Activity: PA4836-122 - Strategic Planning and Forecasting Code update - draft**Description**

Strategic planning and forecasting is utilized in Navy industrial activities in resource planning and long term workload forecasting to meet CNO strategic maintenance requirements through the gathering and compiling of workforce data. This will modernize the database architecture to provide fully functioning data warehouse environment that will eliminate the weekend long running of batch jobs that hinders efficiency and productivity.

Investment Description and Justification

Short Description

MALSP II IT (MAL-EIT): expeditionary requisitioning & supply chain mgmt across USMC Aviation. EPUK: automated wireless HW/SW system integrating USMC ACE & LCE log systems to sustain MAGTF operations in austere expeditionary environments across ROMO.

Full Description

The purpose of MAL-EIT is to provide automated expeditionary logistics capabilities to Marine Aviation that enable planning, tracking, and visibility of aviation logistics elements across the spectrum of operations. The initial step to replacing the current manual processes is to leverage electronic data resources into a modern and automated IT System. MAL-EIT is the IT enabler for the Marine Aviation Logistic Support Plan II (MALSP II).

Investment Description and Justification

Short Description

USMC has implemented active RFID technology within the ashore supply enterprise to comply with OSD policy. Architecture is designed to achieve these objectives with implementation flexibility while standardizing hardware and software interfaces.

Full Description

The USMC active Radio Frequency Identification. Fixed Infrastructure provides the USMC portion of the DoD wide infrastructure in support of the DoD Radio Frequency Identification (RFID) Policy dated 30 July 2004. This world-wide network of read sites provides visibility and tracking of key DoD assets equipped with aRFID tags as they flow past read points at all major DoD bases and stations. The reader network provides aRFID tag read information to DoD Radio Frequency In-Transit Visibility (RF-ITV) Network which provides data to GTN, as well as numerous supporting systems, such as BCS3 and C2PC. The USMC portion of this infrastructure consists of aRFID readers connected to computers running the Savi Site Manager software which takes the tag read information (Tag ID, Location (interrogator ID) and time of read) and relays the information to the DoD RF-ITV Server maintained by PM J-AIT. The computers running the Site Manager software have no user and the only human intervention is by a site administrator who currently uses passwords that comply with MARADMIN 155-06, CJCSI 6510.01E and DODI 8520.2. All detail information regarding the item information for tracked assets and movement information is accessed through the DoD ITV web interface into the DoD RF-ITV which is PK enabled.

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

The objectives of the NAVAIR Depot Maintenance System (NDMS) are to: 1) improve business performance while reducing unit repair costs, 2) increase response times/system availability, and 3) standardize/synchronize processes and information.

Full Description

The NAVAIR Depot Maintenance System (NDMS) is a Depot production system that supports the resources, required to perform depot level maintenance, repair, modification of aircraft, engines, components and other aeronautical equipment and to perform manufacturing and prototyping operations. The main objectives of NDMS are to: 1) improve business performance in the depots while reducing depot unit repair costs, 2) increase depot response times to increase weapon and system availability, and 3) standardize data and information systems to reduce the Automated Data Processing/Information Technology (ADP/IT) cost to improve information accuracy, consistency, and availability for management decision making. NDMS supports the functions of acquiring, developing, implementing, and/or providing interfaces between selected migration and legacy systems. MRP II is the core business process/system in NAVAIR 6.0 that provides the resources required to perform depot level maintenance, repair, modification of aircraft, engines, components, and other aeronautical equipment and to perform manufacturing and prototyping operations. The key customer for NDMS is the 10,800 Depot level artisans who provide Engine, Aircraft and Component support for the Navy warfighter, Navy Inventory Control Point/ Defense Logistics Agency (NAVICP/DLA), Executive Office of the President; Homeland Security (US Coast Guard, and US Customs); National Aeronautics and Space Administration (NASA); National Oceanic and Atmospheric Administration (NOAA); US State Department; and the US Department of Agriculture's Forestry Service.

NAVAIR AVIATION LOGISTICS ENVIRONMENT (007-000005088 - ALE)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18269 - Enhance information technology and cybersecurity defense capabilities.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Major - High Value IT Investment (HVII) Tier 1

Investment Type:

This is a Defense Business System (DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

The Aviation Logistics Environment (ALE) is the NAVAIR Information Technology (IT) solution that delivers full lifecycle weapon system logistic and maintenance capabilities via Naval Aviation Support Process (NASP).

Full Description

The Aviation Logistics Environment (ALE) is the NAVAIR Information Technology (IT) solution that delivers full lifecycle weapon system logistics and maintenance capabilities via the Naval Aviation Support Process (NASP). The ALE organization delivers these capabilities via net centric, shared data environments that supports shore based, afloat and expeditionary operations.

Major Investment Description and Justification**

NAVAIR AVIATION LOGISTICS ENVIRONMENT (007-000005088 - ALE)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

ALE is the NAVAIR information technology (IT) solution that delivers full lifecycle weapon system logistics and maintenance capabilities to the Naval Aviation Logistics Community. ALE will deliver these capabilities via a net centric, shared data environment that supports shore based, afloat, and expeditionary operations. The actions taken to implement this program of record consist of fielding common integration software to connect end-to-end business processes, modifying enterprise-wide government developed classified and unclassified software systems to support fleet commands, and closing business process gaps with commercial-off-the-shelf (COTS) and Government Off the Shelf (GOTS) software. The resulting effects are increased fleet used software application rationalization; optimized data center hosting; and reduced IT footprint via more effective IT enabled business processes. Capabilities include Maintenance planning and execution, Reliability Centered Maintenance (RCM), Product Lifecycle Management (PLM)

Major Investment Description and Justification**

NAVAIR AVIATION LOGISTICS ENVIRONMENT (007-000005088 - ALE)

Major Investment Business Case

Description and Justification

Return on Investment

ALE capabilities will expand to fleet and program customers (who do not have the full set of capabilities) after FY23, as ALE moves into the sustainment phase and utilized by the program offices. ROI was calculated based on annual cost avoidance from various Aircraft Type/Model/Series migrating from current original equipment manufacturer (OEM) provided ground stations and interactive electronic technical manual (IETM) viewers to an ALE Product Lifecycle Management (PLM) enterprise solution. ALE will provide greater benefits to the fleet for better health and management systems and advanced ground stations that include reduced maintenance costs, reduced maintenance overhead, and improved asset management for parts and tools.

Major Investment Description and Justification**

NAVAIR AVIATION LOGISTICS ENVIRONMENT (007-000005088 - ALE)

Major Investment Business Case

Description and Justification

Budget Justification

FY 2020 to FY 2021 Increase/Decrease Statement: FY2020 decrease of \$16.414M RDT&E ALE (Issue sheet 76915, \$14.7M and Issue sheet 76918 \$1.71M), and the FY2021 decrease of \$9.054 RDT&E (Issue sheet 71773 \$.034M, and Issue sheet 50629 \$9.020M). This will result in reduction and delay in the following product development: automated workflows, integrating platform content, agile development for legacy system transitions into the NAVAIR Product Lifecycle Management (PLM) solution, and Enterprise Service Bus (ESB) connectors for authoritative data sources.

NAVAIR AVIATION LOGISTICS ENVIRONMENT (007-000005088 - ALE)

Major Investment Business Case

Description and Justification

FY2020 Accomplishments

1. Pending Gate 2 Review (anticipated for completion in FY2020)
2. Development of associated acquisition documentation in support of Gate 2 Review and beyond
3. ALE PMO award of task order to procure Product Lifecycle Management (PLM) and Enterprise Service Bus (ESB) data connections software licenses and applicable services for software implementation, integration and maintenance.
4. Incremental development of the Maintenance Engineering Groundstation for Aviation (MEGA) system.
5. Continued minimum sustainment of current ALE IT systems in portfolio while the business processes they support are evaluated for incorporation into the ALE PLM instance referred to in item 3 above.

Investment Description and Justification

Short Description

MCPALMS is a web-based application that automates and manages the below major functions within the scope of enterprise maintenance depot operations supporting the Marine Corps.

Full Description

Maintenance Center Productivity and Labor Management System (MCPaLMS) is a web-based application that automates and manages the below major functions within the scope of enterprise maintenance depot operations supporting the Marine Corps. System is used by Maintenance Centers Albany and Barstow and Defense Logistics Agency (DLA) Land and Maritime Albany and Barstow. The Labor Distribution module provides authorized personnel the capability to charge direct and indirect labor hours to a customer's Job Order Number (JON) at the Work Breakdown Structure (WBS) and shop level and interfaces with Defense Industrial Financial Management System (DIFMS) for customer billing and Defense Civilian Pay System (DCPS) for payroll processing. The job control module provides ability to manage customer JONs for labor and material charging purposes and interfaces with MRPII MTO for JON/WBS import and DIFMS to establish cost schedule status monitoring at the JON, shop and WBS level. The system control provides basic system support services; database backup, system initialization and restart, data access control, and system administration functionality for maintaining users and the MCPaLMS database. The material control module provides material visibility, receipt, issue, and return. Interfaces with MRP II MTO for Work-In-Process (WIP) material availability, Industrial Logistics Supply Management Information System (ILSMIS) for requisition status, JON funding and associated WBS availability, 'Code A' material visibility and the processing of the Non-DSS MTO issues generated via the Parts Request module.

Investment Description and Justification

Short Description

I-GUIDES enables the end-to-end UID process: Create, Mark, Verify, Manage/Track, Transmit Data Exchange - supports a full range of data input approaches (manual, semi-automated, automated) utilizing XML, XLS or text.

Full Description

I-GUIDES enables the end-to-end UID process: Create, Mark, Verify, Manage/Track, Transmit Data Exchange - supports a full range of data input approaches (manual, semi-automated, automated) utilizing XML, XLS or text. It exchanges data with legacy infrastructure utilizing FTP or SFTP in a user-friendly graphic user interface (GUI). UI Creation - I-GUIDES generates the two-dimensional matrix and marking template for the UI from raw data and guarantees accuracy and uniqueness per DoD requirements. Hardware-Agnostic - I-GUIDES outputs to Microsoft™ Windows-driven printers and direct part marking devices, as well as selected other marking devices and middleware. Customized Labels - I-GUIDES seamlessly utilizes Seagull Scientific's Bartender™ application, which provides best-in-class template design. Verification and Validation - I-GUIDES interfaces with the major verification systems providing a seamless connection between systems while maintaining history of verification and validation. Registration - I-GUIDES enables transmission to the IUID registry and/or the user-specified address of third parties. Web-based - A single server-based application of I-GUIDES can support an entire organization, making it accessible anywhere on the corporate network and easily upgradeable. The system can also be used for remote part marking with its client application. Customizable - I-GUIDES supports easy customizations with the use of "environments," allowing any program or business unit within a company to tailor its view of the application, enabling data fields, naming conventions, sorting parameters and page layouts that are meaningful to them. All IUID Types - Whether it is new procurement, legacy item or PIPC, I-GUIDES supports all DoD constructs, as well as GIAI, GRAI, ESN or VIN. With tools for use in all applications including manufacturing, custodianship or depot maintenance, I-GUIDES has the functionality to meet any requirement. Flexibility - I-GUIDES offers the ability to create the number of environments you need to organize your UID data around specific primes, programs, projects or whatever user groups make sense for your application. Whether you have two programs or 200, I-GUIDES is designed to meet your needs today and grow effortlessly with your expanding contract requirements. I-GUIDES is capable of managing and printing RFID (Radio Frequency Identifier) data shipment tags. (the purchase of a separate license is required).

Investment Description and Justification

Short Description

MRMS provides and information support capability that enhances maintenance management within the IMA community.

Full Description

MRMS provides an information support capability that enhances maintenance management within the IMA community to improve the material readiness of the Atlantic and Pacific Fleets. It is designed to be the automated system that implements regional and continuous maintenance. It supports the concepts embodied within the Integrated Fleet Maintenance Model. MRMS will interface with the Regional Maintenance Automated Information System (RMAIS) to permit efficient integration and utilization of fleet maintenance assets. MRMS exchanges Sensitive But Unclassified (SBU) Navy ships maintenance information with other information systems as described in the tables in Section 3.4. The format for information exchange is the Navy Ships 3-M (Material and Maintenance Management) Card format. The MRMS application accepts information from RMAIS and supplies information to systems such as Ship Configuration and Logistics Support Information System (SCLSIS) and the 3-M database with up-line reporting services through RMAIS utilizing the same card file formats.

Investment Description and Justification

Short Description

A workflow app that helps manage tech data and publications, is the Mgmt Information Sys for internal reviews of L1/SS tech referrals and helps accomplish ISEA tasks.

Full Description

The LI/SS EIS Website will provide users at both shore and sea worldwide the availability to process engineering information that display configuration, maintenance, inspection and supply information in a modular based web enabled application. This information will eventually provide the Level I/SUBSAFE engineering community the tools to assist in accomplishing complex technical analyses on a variety of Level I/SUBSAFE configuration, supply and logistic aspects including reliability, maintainability and availability (RMA) using the historical data it contains. The site is NAVSEA Data Environment (NDE) compliant and will be capable of being fully integrated with all current and future NDE compliant sites. The ultimate goal is to provide a single, streamlined, easy to use, and user accepted web enabled tool for determining the acceptability of engineering determinations by the responsible Level I/SUBSAFE technical community ashore or afloat worldwide and maintain those responses for immediate display and analyses, etc., supported by NDE as the backbone infrastructure. A system change request form will be incorporated to provide comments and recommendations for design and content improvements to the site. This will ensure the site provides the greatest range of usefulness and flexibility for users. It is expected that the content of the website will change frequently as user's request additional capabilities and additional capabilities are added. The LI/SS EIS Website was programmed in compliance with the World Wide Web Consortium (W3C) coding standards for Hyper Text Markup Language (HTML), Java Script, Dynamic HTML and will be J2EE compliant. Internet Explorer is compliant with the W3C coding standards whereas Netscape does not comply. Therefore, Internet Explorer compliments the LI/SS EIS Website and will display information properly, while no guarantee can be provided for site operation under Netscape.

Investment Description and Justification

Short Description

GD&C creates, tracks, and certifies Navy gages. It informs the Fleet when gages need to be re-certified. GD&C is also used to ?tests? gages to verify their continued usefulness.

Full Description

Gage Design and Certification is a system that creates, tracks, and certifies Navy gages throughout the Fleet. The system lets the Fleet know when the Gage needs to be re-certified, and then the user ships the gages back to NSWC Corona where it is 'tested' to verify its continued usefulness. Some of these gages are used to ensure the missile tubes are perfectly cylindrical and are the right size for a missile to properly launch. Some of the gages are for missile fins to ensure they are the right measurements. GD&C tracks location, calibration cycles, inspection reports, and life cycles for each of the gage programs. The system ties data acquisition devices such as CMM's to the design files and to the inspection records for automated inspection routines. It stores engineering design files for the Navy Gage and Marine Corp infantry weapons programs as well as a history of each gage. The operational engineering capabilities of Gage certification ensures force health protection, while asset tracking provides logistics asset visibility. Gage Design and Certification is a system that creates, tracks, and certifies Navy gages throughout the Fleet. The system lets the Fleet know when the Gage needs to be re-certified, and then the user ships the gages back to NSWC Corona where it is 'tested' to verify its continued usefulness. Some of these gages are used to ensure the missile tubes are perfectly cylindrical and are the right size for a missile to properly launch. Some of the gages are for missile fins to ensure they are the right measurements. There are 100s of 1000s of gages the Navy is responsible for creating, certifying, and maintaining logistics.

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Web-based system providing the warfighter with a single point of entry to access multiple DOD and Navy supply systems, perform end-to-end supply chain functions, and access DOD/DON supply systems and other logistics information.

Full Description

Web-based real-time data access to legacy Navy and DLA legacy/DLA DLATS/ERP supply systems providing supply technical screening, stock check information for NSNs, requisition status, MILSTRIP entry, shipment status and serial number item status. OTS provides a common view across DLA and Navy inventory applications and distributed databases and provides a single-point, centrally managed global access available to all authorized users through an internet browser. Complete end-to-end real-time supply chain capability and visibility is provided through OTS. Tailored functionality augmenting Navy ERP for external users including Material Obligation Validation (MOV) processing for NAVSUP WSS.

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

ILSMIS provides life cycle procurement and supply systems management for Naval Surface Warfare Center and Naval Undersea Warfare Center Activities, including requisitioning, contracts, receipt of material, shipping, repairables management, etc.

Full Description

ILSMIS is a cradle-to-grave material management system. It allows users to write an electronic request for an order of bankcard, small purchase or large contract materials/supplies and electronically monitor that request through delivery of the item to the user building. ILSMIS also allows receipt and issue of government furnished material, tracking of sponsors owned material, etc. It tracks location of material in inventory and provides insight to condition of material. ILSMIS currently interfaces with DIFMS, NOMIS, SLDCADA, EIC, CAS, JCALS, DAASC, NMQAO, INMASS, SIMS, and ASRS. Interfaces are being developed for SPS and Prime Vendor. ILSMIS operating environment is as follows: Sun Sola Platform, Sybase (V11.0.3.2) relational DBMS, MicroFocus COBOL (V4.1.10).

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / Other general government / Disaster Repair and Response

Investment Description and Justification

Short Description

RMI is envisioned to provide DoN enterprise-wide decision-support capabilities that provide timely and actionable reports on injuries, occupational illnesses, and mishaps across the Navy and Marine Corps. This capability had not previously existed.

Full Description

The Risk Management Information (RMI) Program will provide DON (both Navy and Marine Corps) end users with an automated, seamless capability integrating critical safety data in a timely manner while also improving hazard identification and mitigation, thus providing a positive effect on mishap rates across the DON. RMI will also provide greater efficiency in safety reporting by reducing the amount of time DON users spend entering or reentering safety data into the system. RMI will provide modern Safety capabilities for the military (both active and reserve) component of the Navy Total Force (NTF), enabling agile responses to business rule changes, automation of routine actions, improve data integrity, and facilitate analysis self-service for organizations and individuals. The Risk Management Information (RMI) Program will procure a suite of independent safety capabilities in multiple phases. The suite's capabilities are Streamlined Incident Reporting, Single Point of Entry, Analysis and Dissemination, and Safety Program Management. This reinvention of Navy Safety will achieve an efficient use of resources with a cost savings that should exceed the investment through consolidation of functionality now being performed by many commands and disparate systems.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Life Cycle Support of all active modules within the Logistics Afloat Support Suite. Support Trouble Calls; Perform security actions.

Full Description

LASS is a suite of apps residing on client workstations; Ships and MALS Automated Reconciliation Tracking System (SMARTS) 332-02.01.00 - A stand-alone app that automates the reconciliation of the Summary Filled Order Expenditure Difference Listing, and Unfilled Order Listing. Fleet Image Management System (FIMS) 868-01.01.11 - Is an electronic document management system designed to provide digital storage/retrieval of common bar-coded supply documents such as DD 1348-1A. It also provides a search engine for the paperless retrieval of images, index information, and user annotations. Sunset scheduled 4/30/14. Integrated Bar Code Supply-One (IBS-One) 105-02.03.00- Provides an auto method to collect/interpret linear/non-linear barcode info within supply chain documents, affixed to material via Portable Data Collection Terminals. IBS supports mission critical logistics/financial functions, including receipt processing, scheduled/spot inventories, location audits, storeroom/warehouse relocations, and barcode label creation/printing via fixed/portable barcode printers. In addition to productivity gains by the users, accurate data at the point of entry results in faster/more accurate reporting, reducing workload for TYCOM/supply chain manager's. This version enters sunset stage, due to IBS-ONE (105-02.03.10), starting Q3 FY13. IBS-ONE 105-02.03.10 - consolidated three modules into one application. IBS module as described in IBS-One 105-02.03.00, FIMS module as described in Fleet Image FIMS 868-01.01.11 and IBS/ Defense Medical Logistics Standard Support (IBS/DMLSS) which provides same functionality of IBS but for DMLSS-Maritime Medical Modules (DMLSS-MMM). This version provides the site the option to execute the IBS, FIMS and IBS/DMLSS applications singularly or in combination. IBS-One 105-02.03.20 is the newest version and has the same functionality as IBS-One 105-02.03.10, but eliminates dependencies of scan license and .Net v3.5; replaces ActivClient ensuring CAC enabling on CANES platforms, adds support of DoD-approved SHA-256 authentication including SHA-1 backwards compatibility, and meet FIAR compliancy by including the scanning of Issues, Offloads and XDECK to FIMS receipt processing, enable FIMS users to create custom libraries based on document type, allows FIMS data/ image Import/Export with Search query to include all types of documents, and provides FIMS multi-workstation data sharing capability.

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Cost Distribution Accounting Subsystem (CDASS) is a feeder that interfaces with SAP to post charges to the projects and records the revenue to the appropriate rated service accounts (Labs).

Full Description

Currently, CDASS allows approved activity personnel to enter and process Navy Working Capital Fund Service Center/MRTFB Service Accounts (SC/SA) transactions on-line. The transactions are based on the transfer costs for services provided, and entered into the system as either a Type B (non-rated) and Type A (pre-approved rated) transaction. The account manager enters the sender cost center for the account, the charging objects for the program or competency receiving the service, and the unit of measure for a Type A charge or the actual cost for a Type B charge. Each record is automatically validated for accurate charging objects and whether a SC/SA exists for the current Accounting fiscal year. CDASS then routes the transaction to a designated Approver for on-line fiduciary approval or rejection. Once approved, it routes the CRA charging record to a CDASS Interface Staging table and a CDASS Approved History table. Designated Comptroller personnel, with the role of creating a Navy-ERP interface file for their designated plant location, generates a request through the CDASS Interface File Create screen and downloads the file to his/her PC ready for Navy-ERP upload process. Designated Comptroller personnel are the only personnel permitted to upload transactions that post to Navy-ERP. Before transactions are uploaded into Navy-ERP an auditable approval process must be in place. CDASS supports the Cost Accounting process for the Navy Air Warfare Center – Aircraft Division. It allows the Service Center/Service Account managers to recover cost incurred in these centers from the customers who receive support from these centers. Prior to posting to the financial system of record, Navy-ERP, the transaction is work flowed by the system through designated Comptroller personnel to provide fiduciary review of the transaction to ensure the services were provided and the customer has provided appropriate funds for the services.

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

The Requisition Automated Processing System (RAPS) processes requisitions for navy stock orders and all open purchase orders (credit card, BPA, servmart, small purchase, and large contract).

Full Description

RAPS is an ashore web application that is an automated Logistics Management System used by the Naval Air Warfare Centers, both Aircraft Division and Weapons Division (NAWCAD and NAWCWD) and by the Fuels Division of the Naval Supply Command at Patuxent River Maryland. The fuel module of RAPS is a feeder system to the Defense Logistics Agency Energy Division (DLA-Energy), Fuels Accounting System (FAS)/Fuels Enterprise System (FES) and the Navy ERP Financial System. The RAPS fuel module supports funds validation, obligation and goods receipt data collection, local and DLA fuel inventory as well as providing field level fuel reporting. The Fuels Division uses barcode scanning and relational database technologies for the accurate and timely issuance of fuels. RAPS is a tool used to record and transfer locally issued fuel data thus eliminating the need for manual fuel chits, and manual data entry into FAS. These fuel transactions include AVGAS (aviation fueling), heating fuels and MOGAS (vehicle fueling). The individual locally issued fuel transaction information is fed into FAS on a daily basis. NAWC financial information is recorded at the individual fuel transaction level and stored in the RAPS database. The current interface allows the Fuels Division to upload the data elements into FAS that are required to generate an invoice that will be processed via an Interdepartmental Billing (Register 06). FES assigns a document number to each individual fuel transaction and interfaces it back to RAPS on a daily basis. This document number is appended to the originating individual fuel transaction data stored in the database. The NAWCs also upload fuel information from FES pertaining to fuelings issued outside of Patuxent River. All NAWC fuel transactions are interfaced to Navy ERP to establish obligations and goods receipts once financial information has been validated. RAPS also generates the DD1149 and the DD1348-1A government forms for the purpose of shipping/disposing/turning in of material. RAPS is a function needed to support the missions of NAWC and the Fuels Division of Navy Supply at Patuxent River.

Investment Description and Justification

Short Description

Supports the life cycle mgmt of capital assets at Naval Shipyards, Naval Surface Warfare Ctrs & GOCO facilities. Directly ties into the business process required to operate/support the Capital Purchases Prgm & industrial eqpt mgmt.

Full Description

The CATS application supports the life cycle management of capital assets at Naval Shipyards, Naval Surface Warfare Centers and GOCO facilities, supporting approximately 745 end users with the ability to input and analyze data. This system provides Planning, Budgeting, Execution, Tracking and Post Investment Analysis of Class 3 & 4 industrial equipment for the Echelon 3 and 4 communities. The application is directly tied into the business process required to operate/support the Capital Purchases Program and the industrial equipment management of the Naval Sea Systems Command's (NAVSEA). CATS provides the capability to manage the capital investment planning and execution process for NAVSEA's field activities and supported sites. CATS is a zero footprint web based product that allows the end user to input capital projects, providing economic analysis (Cost Benefit, ROI, Payback) used to support project development in Naval Working Capital Fund (NWCF) and Other Procurement, Navy (OP,N) appropriations. CATS is not a part of a family or part of another system and does not interface with other systems.

OMB Sector/Function/Service:

General Government / General property and records management / Goods and Services Acquisition

Investment Description and Justification

Short Description

Documents deficiencies and collects/utilizes past performance quality information to satisfy the requirements of 41 Code of Federal Regulations (CFR). DoD Directives 5000.1 and 5000.2-R, and SECNAVIST 5000.2B.

