IT/Cyberspace Activities Investment Profile Report

Date: March 2020

File: IT/Cyberspace Activities Investment Profile Report, NAVY

Description: Provides Detailed Information on NAVY IT Investments Reported to the Office of Management and budget (OMB) IT Dashboard and submitted to the Congress in support of the Department of Defense IT/Cyberspace Activities FY 2021

Includes: - - Unclassified Information Technology (IT) Investments

Does Not Include: - Unclassified National Security System (NSS) Investments
Classified Investments
- Detailed FY22-FY25 resource estimates

IT/Cyberspace Activities Investment Profile Report
Organization Architecture Profile

Architecture Profile

DoD Segment 500-000 Financial Management

Architecture Budget Justification

Navy financial management investments support the Navy's strategic goal to rationalize and modernize financial management systems and processes, and implement one standard accounting and general ledger system. The largest Navy financial management investments improve and strength financial and business operations, and reduce administrative and regulatory burden. Navy Enterprise Resource Planning (N-ERP), UII 007-000000186, was established to transform and standardize Navy business processes for key acquisition, financial, and logistics operations. It combines business process reengineering (BPR) and industry best practices, supported by commercial off-the-shelf software, and integrates all facets of a business, using a single database to manage shared common data. Navy ERP reduces the Navy's overall costs by applying proven industry best practices and processes and replacing legacy IT systems; facilitate an end-to-end supply chain solution; integrate financial management, workforce management, inventory management, and material operations; and, enable rapid response to operating force logistics needs. As the official general ledger accounting system for the U.S. Marine Corps and select US Navy Budget Submitting Offices (BSOs), the Standard Accounting Budgeting and Reporting System (SABRS), UII 007-000001761, was designed to meet fiduciary standards established by the General Accounting Office, Office of Management and Budget, United States Treasury Department, and DOD. As a fully integrated system combining financial management services, which include funds distribution, accounting, reporting, and statistical information, SABRS supports rationalization and modernization by using batch and online automated data retrieval capabilities. Like SABRS, the Command Financial Manager System, CFMS, UII 007-000005759, promotes rationalization and standardization in budget formulation, execution, and managerial analysis. It is an unclassified web enabled Financial Management System that provides the following capabilities: online system balancing of budget submissions, funding document internal control checks ensure budget controls are not exceeded, automatic emailing of funding documents to receiving activities, and electronic data transfers to and from interfacing activities. Major Cost Drivers effecting changes between FY 2020 and FY 2021 include: Minor decreases in OPN due to realignment to OMN to offset infrastructure as a service costs for Navy ERP cloud transition; SABRS decrease in Operations is due to the transition to Navy ERP in support of a single unclassified general ledger system; Command Financial Manager System decrease in Operations to support command migration of financial feeder systems as they move toward one general ledger system; USFF HQ Support decrease in Operations due to Navy Maritime Maintenance support scope changes, requirements efficiencies due to modelling efforts and system rationalization efforts related to the Navy Data Environment; Transaction Universe 007-000101029: Increases are due in part for Navy ERP's technical upgrade to the Navy Data Platform. The updated capability will replace the current Financial Reporting Capability in NBIS to support supply chain data analytics. Changes in support of and migrations to Navy ERP as a single unclassified general ledger system support both the Navy strategic goals of financial management system modernization/rationalization, and financial improvement audit readiness.

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Executive direction and management / Performance Management

Investment Description and Justification

Short Description

The Navy ERP Program is a high-velocity back-office system that enables faster, more accurate responses to the needs of the warfighter, sharing authoritative information across functional communities to improve Enterprise performance.

Full Description

The Navy Enterprise Resource Planning (Navy ERP) Program was established to transform and standardize Navy business processes for key acquisition, financial, and logistics operations. Navy ERP combines business process reengineering (BPR) and industry best practices, supported by commercial off-the-shelf software, and integrates all facets of a business, using a single database to manage shared common data. Navy ERP will be a major component of the Navy's Global Combat Support System family of systems and will provide a critical link between operating forces and support activities. Navy ERP will: reduce the Navy's overall costs by applying proven industry best practices and processes and replacing legacy IT systems; facilitate an end-to-end supply chain solution; integrate financial management, workforce management, inventory management, and material operations; and, enable rapid response to operating force logistics needs.

Horizontal Variance

Navy Enterprise Resource Planning (007-000000186 - Navy ERP)

Budget Line Horizontal Variance Explanation**The investment is designated as a 'Major' therefore requires Horizontal Variance explanations at the Appropriation Level**

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--|---------------------|--|--|
| NAVY | Operations | \$ 39,038 | |
| Horizontal Change Explanation | | | |
| Increase for additional users and technical sustainment following the Working Capital Fund/SABRS user migration to Navy ERP. This increased effort reflects the Department of Navy priority for a single unclassified general ledger system. Additional increase reflects a shift of OPN funding to OMN as Navy ERP as an electronic business system is moving to the Cloud in FY20, and the infrastructure as a service is funded with OMN. | | | |
| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
| NAVY | Procurement | (\$3,865) | |
| Horizontal Change Explanation | | | |
| Decrease in OPN due to purchases of on premise equipment at the NAVAIR data center no longer required after movement to infrastructure as a service concept. Funds realign to OMN to offset infrastructure as a service costs with Navy ERP as an electronic business system is moving to the Cloud in FY20. | | | |
| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
| NAVY | DWCF | \$ 1,040 | |
| Horizontal Change Explanation | | | |
| Increase due to working capital fund users migrating to Navy ERP and requiring licenses and help desk support. | | | |

**IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification**

Navy Enterprise Resource Planning (007-000000186 - Navy ERP)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

Created to modernize, streamline, and standardize how the Navy manages people, money, programs, equipment and supplies, Navy Enterprise Resource Planning (Navy ERP) combines business process reengineering and industry best practices to integrate all facets of Navy business operations using a single database to manage shared common data. It also enables Navy compliance with the Chief Financial Officers Act of 1990 and the DoD Information Assurance Certification and Accreditation Process. Additionally, Navy ERP will be a key enabler for Navy to achieve auditability.

Navy will realize benefits on many levels. The first major benefit will be realized through legacy system retirement cost avoidance. The system has enabled the retirement of 80 systems and applications to date, with 8 more to be retired, generating a cumulative cost avoidance of ~ \$1,103M by the end of FY19. Additionally, the Single Supply Solution is expected to bring \$505M in Inventory Savings by the end of FY19. Data validation at time of entry, electronic archiving, increased electronic workflow, system audit trails and standardized report generation are just some of the benefits that will increase business process efficiencies and improve internal control across Systems Commands.

The ability to rapidly determine operating force logistical needs and to respond quickly to those requirements through an integrated ERP system is paramount. Navy ERP creates a solution that allows rapid access to information on finances, material, personnel, and other end-to-end process information. The solution is designed to include all common business practices, master data, and organizational elements.

The customers for Navy ERP are: Naval Air Systems Command, Naval Sea Systems Command, Naval Supply Systems Command, Space and Naval Warfare Systems Command, Office of Naval Research and Strategic Systems Programs.

The stakeholders are:

- Resource Sponsor: Secretariat Review Board (SRB)
- Budget Submitting Office: Space & Naval Warfare Systems Command
- Program Executive Office (PEO): PEO Enterprise Information Systems
- Comptroller: Office of the Assistant Secretary of the Navy, Financial Management & Comptroller
- Acquisition Oversight includes the Offices of
 - Deputy Assistant Secretary of the Navy (C4I & Space)
 - Assistant Secretary of the Navy (Research, Development & Acquisition)
 - Under Secretary of Defense (Acquisition, Technology)

Navy Enterprise Resource Planning (007-000000186 - Navy ERP)

Major Investment Business Case

Description and Justification

Return on Investment

The Navy Enterprise Resource Planning (ERP) Program has completed the investment phase and is in full sustainment. Full Deployment Decision (FDD) was December 2013. Through IT legacy system cost avoidance and inventory efficiencies, the Navy ERP Program is expected to save ~\$179M per year in sustainment costs.

Non-Tangible Benefits include:

- Standardized business processes
- Audit Readiness
- Financial transparency
- Asset visibility
- Labor efficiency
- Data integrity
- Business intelligence for improved business decisions

Internal and External Benefits include:

- Retirement of 83 legacy systems
- Cumulative cost avoidance of \$1.41M (FY08-FY23)
- Reduction of inventory costs, cumulative total \$733M

Major Investment Description and Justification**

Navy Enterprise Resource Planning (007-000000186 - Navy ERP)

Major Investment Business Case

Description and Justification

Budget Justification

Navy Enterprise Resource Planning (Navy ERP) FY 2021 OMN funding will:

- Operate & maintain 24/7 availability of the Navy ERP Production System (data and disaster recovery center operations, hardware and software license maintenance, etc.). Funding includes defect backlog elimination for a portion of the backlog and additional sustainment support during parallel operations and optimization of the current system following the transition to Cloud technology.
- Provide on-going end user and Help Desk services for 72,000+ users at Naval Air Systems Command (NAVAIR), Naval Supply Systems Command (NAVSUP), Naval Information Warfare Systems Command (NAVWAR), Naval Sea Systems Command (NAVSEA), Office of Naval Research (ONR) and Strategic Systems Programs (SSP).
- Provide licenses and labor services to support integration services for advancements in SAP database technologies and capabilities to improve cyber security management, minimize process customizations, and improve system performance; specifically accelerating business critical transactions, reports, and facilitating faster month-end/year-end financial closing. These improvements will ultimately distribute savings across the customer commands and reduce sustainment costs of Navy ERP.
- Support the implementation and activation of Standard Financial Informational Structure (SFIS) elements.
- Support Navy ERP audit initiatives to include the coordination, creation, and delivery of policy and process artifacts for Navy ERP stakeholders. Implement software changes necessary for audit readiness across the enterprise. Implement Item Unique Identification and Defense Logistics Management Standards.
- Support the tracking, coordination, and remediation efforts for Notices of Findings and Recommendations (NFRs) and Corrective Action Plans (CAPs) resulting from the prior year Schedule of Budgetary Activity (SBA) and Statement of Budgetary Resources (SBR) audit efforts.
- Support the design and implementation of a Manager's Internal Controls Program (MICP) to maintain audit readiness by applying risk management best practices to noted program audit weaknesses.
- Provide "Blue Book" Testing on behalf of Navy Financial Management & Comptroller (FM&C). Maintain, Monitor and Improve Risk Management Framework (RMF) and IT controls in accordance with the National Institute of Standards and Technology's (NIST) Financial Management Overlay for audit relevant systems.

Navy ERP FY 2021 Navy Working Capital Funding is required to operate & maintain 24/7 availability of the Navy ERP Production System (data and disaster recovery center operations, hardware and software license maintenance, etc.). It also provides on-going end user and Help Desk services for users at Naval Air Systems Command (NAVAIR), Naval Supply Systems Command (NAVSUP), Naval Information Warfare Systems Command (NAVWAR) and Naval Sea Systems Command (NAVSEA). Funding supports audit efforts related to Financial Improvements and Audit Readiness (FIAR) requirements.

FY2020 Accomplishments

Navy Enterprise Resource Planning (Navy ERP) planned CY Accomplishments (FY2020):

- Operate & maintain 24/7 availability of the Navy ERP Production System (data and disaster recovery center operations, hardware and software license maintenance, etc.).
- Provide on-going end user and Help Desk services for ~72,000 users at Naval Air Systems Command (NAVAIR), Naval Supply Systems Command (NAVSUP), Space and Naval Warfare Systems Command (SPAWAR), Naval Sea Systems Command (NAVSEA), Office of Naval Research (ONR) and Strategic Systems Programs (SSP).
- Provide a partial archiving solution to mitigate an urgent data management risk while also laying the groundwork for modernization.
- Resolve several manual workarounds with automated solutions. Resolve backlog issues with defect backlog elimination for a portion of the backlog and additional sustainment support during optimization following the transition to Cloud technology.
- Sustain the high level of technical and functional knowledge, skills and abilities across the Navy ERP workforce needed throughout the lifecycle.

Major Investment Operational Assessment

Operational Assessment Data

| | | | | | |
|---|--------------------------|-------------------------|-----------|-------------------------|------------|
| Document Name | Modernization Assessment | Version | | Date of Document | 2018-08-23 |
| The Following is the amount of O&S type \$ Reported in FY2019 and FY2020 | | FY19 | \$178,591 | FY20 | \$345,621 |
| | | Date of Analysis | | 2017-10-16 | |

OA Analysis Explanation

Context for Navy ERP Modernization Assessment:

1. Navy ERP has reached a point in its lifecycle where a Technical Refresh is required in order to protect the Navy's initial program investment of \$1.5B.
2. A Navy ERP Modernization Assessment was performed to produce a Technical Refresh Roadmap and cost estimate that would be used to substantiate the POM 20 submission.

Findings of Assessment:

Assessment determined Navy ERP Tech Refresh will yield three important business outcomes:

1. Protect the Navy's investment in Navy ERP by driving sustainment efficiencies, decommissioning custom code, and archiving data to eliminate mass volumes and excessive run times.
2. Address top priorities raised by Navy ERP User Community such as performance improvement, ease of use, and improved user experience
3. Position Navy ERP to achieve future operational improvements through real-time decision making and analytics, movement to the cloud and standardizing and improving business processes and establishing a single universe of transactions.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

Creates and transmits budget submissions; identifies, tracks, and justifies training resources for PPBS execution; and develops and disseminates cost to train data.

Full Description

CARIS is a financial management system that integrates the components of the Budget and Execution subsystems into one relational database running in a WEB environment. The Budget subsystem provides a repository for managing annual funding controls and a vehicle for assimilating the data required for various Navy budget exhibits. The Execution subsystem provides a current and historical status of funds and a means for identifying invalid financial data elements and for issuing Funding Authorization Documents (FADs). CARIS supports multiple appropriations and provides flexibility in meeting the changing financial demands within BUPERS. Budget Modules: 1) CARTS – Tracks, distributes, and manages funding controls by fiscal year. 2) CP-2 – Calculates and projects civilian personnel costs. 3) OP-32 – Calculates labor/non labor price growth and program growth. 4) OM-6 – Identifies programs which have critical funding shortfalls (Unfunded). 5) OM-1/OM-1Q – Builds a monthly obligation phasing plan and a quarterly cash phasing plan. Execution Modules: 1) CARDS – Electronically issues FADs to the performing activities. 2) CMEFFS - Imports accounting and cost data daily from STARS-FL and provides users the ability to view, save, and print reports to help manage their funds. 3) Dictionary – Contains the authorized financial data elements used in the Budget and Execution processes. Any data elements used in the JON that are not identified in the Dictionary will appear on an Exceptions/Invalids Report.

Investment Description and Justification

Short Description

Assists HHG Audit Team with ensuring members moves were conducted IAW with section 5310 of the JTR to include matching the actual move with member's orders and that the actual weight of member's furniture is within the limit allowed for his rank.

Full Description

PPTAS allows the Navy Household Goods Audit Team (HHG-AT) to audit, track, report, initiate collections and authorize liquidation of monetary claims associated with all Personally Procured Moves (PPMs) made by Navy service members. For PPMs, PPTAS receives transaction data via Defense Personal Property System (DPS) from transportation offices indicating approved personally procured moves and related advanced payments. PPTAS helps to ensure military member moves were conducted IAW with section 5310 of the Joint Travel Regulations to include matching the actual move with member's orders and ensures actual weight of member's goods is within the limit allowed for their rank. PPTAS streamlines research for invoicing irregularities associated with the commercial mover. The validation process automatically excludes many shipments meeting regulatory compliance and significantly reduces FTE needed to audit HHG movements that fail validation. PPTAS creates essential debit or credit actions based on these audits. Its secondary function is to settle Personally Procured Move Claims submitted by members and facilitates Electronic Funds Transfer (EFT) for DFAS direct deposits to member accounts. ATO approved through 14 February 2014.

Investment Description and Justification

Short Description

Web app hosted by NAVFAC; mission critical. Financial Analysis/Reporting Tool, Database to track NAVFAC's EDM & FDM data. NAVFAC application for aligning Effort (WYs) with funding (\$) by business line and FY.

Full Description

EDM/FDM is a Web application hosted by NAVFAC to track NAVFAC's Effort and Funding Distribution Matrix (EDM and FDM) data. It is the NAVFAC standard application for aligning work years of effort with funding (dollars) by business line, location and fiscal year. Use of 3-axis data cubes reduces effort on annual budgets by over 80% by permitting easy comparison among activities. The system tracks NAVFAC's execution by business line and fiscal year and provides reporting capabilities for annual budget reports.

Investment Architecture

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Accounting

Investment Description and Justification

Short Description

RIMS (FM) is a Financial Management application created to manage those funds appropriated by Congress to the Naval Reserves.

Full Description

The mission of COMNAVRESFORCOM is training and mobilization of Reservists. Funding for RPN training is authorized by a congressional appropriation, which provides authority to expend funds for mission essential training, Special training, and NSHS, each fiscal year. All costs incurred under the RPN appropriation must be supported by financial documents. The RIMS (FM) system is a management tool, for COMNAVRESFORCOM N00F and NSHS, supporting all official AT, ADT, and IDTT financial records and documents. The system allows the entry and processing of two primary transactions – reservation and adjustments. A reservation is the amount set aside to fund training for reservist orders and an adjustment is changes to the reserved amount resulting from modifications to orders. The RIMS (FM) system handles information that is necessary for the conduct of day-to-day business, but does not materially affect support to deployed or contingency forces in the short-term. The consequences of loss of integrity or availability can be tolerated or overcome without significant impacts on mission effectiveness or operational readiness. Based on that, the Mission Assurance Category level for RIMS is III. The Confidentiality level for the RIMS system is Sensitive. Maintenance and hosting of the RIMS application is performed at SPAWAR ITC in New Orleans.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

CDMS provides storage and retrieval of financial Records including funding documents, contracts, invoices, and financial reports. In addition CDMS tracks invoice action items and reconciliation of training invoices to credit card statements.

Full Description

CDMS is a NAWC Aircraft Division financial document management system for use within the Naval Air Warfare Center Aircraft Division (NAWCAD) and Naval Air Warfare Center Weapons Division (NAWCWD) Comptroller offices and Naval Supply Department at Patuxent River. The CDMS provides the capability to maintain archived electronic document copies for its customers. Customers/Users may retrieve reports and electronic copies of documents including: funding documents, contracts documents, invoice packages, ad-hoc reports, and Navy Supply Department material receipts documents. CDMS also integrates import and export of data from external systems for tracking and reconciliation purposes. The system is also used to support internal and external audit reviews with supporting documentation.

Short Description

Processes labor records, prepares data for DWAS, tracks input errors, & tracks valid time & labor data. Reconciles variances between labor records & payroll.

Full Description

LMSIS is a web-based platform that allows NAVFAC Working Capital Fund activities to process time and attendance data through labor distribution validation and to ensure that costs can be attributed to the proper funding documents. It processes labor records for PW cost purposes, prepares data for DWAS, tracks input errors, tracks valid time & labor data, reconciles variances between labor records and payroll, and corrects, creates or transfers cost information for DWAS.

Investment Description and Justification

Short Description

The Base Telephone Office (BTO) Account Summary Database is a web-based application that allows for the management of telecommunication accounts and costs, and the automation of telecommunication service account summaries.

Full Description

The Base Telephone Office (BTO) Account Summary Database is a web-based application that allows for the management of telecommunication accounts and costs, and the automation of telecommunication service account summaries. Telecommunication services are provided to employees at the Naval Air Warfare Center Aircraft Division (NAWCAD), Naval Air Systems Command (NAVAIR), and Tenant Activities located at Systems Command (NAVAIR), and Tenant Activities located at both Patuxent River Maryland and St. Inigoes Maryland. The telecommunication services include toll free, cellular telephone, pager, local and long distance commercial services, calling card, local and long distance (as denoted by host-tenant agreements), collect calls, conference calls, directory assistance, and basic services. The application tracks, processes, and analyzes account summary information, and manages web account summary access.

Investment Description and Justification

Short Description

Management support for various systems/applications to include NHBS, FASTDATA, NITE/STAR, VAMOSC/OSCAM, etc.

Full Description

This system includes one single server installed and operated by NCCA. NCCA is responsible for several systems that run on this server that support a community of interest known as the Navy Cost Community. This community includes the Naval Center for Cost Analysis, Naval Sea Systems Command(SEA-05C), Naval Air Systems Command(AIR-4.2), Marine Corps Systems Command, and Space Warfare Systems Command(SPAWAR 01-6). Currently, the system contains seven(7) main components including the NCCA Corporate Web Site with guidance, policy and directives; the official DON and Army(Joint) Inflation Indices; the NCCA Online Document library; the Joint Cost Analysis and Research Database(JCARD); the NAVSEA Information Management System(IMS); the NAVSEA Common Cost Model(NCCM); and the NAVSEA Government Furnished Material Cost Tracking System (GFM COST). The system also provides other products that NCCA is responsible for including leading the Department of the Navy cost community in issues of cost policy and policy implementation by providing Navy Cost Analysis Guidance and Directives, and the Navy Inflation Indices. The NCCA Web is a business essential mission support system designated as Mission Assurance Category(MAC) III that processes unclassified information up to and including Sensitive information in the System High mode of operation. Components: NCCA Web Site(Public View), the DON & Army Joint Inflation Calculator, NCCA Online Document Library Joint Cost and Research Database(JCARD), NAVSEA Information Management System(IMS), NAVSEA Common Cost Model(NCCM), and the NAVSEA Government Furnished Material Cost Tracking System.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Budget Execution

Investment Description and Justification

Short Description

IBPES provides the capability for PMs and TPMs to create a hierarchical work breakdown structure (WBS) and associate Subtasks to facilitate planning and execution of life-cycle sustainment operations of ship combat systems such as AEGIS.

Full Description

The "Integrated Business Planning and Execution System (IBPES)" provides a structure for the orderly planning, programming, budgeting and execution of the activation, maintenance, and modernization of ship combat systems support capabilities at the Aegis and Non-Aegis sites. Additionally, it maintains reliable configuration and engineering data about the Aegis and IWS shore sites, thereby helping to sustain the readiness of Aegis and IWS fleet requirements.

Investment Description and Justification

Short Description

MAJIC is designed to allow budget analysts for the Navy personnel appropriation to assemble the myriad of data needed to construct the Military Personnel, Navy (MPN) appropriation. Application will produce the budget submit in the required format.

Full Description

MAJIC is designed to allow Navy budget appropriation analysts ability to assemble data needed to construct the MILPERS, Navy appropriation and will produce the budget in the required format for a minimum of three annual budget submissions. MAJIC is also the tool used to monitor the execution of the budget ultimately approved by Congress for a given fiscal year. Monitoring is performed during the entire execution of the six year life cycle of each approved budget so that at any given time six budget years are being actively tracked through execution.

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

MFS is a web-based, financial management tool designed to automate and integrate the majority of MarForRes' fiscal functions.

Full Description

The Memorandum Fiscal Services (MFS) is a Marine Forces Reserve (MarForRes) Intranet based financial analytical system providing services to the Command's fund and program managers, as well as budget, accounting, and RE&A personnel. MFS supports users representing every level of the financial hierarchy, from Force-level executive decision makers to financial analysts and data entry clerks. MFS provides a means for creating and retaining detailed memorandum documentation in an electronic format and merges the memorandum records with official accounting data to provide fund managers a timely and reliable fiscal snapshot. The speed and accuracy in which MFS delivers crucial financial information provides fund managers the necessary lead time to make informed decisions impacting the operational readiness of their respective organization. To enhance and simplify the usability of the application, as well as increase data accuracy, MFS incorporates plain English descriptions instead of the financial code or abbreviated syntax for data input and reporting information. In addition, MFS leverages data from other external systems (such as but not limited to SMARTS, FedLog, MHIF, WebVLIPS, MROWS) as well as MarForRes intranet applications (such as but not limited to CTS, TEEP, TOT/TOP, Exercise Support, etc). MFS automates most manual tasks and provides users a vast array of analytical solutions by comparing/contrasting memorandum data with accounting data from SABRS. MFS provides resources and tools for managing budget submissions, creating funding documents, and customized reporting capabilities. This system provides management of funding execution by capturing operational costs and financial activities of all appropriations under the responsibility of the Commander Marine Forces Reserve. Beginning in Fiscal Year 2009, MFS began providing financial support to Marine Corps Logistic Command in Albany, GA as proof of concept for scaling support to additional commands. Beginning in Fiscal Year 2011, MFS will provide financial support to Marine Central Command and Marine Special Operation Command. Both MARCENT and MARSOC were included into the MFS scope as special circumstance to allow those Commands to better support the warfighter.

Investment Description and Justification

Short Description

CFMS is an unclassified web enabled Financial Management System. FFC, CNMOC, NETWARCOM, CNI, FSA, FASWC, MARFPCOM, NSAWC, NAVELSF, CNE, Type Commanders and Regional Managers utilize CFMS to support budget formulation, execution and managerial analysis.

Full Description

CFMS is an unclassified web enabled Financial Management System. FFC, FSA, NCIS, and PACFLT utilize CFMS to support Budget Formulation, current and prior year Funds Grant and Funds Distribution, Execution and Managerial Analysis Functions. CFMS interfaces with STARS (Standard Accounting and Reporting System) and WebOTF (FISC). Thousands of transactions are processed per FY that result in online system balancing of budget submissions, formal funding documents with system checks to ensure mandated controls are not exceeded, automatic emailing of funding documents to receiving activities, and electronic data transfers to and from interfacing activities. Budget controls are loaded and spread electronically and OP32s are produced online. CFMS resides on Dell Poweredge Servers using cluster software and an Oracle relational data base. There are currently about 3,000 users located in approximately 57 various locations around the U.S. and OCONUS. Specifically, our users include Fleet Forces Command, AIRPAC, SUBFOR, SURFPAC, NNWC, NWDC, NCTAMSLANT, CNMOC, FASWC, NECC, NSAWC, NECC, FSA, NCIS and CNE. In addition, there are 2900 Performing Activities who logon to the CFMS Web Site to accept encumbrance documents.

Investment Description and Justification

Short Description

AUTOMATED TOOL TO PROCESS TRANSPORTATION INCENTIVE PROGRAM APPLICATIONS AND VALIDATE PROGRAM DISBURSEMENT AND CREDIT.

Full Description

The Office of Assistant Secretary of Navy for Financial Management and Comptroller (FM&C), Financial Management Office (FMO) is responsible for implementing and overseeing the Department of the Navy's Transportation Incentive Program (TIP) Outside the National Capital Region (ONCR). The Transportation Incentive Program System is intended to provide FMO with the tools necessary to strengthen internal controls and mitigate fraudulent activities through automated solutions that validate data prior to submission and decrease overall workflow processing time. The goal of these processes is to: Reduce error rates of submitted TIP applications. Reduce the number of paper applications received for manual processing. Reduce the overall processing time for applications. Decrease administrative overhead by eliminating redundant effort. Provide monitoring of applications by cognizant authorities. Integrate process and policy certification of program Participants. Provide a secure central repository of application data

Investment Description and Justification**Short Description**

MSC-FMS is a DoD/DFAS Migratory finance and accounting system that supports both Navy and USTC. It contains GL, AR, AP, Purchasing, Project Billing, Project Costing, Inventory and Fixed Asset capability. Consistent with statutory requirements.

Full Description

MSC-FMS is a state of the art, fully integrated finance and accounting system that replaced non-compliant legacy systems in fiscal year 2000. The new system is Joint Financial Management Improvement Program (JFMIP) certified, meets and exceeds numerous Federal Financial Management System Requirements, and is CFO capable. This system is based on Oracle Federal Financials and includes a Federalized General Ledger utilizing the USSGL at the detailed transaction level, along with federalized modules for Accounts Receivable, Accounts Payable and Purchasing. In addition, Oracle commercial modules supporting project costing, project billing, inventory and fixed assets were implemented. Finally, for internal reporting and presentation of decision-making information, MSC developed a financial data mart.

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Accounting

Investment Description and Justification

Short Description

Integrated Management/Processing System (IMPS) is NRL's Business System. It includes Accounting, Funding, Budgeting, Billing, General Ledger, Labor, Procurement, Inventory Management, Cash Processing, and Asset Tracking.

Full Description

IMPS is integrated software made up of numerous modules. The modules and functionality of IMPS are as follows: ----- The Accounting, Billing, and Cash System (ABCS) is used to record financial transactions and related information to the General Ledger and DONIBIS FPD reports, consolidate all financial data from JOCAS to the Job Order/Source Code/Funding Document levels, to calculate/process reimbursable billings, and to process all cash transactions. The Automated Internal Costing of Supplies module (AICS) supports the operation of NRL stores of materials and supplies. The Asset Management System (AMS) is used to track buildings, land and plant property owned by NRL as well as Sponsor Owned Equipment. The Funds, Allocation, and Budgeting System (FABS) is used to record information relevant to incoming funding documents and lines of accounting, to establish allocations of funds to job orders and to record Job Order and Function Budgets. Additionally, FABS is used to record bill codes, stabilized rate standards, cross-charging privileges and other reference information. The Job Order Cost Accounting System (JOCAS) is used to accumulate all commitment, obligation, cost and expenditure data at the Job Order level. The Procurement Information Processing System (PIPS) is used to process all Small Purchase and Major Contract Procurements, as well as Procurements from other government activities (outgoing funding documents).

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Accounting

Investment Description and Justification

Short Description

VAMOSC supports cost analysis in performing cost cost analyses.

Full Description

The Naval Center for Cost Analysis (NCCA) is responsible for both the Naval VAMOSC System and the NCCAWeb System, hereafter referred to as the Naval VAMOSC Application System. NCCA's organizational mission is also to guide, direct and strengthen cost analysis within the Department of the Navy; to ensure the preparation of credible cost estimates of the resources required to develop, procure and operate military systems and forces in support of planning, programming, budgeting and acquisition management; and to perform such other functions and tasks as may be directed by higher authority. The Naval VAMOSC Application System supports this mission by providing cost and non-cost data collection and reporting of US Navy and US Marine Corps historical weapon system operating and support (O&S) costs. OSD PA&E provides executive oversight for the Services' VAMOSC programs. Naval VAMOSC Application System collects and reports the historical operating and support costs of Navy and Marine Corps weapon systems and personnel. Data is collected from over 130 unique sources that contains over 1200 unique data elements. Some of the raw data is collected from these sources in an automated approach, while others are files provided manually by individual program offices. Business intelligence software provides the user interface. Registered DoD users may access the data from the websites using a browser. Funding provides for source data collection, updating of internal dictionary tables, database operations and maintenance, data quality assurance, system administration, user documentation, user conference logistics, training, special analyses, website support, user account maintenance, and user support. Funding also pays for the operations and support of the Operating and Support Costs Analysis Model that is populated with VAMOSC data. Many of these tasks are currently outsourced. Although the Naval VAMOSC Application System is in maintenance mode for many of the ongoing systems, enhancements are continuously being evaluated to make the system more manageable and applicable to the user environment. Enhancements have typically been limited to the inclusion of additional data elements (e.g., food costs on ships) collected from VAMOSC sources as they became available, but also entirely new data sets are being added to the database as new information is uncovered.

Investment Description and Justification

Short Description

A client server or stand alone source data automation and funds tracking tool used widely by Navy and supported by the ASN (FM&C), FASTDATA is comprised of two modules: fund administrator (FA) and SITE (i.e. cost center).

Full Description

The FASTDATA system performs the following functions: Automates and standardizes accounting record keeping Automates the creation of source documents and capture of cost tracking information Captures accounting transactions at the source Automates document control logs and memorandum records Provides information regarding funds management at the local user level Automatically generates accounting transactions and document number assignments Eliminates redundant data entry, input errors, and duplicate documents and obligations Automates the bookkeeping associated with the maintenance of site records Provides import and export capabilities for obligations, job orders, and expenditures Improves the accuracy and timeliness of accounting data Provides up-to-date status of available funds Does not require advanced knowledge of accounting and accounting system procedures Does not require connection to the mainframe accounting system Can interface with supply, accounting, budget, and travel systems Allows the FA to control a site's access to documents and menu options

Investment Description and Justification

Short Description

BPS tracks requirements and costs for developing the OPN/WPN Spares and Repair Parts Budgets.

Full Description

BPS is a budget development program that supports nearly \$500M in NAVSEA OPN Outfitting Spares, SCN Outfitting Spares, and SCN Post Delivery annual funding requirements. BPS calculates budget requirements and is utilized in preparing numerous POM/PR, Capability Plan, and budget submittals, as well as for regular data calls and short fused financial drills from DASN, OPNAV, FMB, and Fleet/TYCOMS in the Navy budget chain.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Accounting

Investment Description and Justification

Short Description

ACES is a software application which resides on the client PC running Windows NT 4.0/Windows 2000. ACES tracks aviation costs by allowing the input and import of Budget Optar reports.

Full Description

The Aviation Cost Evaluation System (ACES) is a Commander Naval Air Forces (CNAF) web application system that is the joint flying hour cost collection system used by Commander, Naval Air Forces, U.S. Pacific Fleet (COMNAVAIRPAC) and the Commander, Naval Air Forces U.S. Atlantic Fleet (COMNAVAIRLANT). ACES is essential for the effective management of the Naval Flying Hour Program (FHP) (includes Navy and Marine) and for all up-line reporting requirements for the Type Commander staff, subordinate commands and higher authority. ACES functionality covers three major areas: Flying Hour Execution, Budget and Planning. ACES resides on a Win 2003 web/database server. ACES tracks Naval Aviation costs by allowing the input and import of Budget OPTAR Reports, Air Station Flying Hour Cost Reports, and other Type Commander (COMNAVRESFOR and CNATRA) reports. Analysis is accomplished by providing 100 available reports within the system. The database consists of an Oracle Relational Database Management System (RDBMS). ACES is the software utilized to generate the Official Monthly Flying Hour Cost Report to OPNAV (N43). ACES captures all costs incurred in support of the FHP from various sources. This includes all Pacific (PAC) and Atlantic (LANT) aviation squadrons, aircraft carriers, MALS (Marine Aviation Logistic Squadrons), naval air stations and the Type Commander's headquarters. The flexible functionality of ACES provides the Aviation Type Commanders the tool to answer and fulfill ever-changing reporting requirements and any supporting data requested by the Office of the Chief of Naval Operations (OPNAV) in order to support the FHP for building/defending the budget. The types of non-financial data captured include: flight hours, aircraft #, and gallons consumed by fuel type (i.e., JP4/5/8, Comm, Into Plane). The financial data captured includes: aviation fuel, flight administration, aviation maint, contract obligations; contingency costs, reimbursable costs, and Defense Finance and Accounting Service (DFAS) adjustments. ACES has supported, since 1996, the requirement of producing an Official Monthly Flying Hour Cost report as the source data for OPNAV's Flying Hour Projection System (FHPS). OPNAV utilizes the FHPS to produce the \$6B FHP portion of the DoN budget. ASKIT is used by all Navy and Marine Aviation units to report fuel / squadron maintenance funds, flight hours, gallons expenditures, and aircraft #'s at the unit level. ASKIT data is imported into ACES.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

The BIS is an automated tool used to support PMRF's program management process which includes planning, estimating, budgeting, timecards, credit cards, travel and contractor cost tracking. Information is entered once and validated at its source.

