# **OVERVIEW**

The Cisco UCS C240 M7 SFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 2U form factor with the 5<sup>th</sup> Gen. Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors, 16 DIMM slots per CPU for DDR5-5600 Memory DIMMs with DIMM capacity points up to 256GB **or** 4<sup>th</sup> Gen. Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors, 16 DIMM slots per CPU for DDR5-4800 Memory DIMMs with DIMM capacity points up to 256GB.

The Cisco UCS C240 M7 SFF server harnesses the power of the latest Intel® Xeon® Scalable Processors , and offers the following:

CPU:

- Up to 2x 5<sup>th</sup> Generation Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors with up to 64 cores per processor or
- Up to 2x 4<sup>th</sup> Generation Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors with up to 60 cores per processor.

#### Memory:

■ Up to 8TB with 32 x 256GB DDR5-5600 DIMMs, in a 2-socket configuration with 5<sup>th</sup> Gen. Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors **or** 

■ Up to 8TB with 32 x 256GB DDR5-4800 DIMMs, in a 2-socket configuration with 4<sup>th</sup> Gen. Intel<sup>®</sup> Xeon<sup>®</sup> Scalable Processors.

#### The server provides one or two internal slot for one of the following:

- Cisco 24G Tri-mode RAID controller with cache backup to control SAS/SATA/NVMe drives or

#### Select CPUs

**NOTE:** If you try to upgrade an existing C240M7 Server from 4<sup>th</sup> Gen CPUs to 5<sup>th</sup> Gen CPUs and if there is GPU greater than 75W is installed in the server an air duct **(UCSC-GPUAD-C240M7=)** must require. Please refer to the **installation guide** for more details.

- The available 5<sup>th</sup> Gen Intel<sup>®</sup> Xeon<sup>®</sup> Scalable CPUs are listed in *Table 5*. See *Table 7 on page* 22 for CPU suffix notations.
- The available 4<sup>th</sup> Gen Intel<sup>®</sup> Xeon<sup>®</sup> Scalable CPUs are listed in *Table 6*. See *Table 7 on page* 22 for CPU suffix notations.

**CAUTION:** Normal operating temperature is limited to  $35^{\circ}$  C [95° F], for the 2U NVMe/SAS SKU, and is lowered to  $28^{\circ}$  C [82.4° F], with a fan fault. When rear drives are installed, the normal operating temperature is lowered to  $30^{\circ}$  C [86° F], and  $26^{\circ}$  C [78.8° F], respectively with a fan fault.

When GPUs are installed, CPU TDP is limited to 300W. With multiple GPU>75W installed, normal operating temperature is 30° C [86° F], lowered to 25° C [77° F], with a fan fault.

#### Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in *Table 9*.

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

### Memory configurations and mixing rules

- Golden Rule: Memory on every CPU socket shall be configured identically.
- System speed is dependent on the CPU DIMM speed support. Refer to Available 4th Gen. Intel® Xeon® Scalable CPUs, page 20 and Available 5th Gen. Intel® Xeon® Scalable CPUs, page 18 for DIMM speeds.
- For full details on supported memory configurations see the M7 Memory Guide.
- DIMM Count Rules:

#### Table 10 Allowed DIMM Count for 1-CPU and 2-CPU

**NOTE(1):** 12 DIMMs count for 1-CPU, 24 DIMMs count and for 2-CPU configurations are only allowed when all DIMMs have the same density.

- DIMM Population Rules:
  - Each channel has two memory slots (for example, channel A = slots A1 and A2). See golden rule above.
    - A channel can operate with one or two DIMMs installed.
    - If a channel has only one DIMM, populate slot 1 first (the blue slot).
  - When both CPUs are installed, populate the memory slots of each CPU identically. Fill the blue slots (slot 1) in the memory channels first according to the recommended DIMM populations in *Table 11.0*, *Table 11.1* and *Table 11.2*.

