

2006 MOTH SURVEY

DURLSTON COUNTRY PARK

Presented by the Friends of Durlston
as an addendum to the Durlston Black Book

Acknowledgements by the Friends of Durlston

Our thanks go to the surveyor for the immense amount of hard work he has put into the field work and the presentation of his survey results.

We would also like to thank all those photographers who have agreed for their work to be included in this report. In case of doubt, the photographs are representative of the species illustrated and, apart from the photomosaic facing page 1, were not taken at Durlston Country Park.

Finally, we acknowledge with gratitude the generous legacy of the late Enid Rogers which made the commissioning of the Survey and Study possible, and to whom this report is dedicated.

Durlston moths 2006

Preface

The Durlston management team commissioned the survey of moths in the Country Park during 2006.

Light traps have been regularly set around the Centre, Car Parks and Globe for well over 20 years and we asked the surveyor, therefore, to concentrate on the Meadows and Downland which were – in respect of their moth populations – relatively unknown. Survey techniques were to include both light traps and other methods, such as sweep-netting.

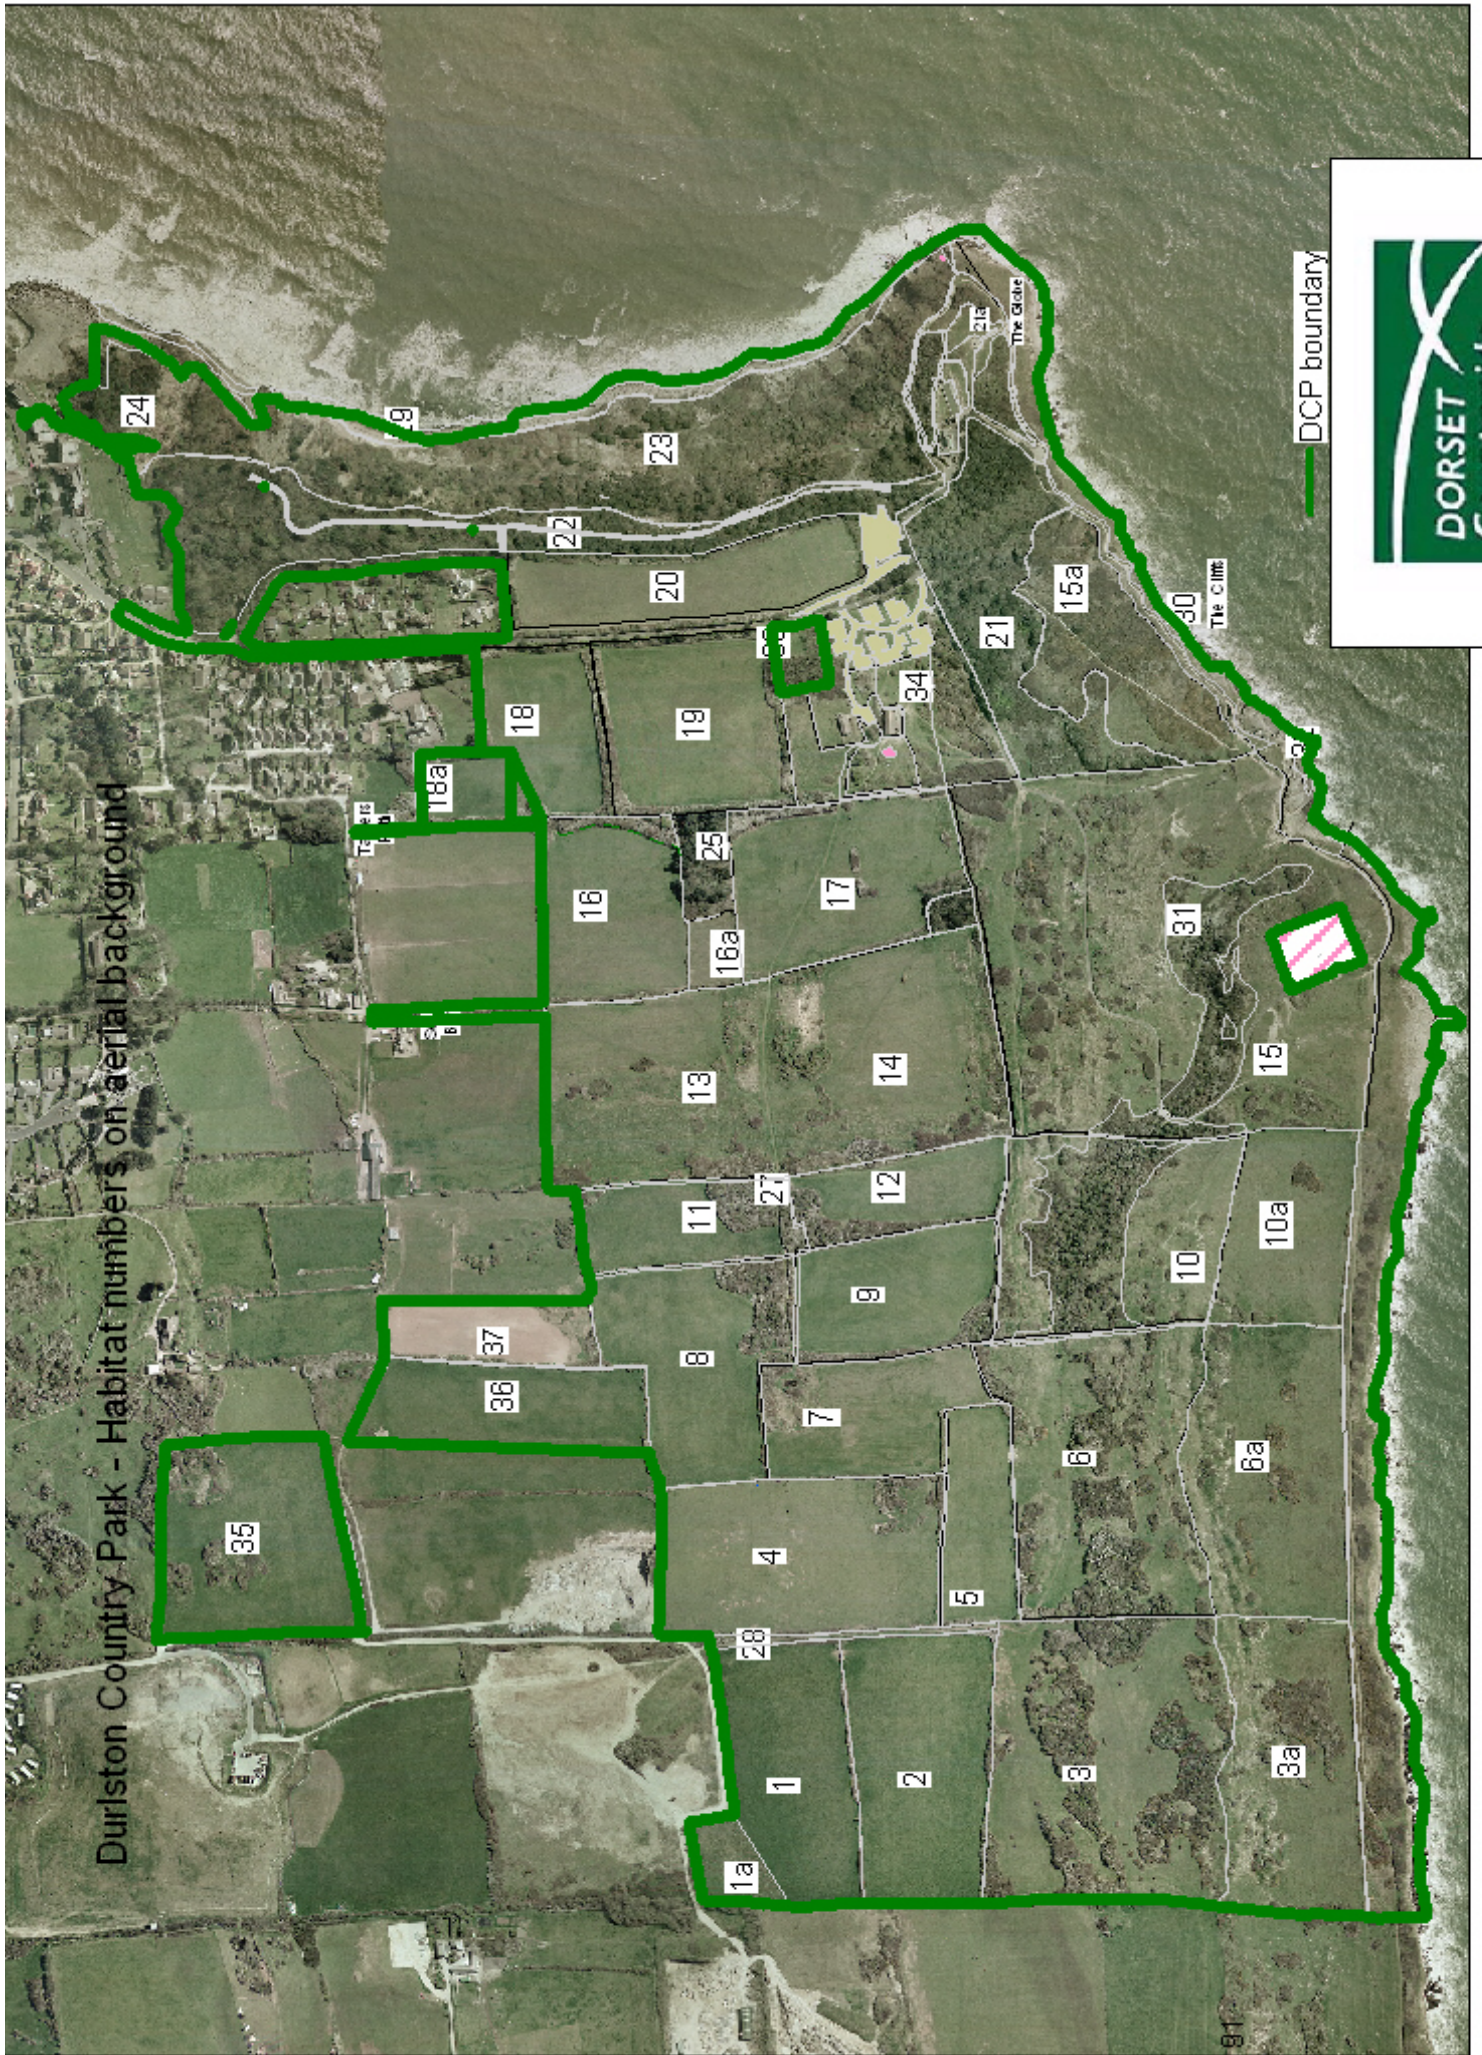

We asked for the identification of those moths which were deemed to be of local or national significance, including any Biodiversity Action Plan (BAP) Priority species and Species of Conservation Concern (SCC), to indicate their specific habitat requirements, and to estimate their distribution and population.

We provided management plans, species list, grazing and cutting regimes and flora sites during the study.

A few butterfly sightings have been included, although these were not the focus of the report.

The diaries of Eustace Bankes provide an essential benchmark of Durlston and Purbeck moths at the turn of the twentieth century. This 2006 report provides a fresh and important benchmark against which future studies can be assessed.

Durlston Country Park

Durlston moths 2006

THE REPORT

1 Background

Durlston Country Park ('the Park') contains many different habitat types that lie within a coastal setting. Chief amongst these are the unimproved calcareous grassland, limestone cliffs and hay meadows. The one hundred and thirteen hectares of land that comprises the Park have been managed in hand by Dorset County Council staff at Durlston ('the Team') since the 1970s and grassland components continue to be sympathetically grazed to maintain a floristically rich site; moreover, much of the Park has SAC and SSSI status in recognition of its carefully managed natural assets.