Full Description

The Business Information System (BIS) is used to provide cost data for the United Range Reporting List (URRL) per Navy instruction COMUSFLTFORCOM/COMPACFLTINST 3624.1B from the U.S. Fleet Forces Command N73 (coordinator of all fleet training range requirements with the Navy Range Office (NRO) , OPNAV N433). Additionally, BIS is the source of data for the Uniform Financial Management System for the DOD MRTFB. BIS IS AN AUTOMATED TOOL (WEB-BASED) USED TO SUPPORT PMRF'S PROGRAM MANAGEMENT PROCESS WHICH INCLUDES PLANNING, ESTIMATING, BUDGETING, TIMECARDS, CREDIT CARDS, TRAVEL AND CONTRACTOR COST TRACKING. INFORMATION IS ENTERED ONCE AND VALIDATED AT ITS SOURCE. AUTOMATIC DATE AND FUNDING LEVEL CHECKS ARE BUILT INTO THE SYSTEM. ROLLING UP OPERATIONAL DATA AND TRANSFERRING IT ELECTRONICALLY TO STARS/FL HAVE ELIMINATED A SIGNIFICANT AMOUNT OF MANUAL DATA INPUT INTO STARS/FL. IN ADDITION, ALL PMRF COSTS ARE ENTERED WITH AN ASSOCIATED FUNCTION SUPPORT UNIT (FSU). FSU COST TRACKING ALLOWS RANGE PERSONNEL TO TRACK THE COSTS OF SUPPORTING AND MAINTAINING SPECIFIC ITEMS, DOWN TO THE RADAR. THIS LEVEL OF GRANULARITY IS REQUIRED TO POPULATE THE MAJOR RANGE TEST FACILITY AND BASE (MRTFB) EXHIBITS AND BUDGETS.

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Budget Formulation

Investment Description and Justification

Short Description

SARMIS was developed to help FMD facilitate its budget submission throughout the fiscal year. SARMIS is composed of multiple modules, based upon business function.

Full Description

The Secretariat Automated Resource Management Information System (SARMIS) is an operational Financial Management System & major application within DON Secretariat. SARMIS categorizes, quantifies & tracks resources required to meet strategic goals & daily core business functions including Budget Submitting Office (BSO), Principle Administrative Office (PAO) & Secretariat Review Board (SRB) Resource Sponsorship. SARMIS functions as the primary repository of management & financial information & provides capability to review, perform analysis, compose & produce quality planning, programming, budgeting & financial execution materials. SARMIS holds & reports to Secretariat Activities all major command & financial, manpower, payroll, & budgetary data through all cycles of DOD Planning, Programming, Budgeting & Execution System (PPBES) process. SARMIS enables Secretariat & DON AA Comptroller to efficiently execute statutory, OSD, DON & agency mandated financial management duties during PPBES process. SARMIS is a mission essential system designated as Mission Assurance Category (MAC) III processing sensitive unclassified information in system high mode of operation. SARMIS serves the entire Secretariat. DON AA users are Financial Management Division Analysts who rely on SARMIS to perform budget formulation, adjustment, tracking & execution functions. SARMIS is single repository used by Secretariat to meet requirements of DOD Budgetary Process. SARMIS data elements mirror official DON Program/Budget Information System (PBIS). SARMIS enhances BSO ability to directly update, extract & analyze budget information. SARMIS allows for standardization of command fiscal data. SARMIS is utilized to establish BSO budgetary controls, funding controls, detail budget & execution audit trails by categories, issue paper preparation & programmatic budget review materials. SARMIS provides financial data for FMD budget submissions, budget execution, pricing/projection of civilian labor, budget exhibits & budget justification materials to FMB. SARMIS is utilized as BSOs single budgetary source for PBIS updates, preparation of POM/SRB input, appropriation allocations, repository of BSO civilian payroll data & official month-end execution data, BSO military manpower tracking, BSO civilian table of organization, ceiling cards & management reporting. SARMIS is analytical tool to build reclamation, identify trends, track marks, review historical budget/execution data.

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Accounting

Investment Description and Justification**Short Description**

TRFIS is comprised of 15 modules that cover multiple administrative functions such as Manpower, Training, Comptroller, Budgeter, Financial/Accounting, Manage-To-Payroll, Beneficial Suggestions, Security, Telephone Management, Hazardous Materials, etc.

Full Description

TRFIS will be used by management and employees to make and support managerial decisions. It provides managers with a current financial and personnel status. Data is used to support management decisions and to prepare briefs and presentations for Commanding Officer. -Manage-To-Payroll module provides tracking for labor dollars segregated by different pay types and by direct and reimbursable. -Comptroller module is used to establish cost centers, establish job orders, develop funding allocations, and to develop and monitor quarterly spending plans. -Financial Module provides a current status of financial position and serves as a means to balance TRFIS data against STARS (STANDARDIZED ACCOUNTING & REPORTING SYSTEM). -Budget module is used to track encumbrance documents and to obtain financial status. -Manpower Module provides a means to track all personnel data such as employee Billet control numbers, grade level and positions. It also downloads data into the timekeeping system CRMM. CRMM creates an electronic timecard for each employee in TRFIS. This module also incorporates our Beneficial Suggestion applications which allow Manpower to input & track Beneficial Suggestion received throughout the command and provides departmental resource managers an ongoing status of Beneficial Suggestions submitted. The Manpower module provides a means of generating command labels for printing labels for command wide disbursement of correspondence to each employee (VERA/VSIP letter for example). Labels include employee name, title, and department)-Military Admin Module – similar to Manpower module but maintains information on Military personnel only.-Training Module is an automated means of tracking Annual Training Plans for each employee. Allows resource managers to identify & select mandatory command training, work center requirements based on position, choose from a vendor catalog of courses, set priority of individual training courses for employees, schedule training.-Security Module is used by our command Security branch to maintain and assign records of each TRF employee's (including contractors) security clearance, their access to TRF restricted areas (badge access), completion of security based mandatory courses, any Letter of Intent and Letter of Notification on security issues if warranted, and employee Courier Card access. This module also maintains the status of security containers (safe number, date of combination change, classification, dept, and custodian

Investment Description and Justification

Short Description

Collects local data to generate DIFMS interfaces for SCCs, Reqs and Just-in-Time contracts. Supports NUWC's Exec Business Info Sys. The Cust Order Doc Retrieval uses DIFMS files to support the Acct Dept in the closure of Funding Struct.

Full Description

The Accounting System Interface (ASI) is utilized by NUWCDIVNPT to fulfill reporting and processing shortfalls within Navy ERP (NERP). Prior to the conversion and transition to NERP, ASI served a similar function within the legacy environment. ASI is a diversified system that collects NERP and/or local data to generate reporting, data processing, and query/analysis capabilities for the following business functions:-Enterprise incident tracking-Undistributed labor-Labor Transfers -Travel comp time-Service Cost Center query

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

Financial information and status query and reporting system. DWAS version.

Full Description

BIMS is a query-only system containing business and financial information from the source accounting system, Defense Working Capital Accounting System (DWAS). This relieves DWAS of the reporting and querying workload, and makes the business data widely available to users across the NAVFAC organization. BIMS contains predefined standard queries that provide status of customer funding as well as other financial information. NAVFAC users can modify the standard queries to create new queries and reports, and can save custom reports to the database that can then be shared with other users.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Budget Formulation

Investment Description and Justification

Short Description

Compliance with NAVAIR and OSHA standards. It is comprised of three major modules: Civilian Manpower Module. The Civilian Manpower Module implements Department of the Navy (DoN) comptroller standardized Civilian Manpower pricing techniques.

Full Description

NOMBERS supports the NAVAIR Comptroller, AIR-10.1.3, in meeting Navy Budget reporting requirements for operations and maintenance, and manpower budget reporting. The system 1) implements DoN Comptroller standardized civilian manpower pricing techniques at each accounting level within NAVAIR and consolidates NAVAIR field activity budgets into an automated CP-2 claimant submission as required by the DoN Comptroller; 2) implements standardized O&M, Navy pricing techniques at each accounting level and consolidates NAVAIR O&M,N programs into an automated OP-32 claimant submission as required by DoN Comptroller; 3) maintains accurate DoN budget controls, revised at each budget submission and is the primary means of distributing those controls to NAVAIR Program Managers. It is comprised of three major modules: Civilian Manpower Module. The Civilian Manpower Module implements Department of the Navy (DoN) comptroller standardized Civilian Manpower pricing techniques at each accounting level (i.e., Appropriation, Budget Activity, Activity Group, and Sub-Activity Group) within NAVAIR. The module is responsible for consolidating NAVAIR field activity budgets into an automated claimant submission as required by DoN comptroller. The module also provides and maintains official NAVAIR Civilian Manpower budget data (CP-2 and CP-3 Exhibits) in archival format. OP-32 Report Building Module. The OP-32 Report Building Module ensures that standardized Operations and Maintenance, Navy (O&M,N) pricing techniques are used at each accounting level (i.e., Appropriation, Budget Activity, Activity Group, and Sub-Activity Group) of the NAVAIR budget. The module is responsible for consolidating NAVAIR O&M,N programs into an automated claimant submission as required by DoN comptroller. The module also maintains official NAVAIR O&M,N as well as Operations & Maintenance, Navy Reserve (O&MN,NR) budget data (NC-1, PB-15, PB-18, PB-18a, OP-26, and OP-32 Exhibits) in electronic format. Funding Controls Module. The Funding Controls module maintains accurate records of DoN budget controls, revised at each budget submission, in electronic format for current and archival use. The module tracks changes in budget controls by budget issue and by program. It is used as the primary means of distributing budget controls to program managers.

Investment Description and Justification

Short Description

This system will allow Business and Strategic Planning Office (BSPO) reps to have all the information they need to administer funds and report to Shipyard customers.

Full Description

THIS SYSTEM ALLOWS BUSINESS AND STRATEGIC PLANNING OFFICE (BSPO) REPS TO HAVE ALL THE INFORMATION THEY NEED TO ADMINISTER FUNDS AND REPORT TO SHIPYARD CUSTOMERS. THE INFORMATION IS PROVIDED AT THEIR FINGERTIPS AND ALSO ALLOWS THE BSPO REPS TO COMMUNICATE WITH OTHER RELATED APPLICATION SYSTEMS AND THEREBY ALL THEIR COUNTERPARTS AROUND THE SHIPYARD. THIS APPLICATION AUTOMATES THE CAPTURING OF DATA FROM COST/OSE FOR THE WEEKLY COAR DATA, FOR THE EXPENDITURES FOR EACH NEW WORK ITEM IN THE NEW WORK LOG, AUTOMATES ESTIMATE AUTHORIZATION REQUIREMENTS TO A PAPERLESS SYSTEM, AS WELL AS REQUESTS FOR ESTIMATES, CAPTURES ALL BSPO COARS IN ONE DATABASE AS WELL AS ALL INCOMING FUNDING DOCUMENTS AND ALL OUTGOING WORK REQUESTS, PURCHASE ORDERS, AND RCPS. IT ASSIMILATES INFORMATION FROM DIFFERENT SYSTEMS THAT IN THE PAST WERE ONLY DONE BY SEARCHING DATA AND INSERTING IT MANUALLY.

Investment Description and Justification

Short Description

Provides a spectrum of support that includes: order writing, funds management, cost computation, administrative and financial feeder transactions, reports, and order retrieval services.

Full Description

MCORS provides users throughout the ACT and RES Marine Corps a spectrum of support that includes: order writing, funds management, cost computation, administrative and financial feeder transactions, reports, and order retrieval services. MCORS is a permission and role based automated order writing program suite for Permanent Change of Station and Temporary Additional Duty orders that support the ACT and RES components when applicable. MCORS supports all permanent duty travel orders for ACT and RES regardless of the order issuing authority; including authority for In-Place Consecutive Overseas Tours, Overseas Tour Extension Incentive Program, and Early Return of Dependents. MCORS supports the entire RES community for all call to duty orders in support of both ACT and RES component missions. MCORS computes the applicable entitlement for the order that encompasses pay, travel and per diem, transportation costs based on various business rules for each individual order created within the system. All computations are based on upon standard per diem tables, city pair tables, the Marine Corps Total Force System (MCTFS) pay tables, Surface Deployment and Distribution Command (SDDC) Rate tables, and order personnel/location information. MCORS leverages information received nightly from the MCTFS as the basis for orders creation, cost computations, orders repository, and itinerary creation. MCORS also provides published order information back to MCTFS for updating of the appropriate MCTFS Remarks and type transaction codes. Data is also exchanged with the Standard Accounting, Budgeting, and Reporting System (SABRS) via standard common transaction layout files on a daily basis in support of multiple Marine Corps appropriations (Military Personnel Marine Corps (MPMC), Reserve Personnel Marine Corps (RPMC), Operation and Maintenance Marine Corps, (O&M), and DoD appropriations. The interfaces between SABRS and MCORS are bi-directional. In addition, MCORS also provides a single repository for all call to duty orders for RES and permanent duty travel orders regardless of the issuing authority. The publish, search and retrieval functionality is available for reserve orders directly from the system while PDT orders are accomplished via a series of web services that are integrated into several enterprise systems/applications to include Unit Diary/Manpower Integrated Pay System (UD/MIPS), Document Transmittal Management System (DTMS), and Marine on Line (MOL).

Investment Description and Justification

Short Description

ABS/BES is the standard Naval Facilities Engineering Command automated budget and execution system.

Full Description

Budget formulation for Navy Working Capital Fund (NWCF). NAVFAC standard system to identify manpower (overhead and direct employees) by work and cost center. Calculates straight and overtime rates, average salary rates and overhead labor costs by Cost Center and Labor Category. Identifies overhead non-labor cost, direct commodity labor and non-labor costs. Computes revenue by Commodity Type Service based on Billable Units and Rates. Computes NOR and AOR by Commodity and Cost Center. Generates budget trends and reports of actual cost and historical data.

Marine Corps Financial Integrated Analysis System (MCFIAS) consists of 3 modules or capabilities referred to as PBE, SMARTS, Q-Records.

Full Description

DRAFT DESC SHELL: Marine Corps Financial Integrated Analysis System (MCFIAS) consists of 3 modules or capabilities referred to as PBE, SMARTS, Q-Records. PBE module: Consists of 4 sub-modules: Programming & Budgeting Documentation Database (PBDD), Civilian Personnel Information Management System (CPIMS), Current Year Deficiencies Database (CYD) and CMC Unfunded Programs List (UPL). PBE is used by over 600 people worldwide. PBDD is the principle capability used by USMC Programmers to build the Program Objective Memorandum (POM) for submission to US Navy. Housing multiple years of historical data, PBDD allows for the organization to view at any given moment the Commander's Intent for submission for the President's Budget. CPIMS is used to track account monthly for the total number of personnel in the USMC; this information is then provided to Navy. Both CYD and UPL are used internally to validate and stratify the unfunded needs of a command; the information gained from both allow the leadership to make informed decisions. The SMARTS module provides Marine Corps and DFAS customers world-wide access to USMC accounting data.

Horizontal Variance

USFF HQ Support (Info Tech, IEMS, TRIMS, RIMS) (007-000100703 - USFF HQ Support)

Budget Line Horizontal Variance Explanation

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$18,042) | |

Horizontal Change Explanation

Total decrease due to a variance resulting from scope changes in support of: reduction in shipboard network migration support requirement as a result of lesser number of CNO Availabilities scheduled in FY21; reduction in Maintenance Figure of Merit (MFOM) modeling requirement as NIWC extracts efficiencies in their modelling efforts; requirement eliminated by rationalization of Regional Maintenance and Modernization Coordination Office (RMMCO) functionality into the Navy Data Environment (NDE);

Investment Level Details

Financial Improvement Audit Readiness Transaction Universe (007-000101029 - FIAR TU)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18275 - Undergo audit, and improve the quality of budgetary and financial information that is most valuable in managing the DoD

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 500-000 - Financial Management

OMB Sector/Function/Service:

General Government / Other general government / Disaster Preparedness and Planning

Investment Description and Justification

Short Description

Audit requirements to sustain the Transaction Universe in the Navy Business Intelligence Service (NBIS) environment.

Full Description

Audit requirements to sustain the Transaction Universe in the Navy Business Intelligence Service (NBIS) environment.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Customer Services

Investment Description and Justification

Short Description

Supports all areas of the Infrastructure Division's mission by providing centralized intra-division access to sensitive and functionally required maintenance, engineering, GIS and related Infrastructure Division facility data.

Full Description

The Infrastructure Division Data Lab (IDDL) supports all areas of the Infrastructure Division's mission by providing centralized intra-division access to sensitive and functionally required maintenance, engineering, GIS and related Infrastructure Division facility data. The servers host a GOTS web site that provides access to over 18,000 facilities related drawings with extensive search capabilities. These servers also serve as a license server to the COTS estimating and COTS ARCGIS software used by the Infrastructure Division. Highly secured file storage and sharing for the NSWCPD Infrastructure Division personnel and selected other employees that interact with the Infrastructure Division is also provided by this system. These servers are highly utilized and are part of well-established Navy business processes. Any loss of this system would cause a severe impact to the services provided by the Infrastructure Division.

Investment Description and Justification

Short Description

This web server hosts the web-based applications AMT, DCI, FIPMT, ICRTC, MCP CBT EVAL, MCP SAST, NIPPD, SOAT for the Financial Management Operations branch of FM&C.

Full Description

The FMO Information Suite (FMOIS) supports the DMO's mission to administer and supervise the FMO Public Information Website, the SOAT, AMT, FIPMT, FMG, MCP SAST and BRT. The Public Information Website provides public information on the FMO Operation. The Statement of Assurance Tool (SOAT) application, DADMS ID 41456, supports the Assistant Secretary of the Navy FM&C FMO in collecting and consolidating information needed to produce the DON Statement of Assurance. The Audit Management Tool (AMT) application, DADMS ID 41452, provides complete information pertaining to audit-related correspondence received and reviewed by the FMO in fulfilling its responsibility as the principal DON cognizant office for financial management issues. The system supports FMO's audit liaison function by providing the means to capture and document the critical data relevancy to FMO, and dates associated with audit liaison action. It positions FMO for reports, final reports and audit follow-up requests, ensuring compliance with statutory Instructions and DoD Directives that implement pertinent sections of OMB Circular A-50 and the GAO Standards for Internal Control. The FIPMT helps the DMO administer Financial Improvement Planning for the Department of the Navy. The application functions as a repository for plans and supporting documentation, a storage facility for assertion packages, manage funding requests, and a collection site for status reports. The Financial Management Guidance (FMG) application, DADMS ID 57516, application is dedicated to providing end users with the guidance needed to carry out key end-to-end business processes. The guidance manual presents best practices for handling day-to-day financial operations by identifying purpose, scope, procedure, and helpful resources for each core business process. The Management Control Program Self Assessment Survey Tool (MCP SAST) application, DADMS ID 41418, is used to conduct individual surveys on the internal controls within individual DON commands/activities. This provides a security type check for all of the DON processes and can best be described as a health assessment for an organization within DON. The Budget Request Tool (BRT) application, DADMS ID 84637, is used to submit, review and approve budget requests by Navy personnel. In addition it maintains a record of all requests submitted via the tool.

General Government / Central fiscal operations / Budget Execution

Investment Description and Justification

Short Description

PRISMS is a financial system for planning, issuing documents, funding and managing contracts.

Full Description

"The PRISMS application is the standard NAVSEA financial management system used by all NAVSEA PEOs and directorates. It provides users with data entry and reporting capability, specifically to input/update budgetcontrols; create/modify funding execution documents and project directives; create plans with a link to the execution funding documents; manage contract ceilings, labor-hours, funding and periods of performance;and monitor execution status. Both task plans and execution documents include the NAVSEA Cost Structure which contains a standard NAVSEA Work Breakdown Structure and associated Functional Cost Elements (FCE). The PRISMS application electronically passes document files to the NAVSEA Automated Funding Document System (AUTODOC) application to process electronic funding documents. It also receives a weekly upload of STARS execution information provided by SEA 01 via data files. The application supports all appropriations including Other Customer Funds and Foreign Military Sales. PRISMS is an Oracle application and is accessible via the web. It is housed on government servers resident within the Washington Navy Yard and requires PKI access. Each user also requires an individual user ID and password, which determines the breadth (e.g., appropriations, organizations, document types) and depth (e.g, read-only, read/write) of the PRISMS' functionality available to the user."

Investment Description and Justification

Short Description

CFMS is an unclassified web enabled Financial Management System. FFC,CNMOC, NETWARCOM,CNI,FSA, FASWC, MARFPCOM, NSAWC, NAVELSF, CNE, Type Commanders and Regional Managers utilize CFMS to support budget formulation, execution and managerial analysis.

Full Description

The Command Financial Management System (CFMS) is designed for reporting and managing the Command's financial resources and allows users to budget, manage, and expend financial resources. The program is sponsored by Commander Naval Installation Command and is currently used by all activities reporting to the command. System outputs include Budgetary Exhibits, Funding Allocation Documents (Operating Targets (OPTARS), Operating Budgets (OBs) etc.) and Encumbrance Documents (Project Orders (POs), Work Requests (WRs), MIPRs, etc.).

Investment Description and Justification

Short Description

AutoDoc is web-based system using full https connectivity. AutoDoc maintains a central document database containing all funding documents that are created in NAVSEA Headquarters.

Full Description

AutoDoc provides an on-line environment where NAVSEA users can create financial documents. Users in Program Offices with their own Financial Management Information Systems (FMIS) can still create financial documents on their own system. AutoDoc automatically collects those documents through Transaction Parsing EFTS System Enhancement (TRAPESE), an ancillary program used to interface between AutoDoc and various financial systems. In either case, document originators access AutoDoc for a document number at the beginning of the process, and are able to track the progress of documents through AutoDoc. TRAPESE connects to the FMIS and AutoDoc to collect documents and forward them between systems. Depending on the document type, the document is processed through AutoDoc in a variety of ways. Different document types take unique processing and decision paths depending on the business rules for that document type. The FADS process is shown because it illustrates that TRAPESE must interface with external systems frequently as a document is processed. AutoDoc performs extensive data validation on documents prior to submission to external accounting systems, to minimize the number of rejections from those external systems. One of the systems that TRAPESE interfaces with is STARS. Data that is transmitted to STARS flows through ancillary system, STRIPES. STRIPES accesses STARS for data entry, and retain audit information of the data that was transmitted.

Investment Description and Justification

Short Description

Implementation of the Department of Treasury's Invoice Processing Platform (IPP) service with the Department of Navy's (DON) financial systems of record to address deficiencies in Intra/Inter Governmental Transfer (IGT) payment processing.

Full Description

This investment supports the implementation of the Department of Treasury's Invoice Processing Platform (IPP) service with the Department of Navy's (DON) financial systems of record to address deficiencies in Intra/Inter Governmental Transfer (IGT) payment processing. IPP is an end-to-end automated shared service solution for IGT business specific buy/sell activities. IPP will improve the reimbursable work order process for compliance with financial audit standards as well as provide standardization for DON.

Organization Architecture Profile**

Architecture Profile

DoD Segment 510-000 Acquisition

Architecture Budget Justification

The Navy's strategic goal of system and process rationalization and modernization extends to acquisition initiatives as well. The Navy Electronic Procurement System (ePS), UII 007-000005841, supports a modernization effort to replace the DON's legacy Contract Writing Systems (CWS) and other ancillary procurement systems or portals, to include the Standard Procurement System (SPS) (i.e., the Navy substantiation of Procurement Desktop Defense (PD2)), Integrated Technical Item Management and Procurement (ITIMP), SeaPort-e, and PRISM systems. These procurement systems write and manage the majority of DON's contracts under ten (10) Heads of Contracting Activity (HCAs). Consequently, ePS is targeted to consolidate the functional capabilities of multiple legacy systems into an integrated solution. SPAWAR Acquisition Capabilities System, UII 007-000002798, the Science and Technology System (S&T), UII 007-000003918, and Naval Air Systems Command (NAVAIR) Science and technology Capabilities initiative, UII 007-000003919, further support system modernization and rationalization. SPAWAR supports information technology efficiency efforts by consolidating procurements, funding and management of all Oracle software across the DON. S&T resources the Information Technology infrastructure supporting the Science and Technology missions of both the Office of Naval Research and the Naval Research Laboratory. NAVAIR S&T supports miscellaneous projects, programs, special interest items, IT organizations and sub-initiatives in support of Science and Technology.

Investment Description and Justification

Short Description

SeaPort e-procurement portal, whose core is a commercial off the shelf (COTS) system, provides a secure automated procurement process that improves processing time, provides the ability to take advantage of numerous acquisition reform initiatives.

Full Description

The SeaPort Portal, whose core is a modified Commercial-Off-The-Shelf (COTS) system, provides a secure, automated procurement process, in which complex, professional support service requirements (with a value greater than \$2,500) can be planned and tracked, developed, solicited, source selected, awarded, and administered using the Naval Sea Systems Command's Multiple Award Contract (MAC) vehicle "SeaPort." This vehicle, which is available for use only by Navy Contracting Officers, is comprised of an established and controlled contractor community, each qualified and capable to compete for various professional, engineering, and technical support services. Based upon individual Program's unique requirements, solicitations are developed for each acquisition and a subset of the contractor community are provided an opportunity to offer customized proposals. Since the Portal is web-based, users around the globe are able to electronically receive, evaluate, and select winning proposals, using best value source selection methods, on-line and concurrently. Vendors use the Portal to upload proposals, Small Business Subcontracting Plan information, and other proposal requirements (excluding Representations and Certifications). Once selected, task orders are prepared and awarded using legally binding digital signatures. Task orders and modifications are generated by re-using the data captured during the requirements determination, proposal, and source selection processes, improving both the processing time and accuracy of contractual documents. Financial and Line item account information is exchanged with Navy financial systems. Additionally, solicitations, task orders and other contract documents are captured in an electronic resource library to provide models for future procurements. The e-procurement portal captures data on each step of the process to provide up-to-the-minute metrics and information required for Official Governmental reporting systems, such as PPIRS, EDA and FPDS-NG. The Portal also maintains the official contract file. This record also includes the Public Facing web-portal (eMASS ID 7782).

| Short Description PRISM is a Commercial-off-the-Shelf (COTS) Contract/Grant writing system. | |
| Full Description PRISM is a Commercial-off-the-Shelf (COTS) Contract/Grant writing system. It receives input manually or electronically from purchase request generation systems via Application Program Interfaces, uses the information to facilitate the solicitation, award, and administration of procurement and assistance instruments and provides various interfaces to standard Federal/DoD systems for vendor identification information, award reporting, and document storage/retrieval. Additionally, solicitations, orders, contracts, grants, and other documents are captured in an electronic resource library to provide models for future procurements. The system captures data on each step of the process to provide up-to-the-minute metrics and information required for Official Governmental reporting systems, such as EDA and FPDS. | |

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

Low cost internet based system for DoD and industry to do electronic commerce upon. NECO has established web based EDI, streamlining the basic procurement process and has gotten very strong first time involvement from the small business community.

Full Description

NECO is an internet based electronic commerce system that makes Navy procurements accessible to a greater sector of the business community. It avoids expensive investment on the part of the vendor, thus providing an incentive for his participation. It is compatible with existing and planned automated procurement systems. It does both electronic data interchange and internet electronic commerce. ATO request with SSAA submitted to NISTT 12 Sept 2006.

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Business Analytics

Investment Description and Justification

Short Description

Application in support of ASN (RDA) Procurement Performance Management Assessment Program (PPMAP), which directs each acquisition command to create a flexible performance-based system to access quality in acquisition management.

Full Description

The Procurement Performance Management Program (PPMAP) is an interactive database, which allows the paper-free exchange of information for all phases of the PPMAP process, which allows for oversight and examination of the procurement management of an activity. QASA is a support module for PPMAP, which directs each acquisition command to create a flexible performance-based system to access quality in acquisition management through standardized and automated reviews, records, and reports for the NFCS to implement ASN's requirement to establish a self-assessment program within the establish a PPMAP. Objectives: a. Support and automate the pre-audit preparation cycle as much as possible b. Develop standardized and automated reviews for the various contracts involved in the Quality Assurance audit. Provide the ability to react to changes to established standards. c. Develop a data structure that will provide for continued data analysis. d. Provide data analysis toolsets to allow the organization to more quickly and accurately analyze data, identify emerging problems, perform trend analysis, and share information throughout the organization regarding the Self-Assessment process. e. Provide the data necessary to identify and implement corrective actions on a near-immediate basis. f. Provide accurate and auditable records for each organization's Self Assessment. g. Provide a means for reduction in NAVSUP HQ PPMAP review team size and on-site time. h. Lay the groundwork for multiple future modules for other procurement organizations.

Investment Description and Justification

Short Description

CAEIMAS provides online financial reporting, production related processes and procedures, and contract information along with a data environment for work collaboration.

Full Description

The server provides process specific customized tools that are used by the CAEI Stand-Alone IPT and Platform Integration Sub-Portfolio. The custom tools are used for storing ISO documentation related to the CAEI Stand-Alone IPT processes, workflow for contract initiation actions, workflow for contract deliverable actions, Interactive storage of COR files, measurement and analysis of contractor performance, management of material ordered for the CAEI Stand-Alone IPT and Platform Integration Sub-Portfolio and creation of work build out material packages for production. Users upload pdf, word and excel documents and enter required information for the completion of contract related workflow processes, enter information about logistics operations, use the system to create integration material kits and upload files that are used in the documentation of processes for ISO and CMMI certifications. The tools are an integral part of the processes used by the CAEI Stand-Alone IPT and SSCC Sub-Portfolio to integrate and install equipment for use by the Navy.

Investment Description and Justification

Short Description

CAMIS is used to perform Post Award Administration on Science & Technology Contracts and Grants with Universities and Nonprofit Organizations.

Full Description

ONR has a DoD Wide mission to perform Post Award Administration on Contracts and Grants with Universities and a number of Nonprofit Organizations. This system is the tool used by ONR to execute this mission. It is specifically designed to facilitate cash management of grants and to ensure that universities are able to expend funds at a rate sufficient to protect ONR research budgets. It has a number of automated functions which support monitor performance, report submission, property administration and electronic invoice processing.

Investment Description and Justification

Short Description

Management Information System (MIS)--required by the Defense Acquisition Workforce Improvement Act to manage the career development of the DON Acquisition Workforce. The MIS is used to track and report acquisition workforce status.

Full Description

Compiles, consolidates, integrates, and maintains information about DON's civilian and military acquisition workforce of approximately 52,000 members. The system includes position, personnel, qualification, training, certification, and career field currency data. It provides data integration and workforce analytical and reporting capabilities to ASN(RDA), DACM, NACC, DON Commands, and workforce managers. DACM MIS is used to monitor workforce size and compliance with statutory and regulatory requirements of Defense Acquisition Workforce Improvement Act (DAWIA), DOD and DON issuances. It is the authoritative source for all recurring and ad hoc acquisition workforce reporting to OSD, ASN(RDA) and the SYSCOMs. Via unmodified COTS, it provides the framework and data for analysis of acquisition workforce composition, compliance, quality, and community health. The system is web-accessible by workforce managers worldwide.

Investment Architecture

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

Energy, Science, and Technology / General science and basic research / Scientific and Technological Research and Innovation

Investment Description and Justification

Short Description

This investment resources the Information Technology infrastructure supporting the Science and Technology missions of both the Office of Naval Research and the Naval Research Laboratory.

Full Description

This investment resources the physical Information Technology (IT) infrastructure and related support services for the Office of Naval Research (ONR) and the Naval Research Laboratory (NRL). This includes support to the Navy - Enterprise Resource Planning implementation, Knowledge Management, RDT&E Functional Area Management, and LiveLink (ONR's primary data repository system for acquisition documents). Resources cover labor, software licensing, hardware replacement, and hardware maintenance. This investment also includes services to High Performance Computing (NRL is a Distributed Center for Department's High Performance Computing Modernization Program) as well as security, accreditation, Designated Approving Authority, and related services to support the laboratory's needs in protecting resources and research.

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / Executive direction and management / Enterprise Architecture

Investment Description and Justification

Short Description

Provides a Master Catalog consisting common data sets with which enterprise architects shall build operational and system architecture products from and aid in the longer range objective of federating architecture efforts.

Full Description

The Marine-Air-Ground Task Force (MAGTF) Collaborative Environment (MCAE) supports a standard framework methodology and processes to generate reusable architecture data to support USMC applicable Joint Capability Areas, Joint Capability Interoperability Development System documentation, and Department of Defense (DoD) Architecture Framework products. Initially, MCA shall provide architects a Master Catalog consisting common data sets with which architects shall build operational and system architecture products from. Use of common data sets allow consistent representation across architecture development efforts and will aid in the longer range objective of federating architecture efforts. It is the goal of the architecture community to have these data sets recognized as Architectural Authoritative Data and to have MCAE recognized as the Authoritative Data Source (ADS) of this architecture data.

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

BIMS is a data entry and reporting vehicle that supports life cycle mgmt of boats, combatant craft, and service craft from initial delivery to deactivations. Performs defined functions.

Full Description

In accordance with DoD OPNAVIST 4780-6d, BIMS has been determined to meet the criteria of an Automated Information System (AIS) Application. BIMS is a data entry and reporting vehicle that supports life cycle management of boats, combatant craft, and service craft from initial delivery to deactivation. BIMS performs clearly defined functions: Provides information on the development, planning, programming and budgeting of alterations; Maintains records of the transfer ownership, disposal, material condition status, and overhaul schedule; Provides information on the repair and maintenance of specific hulls; Provides information on the management and control of boats and combatant craft inventory; Provides information on the management and condition assessment of service craft. BIMS is a combination of software and hardware that performs a specific support function across a range of missions.

Navy Electronic Procurement System (007-000005841 - Navy ePS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18275 - Undergo audit, and improve the quality of budgetary and financial information that is most valuable in managing the DoD

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Major - High Value IT Investment (HVII) Tier 1

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

The Navy Electronic Procurement System will provide contract writing capability, will assume capabilities of the Standard Procurement System, meet the needs of the Navy's Contracting Activities, reduce ancillary systems, and support auditability.

Full Description

Electronic Procurement System (ePS) will be a Commercial-off-the-Shelf (COTS) end-to-end (E2E) system capable processing of contract requirements electronically from inception to closeout, while incorporating flexibility to interface with other electronic systems as necessary.

The ePS is a modernization effort to replace the DON's legacy Contract Writing Systems (CWS) and other ancillary procurement systems or portals, to include the Standard Procurement System (SPS) (i.e., the Navy substantiation of Procurement Desktop Defense (PD2)), Integrated Technical Item Management and Procurement (ITIMP), SeaPort-e, and PRISM systems. These procurement systems write and manage the majority of DON's contracts under ten (10) Heads of Contracting Activity (HCAs). Consequently, ePS is targeted to consolidate the functional capabilities of multiple legacy systems into an integrated solution.

The ePS will deliver the following functional/technical capabilities:

- Provide robust functional capabilities to support the E2E Procure-to-Pay (P2P) process
- Capture data at the source (i.e., no redundant data entry via touch labor)
- Leverage a data-centric and DoD/DON standard-compliant design for data storage and exchanges
- Provide industry partners with a web-enabled interface to support procurement communications and actions
- Enforce business process controls and system controls to support a clean audit opinion
- Inform decision making through available, accurate, timely, and visible reporting and metrics
- Comply with DON-specific architecture, cybersecurity, and environmental constraints (e.g., Navy/Marine Corps Intranet (NMCI) and Outside Contiguous US (OCONUS) Navy Enterprise Network (ONE-NET))
- Deliver a flexible solution that allows changes to be made promptly and cost effectively
- Support 100% of the DON contracting actions in a fully auditable and traceable environment

**IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification**

Navy Electronic Procurement System (007-000005841 - Navy ePS)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

The electronic Procurement System (ePS) is the Department of the Navy's (DON) End-to-End (E2E) Contract Writing System (CWS). It will provide the Navy and Marine Corps contracting community with a full contract writing management capability and facilitate integration with federally mandated systems, DON financial systems, and industry. The ePS will utilize Department of Defense (DoD) standards and support auditability. The ePS will address existing CWS challenges including outdated architecture, limited capabilities, scalability concerns, and existing legacy systems.