Full Description

Within the Department of the Navy (DON), Secretary of the Navy Instruction (4855.3) establishes the requirements for all DON Activities to utilize the Product Data Reporting and Evaluation Program (PDREP) Automated Information System (AIS) for processing supplier performance information. This SECNAV Instruction establishes PDREP-AIS as the DON single source to support mandatory reporting, collection, sharing, retrieval and analysis of supplier performance information identified in the Code of Federal Regulations (CFR), Federal Acquisition Regulations (FAR), the Defense Federal Acquisition Regulation Supplement (DFARS), the Navy Marine Corps Acquisition Regulation Supplement (NMCARS) and other DOD/DON regulations. PDREP utilizes the AIS to provide the application functionality allowing for reporting, collection and analysis of the required supplier information. PDREP-AIS is the DON authoritative source for Critical Safety Items (CSI) and Counterfeit Material Reporting. PDREP is the DOD authoritative source for collection of supplier warranty information. The PDREP AIS also supports the DON requirement to provide supplier performance information to the DoD Past Performance Information Retrieval System (PPIRS) for use by all DOD. PDREP provides critical supplier performance information to DON components and Program Executive Offices (PEOs) and works across DOD component lines to collect and share this critical information. The PDREP-AIS is Item Unique Identification (IUID) compliant providing automated data retrieval from the IUID registry for easier reporting of Unique Item Identifier (UII) materials. PDREP has been identified as a DON-IT KM/CM Program of Record. PDREP includes all of the following: Contract Award and Delivery Data (CAD), Corrective Action Request (CAR), Critical Safety Item Program (CSI), Counterfeit and Fraud Material Reporting and Tracking, DON Feeder Program for DOD Past Performance Information Retrieval System, Facility Operations Plan (Surveillance) (FOP), Hull, Mechanical and Electrical Equipment Data Research System (HEDRS), Letter of Delegation (LOD), Material Inspection Record (MIR), Material Test Records (MTR), Product Quality Deficiency Report (PQDR), Receipt Inspection Management System (RIMS), Special Quality Data (SQD), Supply Discrepancy Report (SDR), Supplier Audit Program (SAP), Supplier Survey (Pre/Post Award), EZ-PDR (PQDR / SDR / MIR), Naval Bulletins, DOD Warranty Program.

| Short Description The Retail Operations Management System (ROM3) enables ship store personnel to maintain accountability of merchandise, track sales, determine profitability and effectively manage the ship store operation afloat. | |
| Full Description The Navy's Resale Operation Management System (ROM)3 is necessary in order for Ships Store personnel to maintain accountability of merchandise, track sales, determine profitability, and effectively manage the Ships Store operation. Every four months Ships Store financial returns are mailed to the Defense Finance and Accounting Service (DFAS), and on a monthly basis a receipt transmittal is sent to DFAS either by mail or email. ROM is also used by facilities that conduct training such as Ships Serviceman A and C schools, Ships Store Fleet Assist Teams, and Afloat Training Groups. ROM enables shipboard personnel to perform all functions necessary for the daily operation of a ships store. It provides the means to order merchandise, and receive and transfer it to a selling location. It records the sale of the merchandise. It also provides a means to conduct periodic inventories, and determine any gains or losses of merchandise. It provides the ability to document the receipt or expenditure of merchandise with other Navy or government activities. | |

Investment Description and Justification

Short Description

Marine Corps Prepositioning Information Center (MCPIC) is a net-centric system designed for the Operating Forces (OPFORs), Marine Forces (MARFORs), combatant commanders (COCOMs) and Joint Chiefs of Staff (JCS) warfighters providing visibility.

Full Description

Marine Corps Prepositioning Information Center (MCPIC) is a net-centric system designed for the Operating Forces (OPFORs), Marine Forces (MARFORs), combatant commanders (COCOMs) and Joint Chiefs of Staff (JCS) warfighters providing visible, accessible, and near real-time planning data for Marine Corps go-to-war combat capability sets loaded aboard Maritime Prepositioning Ships (MPS) or stored ashore in the Marine Corps Prepositioning Program – Norway (MCPN). This system is used by Marine Corps and joint operational planners to develop war plans, and to respond immediately to emerging crisis response (kinetic and Humanitarian Assistance/Disaster Relief) contingencies. The MCPIC system directly contributes to planning at all levels of war. Strategically and operationally, it provides Combatant and Marine Corps Commanders with the means to determine readiness, resource availability, and location of specific combat systems within the Marine Corps' prepositioned assets to make warfighting decisions. Second, it provides the prepositioning community with the tactical set of tools to determine the following: ship spread-load of prepositioned equipment and supplies; asset status, condition and availability; equipment deployment planning; prepositioning information and expertise dissemination. MCPIC includes four features used by prepositioning planners: (1) Prepositioning Planning System (PPS) - PPS provides MPF and MCPN plans with capability set breakdowns available by squadron, individual ship, and ashore site. It also includes associated reference data, prepositioning objectives (POs), Using Unit Responsibility Item (UURI) Table of Authorized Material Code Numbers (TAMCNs); and, equipment parent/child association requirements; (2) Prepositioned Equipment and Supplies Viewer (PES-V) - PES-V provides users the ability to query MPS and MCPN asset data; (3) Knowledge Management Explorer (KME) – KME is a simplified version of Microsoft SharePoint that serves as a collaborative filing system for the prepositioning community; and (4) Prepositioning Decision Support and Analysis Tool (PDSAT) serves as an interactive "Tailoring" tool to construct a notional Marine Expeditionary Brigade Table of Organization & Equipment (MEB TO&E). Additionally it aids in the development of the Class II/VII Prepositioning Objective (PO) and its accompanying 30 days of combat sustainment to be prepositioned aboard MPS and within the MCPN caves of Norway.

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Theater Medical Information Program (TMIP) is a system that provides clinical data collection and a data transport capability in a combat or hostile environment involving deployed forces. It is the deployed medical information system.

Full Description

The I-TSCMIS solution will utilize a web based architecture and enterprise hosting of existing TSCMIS software, enabling new users to access and submit information through the Secret Internet Protocol Router Network (SIPRnet). Establishment of I-TSCMIS will enable DoD Security Cooperation (SC) activities to comply with guidance from the 2010 Guidance for Employment of the Forces (GEF), National Military Strategy (NMS), Chapter VII, Campaign Support Plans. It will provide decision-makers, SC planners and other users with the ability to view, manage, assess, and report SC activities and events. I-TSCMIS will contribute to planning more effective cooperative security activities to align or meet desired outcomes in support of SC end states. It will support the monitoring, assessment, and allocation of SC funding and assist with identifying redundant SC investments in the interim while the Global solution is under development. I-TSCMIS is expected to be subsumed or replaced by G-TSCMIS in the future.

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

The Manufacturing Resource Planning II (MRP II) Suite is comprised of multiple software applications used in the Department of Defense (DoD).

Full Description

The Manufacturing Resource Planning II (MRP II) Suite is comprised of multiple software applications used in the Department of Defense (DoD). The suite provides planning and execution tools that support:

- Material requirements planning
- Rough-cut capacity planning
- Application of probabilistic factors associated with Maintenance, Repair and Overhaul (MRO)
- Shop-floor control
- Constraint-based planning, optimization, and simulation

The MRP II Commercial Off The Shelf (COTS) system was implemented as a corporate support set of applications across the DoD. The DoD Program Management Office (PMO) for MRP II resides at the Naval Air Station (NAVAIR) Patuxent River, MD. The Milestone Decision Authority (MDA) resides with the Deputy Assistant Secretary of the Navy (DASN (C4I/EW/SPACE)). The Program Executive Office (PEO) is the NAVAIR Chief Information Officer (CIO). However, the Marine Corps purchases the subsystem it uses directly from the vendor. The Marine Corps uses the Make-to-Order (MTO) subsystem of MRP II at the Marine Corps Maintenance Command (MCLC) centers located in Albany, GA and Barstow, CA. The MTO application was initially identified within the Marine Corps inventory as Compass Contract. It provides the closed loop planning, execution and control support for the re-manufacturing, repair, overhaul and manufacture of depot commodity workloads. The subsystem is now named NetWORKS MTO and 7.8 is the current version although it is still commonly referred to by the system name of MRP II.

MASTER DATA REPOSITORY (MDR) is the foundation for all of the LCMI applications. The MDR is a centralized database which provides a consolidated location for equipment management information.

Full Description

The Master Data Repository (MDR) is the foundation for all of the LCMI applications. The MDR is a centralized database which provides a consolidated location for equipment management information from a vast majority of the automated logistics information systems (GCSS-MC, SASSY, MIMMS, MARES, SCS, MOWASP, WOLPH, etc.). The MDR captures data from the two LCMI transactional applications MSST and AEMIT, which are input by the user base.

Investment Description and Justification

Short Description

Data Entry (DENT) allows the functional user to input transactions into various USMC mainframe applications. Data Entry allows the functional user to perform basic edits on transactions specific to each interfacing mainframe application.

Full Description

Data Entry is a system that allows the functional user to input transactions into various USMC mainframe applications. Data Entry allows the functional user to perform basic edits on transactions specific to each interfacing mainframe application listed below. Data Entry is an on-line mainframe application that also provides users with the means to input source data using predefined criteria for each specific mainframe application listed below. Data Entry was originally developed to input and edit transactions in Direct Support Stock Control Subsystem (DSSC), Store Accounting (SS04), Automated Procurement (SS05), Provisioning (SS10), Allotment Accounting (SS17), War Reserve System (WRS), Stock List 1-2 (SL 1-2), Stock Control System (SCS), Marine Corps Integrated Maintenance Management System (MIMMS), Mechanization of Warehousing and Shipping Procedures (MOWASP), Supported Activities Supply System (SASSY), Publications (PUBS), Department of Defense Activity Address Directory (DODAAD), MCLB AIS Transaction Router (MAISTER), Standard Accounting and Budget Reporting System (SABRS), Lakes Helper, Material Returns Program (MRP), and the Technical Data Management System (TDMS). Today, Data Entry's primary function is to input and edit transactions into DSSC. The mainframe is located at the Defense Information Systems Agency (DISA) Process Element (PE) St. Louis, MO (formerly referred to as the Defense Enterprise Computing Center (DECC)).

The TMDE web site is a no-frills, simple, and powerful information portal designed to provide processed data to its customers. It is designed with the needs of both external and internal customers in mind.

Full Description

The TMDE web site is a no-frills, simple, and powerful information portal designed to provide processed data to its customers. It is designed with the needs of both external and internal customers in mind. The site design is dynamic and varies to meet the needs of its customers. It gathers disjointed, manual practices together into a selection of organized browser-based tools. TMDE web site supports the business and data needs of multiple commodity areas. These commodity areas include the Marine Corps Automatic Test Equipment Program (ATEP), Infantry Weapons Gauge Calibration Program (IWGCP), Marine Depot Maintenance Command (MDMC) Test Measurement & Diagnostic Equipment (TMDE) Calibration Laboratory, Marine Corps and Navy calibration laboratory audit programs, General Purpose Tool & Test Set (GPT&TS) program, MDMC funding, Quality Assurance (QA), and work management programs, and the Survey Instrument Calibration Program (SICP). The TMDE web site provides a central site for these program areas to store and retrieve various data; primarily calibration based, a centralized point to ship/receive TMDE, and a forum section for web site customers. Access and support is provided to Marine Corps, Navy, Air Force, and Army customers and commands.

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

TCPT was the first application designed through the EWLT initiative and focuses on transportation capacity planning capabilities at the resource allocation and assignment level.

Full Description

TCPT was the first application designed through the EWLT initiative and focuses on transportation capacity planning capabilities at the resource allocation and assignment level. The TCPT allows Marine Air Ground Task Force (MAGTF) transportation planners to view transportation capacity in an online environment through an integrated association of ground transportation orders, personnel, and equipment resources. TCPT is a web accessible client-server application that is based upon a USMC Subject Matter Expert (SME)-developed, unclassified software tool known as "Big Board." TCPT is a three-tiered Java web application utilizing an OracleT database, to be deployed to the Marine Corps Enterprise Network SIPR & NIPR enclaves, available to authenticated USMC users with any standard Web browser and connection.

Investment Description and Justification

Short Description

The Asset Enterprise Management Information Tool (AEMIT) receives R&D funding through the Life Cycle Modeling Initiative (LCMI) portfolio, sourced from MCSC. AEMIT is a web-based application with a transactional db that automates the weapon records.

Full Description

AEMIT receives R&D funding through the Life Cycle Modeling Initiative (LCMI) portfolio, sourced from MCSC. The Asset Enterprise Management Information Tool (AEMIT) is a web-based application with a transactional database that automates the weapon record book information (e.g., round count, effective full charge, pullover gauge measurements, etc.) In addition, the tool integrates life cycle performance metrics in order to assist the program manager with strategic planning. This concept is a prototype being evaluated for the Howitzer, but may be applied to many other weapon systems in the future. AEMIT will become a program manager decision tool, with a dashboard to pull data from many areas of the LCMI data repository. AEMIT is intended to become a tool to sustain weapon systems over time in the areas of reliability, availability, and maintainability. It will be used both in garrison and deployed.

| MSST is a Web-based application that automates the central activities used by members of MARCORLOGCOM to schedule repair and maintenance of military equipment, which is referred to as Depot Level Maintenance. | |
| Full Description | |
| MSST is a Web-based application that automates the central activities used by members of MARCORLOGCOM to schedule repair and maintenance of military equipment, which is referred to as Depot Level Maintenance. MSST provides a consolidated location for the planning, creation, management, funding, and execution of the Marine Corps' Master Work Schedule. Using Role Based Access Controls (RBAC), MSST can restrict user access to data based on a "need to know". Users are assigned roles that directly correspond to their daily responsibilities. Those roles can be updated to reflect changes in responsibility or to increase the level of access within MSST. The MSST application is currently in use by the Maintenance Management Center and the Marine Depot Maintenance Center Production Plans at Albany, GA and Barstow, CA. MSST provides a comprehensive view of the Marine Corps maintenance capability. | |

Investment Description and Justification

Short Description

TLCM-OST is a seamless user interface resulting from the migration of the decision support components of the existing Life Cycle Modeling Integrator (LCMI)suite of applications.

Full Description

The Total Lifecycle Management Operational Support Tool [TLCM-OST] is a seamless user interface resulting from the migration of the decision support components of Marine Corps Equipment Readiness Information Tool [MERIT], TLCM-Common Operational Picture [TLCM-COP], Total Support Cost [TSC] and the Master Data repository [MDR]. TLCM-OST is currently in the process of rationalizing the capabilities and functions of Secondary Reparable [SECREP] Total Allowance Recomputation Tool [START], and System Operational effectiveness [SOE] and combining them into a single application. TLCM-OST also aligns to and augments Global Combat Support System – Marine Corps (GCSS-MC) by providing strategic and operational business intelligence via GCSS-MC historical data captured within the MDR. TLCM-OST utilizes Commercial Off-The-Shelf (COTS) toolkits to build graphical and tabular views, which will integrate legacy logistics systems and GCSS-MC historical data into information that can be used to analyze trends and identify emerging challenges in order to provide a dynamic, adaptable view of ground equipment readiness. The TLCM-OST's breadth, versatility, and user-friendly environment will make it a crucial tool for anyone who needs a fast, comprehensive analysis of all of the Marine Corps' authoritative logistics data no matter its source. Basically, provides the Marine Corps an enterprise Business Intelligence/Decision Support Tool for its logistics community by integrating authoritative logistics, acquisition, and financial data in order to provide a single accepted and trusted source (i.e., one answer) to support ground equipment asset visibility, readiness, and operational effectiveness.

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Marine Gas Turbine Information System (MGTIS) provides automated service records for ship-board gas turbine equipment.

Full Description

The mission of the Marine Gas Turbine Information System (MGTIS) is to provide automated service records for ship-board gas turbine equipment. This is accomplished by providing an automated log tool that each ship can use to track data. This automated tool also provides a means of packaging and transmitting data to a central land based site. The purpose of this is to allow efficient transfer of shipboard operating and maintenance data to repair or rework facilities. A final benefit of this is that shipboard maintenance can be coordinated with shore-based depot maintenance efforts. All Navy gas turbine surface combatants and LCAC crafts are required to maintain gas turbine records showing configuration, component, maintenance, and operational data. MGTIS is the system maintaining this data. Interface is done through a browser based, server side solution (WEBLOG) delivering data to any browser. This data is Echelon II mandated and is critical in life cycle & logistics support for this equipment. It allows for greater flexibility in ship support with update capabilities by ships, engine repair activities, NAVICP, RMCs, SIMAs, ATGs, TYCOMs, and NAVSEA. The relational database structure is used to generate generic & customized reliability and maintainability metrics. Distance support is more easily provided by having life cycle manager access to operating and maintenance data.

Investment Description and Justification

Short Description

MCPAS web site is a web-based system for providing various financial, employee, material, and production data required for the operation within MDMC Production Plants.

Full Description

MCPAS web site is a web-based system for providing various financial, employee, material, and production data required for the operation within MDMC Production Plants. The web site is a real-time system with a government maintained interface that provides specific data from Oracle databases. The web front-end is user-specific based on the user's requirements and controlled by the appropriately configured permissions set by the Access Control List. The MCPAS web site provides support for all of Division, Branches and Cause Work Centers within the MDMC Production Plants.

Investment Description and Justification

Short Description

Module Test Repair Activity (MTRA) traps off-ship Gold Disk requisitions, alerts user activities to bring NRFI assets in for repair, reports demand, and provides reports and analysis.

Full Description

Module Test Repair Activity (MTRA) traps off-ship Gold Disk requisitions, alerts user activities to bring NRFI assets in for repair, provides asset visibility throughout the repair process, reports demand, manages pool assets and provides reports and analysis. (MTRA functionality moving into AWN/eRMS as ship availability for installation 2012 through 2014.) All other functionalities previously in Birdtrack have moved to other applications for cost and efficiency reasons. Average Customer Wait Time (ACWT) analysis is now part of the Inform 21 NAVSUP data warehouse. Medical Contingency Authorization Application (CAA) is routed from DAAS directly to DLA at DSCP.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Provides an enterprise IT solution for shore maritime maintenance that aligns to mission needs & delivers a cost effective IT solution, enables execution of ship maint & repair for shipyards, RMCs, TRFs, SRFs, & other industrial activities worldwide.

Full Description

The NMMES-TR will be an enterprise solution for replacement of the current shore maritime maintenance solution that will retain the capabilities that enable the planning and execution of ship maintenance and repair in the naval shipyards, intermediate maintenance facilities, regional maintenance centers, Trident refit facilities, ship repair facilities, and other industrial activities worldwide. NMMES-TR's capability will also enable ship maintenance to be conducted in alignment with the Optimized Fleet Response Plan (OFRP), the operational framework with four phases (maintenance, basic, integrated or advanced, and sustainment) designed to optimize the return on training and maintenance investments, maintain Sailor quality of service, and ensure units and forces are certified in defined, progressive levels of employable and deployable capability. Its capability goal will be to provide a modern solution that will be more effective and efficient in combatting future cyber-security threats.

Major Investment Description and Justification

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION - TECHNICAL REFRESH (007-000100870 - NMMES-TR)

Major Investment Business Case

Description and Justification

Purpose Goals and Benefits

The NMMES-TR is an Information Technology (IT) acquisition program that will provide a sustainable enterprise IT solution leveraging Commercial, Off-The-Shelf (COTS) technology and business processes for shore maritime maintenance. Unlike the uniquely custom designed status quo toolset, the NMMES-TR solution will not implement extensive product customization to match the current maintenance business processes; but rather, maintenance business processes will be modified to match the software solution, thereby adopting industry best practices. Accordingly, the solution will be more flexible to the BPR process, and more agile to capitalize on efficiency improvement opportunities and innovations. This will facilitate alignment with the Optimized Fleet Response Plan (OFRP) by assisting the maintenance activities with accomplishing assigned tasks as planned in order that submarines, aircraft carriers, and surface ships can properly train and deploy on schedule. NMMES-TR will also provide a modern solution that will be more effective and efficient in combating cybersecurity threats, and capable of continuous monitoring.

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION - TECHNICAL REFRESH (007-000100870 - NMMES-TR)

Major Investment Business Case

Description and Justification

Return on Investment

The key ROI for this investment will be assurance of maintaining fleet readiness, cyber security, reduction of software sustainment costs, and operational security. The current "as-is" systems continue to incur more critical type failures and are vulnerable to cyber-attacks and disclosure of critical sensitive data.

The program is still in the acquisition planning phase. ROI will be established once the program is established as a POR and has an established baseline.

NAVY MARITIME MAINTENANCE ENTERPRISE SOLUTION - TECHNICAL REFRESH (007-000100870 - NMMES-TR)

Major Investment Business Case

Description and Justification

Budget Justification

BY2021 RDTEN funding reflects the first full year System Integrator development effort. Specific efforts include requirements analysis, the development of prototypes, cyber testing, human centered design assessments and the execution of Systems Engineering Technical Reviews (SETRs) including Preliminary Design Review (PDR) and Build Technical Review (BTR). Task orders will support Increment 1 functional demonstrations and the development of prototypes to support the down select of candidate applications to form the NMMES-TR technical solution. During this period, the System Integrator will deliver an integration platform that will include a centralized data environment that will support business application processes as well as enterprise-wide analytics for improved business intelligence. OMN supports the civilian personnel costs for NAVSEA and NAVWAR HQ staff. Additionally, OM&N will be used for software license procurement and Cloud hosting costs.

Major Investment Business Case

Description and Justification

FY2020 Accomplishments

Upon successful completion of the Gate 6 Review, the NMMES-TR program will conclude pre-acquisition designation preparatory efforts. The NMMES-TR PMO will then award a single prime System Integrator contract and a Business Application (BA) contract award for all commercial items including cloud hosting, integration environment layers, business applications, and other commercial items during Q2. These activities will substantially increase the level of effort to design the system solution and conduct prototype demonstrations.

DoD Core Project Data **Agile****Objectives and Expected Outcomes**

NMMES-TR will acquire cloud hosted COTS applications using an incremental approach based on the required functionality for the shore maritime maintenance community. This program will integrate the following Mission Tasks; Maintenance, Repair and Overhaul (MRO), Project and Portfolio Management, Supply Chain Management, Environmental Safety and Occupational Health (ESOH) and Data Analytics. The program will use a third-party Systems Integrator to integrate existing legacy systems with cloud hosted COTS applications that will be deployed to the Navy's Regional Maintenance Centers, public naval shipyards, ship repair facilities, and other maintenance activities.

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Afloat/Ashore Energy management.

Full Description

Global Energy Information System (GENISYS) provides the ability to consolidate the what (i.e., fuel, shore power), the why (i.e., mission requirements, environmental conditions), and the how (i.e., equipment alignments, ship speeds, maintenance condition) for converting energy into naval power projection through three applications: electronic LogBook, Shipboard Energy Assessment, and Fleet Energy Conservation Dashboard. These applications consolidate, store, aggregate, and present energy consumption data for any ship or group of ships, enabling more informed decision making and situational awareness of the potential for substantial energy savings. GENISYS provides tactical users the ability to monitor energy generation and stored energy to potentially support application of other warfighting capabilities requiring energy surge capability. This ability will increase both current and future readiness of the naval surface force through improved energy management.

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / General property and records management / Logistics Management

Investment Description and Justification

Short Description

Tool for condition based maintenance, distance support, and remote monitoring. Provides a total ship common software solution to meet Hull, Mechanical, & Electrical (HM&E) systems and mission system equipment condition assessment requirements.

Full Description

Enterprise Remote Monitoring (eRM) is the next generation Navy's Program of Record for Remote Monitoring and Condition Based Maintenance (CBM) for Hull, Mechanical and Electrical (HM&E) Systems. eRM is an automated system that acquires machinery system parameters, analyzes them against preconfigured fault analysis, and stores their value for forensic investigation. Subject Matter Experts (SME) create fault algorithms which serve as the initial condition assessment of system operation. Information collected is used for further analysis to review trend data and prescribe risk mitigating actions to improve operations. This application supports the Navy's CBM strategies as part of an overall acquisition or modernization plan to reduce Operating and Support (O&S) costs and manpower requirements. In addition, this system supports ship's crew by providing paperless electronic logging of Operational Logs required to maintain HM&E equipment.

Investment Description and Justification

Short Description

NOSS will enable the planning, procurement and physical/financial accountability of all material and property across all warfare communities.

Full Description

NOSS includes planning, procurement, and physical/financial accountability of materiel and property across all warfare communities. NOSS will further optimize business practices at the tactical echelon (field level), with enterprise support activities employing an interoperable service-oriented architecture (SOA). It will aggregate and analyze operational data within business intelligence (BI) framework to enable historical and predictive common operating pictures for logistics and readiness performance requirements.

Investment Description and Justification

Short Description

Naval Aviation Maintenance System (NAMS) -- part of the Navy Operational Business Logistics Enterprise family of systems intended to replace the Navy Tactical Command and Support System, will augment and enhance existing/planned logistics systems.

Full Description

Naval Aviation Maintenance System (NAMS) -- part of the Navy Operational Business Logistics Enterprise (NOBLE) family of systems intended to replace the Navy Tactical Command and Support System (NTCSS), will augment and enhance existing/planned logistics systems. Summary of the NAMS attributes is provided below: Deployable (connectivity and operational across the globe) and affordable Integrated and interoperable with other deployed logistics business systems. Product-centric (ready to integrate into a product lifecycle management-centric ecosystem), Streamlined (to enable warfighters to accomplish tasks as efficiently as possible). Cyber secure and cyber-insulated (to decrease exposure to IT controls at the network/server level) Agile and maintainable (to allow easy corrections and updates to business processes and data models without coding or software deployments).