- 2. Only valid when DIMMs in blue and black slots are the same density.
- DIMM Mixing Rules:
  - Higher rank DIMMs shall be populated on Slot 1.
  - Mixing different DIMM densities in the same slot across channels is not supported. All populated slots of the same color must have the same DIMM density.
  - Mixing X4 and X8 DIMMs is not allowed
  - Mixing 16Gb DRAM based and 24Gb DRAM based DIMMs is not allowed. Therefore, 48GB and 96GB cannot be mixed with any other memory DIMMs
  - 48GB supports 1 DIMM Per Channel (1DPC) only
  - The DIMM mixing rules matrix is described in the *Table 12* and *Table 13*, below

# Table 12 Supported DIMM mixing and population across 2 slots in each channel - 16GB, 32GB, 64GB,128GB, and 256GB DIMMs

Notes:

1. For 2,4,6, 8 DIMMs count, only populate slot 1 (Blue slot). see Table 11.0 for details

2. When mixing two different DIMM densities, all 8 channels per CPU must be populated. Use of fewer than 8 channels (16 slots per CPU) is not supported.

48GB	1Rx4	No	No	
96GB	2Rx4	No	Yes <sup>1</sup>	

Notes:

1. For 6, 8 DIMMs count, only populate slot 1 (Blue slot). see Table 11.2 for details

- Memory Limitations:
  - Memory on every CPU socket shall be configured identically.
  - Refer to Table 11.0, Table 11.1 and Table 11.2. and Table 12 and Table 13, for DIMM population and DIMM mixing rules.
  - Cisco memory from previous generation servers (DDR3 and DDR4) is not supported with the M7 servers.
- For best performance, observe the following:
  - For optimum performance, populate at least one DIMM per memory channel per CPU. When one DIMM per channel is used, it must be populated in DIMM slot 1 (blue slot farthest away from the CPU) of a given channel.
  - The maximum 2 DPC speed is 4400 MT/s, refer to *Table 14.0* and *Table 14.1* for the details.

# **STEP 5** SELECT DRIVE CONTROLLERS (OPTIONAL)

The following list summarizes how drives are controlled on the server:

- Up to 28 SAS/SATA drives are controlled through a Cisco 12G SAS RAID controller.
- Up to 14 SAS/SATA/NVMe drives are controlled through a Cisco 24G Tri-mode RAID controller
- Up to 14 SAS/SATA drives are controlled through a Cisco 12G SAS pass-through HBA.

**NOTE:** PCIe drives are controlled directly from the CPUs.

### **RAID Volumes and Groups**

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For the Cisco 12G SAS RAID controller, use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume
- For the Cisco 24G Tri-mode RAID controller, use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs or NVMe SSDs in each RAID volume.

**NOTE:** 240 virtual drives (VDs) per controller, with up to 64 per disk group with the 12G Raid Controller, and 16 per disk group with the 24G Tri Mode Controller.

#### **RAID Controller Options**

Select one of the Controllers options for internal drives from the following Table 15.

- Two Cisco 24G Tri-mode RAID controller or
- One Cisco 12G RAID controller or
- Two Cisco 12G SAS HBA

#### NOTE:

- If the Cisco 24G Tri-mode RAID controller, 12G SAS RAID controller or Cisco 12G SAS HBA is selected, it is factory-installed in a dedicated slot.
- All RAID controllers are only supported on UCSC-C240M7SX. For UCSC-C240-M7SN, drives are controlled directly from the CPU.

- When you order Qty 3-4 front-facing direct-attach NVMe drives without raid controller or with controller UCSC-SAS-T-D, two NVMe cables (PID: CBL-SAS24-C240M7 and CBL-FNVME-C240M7) are included along with the drives.
- UCSC-BBLKD-M7 is included for the unselected front and rear storage device.

**NOTE:** If you decide to add front-facing NVMe drives later, you may need to order the drives as spare and also NVMe cables. Spare NVMe cables support depends on the drive controller installing/installed in the system.