Full deployment of the ePS ensures compliance of the DON's contracting abilities with the following legislative mandates: the writing and management of all contracts must now occur in congressionally approved computer systems (Section 862 of the National Defense Authorization Act (NDAA) of 2013); the central management and oversight of all DoD business (10 U.S. Code (U.S.C.) Section 2222); and all contracting actions must be fully auditable and traceable (Section 1003 of the NDAA 2010 & Office of the Secretary of Defense (OSD) Financial Improvement and Audit Readiness (FIAR) Guidance).

The ePS will use DoD data exchange capabilities (e.g.; Procurement Data Standard (PDS) and Purchase Request Data Standard (PRDS)) in order to achieve standardized data interoperability with external systems. The Navy Enterprise Service Bus (NESB) serves as the hub to relay procurement data to various finance and other systems of record, such as Navy Enterprise Resource Planning (Navy ERP), Standard Accounting & Reporting System (STARS) and Standard Accounting Budgeting & Reporting System (SABRS).

IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification

Navy Electronic Procurement System (007-000005841 - Navy ePS)

Major Investment Business Case

Description and Justification

Return on Investment

ePS is the procurement and enhancement of a Commercial Off-The-Shelf (COTS) Contracting Writing System (CWS). The expectation of these enhancements is to enable the retirement of all legacy systems to include SPS, ITIMP, SeaPort-e, and PRISM. This alternative will incorporate an open-source ESB that provides an insulating interfacing capability for the CWS as well as integration, maintenance, and implementation efficiency within the DON environment. Based on the 2016 Economic Analysis, The ePS solution showed annual savings of \$24.19M per year during sustainment and the cumulative benefits exceeded the investment costs in FY29. In addition to being more cost efficient, the ePS is the preferred alternative because:

- It has a centralized enterprise capability that will reduce operating costs and increase efficiencies
- Its data centricity will reduce training costs and eliminate work redundancies
- The new financial systems interfaces for audit-ready E2E procurement will eliminate manual entry of financial data; reducing data errors and enable a more efficient use of manpower
- Utilizing DoD data standards will increase data consistency, auditability, and data sharing across organizations
- The use of Electronic Contract Files will reduce space and paper needs while improving access to historical data

The result of a successful ePS implementation will be a contracting process workforce well informed and completely empowered to writing accurate and timely contracts in support of the warfighter, including management of the data flows into and out of the deal making space.

Budget Justification

FY 2021 Research, Development, Test, and Evaluation, Navy (RDTEN) funding is required for:

Complete Release 1 (R1) Deployment

- o Complete user training for R1 users
- o Complete testing for R1
- o Complete data migration mocks and cutover for R1 legacy contracting writing system instances
- o Complete user training and begin over the shoulder support for R1 users

Begin Release 2 (R2) Deployment to over 3,000 additional critical users

- o R2 software licenses
- o Initial gap closure efforts for R2 planned requirements
- o Initial Interface development and testing for additional R2 financial systems including FACMAN, CFMS, FASTDAT,DMLSS, DWAS, STARS-HCM and GFEBS
- o Complete R2 Build Technical Review (BTR) and Fielding Technical Review (FTR)
- o Begin integration testing for R2
- o Update training materials

FY 2021 Operation and Maintenance, Navy (OMN) funding is required for license renewals supporting limited deployment and help desk support

FY2020 Accomplishments

Current year (CY) (FY 2020) funding supports the following Electronic Procurement System (ePS) planned accomplishments:

- Complete Limited Deployment, which spans five sites and includes 310 critical users (contracting and grants professionals).
- Complete interface development and testing for Navy ERP, PR Builder, and SABRS financial systems.
- Complete cybersecurity testing to achieve Authority to Operate (ATO).
- Complete integration testing, user acceptance testing, operational assessment, operational test readiness review, and Initial Operational Test and Evaluation (IOT&E)
- Complete data migration mocks and cutover for Limited Deployment legacy contracting writing system instances
- Complete production readiness review
- Complete user training and continue over the shoulder support
- Complete functional configuration audit
- Begin Release 1 deployment preparation and gap closure for over 3,000 additional users
- Initial interface development for additional Release 1 financial systems
- Complete Release 1 Build Technical Review and Fielding Technical Review
- Begin integration testing for Release 1

Investment Description and Justification

Short Description

AMAS is an automated acquisition system developed by the DoN. It is an automated procurement system for the management of all procurement activities.

Full Description

ACE-C is an integrated end-to-end SPAWAR Claimancy 2.0 electronic commerce system supporting SPAWAR and associated claimant's business activities. ACE-C seamlessly integrates components such as SPAWAR Acquisition Management Automated System (AMAS), E-Commerce Central (ECC), E-Commerce Select (ECS), WEBX/AX Contracts Imaging Document Management System (CIDMS), PD2 also known as the Standard Procurement System (SPS) and the Acquisition Source Selection Interactive Support Tool (ASSIST) to provide online acquisition, automated solicitations posting, and offer evaluation support as well as automated contracts archiving. ACE-C is a complete automation support and workflow system providing automation tools for the entire consolidated end to end procurement process – from requirements definition and receipt to acquisition planning, solicitation, award, administration, and closeout. Day to day operation of ACE-C is managed by SPAWAR HQ 2.0 Paperless Initiatives Office.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

THIS IS NOT A 'FINANCE' APP. eCRAFT is a WEB based application. The eCRAFT client is a internet browser, while the eCRAFT application uses an ORACLE Application Server, and an ORACLE Database server.

Full Description

The electronic cost reporting and financial tracking (eCRAFT) system is a web based application that uses oracle for its database storage and Internet Explore for it client interface. The eCRAFT system was implemented at NUWCDIVNPT, to standardize and automate the process of managing contract financial data for service contracts. The eCRAFT system provides this support to both the contracting personnel and the technical departments to manage the service contracts using standard reporting formats and schedules. The eCRAFT tool is instrumental in aiding Contracting Officer Representatives (CORs) to monitor/validate vendor expenditures in accordance with NAVSEA COR Instruction 4200.17. Also, CORs compare eCRAFT vendor expenditures for a reporting period against the Wide Area Work Flow (WAWF) system and ensure expenditure totals are consistent with contractor payment requests.

General Government / Support delivery of federal services / Web Content Management

Investment Description and Justification

Short Description

The ASN (RDA) Information System & Dashboard is comprised of five components, including the Chief of Naval Operations (OPNAV) Tracker, the Congressional Tracker and Web Maintenance Application, and the Information System web site.

Full Description

The ASN RDA Information System & Dashboard Web Site is an interface for Department of Defense (DoD) and Department of Navy (DoN) personnel. It is comprised of multiple components which together provide the ability to maintain, report and disseminate information throughout the ASN (RD&A) organization, the Navy and DoD quickly, accurately and in one location. The application does this by allowing users to access all information required to perform the daily business within their organization, reducing the amount of data entry, providing continuity throughout the organization and simplifying the dissemination of information. The application provides support for the Requirements Documents process, Congressional Appropriations and program funding, captures all aspects of a program from General Information, Program Assessments, Budget Information and Metrics, provides reporting on the overall status of Navy Programs including contacts, milestones, program assessments, budget information and metrics information for all ACAT Level I - IV programs and is used as an executive decision support system designed to provide critical information to senior Navy managers and program executives to assist them in managing the Navy programs.

Investment Description and Justification

Short Description

On-line interactive system that supports the processing of procurement actions from requirement generation to the completion or termination of the contractual cycle. All involved work from interactive information to generate procurement documentation.

Full Description

ITIMP IS AN ON-LINE INTERACTIVE SYSTEM THAT SUPPORTS THE PROCESSING OF PROCUREMENT ACTIONS FROM REQUIREMENT GENERATION TO THE COMPLETION OR TERMINATION OF THE CONTRACTUAL CYCLE. BUYERS, CONTRACT ADMINISTRATORS, EQUIPMENT AND PACKAGING SPECIALISTS, MANAGERS, CONTRACT SUPPORT PERSONNEL, BUDGET AND FUNDING PERSONNEL WORK FROM INTERACTIVE WORKLOADS TO GENERATE PROCUREMENT DOCUMENTATION, UPDATE ITEM DESCRIPTIVE DATA, CONTROL AND TRACK WORKLOAD, AND MAINTAIN COMPREHENSIVE PURCHASE SUPPORT INFORMATION. THE ITIMP USER CAN INTERACTIVELY ACCESS THE CORPORATE DATABASE FOR REQUIREMENTS AND FINANCIAL STATUS AND DATA. ON-LINE AND BATCH INTERFACE PROCESSES ARE AVAILABLE TO ASSURE THAT ITIMP CONSTANTLY REFLECTS THE MOST CURRENT CORPORATE REQUIREMENT, FINANCIAL AND ITEM INFORMATION.

Investment Description and Justification

Short Description

Software tool that provides the ability for users to anticipate, plan & forecast for future warfighter requirements & technology developments that will impact current & next-generation capabilities and share real-time product & technology roadmaps.

Full Description

A software tool that provides the ability for users to: 1) Anticipate and plan for future warfighter requirements and technology developments that will impact current and next-generation capabilities, 2) More accurately forecast the future of planned products and align project selection with organizational goals, 3) Share real-time product and technology roadmaps with distributed teams, acquisition program offices, and stakeholders to reduce business risk and drive broad participation in the planning process, and 4) Tightly link day-to-day operational activities with strategic technology development initiatives. This pilot installation will allow SEA073/Undersea Warfare Chief Technology Office to 1) Turn strategic technology roadmapping into a dynamic, "living" process, 2) Enable "living" strategic technology roadmaps that evolve with warfighter needs and requirements, 3) Create more Easily-understood, Insightful views of the future, 4) Synchronize Science & Technology development strategies from the Naval Research Enterprises, government laboratories, and commercial Industry with stakeholders such as acquisition resource sponsors, warfighting requirements developers, and Naval leadership in general. Tool will be used to create Technology Roadmaps mapping PEO Submarine program office Science and Technology current and future programs and investments. This is a web based tool that will be accessed via login with username and password by licensed users from CAC enabled clients within PEO Subs. Input is manual user input or upload of Microsoft office tools to include Word documents, Excel spreadsheets and Project files. Data Files: Consists of any documents related to technology Roadmapping within team submarine programs. Data will be displayed internal to the system as a roadmap and can be depicted in multiple table and chart formats that exist in Microsoft excel. Although print capability exist there is no plan to use printouts. The system is web based and users can view data via SharePoint. There will be no external reports generated by the system. System will be hosted on DISA servers and has a COOP server. Data will be backed up daily.

Investment Description and Justification

Short Description

System of tools, including the government owned NMCI Enterprise Tool (NET) and Requirements to Award Tool (RAPT), that serve as the customer interface and single point of entry for the lifecycle management of IT services on the NMCI.

Full Description

The NMCI Enterprise Service Tool (NEST) suite is a system of tools, including the government owned NMCI Enterprise Tool (NET) and Requirements to Award Tool (RAPT), that serve as the customer interface and single point of entry for the lifecycle management of IT services on the Navy Marine Corps Intranet (NMCI). The NET is the user interface to enable the consumption and management activities for services ordered against active NMCI IT service contracts. RAPT manages the requirements approval process workflows, awards unique orderable services, feeds the awarded service information into the NET, and stores associated contract documentation.

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$1,831) | |

Horizontal Change Explanation

Change due to fewer new developmental efforts because NGEN-R tool readiness requirements will be deployed. The focus will be to enhance deployed functionality while providing IT service lifecycle management processes during the transition from the NGEN contract to NGEN-R contracts (EUHW and SMIT). Change also supports NEST in sustainment.

Investment Description and Justification

Short Description

The Acquisition Management System (AMS) is a software suite of web applications that standardize key acquisition processes and provide for common measuring and tracking across the command.

Full Description

The Acquisition Management System (AMS) is a software suite of web applications that standardize key acquisition processes and provide for common measuring and tracking across the command. This integrated suite of web application tools can operate independently or share information across AMS tools leveraging a common repository to increase overall effectiveness in all acquisition phases. If a user leverages all AMS tools, the process becomes more automated eliminating the need to perform duplicate data entry. AMS integrated application tools include the following modules: Common Spend Plan Tool (CSPT), Procurement Management Tool (PMT), Contract Data Requirements List (CDRL), and the Acquisition Plan (AP). AMS integrated application tools: create and update acquisition plans; plan and allocate funds for both internal activities and contracting actions; initiate and manage procurement actions from preliminary planning to contract award; and create CDRLs/upload vendor deliverables.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

OMB Max is a globally secure information source accessible across the federal government. OSBP maintains "Administrator" rights. OMB MAX serves as a knowledge sharing, collaboration tool with all DON Components, DON Commands and DON Leadership.

Full Description

DON OSBP uses OMB Max as an efficient knowledge management portal to share information to the DON acquisition workforce, including the DON's ~130 Small Business Professionals. OSBP began using MAX Collect and MAX Analytics in FY19. These tools are critical to OSBP's requirement to conduct industrial base analysis. MAX Collect and MAX Analytics allow OSBP to collect and display real-time results for our customers, eliminating the need to manually create small business Dashboards for each DON command. In addition, the 10 Commands can customize reports to include execution status at the lower echelons as well as customize Dashboards for briefing their Leadership. OMB Max currently have 141 users and a repository of over 200 documents. OMB will be utilized to create Phase 2 of the SBCR App called "the Rule of 2". The Rule of 2 is a market research tool that will generate a report that displays the universe of small businesses to perform work within the required PSC/NAICS; display their work history; compare their work that is performed Fed-wide and their financial stability. If OMB Max is not funded, OSBP will revert to manually creating the Dashboards on a weekly basis and have to establish another knowledge management portal to share data/information with the workforce.

Investment Description and Justification

Short Description

DON EKR supports portfolio management, business process modeling, and business enterprise architecture for the DON business system portfolio.

Full Description

The Department of the Navy Enterprise Knowledge Repository (DON EKR) is an enterprise-wide solution that supports the DON AA's business portfolio management, business process modeling, and cross-process and cross-domain analysis of DON end-to-end business processes. Currently, the DON uses a range of tools to store system information, prohibiting enterprise-wide visibility and coordination. DON EKR is the single platform to share information across the DON and help achieve business process excellence by responding to changing business and economic conditions. It supports the planning, programming, budgeting, and execution (PPBE) and DBS certification process in an effort to reduce duplicative capabilities, invest in and maintain required business capabilities, and enable strategic goals and objectives. The DON EKR approach and suite of tools (1) enables the DON business mission area to consolidate, rationalize, and integrate business enterprise architecture (BEA) information; (2) leverages extensive use of ARIS modeling and reporting capabilities; (3) delivers interactive and easy-to-interpret dashboards using the ARIS visualization platform; (4) captures and manages BEA information across the lifecycle of an investment; and (5) enables the DON to better follow and comply with the OSD OCMO E2E reference framework. DON EKR is an instance of the Army's EKR (DITPR ID# 16745; UII: 007-000100187).

Investment Architecture

DoD Type Segment:

Business Services / 510-000 - Acquisition

OMB Sector/Function/Service:

General Government / Knowledge management / Information Mapping / Taxonomy / Categorization

Investment Description and Justification

Short Description

The Small Business Coordination Review Application (SBCR App) is an electronic system that automates the generation of the Small Business Coordination Record (DD2579).

Full Description

The SBCR App was mandated by the ASN(RDA) memorandum entitled "Small Business Coordination Review Application" dated 2 Feb 2016 for all of DON to utilize the system to automate the generation of the Small Business Coordination Record (DD 2579). The mandate was also incorporated into the Navy Marine Corps Acquisition Regulation Supplement (NMCARS) per Change 13-10, 5219.201 (c)(10)(B), September 2013 edition. As required in DFARS 219.201, the Contracting activity small business (SB) specialist must review and make recommendations for all acquisitions over \$10K, except those under the simplified acquisition threshold that are totally set aside for SB concerns in accordance with the FAR. This review must take place before issuance of a solicitation or contract action and be documented on the DD Form 2579, SB Coordination Record, which is a paper form. The SBCR App automated the review process which includes the contracting officer who is responsible for the coordination and completion of the form, the contracting activity small business specialist and Small Business Administration Procurement Center Representative that reviews and concurs or non-concurs with the action. There have been over 130,000 contract actions generated in the SBCR App across the DON and currently over 4,800 active users. Immediate benefits of the tool include coordination time savings, improved data quality and availability of raw data to develop more accurate procurement forecasts. Long term benefits include centralized collection of data allows derivative analysis and forecasting, automated market research to provide information for informed decision making (i.e. Rule of 2) and workload reporting. Additionally, the new ePS (Electronic Procurement System) Requirements Specification lists states that "The system shall provide a web link to the SBCR homepage from within the application" along with other specifications (SMI-09.02, DBB-66, DBB-67, DBB-68, PLP-01, PLP-02, and PLP-030) shall conform to the SBCR App that was awarded. If the SBCR App is not funded, the workforce will revert to using the manual process for coordination of the DD Form 2579 potentially adding time to the schedule and impacting data quality. The funding keeps the DD 2579 process efficient by being automated and current with policies and procedures.

Investment Description and Justification

Short Description

NAVRIS is an integrated information management system whose primary purpose is to facilitate buying Science and Technology research. The system provides program management, human resources, and financial management support.

Full Description

Naval Research Information System (NAVRIS) is an Office of Naval Research web-based, enterprise-level integrated information management system that provides ONR a full life-cycle electronic mechanism for buying research. NAVRIS also supports ONR's day-to-day internal operations and streamlines access to important data. Using state-of-the-art component technologies, NAVRIS is a collection of integrated subsystems that are easy to maintain and update.

Organization Architecture Profile**

Architecture Profile

DoD Segment 520-000 Human Resources Management

Architecture Budget Justification

Navy Human Resource (HR) Management IT efforts support the overall DON strategic goal to develop and implement human capital strategies, guaranteeing military and civilian workforce skill enhancement, innovativeness, agility, and readiness. The Navy Standard Integrated Personnel System (NSIPS), UII 007-000001371, is the Navy's business solution to Human Resource Management for approximately 400,000 sailors worldwide. It encompasses active and reserve as well as officer and enlisted members of the Navy military. It tracks the personnel record from accession to departure from Navy service. NSIPS is used to process all member contracts documentation, such as the contract document, gains, losses, and punitive documents. The Record of Emergency Data and Dependency Data as well as associated forms are processed in NSIPS. Marine Online (MOL), UII 007-000000149, replaces manual HR data admin processes with a self-service, paperless, web-based environment. MOL automates paper-based administrative processes based on roles, permissions and echelons of access. The Academic and Professionally Accredited Enterprise Education Enclave (AEEE), UII 007-000002062, System supports the sole Navy undergraduate degree-granting higher education command. This hybrid network enclave serves as a dynamically variable resource for multifaceted teaching, education, and research activities in a blended physical/virtual campus environment similar to four-year civilian universities. Naval Criminal Investigative Service Operations (NCIS OPS), UII 000002453, encompasses ongoing operations of NCIS information technology activities and systems. Customer Relationship Management, UII 007-200000360, is the Program of Record used to fund contract labor, remote hosting, licensing, and travel.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Development and Training

Investment Description and Justification

Short Description

CeTARS serves as the Navy's authoritative data source of all Navy formal training including course description, class schedules, quotas/plans/requirements and statistical information, and student and training information.

Full Description

CeTARS is Manpower, Personnel, Training and Education's (MPTE's) Operational Navy (OPNAV N1) premier Student Training Management System which serves as the authoritative data source for all formal Navy Training statistical Information and aspects of student management, as defined in OPNAV Instruction 1510.10B; which mandates and standardizes student reporting at all Navy training activities, or activities that 'train' Navy students. Every formal course of instruction conducted throughout the Navy is required to accurately report student status to CeTARS. CeTARS ensures functionality for the timely collection and dissemination of that information to manage and support Navy training from various Navy Echelons, other DoD departments, agencies, services, contractors, and authorized foreign governments, with over 4,000 users located at more than 300 locations worldwide; management and tracking over 1,000 courses, with an average daily attendance of over 50,000 students. CeTARS interfaces with 37 other applications and systems (Navy, Army, Marine Corps, Bureau of Medicine (BUMED), etc.) to share student data and order writing capabilities in support of MPTE enterprise efforts. MPTE has identified CeTARS as major an integration partner with several enterprise initiatives, such as Personalized Recruiting for Immediate and Delayed Enlistment Modernization (PRIDE MOD I & II) and next generation Learning Management System - Distant Learning (LMS-DL), as delineated in their IT Business and Strategic Plans, and in conjunction with Program Objective Memorandum (POM) planning.

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Workforce Planning

Investment Description and Justification

Short Description

MOL replaces manual HR data admin processes with a self-service, paperless, web-based environment. MOL automates paper-based administrative processes based on roles, permissions and echelons of access.

Full Description

MOL replaces manual HR data admin processes with a self-service, paperless, web-based environment. MOL automates paper-based administrative processes based on roles, permissions and echelons of access. It allows Marines and leaders to view and update manpower data and conduct HR transactions on line. On-going business process reengineering efforts will optimize legacy system functionality and data relationships. Current capabilities include viewing individual personnel records, the management of training information, personnel accountability, leave processing, proficiency and conduct markings, and enlisted promotions.

General Government / Central personnel management / Workforce Directory / Locator

Investment Description and Justification

Short Description

Tracks day for day deployment of Navy members on an individual basis and to support potential payment to members whose deployed time exceeds mandated thresholds.

Full Description

PERSTEMPO tracks deployment of members on an individual basis and supports eventual payment (by the Defense pay system) to members whose deployment days exceed mandated thresholds. The PERSTEMPO system records and tracks the amount of time every sailor in the Navy, Officer and Enlisted, Active and Reserve, is required to be away from his or her permanent duty station/homeport. Transactions are built for one, more than one or entire units by authorized Navy members by entering the dates of deployment, purpose, and category. Weekly electronic submissions are provided to the Defense Manpower Data Center (DMDC).

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Other general government / Disaster Preparedness and Planning

Investment Description and Justification

Short Description

NMCMP-S (SIPR) is a module of the NMCMP application. The module is called the Requirements Tracking Module (RTM) and is used by USFF to write detailed requirements for contingency support.

Full Description

NMCMP-S (SIPR) is a module of the NMCMP application. The module is called the Requirements Tracking Module (RTM) and is used by USFF to write detailed requirements for contingency support. The RTM contains 3 classified fields that can be used if required. As a result the RTM must live on the SIPR Environment (Pentagon Network). Output from the RTM goes through a DISA approved high to low process which strips any classified information and traverses the requirement to the low side of NMCMP. NMCMP Low side is then used to generate orders based on the requirements.

Investment Description and Justification

Short Description

Decision support models for military community managers. The Navy's military Personnel Models and information systems support the Navy's personnel policy evaluation, formulation, planning and execution to achieve fleet readiness.

Full Description

PRIMS is the sole authoritative data source that houses the Physical Fitness Assessment (PFA) data for command information, authorization information, and member personnel data. PRIMS is governed by the guidelines established by OPNAVINST 6110.1J series and provides a standardized Navy database to monitor and track the progress of Navy active duty and reserve personnel PFA data and identify, screen, train, educate, counsel, monitor and rehabilitate members who did not meet the PFA standards. PRIMS is a web-based application that is hosted and maintained by BUPERS Online (BOL).

OMB Sector/Function/Service:

General Government / Knowledge management / Data Warehouse

Investment Description and Justification

Short Description

The N1 Enterprise Data Warehouse/Data Mart mission is to coordinate, and align enterprise data under a single, coherent, and forward-looking strategy. It supports a wide range of current and future DoN initiatives to reengineer business processes.

Full Description

Provides central combination of pay, billet, strength & Human Resource data. Key benefits: 1) granular source data; 2) integration to eliminate stove-piped functions; 3) modeling to support improved decision making; 4) ad-hoc data mining so Navy leadership can view data associated with any manpower budget facet. Modules & Models: Intelligent Workbook provides granularity by mapping billets to Navy End Products & Intermediate Products, an improvement over average rate programming. Billet Change Request provides out-of-cycle change requests for military manpower billets. Distribution Incentives Management System tracks particular billets, identifies hard-to-fill locations, tracks sailors' preferences & incentives required to attract volunteers. Enlisted Community Management Model creates more accurate Loss Forecasts, Accession Plans, A-School Plans & Advancement Plans. Joint Professional Military Education II Model identifies throughput & timing of quotas to maximize return on training resources. Manpower Query System provides queries of TFMMS billet, end strength & activity data. N10 Executive Dashboard provides key financial metrics & status of key program management & audit readiness efforts. Navy Econometric Model estimates officer & enlisted recruiting & retention parameters & effect of assignment incentives. Navy Subspecialist System validates subspecialty-coded billets, prioritizes & removes excess authorizations to ensure supply meets demand for highest priority billets. Navy Total Force Strength Model produces timely & accurate Navy Active Enlisted & Full-Time Support strength projections. New Accession Training provides active & reserve pay & personnel data to satisfy requirements of Financial Improvement Audit Readiness. Permanent Change of Station Model evaluates cost & effect of execution alternatives & provides measures for decision-makers creating execution plan. Selective Reenlistment Bonus Model supports budget formulation/justification & more efficient allocation of resources across targeted critical skill sets. Web Full Time Support Navy Officer Personnel Planning System reconciles annual & FYDP plans with actuals to generate budget submissions. Web NOPPS captures official active component officer end strength activity based on OPINS transactions in aggregate & community level detail for certifying congressional compliance, budgeting, reporting & creating the FYDP. Forecasting Model incorporates officer strength analysis forecasts.

Investment Description and Justification

Short Description

Electronic Military Personnel Record System (EMPRS) is an electronic document/image based system that serves as the repository for all Department of Navy (DoN) official military personnel record images. It supports retired, active, and reserve military.

Full Description

The EMPRS is the Navy's personnel records management system and is the repository for Official Military Personnel (OMPF) images. Provides records storage and management for both active-duty and reserve personnel, and provides decision support for the Selection Board process, Mobilization, Causality Assistance, Distribution, and Entitlements. It is a stand-alone hybrid system of electro-mechanical, photographic, manual, and automated processes.

OMB Sector/Function/Service:

Law and Justice / Federal law enforcement activities / Criminal Investigation and Surveillance

Investment Description and Justification

Short Description

This initiative consolidates the functionality of the USMC Centralized Law Enforcement Operation Center, the DON Law Enforcement CLEOC and the NCIS Criminal Reporting and Collection Systems into one application to collect and analyze data.

Full Description

NJIS is a cradle to grave case management system for the DON Legal communities. It will provide a web based system that will allow users from Law Enforcement, Judicial Actions, Corrections, Command Actions, and NCIS a tool to manage day to day case related activities. This system will satisfy DIBRS requirements for the Department of the Navy and also address data management for the Legal communities for both the Navy and the Marine Corps.

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Development and Training

Investment Description and Justification

Short Description

A comprehensive decision support system for Manpower, Personnel and Training (MPT) managers. NTMPS integrates MPT information from existing systems, and projects training throughput and related resource requirements for 20 years.

Full Description

NTMPS is an Operational Data Store/Data Warehouse that offers training officers, manpower and personnel managers and other Fleet personnel with a one-stop shop for information concerning manpower, personnel, training and education (MPT&E) issues. NTMPS data is collected from over 30 sources, integrated and then made accessible to users. NTMPS is the authoritative source for Fleet TYCOM training requirements for recording mandatory GMT and other required Navy unit level training such as IAA, etc. NTMPS contains several applications in addition to the core data warehouse designed to meet fleet user requirements: 1) Fleet Training Management and Planning System (FLTMPS) Ashore (DADMS ID 80631) is the web-based decision support system containing detailed personnel training histories and TYCOM training requirements and status. FLTMPS features nearly a thousand standard reports and limited ad hoc capability, providing Fleet users with current status of training readiness as well as access to the latest training requirements and course related information. 2) FLTMPS Afloat (DADMS ID 80336) is a web application that operates on afloat units running the Navy Information/Application Product Suite (NIAPS) Distance Support servers version 2.3 and later. FLTMPS Afloat provides fleet users immediate access to MPT&E data in a disconnected environment. 3) The Electronic Training Jacket (ETJ) Ashore (DADMS ID 80796) is a web application that allows Active Duty and Reserve Enlisted and Officers to view and print, from a single source, all documented information on their individual training and education accomplishments. 4) The ETJ Afloat (DADMS ID 81319) is a shipboard web application running on NIAPS Distance Support servers that allows Active Duty and Reserve Enlisted and Officers to view and print, from a single source, all documented information on their individual training and education accomplishments. 5) Online Account Request System (OARS) (DADMS ID 81495) is a web application which allows NTMPS users to apply for accounts to the FLTMPS, FLTMPS Afloat and EPM applications. 6) The Enterprise Performance Management (EPM) (DADMS ID 80485) web application is a MPT&E business Intelligence tool accessing data from the NTMPS data warehouse. 7) Career Tools Afloat (CTA) (DADMS ID 81621) is a shipboard web application which serves as the common access point to all Sea Warrior Afloat Programs and other applications as directed.

Investment Description and Justification

Short Description

Provides automated support functions for NSTC OD and CD divisions. NETFOCUS combines all Officer Development (OD) and Citizenship Development (CD) programs under one umbrella.

Full Description

Naval Education and Training Future Officer and Citizenship User System (NETFOCUS) provides automation that supports management and administration of Officer Development (OD) and Citizenship Development (CD) programs under Commander, Naval Service Training Command (CNSTC). These include Naval Reserve Officer Training Corps (NROTC) and Seaman-to-Admiral 21st Century (STA-21) Scholarship programs. CD programs include Naval Junior Reserve Officer Training Corps (NJROTC) and Navy National Defense Cadet Corps (NNDCC). NETFOCUS has automated interfaces with United States Naval Academy (USNA), Officer Personnel Information System (OPINS) and Defense Joint Military Pay System-Reserve Component (DJMS-RC). NETFOCUS and USNA share scholarship application starts. NETFOCUS sends transactions to OPINS for designator or other changes to personal information. NETFOCUS sends daily transactions to DJMS-RC for pay and allowance events. NETFOCUS is heavily used by USN and USMC recruiting communities to manage candidates through completion of their scholarship application. Navy candidates are selected by boards administered by NSTC OD. Marines manage their selections boards different from the Navy and outside of NETFOCUS. Both Navy and Marine selectees are placed by NSTC OD, supported by NETFOCUS. NETFOCUS is used at 84 NROTC Units throughout the country supporting 174 colleges and universities, where program participants are tracked throughout their education experience. NETFOCUS is used by over 600 NJROTC and NNDCC units located throughout the world. Both NR and NJ units utilize common NETFOCUS functions for ordering, issuing and managing inventory of uniform items and instructional materials. NETFOCUS is the authoritative data source for the NROTC, STA-21, NJROTC and NNDCC programs managed by NSTC.

Investment Description and Justification

Short Description

CorbWeb is web-based application used exclusively by SECNAVCORB Combat-Related Special Compensation Board (CRSCB). CorbWeb is the Navy CRSC board's system to automate adjudication process of CRSC entitlement applications.

Full Description

The CorbWeb program is a web-based application used exclusively by the SECNAV CORB Combat-Related Special Compensation Board (CRSCB). While each Service branch has its own CRSC board, each uses their own unique Service systems to process claims. The CorbWeb program is the Navy CRSC board's system to automate the adjudication process of CRSC entitlement applications. Military retirees and medical retirees are eligible for the CRSC program which allows the retiree to receive their monthly Veterans Affairs Disability Pay without a reduction in their military retirement. Without the CRSC entitlement retirees, who are less than 50% disabled, receive monthly reductions in their military retired pay equal to what the Veterans Affairs is paying them. The CRSC board determines an applicant's eligibility and the Defense Finance and Accounting service (DFAS) determines and pays the entitlement amounts due the Veteran.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Workforce Planning

Investment Description and Justification

Short Description

NMRS is a large-scale modeling and DSS providing quantitative and qualitative manpower planning. It determines requirements for varying workload under varying capabilities and conditions of readiness for each Navy activity (Ships and Squadrons).

Full Description

The Navy Manpower Requirements System (NMRS) is a decision-support information system that provides a suite of tools to calculate the overall Navy manpower requirements for Fleet Manpower Requirements Determination (FMRD) documents; Ship Manpower Documents (SMDs), Fleet Manpower Documents (FMDs), Squadron Manpower Documents (SQMDs), Manpower Requirements Worksheets (MRWs). NMRS determines manpower requirements for varying workload volumes under differing levels of capability and conditions of readiness as defined by Required Operational Capability/Projected Operational Environment (ROC/POE) and/or Mission Statements. It provides for the recording, storage of, and access to workload/work-hour inputs for capabilities, configuration and policy data, manpower business rules and standards for algorithms, workweek constraints, and quality structuring rules. The system provides the manpower requirements necessary to support the wartime mission capabilities for all Navy ships and squadrons.

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Benefits and Compensation

Investment Description and Justification

Short Description

NSIPS will deliver field-level pay and personnel data to update corporate databases in peacetime as well as during recalls, and during both a partial and a full mobilization.

Full Description

The Navy Standard Integrated Personnel System (NSIPS) is the Navy's business solution to Human Resource Management for approximately 400,000 sailors worldwide. It encompasses active and reserve as well as officer and enlisted members of the Navy military. It tracks the personnel record from accession to departure from Navy service. NSIPS is used to process all member contracts documentation, such as the contract document, gains, losses, and punitive documents. The Record of Emergency Data and Dependency Data as well as associated forms are processed in NSIPS. Various entitlements, bonuses, and other pay impacting events are processed in NSIPS. The system tracks medals and awards, education, including college degree programs and training courses, Personnel Qualification Standards (PQS), and formal certifications. The Electronic Service Record (ESR) as a part of the system allows the member as well as leadership the ability to view their record in real time to ensure it is accurate and up-to-date. There is a member self-service capability allowing the sailor to update non pay impacting information in their record such as emergency contact information, member address and phone, and other personal information. The ESR self-service access also allows the member to request leave electronically and leadership to review and approve the member's electronic leave form on line. The NSIPS environment also provides special application modules for stake holder communities such as the processing of officer acceptance and oath of office when they are commissioned, career information management for career counselors, Navy retention data for manpower planners, permanent change of station travel funds obligations and expenditures for travel planners, healthcare professional incentives authorizations and tracking, and SEAL/SWCC special qualifications tracking and management. To accomplish the mission of tracking members and keeping their pay and entitlements accurate in a timely manner, NSIPS interfaces with over 30 other DON and DOD personnel and pay systems.

**IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification**

Navy Standard Integrated Personnel System (007-000001371 - NSIPS)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

Chief of Naval Personnel approved name change from NSIPS to Navy Personnel and Pay (NP2) in FY19.

