has been provide via contract number CTC 0197 via the Future Commercial Satellite Communications (COMSATCOM) vehicle. Government Public Affairs, Combat camera, military personnel, the public and worldwide media utilize the DVIDS services.

<b>UII</b>	007-000001912	<b>Acronym</b>	TDC
<b>Name of Investment</b>	THEATER DEPLOYABLE COMMUNICATIONS		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Theater Deployable Communications (TDC) program provides communications support for deployed Air Force, joint and coalition operations across the globe. Specifically, TDC provides comm systems for deployed war fighters, homeland defenders, humanitarian relief efforts and natural disasters. Program goals are to increase interoperability and data capacity while reducing weight and footprint of deployed equipment, efficiently manage available transmission capacity of deployable comm systems, and provide a solution that is common with that of fixed bases and compatible with other service branches, simplifying training and support infrastructure.

TDC provides the common user communications backbone for deployed bases. Specific comm. functions provided include: circuit (voice) switching, packet (data) switching, multiplexing, intra-base and inter-base transmission, network management, information protection and network core services.

The TDC program consists of three components: Integrated Communications Access Packages, deployable Network Control Centers and Ground Satellite Terminals. The majority of TDC equipment is commercial off-the-shelf comm equipment such as telephone switches, data routers and switches, multiplexers, line of sight radios and lasers, and servers; all integrated into packages that are suitable for deployment. TDC also includes satellite terminals that operate over military and commercial frequency bands. The only components of the program that are not commercial-off-the-shelf are those associated with unique military requirements such as crypto equipment and ancillary devices required for interoperability with legacy communications and supported systems.

TDC does not include general purpose computer equipment with the exception of that required to configure, manage and monitor the comm network. The software packages included with TDC are commercially available products used for network management and information assurance (such as firewalls and intrusion detection tools).

Initial TDC equipment was ordered in FY95, fielded in FY97 and declared FOC in FY07. Additional sustainment, support and technology refresh of fielded systems will continue beyond FY2018.

FY13/14 goals include: continued transition of TDC equipment to an Everything over IP (EIOP) architecture; replacement of obsolete parts/technology; fielding of software/hardware to meet security and interoperability certification requirements & IA mandates.

<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Theater Enterprise-Wide Logistics System (TEWLS) supports critical medical logistics warfighter requirements in a net-centric environment. It ties the national, regional, and deployed units into a single business environment. It creates the necessary links for planners, commercial partners, and AMEDD logisticians to accomplish essential care in the theater through a single customer facing portal. It removes disparate data and replaces it with a single instance of actionable data. TEWLS supports today's modern, non-contiguous battlefield at the regional, COCOM, and Service levels by leveraging emerging Medical Materiel Executive Agency and Theater Lead Agent infrastructure concepts to manage the entire medical supply chain from the industrial base to the end user. Theater Army Medical Mgmt Information System (TAMMIS) at the Theater Lead Agent for Medical Materiel (TLAMMs) will transition to TEWLS Release 2 beginning in 1st Quarter, FY10.

**Description of Investment**

The Customer Relationship Management investment is used by AFPC, ARPC and FM to do a number of various functions supporting our Service Centers in San Antonio and Denver. The software that is being used is Oracle-Right Now Technology. This software is utilized to create web self service applications that Air Force members utilize to do personnel actions such as retiring, retraining and allows the technician to track these actions in a case specific to the person who applied. Additionally this software is used by our customer service representatives in our Service Centers to track phone calls they receive from Air Force members and route the case to personnel in various backshop offices to answer the question.

Funding for this initiative is disbursed between Defense Information Systems Agency (DISA) and Oracle RightNow. Funding to DISA is annually to host hardware/software in a secure facility at Tinker Air Force Base and provide Authority To Operate (ATO) accreditation. Access to the area is controlled by 2 swipe card access that require a PIN. In addition, we contract Oracle-RightNow to operate the myPers website. This includes users licensing (TFCS-Agent's console), software upgrades, and applications support.

**Description of Investment**

The Transportable Tactical Command Communications (T2C2) system enables warfighters in small, highly dispersed team-sized elements to send and receive time sensitive Situational Awareness (SA), Intelligence, and Mission Command (MC) information while At-the-Halt (ATH) in support of all operational phases. The system utilizes Very Small Aperture [Satellite] Terminals (VSATs) that extends the LandWarNet Beyond Line of Sight (BLOS) down to company headquarters and also with commercial equipment providing similar BLOS network access to other teams.