#### Caveats

For UCSC-C240-M7SX:

- Front SFF NVMe drives 1-2 are connected directly to CPU1.
- Front SFF NVMe drives 3-4 are connected directly to CPU2.
- The rear NVMe drives are controlled directly from the CPUs.
- If you order 3 or 4 NVMe drives, you must also order two CPUs
- SFF NVMe drives are bootable in UEFI mode only.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS HDDs and SAS/SATA SSDs when using a Cisco M6 12G SAS RAID controller or Cisco 24G Tri-Mode RAID controller or Cisco 12G SAS HBA.
- SED drives can be mixed with the non-SED drives in *Table 18 on page 36*

- Rear NVMe drives in riser 1B are connected directly to CPU1
- Rear NVMe drives in riser 3B are connected directly to and require CPU 2
- Rear SAS/SATA drives in riser 1B or 3B connect to RAID or HBA Controllers.

#### Table 19 Available PCIe Option Cards (continued)

- Notes: 1. HHHL = half-height, half-length; FHHL = full-height, half-length; SS = single-slot; DS = double-slot. SFF = small
  - form factor.
  - 2. For installation in the mLOM slot, you can order either an mLOM VIC, or the OCP NIC but not both. If ordering the OCP NIC, the OCP Mechanical Kit (UCSC-OCP3-KIT-D) must also be installed in order to mount OCP NIC in the mLOM slot.
  - 3. When present, the recommended Fan Speed Control policy setting is balanced.
  - 4. NICs with 16 active electrical lanes, such as the 100G NICs, can be inserted in slots with 8 active electrical lanes. The NIC will function but may exhibit degraded performance.
  - 5. This Virtual Interface Cards incorporate VIC Secure Boot technology .

#### Caveats

- For 1-CPU systems:
  - All the PCIe slots on riser 1A and 1C are supported for the PCIe Cards.
  - Riser 2 and 3 are not supported in 1-CPU system.
  - Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slots 1 or 2 of riser 1A or slot 1 of riser 1C.
  - You can order an mLOM VIC card to be installed in the mLOM/OCP 3.0 slot internal to the chassis and thus have two VIC cards in operation at the same time. If you order a double-width GPU, it must be installed in slot 2; then a PCIe VIC can be installed in slot 1. See the *Table 19 on page 40* for the selection of plug-in and mLOM/OCP 3.0 VIC cards.

- For 2-CPU systems:
  - All the PCIe slots on riser 1, 2, and 3 are supported for the PCIe Cards.
  - You can order an mLOM VIC card to be installed in the mLOM slot internal to the chassis. You can also have up to two PCIe VICs.
    - If Riser 1A an 2A are selected, two PCIe VIC can be installed in slot 2 of Riser 1A and slot 5 of Riser 2A. If GPUs are installed in slot 2 of riser 1A or slot 5 of riser 2A, the NCSI capability automatically switches over to slot 1 of riser 1A or slot 4 of Riser 2A. Therefore, Cisco PCIe VICs can be installed in slot 1 of Riser 1A and slot 4 of Riser 2A if GPUs are installed in slots 2 of Riser 1A and slot 5 of Riser 2A.
    - If Riser 1C and 2C are selected, two PCIe VIC and be installed in slot 1 of Riser 1C and slot 4 of Riser 2C.

See *Table 20 on page 44* for the selection of plug-in and mLOM VIC cards. See also *C240 M7 Server With Top Cover Off, page 65* and below table for the PCIe slot physical descriptions.

- The server supports up to two PCIe Cisco VICs plus an MLOM VIC. However, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 2 of riser 1A/slot 1 of riser 1C, then slot 5 of riser 2A/slot 4 of riser 2C for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.
- For installation in the mLOM slot, you can order either an mLOM VIC, or the OCP NIC but not both. If ordering the OCP NIC, the OCP Mechanical Kit (UCSC-OCP3-KIT) must also be installed in order to mount OCP NIC in the mLOM slot.