- NP2 has enabled the Navy to:
 - Eliminate ten legacy human resources management systems.
 - Eliminate the need for local personnel detachments and management sites to maintain legacy hardware and/or human resources software.
 - Automate application updates via one Web server, eliminating the need to send software updates to the individual personnel processing locations around the world.
 - The Electronic Service Record (ESR) enhances reliability and productivity within the Navy's personnel management operations by making maximum use of corporate data and eliminating redundant data input. ESR is also a significant change for individual Sailors because they have greater access to information that affects their career.
 - E-Leave is the self-service electronic leave process for military personnel. E-Leave's automated capability is enabling the Navy to realize significant savings in man-hours and processing time. The digital process also makes requesting leave and checking in and out more convenient for Sailors. Among the key benefits are: time savings, improved efficiency, improved accuracy, and timeliness of the service member's leave charge, accounting, and balance.
 - The NP2 Web Afloat server delivers secure personnel and pay support to users at sea.
 - Mandated by OPNAVINST 1040.11B, standardizes Career Development Boards across the Navy, providing leadership the ability to conduct non-intrusive management assessments on all subordinates. A total force management tool that provides for career development of active and reserve components.
 - Designated by N1 and Fleet as authoritative source for retention reporting, provides Congressional mandated attrition and reenlistment analysis and reports. Serves as the analysis and reporting tool to measure retention and attrition fleet-wide.
 - Mandated by NDAA 2011, H.R. 2433, Veteran's Opportunity to Work Act (VOW) 2011 and The White House Veteran's Initiative (VEI) which both are targeted to reduce the unemployment of veterans. Mandates pre-separation assessment and counseling, VA benefits and DTAP briefing for all Service members.
 - Effectively manages the centralized cost accounting, reporting, and statistical systems for obligating, reporting, and controlling funds appropriated for the Permanent Change of Station (PCS) program supported by the Permanent Change of Station Variance Component.

Major Investment Description and Justification

Navy Standard Integrated Personnel System (007-000001371 - NSIPS)

Major Investment Business Case

Description and Justification

Return on Investment

The Navy conducted an initial business case analysis for implementing the first element of the strategy that leverages NP2. This analysis is anticipated to be representative of all levels of the strategy. The investment benefits were determined as part of business process reengineering (BPR) conducted by BUPERS Business Transformation Office (BBTO). The benefits of the BPR were determined based on labor avoidance calculated as the delta between Activity Costs and corresponding time in both the As-Is and the To-Be environments. The results are an annual benefit with a break-even of three years and a Benefits-Cost Ratio (BCR) of 2.21. There are four main benefit areas, with results as shown below:

- Streamlined Processes
 - o By standardizing business rules and streamlining processes, there will be a reduction in human intervention and in inefficient and error prone activities which will result in time and cost savings.
- Enhanced Self-service
 - o Providing Service Members with a self-service single point of entry that will allow them to track, update, communicate, and plan submissions and therefore reduce errors due to manual submissions and ineligible requests
- Increased Technology Effectiveness
 - o Providing a centralized authoritative data source that will provide all required Retirements and Separations (R&S) functionality which will reduce activity costs and minimize process delays.
 - o Implementing electronic signature capability for documentation eliminates the need for manual signatures which will improve the response time and lessen the potential for manual mistakes.
 - o Increased Information sharing allows for interoperability and data sharing with other DON information systems in a secure and judicious manner.
 - o Reduction in the amount of rejected or withdrawn requests greatly improves overall efficiency
- Improved Decision Making
 - o Implement End-to-End (E2E) workflow functionality for routing requests ensures electronic traceability and faster decision making.
 - o Enhanced automation of tasks such as auto-populating forms with data, email templates and notification logic to improve speed of service delivery, reduce errors and expedite decisions.

Major Investment Description and Justification

Navy Standard Integrated Personnel System (007-000001371 - NSIPS)

Major Investment Business Case

Description and Justification

Budget Justification

- FY21 Operations and Maintenance, Navy (OMN) - Will provide support for a field level, web-based, single point of entry system both ashore and afloat to process personnel and pay actions for over 400,000 Navy active and reserve personnel, provide capable and flexible reporting to satisfy customer/user needs, and support current and future human resources business processes. Planned accomplishments in FY21 include the continuation of a NSIPS Quarterly releases, stabilization of Legacy systems consolidated into NSIPS and deployment of NES & OPINS functionality into NSIPS. Execution of Incremental transition of NSIPS capability is planned. In addition, funding will be used for the maintenance of software and hardware products used to support the NSIPS/NP2 application; Software modifications necessary to disable retired legacy functionality; Batch processing modifications; Data cleansing support; Re-accreditation support due to system changes; DADMS and DITPR-DoN updates due to changes in functional scope; Impact analysis on established Schedule of Budgetary Activity (SBA) Audit processes and procedures; Modifications of processes and tools necessary to remain compliant with SBA audit findings. OMN efforts are primarily funded via N00039-14-D-0001 / Task Order # 105
- FY21 Research Development Testing & Evaluation (RDT&E) - Efforts in FY21 are focused on the NP2 Rapid Fielding Pilot (RFP) that will support the NP2 Initial Operating Capability (IOC) functionality. The initial NP2 Release functionality will encompass the following Rapid Prototyping Pilot (RPP) and RFP pilots: Pay Calculation / TDD; Manpower; Payroll Accounting; Member Record Conversion; Initial Gain; Personal Events; Orders Integration; Post Payroll Processing; PCS Mobile; PCS Transfer; User Access; Debts & Collections; Vendor Interfaces; Career Path; Performance; PCS Travel Expenses; Reserve Activities; Separations; Job History Conversion; Finance; In Transit & TDY Orders; Other Conversions; and Payroll Reporting.
 1. Perform analysis of Afloat requirements for NP2.
 2. Complete Defense Joint Military System (DJMS) data cleansing and Personnel data cleansing in support of transition of Pay functionality to NP2.
 3. Begin integration sprints for NP2 RFP scope (Financial Management; Payroll Interfaces; Training; Performance; Reserve Activities; Career Path; and Conversion).
 4. Conduct Iterative Development Test (DT) and Iterative System Integration Test (SIT) for NP2 RFP scope.
 5. Begin Training for initial NP2 Release.
 7. Initiate deployment planning for NP2 RFP.
 8. Conduct the Government planned Systems Engineering Technical Reviews (SETR) for initial NP2 Release.
 9. Deliver planned capability drops for NP2 RFP (Hire to Retire functionality).

FY2020 Accomplishments

CY (FY 2020) Accomplishments are:

- Migrate NSIPS, NP2, & OPAS hosting to the AWS GovCloud. The migration will result in capacity and performance improvements for NSIPS, address end of life hardware issues, and complete an audit finding by obtaining a single RMF authorization for NSIPS, NP2 & OPAS.
- Automate the administrative and system level activities required to create, submit, and authorize the forms and documents required to process a Service Member's meritorious advancement as part of the Selected Reserve Meritorious Advancement Program (SELRES MAP) business processes.
- Automate eMuster capability that will replace the manual workflow and paper signing process, with electronic signatures and routing within NSIPS. This will enhance FIAR compliance by providing better timeliness and accuracy, along with accountability and non-repudiation via automation and electronic workflow. Electronic workflow would assist in providing operational metrics to identify and provide focus to accelerate pending reviews.
- Implement a NSIPS interface (MILMOVE) to support a joint TRANSCOM & DDS PCS initiative requesting a persistent web-interface to NSIPS to pull live sensitive PII data. This will enable auto-population of data items for PCS moves.
- Implement NSIPS API service requirements and integration efforts of sailor-facing functionality with My Navy Portal (MNP). Enhance sailor experience by increasing self-service capability integrated with MNP.
- Deploy NP2/NSIPS Quarterly Functionality Releases.
- Support Navy Audit requirements and support the FY20 Full Financial Statement Audit (FFSA).
- Complete transition to Risk Management Framework (RMF) for NSIPS Web and Afloat 1.4 versions.
- Continue the activities to consolidate Navy Enlisted System (NES) and Officer Personnel Information System (OPINS) functionality into NSIPS.
- Complete design and development for NP2 RPP scope.
- Complete unit, functional, integration/regression testing and package handoff of NP2 RPP scope.
- Complete integration sprints for NP2 RPP scope.
- Complete Iterative Development Test (DT) and Iterative System Integration Test (SIT) for NP2 RPP scope.
- Conduct Training for NP2 RPP scope.
- Begin Defense Joint Military System (DJMS) data cleansing and Personnel data cleansing in support of transition of Pay functionality to NP2.
- Acquire and support JITC services for audit efforts such as SFIS Compliance, Financial Compliance, and Interoperability certification.
- Testing organizations conduct OTS observation for NP2 RPP scope.

| | | Date of Analysis | | 2018-05-10 | |

OA Analysis Explanation

Operational Analysis Explanation:

Document the results of Navy Personnel and Pay (NP2) System 1.4.13.0 Deployment Production monitoring. The monitoring period was effective at 1440, 30 April 2018 and was concluded on 2359, 10 May 2018. Monitoring was primarily performed on twenty-seven (27) Active Duty Accounting and Disbursing Symbol Numbers (ADSNs) and three (3) Reserve ADSNs. Overall this encompassed 5,153 Naval Activities.

The production monitoring team were to gather production transactions, analyze and convert into statistics for future delivery to the Program Management Office (PMO). In addition, any evidence of discrepancies found in production were delivered to PMO, via email, Change Requests, or verbally.

The NP2 Quality Assessment (QA) Production monitoring team found the overall environment performed as expected. The NP2 QA Production monitoring team found that the overall accuracy performance statistics were within the established thresholds set by the Operational Requirements Document (ORD) and the overall timing statistics were within the established thresholds set by the ORD. To maintain and achieve the accuracy thresholds, those Corporate Assets with high error rates will have to be monitored more closely. The timing discrepancies should be researched and viable explanations provided.

Investment Description and Justification

Short Description

This application keeps track of all the shipyard positions and who is filling those positions as well as the organizational structure of the shipyard.

Full Description

This application keeps track of all the Shipyard civilian positions and who is filling those positions as well as the organizational structure of the Shipyard. The Target Position Organization Structure (TPOS): (1) tracks core and non-core billets through the identification of position category codes (full time billet, established for the incumbent only, billets established in error, temporary billets, duplicate billets, billets slated for abolishment or downgrade when unencumbered, and special hires); (2) status codes are assigned for each category code (core, attrition, backfill for attrition, details in or out of a billet, DCPDS error, new billets for external hires, NAVSEA billets, obligated billets); (3) tracks BSC/BIIN numbers to individual authorized billets, which is not only mapped to the billet, it includes the name of the individual in that billet; (4) personnel use this program to track actual dates for temporary promotion/reassignments; (5) detail to duties are tracked (which HR will not process); (6) keeps track of apprentices (WSPP & WSAPR); (7) allows Departments to view positions/employees in their respective department; (8) identifies target grades and pay plans; (9) allows Management to see their respective organization structure and specific information above; (10) and supports the human capital metrics which are used by the Executive Steering Group (Government's version of a Board of Directors), Full Time Equivalent Board (Board that oversees the execution of Human Capital) and the Position Manager (oversees all position management). This program also allows the use of "notes" for any billet, which allows the administrators and Position Manager to enter data, for internal use only (High Grade Approvals, actual dates an employee separated who encumbered an "attrition" billet), etc. This program also maps the "typical charge code" which identifies the billet as either direct, overhead or quasi (direct and overhead), for labor charging profiles. This program allows the user to "run reports"; they can run a standard report or build one. The reports can also be exported to Excel, for other uses.

Investment Description and Justification

Short Description

JDETS provides tracking, data collection and produces findings and reports. This Oracle 10.2.0.4 Client based application supports Active Duty and Medically Retired Sailors and Marines of the Department of the Navy Disability Evaluation System.

Full Description

JDETS provides tracking, data collection and produces findings and reports. This Oracle 10.2.0.4 Client based application supports Active Duty and Medically Retired Sailors and Marines of the Department of the Navy Disability Evaluation System. The application screens were created in Power-Builder. The application is executed with an Oracle Client Executable form, which reside on a file-server running the Windows O/S. The Department of the Navy's Physical Evaluation Board processes over 7000 cases of Active Duty and Retired Sailors and Marines every year. JDETS is an internal system used by the PEB which tracks all DON cases and produces findings letters. This program has been in use since 1998 to present day. The operational necessity of this program for the DON is mission critical. Without the use of JDETS, the PEB would be operating on a dated file card system of paper record system only. The use of the full SSN is also considered mission critical. The service member's SSN is their primary identification method of being tracked throughout the Disability Evaluation System. Additionally, a number of DOD external agencies with whom we conduct official business and receive personnel records from, such; Headquarters, Marine Corps; and the Department of Veterans Affairs, mandate full SSN application.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Development and Training

Investment Description and Justification

Short Description

TWMS is a modular web based app used by Human Resources Mgmt Officials, command management personnel, managers, supervisors, financial personnel, and employees to track and manage their total workforce data requirements.

Full Description

Functional Description: Total Workforce Management Service (TWMS) is a web based GOTS system which gathers information from official programs of record, such as DCPDS, NSIPS, TFMMS, DCPS, DMO, NTMPS, NDAWS, TFSMS, PeopleSoft NAF, and SAPHR, and combines them to allow the user to manage their TOTAL WORKFORCE, which includes data on Civilians (both APF and Foreign Nationals), Military, NAF, Contractors, as well as required and authorized billet information via one easy to use web interface. TWMS allows the user to produce reports, metrics, track gains and losses, perform daily and emergency musters of personnel, align people to billets, contractors to contracts, track security clearance information, assign required skills, training, and certifications to positions and identify employee deltas, track completed training, create and manage Performance Plans for IPMS and PARS, create and manage IDPs, Telework Agreements, and SAARs, process workflows on documents such as SAARs, SF182s, and other standard workforce forms, automate the command check in/checkout process, and manage assets assigned to personnel. Users can view a wealth of information on each employee, including assignment history, training information, personal and recall information and benefits & pay information. TWMS also allows each employee to view their own record via the self service tool, and allows to them to update non program of record information such as work phone, cell phone, building and room numbers. Other modules of TWMS includes TOPS (TRANSACTION ONLINE PROCESSING SYSTEM - submit, track, and receive feedback on military pay and personnel related transactions), TPOS (Target Position Organization Structure - A Position & Organization Management Tool), Employee Locator, Unemployment Case Tracker, Bargaining Unit Status (BUS) code tracker, RPA Tracking and Billet Alignment, IPMS Management, PARS Management, Daily Muster with Individual Anti Terrorism Plan (IATP) Travel Tracker, SF-182, Telework, Performance Plan, & SAAR Mgmt workflows, Training Requirements & IDP management, and automated event notifications. TWMS is the official DON source for CybSecurity Workforce data, and the DON Interim solution for RPA Tracking. TWMS requires no client other than the standard Internet Explorer Browser and Adobe Acrobat reader.

Investment Description and Justification

Short Description

Reserve Standard Training and Administration Readiness Support Microcomputer based field level systems that provide support for training management and medical records of Naval Reserve personnel.

Full Description

Tracks and reports individual medical readiness for all NAVY, MARINE AND COAST GUARD MEMBERS. The MRRS system mission is to assist the Navy, Marine Corps, and Coast Guard in assessing the medical readiness state of each reserve and active from a headquarters perspective. Each of the Naval, Marine and Coast Guard clinics will use MRRS as a data-entry station to update the medical status of the members when any readiness medical status changes. MRRS tracks information related to physical exams, dental status, illnesses/injuries, pregnancies, and immunizations. An extensive reporting facility is implemented to provide rapid up-to-date information to the decision-makers. The MRRS system also provides capabilities for managing the process for claims resulting from on-the-job illnesses or injuries. MRRS complies with a Secretary of Defense directive to provide current anthrax and small pox immunization status of the reserve force to Navy Medical Information Management Center (NMIMC). A recent enhancement has been implemented to send all immunization data to NMIMC. NMIMC forwards the immunization data on to Defense Enrollment Eligibility Reporting System (DEERS). New functionality has been recently added to MRRS to record and track information related to Chemical, Biological and Radiological Defense (CBRD) System equipment. MRRS is currently developing a module to support the marine medical personnel in the field. Acronym changed per PEO-IT request from RAMIS.

OMB Sector/Function/Service:

General Government / Knowledge management / Data Warehouse

Investment Description and Justification

Short Description

A virtual database of human resource data.

Full Description

Enchilada is comprised of two applications: Enchilada and Security. Enchilada is a data repository providing secure access to information about NUWC employees and other persons of interest to NUWC and a mechanism for coordinating the activities of a broad spectrum of new and legacy information collection systems. The visible portion of Enchilada provides "one-stop shopping" for information and business applications from various source systems. Behind the scenes, Enchilada manages data security and the dissemination of information generated by one system to employees and other systems having an interest in the information. The Security application supports the Security Division's mission to implement access controls for a Level 1 Restricted Area in accordance with SECNAV M-5510.30, SECNAV M-5510.36, and OPNAVINST 5530.14D. It accomplishes this by providing a means for identifying authorized visitors, including those who are not in JPAS, to the guard force. It provides clearance information on employees to their supervisors, and a means of communicating changes in special access programs from program managers to the Security Division. It also manages information required to document the eligibility of DON military, civilian and certain affiliated employees for access to classified information and assignment to sensitive positions. It is the only information repository for military personnel assigned to the command. The primary contribution of Enchilada to NUWC is in its capabilities to provide up to the minute employee staffing information to all levels of enterprise management. Elements of the system are incorporated into the day-to-day activities of management decisions, including daily Request for Personnel Actions transactions distributed for processing to the Regional Human Resources Service Centers (HRSC). Fundamental to this contribution is the system's characteristic of providing the identical information about an employee in many different contexts. The various Human Resource (HR) applications includes:

- o Action Suspense
- o Bring a Child To Work
- o Contractor Check-In Check-Out
- o DAWIA
- o Demonstration Incentive Payout (DEMO-IP) & Reconsideration
- o Division On-Line Training – Human Resource Office (DOTS- HRO)
- o Division On-Line Training (DOTS)
- o Grievance Reporting
- o Information Tracking System (GRITS)
- o Level Descriptor Addendum (LDA)
- o Mandatory On Line Training
- o Medical Surveillance
- o QRAM – Recruitment
- o Report Tree
- o SF50 Employee Distribution System.

Navy Family Accountability and Assessment System (007-000001728 - NFAAS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18273 - Improve and strengthen business operations through a move to DoD-enterprise or shared services; reduce administrative and regulatory burden.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Other general government / Disaster Preparedness and Planning

Investment Description and Justification

Short Description

A Web-based system for Personnel Accountability, Disaster Recovery, and Individual Augmentation Support.

Full Description

NFAAS is a web-based system for accounting for personnel following a disaster. NFAAS captures accounting status, contact and location information. NFAAS is also used to assess the impact of the disaster on Navy affiliated personnel and provide support to help families return to a steady state. NFAAS is used on a regular basis to track contact and data on sailors on Individual Augmentation orders.

OMB Sector/Function/Service:

General Government / Central personnel management / Workforce Planning

Investment Description and Justification

Short Description

Allows users to review unclassified activity data, maintain AMDs, create or modify packets, run queries, and manage personnel.

Full Description

The Total Force Manpower Management System (TFMMS) provides the manpower enterprise the tools to produce the Navy's authoritative manpower products; Activity Manpower Documents (AMD), total force positions, manpower resource controls, and organizational structure. These products provide the manpower requirements and authorizations for active and reserve military, civilians, and contractors. TFMMS provides the Manpower Change Request (MCR) process to update authoritative manpower products. The system sends the manpower demand signal output to the Navy and the Manpower, Personnel, Training and Education (MPTE) processes to support personnel readiness.

Investment Description and Justification

Short Description

Hybrid network serves as a dynamically variable resource for multifaceted teaching, education, and research activities in blended physical/virtual campus environment.

Full Description

System supports the sole Navy undergraduate degree-granting higher education command. Hybrid network enclave serves as a dynamically variable resource for multifaceted teaching, education, and research activities in blended physical/virtual campus environment similar to four-year civilian universities. Functionality includes collegiate-level admissions outreach, curriculum development, course delivery, pedagogical research, extra-curricular activities, and intercollegiate sports. Produces approximately 50% of annual Navy officer accessions.

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Development and Training

Investment Description and Justification

Short Description

Establishes and supports an enterprise approach to MPT/HSI within the Navy. Enables the development standardized MPT processes, language, tools, policy, guidance, and metrics. Addresses human element considerations early in the life-cycle.

Full Description

Human Analysis & Requirements Planning System (HARPS) is a web-based toolset supporting SPAWAR Manpower Personnel and Training (MPT) products including most notably the online collaboration and development of Navy Training System Plans (NTSP). NTSPs are used to define how many sailors with which NECs are needed to support a specific SPAWAR system and OPNAV uses NTSPs to budget funding according to projected manpower requirements across the Navy. HARPS consists of the following tools for different MPT functional areas: HSI Integrated Architecture (HSI IA). Navy Training System Plan (NTSP) Development (Computer Information Systems Network [CISN] Manpower & Analysis Training Tool CMATT). Capabilities Based TRPPM Board (CBTB). Task Analysis & Competency Development (TACD). Training Metrics Tracker (TMTRAC) The NTSP tool within HARPS has streamlined the NTSP Approval/Adjudication process, reduced need for face-to-face TRPPM/NTSP Conferences; enabled Process metric gathering, reporting and analysis; provides ORACLE data repository for all Navy Training Systems Plan (NTSP) data; enables incremental changes to NTSPs vice wholesale rewrites; standardizes NTSP reporting; provides on-line threaded discussion for issue adjudication; and supports NTSP Annual Review Process.

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Development and Training

Investment Description and Justification

Short Description

IWS Communicator is a private web site for PEO IWS personnel. It is used to facilitate and disseminate information, lean business processes and as PEO IWS COOP tool.

Full Description

The Talent Management Dashboard (TMD) replaces the IWS Communicator. The Talent Management Dashboard (TMD) was originally just a module, part of the IWS Communicator system. TMD has continued to grow, mature, and be adopted by other organizations while the IWS Communicator is being migrated to other systems. With TMD as a primary purpose of the system's existence, PEO IWS is working to better reflect the primary use of this system for Talent Management within the proper FAM identification. Finally, our C&A package/ATO defines the requirement to establish a DITPR-DON record for TMD. TMD helps employees assess and plan the growth of their careers by allowing them to identify areas of interest for development. TMD then helps organizations to strategically process the aggregate employee assessments and plan for the growth of both the employees and the organization.

Investment Description and Justification

Short Description

The NAVAIR Workforce Shaping Tool (Total Force Readiness Individual Workplan-TFR IWP) is used to give insight to NAVAIR, NAE, and Navy leadership about where or dollars are being spent and what End-Item Fleet Products and Intermediate Products.

Full Description

Command Staffing (CS) is a Command-level process to: 1) identify and capture planned, funded workload and elevate staffing decisions, and 2) ensure workforce risks are properly balanced across the entire PEO and Command portfolio of work. The goals of the Command Staffing process are to: Utilize a common structure and 'language' to describe our demand for work (our demand signals, based on specific program events and activities), the required work output (our Intermediate Products), and the estimate of workyears required to produce that output. Reinforce roles and responsibilities for determining and staffing workload under CAO/IPT, including the shared accountability demanders and suppliers have in ensuring program/project success. Provide leadership insight to staffing levels across the portfolio of PEO, Command, and external agency customers allowing for optimization of resources and proper balancing of staffing-related risk. Ensure visibility, transparency, and consistency in the development of manpower projections that feed multiple processes across customers and provide for stakeholder review of those requirements prior to external release. This application is critical in that it supports the N1 Single Manpower Resource Sponsor, N1 POM/PR process. It is used by the entire Naval Aviation Enterprise in support of the baseline for the POM/PR build.

Investment Description and Justification

Short Description

HR PORTAL (PORTAL). This system is currently under development. This will be the Portal for all DON civilian personnel activities and will replace the DONHR site.

Full Description

HRCP is an integrated system comprised of government off-the-shelf (GOTS) and commercial off-the-shelf (COTS) modules, delivering a full spectrum of Human Resources FAM approved tools in the servicing of 185,000 DON and 8,000 DoD civilian employees; HRCP collects DON APPR, FND, FNI civilian employee data only. HRCP provides the HR Tools required and mandated for HR Professionals, Management, and Civilian Employees to process civilian personnel, pay, benefit, awards, retirements, etc... transactions. HRCP has been integrated with and supports the mandated DoD Defense Civilian Personnel Data System (DCPDS), Office of Personnel Management (OPM) Enterprise Human Resources Integration, DoD Defense Civilian Payroll System (DCPS), and all of DON's management information systems strategic systems requiring civilian personnel data to include Navy Enterprise Resource Planning (Navy ERP), Total Workforce Management System (TWMS), and Civilian Workforce Development Application (CWDA).

General Government / Knowledge management / Case Management

Investment Description and Justification

Short Description

CORB uses four systems (NDRB, CAPS, JDETS, & CORBWeb) to process and track all cases considered by one of the CORB's sub-boards. During FY08, all systems will be updated and fall under a single umbrella system.

Full Description

The application allows for the review, scheduling, and case management of Navy, Marine and Coast Guard cases for Secretary of the Navy Clemency and Parole Board.

Investment Description and Justification

Short Description

ASM is a s/w tool designed to identify technical training requirements, track training across an individual's career, validate knowledge/skill for Naval Air maintenance personnel and provide feedback to commanders regarding unit training process.

Full Description

Advanced Skills Management, formerly AMTCS Software Module, is designed to track technical training exposure across an individual's career, validate knowledge/skill in job related procedures, and provide a feedback system to better manage the individual and workforce training process for more effective planning and decision making for future organizational needs. Specifically, ASM: 1.Identifies training requirements by task, job or rank 2.Creates and administers both individual and group training plans 3.Assigns training methods (formal, informal, OJT, testing, reading) 4.Provides on-line testing for real-time knowledge assessment 5.Identifies deficiencies and associates remediation 6.Tracks training, certification, and licensing progress using an electronic training jacket 7.Assesses test and training effectiveness and provides data for curriculum analysis 8.Generates standard or custom reports for personnel, group or unit reporting requirements 9.Supports over 12 major Navy aircraft platforms including all F/A-18 variants, EA-6B, AV-8B, C-130, SH-60B, MH-53, CH-53, CH-46, AH-1W, UH-1N, P-3, E2/C2, E-6, and AIMDs 10.Uses a web-based interface and runs on an Oracle database 11.NMCI and IT21 approved 12.NUWC Division Keyport manages the day to day operation of the systemAMTCS has a varied user base that includes: 1.Naval Air and USMC squadrons (Organizational Maintenance)2.Aircraft Intermediate Maintenance Departments (AIMDs-Intermediate Maintenance) 3.Naval Air Schoolhouses (Maintenance Training) 4.Navy Meteorological Oceanographic Personnel Development Center (NMOPDC-all aspects of NMOPDC training management) 5.NAVSEA Torpedo Intermediate Maintenance Department (Intermediate Torpedo maintenance training management).

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$11,883) | |

Horizontal Change Explanation

ASM took a program cut in FY19 that affected contract support services. FY20 is increased at a slightly higher level of support required to make up for work unable to be accomplished in FY19. FY21 brings the contract support services back the normal levels through the FYDP. Minor program adjustment for 66021

Intellectual Property Management Information System (007-000002982 - IPMIS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18273 - Improve and strengthen business operations through a move to DoD-enterprise or shared services; reduce administrative and regulatory burden.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

IPMIS provides a repository of Navy invention data. The main data elements include Navy Case Summary information, case history, inventor information, fees to process, patents, and information about attorneys assigned to the cases.

Full Description

1. Intellectual Property Management Information System (IPMIS) - This system is a computerized system that provides a repository for Navy Invention data. The main features include Navy Case Summary information, case history, inventor information, fees to process patents, and information about attorneys assigned to the cases. 2. Licensing - This system is a computerized system that provides a repository for Navy licensing of Inventions data. The main features include Licensing Summary information, applicants, licensees, license information, royalties received and disbursements to inventors. 3. IPMIS Query on the Web - A Navy Case reporting tool for IPMIS users to do Ad Hoc queries of data by inputting parameters on a web page.

Investment Description and Justification

Short Description

CORMIS is a web application database used to manage Navy and Marine Corps brigs, detainees, prisoners, correctional custody awardees, and those service members on appellate leave.

Full Description

Corrections Management Information System (CORMIS) provides comprehensive Web-enabled information technology support and an array of functional tools to support naval offender management programs which include: confinement, and clemency and parole processing. CORMIS also provides public safety reporting requirements in support of victim-witness assistance program notifications, sex offender registration / notification requirements, and DNA collection requirements for confined qualified military offenders. CORMIS serves as the DON's authorized electronic records management system for associated naval offender management programs.

Investment Description and Justification

Short Description

Application for collecting and disseminating alcohol and drug abuse incident, screening, treatment and training for the Navy and Marine Corps.

Full Description

ADMITS is the Navy and Marine Corps repository for alcohol and drug incident, screening, treatment, and training information. The ADMITS provides statistical reporting and longitudinal assessment of the effectiveness of Navy and Marine Corps substance abuse programs. It provides information on which to validate the Navy's policy of zero-tolerance of drug abuse and to ensure compliance with urinalysis testing policy. It provides historical data to field activities in order to evaluate and recommend the disposition of members who have an alcohol incident. It provides background checks for prospective employees of MWR child care activities who are either an active duty member or retiree.

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

PRIDE MOD supports enlisted accessions process by providing applicant classification and recruit booking of school and Recruit training Center shipping reservations. PRIDE MOD supports the accessions, classification and shipping reservation process.

Full Description

PRIDE Mod supports the Navy Recruiting Command's enlisted accessions process providing enlisted applicant classification and allocation of training resources. PRIDE Mod captures enlisted applicant qualifications data, e.g. aptitude, test scores, education, color perception, etc. and determines what ratings and programs an enlisted applicant is qualified for. The system matches applicant qualifications to available programs as determined by school seat quotas to provide available options. PRIDE Mod is also used to process incentives, waivers as required, and make Class A school reservations. Future State: PRIDE Modernization (Increment II) supports the officer and enlisted accessions process by providing enlisted applicant classification and recruit booking of school and Recruit training Center shipping reservations and officer application tracking, board results, shipping and training school notification. PRIDE MOD (Increment II) supports enlisted accessions, classification and shipping reservation process for over 43,000 recruits per year and officer accession commission/enlisted processing for 6000 officer personnel to officer candidate school, officer development school and officer direct commissioning school. PMOD provides 700 users in 71 locations recruiting accession workflow for new enlisted recruits' and officer applicants' applications.

Investment Description and Justification

Short Description

JPATS is an information management system supporting flight training within CNATRA.

Full Description

Joint Primary Aircraft Training System (JPATS)-Training Integrated Management System (TIMS) is a joint USAF/USN program. It is the total replacement system for primary pilot training and all associated ground based training. The principal mission of JPATS-TIMS is to train entry-level US/USAF and international student pilots in primary pilot skills. JPATS-TIMS also provides primary and intermediate training to entry-level Student Naval Flight Officers and basic airmanship understanding to entry level USAF student navigator. The system provides resources and scheduling management, performance measurement, and manages all training activities to include scheduling, creation of grade sheets, flight records, resource allocation, qualification and currency tracking, academics and computer-aided instruction, long-range planning, and all training reports.

Investment Description and Justification

Short Description

The CNATRA HQ DSS is a web-based application that is used to standardize the collection, collation, analysis and dissemination of current statistical data from all phases of aviation training.

Full Description

The CNATRA Headquarters Decision Support System (HQ-DSS) provides real time and historical data on the flight training of Naval Aviators and Naval Flight Officers. The system functions as a reporting system to mine and compile aviation training data from the Joint Primary Aircraft Training System- Training Integrated Management System (JPATS-TIMS), managed by the Chief of Naval Air Training (CNATRA), in accomplishment of Multi-service aviator production training. The CNATRA HQ-DSS consists of web-based functional modules, which provide for reporting and monitoring of training performance, quality and analytical output used in planning aviator production requirements and resources. The modules provide a web interface, providing authorized users consisting of military, civilian, and contractor personnel the capability to enter and/or select functions to query data from the TIMS Wing-level databases.

Investment Description and Justification

Short Description

Web-enabled decision support system that allows Navy Career Counselors to qualify and rank conversion opportunities for Sailors.

Full Description

Formerly known as "FLEET RIDE." CAREER WAYPOINTS is a rating quality and eligibility screening mechanism used for all enlisted Sailors entering the Navy or desiring to reenlist or convert before their 14th year of service. It has become the Navy's primary total force management tool used to control reenlistments and separate Sailors who do not meet performance standards relative to their peers. It also provides conversion processing capabilities to level rating manning from overmanned to undermanned ratings for both rated and non-rated Sailors. C-WAY requires Sailor PII data to process Re-enlistment Module applications for retention, as well as qualify Sailors to rating conversion opportunities and Apprentices to rating designations, as part of mandatory Chief of Naval Personnel career counseling and retention programs, including Re-enlistment Module and Professional Apprentice Career Track (PACT).

Investment Description and Justification

Short Description

CMS-ID is integral to the detailing process for Active/Reserve Enlisted personnel. CMS-ID will provide an integrated web-based architecture framework to allow fleet personnel to manage distributions, requisitions and assignments.

Full Description

Career Management System-Interactive Detailing (CMS-ID) is a mission critical Commander, Navy Personnel Command (CNPC) and Commander, Navy Reserve Forces Command (CNRFC) system supporting the Assignment and Distribution functional areas of the Navy for the Active, Full-Time Support (FTS) and Reserve Component Enlisted personnel. The mission of CMS-ID is to provide an integrated web-based architecture framework as part of the ongoing efforts of the Department of Navy (DON) to allow fleet personnel to manage unit level manning, view Sailor distribution information, view available requisitions (billets/positions), provide an automated means to communicate assignment requests with Detailers and Reserve Assignment Coordinators(RAC) and assignment selection by the Detailers and RAC. In April 2013, Billet-Based Distribution (BBD) functionality was added to CMS-ID as the first step to align enlisted Sailors (Active/FTS) to billets.

Investment Description and Justification

Short Description

EAIS provides on-line enlisted personnel information and order writing capabilities for use by enlisted assignment and placement personnel.

Full Description

The Enlisted Assignment Information System (EAIS) is an order writing system, which supports the assignment and distribution of Enlisted personnel by Enlisted Detailers at NPC. EAIS provides a Permanent Change of Station order writing function, including separation orders in support of the Active Component to Reserve Component (AC2RC) seamless transition initiative, and rapid access to enlisted personnel data. Through various screens it supports Assignment Incentive Pay (AIP), overseas screening, and the distribution of recruit orders. EAIS also provides the ability to accomplish numerous personnel actions online, in real time, such as PRD changes, etc. The enlisted distribution process is dependent upon the quality of EAIS information for numerous managerial and Congressional groups seeking information about the active enlisted population.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

OAIS II provides on-line officer personnel information and order writing capabilities for use by officer assignment and placement personnel.

Full Description

OAIS II provides on-line officer personnel information and Permanent Change of Station (PCS) order writing functions, including separation and retirement orders, for use by officer assignment and placement personnel. System handling information that is important to the support of deployed and contingency forces. The system owner is NPC. Functional Manager is PERS-455. The Online Distribution Information System (ODIS) provides users the capability for rapid, AD-Hoc queries of personnel and activity data in support of distribution processes, manning, and assignments in response to requests from higher authority (BUPERS, CNP, CNO, and DOD). OAIS II and ODIS are mainframe systems located at DECC Mechanicsburg, PA. Backup is located at the DECC in Ogden, Utah.

