

A shipment of aquatic plants from Florida identified as Q-rated *Neptunia oleracea* (waterlily mimosa). (Photos courtesy of Santa Clara County.)

### San Francisco County High Risk Interception

**PDR: 380P50000003**

On August 26, 2021, San Francisco County Agricultural Inspector Chad Porter, conducted a high risk inspection at a FedEx facility in the city of San Francisco. During the inspection, Inspector Porter intercepted a properly marked package from the island of Kauai in Hawaii. The package came with certification for burrowing and reniform nematode and contained an assortment of individually wrapped nursery stock, including one *Gardenia brighamii* (Kula gardenia) plant.

Upon closer inspection, Inspector Porter found several live insect pests on and under the leaves of the gardenia plant. Pest samples were collected and sent to the PPD Entomology Laboratory where they were identified as A-rated *Asiothrix antidesmae* (whitefly). A Notice of Rejection was issued for violating California FAC [Section 6461.5](#) (live pests). The gardenia plant was double bagged and disposed of in the municipal waste. The rest of the plants, which were all individually wrapped, were thoroughly inspected, and released to the receiver after no pests were found.

A-rated *Asiothrix antidesmae* (whitefly) found on a *Gardenia brighamii* (Kula gardenia) plant from the Hawaiian island of Kauai.

**Scale Pests Found on Longans & Mangosteen Fruits**  
**PDRs: NE0P50004535 & 4536**

On August 22, 2021, a vehicle traveling from Georgia to California arrived at the Needles Border Protection Station. Inspector Nathan Wilfong inspected the vehicle and intercepted 10lbs. of *Dimocarpus longan* (longan) fruit and 6lbs. of *Garcinia mangostana* (mangosteen) fruit. Longan and mangosteen fruit are admissible into California unless surface pests or signs of disease are found upon inspection.

The traveler stated that the longan and mangosteen fruit were purchased at a local Asian supermarket in Atlanta, Georgia. Upon a closer inspection of the fruit Inspector Wilfong noted that the mangosteen and longan (stems and fruit) were infested with approximately 15 live scales. The fruits were refused entry into California due to violating California FAC [Section 6461.5](#) (live pests) and consequently were confiscated by Inspector Wilfong.

Pest samples were collected and sent to the PPD Entomology Laboratory where Q-rated Diaspididae (scale) were identified. The longan and mangosteen fruit were double bagged with heavy duty plastic bags and discarded in the landfill waste dumpster at the Needles Border Protection Station.

**A/Q/W-Rated Pest Interceptions with Determinations Entered:**

**08/26/2021 through 09/01/2021**