#### NOTE:

- UCSM managed servers are discoverable only if a PCIe VIC is installed or a VIC is installed in the MLOM slot.
- Select Cisco UCS Virtual Interface Cards incorporate VIC Secure Boot technology to ensure the integrity of the VIC hardware and firmware upon server boot. VIC Secure Boot is independent of server-level secure boot from Cisco, but both technologies contribute to the Cisco trust model ensuring customers' equipment is genuine and running validated firmware.
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C240 M7 server, but are not sold on the Cisco price list, check the Hardware Compatibility List link.

### **ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES**

At the time of first launch, the 3rd Party Ethernet adapters were tested for interoperability with an initial selection of Optical Modules and Cables. # STEP 8 ORDER GPU CARDS (OPTIONAL)

Select GPU Options

The available GPU PCIe options and their riser slot compatibilities are listed in *Table 20*.

**CAUTION:** 256GB DIMMs cannot be combined with GPU cards, and the ambient temperature shall be limited to a maximum of 28°C.

### NOTE:

- GPUs cannot be mixed
- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM
- If a GPU with TDP equal or greater than 150W is ordered, all the 3 risers are required, and GPU airblocker will be installed in the middle slot of any empty riser in the system.
- If GPUs are installed in slot 2 of riser 1A/1C or slot 5 of riser 2A/2C, the NCSI capability automatically switches over to slot 1 of riser 1A/1C or slot 4 of Riser 2A/2C. Therefore, Cisco PCIe VICs can be installed in slots 1 and 4, if GPUs are installed in slots 2 and 5. If you order multiple GPUs, they must be installed as shown in *Table 20 on page 44*.
- Please refer to installation guide for the installation of the GPUs.

- Air duct (UCSC-GPUAD-C240M7) is not auto-included with the double wide GPUs, however it is required selection under configuration. For GPU UCSC-GPU-FLEX140 and UCSC-GPU-L4 air duct is not required.
- UCS-P100CBL-240-D is included with the selection of A100/A40/A16/A30 GPUs.

**NOTE:** If you are adding GPUs later to non GPU ready configuration, you need to order the GPU kit (UCSC-GPUKIT-240M7=) along with GPUs, this GPU kit includes 2x low profile heatsinks, 1x GPU airduct, 2x thermal paste and 2x GPU airblockers.

Notes:

- 1. 1C and 2C are Gen 5 riser and 1A and 2A are Gen 4 riser.
- 2. The server supports one full-height, full-length, double-wide GPU (PCIe slot 7 only) in Riser 3C.
- 3. L4 is supported on all slots in PCIe risers. The maximum would be 8 when you have riser 1A+2A+3A and populate all 8 slots with L4.

# STEP 9 ORDER POWER SUPPLY (REQUIRED)

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M7 C-series servers. Each power supply is certified for high-efficiency operation and offer multiple power output options. This allows users to "right-size" based on server configuration, which improves power efficiency, lower overall energy costs and avoid stranded capacity in the data center.

Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

#### http://ucspowercalc.cisco.com

#### WARNING:

- Starting 1<sup>st</sup> January 2024, only Titanium rated PSUs are allowed to be shipped to European Union (EU), European Economic Area (EEA), United Kingdom (UK), Switzerland and other countries that adopted Lot 9 Regulation.
- DC PSUs are not impacted by Lot 9 Regulation and are EU/UK Lot 9 compliant

Notes:

1. This power supply supported with NO-POWER-CORD and CAB-48DC-40A-8AWG

### NOTE:

- In a server with two power supplies, both power supplies must be identical.
- Refer to *Power Specifications*, *page* 97 section for the full details on the each power supply.

# **STEP 10 SELECT INPUT POWER CORD(s) (REQUIRED)**

Using *Table 23* and *Table 24*, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

**NOTE:** *Table 23* lists the power cords for servers that use power supplies less than 2300 W. *Table 24* lists the power cords for servers that use 2300 W power supplies. Note that the power cords for 2300 W power supplies use a C19 connector so they only fit the 2300 W power supply connector.