Investment Description and Justification

Short Description

NES is the Navy's authoritative database for all active duty Navy enlisted personnel.

Full Description

The Navy Enlisted System (NES) is the Navy's corporate database of authoritative data on all active duty Navy enlisted personnel. The system generates and maintains the official automated personnel records of all United States Navy/United States Naval Reserve (USN/USNR) active duty enlisted personnel for both current and historical purposes. NES is primarily used to calculate enlisted strength, to authorize the establishment of a pay record at Defense Finance Accounting Center. The enlisted distribution and promotion processes are dependent upon the quality of NES information, as are numerous managerial and Congressional groups overseeing aggregated information about the active enlisted population. NES provides corporate data that supports the following processes: 1)Enlisted Distribution 2)Strength Accounting 3)Mobilization 4)Individual Special Pay 5)Individual Enlisted Career Progression 6)Field Reporting 7)Personnel Accounting and 8)Reenlistment/Extension Processing.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

OPAS supports the administration of officer promotions, the scheduling of promotion boards, and the storage of officer promotions data.

Full Description

PeopleSoft OFFICER PROMOTION ADMINISTRATIVE SYSTEM creates and captures/stores promotional history and also captures/stores other data from legacy systems that impact an officer's eligibility concerning statutory selection and continuation boards. OPAS also calculates and assigns lineal/precedence numbers for both active and reserve officers, and then transmits those numbers to the appropriate legacy system (OPINS/IMAPMIS). Furthermore, OPAS generates and exports the list of eligible officers for selection boards that are exported to the board. Once OPAS receives selection board results, OPAS forwards those results to OPINS and/or IMAPMIS. OPAS generates monthly promotion messages for both the AC and RC officer populations and transmits (to legacy systems) the associated promotional transactions to update, grade, date of rank, effective date of pay and the new lineal/precedence number. OPAS also supports enlisted selection boards for advancement to E7, E8 and E9 for both active and reserve enlisted personnel by generating the list of eligible members and once results are received, transmits those selected to the appropriate legacy system.

Investment Description and Justification

Short Description

Corporate database for active Navy officers and officer candidates.

Full Description

The Officer Personnel Information System (OPINS) is a corporate system that generates and maintains the official automated personnel records of all the United States Navy/United States Naval Reserve (USN/USNR) active duty officers and officer candidates for both current and historical purposes. OPINS also maintains personnel records for active duty officers (Active Duty for Special Work (ADSW), Training Active Reserve (TAR)), Officer Candidates Accounting and Reporting Subsystem (OCARS), Naval Reserve Officer Training Corps (NROTC), and United States Naval Academy (USNA). OPINS is primarily used to calculate officer staffing strength, authorize the establishment of a pay record at the Defense Finance and Accounting Service (DFAS), prepare Officer Data Cards (ODC) for dissemination to officers, and prepare Officer Distribution Control Reports (ODCR) for dispersal to field activities. The officer distribution and promotion processes are dependent upon the quality of OPINS information, as are numerous managerial and congressional groups seeking aggregated information about the Active Officer populations. OPINS provides critical, historical, and current data for decision support systems as well as selection boards. Force Management (FORMAN) is a subsystem of OPINS that automates the first term reenlistment process, allowing functional managers to maintain tighter control during force draw down. FORMAN automates retirements and Navy in-rate approvals with available quotas, processes first term extensions, and meets Navy functional priorities.

Investment Description and Justification

Short Description

The "My Education" strategy has been launched to evaluate and identify optimization potential for NETC.

Full Description

The "My Education" strategy has been launched to evaluate and identify optimization potential for NETC. This development effort will help to enhance capability by leveraging critical functionality provided by existing educational legacy systems which reside within their own architectural accreditation boundaries. The first module to transition into the "My Education" environment is the; Non-Resident Training Courses (NRTC) module. Other tentative migration systems, subject to retooling of the application's software and/or hardware and/or compliance milestones in the C&A life cycle, include the Center for Personal and Professional Development's (CPPD) Sailor/Marine American Council on Education Registry Transcript (SMART), United Services Military Apprenticeship Program (USMAP), and Navy College Management Information System (NCMIS) may also be incorporated as modules into "My Education". However, due to those provisional software/hardware improvements/consolidation and/or compliance milestones in the C&A life cycle there is not a set schedule to achieve the total encapsulation of all indistinct "My Education" components. The goal is to avoid duplicating C&A efforts by merging these legacy applications into the "My Education" environment once they reach the accreditation decision and oversight milestone. The NRTC's are self-study courses, which may include exercises, lessons, or examinations designed to assist the student in acquiring the knowledge or skill described in the associated text. These self-study packages are designed to help students acquire Navy professional or military knowledge in preparation for an advancement exam. The package normally consists of a course text and a set of course assignments, and may be delivered in printed or digital form and in some cases both.

OMB Sector/Function/Service:

Education and Workforce / Social services / Training and Employment

Investment Description and Justification

Short Description

The Federal Capability Assessment tool (FCAT/IDP) is a data collection and reporting tool that is specifically designed to support the federal government in workforce planning.

Full Description

IDPT embraces DON FM community's vision for competency proficiency achievement and long term goals for Comptroller personnel across the Department of Defense. This tool allows the N8 Enterprise to properly identify competencies for each employee's specific FM professional discipline and career level. The tool calculates the knowledge strengths and gaps to assist employees and managers with identification of learning opportunities to achieve gap closure, facilitating employee growth. The tool provides several learning modalities to accommodate all learning styles, and varying cost structures to ensure that employees can attain knowledge even in a fiscally constrained environment. IDPT provides access to resources and tools to improve knowledge allows them to more effectively and efficiently complete daily duties; reduce labor consumed, reduce errors, and reduce task related stress. Having a resource bank and a measure to identify and provide feedback in very specific areas, provides a wealth of career fostering to employees which provides employees with a more friendly and less intimidating working surroundings. The FMIDPT will establish itself as a key foundation to CNIC N8's infrastructure supporting DOD/DON's auditability goals. It provides a tool to reach DON's auditability goal, compliance with DOD's Financial Improvement Audit Readiness (FIAR), DON's Financial Improvement Program (FIP), and local Management Internal Control (MIC) programs. Equipping employees with these skills and resources allows them to help CNIC provide "reasonable assurance" of financial data for auditability. IDPT takes competency proficiency several steps further by allowing employees, supervisors, and mentors to assess an employee's competency skill level. The tool provides a gap analysis which guides an employee, their supervisor, and optional mentor with the built in customized IDP tool, offering training suggestions which have been specifically mapped to a competency and proficiency level. The dynamic library of opportunities allows an employee to select current training opportunities spanning several modalities which specifically tie back to a competency where improvement may be needed, thus facilitating a reduction in identified skill gaps. This tool supports the DOD FM Certification positive certification requirements.

OMB Sector/Function/Service:

General Government / Central personnel management / Employee Performance Management

Investment Description and Justification

Short Description

Provides the ability to screen, collect and transmit data to Office of Personnel Management (OPM) to open a personal security clearance for new recruits into the Navy and Navy Reserve.

Full Description

The NASIS application collects data from future sailors to initiate a personal security investigations for all officer, enlisted, active and reserve Navy personnel. The information for security clearance investigation is submitted to JPAS to initiate an investigation. All future sailors must complete the SF86 request for security clearance and are required to have an open investigation prior to shipping to boot-camp. NASIS is Navy's security clearance data collection tool and interfaces with JPAS. Background: All accessions services were required by OPM to develop their own data collection tool for security clearance request information because of the sheer number of submissions generated from recruiting commands annually. Recruiting commands are not authorized to submit security clearance information directly into eQUIP. The NASIS functionality will be subsumed by PRIDE Mod II in FY15.

Investment Description and Justification

Short Description

The Web Recruiting Tools (WebRTools) application is a GOTS contact management system developed to aid the enlisted recruiter in the effective prospecting and processing of potential applicants for enlistment into the United States Navy.

Full Description

WebRTools supports the Navy Recruiting Command by providing contact management capabilities for Active Enlisted and Officer recruiting. WebRTools is a government designed and developed system using ASP.NET, Hyper Text Markup Language (HTML), and Java Script. It is a Web-enabled application which provides applicant lead and contact information for over 4000 field Recruiters. WebRTools runs in a secure Microsoft Windows 2008 Server environment. Through a series of on-line processes, WebRTools provides recruiters with the ability to track leads and manage their recruiting contacts. The application provides the capability to input information on applicants to include personal data, remarks, and information relating to contact with the individuals. WebRTools includes On-Line Help for users and an intra-station message capability allowing recruiters within the same station to exchange instant messages. WebRTools provides a Sales Activity Analysis capability to determine effectiveness of recruiting in specific areas. WebRTools serves as the single primary contact management system for Active Enlisted and Officer Recruiting providing leads information and tracking progress of contract management. WebRTools receives ASVAB Test Result notification messages from USMEPCOM's eSOA system. As these messages are received from USMEPCOM they are processed immediately and the ASVAB data is available to the appropriate recruiter. WebRTools is the primary source of applicant data for the PRIDE Mod system. WebRTools allows Recruiters and RINCs to send basic applicant data to PRIDE Mod as part of a Projection Request. Also, as part of the Projection Request, WebRTools sends the Processing Date and Time, Projection Type, MEPS Id and requests for Aptitude and Medical Testing at a MEPS. WebRTools processes initial Strength Gain and Attrition messages from PRIDE Mod. The WebRTools Self Service for Applicants (WRT SSA) system is the Navy's newest Applicant tool to be utilized by personnel applying to join the Navy through the Internet, Navy.com, and NavyReserve.com from the convenience of their homes or offices. In addition, the system will be a key Information Delivery System (IDS) providing Navy Recruiters with near real-time awareness of hot Leads. WebRtools MepsTrack provides the recruiter the ability to track his applicant through the MEPS process, displaying the times the applicant completes each step of his process. Also provide the MEPS user the ability to provide feedback.

Investment Description and Justification

Short Description

System is the consolidated manpower management and assignment tool that HQMC relies on as the enterprise solution and is the single source system to manage personnel, billets and assignments.

Full Description

WebMASS is the consolidated manpower management and assignment tool for the USMC. This enterprise solution is the single source upon which MM and RA (for Active Reservists) relies to manage personnel, billets and assignments. Additionally, the data that is gold sourced in WebMASS is a critical input to MM's Manpower Models. Web Orders replaced Naval Messages and the Automated Orders Writing Program (AWOP) for the delivery of Permanent Change of Station (PCS) orders for all Active Duty and Active Reserve Marines.

Investment Description and Justification

Short Description

System provides periodic reporting, recording, and analysis of the performance and professional character of Marines in the grade of E5 through MGen.

Full Description

APES provides for periodic reporting, recording, and analysis of the performance and professional character of Marines in the grades of Sergeant through Major General. Its fundamental concepts are accuracy, accountability, simplicity, and consistency of policy and evaluation methods. APES supports the centralized selection, promotion, and retention of the most qualified Marines of the Active and Reserve Components of the USMC. APES also aids in the assignment of personnel and supports other related personnel management decisions.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

Applicant Relationship Management (ARM) will support officer and enlisted, active, and reserve component recruiting processes by providing a single integrated prospecting system that will manage the future sailor through the entire lifecycle.

Full Description

Applicant Relationship Management (ARM) will support officer and enlisted, active, and reserve component recruiting processes by providing a single integrated prospecting system. ARM will manage the future sailor through the entire lifecycle (i.e. from prospect to quality lead and hand off for job sale) and will integrate with Personalized Recruiting for Immediate and Delayed Enlistment (PRIDE) Modernization II. The Navy Recruiting Command (NRC) will replace three legacy recruiting systems WebRTools, WebOTools and the Command Integrated Recruiting Information Management System (CIRIMS) which currently provides only a limited operational prospecting capability and no collaborative and analytical capabilities across all mission areas. Integrated processing and processing systems are critical to realizing the command's vision of Recruiting Force 2020 (RF2020). ARM will provide prospecting functionality in support of RF2020 for over 4,000 multi-purpose recruiters by providing the ability to recruit across all mission areas anytime, anywhere. ARM will provide leadership a consolidated view across these mission areas and will provide enhanced analytical capabilities to allow managers to correlate sales activity to marketing campaigns in order to determine effectiveness and return on investment. ARM will incorporate enhanced "self-help" capability, leverage interface partner data exchanges as well as incorporating workflow processes. The system will leverage paperless capability across the enterprise with biometrics for positive identification and electronic signature at first contact through establishment of a sailor's electronic service record.

Investment Description and Justification

Short Description

System provides drill management capability to the Marine Corps Reserve community including the ability to schedule, manage, allocate, muster, and report drills.

Full Description

Drill Management Module (DMM) provides drill management capability to the Marine Corps Reserve community including the ability to schedule, manage, allocate, muster, and report drills. The Drill Management Module (DMM) automates the drill accounting process by providing capabilities to schedule, manage, allocate, muster, and report required drills for the Marine Corps Reserve community; as well as supporting the electronic generation, processing, and tracking of Line of Duty (LOD) determinations and Medical Hold (MEDHOLD) determinations for injuries that may occur during a drill period or while on Active Duty. Manpower and Reserve Affairs (M&RA), Marine Corps Base (MCB) Quantico, VA., is the hosting site for TFAS DMM. All Marine Corps Reservist are able to access TFAS DMM via a resource link within Manpower Information (MI) Portal as well as a resource link within Marine Online (MOL).

Investment Description and Justification

Short Description

The web-based DON eGov source data automation standard time & attendance system. Allows centralized or distributed input & tracks civilian, military & contractor labor hours. Interfaces w/local financial systems & CDPS, DIFMS & STARS.

Full Description

SLDCADA is a time and attendance system that has been chosen as the DON standard. SLDCADA allows for centralized or distributed input, provides the capability to track civilian, military, as well as contractor labor hours against job order numbers for financial purposes, and hours against type hour codes for pay purposes. Other notable features include a leave availability check, prior pay adjustments, exception reporting, ability to query DCPS files (MER and BIMER), and easy access to employee information by authorized users. SLDCADA provides single time and attendance screen for input, correction, certification, prior pays, and review, which ultimately reduces the training effort and makes user input easy. All reports are on-line, resulting in a reduction of hard-copy reports. Interfaces are in place with DCPS, the DoD standard financial systems (DIFMS, STARS-FL, STARS -HQ), as well as other various local financial systems. SLDCADA is parameter driven so it can be tailored to meet individual site requirements. This allows the application to be customized, thereby providing a site with maximum flexibility. Note that SLDCADA only collects civilian hours for pay purposes. Military/Contractors hours are for tracking only not pay.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

NOW is the standard Department of the Navy order writing system for active and reserve officer and enlisted personnel.

Full Description

The Naval Reserve Order Writing System (NROWS) was formerly known as the NOW system. NROWS was an Abbreviated Acquisition Program (AAP), but has been in sustainment since 2004 and is no longer an AAP. The system provides total visibility for order history and current Reserve activities throughout the entire Commander, Naval Reserve Force (CNRF) community. NROWS provides users and managers with information on total force readiness and availability for operational planning. The objective of NROWS is to perform many of the data impact edits as early in the order writing process as possible. Meeting this objective reduces the number of applications and order validations currently being performed manually and greatly decreases the application error rate. Providing reservists with the ability to check the status of their own orders will save time and effort. NROWS provides that capability. NROWS is a consolidated information system that combines all CNRF order-writing functions. This new system replaced the following three legacy systems: Reserve Financial Management System (RESFMS)•Reserve Integrated Management System (Order Writing Module) (RIMS (OM))•Inactive Duty for Training Travel (IDTT). The production site is located at the SPAWAR Atlantic New Orleans, LA and the COOP Failover site is located at San Diego, CA.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

The Military Sealift Command (MSC) has consolidated its Civilian Mariner (CIVMAR) personnel functions utilizing Oracle Human Resource (HR) and Payroll. The system's name is now Human Resources Management System.

Full Description

In order for MSC to successfully carry out its mission in an ever-changing environment, MSC needs a robust resource management and staffing system to quickly and efficiently place Civilian Mariners (CIVMARS) who work and sail on the U.S. Government-owned MSC ships. MSC-HRMS resides in the Civilian HRMS sub-domain of the HRM Business Mission Area (BMA), and supports the Civilian Personnel and Pay function by providing a comprehensive and flexible tool for managing the staffing, training, and employee relations for CIVMARS. MSC's workforce goal is to attract, develop and care for a workforce capable of meeting MSC's vision. This will be achieved through an increased emphasis on career development and by promoting each individual's success by shaping, training and properly equipping the workforce. Implementing and maintaining a robust human resource management application allows MSC, which is charged with providing CIVMAR support and management oversight, to efficiently meet the aforementioned goals. MSC-HRMS aligns to the Manage Human Resources Information HRM EA OV-5 operational activity.

Business Services / 520-000 - Human Resources Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Program / Project Management

Investment Description and Justification

Short Description

Marine Corps Total Force System (MCTFS) is the integrated pay and personnel system for active duty and reserve Marines, and the authoritative source of data for all Marine Corps (MC) pay and personnel information.

Full Description

Marine Corps Total Force System (MCTFS) is the integrated pay and personnel system for active duty and reserve Marines, and the authoritative source of data for all Marine Corps (MC) pay and personnel information consisting of over 550,000 records. MCTFS receives and feeds many other systems with critical personnel information and financial data to include Social Security Administration, Thrift Savings Plan, Treasury, Office of Personnel Management, Federal Reserve System, State and Local Governments, Privatized Housing Contractors and approximately Sixty financial institutions and other system and organizations.

MCTFS has been successfully fielded and is currently in its post deployment system support phase of its lifecycle.

MCTFS supports centralized business-critical pay functions for the Marine Corps Enterprise on time and accurately, including computation and payment of net pay to individual Marines, while accommodating all necessary system change requests to meet current legislative, regulatory, mission essential, force reset, and contingency change requirements.

MCTFS is maintained in an audit compliant state to ensure accurate financial transactions and reporting. MCTFS includes a comprehensive history of pay entitlements, deductions, and payments for each active duty and reserve Marine.

The principle advocate within the Marine Corps is the Deputy Commandant, Manpower and Reserve Affairs.

The qualitative return on the MCTFS investment, since FOC in 1994, is realized through business function automation and the resulting reduction of costly, time consuming, and distributed manual work efforts that result in a late transaction reporting (poor timeliness) and higher error rates (reduced accuracy). The quantitative goal of MCTFS is to serve the Marine Corps' pay and personnel management requirements at a 97% timeliness and accuracy rate.

Investment Description and Justification

Short Description

The Center for Career Development (CCD) is a non-IT POR. It is a CNO-Sponsored organization created to study and analyze retention trends and factors and provide the fleet with tools and education necessary to make informed career decisions.

Full Description

CCD provides enhanced professional training for Career Counselors and Command Retention teams. The program provides career decision seminars and workshops for Sailors and their families about the career benefits of the Navy that will help them make informed career decisions. The funding shown below will be used to support the maintenance of the CCD Home Page on the web.

Investment Description and Justification

Short Description

A web-based recruiting tool that generates leads and contracts. Provides more realistic information to potential recruits, thus enabling people to make an informed choice about joining the Navy.

Full Description

A web-based advertising tool that provides realistic information to potential recruits, thus enabling people to make an informed choice about joining the Navy. The navy.com system is comprised of three Navy marketing tools: navy.com, navyreserve.com and NALTS. Navy.com and navyreserve.com are vital marketing tools that act as the hub of many advertising tactics. All communications direct prospects to these sites for more information. Everything from television ads and radio spots to email, banner ads and social media drive traffic to navy.com and navyreserve.com. NALTS is an acronym for the Navy Advertising Leads Tracking System. It is a database system created on behalf of the Navy as a means to track and process leads that are obtained from the Navy's national and local marketing communications and to manage the use of prospect lists for National and local efforts.

Investment Description and Justification

Short Description

NRC-LS provides NRC IG with an accessible and usable case matter tool that will support Field Investigators, Auditors, and Headquarters personnel with the assembly, maintenance, and reporting of all pertinent IG case matter.

Full Description

NRC-LS maintains and provides NRC with an accessible and usable contact and processing management database that supports field, region, headquarters, and affiliate command (Navy Personnel Command and Commander, Navy Reserve Forces Command) personnel for the execution of the Navy's officer active and reserve components' recruiting accession missions. NRC-LS supports research projects in support of strategic analysis for issues impacting recruitment, accessions, training, testing, force development, and force quality. NRC-LS provides NRC IG with an accessible and usable case matter tool that will support Field Investigators, Auditors, and Headquarters personnel with the assembly, maintenance, and reporting of all pertinent IG case matter. This includes responding to Congressional inquiries. NRC-LS is composed of functions that include: Obtaining data from multiple sources; Verifying data integrity; Processing and maintaining data in a form for easy access and understandable for research and analysis; Supporting requests to conduct routine and preparatory analysis; Microsoft Office integration via plug-ins; To-do dashboards for every user.

Short Description

PERSONNEL DEMONSTRATION MANAGEMENT SYSTEM.

Full Description

PDMS is the NRL personnel demonstration project support system for the Naval Research Laboratory as implemented under Federal Register Notice/Vol. 64, No.121 of June 24 1999. PDMS is an all inclusive data system that provides NRL employees and managers information required to make informed decisions in regards to performance appraisal, position classification, compensation adjustment decisions, requirement document creation, command drug testing and manpower management. DCPDS data is required to keep personnel records up-to-date for accurate decision making, reporting and overall support of the Naval Research Laboratory Navy Working Capital Fund operations.

Investment Description and Justification

Short Description

The system provides digital marketing, database marketing, leads management, and fulfillment services using a leased data center environment procured on behalf of the USMC Recruiting Command. Rackspace provides hardware and OS level support.

Full Description

The system provides digital marketing, database marketing, leads management, and fulfillment services using a leased data center environment procured on behalf of the USMC Recruiting Command. Rackspace provides hardware and OS level support for all systems while management and operation of all applications is outsourced in support of USMC Recruiting Command marketing efforts. The environment consists of three logical environments; two are located in the Irving, TX data center and one is located in the Herndon, VA data center. The system maintains a centralized marketing database which contains information from key sources including USMC's system of record (MCRISS), Call Center and Data Entry Vendors, the website, all marketing promotions and responses, a robust prospect universe and demographics, and other information supplied by vendors responsible for marketing initiatives.

Investment Description and Justification

Short Description

JES enables the JAG Corps to meet its organizational strategic goals by providing the mechanism to issue legal assistance documents, track claims, process recruits for the JAG Corps and manage requirements for OJAG Officers.

Full Description

JES enables the JAG Corps to meet its organizational strategic goals by providing the mechanism to issue legal assistance documents, track claims against and on behalf of the Navy, process potential recruits for the JAG Corps and to manage "in good standing" requirements for OJAG Officers. The system data is utilized to assess personnel needs worldwide (both in the judiciary and also for counsel assignment), and to track trend development in officer composition, areas of claim, and crimes committed. The data contained within the database is also used to populate data warehouses that allow for the responding to inquiries from Congress concerning issues of national importance as well as tracking of various trends throughout the Navy and Marine Corps. JES allows JAG to produce reports required by SECNAV, CNO, and other DoD and Navy entities in support of manning issues. JES is also used to produce statistical data in reference to historical Navy and Marine Corps court cases, findings, and ruling when responding to Congressional, Freedom of Information (FOIA), and media inquiries. As the Department of the Navy's executive agent for adjudicating claims under the Federal Tort Claims Act (FTCA), the Military Claims Act (MCA), the Foreign Claims Act (FCA), and the Military Personnel and Civilian Employees' Claims Act (PCA), as well as all affirmative claims asserted under the Federal Claims Collection Act (FCCA) and Medical Care Recovery Act (MCRA). JES is the official system of record for the storage of all JAGMAN investigations, and the custodian and release authority for all JAGMAN investigations conducted prior to September 30, 1995 and all JAGMAN litigation reports JES is vital to the management and oversight of many JAGC functional areas, officer community management, and most including recruiting and accessions strategy. JAG receives nearly 1000 applications from law students and lawyers seeking entry into the JAGC. The application process is online and JES allows for management of the entire process from recruiting through to officer commissioning.

Investment Description and Justification

Short Description

RFMT suite is a system of modules that facilitates the application, assignment, and Inactive Duty Training order generation for Navy Selected Reserve Officers. It is a web based system that supports human resource processes and workflows.

Full Description

RFMT, formally known as APPLY-SLATER, is comprised of a web accessible database and a suite of interoperable, personnel-related modules that support the mission of NAVRESFOR. These modules are APPLY, SLATER and Inactive Duty Training Order Writer (IDTOW). Each module has a specific set of capabilities; however, the data flow for a Reservist's assignment can be traced from APPLY (where the Reservists APPLY to billets), to SLATER (where Operational Support Officers/Boards SLATER Reservists to billets), to IDTOW (where the official Inactive Duty Training (IDT) Orders are generated and released to the Reservist). RFMT users (officers and enlisted service members) connect to the system during the allotted application period during the fiscal year in order to upload their applications for billets. Once identification is made, the member can see all available billets they are qualified to apply for, as set by the ESC. The member identifies their selections and then sets a priority corresponding to their desired billets. Member personal information, such as address, email, duty history, etc. may be updated via RFMT. APPLY allows a centralized means of identifying, advertising, and filling of junior and senior command and non-command billets across the Navy Reserve community and allows community leaders to set filter criteria restricting selection to community standards. Once the application period is complete, the RFMT website is shut down for the slating selection process. The slating process is used by the Navy Reserve National Command and Senior Officer (05/06) Non-Command Billet Screening and Assignment APPLY Board members to ultimately assign billets to the most qualified candidate. This configuration involves the SLATER server and four laptop computers in a closed room. Upon completion of the slating process, the RFMT website is re-opened and results are made available to all applicants. Applicants then elect to accept or decline assigned orders. If accepted, RFMT generates orders for further processing in IDTOW. RFMT will serve as a secure and reliable portal via Navy Reserve Homeport (NRH) Private for use by authenticated members of the NAVRESFOR. The common access card (CAC) authentication site serves as the collaborative site for NAVRESFOR authenticated users. Trained site collection administrators will provide support for subordinate organizations and will be supported by a centralized Customer Service Center (CSC) hosted by Commander, Navy.

Investment Description and Justification

Short Description

CORE MISSION SUPPORT APPLICATIONS FOR AUTOMATED RECRUITING SUPPORT (CMSA-ARS) consists of multiple separate applications being utilized by the field Recruiters or at headquarters in the support of the field Recruiter.

Full Description

CORE MISSION SUPPORT APPLICATIONS FOR AUTOMATED RECRUITING SUPPORT (CMSA-ARS) consists of multiple separate applications being utilized by the field Recruiters or at headquarters in the support of the field Recruiter. These systems are comprised of the following: Personnel Status Report (PSR) - tracks location and status of field recruiting and support personnel regarding recruiter production status, medical waiver request and approval process. Recruiting Quarterdeck (RQ) - provides a web based method to share internal information and data of interest to the various recruiting command departments, regions and field recruiters. It includes information about NRC leadership command and HQ departmental, philosophy and vision. Rational software - provides a full lifecycle solution of analyst, developer and tester tools to unify cross-functional teams and support enterprise software projects from requirements to release. FootPrints - provides a web-based help desk and customer support tool. Medical Waivers - provides authorized personnel immediate access to the medical waivers information for more accurate recruit suitability decisions. It serves as the single primary source for collection, retention, review and processing of medical waivers for Officer and Active Enlisted recruiting applicants. Computerized-Special Operations Resilience Test (C-SORT) - increases efficiency in classifying potential recruits and directly supports the NAVY's requirement to grow the SO (SEAL) rating. C-SORT helps determine an individual's "Resilience" at the accession point and filters out those who have low probability of completing training. C-SORT also decreases DEP pool and training pipeline attrition. Physical Screening Test (PST) Tracker - supports the Naval Special Warfare (NSW)/Naval Special Operations (NSO)/Aviation Air Rescue Swimmer (AIRR) Coordinator or Mentors to collect and analyze PST data from candidate's first contact with the recruiter, Delayed Entry Program, Recruit Training Command and NSW NSO Preparatory courses.

Investment Description and Justification

Short Description

CRSC Web is web-based application used exclusively by SECNAVCORB Combat-Related Special Compensation Board (CRSCB). CRSC Web is the Navy CRSC board's system to automate adjudication process of CRSC entitlement applications.

Full Description

The CRSC Web program is a web-based application used exclusively by the SECNAV CORB Combat-Related Special Compensation Board (CRSCB). While each Service branch has its own CRSC board, each uses their own unique Service systems to process claims. The CRSC Web program is the Navy CRSC board's system to automate the adjudication process of CRSC entitlement applications. Military retirees and medical retirees are eligible for the CRSC program which allows the retiree to receive their monthly Veterans Affairs Disability Pay without a reduction in their military retirement. Without the CRSC entitlement retirees, who are less than 50% disabled, receive monthly reductions in their military retired pay equal to what the Veterans Affairs is paying them. The CRSC board determines an applicant's eligibility and the Defense Finance and Accounting service (DFAS) determines and pays the entitlement amounts due the Veteran.

Investment Description and Justification

Short Description

Marine Corps Distance Learning (MCDL) provides the USMC E-Learning Infrastructure that enables Marines to receive vital training and education via the appropriate interactive media, when and where the learning is needed.

Full Description

Marine Corps Distance Learning (MCDL) provides the USMC E-Learning Infrastructure that enables Marines to receive vital training and education via the appropriate interactive media, when and where the learning is needed. DL provides Marines access to learning resources and performance support tools worldwide 24/7. DL also provides Distance Professional Military Education (DPME) programs to Marine officers and enlisted leaders. The vast majority of officers (CWO-Major) complete their PME requirements via DL onsite or online seminar programs. Enlisted DPME programs provide full or partial PME requirements for all enlisted leaders LCpl-GySgt. DL contributes to Marine Corps' operational readiness by developing and delivering required military occupational specialty, pre-deployment, language/culture, common skills and annual training as well as DPME courses. DL provides required training and education, fills critical gaps in the training and education continuum, compensates for limited capacity of resident school houses and gives the commander a better-trained Marine while increasing personnel availability to accomplish the unit's mission.

Investment Description and Justification

Short Description

The TRAINING, EXERCISE, AND EMPLOYMENT PROGRAM, TRANSPORTATION OF PEOPLE, AND TRANSPORTATION OF THINGS (T3) database system is a web-based asp.net SQL database that supports MFR exercise planning and execution.

Full Description

The TRAINING, EXERCISE, AND EMPLOYMENT PROGRAM, TRANSPORTATION OF PEOPLE, AND TRANSPORTATION OF THINGS (T3) database system is a web-based asp.net SQL database that supports MFR exercise planning and execution. T3 is managed by the MFR G-3 and is the primary system for the G-3 and G-4 to manage MFR training events, specifically scheduling, manning, and the transportation of people and things. Events are classified as CJCS, Force Level Exercises, Unit Level Exercises, and/or Community Relations. Once created within the system, each 'Event' will provide a backdrop for units to assign unit personnel, formulate, and submit transportation requirements using menu-driven options and requirement calculators. T3 is designed to be an organizational (SMCR Unit, MSC and MFR Staff) and a commander's management tool, capable of identifying unit, personnel, equipment and resources prior to the execution of training exercises or deployments. It serves as the primary scheduling function for a combination of activities associated with training and exercises which result in resource utilization over time. Resources are defined as units and their associated personnel and equipment.

Investment Description and Justification

Short Description

Talent Management System will address the needs of the DON civilian acquisition workforce.

Full Description

Talent Management System will address the needs of the DON civilian acquisition workforce to: understand the talent need (Hiring & Development), project hiring plans (Gains) and transfers/retirements (Losses), do succession planning, and understand current and future workforce health (Bench Strength). TMS anticipates using personnel data from DCPDS/DCHRMS to provide career development and talent management functionality to the DON.

General Government / Support delivery of federal services / Customer Services

Investment Description and Justification

Short Description

ECRM provides the qualitative customer service interface requirement needed to satisfy Navy Personnel Command's customer base of Active Duty, Dependents, Reservist, Veterans and the general public.

Full Description

The Navy requires an Enterprise Customer Relationship Management (ECRM) solution for the Manpower, Personnel, Training and Education (MPTE) Enterprise that integrates business processes, supporting systems, and authoritative data to manage its workforce. ECRM is a key component of the My Navy Career Center (MNCC), Navy Recruiting Command (NRC), and Performance Evaluation Transformation (PET) that support MPTE Transformation efforts. The ECRM in FY20 supports the completion of the Initial and Full Operation Capabilities for MNCC, NRC, and PET MPTE Transformation efforts. This effort will result in a Commercial Off the Shelf, cloud hosted capability that integrates business processes, supporting systems and authoritative data to manage its workforce.

Investment Description and Justification

Short Description

The CRM is Program of Record used to fund contract labor, remote hosting, licensing, and travel. The CRM is sponsored by NPC and operates the Customer Service Center.

Full Description

CRM provides the qualitative customer service interface requirement needed to satisfy Navy Personnel Command's customer base of Active Duty, Dependents, Reservists, Veterans and the general public. CRM plans, organizes, directs and controls the NPC Customer Service Center (CSC), a one-stop-shop employing a toll free number (1-866-U-ASK NPC) to manage the organizations inbound contacts i.e. phone, e-mail, voice mail, fax or regular mail and perform outbound services as required. The CSC workflow model is a tier system based on levels of expertise. Tier I (self-help), Tier II (Agent Assisted), Tier III (SME support), and Tier IV (requires research) are fundamental pillars. The CSC is activated by external and internal customers who generate a Customer Service Request with unique identifier, a Customer Service Agent using scripts and a robust search engine, attempts call resolution. Unresolved contacts are escalated to the appropriate division/department for SME support. CRM is sponsored by NPC.

Organization Architecture Profile

Architecture Profile

DoD Segment 530-000 Logistics

Architecture Budget Justification

Navy logistics systems and initiatives support DON strategic goals of modernization of business operations and integrated force structure. Global Combat Support System - Marine Corps/Logistics Chain Management (GCSS-MC/LCM), UII 007-000000155, serves as the primary technology enabler for the Marine Corps Logistics Modernization strategy. GCSS-MC/LCM provides the backbone for all logistics information required by the Marine Forces and the Supporting Establishment. Naval Tactical Command Support System (NTCSS), UII 007-000001372, is a suite of applications supporting Navy and Marine Corps supply and maintenance activities, both ashore and afloat, in a common computing infrastructure. Navy Maritime Maintenance Enterprise Solution (NMMES), UII 007-000004836, consolidates overlapping application functionality and database, data centers, and infrastructure into a fully integrated enterprise solution resulting in reduced costs to Navy. The Navy Aviation Logistics Environment (ALE), UII 007-000005088, is the naval aviation's information technology (IT) system of systems solution and digital ecosystem delivering full lifecycle weapon system logistics and analytical capabilities via a shared services data environment for shore-based, afloat, and expeditionary operations. ALE is the digital integrator for Sustainment Vision 2020 in alignment with OPNAV Logistics Functional Area Manager (LOG FAM) Digital Transformation; Navy Maritime Maintenance Enterprise Solution Tech Refresh (NMMES-TR), 007-000100870, is a pre-acquisition designation program that provides an enterprise IT solution for shore maritime maintenance that aligns to mission needs and delivers a cost effective IT solution. NMMES-TR enables execution of ship maintenance and repair for shipyards, RMCs, TRFs, SRFs, & other industrial activities worldwide.