Investment Description and Justification

Short Description

Information Technology associated with Collateral Equipment.

Full Description

The equipment consisting of secondary items which are functionally related to an end item, but are not considered a part of them. The material is identified in the SL- 3 (stock list) for the end item under the headings; supply system responsibility, using unit responsibility, and collateral material. An end item is considered complete only when the total quantities of items shown in the SL-3 are on hand. Repair parts, spare parts, and components are not considered collateral equipment.

Investment Description and Justification

Short Description

NOME is an enterprise and field level (afloat and ashore) solution that will deliver a fully integrated enterprise maintenance solution.

Full Description

NOME part of the Navy Operational Business Logistics Enterprise (NOBLE) family of systems intended to replace the Navy Tactical Command and Support System (NTCSS), the NOME initiative will provide the USN with a robust deployable, scaleable and streamlined tactical maintenance solution afloat to maintain the operational availability of deployed and deployable ships and submarines. NOME will provide the Sailor with the most current information by which to perform maintenance, and once maintenance is complete, transfer that information to the integrated data environment such that operational staffs and work planning organizations have the current configuration of each hull.

DoD Type Segment:

Business Services / 530-000 - Logistics

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Customer Services

Investment Description and Justification

Short Description

Processes ship sensor readings for HM&E equipment. Final system statuses and maintenance recommendations are included in an Integrated Performance Analysis Report (IPAR) and provided to each ship and distributed to the Navy's maintenance community.

Full Description

CMAS is a shore-based Integrated Condition Assessment System (ICAS) component that processes ship sensor readings for Hull, Mechanical, & Electrical (HM&E) equipment. This data is typically delivered to CMAS via Navy Distance Support, and is sorted by an In-Service Engineering Agent (ISEA). The ICAS data is extracted from its native format and written to the CMAS Data Repository relational store using Data Historical techniques. Final system statuses and maintenance recommendations are included in an Integrated Performance Analysis Report (IPAR) and provided to each ship and distributed to the Navy's maintenance community.

Investment Description and Justification

Short Description

Provides shore and shipboard users with the ability to track, troubleshoot, and perform preventive and corrective maintenance at the operational, intermediate, and depot levels for submarine assets including towed arrays & imaging and sonar systems.

Full Description

Advanced Systems Information Exchange Server (ASIXS) is a web application that provides the following centralized capabilities for submarine assets including towed arrays, imaging and sonar systems and equipment and submarine rescue equipment: configuration management of system builds to support specific and varying mission requirements; maintenance management and tracking; depot repair workflows; data aggregation for shortfall Analysis; assets failure tracking and analysis of and between systems and components. ASIXS also provides the functionality that allows users to: manage and maintain a history of asset configurations; maintain a centralized and searchable material test results database; aggregate National Item Identification Number (NIIN), Approved Parts List (APL) and back order supply data for equipment shortfall analysis and requirements projections. ASIXS provides shore-based and shipboard users with the necessary data and tools to operate, track, troubleshoot, and perform preventive and corrective maintenance at the operational, intermediate, and depot levels to ensure operational readiness and availability to meet Fleet deployment schedules and missions. Stakeholders include the following program offices: PMS 4011, 4012, 4013, 485, 435, 391, 394, IWS5 and users are spread out across NAVSEA headquarters, Warfare Centers, Fleet Support facilities, Fleet Repair facilities, and various Original Equipment Manufacturers (OEM) facilities. ASIXS is hosted at DISA DECC Mechanicsburg, PA in alignment with the DON data center consolidation initiative.

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

The purpose of the Marine Corps Publications Distribution System (MCPDS) is to provide Publications Sponsors, Item Managers, and Equipment Specialists with access to inventory management and distribution data for publications.

Full Description

The purpose of the Marine Corps Publications Distribution System (MCPDS) is to provide Publications Sponsors, Item Managers, and Equipment Specialists at Marine Corps Logistics Base (MCLB), Albany, GA; Marine Corps Systems Command (MARCORSSYSCOM), Quantico, VA; and Headquarters Marine Corps (HQMC), Washington, DC, with access to inventory management and distribution data for publications. Working in concert with the Albany Publications System (APS [aka: PUBS]) at MCLB Albany, GA, the MCPDS manages reprints for backorders and stock replenishments, and initial distributions of publications. Additionally, MCPDS is used by the Operating Forces worldwide to order publications, check the status on outstanding orders, report receipts, and manage local publication libraries.

Investment Description and Justification

Short Description

The Virtual Shelf (VS) 3.0 is a web-enabled database for providing the results of Deep Dive Studies on over 50 components and/or systems to reduce configuration variation during ship design and major overhaul.

Full Description

The Virtual Shelf (VS) 3.0 is a web-enabled database for providing the results of Deep Dive Studies on over 50 components and/or systems to reduce configuration variation during ship design and major overhaul. The availability of this data provides the means for private shipbuilders to comply with current & future contractual Commonality requirements and of realizing NAVSEA Strategic Objective: Maximize Commonality Across Platforms & lowering the total ownership cost of ships. The Deep Dive results indicate potential savings of up to \$8.4B over a 30 year life cycle. VS 3.0 also includes cross references with public shipyard parts databases.

Business Services / 540-000 - Real Property Management (EI&E)

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

USMCMAX is the Marine Corps standard facilities asset management system. Two of the three components that make up MAXIMO have received authority through DITSCAP process.

Full Description

MAXIMO is used by the Marine Corps to automate facilities maintenance management to:

- Track work orders and failures to better schedule preventive maintenance.
- Track inventory use to find optimum stock levels.

The goal is to maximize availability of items for upcoming work, while also reducing unnecessary inventory and associated carrying costs.

- Track purchasing of inventory stores and materials for work orders.
- For assistance in creating budgets, MAXIMO can track costs for labor, materials, services, equipment, and tools used to complete work orders.
- Reduce on-the-job injuries and accidents by identifying hazards in the workplace and precautions to take to increase safety.

MAXIMO can automate processes that are consistent or happen on a predictable schedule, for example preventive maintenance, periodic inspections, or reordering inventory items.

Investment Description and Justification

Short Description

Safety and Health Management System, OSHA Recordkeeping, Training, Data Retrieval and Trending.

Full Description

ESAMS is a HGW Inc. web based application designed to provide safety and environmental management tools, for Naval activities to comply with NAVOSH requirements. The website is hosted by CNIC. To ensure compliance with security requirements, users should use web browsers capable of supporting 128-bit encryption (i.e., Internet Explorer 5.0 or higher). Functional: ESAMS provides users with the following capabilities: ESAMS allows employees, supervisors, coordinators, and environmental and safety professionals to manage their training, metric, medical surveillance, mishap, inspection, and deficiency data at multiple levels. Capabilities: The following systems and related components comprise the ESAMS suite: Training & Requirements Management System (TRMS) is the administrative area for Occupational Safety and Health (OSH) professionals as well as other designated individuals to administer personnel data, establish training requirements, associated medical stressor programs, assign Personal Protective Equipment (PPE) by task, create courses and classes, and assign roles/tasks to personnel. Report Management System (RMS) contains a central management area for employees, supervisors, department training coordinators, and OSH professionals to manage and review requirements and training, submit electronic completion of non-training requirements, review on-line course catalogue, obtain web-based training, and register for upcoming classes. Metric Reports can be generated via the web for the region, command, or code/department level. The reports provide metric information with respect to Training Requirements (percent completion), Monthly Safety Topics, Mishap metrics, Inspection and Abatement metrics as well as others requested by the customer. Web based training offers employees a convenient way to fulfill training commitments required by the Navy, Occupational Safety and Health.

Investment Description and Justification

Short Description

EIMS is a stand alone, comprehensive, geo-referenced, system of commercial off-the-shelf (COTS) systems Navy information management system and associated databases used to support Navy Fleet environmental requirements.

Full Description

EIMS is a Navy enterprise geo-referenced information management system designed to support sustainment and management of USFF and PACFLT training and testing areas, including operational and environmental planning and compliance; natural resources and encroachment planning, analysis and management; weapon danger zone generation; operational range clearance and other fleet range sustainment projects. Protective Measures Assessment Protocol(PMAP) is a child application of EIMS.

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

The Business Management System is used to document and automate Command business processes.

Full Description

The NAVFAC Business Management System (BMS) provides a systematic method for the management of business processes, common practices and processes, and quality improvements that produce and support the Command's product and services. This provides "how to" documentation for use by all NAVFAC Commands and Echelons, and links to applicable, appropriate and up-to-date policies, guidance, forms, and information. BMS is designed to describe and automate process documents using a COTS product (Oracle) to provide easy access to key information within a workflow (process) context.

Investment Description and Justification

Short Description

Enterprise integration app that integrates end-to-end facility production chain including work, maint, projects, contracts, construction and programs. Comprised of several integrated modules that are deployed on a common infrastructure-Oracle 9iAS.

Full Description

ieFACMAN is NAVFAC's enterprise integration application that integrates the end-to-end facility production chain including work, maintenance, projects, contracts, construction and programs. ieFACMAN is comprised of several, integrated modules that are deployed on a common infrastructure (Oracle 10G), code-base (Java modules), and database (Oracle 10G). By integrating core functions and systems, ieFACMAN provides a very cost-effective method to provide transformational capability as compared to traditional integration methods (e.g. Message Broker). ieFACMAN Gateway incorporates Jacada, eProjects and eContracts modules and ieFACMAN Reporting includes Discoverer.

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

SPIDERS is a specialized facility infrastructure data management system.

Full Description

SPIDERS is an engineering management system that provides a risk-based process for determining and reporting specialized asset condition and mission dependency information. SPIDERS provides several tools that directly support inspection workflows such as planning, scoping, and document management. Engineering data is collected in an electronic format and imported directly into the database. SPIDERS outputs reports that meet the requirements of the Public Works (PW) and Capital Improvements (CI) business lines and that inform CNIC. Asset condition and mission dependency information from SPIDERS will be provided to the NAVFAC asset management tool known as Maximo Enterprise to support reporting requirements for categories of specialized and other facilities.

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

RSIMS is a map-based decision support tool that combines geospatial data with tabular information related to regional facilities and installation management. RSIMS reads data replicated from enterprise information systems.

Full Description

The Regional Shore Information Management System (RSIMS)/GeoReadiness Explorer (GRX) is a web enabled decision support application that is a key component of the Navy's shore GeoReadiness IGI&S enterprise program. GeoReadiness collects, maintains, delivers and provides access to authoritative geospatial data to improve situational awareness and strengthen decision-making at Navy shore and expeditionary installations. It supports the Navy Installation and Environment (I&E) community by providing Installation Geospatial Information and Services (IGI&S) through the capability to query, edit and disseminate geospatial data, and to view, report and analyze shore installation facility data in conjunction with spatial data. The GRX viewer module reads data replicated from enterprise information systems (e.g., real property inventory, facility condition assessment, workorder management, utilities consumption records, etc.) and portrays it visually on plans and in report formats to facilitate shore installation facility planning, emergency management response and decision-making. GRX provides map based access to NAVFAC and CNIC business systems and the ability to overlay Navy data with other web based map services. The GeoReadiness enterprise system provides authoritative, cost-effective defense installation geospatial information and services to OSD, OPNAV, CNIC and NAVFAC for fact-based decision making.

OMB Sector/Function/Service:

Environment and Natural Resources / Other natural resources / Environmental Monitoring and Forecasting

Investment Description and Justification

Short Description

Data portal serving the Navy Environmental Program. Supports budget preparation, execution tracking, and DOD performance metrics tracking. Modular approach simplifies addressing additional needs.

Full Description

EPRWeb is the Navy's enterprise web-accessed software application that serves as a project summary area, financial planning, communications tool, and tracking program for DON world-wide, both ashore and afloat. The application suite is linked to a protected database that allows worldwide DOD PKI-registered users to track and report environmental program requirements information on a real-time basis. Environmental program managers throughout the chain of command employ EPRWeb to develop a comprehensive line item budget, execute and track performance requirements, and develop flexible authoritative reports for the office of the Navy Comptroller. Notice of Violation and P2 Water modules have already been migrated. Environmental Management System (EMS) is slated to be merged into the EPRWeb environment at the direction of CARS / NETWARCOM.

Investment Description and Justification**Short Description**

IBONS integrates the functions of physical security, geo-spatial information (GIS), computer-aided design and drafting (CADD), and engineering document management functions to provide effective operations support.

Full Description

IBONS is a web-based system that was developed by NAVAIR to support mission requirements. IBONS integrates the technologies of Java, Oracle database, computer-aided design and drafting (CADD) and engineering document management functions in a NETWARCOM accredited application approved for the NMCI network. IBONS fulfills the mission through modules that support the following business functions: Infrastructure Management; Workspace Management – space mgmt, move mgmt, seat mgmt- seat attributes, equipment & people; Maintenance UIC Funding; Energy Usage, Metrics & Reporting; Facility Services; Occupancy Fee Reimbursement; Command and Program Cost Redistribution; Navy and Marine Corps Airfield Safety Waivers –Official Navy application for tracking and reporting encroachments and variances of airfield operations; Furniture Procurement, design and layout to comply with Federal (ex., OSHA, American Disabilities Act (ADA), etc.) and Navy standards; IBONS maintains space, evacuation, HAZMAT & spill, fire protection & furniture floor plans. These floor plans are drawn to Navy and Architectural, Engineering & Construction standards linked to data (space, organization, people, seat, network jack, etc.). IBONS includes the following sub-modules: Operational Environmental Management (OEM) which supports the Range Sustainability Office operations and is required for Federal NEPA compliance of test projects, Range safety applications, flight planning support, flight track, noise and sonic boom analysis and environmental impact statement compliance. OEM consists of the following Range Safety applications: Air Events Disturbance Tracking (AEDT) and Operational Environmental Planning Tool (OEPT). Base Access Security Information Control System (BASICS II), used by Public Safety and NAWC Security - web application ensuring compliance with NAS Patuxent River occupancy and NAVAIR Acquisition, Research Development Test and Evaluation (visitor) security requirements.

OMB Sector/Function/Service:

Environment and Natural Resources / Other natural resources / Environmental Monitoring and Forecasting

Investment Description and Justification

Short Description

Web-based enterprise environmental data mgmt system for the Navy's Installation Restoration Program.

Full Description

NIRIS is the authoritative web-based enterprise environmental data management system for the Navy's Environmental Restoration (ER) Program. The core system consists of an integrated Oracle database, an ESRI-based mapping component, and a series of ER-specific business modules. This framework supports a standard corporate database structure that allows for the storage and management of all ER data; the business modules are primarily focused on environmental analytical results. The system supports the automation of ER data management (collection & reviews), web based mapping displays and easy and direct access to ER Program-specific business data such as validated chemical results. It also allows detail and summary Program data to be extracted and exported for use with other environmental analysis tools.

Investment Description and Justification

Short Description

Washington Navy Yard Facility Management (WNYFM) is an information management tool that manages personnel seat and space management, IT cable plant and infrastructure, NMCI rollout, facility repair and maintenance, parking and phone system management.

Full Description

Designed as a facilities management tool specifically for the Washington Navy Yard. The database is used to administer internal moves, adds and changes as well as parking. Functional WNY Facilities Management (WNY-FM) is a unique web-based application for displaying and maintaining information pertinent to the day-to-day operations of NAVSEA Headquarters. The database contains data related to staffing, buildings, seat assignments, phone equipment, phone number assignments, network cable plant and circuits, parking, facilities help desk calls, furniture inventory and keys.

OMB Sector/Function/Service:

Environment and Natural Resources / Water resources / Water Resource Management

Investment Description and Justification

Short Description

The BRACMIS system functions as the primary resource management tool in supporting the BRAC PMO during the execution of BRAC. It serves as the central repository for all data related to the budget, business plans and property disposals.

Full Description

BRACBIMS is the official reporting tool for the Department of the Navy Base Realignment and Closure (BRAC) Program Management Office (PMO). It supports financial and programmatic business activities across the PMO, tracking actions and reporting progress to higher echelons. BRACBIMS consolidates, integrates, and standardizes data from BRACMIS, STARS-FL, NORM, SABRS and other authoritative sources into a single web-enabled content rich application. BRACBIMS provides program information to senior executives, facilitates data calls, improves reporting accuracy, eliminates over-processing, and reduces the preparation time of existing reports through automation. Ad-hoc queries, analytics, event management, and balance scorecard capabilities are also provided. The BRAC program has high visibility as annually-established metrics and performance indicators are reviewed monthly in Command execution briefings. Information is provided regularly to higher echelons, and the total BRAC acreage disposed is reported by the DoD in Government Performance and Results Act (GPRA) and General Services Administration (GSA) metrics. The BRAC PMO is responsible for coordinating with the Department of Navy BRAC Support Offices, Commander Navy Installations Command, Headquarters Marine Corps, Naval Facilities Engineering Command, and Department of the Navy Assistant for Administration (DON/AA) to prepare the annual BRAC Program Budget and manage fund allocation and execution of the BRAC Appropriation. System upgrades in FY15 include the virtualization and consolidation of BRACMIS and BRACKMS servers into a single environment, referred to as BRAC Business Intelligence Management System (BRACBIMS). This consolidated environment will provide enhanced reliability and security, scalability for growth, SSO (Single sign-on) capabilities, reduced IT footprint & administrative overhead, unified system records and a single ATO.

Investment Description and Justification

Short Description

Naval Facilities Engineering Command (NAVFAC) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Logistics capabilities not delineated elsewhere.

Full Description

The MILCON Application provides support to the NAVFACHQ Military Construction (MILCON) Directorate for Project Management, Program Development, and Congressional Inquiries. NAVFAC is the advocate for the Navy's Military Construction program throughout the planning, programming and budgeting cycle. NAVFACHQ MILCON supports the MCON program during the FMB, OSD and Congressional budget reviews. NAVFACHQ MILCON also manages funds and execution of MCON, MCNR, BRAC, Demolition and various other Defense construction programs. The MILCON Application helps coordinate the accuracy of MILCON project and budget information located in OPNAV, FMB and various other data sources.

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

FRES is an unclass app that portrays shore facility readiness (SFR) from Navy level down to region, installation & facility level. SFR displayed by shore capability area, expressed in terms of facility condition, configuration & capacity.

Full Description

The Facility Readiness Evaluation System (FRES) is the official Navy system for reporting the condition and availability ratings of shore facilities. FRES is sponsored by CNIC Facilities Service and Investment; CNIC functions as PM. FRES produces ratings on a scale of 1 to 100 on the quality of the facility, appropriate size of the facility, and the overall rating. FRES uses condition assessments to determine the quality rating of the facility and uses iNFADS data to determine the ratio of the on-hand asset against the requirement. These calculations are done at the category code level at a given installation, then rolled up and recalculated through the Shore Capability Area level for the entire Navy. Identifies BAM/POM funding impacts to facility condition readiness.

DoD Type Segment:

Business Services / 540-000 - Real Property Management (EI&E)

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

The MCRTAMS provides commanders, operating units, range managers, and cross-service users with the metrics to relate range capabilities to specific training requirements utilizing both established and developing software tools and data metrics.

Full Description

The MCRTAMS provides commanders, operating units, range managers, and cross-service users with the metrics to relate range capabilities to specific training requirements utilizing both established and developing software tools and data metrics. The MCRTAMS also provides the Marine Corps' integrated and readily available range inventory and training range database. This inventory is continuously updated and shared among range users, managers, and planners at all levels of command. The MCRTAMS identifies all available training resources, specific training capacities and capabilities, and those specific training constraints initiated by encroachment. The MCRTAMS matches the Marine Corps Training and Readiness (T&R) requirements with specific ranges and USMC and DoD facility category codes identifying the ranges and/or facilities capable of satisfying/supporting the T&R training standards. The MCRTAMS provides Marine Corps managers and planners at all levels of command with the essential information to develop a comprehensive training range sustainment plan to sustain, upgrade, and modernize USMC ranges. Note: The joint Marine Corps and Army developed enhanced range scheduling and management tool, RFMSS is an essential and key system for interface and input to the MCRTAMS and for Marine training area users. RFMSS is a web-based system that provides installations with range management tools to schedule ranges, perform range management functions, and collect necessary range data. RFMSS is a cooperative Army and Marine Corps built, funded, tested, and implemented range management system that is being fielded at all Marine Corps and Army installations that have ranges or training areas. MCRTAMS complements RFMSS and is not a duplicate of functions.

Investment Description and Justification

Short Description

Navy Inventory of facility assets, includes Shore Facilities Planning System.

Full Description

iNFADS is the Real Property Inventory (RPI) for the DON. This enterprise system includes all of the data necessary to support the DON inventory of facility and site assets (e.g. maintaining, adding and transferring property records). iNFADS also provides critical data and supports business processes for Asset Management, Planning, and Real Estate acquisition and disposal for the Navy and Marine Corps. iNFADS has been operational since 2001.

OMB Sector/Function/Service:

General Government / General property and records management / Facilities, Fleet and Equipment Management

Investment Description and Justification

Short Description

Enterprise asset management system.

Full Description

MAXIMO is a computerized asset maintenance system. It stores and maintains data about facilities, assets, and inventory. MAXIMO is designed to improve the availability and performance of revenue-generating assets while decreasing operating costs, without increasing safety issues. MAXIMO allows you to:

- Track work orders and failures to better schedule preventive maintenance.
- Track inventory use to find optimum stock levels. The goal is to maximize availability of items for upcoming work, while also reduce unnecessary inventory and associated carrying costs.
- Track purchasing of inventory stores and materials for work orders.
- To assist in creating budgets, you can use MAXIMO to track costs for labor, materials, services, equipment, and tools used to complete work orders.
- Reduce on-the-job injuries and accidents by identify hazards in the workplace and precautions to take to increase safety.

MAXIMO can automate processes that are consistent or happen on a predictable schedule, for example preventive maintenance, periodic inspections, or reordering inventory items.

OMB Sector/Function/Service:

Environment and Natural Resources / Other natural resources / Environmental Remediation

Investment Description and Justification

Short Description

NORM is a complex fat-client system that tracks \$5 billion worth of Environmental Restoration, Navy (ER,N) and Base Realignment and Closure (BRAC) environmental cleanup work. It controls site registration and approval of over 5,000 cleanup sites.

Full Description

NORM provides bottom up site-level environmental restoration cost estimating and cleanup milestone tracking as required by OSD and Navy program and financial management guidance and instructions. The system is integral to HQ's planning, programming, and budgeting process for the ER,N program, supporting remediation project manager (RPM) and program analyst (PA) users across NAVFAC engineering commands. NORM supports NAVFAC HQ and ASN BRAC financial and environmental liability reporting for BRAC and ER,N Programs. NORM is also used to create Navy's portion of OSD's Annual Environmental Restoration (ER) Report to Congress.

| Short Description Provides centralized intra-division access to sensitive and functionally required maintenance, engineering, GIS and related Carderock Division facility data. | |
| Full Description The FMFD Servers support all areas of the Facilities and Model Fabrication Division's mission by providing centralized intra-division access to sensitive and functionally required maintenance, engineering, GIS and related Carderock Division facility data. The servers host a GOTS web site that provides access to over 18,000 facilities related drawings with extensive search capabilities. These servers also serve as a license server to the highly used prototyping software used by the NSWCCD Model and Fabrication Division as well as a license server for the estimating software used by the Code 36 engineers. Highly secured file storage and sharing for NSWCCD Code 36 personnel is also provided by this system. These servers are highly utilized by all NSWCCD Code 36 detachments and are a part of well-established Navy business processes. | |

OMB Sector/Function/Service:

Environment and Natural Resources / Other natural resources / Environmental Monitoring and Forecasting

Investment Description and Justification

Short Description

MCFIRS is a web-based application that provides the Marine Corps with an improved framework for efficient utilization of fire department resources through better information management.

Full Description

MCFIRS is a web-based application that provides the Marine Corps with an improved framework for efficient utilization of fire department resources through better information management. This is accomplished by providing a standardized system that improves productivity, quality, data sharing, and accountability. MCFIRS is a system that incorporates the National Fire Incident Reporting System (NFIRS), plus other versatile modules that supports the Marine Corps Fire and Emergency Services (Structural and ARFF) fire departments. MCFIRS is a tailored Commercial Off the Shelf (COTS) software package, is hosted by a commercial datacenter located in Denver, CO, and is accessed by civilian and uniformed firefighters at numerous Marine Corps Bases and Installations using Navy-Marine Corps Intranet (NMCI) standard browser and approved CAC cards. MCFIRS provides user friendly access to information including, but is not limited to: NFIRS compliant incident reporting, equipment maintenance, training records, and other fire department related data. The USMC benefits from MCFIRS's ability to provide data management for most, if not all, of the fire departments data management needs.

MCICOM Portal is the MCICOM landing page for users wanting to access all systems under MCICOM.

Full Description

MCICOM Portal is the MCICOM landing page for users wanting to access all systems under MCICOM. This site displays Status, Notes, Description of the system and displays any future or current outages with a From and To date time. In addition links are provided for each system for the user to access the system they want via a URL that will open in another window. When accessing the page the users name will appear in the top left corner of the page with a last access date. The systems are displayed in a carousel with the ability to scroll either left or right to access the system information. Systems accessed include MCITC AutoSAAR Application (ASA) and Time Tracker.

Investment Description and Justification

Short Description

The Installation Statistics, Analytics and Reporting (iSTAR) is a web-based Executive Information System (EIS) and dashboard used by the United States Marine Corps (USMC) for installation management.