<b>UII</b>	007-000001935	<b>Acronym</b>	TC-AIMS II
<b>Name of Investment</b>	TRANSPORTATION COORDINATORS' AUTOMATED INFORMATION FOR MOVEMENTS SYSTEM II		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	LOGISTICS/SUPPLY CHAIN MANAGEMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

The Transportation Coordinators Automated Information System II (TC AIMS II) is a migration system that provides a base-level unit move capability. It supports the warfighting CINCs by providing in-transit visibility (ITV) data to the Global Transportation Network (GTN) as well as source data to the Joint Operation and Planning Execution System (JOPES) through feeder systems. TC AIMS II is a program which consolidates management of the unit/installation-level transportation functions of Unit Movement, Load Planning and Installation Transportation Office/Traffic Management Office (ITO/TMO) operations into a single automated capability for use through DoD. The functionality of unit movement and load planning will be migrated into TC AIMS II applications, thereby reducing system redundancy. TC AIMS II provides a common hardware suite running software applications designed for easy data retrieval; data exchange and connectivity to relevant external sources. Open systems architecture is emphasized throughout for standardization and interoperability and for ease of system growth and maintenance.

<b>Lead Agent</b>	DEFENSE HEALTH AGENCY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	HEALTH	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

TRICARE Online (TOL) is an online patient-focused portal that provides eligible Department of Defense (DoD) beneficiaries and their families convenient anywhere, anytime access to military healthcare services that support participation in their healthcare experience via a user friendly, network-centric platform. In addition to personal health data access via the Blue Button, TOL allows beneficiaries access to schedule personal and family appointments at their Military Treatment Facility (MTF), schedule prescription refills for MTF pick up, complete and submit health risk assessments, research general health information and link to secure messaging. As the DoD patient portal, TOL offers a single, efficient platform of online services to help care for beneficiaries.

In addition to active duty and retired service personnel and their qualified dependents TOL technologies benefit the entire MHS. TOL technologies help alleviate the administrative healthcare workload, increase access to care, and improve patient satisfaction by automating consolidated healthcare information and services online providing an alternative to limited call center days/times. TOL engages MHS beneficiaries as partners in their own healthcare and helps to improve military healthcare overall by supporting the safety and accuracy of personal healthcare data, avoiding the duplication of tests and reducing delays in treatment.

**Description of Investment**

The U.S. Army Human Resources Command Core Automation Support provides critical resources (including civilian pay) for core DA systems supporting personnel processes directly affecting Army-wide readiness. It also maintains the Army Human Resource Command (AHRC) operational capability by managing applications software and databases for critical systems that support the procurement, training, distribution, sustainment, and separation of Army personnel as well as support for Retirees, Veterans, and family members. Finally, it provides IT solutions for AHRC business processes as well as basic telecommunications, printing, and postal services between AHRC managers and the field.

**Description of Investment**

The Unified Command Suite (UCS) vehicle is a self-contained, stand-alone, C-130 air mobile communications platform that provides both voice and data communications capabilities to civil support team (CST) commanders. The UCS consists of a combination of commercial and existing government off-the-shelf communications equipment (both secure and non-secure data) to provide the full range of communications necessary to support the CST mission. It is the primary means of reach-back communications for the Analytical Laboratory System (ALS) and act as a command and control hub to deliver a common operational picture for planning and fulfilling an incident response.

It provides: • Digital voice and data over satellite network • Secure Internet Protocol Router Network (SIPRNET) and Non-Secure (NIPRNET) • Radio remote and intercom with cross-banding • Over-the-horizon communication interoperable interface with state emergency management and other military units.

**Description of Investment**

The USTCLAN is a critical system supporting the command and control (C2) communications of the USTRANSCOM Commander and his staff. It is comprised of ~ 4800 distinct personal computers, numerous servers and routers, a multitude of switches and the hardware and software infrastructure comprising the classified and unclassified Local Area Networks (LANs) at the USTRANSCOM command site on Scott AFB, IL. This progrqam supports the following activities: Upgrade of network infrastructure to support increasing bandwidth, service, systems and reliability requirements. Server upgrades, network router and switch upgrades, cable installation, network component upgrades and wide area network connectivity with component commands. Upgrade of standard server COTS products. Provides worldwide DTS theater-centric C4 infrastructure baseline assessments, engineering and documentation. Provides O&M hardware and system administration support. Provides CDR, studio and portable VTC support. Provides AV presentation system support. FOC is dependent upon supported DTS requirements.

<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

Video Teleconferencing provides interactive face-to-face meetings from multiple geographically separated locations. It provides the capability for Health Affairs senior leadership and personnel to interface in a dual audio/video mode (audiovisual) to facilitate face-to-face interchange of ideas and information real time, in a conference environment. This initiative creates cost savings by reducing travel requirements and wait time requirements for meetings and conferences.