The Durlston Management Plan 2005-2010 ('the Management Plan') contains a key conservation objective, "to ensure the quality and extent of important habitats will be the same or better than now, and characteristic species continue to be present at current or higher levels". To achieve this objective, several actions have been identified within the Management Plan and two in particular are relevant to this study and survey; these are: "review flora and fauna monitoring to establish baseline data" and "produce biodiversity land management plan".

The Team is therefore keen to increase its understanding of the resident flora and fauna species that characterise the Park and in particular species that are threatened in Dorset or nationally due to absence or loss of habitat. Various recording schemes have been initiated and facilitated by the Team to research and assess the wildlife value of this land and this lepidoptera study and survey (the Study) forms part of that process.

There is a long history of moth recording at the Park and historical records dating back as long ago as 1883 indicate that a wide range of local species were resident in the area and in many other unimproved calcareous grassland sites prior to the Second World War. During the second half of the twentieth century, changes in farming methods and the introduction of intensive arable systems ultimately caused the loss of most of Dorset's unimproved calcareous grassland. Inevitably, many of the flora and fauna species that depended on this habitat type died out or became very rare, and moths were no exception.

Moths and butterflies make up a significant part of Britain's biodiversity (approximately 2500 species), and many other organisms, such as birds, bats and invertebrates depend upon them for food. Having been studied for over 300 years [since 1706?], the group is sufficiently well known and large enough to be used to monitor the health and diversity of habitats - the more diverse the habitat the more diverse and rich the invertebrate species populations will be. For land owners or conservation agencies keen to assess the diversity of the land they manage, it is essential firstly to identify the range of critical species that reside there and to know how to cater for them. Once a baseline of key species plus habitat (type and structure) requirements has been established, these can be incorporated within habitat management plans and populations monitored subsequently. Increased diversity has the added benefit of creating niches for new species dispersing from quality habitats nearby or further afield; this is particularly true of winged species such as Lepidoptera which are designed to exploit new territory rapidly via dispersal.

Durlston moths 2006

Two names crop up in any discussion of Purbeck moths and butterflies – Eustace Bankes and Archibald Russell.

Eustace Bankes (1861-1929)

Eustace Ralph Bankes was born in 1861, the son of Eldon Bankes, the rector of Corfe Castle; his mother was Charlotte Elizabeth née Scott, daughter of the 2nd Earl of Eldon – and owner of the Encombe estate. Eustace lived at the Rectory at Corfe Castle until his marriage to Grace Hammick in 1900. Based at Corfe Castle for much of the time, his primary focus for fieldwork was the eastern half of Purbeck where he roamed whenever he could in search of micromoths. He kept a set of diaries between 1883 and 1911, and his notes are so extremely detailed that it is often possible to know precisely where he found a particular species; for example, ten *constrictata* beaten from the bramble breaks in the third field beyond the new lighthouse. These diaries have provided the author with a valuable insight into what the Park must have been like so many years ago both from his narrative and from the rare species that he found.

One of the great British collectors, Eustace amassed nearly 100,000 specimens mostly of microlepidoptera which eventually became the property of The Natural History Museum, London. He wrote a large number of papers and contributed to such works as the Victoria County History of Hampshire and the Isle of Wight.

Archibald Russell, C.V.O., F.S.A. (1879-1955)

Archibald George Blomefield Russell was born on 20th June 1879, the fourth son of the Chief Constable of the West Riding of Yorkshire. He was educated at Eton and won a classical scholarship at Christ Church, Oxford; there he took a fourth in *Lit. Hum.* in 1902. On leaving Oxford he lived in London, occupying himself with 'higher class' journalism and art criticism and in 1906 he produced his most important contribution to literature, the definitive edition of William Blake's letters.

He was a Fellow of the Royal Society of Antiquaries and of the Royal Entomological Society for, in combination with his artistic interests, he had a wide and expert knowledge of the subject of moths. It was quite late in life that he took up the collecting of butterflies and moths which he originally encouraged as a pastime for his two sons. He himself eventually became a real enthusiast, making journeys to many parts of the British Isles in search of some scarce or local species. His aesthetic eye made him careful in the preparation of each specimen, making it almost a work of art in itself. In this way he built up a very fine and representative collection predominating in Dorset captures. For it was at his home on the cliffs overlooking Swanage that he was at his happiest. Here during the summer months for nearly 25 years he ran a light-trap, which attracted many rare species of moths, including two new to Great Britain, *Plusia limbirena* and *Hymenia recurvalis*. He was an ideal host always ready to give help to the younger generation interested in this pursuit.