Full Description

The Installation Statistics, Analytics and Reporting (iSTAR) is a web-based Executive Information System (EIS) and dashboard used by the United States Marine Corps (USMC) for installation management. iSTAR allows Commanders, Functional Managers, and Subject Matter Experts (SMEs) to generate interactive reports, by mission area and at different levels (HQMC, Region, and Installation), using charts and maps to display output in a standard and consistent format. iSTAR serves as a starting point from which to obtain a sense of the big picture by running various mission area reports before digging deeper into the data. It uses data visualization tools to present and organize the most important data needed to achieve one or more objectives so the information can be monitored at a glance.

Investment Description and Justification**Short Description**

WEBCASS-STEP is an online data collection, analysis, and reporting tool for environmental compliance data, budget programming and execution data, and metrics tracking for USMC facilities.

Full Description

WEBCASS-STEP is an online data collection, analysis, and reporting tool for environmental compliance data, budget programming and execution data, and metrics tracking for USMC facilities. WEBCASS-STEP also has the ability to create and track both Compliance and Environmental Management System (EMS) findings based on Local, State, Agency, and Federal regulations. There are three different kinds of regulatory drivers that USMC follows: Federal/State/Regional laws, Agency/MCO/MARFORRES directives, and the Overseas Environmental Baseline Guidance Document (OEBGD) and accompanying country-specific guides (JEGS, KEGS). The TEAM Guide checklists for these regulations will be used by WEBCASS-STEP to identify deficiencies in meeting regulatory requirements. WEBCASS-STEP supports USMC Environmental Management Program objectives as follows: tracks and reports environmental compliance through comprehensive environmental management approaches and Environmental Compliance Evaluations (ECEs); Promotes pollution prevention as the primary means for achieving and maintaining environmental compliance; Programs, plans, budgets, and executes resources to meet environmental objectives; and Mitigates risks from environmental practices according to a risk-based analysis.

Investment Description and Justification

Short Description

The Integrated Residuals Application Management System (IRAMS) is web-based .NET application that serves the needs of the Public Works Department.

Full Description

The Integrated Residuals Application Management System (IRAMS) is web-based .NET application that serves the needs of the Public Works Department. IRAMS allows the accurate management of residuals application operations, including operations where effluent and other residuals are also applied to land application sites. IRAMS allows for tracking and reporting of groundwater, soil, and crop test information. IRAMS allows the operator to link application areas from the database to map positions through which application fields can be visually located and maps can be printed out showing drivers the exact locations of application sites. IRAMS provides annual EPA reports and GIS function which displays queries via a mapping experience.

Investment Description and Justification**Short Description**

The Regional Asbestos Management Application (RAMA) is a web-based .NET application that serves the requirements of all installation asbestos stakeholders (Environmental, Safety, Public Works, tenants).

Full Description

The Regional Asbestos Management Application (RAMA) is a web-based .NET application that serves the requirements of all installation asbestos stakeholders (Environmental, Safety, Public Works, tenants). RAMA allows field personnel to access the system via a web browser to manage the asbestos abatement program. It provides the ability to identify, track, and display areas within facilities that contain asbestos materials. The application provides real-time reporting to stakeholders in PDF format; storage of photographs, floor plans, archived reports, test results, and personnel training requirements. In addition, the application also provides a Geographical Information System (GIS) function which displays queries via a mapping experience.

Investment Description and Justification

Short Description

Provides facility readiness, investment strategy development, utilities management, and energy analysis to support the prioritization of energy and water projects.

Full Description

The Shore Investment Energy Utility Model (SIEUM) is comprised of three separate components: the Shore Facility Investment Model (SFIM), the Heuristic Asset Management of Utilities Requirements (HAMUR) and the Energy Return on Investment (eROI). The SIEUM system provides facility readiness, investment strategies development, utilities management, and energy analysis to support the prioritization of energy and water projects. It is deployed on hosting servers at the Commander, Navy Installations Command (CNIC) Service Delivery Point (SDP), Norfolk, VA.

Investment Description and Justification

Short Description

Building automation/energy management control system.

Full Description

The 29 Palms Energy Management Control System (EMCS) provides the Marine Corps Air Ground Combat Center (MCAGCC) Twenty-nine Palms with an effective means for monitoring electric, gas, and water consumption. EMCS is comprised of heating, ventilation, air conditioning (HVAC) and lighting. Additionally, the utility metering (electric, gas, and water), potable water and waste water systems are monitored and controlled throughout the network. EMCS provides the MCAGCC Twenty-nine Palms Public Works Department (PWD) with the ability to comply with State and Federal regulations, specifically in the water departments. EMCS also provides the base with the ability to meet the requirements of the Energy Policy Act of 2005 (EPACT). EMCS is vital for meeting the base's goal of saving energy. EMCS is critical for purposes of comfort, compliance, environmental protection, life safety and productivity of the military personnel at MCAGCC Twenty-nine Palms. EMCS is continuously monitored (24/7) by the Energy Management Department.

Investment Description and Justification

Short Description

Assist NAVAIR in ensuring continued sustainability of the Sea Land and Air ranges. Determine NEPA documentation compliance for test plans, track and report NEPA compliance for range events, track and respond to community disturbances.

Full Description

Assist NAVAIR Ranges Sustainability Office in achieving their mission of ensuring continued sustainability of the NAVAIR Sea, Land and Air Ranges. Current capabilities include assisting test planners with determining NEPA compliance requirements, tracking actual range events to ensure continued compliance with existing NEPA documentation, tracking and responding to community reports of disturbance regarding range events, tracking and mitigating range encroachment issues, and using the information to educate both range users and the community to ensure continued compatibility between the two environments. This toolset includes Aircraft Events and Disturbances Tracking (AEDT), Environmental Planning Checklist, Environmental Review Tool, Operational Environmental Planning (OEPT), and Encroachment Tracking Tool (ETT). OEM is hosted on the IBONS server. OEM is embedded within the IBONS framework (DITPR-DON ID 21430), and leverages IBONS' access management capability.

Investment Description and Justification

Short Description

The Automated Badging system is the primary repository of information required to control access to Puget Sound Naval Shipyard facilities of shipyard employees, ships forces, and shipyard visitors.

Full Description

The Automated Badging System joins the Personnel Security Manager (PSM), PSNS Badging System (PBS), Refueling Area Access List (RAAL), and Visitor Control (VC) modules into one database structure. A single integrated system designed to control access to Puget Sound Naval Shipyard (PSNS) facilities of shipyard employees, ships forces, and shipyard visitors.

Navy training and readiness IT investments align to the strategic goal to rebuild military readiness and establish a modernized naval force. It also supports the training and readiness of employees performing routine administrative and business functions such as Acquisition, Financial Management (PPBE, accounting, payroll, etc.), Human Resources (hire-to-retire, personnel management, etc.), Defense Health, logistics, and installation management. Training and Operational Readiness Information Service (TORIS), UII 007-000002392, is a web-centric, enterprise-level, data collection, transfer, storage/warehousing, and decision support system designed to capture war fighter mission area training and sustainment proficiency information from the surface fleet. TORIS solves the critical issue of how to collect watch team training performance data without unnecessary burdening of our war-fighters aboard fleet units.

Investment Description and Justification

Short Description

Web-based app that distributes information and web-based courses for NFACT. Allows students to register online, tracks DAWIA certification and education levels, training and business courses.

Full Description

NFACTS provides automated management tools necessary to support acquisition policy management functions, acquisition workforce training, leadership development program management, and intern program management. NFACTS provides the capability to share information and work processes and perform audit program functions across NAVFAC with a minimum number of personnel. Additionally, NFACTS provides a central repository of training history for NAVFAC, which includes training rosters, enrollment analysis reports, statistical data, and the ability to provide the NAVFAC workforce with official transcripts recognized by the Academic Council of Education (ACE) for college credit recommendations.

Investment Description and Justification

Short Description

A web-based, Microsoft SQL server database, enterprise level data collection, transfer, & storage app. TORIS solves the crucial issue of how to collect readiness & performance data without unnecessary burdening our war-fighters aboard fleet units.

Full Description

The Training and Operational Readiness Information Services (TORIS) is a web-centric, enterprise-level, data collection, transfer, storage/warehousing, and decision support system designed to capture war fighter mission area training and sustainment proficiency information from the surface fleet. TORIS solves the critical issue of how to collect watch team training performance data without unnecessary burdening of our war-fighters aboard fleet units. Built and maintained by Afloat Training Group Pacific (ATGPAC) for use at the "deck plate" level, training assessors can capture data digitally during training scenarios conducted in operational environments under time-tested procedures and send this information to centralized servers for warehousing and further analysis. TORIS is the information system that underpins the Surfaces Force Readiness Manual (SFRM) and the Surface Force Exercise Manual (SFEM) and is the primary enabler for the Surface Warfare Enterprise (SWE) continuous readiness initiative. TORIS is the authoritative source for watch team training performance data from the surface fleet and is a critical data feed for all stakeholders of the unit level training (ULT) process. TORIS captures watch team training information generated during assessments conducted in operational environments aboard surface ships, data that supports those assessments (e.g. scheduling, trainer assignment, etc), and associated metrics on the operational readiness of Surface Force units. Outputs also include unit level training proficiency information for "Big Navy" dashboards and reporting systems such as NTIMS and DRRS-N. The system does not contain or process classified information.

Architecture Profile

| | |
|--------------------|---------------|
| DoD Segment | 599-000 Other |
|--------------------|---------------|

Architecture Budget Justification

Navy business services IT investments support the DON's strategic goal to modernize business operations. and enhance information technology. However, segment 599 is applicable only in limited cases, for those "few" defense business service related IT investments that do not currently fit within the other business segments. Business systems/applications that would fall within this segment involve or provide inherently managerial functions or provide business functions or capabilities such as, case/correspondence/workflow/records management/collaboration, or other staff functions. Navy primary business services investments include NAVSEA Warfare Center Business Operations IT Resources, Legacy Logistical Information Systems (LIS) Portfolio, and NAVSEA HQ Business Operations. These investments support business operations modernization by providing business operations and management, commercial off-the-shelf (COTS) and in-house labor.

Investment Description and Justification

Short Description

Naval Inspector General Hotline Tracking System serves as the Navy Program Manager and focal point for the DoD and Navy's "Hotline" Program.

Full Description

Web-based centralized case management information system for managing and tracking Hotline contacts or complaints, and IG investigations across the Navy IG enterprise. Single-source real-time data and top-down visibility of all IG cases to deliver complete and accurate records to support FOIA requests, record checks and congressional inquiries. Used to identify and analyze trends and metrics to increase efficiency, decrease processing time and support all Navy IG business areas.

Investment Description and Justification

Short Description

Consolidated and isolated networked system designed to produce and manage the issuance unique, tamper resistant passes that allow for automated monitoring of access control parameters, and enhance installation security.

Full Description

20110912: Many directives and policies from the Department of Homeland Security (DHS), Presidential Office, Department of Defense (DoD), and Headquarters Marine Corps (HQMC) require improvements in the current operations and controls used for military base access and security management. New policies, and threats to the integrity of military bases, increase the need for authorization, authentication, tracking, and administration of credentials granted to non-military persons. The Base Pass Access and Control system (referred to as BPAC) is available in two Configurations, BPAC Enterprise Solution (BPAC-E) and BPAC Expeditionary Solution (BPAC-X). Both incorporate automatic identification technology, biometrics, and work flow automation to help improve issuance and lifecycle management of base access passes, security administration and enforcement. BPAC is a consolidated and isolated networked system designed to produce and manage the issuance of high quality, uniquely and unpredictably numbered, tamper resistant passes that allow for automated monitoring of access control parameters in order to enhance installation security. BPAC is GOGO and operated and administered by the local PMO.

Investment Description and Justification

Short Description

Collaborative tool that encompasses lifecycle engineering, planning, and Configuration Management (CM) to provide comprehensive information for the Sites Planning Agent (SPA) and the Land Based Test and Training Sites (LBTTTS).

Full Description

The All Sites Module (ASM) is a collaborative tool that encompasses lifecycle engineering, planning, and Configuration Management (CM) to provide comprehensive information for the Sites Planning Agent (SPA) and the Land Based Test and Training Sites (LBTTTS) for out-year baseline planning, current baseline management, and asset utilization. ASM provides managers, engineers, logisticians, and planners with correct, reliable configuration and engineering data about the LBTTTS, thereby helping to sustain the readiness of fleet requirements. The LBTTTS provide the environment for development, testing, certification, and training of baseline computer programs and equipment. ASM is a portal that enables the assimilation, reporting, and knowledge sharing among the sites required to expedite the execution of business processes established among the sites. ASM allows the sites to share not only data but best practices throughout the enterprise. ASM business processes include CM practices, engineering, Information Assurance (IA) data gathering, software maintenance agreement tracking, document storage and retrieval, cable and material ordering and tracking, and local sites' change control. ASM provides the sites with query and reporting capability to retrieve requested data for site maintenance and data calls.

Investment Description and Justification

Short Description

FOIAonline is an intergovernmental FOIA (Freedom of Information Act) request-processing system, owned and operated by the EPA, that is accessible via the Internet to the public with a public-facing site and to account holders from participating.

Full Description

FOIAonline is an intergovernmental FOIA (Freedom of Information Act) request-processing system, owned and operated by the Environmental Protection Agency (EPA), that is accessible via the Internet to the public with a public-facing site and to account holders from participating Federal government agencies with a controlled-entry website (FOIAonline), that meets the requirements of the President's eGovernment Initiative, an effort to improve Federal government operations through increased use of technology. FOIAonline consists of hardware and software maintained by the EPA with the assistance of contractors that furnish a user-friendly means for any member of the public to submit a request under the Freedom of Information Act (FOIA) to any office or activity within the Department of the Navy, security for sensitive information, and automatic tracking and reporting, in accordance with DON requirements and per agreements with the EPA. These agreements, in addition to governing on-going operations and systems usage on an annual basis, provide flexibility for adding training, minor changes to configuration, functionality enhancements. DON has a duty to release all of its records to the public on request, unless an exemption applies, under the Freedom of Information Act, 5 U.S.C. §552, which was enacted in 1966. Under the FOIA, every Federal agency must respond to a requester, ordinarily within 20 business days. This is so even when an exemption applies. Exemptions within the FOIA provide for withholding information for reasons that include that the information is classified, or, where foreseeable harm has been determined, it is confidential, privileged, proprietary, personal, or investigative. Accordingly, all information that is released to the public is unclassified and has been determined to lead to no foreseeable harm if made known to the public. Every Federal agency is liable under civil law for any failure to meet this obligation. Court damages would have to be paid by the agency found to be at fault.

Health and Well-Being / Consumer and occupational health and safety / Worker Safety

Investment Description and Justification

Short Description

CIRRAS is a Web-enabled automated Force Preservation Council Tool.

Full Description

CIRRAS enables USMC Commanding Officers and Senior Enlisted Advisors to make informed and timely decisions on Force Preservation (FP) risk assessments based on the identification and tracking of individual Service Member (SM) behaviors associated with increased risk or resiliency as defined by the Commandant's "Six Fs". The "Six Fs" are Fidelity, Fighter, Fitness, Family, Finances, and Future. The CIRRAS will be employed from the Regimental/Group Commander to the immediate supervisors (Platoon Commander / Officer in Charge) of all SMs, under the intent of MCO 5100.29B Marine Corps Safety Program, MCO1500.60 FPC Program and other Force Preservation directives.

Organization Architecture Profile**

| Architecture Profile | |
|-----------------------------------|-------------------------------|
| DoD Segment | 600-000 DoD IT Infrastructure |
| Architecture Budget Justification | |

Navy's IT infrastructure is comprised of Network, Communications, Cloud Computing and Data Center investments, and includes the Navy's largest investment, the Next Generation Enterprise Network Increment. Other Navy investments in this segment include Base Communications Office (BCO), Fleet Deployed Communications Capabilities, and Cellular Phones. The Next Generation Enterprise Network (NGEN), UII 0007-000003538, is an enterprise network which provides secure net-centric data and services to Navy and Marine Corps personnel. NGEN forms the foundation for the DON's future Naval Network Environment. Increases between FY 2020 and FY 2021 include funding for Microsoft Office 0365, Digital Transformation efforts, NGEN-R Tech Refresh and Transformation. The Base Communications Office (BCO), UII 007-000001845, is provides BCO support, voice communications in the form of desk phones, cell phones, pagers, calling cards, fax and modem lines, video teleconferencing (VTC), audio conferencing and toll free telephone services. BCOs are responsible for the day-to-day management, administration, operations and maintenance of existing base communications facilities and services, whether leased or government owned. The Navy Continuous Training Environment (NCTE), UII 007-000100706, is the Navy's global Tactical Training Network that supports United States Fleet Forces (USFF) in conducting Fleet Synthetic Training (FST). Increases between FY 2020 and FY 2021 include funding for Microsoft Office 0365, Digital Transformation efforts, NGEN-R Tech Refresh and Transformation.

CELLULAR PHONES (007-000000011 - CELL)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18269 - Enhance information technology and cybersecurity defense capabilities.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Information sharing / Computer / Telephony Integration

Investment Description and Justification

Short Description

Cellular Phones (CELL) provide ability for real-time audio to direct, command and control, exchange of information and to allow accessibility of personnel off-site. CELL includes hardware devices and the service contracts associated with the devices.

Full Description

Cellular Phones (CELL) provide ability for real-time audio to direct, command and control, exchange of information and to allow accessibility of personnel "off-site." CELL includes hardware devices and the service contracts associated with the devices.

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Knowledge management / Data Warehouse

Investment Description and Justification

Short Description

Covers the continuing maintenance of the NAVSUP Corporate data warehouse and the transition to SAP's Business Information Warehouse. The current FISCMS and TLOD functionality in InforM21 will be supported but not expanded.

Full Description

Information Management for the 21st Century (InforM-21) is a data warehouse and business intelligence tool providing global access to Navy logistics information. InforM-21 is run and managed by the NAVSUP Business Systems Center and sponsored by the Naval Supply Systems Command (NAVSUP). InforM-21 applications include the following: ADF - Activity Data File - This file will be static after ERP implementation. The Activity Data File (ADF) resides on the UICP transition database and contains a list of activities which submit asset reports to the NAVSUP Weapon Systems Support. Each activity record on the file contains general information about that activity such as codes used to identify its attributes. Birdtrack ACWT -- Average Customer Wait Time provides inventory positioning analysis and asset visibility, with the goal of speeding the flow of replacement parts to ships and forward-deployed activities. ACWT integrates data collection from many disparate data sources, such as Defense Automated Addressing System Center (DAASC), Material Finance and Control System (MFCS), Uniform Automated Data Processing System 2 (U2), RSupply, and transportation systems, providing timely and strategic decision-making abilities and management/asset distribution. CIIC Reporting - CIIC Reporting provides NAVSUP and NAVSUP Weapon Systems Support personnel visibility of CIIC-coded material master data and inventory data. CIS - Corporate Information System - CIS is a tool which provides a view of the "corporate health" of the NAVSUP claimancy. It provides users with a one-stop analysis tool enabling them to have their fingers on the pulse of the supply system. It is used to record and graphically display data reported to NAVSUP by its field activities. It includes information covering a wide variety of categories such as Readiness, Supply Support, Financial, Contracting, Inventory, and others. It shows the history of the performance metric so that trends can be identified and acted on before they become problems. DAC Diagnostic Tool (DDT) - merges data from Navy ERP and MFCS PX02 to create reports that aid in research of failed DAC IDOCs. The failed IDOCs are categorized into various error types depending on the source of the error. DDF - Due in Due Out File - This file is static since ERP implementation. The NAVSUP Weapon Systems Support's Due In - Due Out File resided on the UICP mainframe. The DDF in InforM-21 provides two years of historical daily snapshots of the DDF. DEN Di.

Investment Description and Justification

Short Description

The Naval Supply Systems (NAVSUP) Enterprise Web is the portal that serves as a communication medium to the public, employees, and business partners for NAVSUP enterprise information.

Full Description

The Naval Supply Systems (NAVSUP) Enterprise Web was initiated to consolidate various web initiatives. The audience is enterprise employees, supply chain partners, supply corps officers, and enlisted communities. The site is intended to be informational vice transactional and hosts the NAVSUP Public Homepage with a secure Intranet for coordination with internal applications.

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Information sharing / Computer / Telephony Integration

Investment Description and Justification

Short Description

BUPERS Online is the infrastructure that hosts web-enabled CNP applications and websites. Serves as a 24x7 application hosting environment for 40 applications including NCMPS, ITEMPO, DMT and 2 Navy- wide websites.

Full Description

BOL is an applications hosting framework that provides a Single Sign On (SSO) authentication for various MPT&E applications hosted in the Millington Data Center. Credential verification is completed via CAC/PKI verification using the DEERs authentication of the members DODID, as well as, certificate verification via DISA's Certificate Revocation Listing (CRL). Once credentials have been verified BOL then allows access to the various applications based on the member's role/access level. If a user requests additional accesses outside of the normal business rules, the "need to know" is verified using the SAAR-N process.

Investment Description and Justification

Short Description

MCEITS is the implementation of GIG Enterprise Services (GIG ES) within Marine Corps. MCEITS will also add other services needed to meet unique requirements within the Marine Corps COI.

Full Description

Marine Corps Enterprise IT Services (MCEITS) is the framework for realigning, collapsing and consolidating the Marine Corps IT environment. It realigns the current environment of applications, databases, networks and facilities into an integrated, layered architecture for the delivery of capabilities based on a common infrastructure and shared services across the enterprise. It supports IT portfolio management and addresses technology, processes, standards, workforce and governance and satisfies the IT objectives contained in Navy-Marine Corps strategies and central to net-centric operations and warfare.

Investment Description and Justification

Short Description

Track FOIA and PA cases submitted to NAVSEA by corporations, education institutions, private citizens, etc. The system captures all congressionally mandated information and caseworkers use as a normal course of business.

Full Description

NAVSEA web enabled FOI/PA Application captures data needed to satisfy congressionally mandated reports relating to FOIA and Privacy Act case processing as well as optional program management reports to provide metrics. Use of the System is mandatory for all NAVSEA field activities and it incorporates FOI/PA business rules. The System resides on 2 Sun Enterprise servers located at Flotilla Server Farm, Bldg 197, WNY, DC. One server for web access, the second server for database. Access to the System is restricted to designated user accounts that are password-protected as well as PKI authenticated. Once logged onto the system, NAVSEA Users have read/write privileges to their specific domain information. The NAVSEA Headquarters FOIA Officer and Administrator have global privileges. The System consists of four modules: FOIA Case System, Program Costs, Miscellaneous Queries, and Reporting. FOIA Case System Module tracks FOIA access requests and Privacy Act access/amendment requests (case processing) from start through completion. Records correspondence, taskings, FOIA exemptions, contract data, notes of conversations, invoices, payments, collection letters etc, as an administrative trail. The FOIA Case System database captures the business address and telephone number of individual corporate FOIA requesters but does not contain any business sensitive data. It also captures the home address and telephone number of individual requesters and may contain sensitive information in the subject block or case processing notes. The database is not a Privacy Act System of Records because information cannot be retrieved by using a personal identifier. Program Costs Module tracks indirect program costs such as equipment, subscriptions, training, and salaries/man-years of employees assigned FOIA program responsibilities for the annual report to Congress. Miscellaneous Queries Module provides a central location to track actions supporting FOIA and Privacy Programs that are not related to specific FOIA or Privacy Act requests. Use of the Miscellaneous Queries Module is optional. Failure to annotate actions in this module will affect the accuracy of some optional management reports. Reporting Module compiles processing costs (direct and indirect), captures mandatory statistics regarding access and amendment determinations, and maintains an Accounts Receivable for individual Freedom of Information and Privacy Act Offices located at NAVSEA Headquarters, sh

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

Key Telephone Systems(KTS) are generally used in relatively small office environments, typically in the range of 50 telephones and requiring relatively unsophisticated functionality and feature content.

Full Description

KTS systems are generally used in relatively small office environments, typically in the range of 50 telephones and requiring relatively unsophisticated functionality and feature content. According to strict, traditional definition, a KTS is not a switch: it relies on the telephone companies switching equipment. The KTS users telephone has multiple buttons permitting (requiring) the user to directly select central office phone lines. KTS requires that the user determine and make the selection of an available outside line using the phone devices buttons. Typically the user owns the KTS hardware and determines how many direct phones lines to lease in support of their office environment.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Web Content Management

Investment Description and Justification

Short Description

Provides the customer with seamless connectivity to the support infrastructure to resolve any issue in a collaborative environment. CRM s, a Distance Support initiative, is the next generation of Customer Relationship Management for the Navy.

Full Description

The primary role of the DS Lab is to provide content and updates for deployed NIAPS Servers and Joint Distance Support and Response (JDSR) servers. This is accomplished by secure HTTPS inbound file transfers. Technologies such as HTTPS, iOra™ Epsilon, and Tumbleweed Secure FTP allow the Distance Support and JDSR programs to communicate through Navy and DoD firewalls without issues. The Distance Support program provides a secure, encrypted, compressed, and reliable means of transferring data from ship to shore. The secondary role of the Distance Support Lab is to provide web and extranet services for Joint and US Navy applications. These applications include web apps, database apps, or other applications geared and designed with maintenance as a primary focus. All communications are Unclassified Trusted Network (UTN) Protect Policy compliant, and all are encrypted to the appropriate level to coincide with DoD regulations.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

The Shipboard Management Information System (SMIS) consists of a collection of IT networks and components serving communications, logistics, engineering, deck/operations, personnel, and administrative functions for the Military Sealift Command fleet.