Investment Description and Justification

Short Description

GCSS-MC/LCM family of systems serves as primary technology enabler for the Marine Corps Logistics Modernization strategy. GCSS-MC/LCM provides the backbone for all logistics information required by the Marine Forces and the Supporting Establishment.

Full Description

GCSS-MC/LCM family of systems serves as primary technology enabler for the Marine Corps Logistics Modernization strategy. GCSS-MC/LCM provides the backbone for all logistics information required by the Marine Forces and the Supporting Establishment. The core for GCSS-MC/LCM Increment 1 is a modern, commercial-off-the-shelf enterprise resource planning software (Oracle e-Business Suite). The Increment 1 design focused on enabling the warfighter to operate while deployed with reach back from the battlefield. Increment 1 replaced 5 legacy supply and maintenance information technology systems and currently supports ~22,000 users world-wide. The focus of future functions will be enhancing capabilities in the areas of warehousing, distribution, logistics planning, decision support, depot maintenance, and integration with emerging technologies to improve asset visibility.

Horizontal Variance

GLOBAL COMBAT SUPPORT SYSTEM-MARINE CORPS/LOGISTICS CHAIN MANAGEMENT (007-000000155 - GCSS-MC/LCM)

Budget Line Horizontal Variance Explanation**The Investment is designated as a 'Major' therefore requires Horizontal Variance explanations at the Appropriation Level**

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | Operations | \$ 19,055 | |

Horizontal Change Explanation

Increase supports the initial funding for Global Combat Support System-Marine Corp (GCSS-MC) Cloud Migration initiative, sustainment of the On Premise Continuity of Operations Planning (COOP)/Disaster Recovery (DR) initiative, and the Data Archiving and Purge initiative which together enable and support leading edge technology pushing logistics to the tactical edge. These efforts allow the Littoral Operations in a Contested Environment (LOCE) warfighter support without the burden of a large communications or logistics footprint.

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | Procurement | (\$2,897) | |

Horizontal Change Explanation

Reduction reflects the completion of the expansion of the Global Combat Support System-Marine Corp (GCSS-MC) user base, and completion of the initial procurement of Warehouse Automated Information Technology hardware beyond the major logistics hubs.

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

The Global Combat Support System-Marine Corps (GCSS-MC)/Logistics Chain Management is a family of systems that supports the logistics elements of command and control, interoperability, and secure access to, and visibility of, critical data. The GCSS-MC/Logistics Chain Management (LCM) component is the implementation of the modern logistics operational architecture. GCSS-MC/LCM Increment 1 accomplished the acquisition and implementation of the initial set of integrated logistics capabilities for the Marine Corps by delivering improved support request and supply and maintenance management services and combat efficiency. Enhanced inventory management functionality will be fielded to Supply Management Units (SMUs), Repairable Issue Point (RIPs), Initial Issue Point (IIPs), and Using Units.

The Deputy Commandant for Installations and Logistics is the functional owner and primary stakeholder of GCSS-MC/LCM. The system supports ~75 Marine Corps locations world-wide and is available 24/7.

GLOBAL COMBAT SUPPORT SYSTEM-MARINE CORPS/LOGISTICS CHAIN MANAGEMENT (007-000000155 - GCSS-MC/LCM)

Major Investment Business Case

Description and Justification

Return on Investment

Global Combat Support System-Marine Corps Logistics Chain Management (GCSS-MC/LCM) is an ACAT IAM currently consisting of GCSS-MC/LCM Increment 1 (ACAT IAC) and is an enabling Automated Information System (AIS) used to support the Business Process Reengineering for Logistics Change Management. Return on Investment (ROI) was determined at Milestone 'C' in the Economic Analysis as part of the reengineering and to a lesser extent for replacement or assumption of existing Logistics Information System (LIS). Return on Investment indicated the system would pay back in 3.86 Years from Full Deployment (2019).

Specifically Increment 1 provides the Marine Corps with:

- An Automated Information System enabling integrated, distributed, logistics capability, with data used by leaders to effectively plan, manage, execute and monitor USMC logistics operations
- An integrated supply and maintenance functionality from garrison to forward units through a common user interface
- Specific functionality includes: Order Management, Inventory Management (inclusive of warehousing), Accountability, and Maintenance Planning and Execution.
- Interoperability with Marine Corps expeditionary forces & Joint/Coalition command and control systems

Major Investment Description and Justification**

GLOBAL COMBAT SUPPORT SYSTEM-MARINE CORPS/LOGISTICS CHAIN MANAGEMENT (007-000000155 - GCSS-MC/LCM)

Major Investment Business Case

Description and Justification

Budget Justification

Operations and Maintenance, Marine Corps (OMMC) will support the following:

- GCSS-MC/LCM Increment 1 sustainment (SW License renewal, systems fixes, and system sustainment)
- Contract award (Option Year 1) for Post Deployment Sustainment Support (PDSS) and transition to commercially provided operations support
- GCSS-MC Program Management Office support
- Expand user base of existing Increment 1 functionality.

Procurement:

Funding will continue to support the the ongoing need for technology refresh of hardware and software in support of the sustainment of GCSS-MC/LCM Increment 1. Funding decrease from FY2020 to FY2021 of \$2.895M is due to the completion of the initial procurement of Warehouse Automated Information Technology beyond the major logistics hubs.

Major Investment Operational Assessment

Operational Assessment Data

| Document Name | Version | | Date of Document | |
|--|---------|------------------|------------------|------------|
| The Following is the amount of O&S type \$ Reported in FY2019 and FY2020 | FY19 | \$60,880 | FY20 | \$60,230 |
| | | Date of Analysis | | 2015-12-03 |

OA Analysis Explanation

Post Implementation Report December 3, 2015:

"Based on overall system performance, analysis of available data, and feedback received by the Deputy Commandant, Installation and Logistics from the user community since the systems introduction in March 2010, it can be concluded with high confidence that Increment 1 satisfied the requirements of the Capability Production Document (CPD) and can be utilized to support Marine Corps Supply, maintenance, financial, and system administration functions.'

PMW-230 continues to operate GCSS-MC/LCM Increment 1 within the established program parameters. - Cost remain within the November 2014 established Service Cost Position. Actual budget remains slightly below the established SCP through fact of life budget changes.

- The systems Key Performance Parameter requires a threshold of transaction visibility within 60 minutes of submission. The system actually approaches the objective of transactions being visible within 10 minutes 95% of the time.
- System availability threshold 95%, averaging 93.9% for August 2017

Investment Description and Justification

Short Description

AUTOSERD provides a central Navy aviation logistics SE Database and Management Information System (MIS) compliant with CALS and DIICOE for making improved decisions affecting aircraft SE logistics acquisition, configuration management.

Full Description

PROVIDE ON-LINE SE ACQUISITION DATA TO ENGINEERS, LOGISTICIANS, SEPOS, AND SUPPORT EQUIPMENT (SE) CONTROLLING AUTHORITIES. PROVIDES SOURCE DATA TO SERMIS, APSS, ILIDS, FMS, MIF & LSAR DATABASE. [SOURCE DATA INCLUDES DATA FIELDS PERTAINING TO VALID PIECES OF SE. SOURCE DATA INCLUDES, BUT IS NOT LIMITED TO, PRIME NIIN, NSN DATA, NOMENCLATURE, CAL CODE, TYPE EQUIPMENT CODE, TYPE DESIGNATOR, SM&R CODE, EQUIPMENT VALUE, WEIGHT, CUBE, LENGTH, WIDTH, HEIGHT, APPLICABLE PART NUMBERS & CAGEs, AND RANGE OF ALLOWANCE.] AUTOSERD REQUIREMENTS ARE ESTABLISHED BY THE SERD SUBMITTALS FROM THE CONTRACTOR OR GOVERNMENT AGENCY RESPONSIBLE FOR DEFINING THE SUPPORT REQUIREMENTS VIA LSA OR MAINTENANCE PLANNING. AUTOSERD IS THE FEEDER SYSTEM WHERE THE SE GETS ESTABLISHED, REQUIREMENTS DEFINED, SUPPORT OF SE IS DEFINED, AND AIRCRAFT CONFIGURATION TO SYSTEMS IS DEFINED. THE DATA IS THEN PROCESSED (IN AUTOSERD) BY NAVICP TO ESTABLISH USN & USMC SE IN THE SUPPLY SYSTEM. THIS IS PERFORMED FOR BOTH NAVICP MANAGED SUPPLY ASSETS ALONG WITH REGISTERING OTHER SERVICES AGAIN THE USN & USMC SE. LASTLY, THEY ALSO INITIATE SICA OR SECONDARY SUPPLY SYSTEM INTEREST AND APPLICATIONS FOR THOSE SE ITEMS MANAGED BY OTHER SERVICES THAT THE USN & USMC HAS NOW ESTABLISHED APPLICATIONS/REQUIREMENTS FOR (AIR FORCE, ARMY, COAST GUARD, DLA, GSA, ETC.) ONCE NAVICP COMPLETES THEIR SUPPLY SYSTEM ACTIONS, THE DATA IS PROCESSED INTO SERMIS TO DEFINE THE REQUIREMENTS FOR THE 700+ IMRL (INDIVIDUAL MATERIAL READINESS LIST) ACTIVITIES.

Investment Description and Justification

Short Description

The single authoritative source for the Joint aviation warfighter to report deficiencies, notify stakeholders, guide support team investigation and response, compile investigation data, report problem resolution, and prevent recurrence.

Full Description

The Joint Deficiency Reporting System is the single authoritative source for the Joint aviation warfighter to report deficiencies, notify stakeholders, guide support team investigation and response, compile investigation data, report problem resolution and prevent recurrence. JDRS is a web-based application hosted and maintained by NAVAIRSYSCOM and provides complete visibility and interoperability of the deficiency reporting and investigative process in one application, allowing a seamless, standard deficiency reporting workflow process across the US Armed Forces... Navy, Marine Corp, Army, Air Force, and Coast Guard (via MOA) and supporting agencies (DCMA, DLA, NASA, DCIS, NCIS). The JDRS application connects the warfighter with their respective program, engineering, quality and logistics support teams in the standardized submission, investigation and resolution of deficiency reports that include: Engineering Investigations and Hazardous Material Reports (EI/HMRs), Product Quality Deficiency Reports (PQDRs), Acceptance Inspection Deficiency Reports (AIDRs), Technical Publication Deficiency Reports (TPDRs), and Aircraft Baseline Trouble Reports/Change Requests (BTR/BCRs). JDRS allows identification and notification of suspect counterfeit components and also includes a critical item management module, allowing identification and evaluation of aviation Critical Safety Items (CSIs). JDRS is integrated into the NAVAIR Automated Logistics Environment (ALE) and utilizes a client-based software component, the JDRS Offline Reporting Module (JDRS-ORM) and the Joint Technical Data Integration system (JTDI) to transfer deficiency reporting data to/from the deployed warfighter in a limited bandwidth environment. JDRS provides leading indicators of safety, reliability, and maintainability in order to improve safety and readiness rates for the Joint services aeronautical community.

Investment Description and Justification**Short Description**

MSC'S INFORMATION SYSTEM PORTAL FOR ENGINEERING AND LOGISTICS APPLICATIONS.

Full Description

Logistics - Logistics and Engineering Life Cycle management and operational support of the MSC fleet is the primary business process of the MSC-LES-ASH. Processes and functionality, provided by the portal, include: Logistics operations (depot, intermediate and organizational maintenance; quality planning, control and inspection; fleet and inventory management; order entry and status); Management of Assets and Liabilities (asset management, inventory); and Reporting and Information (analysis and forecasting, knowledge management, reporting), commodities, inventory, engineering & availability support. Business process information from around the command is brought together and be given the same look and feel, thus reducing training requirements. Initially, the Portal is used by approximately 1000 Logistics (N4) and Engineering (N7) users. This is projected to ultimately reach 7500 personnel when MSC-LES-ASH becomes the enterprise solution for MSC business needs.

Investment Description and Justification

Short Description

JEDMICS is DoD's Standard System for managing & controlling unclassified engineering drawings and is the authoritative source for drawings in support of material management, maintenance, engineering & acquisition processes.

Full Description

JEDMICS Mission: "Achieve corporate information management goals for the Department Of Defense by creating & maintaining a standard engineering data management system". Joint DoD standard repository system for digital engineering drawings and related technical data. Data within JEDMICS supports maintenance & repair; parts procurement; design and acquisition engineering; and warfighter battle damage assessment/repair. JEDMICS PM is LCM for the system, and follows an evolutionary acquisition development concept to provide annual baseline releases to implement system requirements resulting from technology maturity; service infrastructure changes; emerging data formats; manage COTS obsolescence replacement; maintain performance/availability; maintain functional capability; address information assurance requirements; and protect corporate knowledge assets. JEDMICS PM is also responsible for a type-certification and DIACAP requirements for the system. System includes tools supporting system admin and multiple-contingency scenarios. The Navy serves as the Executive Agent for the JEDMICS Program Office which includes specific "instances" of systems within NAVSEA, NAVAIR, Marine Corp, and Air Force.

Investment Description and Justification

Short Description

Website to check for the availability of commercial assets. Tracks the asset through the repair life cycle and supports the logistic personnel - item managers - to meet the requisitions requirements designated by the fleet.

Full Description

Website to check for the availability of commercial assets. The application also tracks the asset through the repair life cycle and is used to print shipping documents and labels. Various reports can also be run at a user and Administrative level. Requisition Processing is also available and Government Furnished Material (GFM) will be part of the next release. Supports the logistic personnel - item managers to meet the requisitions requirements designated by the fleet. This site tells the item managers where the assets are at any given point. ATO request with SSAA submitted to SPAWAR, 22 Sept 2006.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

TDMIS is a DoN database used to manage and track the life-cycle history of tech manuals (TMs). TDMIS currently contains the TMs from NAVSEA, SPAWAR, and NAVAIR Air Traffic Control and Landing System (ATC&LS).

Full Description

The TDMIS is a Department of the Navy (DON) system used to manage and track the life cycle history of technical manuals and is mandated for use by NAVSEAINST 4160.3B. The system identifies tracks and distributes information, technical data and technical manuals for NAVSEA, SPAWAR, NAVAIR, and SEALIFT Commands. TDMIS is the central point for technical data for NAVSEA, SPAWAR, NAVAIR and SEALIFT to the fleet and other government agencies. TDMIS interfaces with the Naval Logistics Library (NLL) to allow the Fleet to know availability of digital copies to download or to order hardcopy TMs. Interfaces with CDMD-OA for applicability, Record Identification Codes (RICs) are matched to RIC to technical manual in TDMIS. This produces a product for the Fleet called an Index of Technical Publications. This is used to identify the current technical manuals to equipment onboard ship. TDMIS provides the Fleet and shore activities access to update and maintain their distribution lists to be able to receive the latest copies of TMs and CDs. TDMIS assigns technical manual numbers and CDROM numbers so technical manual managers can issue technical manuals to the Fleet via CDROM to display via ATIS. TDMIS produces products used by the Fleet – genITP for use in ATIS allows the sailor to view the TM distributed to them via the initial distribution process initiated from TDMIS. TDMIS Shipboard Library System allows the sailor to track their technical documentation and allows verification of their ship's library. TDMIS is the only system that maintains and tracks Technical Manual Deficiency Evaluation Reports (TMDERs) that allows the Fleet to report a deficiency to a technical manual directly to the Technical Manual Manager for review and update into the technical manual. TDMIS interfaces with SMART-T to allow for the download and/or viewing of technical manuals by the fleet, fleet support activities, and approved contractors.

Investment Description and Justification

Short Description

On-line, real-time environment for the creation/review/processing of Provisioning Technical Documentation. Automates development/processing of PTD for the updating and development of APLs and AELs.

Full Description

ICAPS provides an on-line, real-time environment for the creation, review, and processing of Provisioning Technical Documentation (PTD). It is "THE" software tool that automates the development and processing of PTD for the updating and development of Allowance Parts Lists (APLs) and Allowance Equipage Lists (AELs) for Maritime and the updating and development of Allowance Requirement Registers for Aviation. The Data Repositories Files for Maritime are at NAVICP-Mechanicsburg and the Data Repository for Aviation are at NAVICP-Philadelphia. It is the only automated system that provides this capability of populating the UICP files and all the required interfaces have been established. The resulting data not only loads the NAVICP-Mechanicsburg repository (WSF, C10, C14, NSAF, MAPL) and Philadelphia data Repositories (MIF), but also interfaces with the NAVICP System Stock and Allowance Computation programs and DLSC for NSN Screening and Assignment.

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

WESS is the DON mandated mishap, hazard, injury and occupational illness reporting system to the Naval Safety Center. WESS provides for reporting of mishaps and hazards, and safety information dissemination via the Internet.

Full Description

WESS is the DON mandated mishap, hazard, injury and occupational illness reporting system for the Navy and Marine Corps. WESS provides for reporting of mishaps and hazards, and safety information dissemination via the Internet. Currently WESS captures all Navy and Marine Corps non-aviation mishap and hazard information (OPNAVINST 5102) as well as aviation mishaps and hazards and bird strikes (OPNAVINST 3750). All information put into WESS is consolidated worldwide at the Naval Safety Center. WESS tracks the number of injuries, type of injuries and body parts injured via website when the incident occurs. This allows the Safety Center to effectively disseminate corrective action, lessons learned and prepare mishap summaries. WESS permits the Safety Center to get a "snapshot" of what mishaps, hazards and injuries are occurring throughout the Navy and Marine Corps and take corrective action to preclude further injury. WESS will permit the Safety Center to redirect resources from the actual entry of data from hardcopy reports to the Quality Assurance of the Navy and Marine Corps safety data entered into WESS. This efficiency will greatly improve the quality of the data and therefore the quality of the analysis performed on the data. While it may be difficult to prove empirically that better analysis leads to better hazard avoidance strategies, the assumption that one aircraft or one ship mishap or one life is saved makes WESS of incalculable value to the Navy and Marine Corps.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

NALDA provides statistical data for use at all management levels relative to: (a) Equipment maintainability and reliability. (b) Equipment configuration, including alteration and TD status. (c) Equipment mission capability and use. (d) Material usage.

Full Description

The NAVAIR Logistics Data Analysis (NALDA) is the Navy and Marine Corps central aviation maintenance and logistics automated information system (AIS). It provides an on-line, integrated life cycle logistics readiness and operational weapons systems database and tools to sustain critical support analysis. It is accessed and used daily by Navy/Marine aviation headquarters, fleet and field activities. NALDA is the cornerstone of the Chief of Naval Operations (CNO) Air Warfare Division's plan to generate a cost-effective aviation ILS AIS. NALDA's open system architecture supports the CNO's desire to evolve to a single Navy logistics/maintenance system. NALDA will directly interoperate with other Navy and DoD logistics open systems to help eliminate existing redundant maintenance/logistics AIS's in a timely and cost-effective manner. NALDA's open system migration strategy is totally compliant and compatible with Defense Information Infrastructure Common Operating Environment (DII COE) initiatives and Computer Aided Logistics Support (CALS) standards. The Office of the Secretary of Defense (OSD) has certified NALDA as the central naval aviation upline ILS data system. NALDA currently provides users with critically needed data access and analysis of maintenance, operations, safety, supportability, and readiness information.

OMB Sector/Function/Service:

General Government / Other general government / Disaster Preparedness and Planning

Investment Description and Justification

Short Description

Computerized asset maintenance system which stores and maintains data about facilities, assets, and inventory.

Full Description

Computerized asset maintenance system which stores and maintains data about fuel facilities, POL assets, maintenance inventory, and fuel quality. This system is used by Navy Fuel Depots to manage the infrastructure maintenance, fuel operations, purchases, labor, and fuel lab testing. It is used to improve the availability and performance of DLA capitalized fuel assets by decreasing operating costs, without increasing safety issues. FAMMS facilitates tracking of POL work orders and equipment failures to better schedule preventive and corrective maintenance. The goal is to maximize availability of resources for upcoming work, while reducing unnecessary inventory and maintenance associated with carrying costs. Users also track purchasing actions of equipment assets and materials for work orders. It creates budgets to track costs for labor, materials, services, equipment, and tools used to complete work orders. Reduce on-the-job injuries and accidents by identifying hazards in the workplace and precautions to take to increase safety. FAMMS automates processes that are consistent or happen on a predictable schedule, for example preventive maintenance, periodic inspections, or reordering equipment items. Formerly titled as MAXIM.

Investment Description and Justification

Short Description

Provides ships a tool to identify the depot-level repairables (DLRs) turn in necessary while still on the ship, prior to turning it into the repair pipeline.

Full Description

The electronic Retrograde Management System (eRMS) is an Oracle-based web application designed to integrate select maintenance, supply, transportation, and financial ITV processes relating to Class IX repairables distribution in order to: reduce, automate, and standardize workload at the retail (deployed and ashore) and wholesale levels; compress the distribution pipeline while reducing costs; enhance in transit visibility; and provide flexible contingency-response and expeditionary capabilities. The primary distribution scenarios are retrograde management, off-station intermediate-level maintenance (Repair & Return), wholesale redistributions of F-cond material to and A-cond material from repair sites, excess A-cond stock offloads, and lateral movements of F- and A-cond whole engines. The USMC (ground forces) is a user of some of these services in addition to the USN. eRMS is a Navy-ERP bolt-on/interface not scheduled for retirement. Inclusion and consolidation into a future release of Navy ERP (V ERP 2.0 or later) is anticipated.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

NLL is a web based publications requisition processing system, index and knowledge management tool.

Full Description

The Naval Logistics Library (NLL) is a secured (HTTPS) web-based Navy publications, Directives, Instructions and Technical Manual Supply System for the Fleet. It is a transactional based website. Functions included: Ordering, Requisition and Catalog index; SMHL; SMCL. It's a Navy publications index and publications knowledge management tool that provides the only SINGLE ordering system for all Naval Supply Systems Command (NAVSUP) sponsored and developed material: NAVSEA (Naval Sea Systems Command) , NAVAIR (Naval Air Systems Command) , MSC (Military SeaLift Command),NETC (Naval Education and Training Command); NWDC (Naval Warfare and Development Center) ; NAVMETOCCOM (Naval Meteorology & Oceanography Command); NAVPERS (Naval Personnel); BUMED (Bureau of Medicine and Surgery); AAUSN Asst Admin Under Secretary of the Navy) ; NAVFAC (Naval Facilities); SPAWAR (Space and Naval Warfare Sys Command); CNO (Chief of Naval Operations); JAG (Office of the Judge Advocate General). Customer base: Afloat/Shore Conus/OConus. Implementation of the NLL Print-On-Demand (POD) and Burn on Demand (BOD) for CD-ROM concepts, were introduced to reduce the Navy's cost of publication management through the reduction of warehouse capacity and costly physical distribution. The program provides on-demand and just-in-time bulk printing and distribution services for secondary publication printing/distribution requirements at no cost to Navy customers. This project assists the twenty-four Navy commands sponsoring Navy documents to identify documents suitable for digitization, to dispose of excess stocks of documents in hard-copy format, to digitize documents and to move towards automated document printing and distribution via DLA Document Services and Government Purchasing Offices. In addition the NLL system provides the following additional services: Direct system interfaces with claimants: NAVSEA, TDMIS/TMAPS, NATEC, NETC; Is a repository for publications and directives where customers can view, print and download pubs and directives in realtime; Provides the Ships Hazardous Material List (SHML)/ Submarine Material Control List (SMCL) which can be searched to identify hazardous materials authorized aboard ships/submarines. Note. Navy document sponsors continue to fund special, non-digital formats needed for initial publication distribution and warehouse stock.

Investment Description and Justification

Short Description

Supports the ACOS for Operating Forces Support (OFS) and Readiness Based Sparing (RBS). The OFS ACOS acts as the NAVSUP interface with operating forces, with a focus on readiness issues in the Inter-Deployment Readiness Cycle.

Full Description

The Readiness Suite (RS) calculates wholesale inventory levels and retail allowances for spare and repair parts needed to maintain Navy and USMC weapon systems. It is a key tool for the Navy to conduct readiness assessments, engineering analysis, budget analysis and sparing determination, to improve readiness and reduce logistics support costs. Key components include: The Readiness Based Sparing (RBS) portion provides the capability for allowance development to achieve OPNAV specified readiness goals (Operational Availability or Full Mission Capability) while minimizing investment. It links wholesale and retail models to produce Multi-Echelon/Multi-Indenture (MIME) readiness based allowances. The CRCS/CADS module calculates aviation usage rates and repair times each quarter for Navy AVCALs and SHORCALs, and USMC PCSP, FOSP and FISP allowances. It maintains a database of configuration, usage, flying hour and other supply and maintenance data. The Maritime CRCS module updates maritime usage rates each quarter for Navy COSAL and RBS allowances. The Naval Online Allowance Handling (NOAH) system is a web-based tool supporting customer collaboration and allowance product distribution. The Levels Setting module computes wholesale inventory levels and demand based levels for retail sites to replace Variable Operating Safety Levels (VOSL). It interfaces with Navy ERP (NERP) as a "bolt-on system".

Full Description

Naval Tactical Command Support System (NTCSS) is a suite of applications supporting Navy and Marine Corps supply and maintenance activities, both ashore and afloat, in a common computing infrastructure. NTCSS manages non-tactical information resources, including logistics, maintenance, administrative, and supply management, to meet the force readiness and sustainment requirements of the Navy and Marine Corps. Underway, users access NTCSS applications, update functional area data on an as-required, on-demand basis. This data is then sent ashore to facilitate logistics data sharing with readiness and reporting systems. NTCSS enables users to work in detachments and forward-deployed units with limited or no connectivity. NTCSS is composed of 5 major applications: (1) Relational Administration Data Management (R-ADM), which provides automated personnel management; (2) Relational Supply (R-Supply), which provides automated inventory ordering processing and control; (3) Organizational Maintenance Management System - Next Generation (OMMS-NG), which manages shipboard organizational level maintenance; and on the aviation maintenance side: (4) Optimized Organizational Maintenance Activity (OOMA) and (5) Optimized Intermediate Maintenance Activity (OIMA).

IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification

NAVAL TACTICAL COMMAND SUPPORT SYSTEM (007-000001372 - NTCSS)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

NAVAL TACTICAL COMMAND SUPPORT SYSTEM (NTCSS)

PURPOSE

NTCSS provides the unit commanding officer of ships, submarines, aviation squadrons, and intermediate maintenance (afloat and ashore) activities the ability to manage: ship/aircraft maintenance, parts inventory, finances, tech manuals and drawings, personnel information, food service, and ship's store. The investment will ensure NTCSS continues to fully support Fleet maintenance supply business processes, while reducing the hardware footprint and supporting reduced manning where applicable.

GOAL

NTCSS Open Architecture (OA) enables business process improvements at the intermediate level and depot level aviation maintenance activities that support the Beyond Capability of Maintenance (BCM) interdiction process, provides global Individual Component Repair List (ICRL) capabilities, and introduces web-based services.

BENEFIT

An additional benefit of NTCSS OA is the utilization of existing ashore data centers in lieu of installed servers (except Marine Logistics Aviation Squadrons (MALSS)).

GOAL

The follow-on to NTCSS will transition NTCSS from its legacy client-server to web-based open architecture that fully leverages services provided by Navy Data Centers and Consolidated Afloat Network Enterprise Services (CANES), exposes data to multiple users, and is fully compliant with Department of the Navy Enterprise Architecture (DON EA).

BENEFIT

Its benefits include: (1) Multi-Unit Identification Code (UIC) management; (2) Multiple commodity management; (3) Distance support; (4) disconnected/detached ops; and (5) Scalability and flexibility for multiple user communities.

STAKEHOLDERS

Stakeholders: Naval Air Systems Command (NAVAIR), Naval Supply Systems Command (NAVSUP), Naval Sea Systems Command (NAVSEA), Commander Naval Air Forces (CNAF), United States Fleet Forces Command (USFF), Naval Network Warfare Command (NETWARCOM), Chief of Naval Operations (OPNAV) N41, Program Executive Officer, Command, Control, Communications, Computers and Intelligence (PEO C4I), Deputy Assistant Secretary of the Navy - C4I and Space (DASN C4I/S), Assistant Secretary of the Navy (Research, Development & Acquisition)

Key customers: USN Surface ships, Submarines, Carriers, Expeditionary Assault Ships, Multipurpose Amphibious Assault Ships, Naval Air Stations, and Navy and USMC Squadrons.

**IT/Cyberspace Activities Investment Profile Report
Major Investment Description and Justification**

NAVAL TACTICAL COMMAND SUPPORT SYSTEM (007-000001372 - NTCSS)

Major Investment Business Case

Description and Justification

Return on Investment

The follow-on to Naval Tactical Command Support System (NTCSS) will move NTCSS from client server to web-enabled technology. It will support the DoD IT Enterprise Strategy and Roadmap (ITESR) through security architecture standardization and optimization. In addition to reducing information assurance (IA) vulnerabilities through an enhanced security posture, it will promote data sharing with other systems, such as Navy Enterprise Resource Program (N-ERP) and align with the Navy's Consolidated Afloat Network Enterprise Services (CANES). The new NTCSS will use the Navy Data Centers, incorporate current information technology best practices, and accelerate reduction of applications performing a similar function. This strategy supports the Navy's server consolidation initiatives with the elimination of NTCSS specific servers in the Fleet. Additional benefits include a reduced hardware footprint through elimination of client servers, enabling updates to Commercial off the shelf (COTS) products facing end of life/end of service (EOL/EOS) issues, and provide greater flexibility to adapt to evolving business processes.

NAVAL TACTICAL COMMAND SUPPORT SYSTEM (007-000001372 - NTCSS)

Major Investment Business Case

Description and Justification

FY20 Operations & Maintenance, Navy (OMN) and Operation and Maintenance, Navy Reserve (OMNR) - pays for NTCSS hardware, software and related support costs. This includes:

- Server maintenance costs (to include pack-up kits for deploying aircraft squadrons);
- Data center hosting fees;
- Civilian salaries;
- Program office contractor support, and travel

The OMN and OMNR also pays for training for program office personnel who provide support services including:

- Help desk;
- Life cycle support;
- Security accreditation;
- Software only installations;
- Hardware/software integration testing;
- In-Service Engineering Activity (ISEA);
- Casualty Reporting (CASREP) response;
- SHIPMAIN documentation;
- Engineering documentation;
- Updates to system administration manuals;
- Training.

Research, Development, Test, Evaluation, Navy (RD TEN) - pays for the software development efforts associated with NTCSS Open Architecture and Relational Supply software development, integration, test & evaluation and system engineering.

Other Procurement, Navy (OPN) - provides standard tactical support information systems to various afloat and associated shore-based fleet activities. NTCSS Patriot (version 3.40) release will be installed on 10 ships/submarines, 4 Naval Air Stations, 3 Marine Aviation Logistics Squadrons, 39 Navy Expeditionary Combat Enterprise sites, 2 training sites. The NTCSS Optimized Organizational Maintenance Activity (OOMA) application will be installed at 25 aviation sites.

Ship set equipment upgrades include:

- Afloat ruggedized, commercial-off-the-shelf (COTS) computing equipment;
- Servers to support the NTCSS application and database;
- Personal computers (PCs) that will interface with the servers for maintenance and supply transactions;
- Printers to display output

Marine Aviation Logistics Squadrons/shore equipment upgrades include:

- Ashore ruggedized, COTS computing equipment;
- Servers to support the NTCSS application and database;
- PCs that will interface with the servers for maintenance and supply transactions;

OA Analysis Explanation

NAVAL TACTICAL COMMAND SUPPORT SYSTEM (NTCSS)

NTCSS is an inactive Acquisition Category (ACAT) IAC program that began limited deployment in 1998, completed Milestone III in 2000 and successfully achieved full operational capability (FOC) in 2009. No Operational Analysis has been performed since FOC.

Senior program office leadership chairs portfolio and program management reviews periodically each year.

Investment Description and Justification

Short Description

Ships' 3-M Database not only contains the data, but the tools to retrieve information (OARS Client & OARS-Web) & reference information provided on the Ships' 3-M Reference Tool. Central repository for all maintenance actions Navy-wide.

Full Description

This system is the nucleus for supporting reliability and maintainability analysis on in-service shipboard and designated shore equipment in support of the fleet. It is an archive of information that provides a means to plan, organize, direct, control and evaluate resources in support of maintenance. As such, it provides historical information but does not provide execution or supply action processing.

Investment Description and Justification

Short Description

Provides capability to schedule, display and manage planned maintenance events. Can interface to OMMS-NG, SOMS & other apps. Provides flexibility in forecasting & scheduling work, schedule ship wide events & reporting of PMS accomplishment.

Full Description

3-M Planned Maintenance System (PMS) software that provides the capability to schedule, display and manage planned maintenance events. SKED can be used in Server mode which will interface to OMMS-NG, SOMS and other applications. It can also be used in Network and Stand-alone mode for activities that do not access OMMS-NG or Micro OMMS. In the Server mode, it will allow for stock check, configuration reconciliation, visibility of other maintenance actions and ability to generate work candidates. It provides greater flexibility in forecasting and scheduling work, ability to schedule ship wide events and up-line reporting of PMS accomplishments. Users prepare PMS schedules using information from the PMS CD-ROMs distributed during each Force Revision. Future updates include true-interval scheduling, scheduling based upon configuration, increased flexibility and more user friendly features.

General Government / Support delivery of federal services / Business Analytics

Investment Description and Justification

Short Description

TSM collects, tracks, assigns actions & generates reports on Gov't surveillance activities, inspection & test results, program performance, audits, physical progress, design drawing review, contract spec review, etc.

Full Description

TSM is a web application that supports the Supervisor of Shipbuilding (SUPSHIP) Quality Assurance, Engineering and Project Office activities. TSM is a single repository/resource for all ship class production, ship delivery, engineering (i.e., deficiencies, change, new work, technical issues, and program issues), logistics and quality assurance (i.e., process handbook, observations, corrective action requests, and test releases) findings and issues. TSM reports on new ship construction problems and discrepancies and tracks their respective resolutions using documents and workflows. The program routes, tracks, and manages all associated tasks, assignments and correspondence. Processes Unclassified Naval Nuclear Propulsion Information (U-NNPI)

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

This system helps the SRA office keep track of who is scheduled to work offsite, when, and what their travel arrangements will be.

Full Description

Shipyards maintenance on submarines is organized around the concept of Project Management teams that possess the technical skills necessary to perform both nuclear and non-nuclear maintenance. Elements of these teams are assigned as much as two years in advance, ramping up to full staffing at availability start. During this effort, the work that is to be done shipboard is broken down into small tasks based on the personnel skills needed. Currently, Portsmouth Naval Shipyard is staffing six simultaneous submarine projects, 50% of which are at off-site locations, as well as advance planning for several others. Submarine availabilities average from 10,000 to 60,000 tasks scheduled over two to 18 months. These tasks are associated with approximately 300 different personnel skills held by approximately 5000 employees. All submarine projects, whether on-site or off-site, draw upon the same pool of 5000 skilled workers, and thus one of the key elements in scheduling submarine work execution is the availability of personnel with the necessary skills. Personnel training and qualification in these skill groups is planned to meet ships schedules without maintaining costly excesses. This resource balancing (ships schedule versus personnel availability versus training) is much more complicated for availabilities that are off-site, since the larger resource pool is not immediately available. Beach Administration provides unique functionality that supports this additional complexity in planning of personnel assignments, to avoid excessive costs, while at the same time ensuring the availability of the trade skills needed to accomplish the work at the site at all times.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

This system automates the process used for controlling whether or not work and tests can be performed on the ship.