Russell's home was Scarbank House, located at the end of what is now Russell Avenue, off Bon Accord Road. His two sons were killed in WW2.

Durlston moths 2006

2 Site description and study scope

The Park is located at the far south-eastern corner of the Isle of Purbeck. It is bounded to the north-east by Swanage, to the north-west by farmland, to the west by National Trust managed coastal grassland and to the south and east by the sea.

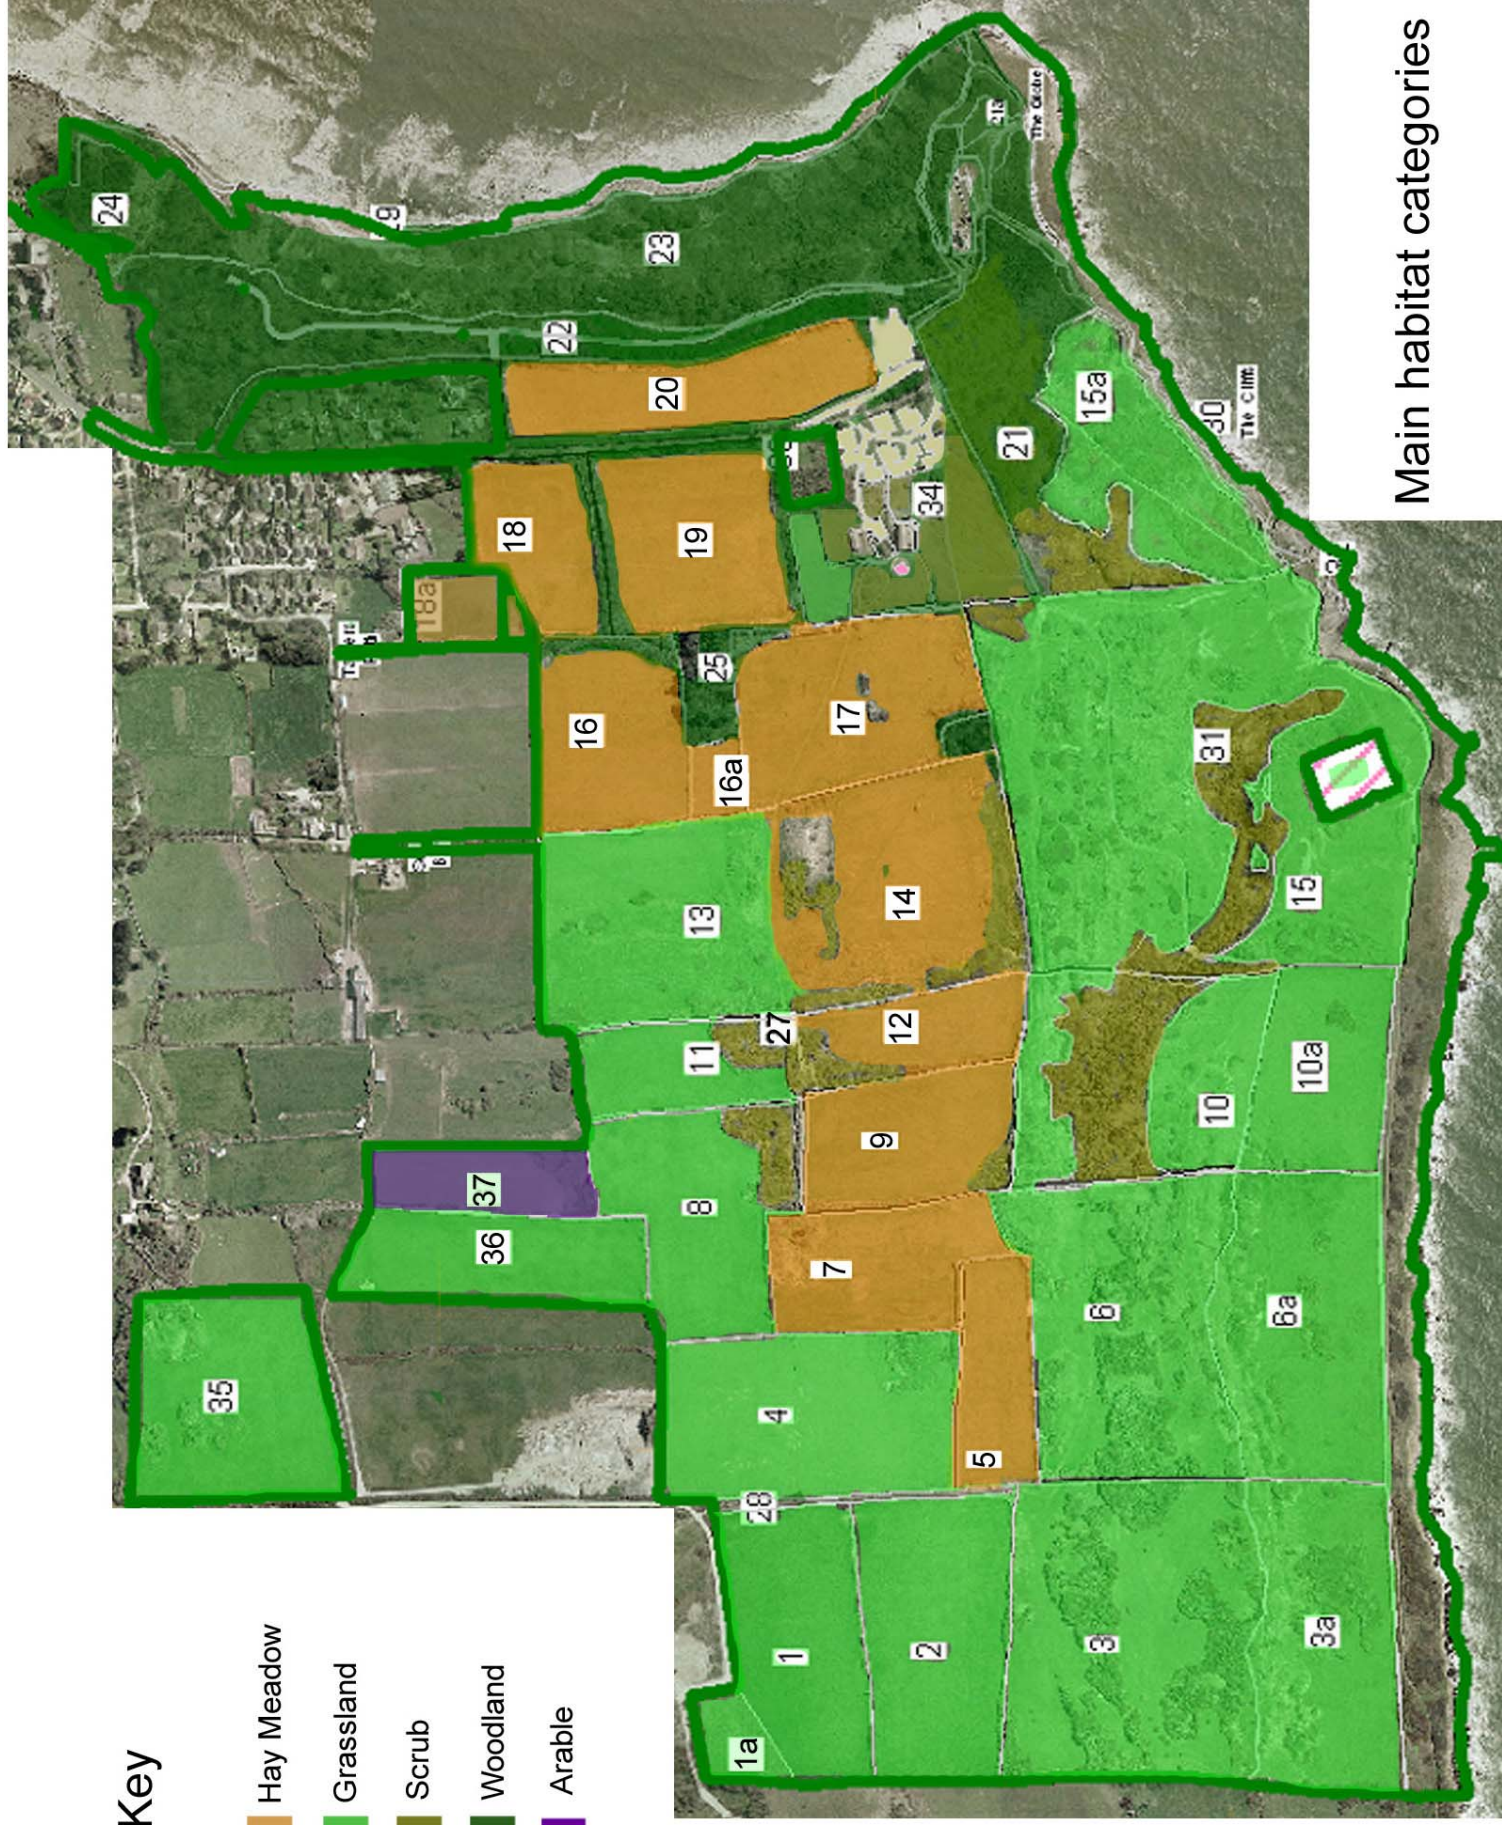

Reproduced from Ordnance Survey map data by permission of Ordnance Survey, © Crown

Some 40% of the Park contains herb-rich calcareous grassland, much of which is downland comprising the south-facing slopes across the southern half of the site. A further twenty per cent is floristically-rich hay meadow. The far eastern portion, approximately twelve percent of the total, is coastal landslip and woodland where mature holm oak and sycamore dominate the landscape; indeed the holm oak, being invasive, has overrun portions of adjacent grassland areas. Scrub occupies roughly eighteen percent and is primarily blackthorn and