Full Description

MSC Shipboard Management Infrastructure System (MSC-SMIS) provides the essential shipboard information technology and network infrastructure necessary to complete MSC's mission. It is made up of the following components: Afloat Network Operations Center (ANOC), Bandwidth Efficient Satellite Transport System (BEST), Afloat Local Area Network (Class/Unclass) and the PC to PC Transfer System (PPTS).

Investment Description and Justification

Short Description

FTS 2001(Federal Telecommunication Service 2001): Is a GSA awarded multi year contract for long-distance telecommunications service, including services such as switched-voice service for voice or data.

Full Description

CHINFO Web is a tool used by US Navy Public Affairs organization. CHINFO WEB is 3 core applications (CHINFO.NAVY.MIL DADMS# 46535, EMBARK DADMS# 76905, and CHINFO Calendar DADMS# 79623.) that support the Navy Chief of Information office (CHINFO). The CHINFO WEB site has a public area available to users on the Internet, but it also has restricted areas and therefore is considered a MACIII Sensitive system. CHINFO WEB is a static website [<https://www.chinfo.navy.mil>] that provides information from the Navy Office of Information (CHINFO) to the public affairs community and interested members of the U.S. Navy. This public facing web site is used to communicate the mission and provide information for the U.S. Navy. CHINFO Embark DV/Friends of the Navy Database is a controlled access (username & password) web-based system which features the ability to add, edit and query relevant information about embarkations of distinguished visitors (DV) on U.S. Navy aircraft carriers, surface ships, and submarines. The U.S. Navy Public Affairs (PA) Office (PAO) uses the database to store information about distinguished visitors (DVs) who are requesting an embarkation on a U.S. Navy vessel, friends of the Navy (FONs), and key organizations. The PAO also uses the database as a means to track all embark requests for review and approval, gather feedback from DVs about their embark experience, and build a contact list of individuals who have authorized future contact from the Navy. CHINFO (PA) Calendar is a controlled access (username & password) event tracking system which features the ability to add, edit and track event information in a variety of ways. The U.S. Navy Office of Information uses the calendar to track events throughout the Navy and provides information on event completeness. Finally, the CHINFO (PA) Calendar is used to brief interested parties on current and future upcoming events. The CHINFO (PA) Calendar is an aggregate calendar of all events throughout the Navy.

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

Pays for Base Communications Office support. Voice communications in the form of desk phones, cell phones, pagers, calling cards, fax and modem lines, video teleconferencing(VTC), audio conferencing and toll free telephone services.

Full Description

BCOs are responsible for the day-to-day management, administration, operations and maintenance of existing base communications facilities and services, whether leased or government owned. This function includes administration of the base inside and outside cable plants, station records, station equipment, off-line devices, and plant-in-place records. They coordinate/consolidate requirements, to include MILCON and special projects and establish budgetary guidelines for shore activities. They act as liaison between Navy shore activities and any service or equipment contractor to ensure the base communications systems maintain the highest possible level of efficiency and effectiveness.

Horizontal Variance

Base Communications Office (BCO) (007-000001845 - BCO)

Budget Line Horizontal Variance Explanation

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | \$ 26,991 | |

Horizontal Change Explanation

Total increase due to to the alignment of the Defense Policy Review Initiative (DPRI) BTI installation schedule with the Guam and Okinawa construction schedule. This funding supports the scope of the work on 13 construction projects in Okinawa funded by the Government of Japan related to the Futenma Replacement Facility. All projects are vital to supporting the relocation of Marines from Okinawa to Guam as part of the creation of Marine Corps Base (MCB) Guam.

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

Centrex (Central Exchange): This is a leased telephone service offered by commercial telephone companies from their local control office as a substitute for a command buying or leasing its own on-premises PBX, Key system.

Full Description

Centrex (Central Exchange): – This is a leased telephone service offered by commercial telephone companies from their local control office (also called a public exchange) as a substitute for a command buying or leasing its own on-premises PBX, Key system, or Automatic Call Distributor (ACD). Centrex is basically normal single line telephone service with “bells and whistles” added - such as intercom, call forwarding, call transfer, toll restrict, and call hold. The local phone companies Central Office (CO) provides Centrex services.

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

PBX (Private Branch Exchange): These are telephone switches that are usually located on the command's premises and may use any available switching technology. A PBX interconnects the telephones of a command to each other.

Full Description

PBX (Private Branch Exchange): – These are telephone switches that are usually located on the commands' premises and may use any available switching technology. A PBX interconnects the telephones of a command to each other and to trunks from the local central office. Users of the PBX share a certain number of outside trunks for making telephone calls external to the PBX. The telephone extension interface may be a standard telephone or an enhanced telephone that uses proprietary digital interface protocols defined by the manufacturer.

Investment Description and Justification

Short Description

This project will utilize electronic document management, automated workflow management and related technologies to enhance the capability of managers and other personnel at COMFRC Enterprise.

Full Description

This project will utilize electronic document management, automated workflow management and related technologies to enhance the capability of managers and other personnel at COMFRC Enterprise to analyze and act upon the vast array of Business Intelligence (BI) that is available from the facility's information systems. The term BI refers to a broad array of applications and technologies designed for the gathering, storing, analyzing and accessing enterprise data for the purpose of making better business decisions. The raw data that is accessed by a BI system exists in many forms (e-mail, word processing documents, spreadsheets, databases, etc.). The proposed system will access data from these and other sources to perform a variety of processing functions (analytical, statistical, reporting, etc.) in order to create a collaborative environment in which system users will be able to cost-effectively extract the full value from data that is contained in the various information systems at the facility.

Investment Description and Justification

Short Description

Web-based app supporting NAVFAC's application portfolio management requirements, including rationalization, data in support of DON apps rationalization, tracking info for apps transition/certification to NMCI.

Full Description

A web based application supporting the NAVFAC claimancy's application portfolio requirements including application software license/cost tracking, and NAVFAC claimancy applications rationalization data tracking. NITEP provides essential information on NAVAC's portfolio of COTS and GOTS products throughout Echelon II, III & IV commands/components that comprise the claimancy. NITEP also provides essential information for each application on the rationalization status, POC's and other critical information used to facilitate NAVFAC transition to NMCI and ONE-NET, and in support of the Navy FAM process. This application supports the NAVFAC Portfolio Manager with the ability to rationalize NAVFAC-wide applications.

CORPORATE DOCUMENT MANAGMENT SYSTEM (007-000002385 - CDMS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18273 - Improve and strengthen business operations through a move to DoD-enterprise or shared services; reduce administrative and regulatory burden.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classifies as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Information sharing / Document Library

Investment Description and Justification

Short Description

The NAVSEA Corporate Document Management System (CDMS) is a tool used for workflow process and document management. CDMS has a highly enhanced search engine for document retrieval.

Full Description

NAVSEA's Corporate Document Management System (CDMS) employs Opentext's Livelink product to reduce paper and improve process efficiencies throughout the command. The Livelink application is a web enabled integrated document management, workflow, knowledge management and collaborative work environment. This application provides rapid desktop access to information required to perform daily business processes in a collaborative web environment. Key components of Livelink are that it is a Web-based COTS product, uses an Oracle database, and is FIPS 140-2 compliant. NAVSEA's implementation of Livelink uses a three-tier architecture involving a web-based user interface, a middleware administrative tier and a backend database. NAVSEA employs IIS web servers behind a BigIP load balancer to provide redundancy and speed to users accessing the system. The application server provides administrative services such as indexing and provides the link to the RDBMS. The RDBMS server is employing Oracle 10g. The CDMS servers all use Microsoft operating systems and are maintained in full compliance with IAVA requirements.

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Knowledge management / Data Warehouse

Investment Description and Justification

Short Description

Database system for use in IT Management.

Full Description

DITPR is the DoD's authoritative inventory of IT systems. It provides senior DoD decision makers a coherent and contextual view of the capabilities and associated system enablers for making resource decisions and a common central repository for IT system information to support the certification processes of the various Investment Review Boards (IRBs) and the Defense Business System Management Committee (DBSMC). DITPR provides consistent automated processes across the Components to meet compliance reporting requirements (e.g., Ronald W. Reagan National Defense Authorization Act of 2002 (NDAA), Federal Information Security Act of 2002 (FISMA), E-Authentication, Privacy Act, Privacy Impact Assessments, Interoperability and Social Security Number Reduction. DITPR also enables the Mission Area and the Components to accomplish IT Portfolio management (PfM).

Investment Description and Justification

Short Description

Naval Facilities Engineering Command (NAVFAC) Intra and Extra net with collaborative tools.

Full Description

The NAVFAC Portal is an integrated, standards-based platform that allows NAVFAC business lines, support lines and Components to be more responsive to changing business requirements. It provides a single environment for the services needed to deploy and manage application and Web services and content. The Oracle security features provide consistent control and access to NAVFAC and Navy applications through the enterprise portal, and Oracle application server components are provided to integrate applications and automate business processes.

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$678) | |

Horizontal Change Explanation

Resources decreased in FY21 due to a technical correction of issue 50326, wireless device management reform. This issue takes efficiencies in wireless device funding to account for improved management of wireless communication devices in accordance with POM (19). New Navy Enterprise contract issued at the start of FY19 provided lower cost of service per device and a large discount for the number (quantity) of devices serviced on the contract for CNRC.

Investment Level Details

PACFLT Base-Level Communications Capabilities (007-000002747 - PAC BASE-LEVEL)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18269 - Enhance information technology and cybersecurity defense capabilities.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

High Value IT Investment (HVII) Tier 2

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Voice Communications

Investment Description and Justification

Short Description

Commander, Pacific Fleet (PACFLT) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Base-Level communications, Unit/Activity-based voice, video and data services.

Full Description

Commander, Pacific Fleet (PACFLT) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Base-Level communications, Unit/Activity-based voice, video and data services.

Investment Level Details

MSC Base-Level Computing Capabilities (007-000002759 - MSC BL-COMP)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18269 - Enhance information technology and cybersecurity defense capabilities.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

Military Sealift Command (MSC) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Base-Level Computing capabilities not delineated elsewhere.

Investment Description and Justification

Short Description

Military Personnel Testing and Education Command (MPTE) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Information Management capabilities not delineated elsewhere.

Full Description

Lean BPM provides the means to identify, track, and control changes to individual application source code and hardware entities, thus managing and monitoring an entire development cycle for Program of Record systems managed by NETPDTC. NETPDTC Lean BPM Services. The major function of NETPDTC Lean BPM Services to date has been the automation of the Execution Management Framework (EMF). EMF is the over-arching and strategically aligned IM/IT service delivery process developed by NETPDTC. Lean BPM is also used extensively to provide configuration/change management (CM) support for NETC applications developed and managed by NETPDTC N6 as the IT Service Provider. The tool is also used for tracking workflow through our core end-to-end business processes including formal Training Project Plans (TPPS), Human Performance Resource Requirements (HPRR), and Impaired Training Equipment Reports (ITERs).

Investment Description and Justification

Short Description

Space and Naval Warfare Systems Command (SPAWAR) miscellaneous subsystems, projects, programs, special interest items, IT organizations and sub-initiatives in support of Related Technical Activities capabilities not delineated elsewhere.

Full Description

NRH (formerly known as NRWS) is a hybrid Microsoft SharePoint 2010 based site providing both publishing and collaborative services targeted to Navy Reservists. System is comprised of both a Public side (for PAO subject matter) and a Private side (FOUO subject matter). Content on the Public side is viewable by the general public and content is controlled by the CNRF PAO. Access to the Private side is restricted by CAC authentication to members of the Navy Reserve and other approved affiliates. The private side enables users and subordinate commands to access and post information and the ability to collaborate in a trusted SharePoint environment. The private site also serves as a portal to other Navy Reserve Systems by providing single sign-on capability. In addition, access to these other Navy Reserve systems is only achieved by first logging on to the private side of NRH. The majority of users are Navy Reservist (SELRES), Full Time Support staff and civilians supporting the Reserve Forces. Day to day operations and administration is conducted by CNRF contracted technicians and managed by CNRF N65 staff. Helpdesk provided by military/GS CNRF members. SPAWAR Systems Center New Orleans (SSC) hosts the servers in a NMCI eDMZ environment. SSC provides network infrastructure along with network administration and security. This support is provided in accordance with a signed Service Level Agreement between the CNRFC N6 and SSC NOLA Technical Director.

Horizontal Variance

ONE-Net (007-000002915 - ONE-Net)

Budget Line Horizontal Variance Explanation

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$5,925) | |

Horizontal Change Explanation

Change due to primarily due to consolidation of a ONE-NET requirement to 1 contract, lower per-unit costs, and a realignment of associated maintenance costs to DLA. Change also due to realignment of NAVFAC DBS from NWCF to OMN; and an inflationary adjustment.

OMB Sector/Function/Service:

General Government / Information sharing / Collaboration Tools

Investment Description and Justification

Short Description

The Carderock division Intranet provides authorized access to information, tools and applications relevant to the Naval Sea Systems Command Carderock Division.

Full Description

The Carderock Division Intranet (CDI) is the existing repository of Division knowledge and computing resources that provides authorized access to information, tools and applications relevant to Carderock Division and tenant personnel supporting communication, collaboration and workflow throughout the Division. It provides the organizing framework for the Naval Surface Warfare Center, Carderock Division (NSWCCD) Core and Support Business Missions (CSBMs). The CSBMs include Human Resources Management, Facilities Service Management, Security Management, Information Technology Inventory Management, Financial Management, and the Management of NSWCCD Public Affairs. These CSBMs integrate horizontally across all functional areas (e.g., planning, budgeting, Information Technology (IT), procurement, etc.) to provide end-to-end support of the core and support business processes to the decision makers at NSWCCD. The CDI environment requires a Microsoft Windows web server and an Oracle database server. The CDI is managed by the Enterprise Solutions Branch of NSWCCD.

Investment Description and Justification

Short Description

NAVSEA Intranet is a web-based application that is used for collaboration, enterprise search, content management, and social computing.

Full Description

NAVSEA Intranet is a web-based application that is used for collaboration, enterprise search, content management, and social computing. NAVSEA Intranet is accessible from both inside and outside of NAVSEA and is authorized to process Controlled Unclassified Information (CUI) with the exception of Naval Nuclear Propulsion Information (NNPI) or documents marked NOFORN. It is used for unclassified information, including business sensitive and For Official Use Only (FOUO) lists, data and documents. Users include NAVSEA business units, including headquarters, Field Activities, Affiliated PEOs, and contractors.

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

The Project Management System (PMS) provides workflow-based modules for sharing and program information for all lifecycle phases of ship acquisition, design and construction.

Full Description

The Project Management family of extranet sites provide central hubs for information sharing, program information such as calendars, lessons learned, risk management. The Project Management System (PMS) PMS- ES is a DISA hosted website supporting PMS 325, PMS 385, PMS 377 and PMS 400D projects which fully integrates major management processes that support program acquisition (or similar business process) objectives.

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

JDSDG-R is Joint Distance Support Distributed Gateway - Rack This is part of the Distance Support program.

Full Description

The JDSDG rack and suite of applications was designed to meet the FORCENET and SEAPOWER 21 initiatives through net-centric replication of data from the deployed unit to the enterprise and vice versa. This system of applications and reach-back capability contribute to the global command and control infrastructure, and help joint forces execute more effective decision making processes in less time. The JDSDG rack has been designed to increase situational awareness, operational planning, replicate data from the field to the enterprise and the enterprise to the field, and to assist in collaborative decision making. This system has been designed to bring better synchronization of actions through enhanced speed and quality of command. In the future, this concept of operations shall be the model for other programs and initiatives to follow to realize the fundamentals of net-centric warfare in the 21st century.

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Other general government / Ensure Continuity of Operations

Investment Description and Justification

Short Description

The SSCNOLA NMCI DMZ Extension CSA represents the Hosting Shell of all network, server, and storage HW required to function as a Production House and Development Facility. CSA provides a mgmt environment for production development and test systems.

Full Description

The CSA is an Enterprise Hosting Environment that hosts Active and Reserve Navy applications, as well as other Departments of Defense and Homeland Security applications. The CSA provides NIPRNET/SIPRNET and NMCI-wide network connectivity to programs that are hosted in the CSA. The CSA allows authorized users access to connected systems and shared services with high levels of availability and security. The CSA is deployed at the following locations: • Space and Naval Warfare Systems Center (SSC) in New Orleans, Louisiana. (CNLA) • Space and Naval Warfare Systems Center (SSC) in San Diego, California. • (future CSA-C COOP Site) Space and Naval Warfare Systems Center Charleston, South Carolina (SSCLANT). (SPSC) The two locations provide mutual Continuity of Operations functions, as well as host Production, QA/Test, and Development Environments.

OMB Sector/Function/Service:

General Government / Other general government / Ensure Continuity of Operations

Investment Description and Justification

Short Description

PROMIS supports the Department of the Navy human research protection program by ensuring that human research is conducted in a manner consistent with any applicable regulations and to provide human research ethics education to appropriate personnel.

Full Description

The Protections in Research and Oversight Management Information System (PROMIS) was developed by Washington Consulting under the direction of Office of Naval Research (ONR) Code 34 and BUMED. The application is configured using Microsoft Office for SharePoint Server (MOSS 2007) and leverages a new stand-alone SharePoint instance. The system was initially deployed in the Fall of 2009, and is currently being used by 23 Navy and Marine Corps Commands for tracking human subject research. PROMIS is intended to support the Department of the Navy's Human Research Protection Program (DON-HRPP). DON HRPP is charged with ensuring that human research is conducted in a manner consistent with any applicable regulations and to provide human research ethics education to appropriate personnel. Navy Commands such as NEDU Panama City, NPS Monterey, NAMRU-SA San Antonio, NAMRU-6 Peru, NUWC Newport, USNA Annapolis, NMC Portsmouth, currently utilize the system, encompassing both medical and social-behavioral research. The PROMIS system is hosted in the ONR Extranet environment and is accessible via a public URL <https://promis.navy.mil>. The site requires CAC/PKI authentication to access the site. The infrastructure supporting PROMIS is maintained by ONR Code 06 and the application is maintained by the WCI (contractor). The system is hosted on SharePoint and the SharePoint UI is the primary source for data collection from Command IRB and DON HRPP Staff. The system stores Human Subject Research Information and assists with the submission, review and reporting of the HRPP data. Automated interfaces (system to system) exist for CITI (Receive Navy Personnel Training Certification). The system is MAC III Sensitive.

Investment Description and Justification

Short Description

Provides: query, analysis, and management tools for DIFMS, ILSMIS, SSLDCADA, SOS, EBIS, and DCPS/DCPDS information. Consolidates data from external sources and provides this information utilizing online reports via the browser.

Full Description

This system provides the platform for multiple applications, SharePoint collaboration sites within the NMCI environment. It interfaces with authoritative data sources such as EBIC and DCPS/DCPDS. It provides an interface into the Virtual In-Service Engineering applications.

Investment Description and Justification

Short Description

Navy Reserve Data Warehouse includes COOP to SSC San Diego for site failover within 4 hours, data replication, high availability for instant failover, automated offsite tape storage, and application/hardware tuning for optimum performance.

Full Description

NRDW-DSS is a corporate data warehouse that was designed to effectively consolidate, integrate, and archive Navy Reserve disparate corporate legacy databases into a single web-enabled content rich information source. These databases include MRRS, NROWS, RHS, RIMSFM, and RCCPDS. Concentrating data from these various data sources, NRDW-DSS provides projection and trends information (dashboard indicators) to senior executives and heads of Reserve commands. Scope ranges of from total force to individuals. NRDW-DSS was developed as a two-tier architecture system. These tiers are the database and the Oracle Portal web server. The system is available for access to Reserve Force Leadership via the Internet. The NRDW-DSS contains and transmits data covered by the Privacy Act of 1974, and must therefore protect this data accordingly. Data is protected in transit from client to server by SSL encryption utilizing FIPS 140-1 encryption. Summarized statistical data is generated cyclically on a monthly basis. CNRFC (N1) is the User Representative and directs which reports are to be generated. Pre-written reports are run and made available to end users. •Reports on retention attrition – loss rates and gains. •Reports on financial – number and length of mobilized status by Force. •Personnel Data – count numbers broken by factors such as designator, paygrade. •Echelon 4 report, staffing and planning grouping by NRA. •An ad-hoc capability is also provided. •Staffing of medical personnel for critical medical units.

Investment Description and Justification

Short Description

uNSERC provides a centralized location where Systems Engineers (SE)s collaborate in the development of Naval Systems, Systems of Systems, Family of Systems, AIR, SPACE, and SEA Platforms.

Full Description

The Assistant Secretary of the Navy (ASN)/Research Development & Acquisition (RDA) Chief Systems Engineer (CHSENG) requires Navy Systems Engineers (SEs) to develop with a standardized systems engineering tool suite that fully supports the systems acquisition lifecycle of all Navy programs. The unclassified Naval Systems Engineering Resource Center (NSERC) was built to satisfy this requirement. The NSERC system is net-centric and facilitates the sharing of licenses, hardware, software, systems administration support and the management of the environment. It also supports and improves the development of System Engineering (SE) and interoperability across the Navy while maintaining the integrity of a Research, Development, Test, and Evaluation (RDT&E) infrastructure. The infrastructure is primarily concentrated within Naval communities but is also focused on meeting the needs of the Department of Defense. ASN/RDA CHSENG is the primary stakeholder for the NSERC, an enterprise system that provides a secure, customizable, collaborative environment for all Navy systems engineers and their support teams. NSERC provides a centralized location where Systems Engineers (SE)s collaborate in the development of Naval Systems, Systems of Systems, Family of Systems, AIR, SPACE, and SEA Platforms. It provides an integrated system engineering tool suite to facilitate the performance of tasks associated with Requirements Analysis, Functional Analysis, Design Verification, Modeling and Simulation, Development, Test, Risk Assessment, and Traceability development. The system and tools provide a collaborative environment where engineers determine requirements, perform research and development tasks, then test and evaluate solutions. Specific system, application, and environments are developed and customized according to a Service Level Offering established between the NSERC Technical Operations Manager and the engineering team's project manager. Customized web interfaces are developed to meet the special requirements of an engineering team.

Full Description

NAV IG web is used to inspect, investigate, or inquire into any and all matters of importance to the Department of the Navy and maintain the highest level of public confidence. The Guiding Principles of the Naval Inspector General are as follows:

- Provide candid, objective and uninhibited analysis and advice.
- Emphasize integrity, ethics and discipline.
- Promote efficiency, effectiveness and readiness.
- Conduct our activities with the highest standards of ethical leadership and professionalism.
- Advocate for quality of life for Sailors, Marines, their families and DON civilian employees.
- Exercise fairness, impartiality and timeliness in accomplishing our mission.

Investment Description and Justification

Short Description

SPAWAR ITD Data Center (SID) - ITD Host Facility.

Full Description

SID provides a Navy hosting environment for DON/AA systems. SID is designated as a Mission Assurance Category (MAC) III Sensitive support system. SID uses the Non-secure Internet Protocol Router Network (NIPRNet) and the Navy/Marine Corps Intranet (NMCI) IA suite at Space and Naval Warfare Systems Center San Diego (SSC PAC) hosting facility in San Diego, CA. The circuit portion of SID is under a separate accreditation boundary through NMCI. SID is comprised of servers that are used to host SID applications that will be accredited separately. The SID accreditation is based on virtual servers running Windows operating system; MS IIS web servers, Oracle database and MS SQL relational database server. SID administration and maintenance of hardware and software is provided by SSC PAC.

Investment Description and Justification

Short Description

The portal is a web application providing access to and interaction with relevant information assets (content, applications, business processes), knowledge assets and human assets, to targeted audiences, delivered in a highly personalized manner.

Full Description

My Navy Portal (MNP) is a web application providing access to and interaction with relevant information assets (content, applications, business processes), knowledge assets and human assets, to targeted audiences, delivered in a highly personalized manner. System functions for MNP fall into 5 broad categories: 1. Identity and Access Management - Will provide a Uniform Security Model by which ONE identity grants global and joint access to all HR content and applications required by the User's role. Sub-functions include account provisioning, authentication, authorization and single sign-on. 2. Information Architecture - Enables a unified brand for the HR community by enabling consistent behavior among content and applications that improves overall User Experience and enhances the ease of use among the various business applications. 3. Content Management and Collaboration - Enables federation of content, knowledge management, communities of practice and collaboration sites and robust/intelligent search capabilities. 4. Application Integration and Aggregation - Establishes a framework to federate existing business applications to the Portal and streamline back-office processes through workflows and business process management. 5. Service Delivery and Customer Relationship Management - Will provide a framework that centrally orchestrates, manages and tracks all customer interactions and transactions. The input/output for end user interactions will be via a web based interface using standard web protocols. The input/output associated with external business applications (item 4 above) will take place using an Enterprise Service Bus. The external applications that are integrated into MNP will be a subset of two existing Systems of Systems - Navy Knowledge Online (NKO) and BUPERS Online (BOL). MNP is expected to support well over 1,250,000 users comprised of all USN active duty and reserve personnel, dependents, all DoN civilians, retirees, contractors and other specifically authorized personnel. MNP will also support a public site accessible to the general public (no login required). The administration of MNP will be accomplished via a comprehensive tiered system administration structure in which a Uniform Security Model is used to assign role based privileges to individual administrators. At one end of this spectrum there will be System Administrator role which broad access and control to MNP configuration and data.

