Energy Management and Controls Solutions

The complete range of HVAC solutions for your business:

- SALES
- SERVICE
- SPARES
- CONTROLS
- RENTAL

Focus on Energy Management

Around the world, global warming is headline news and energy efficiency is at the top of everyone's agenda; individuals, businesses and governments.

The UK Government has set an ambitious target to reduce carbon emissions by more than 26% by 2020 and have introduced a range of measures aimed at achieving this goal.

Can you afford to leave your energy costs to chance?

At Carrier, we firmly believe that it is our responsibility, both as individuals and as a leader in our industry, to take measures to reduce energy consumption wherever possible.

Carrier can help reduce your energy costs

Carrier offers a range of inspections; from your HVAC system right through to your entire building, to identify energy savings from:

- Improved air distribution
- Optimised control
- Replacement of old plant
- Improved system efficiency
- Effective monitoring and maintenance

The Comfort/Cost Equation

Carrier can provide energy surveys by experienced, highly qualified engineers for any installation. The reports generated produce recommendations which can result in both energy savings and cost reductions.

Carrier's energy surveys can make a major contribution to your company's energy strategy and will result in a controls strategy, which is the first step towards the future management of your heating, ventilation and air conditioning (HVAC) systems. Imagine controls management access from anywhere, reduced on-site costs, lower energy consumption and lower utility costs.

Equipment Communication

With the latest open protocol controls technology, plant can speak to plant whatever the brand, whether chiller or boiler. This technology allows you to overview all your plant utilising various interface solutions.

Installation of Integrated Controls Solutions

Dedicated teams of specialists can carry out complete project design and turnkey management and installation on small single or large multiple sites.

Performance Tracking and Prediction

For critical installations the most sophisticated technology is available from Carrier, designed specifically for HVAC equipment. There is no longer any need to make do with costly adapted algorithms.

Service and Repair of Controls Systems

New and existing controls systems can be maintained, repaired, refurbished or replaced according to your needs. Carrier maintenance contracts can accommodate specialist controls servicing packages to suit your business.

Act now. Save energy.