Full Description

PWCTS is a paperless, automated, web-based work control system that processes, tracks and reports on work control-related documents. The PWCTS application eliminates administrative redundancy by combining PWCTS application data input with corporate database input sources, to generate aggregate information output. PWCTS provides administrative features for system personnel access control, and document assignment and maintenance. PWCTS also provides operational convenience features in the form of research tools, and the ability to customize application display preferences and control routine application operating characteristics.

Investment Description and Justification

Short Description

This application tracks ripout material from ripout off the boat through the shipyard until re-installation on the boat.

Full Description

The Ships Equipment Warehousing System (SEWS) utilizes bar-coded tags that are scanned and affixed to tens of thousands of submarine components removed from ships for various reasons, and stored until reinstallation, allowing tracking and accountability at every level of management in the shipyard, and ensuring that the material is reinstalled shipboard.

Investment Description and Justification

Short Description

MSC LOGISTICS & ENGINEERING SUPPORT.

Full Description

Military Sealift Command Shipboard Logistics And Engineering (MSC-LES-AFL) provides critical application supporting MSC's mission to provide global ocean transportation of equipment, supplies and ammunition to sustain U.S. forces worldwide during peacetime and in war for as long as operational requirements dictate. MSC-LES-AFL is a collection of applications which allow the Logistics and Engineering Directorates to provide support to the ships in a fast and efficient manner, reducing down time and ensuring the MSC fleet maintains the readiness level necessary to complete the MSC mission. The following applications are included as part of MSC-LES-AFL: ShipCLIP, Food Service Management (FSM), Shipboard Automated Maintenance Management System (SAMM), DEXTER, and CargoMax.

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$2,629) | |

Horizontal Change Explanation

Total decrease due to higher costs associated to SYBASE software. Inflation rate adjustments were not made across the FYDP causing the decrease in FY21. Adjustments will be made during actuals.

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| TRANSCOM | AT INVESTMENT | (\$48) | |

Horizontal Change Explanation

Reduction in costs to maintain and support ShipCLIP application, replication support, and test networks and ShipCLIP deployment. This also includes remediation of security vulnerabilities identified that have direct impact to the functions provided in ShipCLIP.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Inventory Control

Investment Description and Justification

Short Description

PEO AIRCRAFT CARRIERS Integrated Data Environment (IDE) Portal which facilitates electronic collaboration between all activities (afloat and ashore) involved in the design, construction, maintenance, and overhaul of U.S. Navy aircraft carriers.

Full Description

PEO Aircraft Carriers IDE Program is a uniform, web-enabled system that provides tools for collaboration and program management to the entire Carriers community, afloat and ashore as well as government or contractor. The system is access controlled and protected to provide a safe environment for creation, storage and transfer of sensitive "Controlled Unclassified Information (including information identified as Unclassified Naval Nuclear Propulsion Information (U-NNPI) / Not Releasable To Foreign Nationals (NOFORN))". The Carriers IDE is based in a COTS suite of Oracle tools including Oracle Collaboration Suite, Oracle Application Suite, Oracle Files, etc. The system is a contracted service hosted on a suite of servers, network components, and applications. The PEO Carriers' IDE concept is an environment of knowledgeable personnel interactively connected using a common, centralized knowledge base for resources to accomplish assigned tasks and then sharing results with the entire community by returning products to the centralized knowledge base or some other accessible forum. Carriers IDE supports the Carriers' user community with a variety of information handling capabilities and functions including a basic ability to create, store, and transfer Controlled Unclassified Information (CUI), including U-NNPI / NOFORN, in many different forms. Carriers IDE capabilities include; project management, project collaboration, project costing and billing, email, file management, web conferencing, calendaring, CAD viewing, and training. These capabilities are integrated at the application level and share a common data store. Access to these capabilities from the desktop is through a standard web-browser using a standard secure socket layer (SSL) encryption protocol, IP access blocking, and an Access Controlled List (ACL). The system only allows access from IP's that are in the ACL then acknowledges the users according to granted specific privileges based on an approved request along with an active PKI certificate.

Investment Description and Justification

Short Description

DECKPLATE is the next generation NALDA and will interface with Navy ERP. It will be the single authoritative source for Navy and Marine Corps aviation maintenance and logistics data.

Full Description

Decision Knowledge Programming for Logistics Analysis and Technical Evaluation (DECKPLATE) is the Aviation Data Warehouse (ADW) for the COMNAVAIRFORINST 4790.2A Naval Aviation Maintenance Program (NAMP). DECKPLATE ADW and Reporting System is the up-line reporting system that provides a single consolidated repository for current and historical naval aviation flight, maintenance and usage data for naval aircraft, engines, components, related support equipment, and personnel capability and qualification data for the purpose of reporting and logistic/engineering analysis. DECKPLATE acquisition plan is that it will replace all NALDA II legacy functionality. DECKPLATE is the authoritative data source for 19 years of detailed maintenance data and over 40 years of flight data. The system will provide enhanced user reporting and analysis capability allowing users to access, correlate and analyze data from multiple sources that includes Naval Aviation Logistics Command Management Information System (NALCOMIS) from both Organizational and Intermediate-level maintenance activities. DECKPLATE provides an on-line, integrated life cycle logistics readiness and operational weapons systems database, and the tools to sustain critical support analysis and future data reporting requirements to support the planned interfaces between DECKPLATE and NAVAIR ERP.

Investment Description and Justification

Short Description

AWIS (All Weapons Information System) is the Navy and Marine Corps central repository of airborne weapons maintenance and logistics information. Tracks shelf life re-calibration needs and historical maintenance information.

Full Description

The All Weapons Information System (AWIS) also known as the Airborne Weapons Information System is the Navy and Marine Corps central repository of airborne weapons maintenance and logistics information. The intent of AWIS is to support airborne weapons systems management as established by the Navy Airborne Weapons Maintenance Program OPNAVINST 8000.16 series. AWIS provides comprehensive and timely information and support for the development, production, maintenance, follow-on engineering, acquisition and logistics to support fleet readiness and help sustain sophisticated weapons systems and associated support equipment. The system structures the process for documenting ordnance maintenance, testing, and deficiency reporting. In order to sustain critical support analysis the system also supports inventory and asset tracking for ordnance life cycle logistics, readiness and reliability. AWIS is the single authoritative information system for up line reporting and analysis of airborne weapons and Peculiar Support Equipment (PSE) data and information, as mandated by the Department of the Navy Information Systems Plan. AWIS is a distributed network utilizing both web based and client server methodologies.

Investment Description and Justification

Short Description

The TOMAHAWK Information System (TOMIS) is an end-to-end Decision Support/Executive Information System which is currently used by over 1100 DoN, FMS, and contractor personnel. It provides the Navy with full life cycle planning and history.

Full Description

The Tomahawk Information System (TOMIS) allows for deployed resource affectivity of all Combat Useable Assets (CUA) assets, specifically the Tomahawk All-Up-Round (AUR), allowing for real time notification to the Fleet of specific assets that should not be used and would otherwise impact mission readiness, operational tempo, or safety. It provides the Navy with full life cycle planning and history of Tomahawk Cruise Missiles and support equipment, including as-designed/as-built data, maintenance planning, weapons status, weapon location, product assurance data, and trend analysis. All the data contained in this system is available in real-time to authorized users from any location. Sources of data include the missile depot, contractor electronics systems, field activities, Navy labs, IMAs (Intermediate Maintenance Activity), and support contractors. Outputs include a variety of reports, automated emails, and ad-hoc querying abilities. Users of TOMIS include Navy labs, IMAs, support contractors as well as FMS (Foreign Military Sales) customers.

MAINTENANCE & SHIP WORK PLANNING (007-000001639 - M&SWP)

Budget Line Horizontal Variance Explanation

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$721) | |

Horizontal Change Explanation

Decrease reflects Fully Operational Capability (FOC) of tech refresh for SURFACE, CPA and partially for SUBMEPP by the end of FY20. With portions of the MSWP 3.0 systems being in FOC the cost of MSWP 2.0 will decrease in the years and the funding realigned to Non-IT tasking in support of Submarine maintenance and lifecycle and in-service support for operational Aircraft Carriers.

Investment Description and Justification

Short Description

Standard shipyard system for facilities and equipment management. Standard inventory tool.

Full Description

Electronic Facilities and Equipment Maintenance (eFEM) system is the web based standard shipyard system for facilities and equipment maintenance, asset management, toolroom management, and tracking of controlled industrial waste. eFEM is one of the 27 corporate systems that directly supports performance of the Naval Shipyards and Intermediate Maintenance Facilities (IMF) mission of keeping the U.S. Navy #1 in the world by providing affordable, timely, and quality maintenance, modernization, inactivation, disposal, and emergency repair of naval ships. The corporate systems provide depot ship maintenance availability planning, estimating, engineering, scheduling, project management, work execution, work tracking and work certification functionality. FEM supports Total Asset Visibility including the "One Shipyard" concept.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Provides a central help desk server from which activities can either enter data directly via the web or interface core data elements. Provides a Navy-wide view of issues being reported & the production of standard metrics on response time.

Full Description

Distance Support CRM operates the NAVY 3-1-1 network of contact centers and support providers responding 24/7 to sailor and extended Navy community requests for non-tactical, non-emergency assistance, both on and off duty, across the spectrum of DRRS-N readiness categories, whenever other sources of support are unknown or not available. NAVY 3-1-1 also maintains the knowledge base of transactional and complementary Navy enterprise data for stakeholders to extract Business Intelligence, perform diagnostic and prognostic analytics, and leverage effective Tier 0 self-help features. Navy 311 products and services include both secure and unsecure Websites, an automated Support Provider Directory, subscription metrics reporting, a Remedy-based shared data environment, and "Join" features to facilitate the standardization and consolidation of independent Navy contact centers.

Investment Description and Justification

Short Description

Automated Data Processing (ADP) sys designed to asst AMMRL program mgmnt in determining and establishing aviation allowance requirements for support equipment (SE) at activities performing organizational, intermediate or depot repairs.

Full Description

PROVIDES INFORMATION AND DATA FOR SUPPORT EQUIPMENT (SE) MANAGEMENT; GENERATES SE ALLOWANCES AND PROVIDES INVENTORY CONTROL OF SE FOR FLEET AVIATION ACTIVITIES; SOURCE DATA INCLUDES DATA FIELDS PERTAINING TO VALID PIECES OF SUPPORT EQUIPMENT. SOURCE DATA INCLUDES, BUT IS NOT LIMITED TO, PRIME NIIN, NSN DATA, NOMENCLATURE, CAL CODE, TYPE EQUIPMENT CODE, TYPE DESIGNATOR, SM&R CODE, EQUIPMENT VALUE, WEIGHT, CUBE, LENGTH, WIDTH, HEIGHT, APPLICABLE PART NUMBERS & CAGES, AND RANGE OF ALLOWANCE. ADDITIONALLY, SERMIS MAINTAINS THE IMRL, INVENTORY DATA AND REWORK DATA FOR ALL ACTIVITIES. SERMIS PROVIDES ALL LEVELS OF SE LOGISTICS MANAGEMENT WITH TIMELY, ACCURATE SE ALLOWANCE, INVENTORY, AND REWORK DATA TO ENSURE THE READINESS OF THE FLEET. SERMIS PROVIDES VARIOUS PRESENTATIONS OF SUPPORT EQUIPMENT ASSET INVENTORIES AND EXCESS/DEFICIT CALCULATIONS USED BY SE MANAGERS AT ALL LEVELS TO ESTABLISH AND IMPROVE ACTIVITY READINESS. SERMIS PROVIDES FOR REQUIRED SE ALLOWANCE COMPUTATION, INVENTORY MANAGEMENT, ACCOUNTING, DISTRIBUTION, TRANSACTION REPORTING PROCEDURES.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

The TRIDENT Logistics Data System (TRIDENT LDS) is a non-tactical automated information system developed to support the TRIDENT system throughout its life cycle. TRIDENT LDS supports the integration of planning and production.

Full Description

The TRIDENT LDS system supports the refit, maintenance and replenishment of OHIO Class fleet ballistic missile submarines during brief, 22-day periods when the submarine is in port between strategic deterrent patrols. The Trident Weapon System is the sea-based component of the United States' nuclear strategic deterrent forces. OPNAVINST 4000.57F mandates the use of LDS for OHIO Class submarine maintenance. LDS provides integration of maintenance planning, scheduling, execution and reporting with maintenance-related logistics elements required to support enhanced intermediate level maintenance and progressive overhaul of OHIO Class SSBN and SSGN submarines in accordance with the OHIO Class Maintenance Plan.

Investment Description and Justification

Short Description

ESRS is a web-based, multi-user, large-scale document control system developed in a client-server environment that provides a single source for maintaining and accessing all technical documents utilized in the Aviation Depot.

Full Description

Electronic Storage and Retrieval System (ESRS) is the tool that provides an interface to the Technical Data that is used at the Fleet Readiness Center East (FRCE). ESRS is a web-based, multi-user, large scale document control system that provides a single interface for maintaining and accessing all technical data utilized at FRCE and includes provisions for access by other FRCs, external customers and field support teams (FST).

Investment Description and Justification

Short Description

CMPRO is a secure, scalable, web-based COTS software solution with an architecture that allows rapid customization around its core engine to meet the needs of each client's unique business process environment.

Full Description

CMPRO is a secure (HTTPS; PKI cert-enabled), scalable, web-based (HTML) COTS software solution developed by Professional Systems Associates, Inc. ("PSA") with an architecture that allows rapid customization around its core CMPRO "engine" to meet the needs of each client's unique business process environment (customization handled by PSA). CMPRO provides, among other things, drawing, parts-list, product definition, document, inventory, as-built, as-delivered, alteration, project, and released software management capabilities (including the management of associated electronic files). Utilizing workflow-enabled electronic forms, CMPRO helps control the processes associated with the data it manages. CMPRO also provides numerous customized solutions for its customers that facilitate functionality specific and critical to their business process requirements. Engineering Data Management (including drawing revision control for hundreds of thousands of Navy drawings, stacked changes, engineering part validation, bill of materials (BOMs), part trees, etc). Document Management. Configuration Status Accounting (ECP, NOR, EO, ACSN, Field Change, FCB, NCR, etc). Inventory Management (formerly SIMS; including production support, work-order management, Total Asset Visibility, sponsor owned material (SOM tracking), UID, Fleet Support, Deployment and CASREP support). Alterations Management (including APL data and Field Changes). Project/Schedule and Action Item Management. CDRL Management (DD1423). NAVAIR Aircraft, Support Equipment, and Depot engineering process support including RRR, REI, EI, LES, MCR, JEDMICS Export, and Material Work Requests (4235/6). As-Built/As-Delivered item tracking (including tracking of serialized parts, UID, item maintenance, DD1149). Currently over 14,000 user accounts for NAVSEA, NAVAIR, MCM, DJC2 (Joint Program), SOCOM, WARCOM, and SPAWAR. Programs include RADIAC (includes Navy/Coast Guard/Homeland Security/Army/USAF), LCS (NSW-PC), DJC2, MCM, Airborne Mine Countermeasures (AMCM), WARCOM (SDV & MK V), Crane Weapons, SPAWAR Charleston/San Diego, Fleet Readiness Centers Southwest North Island and Southeast JAX, Surface Mine Counter Measures(SMCM), NSW-PC fleet and MILSTRIP ordering, and NUWC-Newport and NUWC-Keyport torpedo support. There are additional non-navy DOD customers (Air Force & Army).

Investment Description and Justification

Short Description

TWPAM is a Web application used by METCAL for planning personnel, material & logistic requirements, resource allocations, and individual resource assignments across field activities supporting multiple SYSCOMs.

Full Description

The Team Work Plan Automation Module (TWPAM) Next Generation (NexGen) is a web application for the Naval Air Systems Command (NAVAIRSYSCOM) that provides support to the NAVAIRSYSCOM Product Support Team (PST) for Metrology and calibration (METCAL) Program. TWPAM NexGen provides the METCAL Product Support Team (PST) with a web-based application supporting development of team work planning and resource allocation data. It supports the following functions: maintaining Metrology / Calibration unique Task Breakdown Structures (TBS), planning personnel and material requirements, planning future year work requirements, leveling of resource allocations, and planning for all individual resource assignments across field activities supporting multiple SYSCOMs (including contractors).

Investment Description and Justification

Short Description

The Yellow Book DB is designed to provide Configuration Management Tracking to assist the F/A-18 CM team.

Full Description

This application aides the Program Executive Office, Tactical Aircraft Programs in executing its responsibilities in managing the Domestic F/A-18 fleet of aircraft, while carrying out program activities. The system is designated mission critical and the user community includes U. S. Navy, Navy business partners, and contractors. This database is divided into five technical areas, which include Historical Aircraft data, Aircraft Management, Configuration Management, the Service Life Assessment Program (SLAP), Service life extension program (SLEP), Correction of discrepancies, Avionics upgrades (A+/C+) and Fleet Support Taskings. Program personnel can access the system from locations around the world via the Internet anytime. Communication between the user and the server is 128-Bit encrypted. The PMD is a set of software tools for gathering, organizing, and disseminating information through the use of discussion forums, an information repository, a group project tracking system, a business automation system, a knowledge management tool, and a Web application system. It represents an enterprise data model that specifies and presents the data required to meet the objective of providing mission capable aircraft for commanders at the time and place needed to provide for national security. The PMD facilitates data entry, manipulation, warehousing, tracking, viewing, and printing of program information elements. POC: Roland Thorpe, PMA265, (301) 995-4167, or roland.thorpe@Navy.Mil

Investment Description and Justification

Short Description

MFOM maintains/provides an index value that measures the material condition component of ship's readiness.

Full Description

The Maintenance Figure of Merit (MFOM) System is a suite of web-based applications designed to provide the necessary data upgrades and improvements to support material and readiness reporting for both ashore and afloat users. The MFOM System provides several integrated functions. First, the system provides web-based tools that allow the user to capture equipment maintenance deficiencies quickly and efficiently into an electronic format. The data are automatically integrated and used to support follow-on maintenance reports thereby eliminating duplication and reducing maintainer workload. Second, the system provides the integrated maintenance data to port engineers and shipyards to better prioritize and plan required maintenance activities during in-port availability periods. Third, equipment maintenance data are integrated into a classified model that uses specific algorithms to compute an equipment readiness value. The MFOM System aggregates all individual equipment values and deficiencies into an overall readiness value displayed at the unit, Battle Group, or Fleet level.

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

The TARP Program provides technical packaging and processing assistance to all ashore and afloat activities, including CONUS and OCONUS sites, to ensure proper protection of components shipped through the Navy Supply and Distribution System.

Full Description

The Navy has documented examples of deficiencies in the protection of Naval and Marine Corps retrograde Depot Level Repairables (DLRs). Inadequate protection and processing can cause excessive damage to assets, which in turn result in higher repair costs and compromised readiness. The TARP Program provides technical packaging and processing assistance to all ashore and afloat activities, including CONUS and OCONUS sites, to ensure proper protection of components shipped through the Navy Supply and Distribution System. The goal of the program is to reduce repair costs, reduce retrograde lead-times, and increase inventory accuracy. Elements that comprise retrograde processing include: Packaging, Handling, Storage, and Transportation (PHS&T), Advanced Traceability and Control (ATAC), Carcass Tracking, and Stock in Transit (SIT). Key to the TARP business process and training strategy is the TARP WebPort. The site contains NAVICP component packaging data (NAVSUP Pub 700), autorod discrepancy reports, site visit reports, training courses, and a management information system. All elements are used to successfully manage the program and ensure that aviation and ship components are available to support readiness for the warfighter.

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

ReMAD will redesign current UICP allowancing programs and processes. ReMAD will interface with ERP as a "bolt-on system" to produce optimized allowances on a continuous update process, replacing UICP batch mode processing.

Full Description

ReMAD calculates allowances for spare and repair parts needed by Navy combat ships to maintain installed weapon systems. The system interfaces with Navy ERP (NERP) as a "bolt-on system" producing optimized allowances. Key components include a module to develop initial allowances and then re-calculate allowances based on configuration and usage changes, a historical data base of authorized allowances which is accessible by the Fleet, and simulation capability to assess the impact of installing new equipment or other changes.

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

CMIS is the Department of Defense standard software system for complete and integrated configuration management of weapon systems from acquisition to disposal. CMIS efficiently manages all product structure data, including complex interrelation.

Full Description

JCMIS is an Acquisition Category (ACAT) III DOD Joint Service Program supporting the configuration, engineering, and technical data management functions of the DOD community with a standard web-based configuration management (CM) system. The current software release, made up of ColdFusion and Oracle, supports the CM functions of Configuration Identification, Change Control, Audits, and Configuration Status Accounting. JCMIS is CMII certified by the Institute of Configuration Management for providing simplified and fully integrated CM of complex interrelationship between a configuration item and its assemblies, subassemblies, individual piece parts, and documentation (technical, engineering, and pending/approved change requests). Annual JCMIS Baseline Release efforts address ongoing spiral development requirements as illustrated below to manage COTS obsolescence and mitigate Information Assurance (IA) vulnerabilities while maintaining interoperability, availability and performance throughout the DOD community. JCMIS is Product Lifecycle Management (PLM) tool for cradle to grave CM.

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

E-6 SMP is the document management system for E-6 Electronic Technical Manuals.

Full Description

E-6 SMP is the document management system for E-6 Electronic Technical Manuals. The application manages the SGML file server, illustration server and production server that hosts the manual's master files by tracking SGML files, illustration files, wiring diagram data files and Maintenance Requirement Cards (MRCs) as they are being updated and reviewed. It maintains a history file of all manual changes as required by MIL-M-81927B. The production generator has the capability of creating both deployable master CDs and camera-ready Maintenance Requirement Cards or wiring diagrams for printing.

Investment Description and Justification

Short Description

Multiplatform app that assigns APL numbering, develops/publishes repair part tech & logistics docs, validates tech & logistics aspects of the COSAL, publishes repair part & status of SHIPALTs & shows O-level PMS MIP/MRC & Intermediate level Sub Maint Standards.

Full Description

The Technical Services tool is a web based application designed for Naval Sea Logistics Center (NAVSEALOGCEN) to provide a single point of entry to multiple web based modules which enable users to access, review, update and create technical logistics data as it applies to U. S. Navy Ships and Submarines. "Technical Services" is a multi-user, multi-site open architecture system employing J2EE software in order to provide users with secure access to all of the web based solutions through a single login point, requiring a PKI certificate or an authentic username and password. In addition, the application is designed to interface with existing and future data systems such as the Weapon Systems File, Standard Procurement System and ICAPS, allowing for data to be both updated and shared.

Investment Description and Justification

Short Description

3-tier based mgmt. sys. for managing Submarine Warfare Federated Tactical System Engineering, Config. Mgmt., Logistics, & Modernization Planning info.

Full Description

AIMTC application uses include; Configuration Management to warehouse the receipt and processing of software/hardware problems and the management of engineering change proposals, Technical Drawing Repository/Document Management provides storage, versioning, metadata, security, workflow, collaboration as well as indexing and retrieval capabilities. As the ICD Engineering Drawing Maintenance Activity (EDMA) per NAVSEA Ltr 04L235/001 dtd 7 June 2001, NUWCDIVNPT uses the on-line Installation Control Drawing (ICD) repository to provide users the capability to view approved ICD drawings for both surface and submarine platforms, utilizing free viewers. A drawing report includes the ability to view the latest revision of the drawing, as well as any previous revisions that are loaded in the system. All the data contained in these databases is available in real-time to authorized users from any location. AIMTC can be used at Navy activities ashore and afloat, original equipment manufacturers (OEM) sites, and contractors sites. The system is maintained by NUWCDIVNPT personnel. (see POC info Technical Manager). The system is used by NUWCDIVNPT as well the following: PMS 425, PMA280, PMS401, PMS435, PMS404, PEOIWS, PMS450, PEO C4I, PEO LMW, PMS403, PMS480, PMS485, PMS 350.

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

SMART-T automates the labor-intensive solicitation preparation and documentation process, supports complex and unique procurements, and ensures that documents comply with DoN/DoD policy and align with best practices.

Full Description

The Streamlined Modular Acquisition Requirements Tailoring Tool (SMART-T) provides (3) essential functions and is mandated for use by NAVSEAINST 4160.3B. First, it is a digital repository for NAVSEA, SPAWAR, NAVAIR and SEALIFT Commands, storing technical manuals for download and/or viewing by the fleet, fleet support activities, and approved contractors. The digital repository, known as the electronic Navy Engineering Technical Library (eNETL) stores both active and inactive TMs totaling more than 50,000 files. The technical manuals are viewed through the Technical Data Management Information System (TDMIS). Second, SMART-T is the official Navy website for the Naval Systems Data Support Activity (NSDSA) which serves as NAVSEA's and SPAWAR's Center of Excellence for Technical Manual (TM) infrastructure/support while improving and modernizing the delivery, quality, and cost of TM products and TM services. Third, SMART-T is a web application tool that provides a fast, easy, and accurate means for defining tailored Technical Manual acquisition and development requirements that conform to current NAVSEA-approved specifications, standards, and NAVSEA Technical Manual Management Program policy. The generated TMCR/TMSR is intended for use in a Solicitation, Contract, Task/Delivery Order, or Government Agency tasking. SMART-T also stores all generated TMCRs and TMSRs in the SMART-T digital repository.

Investment Description and Justification

Short Description

ATIS is a digital retrieval and display system for technical data that provides a central point of access to this data for maint/support of naval ships. Documents in various formats are indexed by ATIS and displayed with the appropriate viewing s/w.

Full Description

The unclassified Advanced Technical Information Support System (ATIS), used ashore and afloat, was developed to improve the access to and display of technical documentation such as drawings, manuals and maintenance data, in the shipboard and industrial environment. The primary purpose of ATIS is to provide a digital-optical system for use by maintenance and support personnel to quickly access and use technical documentation. Technical documentation is provided as electronic files in raster, intelligent raster or ASCII formats. ATIS software is designed to retrieve the above data types and display them using appropriate playback software.

Provides electronic editing & publishing of torpedo maintenance documentation.

Full Description

The Electronic Engineering Forms Website (EFORMS) was developed for use ashore and afloat for the Department of the Navy (DoN), Naval Sea Systems Command (NAVSEA) PMS 392 by the Naval Sea Logistics Center (NAVSEALOGCEN). The EFORMS Website will provide access to various Navy engineering forms and will allow authorized users access via a single point of entry and serve as a modular developed workflow software application and repository for completed engineering forms.

Investment Description and Justification

Short Description

Contains Ships 3-M info on Trident subs. Is a special version of the Open Architectural Retrieval System (OARS) developed to allow FMD data analysts to edit Ohio class sub data.

Full Description

The IDESC, a Software as a Service(SaaS) Solution, is used ashore, supports PEO SHIPS, SEA 21, and PEO IWS(NSWCPHD) in the execution of programs throughout the entire life cycle by hosting applications that provide capabilities required to manage and execute projects. These capabilities include web based secure access to program information, document management, CAD data management & visualization of CAD data, automated process (workflow) execution, project status reporting/dash boarding, project team composition and role definitions, role based access controls, project planning and management, remote meeting facilitation, action item tracking and reporting, real-time team collaboration of program activities, access to ship messages and a program resource calendar. All capabilities are web-accessible in an integrated environment to manage all programs across PEO SHIPS. Per the directive of a Congressional Add, the IDESC was used by PEO SHIPS 400F to host an integrated digital environment for managing the Cruiser Modernization program and other programs involved in modernization and maintenance. This integrated digital environment was used to streamline business processes including but not limited to Ship Availability Planning, Logistics Readiness Reviews, Risk Management, Technical Data Package Development and Distribution, Test & Evaluation planning, PARM reviews, and Integrated Logistic Support Certification process. Upon the success of the Cruiser Modernization implementation several other PEO Ships Programs are now using the IDESC including PMS470, Surface Combatant (SEA-21) and several Amphibious Ship Programs: Landing Craft, Air Cushioned (LCAC), Landing Craft Utility (LCU), Ship-to-Shore Connector (SSC) and LHA Program offices. The additional programs represent a user growth from 150 users to over 2,000 users. The IDESC is a DoD level joint effort (DoD only Private Cloud) used by the US ARMY, US NAVY, US MARINE CORP, SPAWAR, NSWCS, and SURFMEPP. The PEO IWS(NSWCPHD)ePLM is an instance within IDESC.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

SWMS is a shop scheduling system for IMAs.

Full Description

SWMS is currently used at four Depot sites: Keyport, Crane, Indian Head, and SPAWAR. The Shop Workload Management System (SWMS) is a web based application that tracks by component the Depot level maintenance and repair of assets requiring overhaul, upgrade, or rebuilding to provide ready for issue assets to the fleet. SWMS collects labor hours to provide historical data for repairs by component as well as providing the capability to record parts used. SWMS is a single source for time phased quoting, planning, and production floor management and execution including scheduling, capacity management, equipment calibration tracking, and support and test equipment maintenance and tracking. SWMS provides configuration management as well as cradle to grave asset management of production work. SWMS provides parts ordering for the technician for repair of components from local storerooms based on a bill of material or free form ordering. SWMS provides Material Requirements Planning (MRP) for the Keyport Fabrication Division to manage the planning, scheduling, and execution of the fabrication work through completion in the production shops.

Prime is the requisition management system under the control of the Priority Material Office (PMO), Bremerton, WA.

Full Description

Prime is the requisition management system under the control of the Priority Material Office (PMO), Bremerton, WA. This is an unclassified, CAC/PKI enabled requisition management monitoring system used extensively by over 450 Combative and Support commands through out DOD for Issue Priority Group I (IPG1) requirements. Prime passes IPG1 requisitions to sources of supply, provides an audit trail and up-to-the-minute status for high priority requisitions. ISIS is a data feed into TRMS and OTS. Prime also functions as a Single Point of Entry (SPOE) which provides distance support OPTAR utilized by fleet entities in the SUBPAC-AOR to provide complete financial management ashore.

Investment Description and Justification

Short Description

The TDC is aligned with JTDI. The system integrates multiple data sets which are utilized by PMA-234, NSWC Crane, the Fleet, and OEMs. It provides total asset visibility, AN/ALQ-99 weapon system configuration management, and AIMD support.

Full Description

Part of Joint Technical Data Integration (JTDI AIR 6.8). Provides access to Airborne Electronic Attack, Technical Data (drawings and publications), Configuration management information, Maintenance plans, Support Equipment and Program office data in an integrated environment. User base consists of EW fleet personnel, Fleet Support team members located at NSWC Crane, NAWC PAX River, NADEP Jacksonville, NAWC PT. Mugu, NAS Whidbey IS, MCAS Cherry Point NC as well as Associated EA-6B / EA-18G / P-8A Support contractors and vendors.

Investment Description and Justification

Short Description

The Conventional Ordnance Resource Program is an interactive website that provides world-wide access to data relating to the life-cycle management of conventional ammunition.

Full Description

Conventional Ordnance Resource Program (CORP) is an interactive, web based, life cycle management tool utilized for the Program, Acquisition and In-Service Management of Navy ammunition. CORP enables users to perform life-cycle management of conventional ammunition. The system provides real-time access to financial management data, inventory data, configuration management documents, procurement tracking documents, notice of ammunition reclassification data, overhead fire data, foreign military sales data, surveillance lot acceptance data, ammunition malfunction data, action tracking data, product improvement data, ammunition data card data, drawing visibility, and historical document visibility. CORP provides the Navy visibility to the data identified above on conventional ammunition from idea conception to removal from inventory for demilitarization.

Investment Description and Justification

Short Description

Supports SUBMEPP mission to deliver products and services via the web.

Full Description

The SUBMEPP eBusiness Site contains the modules: eProduct - Provides access to the unclassified SUBMEPP Maintenance Instruction Documents developed by SUBMEPP. These Products include Maintenance Standards, Standardized Test Procedures, Unrestricted Operations Maintenance Requirement Cards, and Deep Submergence Systems Hull Integrity Procedures. Contains data used to build web pages for site. Information includes Product Number, Rev, Change, Issue Date, Title, and Special Handling. AWP - Provides access to Availability Work Packages, event driven availability planning and linkages to Maintenance Instruction Documents. (in progress) CCRP - Provides access to information that identifies components being provided by the Shop 31 Corporate Component Repair Program for upcoming Depot Availabilities and the status of the CCRP support to those availabilities. URO Status - Provides access to the status of URO scheduled maintenance requirements and linkages to applicable URO MRCs. URO Smart Forms - Enables electronic submittal of URO MRC inspection reports (in progress.) Feedback: Service to provide web feedback on SUBMEPP products with User Activity Comment Sheet, obtain status of feedback, and view feedback previously resolved for maintenance products. Reliability Centered Maintenance (RCM) - tools to perform analyses and evaluate risk. URO Analyst - tools to evaluate and track URO feedback data over time.

Investment Description and Justification

Short Description

The Standard Tooling Program tracks tooling requirements for shop 06 work. Receiving info from MAT of matl status/ availability of matls required for completion of tooling process. Material reports are generated. JMLs are produced.

Full Description

The Standard Tooling Program (STDT) is utilized by S/06 to track tooling requirements for their shop work. The program receives an interface from Material Asset Tracking (MAT) via the Web Server daily that updates the STDT database. The MAT information consists of material status & availability of materials required for completion of the tooling process. Material reports are generated; JMSs are produced for Shop Stores requirements are needed. The application users have access through the Shipyard Intranet.

Investment Description and Justification

Short Description

TIMS-TM is the Shipyards database of technical manuals and similar documents. It is used to track the location and status of individual copies of manuals and provide the vision/change/ACN level approved for SY use both nuclear and non-nuclear.

Full Description

Technical Information Mgt System (TIMS) is a local database of drawings & technical manuals, including change/revision status, location, charge out information, & notification to technical codes of changes. It is used to track the location & status of individual copies of manuals & provide the vision/change/ACN level approved for Shipyard use both nuclear & non-nuclear. TIMS creates Ships Drawing Index (SDI) which includes all drawings & revision information which is not found in JEDMICS.

Investment Description and Justification

Short Description

Automates local process for orderly identification, approval, design, planning, programming, budgeting, installation, life cycle support and configuration control of Aircraft Carrier alterations for all in-service & new construction Aircraft Carriers.

Full Description

The mission of the IMPAC system is to support the planning and execution of in-service aircraft carrier modernization. Managing modernization is a key component of aircraft carrier life cycle management. The IMPAC system provides a structure for the orderly identification, approval, design, planning, programming, budgeting, installation, life cycle support, and configuration control of ship alterations (SHIPALTs) and alterations equivalent to repairs (AERs) for all in-service aircraft carriers. By appropriately integrating hardware, software, communications infrastructure, a database, and standardized administration tools, the IMPAC system assists the CPA to automate the processes required to meet its mission.

General Government / General property and records management / Inventory Control

Investment Description and Justification

Short Description

MSADA is a MS Access application that communicates with SQL Server 2000 database, non-interfacing, utilized to manage the DOD requirement of tracking Navy small arms/weapons. Tasking is directed via SEATASK 07SA01.