Investment Description and Justification

Short Description

The FSC RightFax system is an application-based program that utilizes OpenText RightFax (Formerly Captaris) software to automate the process of creating, sending, receiving, and managing faxes directly into user's computer.

Full Description

The FSC RightFax system utilizes RightFax, a software product from OpenText, to automate the process of storing faxed documents in an electronic format and routing/forwarding them to a designated mailbox on the server. Users will be notified via email that they have documents awaiting their attention. Users will also be able to access the documents by logging onto a secured web site, where they can archive the faxed documents, forward the documents to a specific user or group, and print documents.

Investment Description and Justification

Short Description

Provides resources for Navy/USMC Base-level communications, Unit/Activity-based voice, video and data services.

Full Description

Naval Surface Warfare Center (NSWC) Crane provides tactical and administrative fleet support functions. The NSWC Crane SharePoint - Classified directly supports this mission by providing a critical information source specifically tailored to exchange Secret and Below Interoperability (SABI) and classified data to authorized users. NSWC Crane SharePoint - Classified environment will service Crane as a controlled channel to collaborate between several entities within the infrastructure of Crane, plus outside commands. Use of this environment is timelier, will provide increased cost efficiency, deliver effective workflow capabilities, will successfully maintain discussion threads, and will allow for submission of documents used for collaboration (reference) purposes. BUT this System will not function as a Document repository.

Investment Description and Justification

Short Description

The Navy Continuous Training Environment (NCTE) is the Navy's global Tactical Training Network that supports USFF N7 in conducting Fleet Synthetic Training (FST).

Full Description

The Navy Continuous Training Environment (NCTE) is the Navy's global Tactical Training Network that supports USFF N7 in conducting Fleet Synthetic Training (FST). Naval Warfare Development Command (NWDC) provides development, system integration, and program management of NCTE. Execution of FST exercises via NCTE is part of Navy's major effort to improve fleet tactical training and gain cost efficiencies through the use of complex modeling and simulation systems. Joint Semi Automated Forces (JSAF) simulation software is the core simulation engine driving the NCTE used to provide Naval and Joint Forces the ability to "Train as They Fight". NCTE is a persistent tactical training network approved by Cyber Asset Reduction and Security (CARS) as an exempted network.

Corona Corporate Applications System (007-000101316 - CCAS)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18084 - Reform the Department's Business Practices for Greater Performance and Affordability

Strategic Objective:

007SO18273 - Improve and strengthen business operations through a move to DoD-enterprise or shared services; reduce administrative and regulatory burden.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

Energy, Science, and Technology / General science and basic research / Scientific and Technological Research and Innovation

Investment Description and Justification

Short Description

CCAS provides customized workflow and data management tools supporting core mission areas of combat system performance analysis, material readiness assessment, training range operations, and Navy metrology (measurement) science.

Full Description

The Corona Corporate Application System (CCAS) is a web and database platform which provides customized workflow and data management tools supporting NSWC Corona Division's core mission areas of combat system performance analysis, material readiness assessment, training range operations, and Navy metrology (measurement) science. Primary users are Corona Division employees, although some applications produce data of interest to program sponsors and Fleet activities. These user communities include USFFC, AIRPAC, SSP, Telemetry sponsors (such as IWS-1), NAVAIR PMA-205, Marine Corps (TECOM, MARCORSYSCOM), and others.

In general, the system accepts data inputs through web forms and stores the data in files or databases for further manipulation or summary reporting. The functions supported are broad and include: an range instrumentation acquisition prioritization and reporting tool for the Navy's tactical aircrew training ranges; a planning tool for telemetry system deployment to support Navy and coalition (including Aegis Ballistic Missile Defense) exercises; a travel compensatory time calculator and approval tool; and local knowledge bases such as the Command Intranet and various wikis. The system also provides a searchable repository of Corona Division policy, procedures, and forms.

Investment Description and Justification

Short Description

SPAWAR - CEDC CHAS - Hanahan, SC.

Full Description

Data Center personnel perform day-to-day support functions including oversight of hosting environment operations, maintenance, and secure networks. Network and infrastructure support teams ensure the proper configuration, operation, and maintenance of hardware and network support systems. Customers also have the option to outsource certain elements of system security, database engineering support, and professional/engineering services by electing to fund the appropriate Enhancing Services offered by DC2HS as detailed in the FY18 Service Catalog for Data Center and Commercial Hosting Services.

Naval Operational Business Logistics Enterprise (007-000103347 - NOBLE)

Investment Strategic Alignment to DoD Goals

Strategic Goal:

007SG18082 - Rebuild Military Readiness as We Build a More Lethal Joint Force

Strategic Objective:

007SO18266 - Restore Military Readiness to Build a More Lethal Force.

Investment Identification

Ownership:

SERVICES / NAVY / NAVY

Reporting Type:

Non-Major

Investment Type:

This is a non-Defense Business System (non-DBS) that is classified as a non-National Security System

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

The Naval Operational Business Logistics Enterprise (NOBLE) program provides COTS-based supply, maintenance, and finance solutions of Naval Operational Forces.

Full Description

The Naval Operational Business Logistics Enterprise (NOBLE) program provides COTS-based supply, maintenance, and finance solutions of Naval Operational Forces. It provides a single enterprise-wide IDE to execute common Maintenance, Repair, Overhaul (MRO) and common Supply Chain and Financial Management (SCM) capabilities. NOBLE supports the Naval Operational Supply System (NOSS), Naval Aviation Maintenance System (NAMS), and Naval Operational Maintenance Environment (NOME) programs. It provides supply chain, financial management, aviation and maritime maintenance, repair, and overhaul support, enhancing readiness, and improving operational availability, reliability, and sustainability across the Naval logistic support enterprise.

Investment Description and Justification

Short Description

The Integrated Data Environment (IDE) Data as a Service (DaaS) is a proposed agile operational Cloud-hosted architecture and platform that will provide a multi-layer cloud and web based implementation.

Full Description

The Integrated Data Environment (IDE) Data as a Service (DaaS) is a proposed agile operational Cloud-hosted architecture and platform that will provide a multi-layer cloud and web based implementation consisting of a (DaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS) for shore based and deployed users. The IDE will provide data integration services to the Navy Operational Business Logistics Enterprise (NOBLE) Family of Systems (FoS), including the Naval Aviation Maintenance System, (NAMS), Naval Operational Maintenance Environment (NOME), and Naval Operational Supply System (NOSS). The IDE will also support other Logistics Information Technology Functional Area Manager (Log IT FAM) portfolio programs (e.g., ALE, MBPS, NMMES-TR).

DoD Type Segment:

Enterprise Services / 600-000 - DoD IT Infrastructure

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT Infrastructure Maintenance

Investment Description and Justification

Short Description

NAVSEA - NSY - Pearl Harbor HI.

Full Description

The mission of the Pearl Harbor Naval Shipyard & Intermediate Maintenance Facility (PHNSY & IMF) Data Center is to serve as the information processing center for numerous Automated Information System (AIS) applications required to support the PHNSY & IMF and the Hawaii Regional Maintenance Center (HRMC), whose mission includes the overhauling, repairing, converting, alteration, and refurbishing of surface ships and submarines. In addition, the PHNSY Data Center also supports ship repair operations for forward deployed ships in Japan, Guam and other remote sites in WESTPAC and Outside Contiguous United States (OCONUS) locations.

|-----------------------------------|--|
|-----------------------------------|--|

Navy's Centrally Managed Enterprise Software License IT investment, Marine Corps Software Acquisition Team (MCSWAT), UII 007-000103057, is a strategic sourcing initiative for the sustainment and management of commercial-off-the-shelf enterprise software. It provides funding required to maintain, sustain and support the Marine Corps software investment in Microsoft, Oracle, VMware, IBM Cognos, Red Hat and Microsoft Premier Support. MCSWAT enables protection to the MCEN by providing the most current software version available through enterprise software sustainment contracts. Increases between FY 2020 and FY 2021 support costs for Microsoft/DEOS ESL.

Organization Architecture Profile**

Architecture Profile

| | |
|--------------------|---|
| DoD Segment | 710-000 Battlespace Awareness-Environment |
|--------------------|---|

Architecture Budget Justification

Navy Battlespace Awareness IT investments support the ability to collect, analyze, predict and exploit meteorological, oceanographic and space environmental data. Navy investments in this segment include Primary Oceanography Prediction Systems and Meteorological and Oceanography Intelligence. Meteorology and Oceanography (METOC) Operational Mission IT (MOMIT), provides for Navy operational meteorology and oceanography data ingestion, processing, distribution and product tailoring capability to support mission areas. Primary Oceanography Prediction System (POPS), UII 007-000001544, produces complex computer-based models of the world's ocean and atmosphere providing forecasts, charts, imagery and operational data sets to support employed Navy forces worldwide. Meteorology and Oceanography Support Information System (METOCSIS), UII 007-000001740, is an aggregated system supporting the METOC in areas of Anti-Submarine Warfare, Aviation, Intelligence, Surveillance & Recon., Mine Warfare, Maritime Ops, Fleet Ops, Precise Time. Major changes between FY 2020 and FY 2021 were driven by acquisition strategy changes, and the development of innovative IT improvements for Marine Corps.

Investment Architecture

DoD Type Segment:

Core Mission Services / 710-000 - Battlespace Awareness-Environment

OMB Sector/Function/Service:

Environment and Natural Resources / Other natural resources / Environmental Monitoring and Forecasting

Investment Description and Justification

Short Description

Reports aircraft material condition. The web based program Support Equipment Broad Arrow reporting process. Reports ready basic aircraft information used by CNAF and CNO. real time material condition data, supply and maintenance information.

Full Description

Aviation Maintenance Supply Readiness Reporting (AMSRR) Version 3.0 is a net centric program that provides for aviation material and supply readiness input and assessment. It provides disposition and location of aviation assets throughout Navy and Marine Corp Aviation. By the very nature of the data AMSRR can provide a way to create and integrate assets from various Navy and Marine Corp Units world wide. Through integration of data from AMSRR with Aviation Data Warehouse data and forwarded to the Defense Readiness Reporting System – Navy (DRRS-N), DRRS-N can provide the basis for determining deployment potential or actual deployed capability. As part of the net centric environment, AMSRR assists in making the right capabilities available at the right time and place. As a force application AMSRR can provide: 1) Total visibility of assets to enhance planning and assess risk 2) The capability to tailor assets to achieve desired effects 3) Support decisions regarding forward basing.

DoD Type Segment:

Core Mission Services / 720-000 - Battlespace Networks

OMB Sector/Function/Service:

Defense and Security / Department of Defense-Military / Battlespace Networks

Investment Description and Justification

Short Description

MCHS supplies only hardware to over 50 Programs of Record. Individual Program of Record (POR) that integrates MCHS hardware into their system is responsible for obtaining C&A. MCHS supports new programs and sustainment of fielded systems.

Full Description

Marine Corps Common Hardware Client Workstations and File/Application Servers (MCCH)- Programs implement approved recommendations of the Unified Marine Air Ground Task Force (MAGTF) C4I Integrated Product Team (IPT) and support the Marine Corps Master Plan which calls for "A robust command and control/information infrastructure, extending the defense information infrastructure to meet Marine Corps deployed information requirements ... Develop a computing infrastructure capable of supporting both joint and service level national security systems and automated information systems".

Marine Corps Common Hardware Tactical File/Application Servers and Tactical Client Workstations (MCCH)- programs provide a refreshed and modernized Information Technology Infrastructure with a multi-level capability for applications. The multi-level approach includes a minimum of three basic technology ranges of varying capability from high (Enterprise, Technical, or Multimedia), medium (Departmental) and low-end (General Purpose or Entry Level) platforms that provide file and applications support for UNIX (RISC, Reduced Instruction Set Computer) and Intel (CISC, Complex Instruction Set Computer) based applications. Within each of the basic ranges there are specific capabilities such as the physical configuration (i.e. laptop), the level of ruggedization, the amount of Random Access Memory (RAM), the number and size of the hard drives, specific multimedia support, etc. that further configure a machine to meet a specific requirement. Tactical primarily consist of ruggedized laptops and the non-tactical primarily consists of Commercial off the shelf (COTS) desktops and laptops.

DRSN provides high quality, secure telecommunications for C2 and crisis management for senior DOD, civil, and allied decision makers. It is the Joint Staff directed secure circuit-switched element.

Full Description

DRSN provides high quality, secure telecommunications for C2 and crisis management for senior DOD, civil, and allied decision makers. It is the Joint Staff directed secure circuit-switched element of the Defense Information System Network (DISN) and is the foundation for Defense global secure-voice-services. Providing high quality, secure-voice, data, and voice conferencing services. The DRSN is the designated DOD strategic secure voice network serving peacetime, pre-attack, and to the maximum extent practical, trans-attack, and port-attack secure voice requirements.

Information Management supports the Marine Corps Operating Forces and supporting establishment commands (customers, beneficiaries) across Marine Corps bases and stations (stakeholders) by providing labor and non-labor resources.

Full Description

Information Management supports the Marine Corps Operating Forces and supporting establishment commands (customers, beneficiaries) across Marine Corps bases and stations (stakeholders) by providing labor and non-labor resources for the following functions:

- Voice Services. Activities that provide for the operation and maintenance of telecommunications and its supplementary equipment.
- Data Services. Activities that provide data services, planning for information resource management, implementation of systems security and control, information storage and retrieval, and development and management of web sites.
- Ground Electronic Maintenance. Activities performed in support of the maintenance and repair of electronic equipment, copiers, printers, computers, radios and all other electronic equipment.
- Audio/Visual Services. Activities to provide audio/visual information productions and services such as slide and slide-sound tests, film strips, multi-media, video disk, audio productions, video, television closed circuit, broadcasting, and graphic art.

Sierra Hotel Aviation Report Program - SHARP - is a transactional Web based application used by the Navy's ashore and afloat fleet aviation units that tracks readiness, scheduling, budget data and generates reports.

Full Description

Sierra Hotel Aviation Report Program - SHARP - is a transactional Web based application used by the Navy's ashore and afloat fleet aviation units. SHARP's major functions: It enables logging all post flight information related to aircrew readiness and log books; captures resource expenditures related to the flight event; it contains multiple functions that enhance data flow within a squadron and detachment such as flight scheduling, and report generation. Unique modules are available to determine aircrew readiness for reporting to NAVY SORTS. Data is used by type wings, type commanders, CNO, and reported up line to the Defense Readiness Reporting System - Navy.

Investment Description and Justification

Short Description

Is a sensor that defends friendly forces from incoming aircraft and cruise missiles by correlating sensor measurement data. interfaced with other CTN systems and the AN/TPS-59 radar IOT improve SA for the Commander.

Full Description

The CTN system is an adaptation of the Navy Cooperative Engagement Capability (CEC), modified to meet the needs of the Marine Corps Sensor and Weapons capability for the Marine Air Ground Task Force (MAGTF). The CTN system will be interfaced with other CTN systems, Navy CEC systems, and the AN/TPS-59 radar, to provide the MAGTF and Joint Task Force Commanders a ground-based sensor netting solution that defends friendly forces from incoming aircraft and cruise missiles by correlating sensor measurement data (target velocity and position) from local and remote radars in the CEC/CTN private encrypted network, which has no direct connection to any GIG element. CTN improves situational awareness (SA) by providing accurate, composite, real-time surveillance tracks. The CTN distributed operations capability is being developed to network the Marine Air Command and Control Systems (MACCS) Family of Systems in support of Expeditionary Maneuver Warfare.

DoD Type Segment:

Core Mission Services / 730-000 - Command & Control

OMB Sector/Function/Service:

Defense and Security / Department of Defense-Military / Command and Control

Investment Description and Justification

Short Description

MMIMS will provide the ability to rcv, manage, and transmit modeled meteorological information from the Air Force Weather Agency. Dissemination of information will be via the AFATD system.

Full Description

The MMIM will be employed at the artillery regimental and battalion Combat Operations Center (COC). The primary method of distribution for meteorological information is the Advanced Field Artillery Tactical Data System (AFATDS). The MMIM will access the tactical fires network at the senior artillery COC and be disseminated via AFATDS to target acquisition assets and firing units. The MMIM will provide the ability to receive, manage, and transmit modeled meteorological information from the Air Force Weather Agency (AFWA). The backbone of the MMIM is the Army Developed Computer Meteorological Data - Profiler (CMD-P) software.

Investment Architecture

DoD Type Segment:

Core Mission Services / 730-000 - Command & Control

OMB Sector/Function/Service:

Defense and Security / Department of Defense-Military / Command and Control

Investment Description and Justification

Short Description

Will leverage equipment solutions common to the Mobile Modular Command and Control (M2C2) fielded solution and the COBRA3 prototype enhanced with FMV receive capabilities. Supports FMV for CENTCOM JUONs OTM.

Full Description

The NOTM Increment 1 systems will function on a digitized battlefield to provide Commanders and their Staff an improved, continuous and reliable operational capability for uninterrupted access to digital C2 data and applications. The NOTM Increment 1 systems allow Commanders and their Staff to rapidly coordinate with higher, subordinate, and adjacent units and provide reach back to Command Elements using available digital C2 applications and tools while both At-The-Halt and OTM. The NOTM Increment 1 systems provide the capability to link to and extend Defense Information Systems Network services. (e.g., Secure Internet Protocol Router Network, Non-secure Internet Protocol Router Network, and Defense Switched Network). Additionally, the NOTM Increment 1 system will be enhanced with Full Motion Video (FMV) capabilities integrated into the NOTM network architecture. The capabilities of the Combat Operations Center (COC) OTM Battlefield Remote Access and Awareness Applications (COBRA3) have been identified as the baseline for the NOTM Increment 1 capability. NOTM Increment 1 will contain four main subcomponents; Point of Presence Vehicle (PoP-V), Staff Vehicle Kits (SVK), Staff Kits (SK) and Tactical Entry Point (TEP). NOTM Increment 1 will leverage equipment solutions common to the Mobile Modular Command and Control (M2C2) fielded solution and the COBRA3 prototype enhanced with FMV receive capabilities. NOTM Increment 1 Phase 11 requires development, integration, testing and fielding of sixteen (16) systems to meet COC OTM, M2C2 Urgent Universal Need Statement, and NOTM Increment 1 Phase I urgent needs of the warfighter. NOTM Increment 1 Phase 22 requires requires development, integration, testing and fielding of forty-three (43) POP-V systems with SVK, SK and TEPs. These systems are required in accordance with the USON to mitigate identified United States Central Command capability gaps for FMV while OTM.

Investment Description and Justification

Short Description

ISCS is a CLASSIFIED system connecting NAVSOC HQ to its remote sites and the Air Force Satellite Control Network (AFSCN).

Full Description

ISCS is a CLASSIFIED system connecting NAVSOC HQ to its remote sites and the Air Force Satellite Control Network (AFSCN). ISCS has no GIG connectivity it utilizes point to point leased lines from DISA. ISCS is the operational satellite command, control, and monitoring system for the FLTSAT, MUOS and UFO satellite constellations using HQ, LP, DET-A, DET-C, and DET-D. ISCS is a semi-automated system that is online 24 hours a day, every day of the year. ISCS generates, validates, and transmits satellite commands. ISCS collects, monitors, and archives telemetry data. ISCS also has the capability to play back archived telemetry data and to perform trend analysis on the data to monitor the status and performance of the satellites. ISCS is designed to be a decentralized system with the capability at each remote site to operate autonomously. ISCS also maintains communications links with SAFB in Colorado Springs, Colorado. ISCS processes CLASSIFIED information up to SECRET.

OMB Sector/Function/Service:

Defense and Security / Department of Defense-Military / Command and Control

Investment Description and Justification

Short Description

CMRS is a ship-to-shore emergency communication system that provides continuous monitoring and reporting in the event of a fleet ballistic missile submarine loss.

Full Description

The Clarinet Merlin Receiving System (CMRS) is a ship-to-shore emergency communication system that provides continuous monitoring and reporting in the event of a fleet ballistic missile submarine loss. The emergency communication is received from the AN/BST-1 submarine buoy at worldwide shore sites, where it is decoded and relayed to the submarine Broadcast Control Authorities (BCA). This system is not PK-Enabled because CMRS is an unmanned system.

OMB Sector/Function/Service:

General Government / Other general government / Public Communications Infrastructure

Investment Description and Justification

Short Description

Navy Installation base communications functions in support of public safety and command and control functions.

Full Description

- Leased communication circuits, including initial installation and monthly recurring charges in support of CNIC activities and personnel.
- Maintenance of all cables and open wire lines used in communication systems
- Management of other communications related equipment
- NERMS/RDC sustainment
- Coordination with NAVFAC on sustainment of ELMR infrastructure elements such as antennas, towers, dispatch consoles, mobile data computers, and associated equipment.
- Radio handset acquisition and management ISO first responders, including Enterprise Logistics Support Center
- Wireless communications in support of public safety activities
- Purchase, lease, and maintenance contracts for satellite phones
- Personnel, warranty, maintenance contracts and other resources required to operate the base area

Investment Description and Justification

Short Description

Naval Computer and Telecommunications Area Master Station (NCTAMS)/Naval Computer and Telecommunications Station (NCTS) Mission Operations is the enabler for all ship to shore, shore to ship and shore to shore C5ISR including the NC3 network.

Full Description

Naval Computer and Telecommunications Area Master Station (NCTAMS)/Naval Computer and Telecommunications Station (NCTS) Mission Operations is the enabler for all ship to shore, shore to ship and shore to shore Command, Control, Communications, Computers, Combat Systems, Intelligence, Surveillance, and Reconnaissance (C5ISR) including the Navy Nuclear Command, Control and Communications (NC3) network. This operational C5ISR infrastructure is comprised of 51 sites. In addition to the general mission operations, key enabling programs funded in this line are: Emergency Power, Fleet Network Operations Center (FLTNOG), Tech Control Facility (TCF), High Frequency Global Communications System (HFGCS) - a key component of NC3, and Tactical Support Communications (TSCOMM).

Architecture Budget Justification

Navy's Force Application IT investments comprise target locating and readiness systems which support the capability to integrate the use of maneuver and engagement in all environments, to creating the necessary effects for achieving mission objectives. Readiness and Cost Reporting Program (RCRP), UII 007-000000231, provides functional capabilities that enable disparate data collection, web query functionalities, expediting capabilities, new afloat data capture, and web-based record-keeping. It features provides a full range of capabilities to satisfy the readiness and logistics business needs of NECC operating forces. The Very Small Aperture Terminal-Large (VSAT-L), UII 007-000005030, was designed and built to provide the Marine Corps with a transmission capability that will accommodate the ever increasing requirements for BLOS (Provides Voice/Data/Video) at tactical levels.

Investment Description and Justification

Short Description

Disparate data collection, web query functionalities, expediting capabilities, new afloat data capture, web-based record-keeping features, and additional functional requirements not readily incorporated into, or not yet in scope for Navy ERP.

Full Description

RCRP provides a full range of capabilities to satisfy the readiness and logistics business needs of NECC operating forces. The RCRP initiative creates a near real time, capability based readiness reporting system for NECC based on Mission Essential Tasks (METs). RCRP provides NECC Forces a standardized, enterprise-wide capability to: measure, display and report the readiness status of NECC Force PESTO (Personnel, Equipment, Supply, Training, Ordnance) resources to DRRS-N (Defense Readiness Reporting System-Navy); Support adaptive force packaging by granulating NECC's capabilities and supporting resources to the level required to provide the necessary visibility and supporting readiness picture; Stimulate cost-wise behavior and shape future investment by providing a capability for future resource planning based on resource priority in the context of capabilities; Provide metrics-based planning support Improve the balance of readiness and cost by tying readiness to cost. RCRP enables the central management and/or aggregation of PESTO resources while providing Commanders at all levels within NECC the ability to visualize the readiness of its unit at several levels to respond to mission needs. RCRP is currently in phase II of spiral development. RCRP is deployed on both NIPRNet and SIPRNet, and is utilizing Navy authoritative data sources for PESTO information. The initial releases of RCRP are limited to manual data import/load techniques derived from Navy Training Information Management System (NTIMS), NFELC TOA, TFMMS, and DRRS-N as authoritative data sources. Plans for future releases are to automate data transactions with these authoritative data sources as well as to incorporate additional Navy PESTO authoritative data resources such as TFMMS, PFOM, MFOM, OFOM, NSIPS, NTMPS, OIS, NAVICP, EDE (NTMPS / CeTARS, NIRM, TWMS, RHS, DCPDS, MMRS, PRIMS), SNAP / Microsnap / R-SUPPLY, PRMS Database and GFM. The RCRP system is hosted at DISA DECC Mechanicsburg.

Investment Description and Justification

Short Description

The VSAT-L was designed and built to provide the Marine Corps with a transmission capability that will accommodate the ever increasing requirements for BLOS (Provides Voice/Data/Video) at tactical levels.

Full Description

The VSAT is a government off-the-shelf (GOTS) satellite communications terminal with COTS equipment. The VSAT provides a capability for operation in the Commercial Ku-band and Military Ka-band with X-band being an acquisition objective. VSAT-L is comprised of the following components: modems, radio frequency (RF) transceiver suites, 2.4M antenna assemblies, baseband interfaces, and packaging. The VSAT-L was designed and built to provide the Marine Corps with a transmission capability that will accommodate the ever increasing requirements for BLOS communications throughput for data, voice, and video to and from command posts at all echelons.

Investment Description and Justification

Short Description

A secure system composed of H/W and S/W components that facilitate expedient emergency response. Interfaces to disparate systems and provides C2 dispatch functions for First Responders with local and base operators.