<b>UII</b>	007-000003542	<b>Acronym</b>	VCE
<b>Name of Investment</b>	VIRTUAL CONTRACTING ENTERPRISE		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	ACQUISITION	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

Virtual Contracting Enterprise (VCE) enables total visibility and analysis of all elements of the contracting mission. As such, it will enable the Army to: 1) eliminate paper contracting files; 2) ensure proper contracting procedures are followed at ALL of our contracting activities; 3) easily and quickly identify potential fraud and contracting irregularities before systemic problems occur.

VCE is not a “new system” but rather an integration of five existing Army automated tools and an expansion of their user base to the entire Army contracting community. Each of the existing tools is fully operational and in sustainment mode. These systems include: Project Contract Folder – PCF, Acquisition Resource Center – ARC, Acquisition Source Selection Interactive Support Tool - ASSIST, Army Contracting Business Intelligence System - ACBIS, and Army Single Face to Industry – ASFI. In addition, the VCE solution will provide seamless integration with the Army’s Procurement Automated Data and Document System (PADDS), and DoD’s Standard Procurement System (SPS) to facilitate the posting (digitizing) of all contracting data providing access to all users except when limited by security, policy, or regulations.

VCE will enhance (integrate) existing systems (mentioned above) and increase the user base from approximately 1,000 AMC users to approximately 12,000 - 14,000 Army users in a pure web environment. The VCE project itself primarily consists of hardware and network infrastructure set-up, integration activities, user training, and incremental increases in the user population consistent with Army activities.

VCE will be utilized by each and every Army contracting professional and contracting leader.

**Description of Investment**

Provides funding for strategic and tactical multimedia visual information (M/VI) products and services in support of the National Strategic Communications Objectives, commanders decision making process, and training. Enables the ability to provide the services required by the Common Levels of Support (CLS), Joint Basing Common Output Levels Standard (COLS), and mandates of the Code of Federal Regulation 36. The Visual Information mission support provides for visual information (VI) investment equipment, documentation, production, army-wide distribution, and presentation services for all regions, missions and functions of the army, OSD, JCS, and HQDA. The M/VI contributes toward the Army Force Generation Process by providing a complete solution to the Army's need for video/multi-media productions, still and motion imagery and graphic print products as it pertains to the Army's Command Plan for Soldiers.

**Description of Investment**

Voice, Data, and Video Communications supports DCMA's technical architecture that defines the computing and communications environment required to sustain and improve its critical business processes. This allows for the consolidation of infrastructure and the central management of systems resources for improved reliability and reduced maintenance expenses. The Voice, Data, and Video Communications infrastructure covers the technical architecture (e.g., Enclave, SIPR-Net, Voice and VOIP Communications, VTC, and Network Support Services) needed to communicate effectively and efficiently throughout DCMA.

<b>UII</b>	007-000006394	<b>Acronym</b>	WDAD
<b>Name of Investment</b>	WEATHER DATA ANALYSIS AND DISSEMINATION		
<b>Lead Agent</b>	DEPARTMENT OF THE AIR FORCE		
<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE AWARENESS-ENVIRONMENT	<b>GIG Architecture Category</b>	FUNCTIONAL AREA APPLICATIONS (FAA)

**Description of Investment**

WDA will continue the modernization of the AFWA Strategic Center, which includes the 14th Weather Squadron (previously the Air Force Combat Climatology Center (AFCCC)), as a component of the Air Force Weather Weapon System (AFWWS). It will also provide infrastructure components for reuse within the AFWWS; and as such, establishes the framework for AFWA to support AF Weather (AFW) Operational Weather Squadrons (OWSs). The Strategic Center at AFWA will be modernized through the use of an increment/block developmental evolutionary acquisition strategy, leveraging reusable software assets developed during each spiral/block. WDA will provide a Common Operating Environment (COE) compliant architecture in which components are available for re-use in other levels of the AFWWS.

WDA will create an open, distributed virtual Joint Meteorological and Oceanographic (METOC) database to provide users access to weather-related information anywhere in the world, and will form the cornerstone of the future AFW architecture. WDA capabilities must be able to receive and process worldwide information in support of the analysis, forecasting, tailoring, and dissemination of strategic processing center products. Ultimately, WDA provides a fused analysis of the atmosphere for theater and tactical customers, and it provides infrastructure components for reuse across the entire AF Weather Weapon System (AFWWS). WDA capabilities will also process and store data from automated sensors (e.g., OS-21), remote meteorological weather sensors (RMWS), automated aircraft reporting systems, unmanned aerial vehicle data, and classified and unclassified conventional and unconventional observations from ground and space-based platforms. They will also simultaneously process and store current and new satellite weather sensor data from multiple polar orbiting and geostationary satellites. It will also develop and reengineer software to an object-oriented environment (leveraging additional data sources) and upgrade dissemination/ingest hardware.