Full Description

MSADA is a mission-essential system supporting the DoD requirements of tracking all the serialized small arms and light weapons within each component military service for accountability of DoD small arms worldwide. The MSADA application supports the DoD mandated requirement (DoD 4140.1-R) that each military service component establish and maintain a serial number registry. The MSADA application is that Registry for the United States Navy (USN), the United States Marine Corps (USMC) and the United States Coast Guard (USCG). NAVSEAINST 8370.2D, Paragraph 2.402.f. Establish and maintain the Navy Registry as the Navy's record for serialization control, asset population and distribution utilizing the Management Support and Data Analysis (MSADA) system. The MSADA application also incorporates the USN allocation readiness of quantities for the various small arms and light weapons authorized to be held by each USN activity. MSADA is utilized by the USN, USMC, USCG and USSOCOM to track and be able to monitor the readiness of their weapons assets. Over ONE million assets are tracked by serial number, condition code, document, nomenclature, NSN, as required by law. MSADA provides structure for an annual reporting requirement for small arms. See supporting documents uploaded.

Investment Description and Justification**Short Description**

SMSMDS is the Navy's only centralized maintenance and logistics system for distribution of life cycle data for STANDARD Missile.

Full Description

The Surface Missiles Systems Maintenance Data System (SMSMDS) consists of all hardware and software required to serve multiple DoD programs: such as STANDARD Missile, Evolved Sea Sparrow Missile, Rolling Airframe Missile, NULKA, Quality Evaluation, Vertical Launch System Canister, and Aegis Ballistic Missile Defense. Two of the major applications are SMSMDS DADMS ID#17787 and SMEPS DADMS ID#17920. SMSMDS and SMEPS are the specialized technical software products that have been designed and developed to meet missile life cycle management support. SMSMDS provides a central place for historical and DoD owned missile information systems. The data are captured initially from the manufacture, build-up, movements, maintenance points, all the way up to firing event. Data is integrated in a cohesive manner that is available for future studies and assessment. SMEPS is an automated tool to manage missile production in accordance with: Surface Missile Process Descriptions (SMPDs), Production Planning Requirements (PPRs), NAVSEA Shore Activity Maintenance Data System (MD 4790), Major Parts Interchangeability and Service Life Data (MD 31460), Maintenance Policy Requirements. SMEPS manages electronic missile and section travelers, process missiles/sections and collect maintenance data. SMSMDS and SMEPS users are AMMO PAC, AMMO LANT, Raytheon, WPNSTN Seal Beach, WPNSTN Yorktown, NSWC Port Hueneme, NSWC Indian Head, NSWC Corona, NSWC Crane, FMC Minneapolis, BAE and NGC Washington DC, APML, China Lake, Earl, NOLSC, and a few FMS countries such as Canada, Germany, and Australia. CWIS architecture has the capacity and flexibility to host additional applications and databases in support of emerging programs.

Investment Description and Justification

Short Description

Naval Sea Systems Command (NAVSEA) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Base-Level Computing capabilities not delineated elsewhere.

Full Description

The Material Readiness Database (MRDB) was established and chartered by Office of the Chief of Naval Operations (OPNAV) as the single authoritative source for calculating Operational Availability (Ao) and associated reliability and maintainability parameters, including, but not limited to, Mean Time Between Failure (MTBF), Mean Time to Repair (MTTR), Mean Down Time (MDT), Mean Outside Assist Time (MOAT), and Mean Logistic Time (MLT). This database is unique in its engineering orientation, in its applicability to wartime scenarios, and in its synergistic approach to time series data analysis. The MRDB is oriented to Reliability, Maintainability, and Availability (RM&A) engineering principles in its reliance on Reliability Block Diagrams (RBDs). Reliability block diagrams are the foundation of modern RM&A and are mandated in the Department of the Navy's operational definitions (see Reliability Block Diagram Standards, Report No. 05MR-001-87, May 1987). The MRDB data is processed in accordance with a specified wartime scenario, mission profile, and Program Manager approved demand use factors. The database transforms data into wartime scenarios using Program Manager approved demand use factors. Indices for Availability, Reliability, Maintainability, and Supportability are among the most important information provided by the MRDB. The MRDB data is collected in accordance with explicit scoring criteria agreed to by the In-Service Engineering Agents (ISEAs) and NSWC-Corona, and then approved by the Program Managers (PMs). Representatives from ISEAs, NSWC-Corona, contractors, and other knowledgeable members of the technical community attend periodic data reviews and validations.

NOSSAWEB is a DON-mandated web application with approximately 10,300 users providing information and technical data for Naval Ordnance Safety programs, including ordnance environmental safety, to NOSSA staff and customers.

Full Description

NOSSAWEB is a DON-mandated web application with approximately 10,300 users providing information and technical data for Naval Ordnance Safety programs, including ordnance environmental safety, to NOSSA staff and customers. This system is also used to manage ordnance transportation related incidents and accidents on a 24x7 basis under 49 Combined Federal Regulation (CFR) hazardous materials transportation, a Title 10 mandated function of NOSSA. NOSSA customers include the fleet and DoD civilians & contractors located worldwide.

Short Description

Commander, Fleet Forces Command (CFFC) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Logistics capabilities not delineated elsewhere.

Full Description

The MIDATA Warehouse database is the master inspection archive used to perform periodic trend analysis as well as to develop the year-end report for Congress/SECNAV/CNO and Fleet Commanders. It provides historical data of past inspections to both the Fleet operators and technical community. The MIDATA Warehouse is accessed through a web interface that allows all registered users the ability to create ad-hoc queries of the data from 1996 to present. These queries can then be printed or exported to MS Access, MS Excel, MS Word, xBase table, or text files.

INACTIVE SHIPS MANAGEMENT SYSTEM (007-000002813 - ISMS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18269 - Enhance information technology and cybersecurity defense capabilities.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Naval Sea Systems Command (NAVSEA) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Related Technical Activities capabilities not delineated elsewhere.

Full Description

The ISMS (DITPR-DON ID#22578) consist of two NMCI CLIN 0427AD servers (C27INACSTJU01(P) DADMS ID# 26810 and C27INACTSTJU02(P) DADMS ID# 44164) and two development servers that provides for communication and collaboration for NAVSEA Inactive Ships personnel and sharing and distribution of NAVSEA Inactive Ships business information. All hosted information and communication is unclassified and supports NAVSEA Inactive Ships business functions. ISMS supports four web-based applications developed for NAVSEA Inactive Ships Management Office (INACTSHIPOFF) to track, ship, inventory, and monitor the maintenance status of parts removed from inactive Navy ships for use on active fleet ships. The four applications are Material Readiness (MR) DADMS ID# 20880, Work Management System (WMS) DADMS ID# 12315, Cannibalization (CANN) DADMS ID# 20742, and Equipment Removal System (ERS) DADMS ID# 20787. OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

MAINTENANCE SUPPORT TOOL/HIERARCHAL ANALYSIS SUPPORT INFORMATION TOOL (MST/HASIT).

Full Description

MST/HASIT was developed under COMNAVSURFOR N43E guidance to provide the Navy Regional Maintenance Teams with a system designed to provide ships' maintenance tasks and CSMP data management for data provided by the RMAIS (CSMP), NAVSEA 04 (ICMP) and CDMD-OA (SCLSSIS) databases. MST/HASIT is considered a client/server system, but the client portion is designed for portability and can run stand-alone. It does not require a persistent connection to the server. The client portion of MST/HASIT runs on the Microsoft Windows operating system and was built with Microsoft's Visual Basic 6 (VB6) programming language using Microsoft Access for data management. The server portion of the MST/HASIT application is a single server solution that performs file storage, processing, and routing services for the client.

Investment Description and Justification

Short Description

WEB AIM is an enterprise data management system. WEB AIM is the configuration/data management tool for Aircraft Launch and Recovery Equipment/Support Equipment engineering drawings.

Full Description

PDM FOR ENGINEERING AND LOGISTICS DATA DEVELOPMENT. AIM serves as the Repository for all CAD Based design efforts for both ALRE and Support Equipment for both Configuration Management and Design Review from NAWC Lakehurst.

Investment Description and Justification**Short Description**

System manages unique historical collection of Navy artifacts for Navy Museums and Curator of the Navy including weapons, artwork, exhibits, loans, and donations to comply with CFO Act of 1990 (PL 101-576). Directed by DASN (Environment and Safety).

Full Description

DON HERITAGE ASSET MANAGEMENT SYSTEM - COLLECTIONS MANAGEMENT SYSTEM (DONHAMS/DONCOMS) is a COTS collection management system designed to provide comprehensive management and access to very large and diverse collections for museums, curators, and art galleries using KE Software's Electronic Museum software (KE-EMu). Unlike other museum software, KE EMu integrates an extensible multi-discipline catalogue with interpretative information and multimedia resources. This application supports Museum Asset Management for the operation of DON Museums. This is the standard Navy database for managing historical artifacts within the Navy. The application was approved and purchased by SECNAV following a Business Case Analysis and/or a selection process to determine the best-suited application among a group of applications for a specified business or war fighting function (ASN I&E letter dated 16 Jan 2003). This application was designated for use by all Navy Museums, Navy Curators, Marine Corps Museums and Curators. There is no budget line for the support of this application even though SECNAV mandated its purchase and use.

Investment Description and Justification

Short Description

The FHPP under the sponsorship of Director, Fleet Readiness Division (OPNAV43), provides a data repository, and an online, real-time environment for developing, validating, maintaining and executing the FHPP budget.

Full Description

The Flying Hour Program (FHP) is a management information system designed, developed, implemented and maintained for the Deputy Chief of Naval Operations (Fleet Readiness) to analyze appropriate Naval Aviation data and develop flying hour budget projections and alternatives based on multi-year aircraft projections. The Flying Hour Program (FHP) model estimates the requirements necessary for Navy and Marine Corps Fleet Aviation Forces to meet CNO stipulated readiness levels in support of the Fleet Response Plan (FRP).

Investment Description and Justification

Short Description

CDMD-OA is the primary system for maintaining ship's configuration logistics data. Associated systems are RADWEB, TDMDE and the Configuration Mgmt Website. CDMD-OA tracks the configuration status of systems, equipment, and logistics items.

Full Description

Configuration Data Managers Database (CDMD) Open Architecture (OA) is the Navy's authoritative configuration database. The Naval Sea Systems Command initiated the development of CDMD-OA to shorten the dataflow lag time between the ship, the CDM, and the Naval Inventory Control Point. As part of the client/server architecture of CDMD-OA, a single, authoritative repository of all naval configuration and logistics data from around the world is available for querying. CDMD-OA incorporates the latest technological innovations to maintain data integrity and speed transmission of updates between the ships, NAVICP and the CDMs. CDMD-OA tracks the status and maintenance of naval equipment and their related logistics items (drawings, manuals, etc.) on U.S. Naval and foreign military ships and activities. CDMD-OA consists of a distributed database with remote site servers hosting individual CDM databases. The remote site servers replicate data to a Central server located at NAVSEALOGCEN DET Fairfield. The Central repository provides a complete view of all ships and shore sites upon which configuration status accounting is required. CDMD-OA transmits configuration data to the Naval Inventory Control Point (NAVICP), Mechanicsburg for supply and allowance allocation. In addition, CDMD-OA transmits all supply and configuration data to the shipboard systems.

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

RADWeb provides file xfer incorporating satellite & landline technology, standard interchange for xferring maint, config & logistics info within the ship's SCLSIS community, & data file transfer & tracking mechanism for CDMD-OA.

Full Description

The Revised Alternative Dataflow Web site (RADWeb) acts as the electronic conduit through which shipboard and shore site allowance update and system/equipment maintenance history data files are passed among various activities (NAVSUP, NAVICP, NAVSEA, SPAWAR, NAVAIR, Warfare Centers, Regional Maintenance Centers, and Fleet Forces Command and Fleet Operational Units). It provides simple, safe and rapid exchange of data which results in development of the right logistics support in a timely manner to the Fleet. Accurate configuration for ship, shore and Expeditionary Forces maintained in the Configuration Data Managers' Database – Open Architecture (CDMD-OA), triggers the correct allowances of spares, test equipment, Planned Maintenance System documents and system/equipment technical documentation to all Navy ships and shore sites. Updated maintenance records sent from operational units via RADWEB help properly plan/assign workload both within the Ship's Force and at the various Regional Maintenance Centers (RMCs). By using RADWeb, the Navy is able to manage and execute changes in requirements electronically, thus improving the Navy's ability to rapidly field new capabilities, plan maintenance and modernization efforts, track and provide the correct logistics products based on real-time configuration data, and avoid expending resources for support of items that are no longer installed. This integrated web-based data transfer system is essential to support overall Fleet maintenance and material readiness.

Investment Description and Justification

Short Description

Stores accounting is the Marine Corps Wholesale Financial System which contains the dollar value of inventory control point assets.

Full Description

Stores accounting is the Marine Corps Wholesale Financial System which contains the dollar value of inventory control point assets. It is an automated operation to record and accumulate all data required for financial analysis of the inventory movement and to control and account for cash resources as well as financial inventory balances. The purpose of the Marine Corps Unified Materiel Management System (MUMMS), MUMMS-04 System (STORES-ACCTG/MUMMS-SS04) is to provide the Marine Corps a system of sound financial and supply management for all inventories controlled by MCLB, Albany, as well as for decontrolled items under the cognizance of the Direct Support Stock Control (DSSC) activities. The MUMMS SS-04 assures adequate financing for the maintenance of approved inventory levels of operating stocks, authorized reserves and related on-order quantities. Overall, Provides the ability to purchase supplies and services (non-DLR) from commercial suppliers on the basis of an authorized, funded purchase request in conformity with the rules of the Armed Services Procurement Regulation.

Investment Description and Justification

Short Description

DACG is a standalone repair and calibration system. It is a suite of hardware and software designed to enhance metrology collection and maintenance of Test, Measurement and Diagnostic Equipment (TMDE).

Full Description

The DACG is one of several repair and calibration stations resident within the AN/TSM-214A (ETMS), it is a standalone system. It is resident throughout the fleet and at the Naval Surface Warfare Center, Corona, CA (NSWC Corona); Marine Corps Communications - Electronics School (MCCES), Marine Corps Air Ground Combat Center (MCAGCC), 29 Palms, CA; and Marine Corps Test, Measurement and Diagnostic Equipment (TMDE) School, Keesler Air Force Base, Biloxi, MS. It consists of a suite of hardware and software designed to enhance the metrology data collection and the test, maintenance, and calibration of TMDE. ** SYSTEM NAME HAS CHANGED TO DATA ANALYSIS CONTROL GROUP (DACG). CALIBRATION FACILITY ELECTRONIC, THE COMPUTER ASSISTED LOGISTICS AND TEST EQUIPMENT CALIBRATION SYSTEM (CALTECS) IS A SUBCOMPONENT.

Investment Description and Justification

Short Description

MCDSS is an automated decision support system designed primarily to support the MARCORLOGBASES logistics managers, from the Inventory Manager through the Commander, in their strategic logistics decision-making processes.

Full Description

MCDSS is an automated decision support system designed primarily to support the MARCORLOGBASES logistics managers, from the Inventory Manager (IM) through the Commander, in their strategic logistics decision-making processes. The system impacts those decisions where there is sufficient structure for analysis to be of value, but where the logistics decision-maker's own judgment is absolutely essential. MCDSS integrates into a data warehouse the semi-automated Principal End Item (PEI) Stratification, Depot Level Maintenance Program (DLMP), Readiness/Capability Evaluation and War Gaming processes, with analytical tools and models as the system components.

Investment Description and Justification

Short Description

Application supports inventory management of all food (fresh/frozen/dry goods), issue records management, order/reorder processing, ration funds management. Supports all food use (meal planning, shelf-life management).

Full Description

FSM 3.X is covered by this entry. All other versions V2.X or less were transitioned to SPAWAR in FY12. is an automated IT tool for Navy galleys, ashore and afloat, that provides the ability to efficiently manage all galley records. It provides the following functional abilities: local galleys need the ability to manage menus including recipes. They also need to order, receipt, stow, and issue food stocks based on upcoming menu. Galley food inventory must be managed to include on-hand visibility, management control, and the ability to make accurate predictions of future food store requirements. The local galley needs to be able to create various forms for management of the galley including food prep documents, survey of food losses, and local galley metrics for galley management's use. The enterprise (Fleet, TYCOM, COMFISC/FISC, BUPERS and NAVSUP HQ) require various reports/data from each galley in order to provide adequate oversight of Navy's Food Service operations. This is used both at the granular level for oversight of the individual galley as well as overall health of the enterprise food service operations.

Investment Description and Justification

Short Description

Provides CM to the Command. Overall objective is config control & mgmt, such that quality and common practice is assured in all aspects of operation delivered in accordance with Command and CMMI® policies and guidelines.

Full Description

CMPRO is a Product Lifecycle Management (PLM) Tool that supports Joint/DOD/Federal programs with engineering and logistics by managing the entire lifecycle of a product/system from its conception, through design and manufacture, to service and disposal. The secure, web-based tool provides configuration, engineering, project management and product tracking functions to support the In-Service Engineering (ISEA) and Software Support Activity (SSA) functions for the customer, fleet users and war fighters supported by SPAWAR. CMPRO is a web-based (zero-client footprint), commercial off-the-shelf (COTS) product lifecycle management (PLM) solution designed to orchestrate all of your organization's PLM data in one secure database. As of October 2014, CMPRO is being used to supplement N-ERP 1.1 and provide Serial Number Tracking, IUID Capability, Tracking of non OM&S Material, and generation and tracking of Transportation Requests (TCNs) for SSC-LANT.

Investment Description and Justification

Short Description

An evolution of the ATMs@Sea program, Navy Cash is a joint US Navy/US Treasury program that combines chip technology and a magnetic strip to produce an electronic purse and provides a cashless environment within the skin of the ship.

Full Description

Navy Cash is an evolution of the Automated Teller Machines-At-Sea (ATMs-At-Sea) program which began installing ATMs on board ships in 1988. Navy Cash program is partnership between the US Navy and the US Treasury. Navy Cash replaced the cash-based economy on board ship with a stored-value-card, electronic-funds-transfer system in 2001. Navy Cash combines stored value chip technology and a magnetic strip to virtually eliminate the need for Sailors and Marines to carry cash. On the ship, a chip based, secure, electronic purse provides for a cashless environment and provides cardholders with electronic access to their personal funds in checking and savings accounts ashore. Off the ship, the magnetic strip on the back of the card provides a branded pre-paid debit feature for access to the funds in Navy Cash accounts and can be used at more than 23 million MasterCard® acceptance locations and more than 1 million ATMs in over 210 countries and territories worldwide.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

FACTS supports the clearance of all DOD cargo for air movement and facilitates Service transportation funds management and budgeting for all modes of transportation.

Full Description

FACTS is a joint unclassified web-based Automated Information System (AIS) that provides a single, integrated process supporting the clearance of all Department of Defense (DoD) cargo for air movement and facilitates Service transportation funds management and budgeting for all modes of transportation. The unique functionality within FACTS, coupled with embedded Service specific rules, provides efficient resource utilization and transportation fiscal discipline within the DTS. FACTS operates with six functional business areas:

Transportation Management Functionality: FACTS maintains shipment information for the current plus the past six years (7 years) and provides transportation managers the capability to query data, review system-generated reports, and create Service-unique reports.

Funds Management Functionality: FACTS provides financial managers the ability to establish transportation budgets and controls to track and manage their transportation funds. Costs are posted to the appropriate Service budgets as cargo moves through the DTS. Financial managers track the usage of funds by TAC, billing modes, and other Service obligation authority levels such as bill accounts and cost centers.

Mobile Unit Routing Functionality: The Cargo Routing Information File (CRIF) functionality provides shippers with mobile unit information to facilitate the proper routing of cargo to mobile units.

Small Parcel Express (SPE) Shipment Functionality: The Small Parcel Express shipment functionality provides Transportation Officers (TOs) the capability to create commercial Bills of Lading (BOLs) in FACTS and automates the shipping process for participating commercial vendors for free on board (FOB) origin contracts, including the cargo routing function for Navy ships.

Transportation Exploitation Functionality: FACTS automates transportation planning for opportune lift, optimizes the use of service wide transportation funds, and provides the services with the capability to leverage transportation assets that have already been procured and not fully utilized.

Reporting Functionality (RF): FACTS uses web-based data mining to provide authorized users the capability to do multidimensional analysis and reporting and to create customized reports.

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

WMS aligns specific Fleet Readiness Centers' (FRC) funding support with personnel resources required to produce FRC products and services.

Full Description

The Workload Management System (WMS) assists in accomplishing the customer's mission to provide the necessary Engineering, Logistics, Maintenance and Program Management In-Service support to the Fleet. Specifically the WMS system provides the ability for the customer to track and manage tasking, flow documentation and knowledge associated with that tasking, as well as evaluate and measure performance at each organizational level. WMS accomplishes this by creating tasks, flowing those tasks between users, and in turn, associating relevant financial information with those tasks. WMS provides the customer with the necessary reports and metrics to evaluate and measure performance at each organizational level as well as permitting detailed real time evaluation and action decisions regarding manpower levels and organizational capabilities. These capabilities assist the customer in articulating the value added by the organization, budget defense or identifying cost savings, describing cost of operation, manpower utilization as well as comparing workload performed with workload projection. WMS also provides predictive analysis of multiple scenarios which will serve to increase productivity, reduce cost of operation, forecast the impact of organizational changes before implementation and improve fleet readiness. Moreover, WMS allows the customer to improve quality of products/services such as Technical Assists, Request for Engineering Instructions (REI's), Technical Engineering Instructions (TEI's), Support Equipment, Maintenance Planning, Engineering Change Proposals (ECP's), Engineering Investigations (EI's), Technical Directives (TD's), Action Requests (AR's), etc... by providing the data necessary to engage in continuous process improvement and business process reengineering initiatives. WMS supports approximately 6000 users at Fleet Readiness Centers (FRC) East, South, Mid-Atlantic, West and West Pac as well as the JSF Joint Program Office. The WMS application has replaced three divergent legacy applications within the naval aviation community and allows for cross site tasking and uniform metrics measurements across the customer base

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

EXMIS enables the supported commanders' readiness through materiel management and delivery of supplies, equipment, and integrated logistics support services.

Full Description

EXMIS uses a Maximo COTS solution set to improve NAVFAC's business processes that support the Navy Expeditionary Combat Command (NECC) and other Navy expeditionary units ashore. The Maximo solution set will support the documentation of expeditionary war fighter requirements, selection of material solutions, maintenance of Tables of Allowance (TOA), initial acquisition of materiel, delivery of TOA materiel, sustainment and replacement of prepositioned and fielded materiel, and disposal of materiel. These activities facilitate the supported commanders' readiness through efficient materiel management and delivery of supplies, equipment, and integrated logistics support. Use of EXMIS will: 1) Reduce manual processes and procedures, and data calls to individual units; 2) Provide TOA optimization (i.e. utilization and recapitalization); 3) Enable asset visibility through requirement generation, acquisition, and fielding; 4) Standardize business processes, practices and reporting; 5) Enable better decision making through the availability of consistent, consolidated NECE data, coupled with web-enabled desktop applications; and 6) Reduce legacy systems and applications in NAVFAC's Expeditionary business line portfolio.

General Government / Support delivery of federal services / Web Content Management

Investment Description and Justification

Short Description

Provides capability for managers of EOSS, PMS, and TMs to edit, publish, distribute and view their technical data via a CITRIX based web interface to a broadly distributed user community. URL is <https://navlogtd.navsses.navy.mil>.

Full Description

NAVLOGTD was formerly Navy JCALS, a joint program previously supported and funded by the Army until the end of FY11. The Navy JCALS and then NAVLOGTD system has been in production at NSWCCD-SSES Philadelphia since 1997, supporting the technical data community. The Naval Logistics Technical Data (NAVLOGTD) Repository System provides the capability for the managers of Engineering Operational Sequencing Systems (EOSS), Planned Maintenance System (PMS), and Technical Manuals (TM) to edit, publish, distribute and view their technical data via a CITRIX based web interface (SSL port 443) to a broadly distributed user community. The user community is made up of fleet sailors, engineers, and technicians.

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION (007-000004836 - NMMES)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18266 - Restore Military Readiness to Build a More Lethal Force.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Major - High Value IT Investment (HVII) Tier 1

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

NAVSEA MMS Initiative is to consolidate overlapping application functionality & database, data centers, and infrastructure into a fully integrated enterprise solution resulting in reduced costs to Navy.

Full Description

NAVSEA 04 PMO-IT has the responsibility for maintenance, modernization and improvement of the IT systems which support shore maintenance, modernization, repair, logistics & readiness for ships and submarines across the Navy. The Navy Maritime Maintenance Enterprise Solution (NMMES) Initiative funds the sustainment of deployed systems, as well as the modernization and selected technology refreshment of ship maintenance and national systems. These existing core ship shore maintenance systems, which are integral to shore ship repair activities, reside in the naval shipyards, regional maintenance centers, ship repair facilities, SUPSHIPS, and other industrial activities throughout the world. The present capabilities for this aging Family of Systems continue to require a challenging level of maintenance support. They require information assurance upgrades, selective modernization and/or enhancement to address technological obsolescence and to remove cumbersome work practices to gain efficiencies; and continual protection of Naval Nuclear Propulsion information. These efforts are required to minimize the risk of systems failure that may directly prevent the fleet from operating at its full potential due to interruptions of the Intermediate and Depot level maintenance activities. These NMMES managed systems support over \$6.5B yearly in ship maintenance and modernization and a military/civilian workforce of over 40,000 personnel supporting worldwide operations.

Horizontal Variance

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION (007-000004836 - NMMES)

Budget Line Horizontal Variance Explanation

The investment is designated as a 'Major' therefore requires Horizontal Variance explanations at the Appropriation Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|---|---------------------|--|--|
| NAVY | Operations | \$ 6,368 | |
| Horizontal Change Explanation | | | |
| The increase for NMMES supports the additional efforts required to maintain Risk Management Framework/cybersecurity posture required to safeguard the systems and information used to execute Intermediate and Depot level maintenance. Additionally, the increase for NMMES reflects the funding of a portion of selected previously unfunded requirements that support and enable intermediate and depot level maintenance for submarines and ships. This is in alignment with the National Defense Strategy and DON Business Operations Plan line of effort to rebuild military readiness and result of the DOD's recognition and prioritization of mission readiness. | | | |
| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
| NAVY | Procurement | (\$5,450) | |
| Horizontal Change Explanation | | | |
| Funded to operational requirement. | | | |
| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
| NAVY | RDT&E | \$ 10,287 | |
| Horizontal Change Explanation | | | |
| Funding changes are inline with issue 68709 and issue 20039. Change in funding supports configuration, integration, training, and go-live efforts on COTS solutions. | | | |
| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |

Major Investment Description and Justification

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION (007-000004836 - NMMES)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

The Navy Maritime Maintenance Enterprise Solution (NMMES) is the fully deployed and operational Information Technology (IT) toolset currently utilized to execute ship and submarine maintenance in the Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Ship Repair Facility (SRF), Intermediate Maintenance Facilities (IMF), and commercial industrial sites worldwide. NMMES enables Fleet readiness through the execution of maritime shore maintenance supporting over \$7.8B yearly in ship, submarine, and aircraft carrier maintenance and modernization and a military/civilian workforce of over 40,000 personnel. NMMES will continue supporting, sustaining, and fielding of an affordable, resilient, reliable, secure, and agile Information Technology (IT) solution in support of generating fleet readiness while delivering standardized business processes for the Navy shore maritime maintenance enterprise including Forward Deployed Naval Forces (Rota, Bahrain, Naples, Japan).

NMMES is chartered to actively maintain capability requirements definitions of the Information Technology toolset for planning, and the conducting of maintenance and logistics support for the US Navy ships, including nuclear powered ships. NMMES executes development, deployment, management, and sustainment of the applications, as assigned, as well as associated upgrades.

Key stakeholders: US Fleet Forces Command, Commander US Pacific Fleet, NAVSEA, Commander Naval Regional Maintenance Centers (CNRMC), Naval Reactors (NAVSEA 08), Naval Shipyards, Forward Deployed Regional Maintenance Center (FDRMC), Ship Repair Facility – Japan (SRF-Japan), Navy Submarine Support Facility - New London.

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION (007-000004836 - NMMES)

Major Investment Business Case

Description and Justification

Return on Investment

The Navy Maritime Maintenance Enterprise Solution (NMMES) is the fully deployed and operational Information Technology (IT) toolset currently utilized to execute ship and submarine maintenance in the Naval Shipyards (NSY), Regional Maintenance Centers (RMC), Ship Repair Facility (SRF), Intermediate Maintenance Facilities (IMF), and commercial industrial sites worldwide. NMMES enables Fleet readiness through the execution of maritime shore maintenance supporting over \$8.9B (FY19) yearly in ship, submarine, and aircraft carrier maintenance and modernization and a military/civilian workforce of over 40,000 personnel. NMMES will continue supporting, sustaining, and fielding of an affordable, resilient, reliable, secure, and agile Information Technology (IT) solution in support of generating fleet readiness while delivering standardized business processes for the Navy shore maritime maintenance enterprise including Forward Deployed Naval Forces (Rota, Bahrain, Naples, Japan).

Successful execution of the Fleet Response Plan for fleet readiness to meet the political and military objectives of the United States is executed utilizing on the present operational NMMES information technology solution for maritime shore maintenance. Rotation of ships and submarines through scheduled maintenance periods, many of which have been critically compressed with the work pre-programmed to multiple levels of interdependency, requires an extensive solution to address the numerous complexities encountered on a daily basis in the Naval Shipyards (NSY), Regional Maintenance Centers (RMC) and Ship Repair Facilities (SRF).

The maintenance systems and applications within the NMMES program require selective modernization and/or enhancement to address technological obsolescence, to remove cumbersome work practices, align with industrial processes, gain efficiencies, meet regulatory and statutory mandates, and provide cybersecurity upgrades required to protect naval nuclear propulsion information (NNPI).

NMMES provides a proven, scalable, secure solution that enables maintenance planning, execution, workload control, quality control, certification, timekeeping in association with work progression, and project closeout. Additionally, it support process standardization, auditability, and enables the data center consolidation requirement.

Major Investment Description and Justification

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION (007-000004836 - NMMES)

Major Investment Business Case

Description and Justification

Budget Justification

These OMN efforts are interdependent for Intermediate and Depot level maintenance operations:
Provided expert oversight and guidance to the Ship Maintenance community to assure the security, integrity, and reliability of IT systems, including application development and sustainment, supporting infrastructure, and cyber security resources.
Government labor conducts NSY and RMC oversight and provides technical assistance to the maintenance activities; conducts project management and day-to-day operations in support of NSYs, RMCs.
The Operations Center is live, supporting 24/7 worldwide readiness generation including FDNF.
Cybersecurity efforts include the Risk Management Framework (RMF) transition and the continuous monitoring and validation as well as the requirement to certify and accredit over 1,800 Platform IT applications.
Infrastructure supports the operators that ensure that ABL and the MSE dev/test environment is operationally available.
Operations and sustainment supports the ongoing daily processes to keep all applications available and functioning.
Corporate training is the team that trains the trainers and users on product changes and updates.
All COTS hardware and software must be vendor supported in accordance with SECNAVINST 5230.15 order to maintain a cyber security accreditation. This accreditation is required to continue operating; the risk of having unsupported HW/SW is system shutdown by 10th Fleet due to cyber risk.

FY21 Planned Maintenance System Management Information System (PMSMIS) will complete development and testing on the PMSMIS and PMS Scheduling tools and begin preparation for the integration with the PMS maintenance and material management upgrade.

FY21 Data analytics and workforce/workload planning and analysis and planning integration and process adjustments will be incorporated as the full adoption continues into FY21 & FY22

FY21 findings issued from the FISCAM audits will be planned, executed, and submitted for closure.

FY21 will continue sustainment of deployed electronic Technical Work Document (eTWD) toolset to enable waterfront and deckplate electronic work document execution and certification with the execution of ongoing follow-on releases.

Technology integration and configuration efforts will continue on the select technology insertions required to align with the Intermediate and Depot level maintenance processes will continue as part of continuous process improvements; this includes continued alignment with the 3-D Integrated Product Models that are being introduced with the FORD, COLUMBIA, and VIRGINIA Block V.

Replacement of end-of-life COTS products will continue to ensure sustainability and cybersecurity.

RMF and NIST 800-53 will continue to be managed; process updates will be incorporated to ensure a resilient, proactive cybersecurity posture is maintained to protect ship, submarine, and aircraft carrier maintenance information including UNNPI.

Major Investment Business Case

Description and Justification

FY2020 Accomplishments

Current year (CY) (FY 2020) funding supports the following Navy Maritime Maintenance Enterprise Solution (NMMES) planned accomplishments:

Deployment of the centrally hosted version of NMMES to the Naval Shipyards (NSY) and Naval Submarine Support Facility (NSSF) in FY20 following identified infrastructure upgrades initiated in FY19 to reduce risk to maintenance operations.

Deploy the electronic Technical Work Document and associated wireless tablets to the Naval Shipyards.

Complete GAT of the product and conduct implementation and training of the user community in the use of the schedule and material management applications

Complete development and configuration of upgrade, and begin Government Acceptance Testing of SPF upgrade in preparation for FY20 deployment and implementation. Continue design for configuration on the QPS and PMC components.

Support DON transition to SABRS in accordance with the FIAR requirement. Complete the software development for the modernized COST (COST) & Pre and Post Payroll Processing (PPPP) applications, and begin planning for Government Acceptance Testing (GAT).

Complete database structuring and begin independent validation of database performance in alignment with the optimization efforts.

Configure the enterprise data analytics reporting and visualization toolsets.

Continue transition to the Risk Management Framework (RMF) for cybersecurity and continuous monitoring.

Continue pursuing Data Center Consolidation initiatives.

Begin analysis and integration planning of the selected tool with NAVSEA PEOs and shipbuilders. Configure the new tool and integrate with the NMMES product line.

Perform software testing and train users at the Naval Shipyards - required to conduct maintenance on the FORD, COLUMBIA, and VIRGINIA Block V class vessels.

Objectives and Expected Outcomes

Modify the NMMES solution to be able to utilize the 3-D Product model information being delivered to the Navy by the shipbuilders for the Ford, Columbia, and Virginia Classes. The Ford Class Carrier and the Virginia Block V and Columbia Class Submarine Programs are being designed, built and delivered utilizing 3-D integrated product models. Configuration and technical information will be provided to the government in electronic format rather than via paper-based drawings. The current suite of Shore Maintenance Systems cannot accept the data delivered by either program, which will impact the ability of the shore Maintenance Community to maintain and modernize these platforms. This is required to support the USS FORD Planned Incremental Availability (PIA) at Norfolk Naval Shipyard as well as future maintenance availabilities on both classes.

DoD Core Project Data **Incremental**

Objectives and Expected Outcomes

The eTWD Initiative is a NAVSEA Sponsored, CNO approved Reduction in Total Ownership Cost (RTOC) Initiative to establish interactive electronic Technical Work Document (eTWD) capability for use in the naval shipyards. An eTWD will be used to execute maintenance, repair, overhaul and modernization work packages on ships and submarines undergoing major availabilities in naval shipyards. This solution will provide paperless work packages, pulling authoritative data from the existing NMMES Family of Systems supporting ship maintenance. The interactive electronic work instruction will be used at the jobsite replacing the current paper driven instructions. The overall goal for eTWD is twofold: 1) to reduce the resources and time preparing, executing and certifying work instructions; and 2) enable the non-stop execution of work by having online documents and accessible for problem resolution. The eTWD Initiative is in progress.