Full Description

Consolidated Emergency Response System (CERS) provides standardized capability for 911 emergency call taking and real time dispatch to first responders, improving response times to emergencies and increases the Marine Corps capability to save life, preserve property and maintain readiness. CERS includes computer aided dispatch (CAD) systems which are used by emergency call takers and dispatchers to capture pertinent data and provide real time information to first responders. An integrated and consolidated emergency response dispatch system will improve coordination of response resources, increase the chance of survival for sick or injured personnel, and decrease losses to facilities, equipment and other USMC property. CERS increases interoperability with critical response partners (on and off installation).

Navy Force Management IT investments support the ability to integrate new and existing human and technical assets from across the Joint Force and its mission partners to make the right capabilities available at the right time/place to support National Security. The Navy Readiness Reporting Enterprise (NRRE), UII 007-000001416, is the authoritative data platform used to register and manage the Naval Force, and to analyze, assess, and report Force readiness. Major changes between FY 2020 and FY 2021 include reductions to the Navy Installation Support IT System. Major changes between FY 2020 and FY 2021 include reductions to the Navy Installation Support IT, UII 007-000004864. This investment encompasses information technology spending by Operations, Quality of Life, Facilities, Manpower, Comptroller, Strategy/Future Requirements, and Administrative departments within the Commander, Navy Installations Command organization.

OMB Sector/Function/Service:

Defense and Security / Department of Defense-Military / Force Allocation

Investment Description and Justification

Short Description

Joint service WAN-based operations scheduling system designed to centralize worldwide aircraft logistics. Provides an airlift data collection and analysis system for the purpose of airlift and aircraft management.

Full Description

JALIS is a multipurpose on-demand automated scheduling program for Operational Support Aircraft (OSA) and Navy Unique Fleet Essential Aircraft (NUFEA). The JALIS application allows DoD Service personnel the ability to request airlift support and retrieve status information about the movement of DoD personnel and cargo. JALIS provides the airlift schedulers with a decision-support tool to develop efficient flight schedules based on the priority of requests and the availability of aircraft assets. It also provides the aircraft operators with an on-line tool to communicate the latest aircraft status, retrieve flight assignments, and enter post-mission reporting data. The DoD Directive 5400.43E mandates JALIS as the official DoD airlift scheduling system, which meets the requirement for multi-service coordinated air logistics scheduling as directed by the Chairman, Joint Chiefs of Staff. The United States Navy is designated as the lead agency for sponsoring and funding the JALIS program. JALIS is a MAC II system.

Investment Description and Justification

Short Description

GOSNet is an intranet/extranet which hosts several application modules for use by T45TS community. Examples include a module for automating the TD verification process, action tracking and receiving submittal of contract CDRL data items.

Full Description

GOSNet is an intranet/extranet which hosts several application modules for use by various aircraft platform communities within NAVAIR, including the T-45, T-44, TH-57, E-6, and F/A-18. Main DADMS applications hosted on the system include GOSNet (#998), ELIS (#15461), IRCMS (#52615), and iSuMO (#79474).

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$3,051) | |

Horizontal Change Explanation

Change reflects a decrease in MCSC program office support, and supports of procurement of DMS equipment, and X-band integration transitioning to test and evaluation.

Investment Description and Justification

Short Description

The Naval Synchronization Toolset (NST) is an Information Technology (IT) system sponsored by the F/A-18 and E/A-18G Program Office to provide high fidelity inventory projections needed to shape the F/A-18 Service Life Extension Program (SLEP).

Full Description

The Naval Synchronization Toolset (NST) is an Information Technology (IT) system sponsored by the F/A-18 and E/A-18G Program Office to provide high fidelity inventory projections needed to shape the F/A-18 Service Life Extension Program (SLEP). By converting carrier, airwing, and squadron operational schedules into an operational demand for F/A-18 resource utilization, the NST enables the tactical distribution of airframes through the creation of airframe operational and maintenance schedules. These operational and maintenance schedules are then coupled with NST-derived squadron demand for airframe resources to project the status of each airframe over time. NST data informs decisions regarding execution and scheduling of ECP development, aircraft modification and inspection. This information is vital to SLEP Program managers and directly facilitates "By Buno" management of the Service Life Extension Program.

Navy Force Training IT investments support the mission training and combat readiness for military forces, and directly align to the Navy's strategic requirement for combat ready naval forces. The Air Combat Training System (ACTS), UII 007-000004768, provides the framework for post Fleet Replacement Squadron tactical aircrew training. This framework increases training effectiveness and efficiency and enhance the overall quality of post-Fleet Replacement Squadron (FRS) weapons and tactics training.

Investment Description and Justification

Short Description

MDS sensors receive multiple signal inputs from aviation platforms and fuses the data to feed other Situational Awareness and After Action Review systems.

Full Description

MDS consists of Multi-static Dependent Surveillance (MDS) sensors capable of receiving Air Traffic Control Radar Beacon System (ATCRBS), Mode S and Automatic Dependent Surveillance–Broadcast (ADS-B) signals from standard avionics equipment on civil and military aircraft. The system shall include Remote Units (RU's) geometrically placed throughout the MCAGCC ranges. The sensors shall interrogate and receive aircraft transponder signals. The system shall also include a Target Processor (TP) and a maintenance display, both generally located together at a collection point for all dispersed RU's sensor data. System capabilities shall include scalability and distributed interrogations. Area coverage for the Twentynine Palms Special Use Airspace (SUA) shall be enhanced through the Multi-Sensor Data Processor (MSDP) or SDS fusion processor. Fusion shall provide track data as a result of combining multiple sensors, cooperative and non-cooperative alike. The fusion technology shall allow multiple sensors to augment each other in a particular coverage volume and provide feeds to other Situational Awareness (SA) and/or After Action Review (AAR) systems.

Investment Description and Justification

Short Description

Immersive training environment for convoy operations.

Full Description

The Combat Convoy Simulator (CCS) trains small unit personnel, vehicle operators, and convoy commanders on immediate action execution in a combat environment. Marines are exposed to various simulated threat and threat countermeasures situations such as improvised explosive devices (IED) attacks, direct and indirect fires, vehicle-borne improvised explosive devices (VBIED) attacks, and roadblocks. Marines receive tailored training in convoy and formation driving, resupply, patrol, logistics support, high-value target extraction, and Medical Evacuation (MEDEVAC). They are taught to respond to a variety of threat situations currently experienced by deployed forces conducting overseas contingency operations. Customizable scenarios direct fires, vehicle-borne improvised explosive devices (VBIED) attacks, and roadblocks. Marines receive tailored training in convoy and formation driving, resupply, patrol, logistics support, high-value target extraction, and Medical Evacuation (MEDEVAC). They are taught to respond to a variety of threat situations currently experienced by deployed forces conducting overseas contingency operations. Customizable scenarios provide Marines an environment for small arms and crew served weapons engagements, in accordance with the Rules of Engagement (ROE), command and control (C2) and evolving tactics in Military Operations in Urban Terrain (MOUT) environments, which cannot be otherwise simulated.

Investment Description and Justification

Short Description

The TVCS is an Air traffic Control (ATC) / range control communication system. It receives analog signals from POTS lines, UHF, VHF and GPS comm. signals and merges them into the Communications Interface Panel (CIP) at the range operator's station.

Full Description

The Tactical Voice Conferencing System (TVCS) is an Air traffic Control (ATC) / range control communication system. The TVCS system is used to communicate to both aircraft and ground troops that are performing exercises on the U.S. Marine Corps (USMC) ATC range. The TVCS receives both analog signals from POTS lines, UHF, VHF and GPS comm. signals. These signals are processed and used by the ATC range control operator using the Communications Interface Panel (CIP) at the operator's station. The CIP is a touch screen flat panel that the range controller's use to initiate and receive all communications on USMC ATC ranges.

Investment Description and Justification

Short Description

SYMIS Support is the aggregate of miscellaneous IT costs including COTS Software, hardware, and consumables supporting over 33,500 Naval Shipyard personnel and the personnel from 14 additional fleet activities.

Full Description

The mission of the four public Naval Shipyards is to provide maintenance, modernization, inactivation, disposal and emergency repair of Navy vessels in an affordable, timely, and quality manner. In order to achieve this mission the shipyards have defined their goals as: simultaneously deliver cost, schedule, and quality performance; to maximize an efficient operation to meet the changing needs of our customers; and to adopt business processes that maximize economy, efficiency and accountability. Keeping the infrastructure current and efficient is in direct support of these strategic goals resulting in delivering quality performance to the shipyard customers. The applications are constantly receiving operational analysis by focus teams and user groups to ensure that they are cost effective and continue to meet the mission and the needs of the customers.

SYMIS Support is the aggregate of miscellaneous IT costs including COTS Software, hardware, and consumables supporting over 33,500 Naval Shipyard personnel and the personnel from 14 additional fleet activities. This aggregate includes items that are unique to industrial operations, such as tool vending machines to deliver kitted tools and maintenance for the IT portion of nontraditional IT (industrial plant equipment for example). It also includes devices such as digital cameras, projectors, smartboards, multi-functional devices (printers, copiers, scanners) and COTS software many of which are on Enterprise Licensing Agreements (Oracle, Microsoft, etc); others are COTS that have a unique function that meets the needs of an industrial base such as spatial analyzer, calibration tools, pipe diagramming tools.

The costs represented in SYMIS Support are not directly attached to any other specific investment and do not meet the requirements to be a separate system. They are, in fact, the general IT support: management, personnel, COTS software, end user devices and consumables that are not dedicated to a system with a unique UUI.

General Government / Knowledge management / Knowledge Capture

Investment Description and Justification

Short Description

The Test Resource Management System is a software tool used for planning, scheduling, invoicing, and management of range and facility test operations and resources in support of Naval Air Systems Command range operations.

Full Description

The Test Resource Management System (TRMS) is a software tool used for management of range and facility test events and range resources in support of test range operations. TRMS is used at NAVAIR ranges at NAWCWD Land Range, Sea Range and Echo Range, and at NAWCAD Atlantic Test Range. TRMS is also used by NAVSEA at Wallops Island, VA SCSC and the Army White Sands Missile Range (WSMR). TRMS uses a central data base management system and a web-based user interface to enable planning, scheduling, invoicing, and reporting of range events. TRMS is used by test managers, test directors, range schedulers, financial personnel, and range managers. TRMS also functions as a NAVAIR comptroller-approved financial feeder system to Navy Enterprise Resource Planning (NERP, DITPR-DON ID 20669) by feeding test range invoicing files to NERP.

Investment Description and Justification

Short Description

Automates maintenance execution tasking for aircraft mechanics required to execute and document aircraft/helicopter explosive component maintenance and aircraft installation/replacement using data resident on a centralized web server.

Full Description

CAD/PAD VFS automates maintenance execution tasking for aircraft mechanics (AMEs, PR, AZs, and AOs) required to execute and document aircraft / helicopter explosive component maintenance and aircraft installation/replacement using data resident on a centralized web server. VFS also provides CAD/PAD team members at all levels of Command data necessary to plan, manage, oversee, and support aircraft / helicopter explosive component maintenance.

Investment Description and Justification

Short Description

The SSC-CH SSO Security sys consists of access control and intrusion detection devices, PC and server running Lenel OnGuard SW Suite. The SSCC SSO Security System controls access and provides Intrusion Detection for all of SSC-CH's SCI (SCIFS).

Full Description

The SPAWAR Systems Center (SSC) Atlantic Security System consists of access control, video surveillance, and intrusion detection devices, workstations, server and alarms that protect all of SSC Atlantic's Controlled and Classified Areas for SSC Atlantic and each of the Atlantic Offices (Wash DC, Norfolk area, Pensacola, Jacksonville). The system is based on the Lenel OnGuard 2005 software suite operating on 1 server monitoring remote sensors and scanners, controlled by several workstations in the Security Office, with alarms and video delivered to Security Monitoring stations at the remote offices and in Charleston.

Investment Description and Justification

Short Description

A system that provides an analytical foundation from which to develop capabilities-based investment recommendations.

Full Description

The Resource Allocation Model (RAM) supports the OPNAV N9I (and N98) in establishing an analytic foundation from which to develop capabilities-based investment recommendations. The contribution and relative importance of Naval weapon systems to current and future Naval and Joint war fighting capability requirements is assessed and combined with other program characterization attributes to prioritize Program investments. Through PMDSS, Program Managers score their programs against a defined set of attributes to characterize program health, risk, and merit. Issues are then characterized by their ability to improve the health, risk, and merit of their respective program and by their return on investment. The PMDSS, along with the Kill Chain Analysis process, is integral to the horizontal integration of Naval Systems development and deployment in a coherent capability based architecture. Present a method for modifying PoRs (through issues) according to documented and transparent criterion. - Simplify the budget decision process by collecting all relevant data and storing it in a single database. - Create program health, risk report, issue sheet, and other documentation to support Program Requirement Reviews (PRRs). - Enhance the correlation between the budget and program capabilities by mapping N8F Program Elements (PE) to the lower level (Tier 3) Joint Capability Areas (JCAs). - Provide an automated decision support system that helps N8 resource sponsors rank Programs of Record (PoR) to identify assets.

| Short Description DVTE is a deployable laptop PC based simulation system capable of emulating organic and supporting Infantry Battalion weapons systems and training scenarios to facilitate T&R based training. | |
| Full Description The Deployable Virtual Training Environment (DVTE) is a Marine Corps training system that provides combined arms tactical level simulation based training and educational training support for the embarked Marine Air Ground Task Force (MAGTF). DVTE provides air, ground and amphibious operations training support to all levels of embarked MAGTF elements in accordance with the Marine Corps Combat Readiness Evaluation Standards (MCCRES), Training and Readiness (T&R) Manual standards and the MAGTF Mission Essential Task List (METL). DVTE provides training support in these areas: Command, Control, Communications and Computers Integration (C4I), Fire Support (FS), maneuver, intelligence, operations, Logistics (LOG), Combat Support (CS), Combat Service Support (CSS), and Special Operations Capable (SOC). DVTE training scenarios provide a realistic portrayal for MAGTF combined arms training. | |

Investment Description and Justification

Short Description

Designed to support training of tactical commanders and their staffs in Command Post Exercises, Field Exercises, and exercises involving a combination of live forces and simulated forces.

Full Description

MTWS is the Marine Corps' only constructive simulation system designed to support the training of tactical commanders and staff from battalion through MEF level. MTWS provides interactive, multi-sided, force-on-force, modeling and simulation of the six warfighting functional areas and expeditionary maneuver warfare. The system supports tactical decision-making and evaluation; operational planning and evaluation; and global war gaming. MTWS supports Marine Corps Title X training requirements for operational staff planning and training on Command and Control (C2) processes and procedures. MTWS is used to support Mission Rehearsal Exercises (MRX), Pre-deployment Training, Marine Expeditionary Force Exercises (MEFEX), Command Post Exercises (CPX), and Joint and Coalition Training Exercises. USJFCOM recently approved integration of MTWS into the USJFCOM's Joint National Training Capability (JNTC) Joint Live Virtual Constructive (JLVC) federation.

Investment Description and Justification

Short Description

System is a single point of service rapidly deployable/scalable system that provides Combat Camera Marines the equipment necessary to document the history of the Marine Corps Events/ training and provides imagery for mission evaluation.

Full Description

The TIPS consists of Government-Off-the-Shelf (GOTS) and Commercial-Off-The-Shelf (COTS) professional production grade still photographic, video production and hardcopy printing equipment. It includes peripherals, hardware and software such as, digital high volume black and white and color presses, photo, video, graphics workstations, large format photo printers, full video duplication equipment and includes equipment necessary to sustain prolonged deployments (conditioned Mobile Electric Power MEP generator power and Environmental Control Units ECU's). The TIPS has the capability to: acquire, manipulate, archive, catalog, retrieve, duplicate, disseminate and transmit any digital imagery (still, video, and graphics) and hardcopy printing products. The TIPS is a single point of service rapidly deployable and scalable system that provides Marines with the 4611,4641,4671,4691 MOS, the equipment necessary to perform specialized missions of imagery acquisition, manipulation and production for the following documentation: fires and maneuver, logistics, intelligence, force protection, as well as many facets of psychological operations. This system documents the history of the Marine Corps Events/ training and provides imagery for mission evaluation. The system is designed for operation by ten 46XX Combat Camera Marines and provides the commander with a valuable decision making tool not provided by any other Marine Corps Unit.

Organization Architecture Profile**

| Architecture Profile | |
|-----------------------------------|-----------------------|
| DoD Segment | 800-000 IT Management |
| Architecture Budget Justification | |

Navy IT Management investments consist of various investments supporting IT payments and services for the broader DON enterprise. Other Payments to DISA, UII 007-000100405, captures payments to the Defense Information Systems Agency (DISA) outside of the Defense Information System Network (DISN) costs that could not be captured in existing investment. Command Support Data Center Reporting, UII 007-000100111, contains Special Purpose Processing Node data center costs and command IT support for the U.S. Marine Corps and supporting establishment agencies. Largest changes include the increases to the Secretary of the Navy Security Tracking System and DISA Payments for Hosting and Computing Services.

Investment Description and Justification

Short Description

Automatic Identification Technology is an automatic capture of source data. Enhances the ability to identify, track, document, redirect and control deploying/re-deploying forces, equipment, personnel and sustainment ammunition on strategic locations.

Full Description

Automatic Identification Technology (AIT) is a suite of technologies that enable and facilitate the accurate and rapid transmission of source data to automated information systems (AIS), thereby enhancing the ability to identify, track, document and control deploying forces, equipment, personnel and cargo. AIT includes mobile computer handheld devices (HHD), radio frequency identification, bar codes, and biometrics. The Department of Navy's AIT Program Office implemented AIT technology within the Navy's ashore supply enterprise. This architecture has been designed to facilitate the objectives in a manner that provides Navy programs the most implementation flexibility while standardizing hardware and software interfaces. The system encompasses the following components: Commercial network connectivity, accredited mobile device hardware & software, wireless bar code scanners and enterprise mobile device management functionality under the Navy Mobile Computing System.

Investment Description and Justification

Short Description

This application identifies who has access to what information/applications on the shipyard. It keeps track of all the applications available and provides a data repository for authentication of our web users.

Full Description

UTAM is a web-based application that tracks users, applications and seats, and the mappings between them. UTAM is CAC-enabled to control access to the application. UTAM tracks key user information including active status, department, shipyard badge number, DoD Common Access Card (CAC) PKI serialized ID, and all Legacy and NMCI network accounts. UTAM also tracks key application information including MAC cost, license cost and basic license information, assigned IAO, implementation strategy, application environment, target network environment, application type, CDA type, and back-end database type. UTAM tracks key workstation information including Seat ID, Asset Tag, Workstation ID, serial number, department, base Contract Line Item Number (CLIN) and additional CLINs, location (building, floor and room), and the Science and Technology user assigned to the seat if applicable.

Investment Description and Justification

Short Description

eTasker is a web-based action item tasking, tracking and reporting system that provides the authoritative data source for interorganizational collaboration on organizational and project task-related information.

Full Description

eTasker provides action item tasking, tracking and reporting capabilities for interaction and collaboration of members of business units within a business enterprise. It allows registered users of the system to input all information needed to effectively manage tasking among members of a business unit. Reporting features include current task status, historical information and metrics. eTasker is an inherently exclusive system, meaning that each business unit controls its own tasking workspace. eTasker is a web application, Public Key Enabled and hosted on a secure server with no requirement for software installation on the client desktop. Since its 2003 deployment, eTasker has replaced over 30 redundant stove-piped legacy tracking and reporting tools. It is currently used to support hundreds of business processes including tracking and monitoring new personnel in-processing, documentation review and approval, and responses to Fleet issues.

Investment Description and Justification

Short Description

The Navy Information Application Product Suite (NIAPS) is a software suite that provides application hosting and enterprise class ship-to-shore and shore-to-ship data replication services for DoD applications.

Full Description

The Navy Information Application Product Suite (NIAPS) is a software suite that provides application hosting and enterprise class ship-to-shore and shore-to-ship data replication services for DoD applications. The primary mission of NIAPS is to extend shore based Navy Enterprise applications into the shipboard environment to facilitate disconnected operations through data replication/synchronization technology.

Investment Description and Justification

Short Description

Navy Installations Command IT Program and Portfolio Management.

Full Description

- Navy Installations Command IT Program Management
- Business Planning
 - > Technology Management and Planning
- IT Quality Assurance and Execution Review
- Portfolio Management
 - > Manage, track information technology software licenses.
 - > Coordinate with N-codes on their application portfolios. provide guidance on selection and management processes. Review their efforts with respect to:
 - > Navy and higher echelon guidance
 - > Cross functional integration
 - > Application or system function duplication
 - > Conformance with generally accepted IT project management principles
 - > Establish and maintain IT portfolio governance and enterprise architecture for system standardization, alignment and synchronization
 - > Ensure application standardization in support of higher echelon initiatives, such as the Navy's Functional Area Manager effort
 - > Enterprise Architecture
 - > Maintain inventory of CNIC's applications in tools such as DADMS and DITPR DON.

Investment Description and Justification

Short Description

The NICC is a joint partnership between NAVSUP and NAVSEA to provide the Navy and other Defense agencies with a single point of entry for 'One Touch' information, logistics, assistance, supply and personal support, 24 hours a day, 365 days a year.

Full Description

This application is the tool that displays historical and Real-Time data via a GUI interface on our pc's. This tool also provides both canned/custom reports and is used to generate metrics and analysis for the NICC business.

OMB Sector/Function/Service:

General Government / Knowledge management / Knowledge Capture

Investment Description and Justification

Short Description

WARS is a solution for the archiving & retrieval of data from WD legacy systems by converting legacy system data into the Corporate Level of the WARS data warehouse.

Full Description

WARS provides NAVAIR with a source for historical data to do analytical processing and reporting. This system provides restructuring, integration, and capturing of summary level management information from multitude of diverse transactional systems across functional business areas (i.e. planning, financial, personnel, acquisition). This data repository allows managers to obtain such data to develop corporate decisions and strategy based on the current environment, as well as, historical trends. WARS allows the organization to exploit information already captured in transactional systems and use the data for forecasting, trend analysis, and analytical processing

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Executive direction and management / Enterprise Architecture

Investment Description and Justification

Short Description

DON Apps and Data Mgt Sys (DADMS) is the Department's authoritative source of Information Technology (IT) asset inventories, as mandated by OMB A-130. DADMS provides capabilities for Functional Area Managers.

Full Description

DADMS is a web-enabled registry of Navy and Marine Corps systems/applications, database, network, and their associated data structures. It is the authoritative source for DON IT (including National Security Systems) application and database portfolio management. DADMS Supports: Legacy system, application, database, and network reduction; Identification of standard applications, databases, and data elements; Enterprise Architecture development and maintenance; Interoperability and Information Assurance assessments. The Functional Area Managers (FAM) use DADMS to execute their responsibilities to direct migration, consolidation, or retirement of applications and databases. The Functional Data Managers (FDM) use DADMS to assist program managers and other system developers in registering metadata and data exchange formats, developing functional data architectures, and designating authoritative data sources. DADMS Enables the Transformation of Applications and Data into Web-Centric Naval Capabilities. In addition, DITPR-DON is a component of the DADMS system.

Investment Description and Justification

Short Description

OGC Online support page for use as a reference for OGC and the public.

Full Description

OGCOnline is OGC's internal website and database system. It includes the Litigation Case Tracking database, Management Information database, automated organization chart, COGNOS metrics management tools, OGC electronic deskbook, OGC Practitioners Forum, Automated weekly reports, brief bank, research tools, a list server for automated e-mail distribution, and 20 topical and organizational sub-sites. This system serves as the core of OGC's communications, information sharing, information distribution, office management and litigation management with all content and databases highly integrated. This system is being considered as a model for NASA and its concepts were used in developing a similar system for the Department of the Treasury.

| Full Description As Directed by SECNAVINST 1650, NDAWS provides end-to-end web-service for processing, reviewing, approving, and recording of unit awards and personal awards (both Active Duty and Veterans). It is the only application that maintains web-service links to BUPERS databases to ensure awards are recorded in members service record. It is the Navy's authoritative data repository for military awards. It provides inherent oversight mechanisms to ensure timely, accurate, and efficient delivery of awards that comply with the spirit and letter of Navy and DoD awards policy. In addition NDAWS provides a public information interface. | |

Investment Description and Justification

Short Description

The Congressional Info Mgmt System (CIMS) is the web-based system used by the Department of Navy for tasking, tracking, and archiving support for Congressional Testimony preparation as well as responses to Congressional requests.

Full Description

CIMS provides the Secretary of the Navy, the Under Secretary of the Navy, Assistant Secretaries, the Chief of Naval Operations and the Commandant of the Marine Corps a staff facility to gather, correlate and display program data required for decisions and actions by those officials, and to act as principal Department of the Navy point of contact with the Office of the Secretary of Defense regarding procedural matters relating to the operation of the Planning, Programming, and Budgeting System (PPBS.) CIMS coordinates action and develops responses to Congressional correspondence and special interest matters which involve expressions of policy by the Secretary of Defense, the Deputy Secretary of Defense, the Secretary of the Navy, the Under Secretary of the Navy, the Assistant Secretaries of the Navy, the Chief of Naval Operations and the Commandant of the Marine Corps. CIMS is web-based workflow, and document management designed to provide a unified Department of the Navy response to the Congressional inquiries.

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

Technology support of the DON internal audit mission to include document repository, data mining, and NMCI support cost.