Due to consolidation of programs to meet the SAF/AQ-directed migration to the AML, this program now contains all of the components from the WDD initiative (BIN 7170). That initiative should be archived.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	BATTLESPACE NETWORKS	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The White House Communications Agency (WHCA) is a joint service military agency under the operational control of the White House Military Office (WHMO) and administrative control of the Defense Information System Agency (DISA). The mission of WHCA is to provide telecommunications and other related support to the President of the United States (POTUS) in his role as Commander in Chief (CINC), Chief Executive Officer of the United States, and Head of State; and other elements related to the President. Elements related to the President include the Vice President, the First Lady, the first family, the United States Secret Service (USSS), the White House Staff, the White House Press Office, the National Security Staff, WHMO and others as directed.

Although WHCA provides a wide variety of services, the core of the agency's mission is to provide instantaneous secure and non-secure voice and five minute record communications support to the POTUS anytime, anywhere. Other voice, video and data communications services are provided as necessary to allow for staff support and protection of the President. In addition, WHCA provides the President and Vice President audiovisual and photographic services on a reimbursable basis, including but not limited to the following services: video tape recording for the President and others as directed; photographic laboratory and graphics support to the White House; and general purpose automated data processing support for the National Security Staff (NSS) and the White House. This support is provided in Washington DC and at trip sites worldwide. To support this requirement, WHCA's organization is structured to allow for Fixed and Deployable (Travel) support.

**Description of Investment**

WHSSS maintains the White House Situation Room (WHSR), a 24x7 fused all-source intelligence center that provides the President, the Vice President, and the White House Senior Staff with up to date situational awareness of both domestic and international events. Additionally, the WHSSS is responsible for all Information Technology for the WHSR and the National Security Staff (NSS) at both fixed and deployed locations to include the interagency SVTS and WASHFAX networks. WHSSS maintains NSS records information in accordance with the Presidential Records Act.

<b>UII</b>	007-000006041	<b>Acronym</b>	WRMS V1.0
<b>Name of Investment</b>	WIDEBAND REMOTE MONITORING SENSOR V1.0		
<b>Lead Agent</b>	DEPARTMENT OF THE ARMY		
<b>Category</b>	INFORMATION TECHNOLOGY	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The WRMS provides for monitoring of X- and Ka-band communication downlinks to support performance monitoring tasks such as transponder performance characterization, characterization of known carriers and unauthorized accesses, identification of impaired carriers, and interference analysis. WRMS interfaces with local Earth Terminals (ETs) at L-band Intermediate Frequency (IF) for access to downlink spectra. In order for WRMS to monitor transponder usage and identify potential unauthorized accesses, it must compare measured spectrum to predicted spectrum. Predicted spectrum information is derived from the payload's overall communication plan, which is generated by the Common Network Planning Software (CNPS) and disseminated to the WRMS from the Defense Satellite Communication System (DSCS) Integrated Management System (DIMS). The WRMS client operates on the Wideband Satellite Operations Management System (WSOMS) Workstation in the Wideband SATCOM Operations Center (WSOC), operates at the SECRET level, and interfaces with the WSOMS Network (WSOMSNET) at the SECRET level.

<b>Category</b>	NATIONAL SECURITY SYSTEM	<b>Acquisition Category</b>	NON-MAJOR IT INVESTMENT
<b>DoD Segment</b>	DOD IT INFRASTRUCTURE	<b>GIG Architecture Category</b>	COMMUNICATIONS AND COMPUTING INFRASTRUCTURE (CCI)

**Description of Investment**

The Wideband Satellite Communications (SATCOM) Operational Management System (WSOMS) is responsible for controlling Satellite Communications (SATCOM) missions on X-, C-, Ku-, and Ka-bands while providing the wideband community with an improved, fully-integrated management capability. This includes the current payload and network control responsibilities for Defense Satellite Communication System (DSCS), and the addition of satellite platform, payload, and network control for the Wideband Global Satellite (WGS) and potentially the Advanced Wideband System (AWS) satellites. The WSOMSNet encompasses the Local Area Network (LAN) at each site, the Wide Area Network (WAN) interconnecting the Wideband Satellite Communications (SATCOM) Operations Center (WSOC) and Management sites, Domain Controller, and the requisite network security components needed to provide secure communications.

**Description of Investment**

AFMC's Parent initiative for grouping investments in the functional area of Warfighter Mission Area - Corporate Management and Support. AFMC is using this initiative to better categorize WMA investments that fit into this Mission Area/Subdomain for better analysis and budget reporting purposes. This initiative is at the AFMC MAJCOM level and will tie to the investments at the Base/Center/2ltr levels. This initiative does not provide any functionality/capability but rather is tied to the investments that provide the functionality/capability that is described per this Mission Area/Subdomain. While AF may have systems with related capabilities, these initiatives are used for AFMC MAJCOM investments with similar capabilities.
