

CA Notify

Get COVID-19 Exposure Alerts

Add CA Notify to your phone to protect your friends, family, and community from COVID-19

Protect your friends, family, and community

CA Notify is a free exposure notification system for smartphones, implemented by the California Department of Public Health, to alert you if you've been exposed to COVID-19. CA Notify is easy to use, private, secure, and 100% voluntary. It's available for both iPhone and Android phones. CA Notify helps keep communities safe from COVID-19 by alerting people if they need to get tested or stay home.

How does it work?

Once you've activated CA Notify, your phone uses Bluetooth technology to anonymously exchange information with nearby phones that also have CA Notify activated. If you are close to another person long enough to be exposed, CA Notify records it. If that person later tests positive for COVID, CA Notify will send you a message letting you know you were exposed, and with information about what you can do to take care of yourself and prevent the further spread. If you are the one who tests positive, CA Notify will send you a different message describing what you can do to anonymously notify the people you have recently been around. Your privacy is secure since the program is anonymous. CA Notify doesn't use GPS, doesn't track your identity or immigration status, and doesn't know your specific location.

How does it help?

CA Notify helps alert people if they've been exposed to COVID-19, so they can get tested, monitor their symptoms, and take precautions. Even if you've been vaccinated and boosted, you can still potentially spread COVID-19. Join millions of other Californians and activate CA Notify today.