# **STEP 11** ORDER TOOL-LESS RAIL KIT (REQUIRED) AND REVERSIBLE CABLE MANAGEMENT ARM (OPTIONAL)

■ Tool-less Rail Kit:

Select a tool-less rail kit (or no rail kit) from Table 25.

#### NOTE:

- Cisco recommends a minimum quantity of 1 Rail Kit.
- If you plan to rackmount your UCS C240 M7 server, you must order a tool-less rail kit.

#### Table 25 Tool-less Rail Kit Options

Product ID (PID)	PID Description
UCSC-RAIL-D	Ball bearing rail kit
UCSC-RAIL-NONE-D	No rail kit option

■ Optional Reversible Cable Management Arm:

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Select an Optional Reversible Cable Management Arm from *Table 26*.

#### Table 26 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMA-C240-D	Reversible CMA for ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, check the *Cisco* UCS C240 M7 Installation Guide.

# **STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)**

By default, the C240 M7 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated.

### NOTE:

- There are no LOM ports on the C220 and C240 M7 servers. Servers ordered without a VIC or OCP card will ship in Dedicated network mode, unless otherwise specified by a configurable SW PID (UCSC-CCARD-01)
- For full details on all the NIC mode settings, see

https://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/c220m6/in stall/c220m7/m\_maintaining\_the\_server.html?bookSearch=true

#### Table 27 Management Configuration Ordering Information

Product ID (PID)	PID Description
UCSC-DLOM-01-D	Dedicated Mode BIOS setting for C-Series Servers
	To change the default NIC mode to Dedicated NIC mode, select this card
	<ul> <li>In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port.</li> </ul>
	See Chassis Rear View (UCSC-C240-M7SX), page 6 for the location of the management port
UCSC-CCARD-01-D	Cisco Card Mode BIOS setting for C-Series Servers
	To change the default NIC mode to Cisco Card Mode, select this card
	<ul> <li>If Cisco card selected, a VIC or MLOM must also be included in the configuration. if OCP card is included in the configuration, a VIC card must be selected.</li> </ul>
	In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

In addition, the optional software PIDS listed in *Table 35 on page 58* can be ordered for setting the server to operate in various modes.

### **STEP 13 ORDER SECURITY DEVICES (REQUIRED)**

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in Table 28

#### NOTE:

- The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

#### Table 28 Security Devices

Product ID (PID)	PID Description
UCSX-TPM-002C-D	Trusted Platform Module 2.0 for UCS servers
UCSC-INT-SW02-D	C220 and C240 M7 Chassis Intrusion Switch
UCSX-TPM-OPT-OUT-D	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified <sup>1</sup>

Notes:

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

# **STEP 14** SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from Table 29.

#### Table 29 Locking Bezel Option

UCSC-BZL-C240-D	C240 M7 Security Bezel

# **STEP 15 ORDER M.2 SATA SSDs (OPTIONAL)**

Order one or two matching M.2 SATA SSDs from *Table 30* along with a boot-optimized RAID controller (see *Table 31*). See *Figure 7 on page 65* for the location of the module connector on the motherboard. The motherboard connector accepts the extender board and the extender board accepts the boot-optimized RAID controller. Each boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs.

#### NOTE:

- It is recommended that M.2 SATA SSDs be used as boot-only devices.
- Order one or two identical M.2 SATA SSDs for the boot optimized RAID controller
- You cannot mix M.2 SATA SSD capacities.

UCS-M2-960G-D	960GB M.2 SATA Micron G2 SSD

Order Cisco boot optimized M.2 RAID controller from *Table 31*. The boot optimized RAID controller plugs into a extender board on the motherboard and holds up to two M.2 SATA drives.

#### NOTE:

- The Cisco boot optimized M.2 RAID controller supports VMWare, Windows and Linux Operating Systems
- The Cisco boot optimized M.2 RAID controller supports RAID 1 and JBOD mode
- The Cisco boot optimized M.2 RAID controller is available only with 240GB, 480GB, and 960GB M.2 SSDs.
- CIMC is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported
- Hot-plug replacement is not supported. The server must be powered off.