Full Description

NASIMS, a MAC III system, is used and managed by the Naval Audit Service to effectively and efficiently manage and track the personnel and administrative functions and business processes of the agency. NASIMS information is used to maximize staff resources and to provide project cost summary data; to track audit milestones and staff hours allocated towards project preparation and active projects which will allow for more effective scheduling of unassigned personnel and to categorize indirect time expended for end-of-year reporting; to plan workloads, to assist in providing time and attendance to the centralized payroll system; and to request, schedule and track auditor training requirements.

OMB Sector/Function/Service:

General Government / Central fiscal operations / Reporting and Information

Investment Description and Justification

Short Description

An information tool available to all Warfare Center Division that enables real time updates of time sensitive employee information.

Full Description

FEA ODB is an architecture that provides web-enabled applications to meet operational requirements for daily business processing needs and to enhance and complement the use of Standard Systems. These applications provide automation of business processes to collect business information not currently collected by Standard Systems. FEA/ODB applications include the Locator application, Corporate Incentive Pay Applications (CIPA), Dahlgren Resource Allocation and Tracking Software (DRATS), the Warfare Center Information Tool (WCIT), Equipment Rental and Maintenance (ERM), and Visitor Control Point System (VCPS). These Front-End applications are used by the NSWC Dahlgren Division (includes Dahlgren and Dam Neck sites), and some modules are used by the NSWC Panama City Division, NSWC EO Division, NSWC Corona Division, NSWC Indian Head Division, and NSASP.

Investment Architecture

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Help Desk Services

Investment Description and Justification

Short Description

Supports Distance Support and automates Service Management business processes with forms and workflows. Manages trouble calls and service requests associated with designing, installing and maintaining unclassified and classified networks.

Full Description

The RSRS system components are installed on Windows based platforms and hosted within the trusted enclave and NIPRNET Public Access Zone inside the SPAWAR Systems Center Atlantic, New Orleans (SSCLANT NOLA) Extended Demilitarized Zone (EDMZ). The RSRS architecture is an industry standard, n-tier implementation operating on Commercial-off-the-Shelf (COTS) hardware and software. The RSRS system uses an Oracle 11 Relational Database Management System (RDMS) for data storage. The BMC Distributed Server Option (DSO) provides enterprise wide synchronization of the SPAWARSSCOM regional sites and local servers. Access to the RSRS system is available through web interface. Data transmissions are protected by the use of secure ports, protocols and network services. The SSCLANT network provides a secure environment with common services and resources available to support connectivity between hosted systems applications and the affiliated system interfaces with user population. The RSRS system interfaces are described in Section 9.0 of this CAP. Firewall, data encryption and intrusion detection services are implemented as part of the SSC LANT enterprise network architecture. The RSRS system provides an integrated architecture for problem resolution and tracking for the SSC NOLA helpdesk staff, technical support staff, application developers and SPAWAR SSC LANT customers. RSRS also includes Remedy on the SIPRNET for C4I trouble ticket tracking and SPAWAR CASREP Response Action Tracker (SCRAT) which is used for notification, dissemination, coordination, aggregation and tracking of technical assistance by In-Service Engineering Agents designated by SPAWAR 4.0 in-service support policy. It provides the quantitative information to perform analytical assessment of processes and C4I system sustainment. SCRAT provides SPAWARSSCOM visibility into the effectiveness of In-service support technical assistance processes and policies. Data accumulated gives the SPAWAR enterprise the ability to quickly assign, track, task, resolve and assess C4I system degradations impacting fleet readiness. Supports tactical, operational and strategic command level visibility for SPAWAR and SPAWAR supported C4I systems readiness degradations.

Investment Description and Justification

Short Description

AACS system provides access control through badge readers for controlling access to work areas in Pearl Harbor Naval Shipyard.

Full Description

The AACS system is used for alarm monitoring and access control for critical areas within the shipyard. This includes the Emergency Control Center, Regional Dispatch Center, nuclear facilities, dry docks, and other controlled areas. All Shipyard cardholders use the AACS System for access to controlled areas. The Security Office (Code 1120) is the functional/operational users of the system, who maintain the access levels of all cardholders. The Information Resource Management Division (Code 1230) is the System Administrators of the system, who maintain the systems availability in accordance with Information Assurance requirements.

Investment Architecture

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Customer Services

Investment Description and Justification

Short Description

SCS manages physical access to SPAWAR and SSC-SD. It is used to record security clearance information for individuals requiring access; it produces electronic badges authorizing access for government employees, supporting contractors, and visitors.

Full Description

The Secretary of the Navy Security Tracking System (SECNAV STS) is a workflow tracking and control system for processing approval of employee badging requests and renewals, training and certifications completed and expiring, and visitor building access requests. The mission of the SECNAV STS is to replace existing paper based processes with an online interface that provides increased accountability and transparency, waste reduction, and ease of access.

Investment Description and Justification

Short Description

This system allows the Naval Education and Training Command (NETC) to obtain a Commercial Internet Service Provider (ISP) in the ITOF classrooms.

Full Description

This system allows the Naval Education and Training Command (NETC) to obtain a Commercial Internet Service Provider (ISP) in the ITOF classrooms. Deviation from the Type Accredited configuration of the ITOF detailed in the C&A Plan v2.0 dated January 2011 is not permitted without the approval of the Navy Operational Designated Accrediting Authority (ODAA). The ITOF v2.0 classroom assets are utilized for the conduct of CISCO and Microsoft certification training and for Prometric certification testing. There are no other features installed on these assets that require additional external communications (i.e., email, instant messenger, chat, etc). The current constraints with TRANET and NMCI do not allow the flexibility to train in the traditional classroom environment due to limited bandwidth and other limitations imposed on systems touching the global information grid. The ITOF v2.0 server, network, classroom, and testing center configurations will be exactly replicated at each ITOF v2.0 CID location (Corry Station, Norfolk, Groton, and San Diego).

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Knowledge management / Data Warehouse

Investment Description and Justification

Short Description

DWBIS converges data and Business Intelligence (BI) analytical reporting tools, with drill down detail, executive dashboards and super user query capabilities. DWBIS allows this Command to answer data calls and perform historical trends analysis.

Full Description

DWBIS is a Team SPAWAR system, including the activities of SSC Pacific, SSC Atlantic, and HQ. DWBIS is comprised of multiple technical components including an On-Line Analytical Process (OLAP) database, Extract Transform Load (ETL) scripts/tools, and Business Intelligence (BI) analytical reporting tools. ETL is used to automatically load data from existing source transaction systems into a single consolidated Data Warehouse (DW) environment. This system provides data integration to enable the delivery of cross-functional diverse business information into standard reporting formats with drill down detail, executive dashboards and super user query capabilities. BI tools enable immediate access to consolidated data to perform analytical analysis, answer data calls, as well as perform historical trends analysis capabilities.

Investment Description and Justification

Short Description

This system enables the DON Office of the General Counsel to organize, review, redact, and produce legal discovery documents. It is web-based and commercially developed. It is run and hosted by a Navy contractor.

Full Description

The InfoDox Platform enables the Office of the General Counsel (OGC) to view and search collected legal discovery documents quickly and easily. It is a vital legal analysis tool for the Navy. The web-based system enables OGC to organize, review, redact, and produce legal discovery documents thoroughly and efficiently.

Investment Description and Justification

Short Description

A set of components and applications developed to integrate diverse procurement data sources for supporting NAVY DoD-wide procurement related business initiatives.

Full Description

The DASN AP WHF is a service-oriented data translation and validation architecture component. It is not a stand-alone, user-accessible system, but rather, a data exchange component between systems facilitating collection, validation, translation, and routing of critical DoN Enterprise data. The WHF serves as a DoN-specific component of the larger DoD GEX environment. DoN data is collected from Federal and DoD systems via SFTP from the GEX and HTTPS web services. Data error checking and handling is performed before the data is passed on to other applications and systems for processing. The WHF collects and standardizes diverse data sources through multiple workflows to facilitate enterprise visibility and integration of disparate architecture and data environments.

Investment Description and Justification

Short Description

Fleet facing technical data repository. Contains Logistics documentation including Technical Manuals, ULSS, APLs, Training Documentation, and Maintenance Procedures. Covers 45 C4I Programs.

Full Description

SAILOR is a web-enabled systems management enterprise application primarily for use by PEO C4I systems professionals. SAILOR provides Tier-0 self-help support for PEO C4I system operators and maintainers, network systems administrators, Information Dominance Corps professionals, and other technical personnel in an effort to mitigate direct Tier-1 phone calls and increased trouble ticket volume. SAILOR provides a complete PEO C4I library and OS support tools such as RETINA software, USB detection, OS images and software patches to major programs including ISNS, CANES, GCCS-M, and ADNS Network Systems Administrators. Further, SAILOR provides critical system administration tools such as hardware, software and firmware drivers and network disaster recovery guides for major network components, including servers, routers, switches, desktops and network appliances. In addition, SAILOR is the largest repository of Information Assurance and Security patches available for PEO C4I systems, including IAVA/IAVB, RETINA software, HBSS engine and relevant instructions for over 50 systems, including PMW130's Computer Network Defense (CND) program. SAILOR's incorporates a unique web content management system that enables custom distribution of critical network configuration information at the PEO C4I systems and platform level. By capturing and associating fielded configuration management data for each of the associated PEO C4I systems, SAILOR distributes platform and variant specific system content to each user for document viewing, image viewing, video, and retrieval of REMEDY data archives. SAILOR is designed to organize and display complex network management information in a simple and easy user interface, including the ability to export system-specific PEO C4I systems configuration list and REMEDY data in spreadsheet format for analysis and reporting related to systems readiness. In addition, SAILOR is designed to be utilized by underway ships, which necessitates synchronization and close coordination of future SAILOR capabilities with Afloat bandwidth improvement initiatives (CANES, ADNS Inc III, NMT, CBSP) to be effective.

OMB Sector/Function/Service:

General Government / Other general government / Ensure Continuity of Operations

Investment Description and Justification

Short Description

Supports the base commander's emergency response mission. In support of CERS, this system allows for radio interoperability with the 1st responder community and BPS of MC installations.

Full Description

Current Base, Post, Station (BPS) Land Mobile Radio (LMR) architectures are fragmented. They consist of outdated equipment, have poor radio frequency coverage and provide a marginal command and control (C2) capability. The Marine Requirements Oversight Council has directed a specific increment of E-LMR to support the base commander's emergency response mission. This increment of capability is called the "E-LMR (Slice)" in support of the Consolidated Emergency Response System was approved for Material Solution Analysis in a Commander MCSC MDD dated 18 Aug 2010. Additionally, other shortfalls in interoperability with the first responder community (e.g., law enforcement, fire and rescue, emergency medical services), internal installations mission essential organizations (range safety, and airfield operations capability, emergency management, public works, hazardous material, anti-terrorism protection [ATP], chemical biological incident response force, explosive ordnance disposal [EOD]), other DoD services (Army, Air Force, Navy), federal, state and local agencies, and host nations are also documented but unfunded. The United States Marine Corps E-LMR Statement of Need (SON) dated 24 January 2002, documented and identified the requirement for an E-LMR capability that will provide reliable, unimpeded, immediate, survivable, versatile, and interoperable wireless communications for public safety personnel tasked with saving lives and safeguarding property, in accordance with ATP, natural disaster response, and Homeland Defense (HD) initiatives. It further documented within these capability gaps, command infrastructure inconsistencies that consist of exercising and synchronizing command and control, collaborating and storing information in a net-centric operational environment, and developing and maintaining a shared situational awareness and understanding.

Investment Description and Justification

Short Description

NAV-IDAS will be established by OPNAV N2/N6 DDCIO(N) to encourage Information Technology (IT) procurement planning and visibility across Echelon II Commands and ensure IT procurements comply DoD and DON statutory and regulatory requirements.

Full Description

The purpose of this initiative is to development of the initial operating capability (IOC) for Navy Information Dominance Approval System (NAV-IDAS). NAV-IDAS will be established through the Office of the Chief of Naval Operations (OPNAV) N2/N6 Deputy Department of the Navy Chief Information Officer for Navy (DDCIO(N)) in order to encourage Information Technology (IT) procurement planning and visibility across Echelon II (EII) Commands and ensure IT procurements comply with the Department of Defense (DoD) and Department of Navy (DON) statutory and regulatory requirements. The purpose of this enterprise web initiative is to provide a capability to track IT-related acquisition procurement requests, ensure IT-related procurement acquisition requests meet capabilities/mission requirements, and provide a capability for containing cost controls and compliance with the governance associated with DoD and DON organizational mandates. NAV-IDAS will provide a standardized and repeatable process to allow Navy decision makers to have enterprise visibility into the procurement acquisition of IT assets and total cost. NAV-IDAS shall be a Web-enabled workflow system in which users submit IT procurement requests online for approval by their agency Command Chief Information Officer (Command CIO) and Department of Navy Deputy CIO (DDCIO(N)) (within above a dollar threshold). The workflow includes reviews by Echelon I Functional Area Manager (FAM) and EII CIO Subject Matter Experts (SME) Echelon II Subject Matter Experts (EII CIO SME), Echelon I Functional Area Managers (Ech I FAM), Echelon II Command Information Officers (EII CIO) and DDCIO(N).

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Knowledge management / Information Discovery

Investment Description and Justification

Short Description

CACCTUS is a critical element in the ability to conduct Service specific Combined Arms Staff Training for all elements of the Marine Corps Air Ground Task Force (MAGTF).

Full Description

CACCTUS is a critical element in the ability to conduct Service specific Combined Arms Staff Training for all elements of the Marine Corps Air Ground Task Force (MAGTF). The CACCTUS contributes to the Marine Corps Core Competency of Combined Arms Operations, as outlined in Marine Corps Strategy 21, by providing an institutional means to effectively train Marine staffs and units in all aspects of effectively integrating combined arms assets. The Expeditionary Maneuver Warfare(EMW) Capability List (ECL) directs the development of training systems and infrastructure that incorporate combined arms staff trainers into regional training centers at all MEF HQ and MAGTFTC.

Investment is Categorized as

General IT

Investment Architecture

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

CMPRO is a Product Lifecycle Management (PLM) Tool that supports Joint/DOD/Federal programs with engineering and logistics by managing the entire lifecycle of a product/system from its conception, through design and manufacture, to service.

Full Description

CMPRO supports business processes for Engineering Data Management (including drawing revision control for hundreds of thousands of Navy drawings, stacked changes, engineering part validation, bill of materials (BOMs), part trees, etc). Document Management. Configuration Status Accounting (ECP, NOR, EO, ACSN, Field Change, FCB, NCR, etc). Inventory Management (formerly SIMS; including production support, work-order management, Total Asset Visibility, sponsor owned material (SOM tracking), UID, Fleet Support, Deployment and CASREP support). Alterations Management (including APL data and Field Changes). Project/Schedule and Action Item Management. CDRL Management (DD1423). NAVAIR Aircraft, Support Equipment, and Depot engineering process support including RRR, REI, EI, LES, MCR, JEDMICS Export, and Material Work Requests (4235/6). As-Built/As-Delivered item tracking (including tracking of serialized parts, UID, item maintenance, DD1149). Currently over 14,000 user accounts for NAVSEA, NAVAIR, MCM, DJC2 (Joint Program), SOCOM, WARCOM, and SPAWAR. Programs include RADIAC (includes Navy/Coast Guard/Homeland Security/Army/USAF), LCS (NSW-PC), DJC2, MCM, Airborne Mine Countermeasures (AMCM), WARCOM (SDV & MK V), Crane Weapons, SPAWAR Charleston/San Diego, NAVAIR Depot North Island and JAX, Surface Mine Counter Measures (SMCM), NSWC PC fleet and MILSTRIP ordering, and NUWC-Newport and NUWC-Keyport torpedo support. There are additional non-navy DOD customers (Air Force & Army). The CMPRO-SWIMS mission is to provide support in RTD&E, Logistics, Inventory Control, and Configuration Management efforts including hardware and software design, digital retrieval, display and printing of technical documents, configuration management of document, drawings, and parts for use by the U.S. Navy, Joint Forces Commanders (JFCs), Regional Combatant Commanders (RCC), Joint Task Force (JTF) operations, Joint Program Office, NSWC PC, and other cognizant government and commercial agency. CMPRO-SWIMS is intended to be a central point of access to technical data related to its associated programs. The system was designed with an open architecture, allowing for the addition and deletion of functions as system requirements and/or technology changes. CMPRO-SWIMS has over 14000 user accounts and supports the U.S. Navy, USSOCOM, COMNAVSPECWARCOM, Littoral Warfare, and other cognizant government and commercial agencies.

General Government / Support delivery of federal services / Issue Tracking

Investment Description and Justification

Short Description

DON Enterprise records and task management system.

Full Description

The Department of the Navy Tasking, Records and Consolidated Knowledge Enterprise Repository (DON TRACKER) will streamline DON's electronic records and task management processes under a consolidated enterprise solution and will enable the DON to capture unstructured and structured electronic records, seamlessly manage tasking across and within all commands, ensure uniform metadata of content, provide workflow-enabled reporting, and aid in compliance with all applicable laws, policies, and regulations. In addition, this will eliminate duplicative capabilities and result in cost-saving opportunities and efficiencies. The DON TRACKER solution will be extended to all authorized, shore-based users across the DON enterprise, including the Continental United States (CONUS) and Outside the Continental United States (OCONUS) communities. This will address the following issues: Currently, the DON lacks standard records management (RM) processes across all directorates and commands; compliance with Federal and Departmental RM mandates is inconsistent; task management (TM) across the DON is not integrated across directorates and commands; decentralized processes have reduced organizational effectiveness; implementation of DON RM and TM programs does not provide a seamless approach for managing activities, resulting in low process efficiencies resulting in duplication of effort, excess costs, non-compliance with laws, policies, regulations and standards, long and protracted process cycle times, and sub-optimal decision making due to lack of visibility of available information - all of which results in difficulties with implementing policy and guidance across the DON. The DON lacks a true lifecycle RM capability from creation through disposition. The current DON infrastructure includes multiple, non-integrated TM systems that lack the ability to edit documents in place, lack transparency, and lack integration with other TM systems and the existing RM system.

Investment Description and Justification

Short Description

Corporate Database (CDB) is a data warehouse containing integrated business data across multiple business areas. A web-based interface provides ad-hoc query, multi-dimensional analysis, and reporting capabilities.

Full Description

Corporate Database (CDB) also known as Warfare Center Enterprise Data Warehouse (WCEDW) is an Enterprise-wide data warehouse integrating workload, workforce, financial, and organizational management data (e.g., plans, customers, people, funding, execution, procurements, etc.). CDB/WCEDW delivers a system of management information, decision support data, and executive level information through an integrated set of web-enabled tools including ad-hoc query, multi-dimensional analysis, and reporting. These capabilities are critical to business processes supporting the Technical Programs and their missions. CDB/WCEDW is used by NSWC/NUWC Corporate staff, line managers, program managers, and analysts within the Warfare Center Divisions and Warfare Center Headquarters.

MyTeam provides an integrated suite of capabilities, improving organizational effectiveness by providing comprehensive content and web management, enterprise search, business process workflows, and team collaboration tools.

Full Description

MyTeam provides an integrated suite of capabilities, improving organizational effectiveness by providing comprehensive content and web management, enterprise search, business process workflows, and team collaboration tools. Provides a web enabled enterprise wide document management, collaboration, workflow, business intelligence, and content management environment to the Naval Air Warfare Center and the Naval Air Systems Command. NAVAIR is utilizing this platform to enable the consolidation and optimization of Acquisition, Business, and Human Resource functions and associated applications across the command. This includes the (Acquisition Management System)AMS Toolkit, the AIR 7.3 Development Program Tool (DPT) and The Developmental Assignment Registry's (DAR) which mission is to provide a tool for the advertising of rotational assignments, approval of rotational assignments, tracking of rotational assignments, and reporting capability since current processes are normally processed out of the system.

Investment Description and Justification

Short Description

BES is a suite of tools utilized to conduct the daily business of the Technology Services Organization, HQMC Programs & Resources; which is software development and systems engineering activity. BES is designed to support the TSO project execution.

Full Description

BES is a suite of tools utilized to conduct the daily business of the Technology Services Organization, HQMC Programs & Resources; which is software development and systems engineering activity. The BES is designed to support the TSO project estimating (size and effort; dollars and hours) and tracking, managing system change requests, budgetary & Earned Value Management (EVM), structured design, and issue tracking. The suite is made up of COTS products such as Atlassian JIRA (software development and issue management tracking) and custom coded applications (GOTS) that include Estimate and Management System (EMS), and Design Logic Table (DLT) Web. The day to day of the operation of BES is managed by application administrators within the System Support Division within the TSO. These systems are funded by the TSO and are designated as MAC III sensitive. There are no MOU's as the TSO is the primary user of the system however TSO customers (external organizations) leverage this system as part of a comprehensive business process. The EMS application is used to manage system change requests, estimate projects, manage size and effort data, approve projects, and release information. Users consist of individuals within the TSO including Military, Civilian, and contractor personnel, as well as external organization such as, Marine Corps Pay Requirements Directorate (MCPRD) and Manpower Information System Support Activity (MISSA). The DLT Web and JIRA application are used by P&R Dept, MCPRD, Marine Corps Disbursing Operations and System Section (MCDOSS), MISSA, USMC Disbursing Offices, Marine Forces Reserve, and Chief Naval Reserve Forces (CNRF) personnel. The DLT Web application documents and stores the logic and business rules for the MCTFS pay and personnel system. The JIRA application tracks production problems, test incidents, requirements, taskings, deliverables, and work assignments.

Investment Architecture

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / Customer Services

Investment Description and Justification

Short Description

Navy Installation business IT and connectivity services that are not provided by NGEN.

Full Description

- Manage purchased administrative telephone service for CNIC activities and personnel.
- Maintenance and repair of telephone and other wire communication equipment.
- Purchase, lease, and maintenance contracts for air cards, pagers, and cell phones.
- Services delivered via a commercial IT services provider in support of CNIC activities and personnel
 - > Cable TV
 - > IP services
 - > Phone or other cable services
- Negotiation, management, monitoring of cable contracts.
- Maintaining cable infrastructure in coordination with NCTAMS and NAVFAC.
- Personnel and equipment providing video teleconferencing services .
- All other audiovisual, to include photographic, services and equipment support should be charged to the program, function, or subfunction it supports.

The Investment is designated as a 'Non-Major' therefore only requires Horizontal Variance explanations at the Investment Level

| Resource Owner Org | Appropriation Group | Horizontal Change Amt FY2020 VS FY2021 | |
|--------------------|---------------------|--|--|
| NAVY | AT INVESTMENT | (\$825) | |

Horizontal Change Explanation

Decrease reflects the SUPSHIP transition from legacy networks to NGEN and a realignment of funding to non-IT tasking in support of operations that are essential to enabling SUPSHIPS to fulfill its mission of maintaining, constructing and delivering ships to the Navy and the Military Sealift Commands on budget and on schedule.

DoD Type Segment:

Enterprise Services / 800-000 - IT Management

OMB Sector/Function/Service:

General Government / Support delivery of federal services / IT System Development / Integration Support

Investment Description and Justification

Short Description

Provides IT support for software development, systems engineering, maintenance, and operations of FM and HRM Business systems including integrated Pay & Personnel, Financial Management and Accounting systems in support of the USMC, DON, and DoD.

Full Description

The TSO provides software development, systems engineering, and technology support to the United States Marine Corps (USMC) and other select DoD customers including Navy Reserve, Air Force Reserve, Air National Guard and Defense Finance and Accounting Service (DFAS). The TSO operates as a Government-owned, Government-operated, Contractor-supported (GOGOCs) Integrated Product Team (IPT). The TSO GOGOCs IPT is comprised of Government civilians, Contractor employees and active duty Marines. The TSO supports a number of business mission area sponsors within the Marine Corps including the Deputy Commandant, Programs and Resources (P&R) and Deputy Commandant, Manpower and Reserve Affairs (M&RA). The TSO provides systems support for the DFAS, the U.S. Navy, and the U.S. Air Force. Additionally, the TSO provides administrative and IT support to other Marine Corps organizations, further referred to as supported organizations, principally located in Indianapolis, Indiana and Kansas City, Missouri, including Marine Corps Pay Requirements Directorate (MCPRD), Marine Corps Disbursing Operations and Systems Section (MCDOSS), and Marine Corps Pay Reconciliation Team.

Investment Description and Justification

Short Description

System creates, processes, and stores DD-2875 (System Access Authorization Requests) for MCICOM users that access MCICOM applications.

Full Description

System creates SAARS (System Access Authorization Requests) for MCICOM users that access MCICOM applications (Builder SMS, GEOFIDELIS, USMCMAX, FI WEB, iSTAR, NEPA PAMS, MCFMIS). The users are taken through a workflow process that will create, authenticate, verify, and approve the users access request. This application will also store the user's SAAR.

OMB Sector/Function/Service:

General Government / Knowledge management / Knowledge Distribution and Delivery

Investment Description and Justification

Short Description

A system used to compress, encrypt and transmit requisitions from Navy ships and ashore organizations.

Full Description

SALTS is an application, used throughout the Navy, Marine Corps, and MSC to report their logistical data upline to data brokers throughout CONUS. The data brokers also provide status, reports, and bills for payment that can be managed through the SALTS application, back to customers. The data being processed includes MILSTRIP, Financials, Maintenance, and Administrative. Much of the data received at SALTS is processed through middleware scripts to reformat data for applications that cannot be modified due to time and funding constraints. This includes National Inventory Management Strategy (NIMS), Job Order Accounting (JOA), and Material Financial Control System (MFCS) Transaction Item Reports. SALTS relies on existing communications infrastructure to pass data between the client, data brokers, and SALTS Central at NAVSISA Mechanicsburg.