gorse. Finally, the southern-most coastal perimeter is limestone cliff habitat. The range of habitats plus each respective area (in hectares) is portrayed in the form of a pie chart in Appendix A. The aerial photograph of the Park on the next page is overlaid with numbered compartments; various statistics for each compartment are detailed in Appendix B.

The Study focused on arguably the most valuable natural assets of the Park, namely the unimproved calcareous grassland, the coastal cliff and the hay meadows. Unimproved grassland and hay meadow are much diminished resources in Dorset, and all three habitats host the rarer resident Lepidoptera species found at Durlston. Although woodland was excluded from the field work component of the Study - neither holm oak nor sycamore are native British trees - a surprising range of mainly deciduous-woodland oak-feeding species were observed in the absence of deciduous oak in the Park, and these consequently merit discussion.

Main habitat categories

Durlston moths 2006

3 Habitat categories

The unimproved grassland varies widely in type from closed, lightly grazed tall sward (e.g. compartment 13 west), through medium sward (e.g. compartment 6a) to open, rabbit-grazed short turf (e.g. compartment 15 south). Relatively large areas of steep-gradient coastal grassland contain disturbed soil and occasional rock piles that offer hot microclimatic conditions (e.g. compartment 3). A number of improved grassland areas are being actively reverted by decreasing soil fertility with the objective of increasing the diversity of flora (compartments 1, 2, 4, 8, 11 and 35). Similarly, grazing and cutting cycles have been designed to enhance the floristic content of hay meadow (e.g. compartment 9).

Scrub is a frequent component across the southern half of the Survey area and succession of the scrub has occasionally created woodland (e.g. compartment 31). The scrub is 'mantel' in type, that is to say dominated by shrubs, chiefly blackthorn or gorse and to a lesser extent hawthorn, with other calcareous shrub species such as dog rose, wayfaring tree, spindle and dogwood relatively scarce. There is occasional 'saum', i.e. vegetation characterised by tall herbs and sparse shrubs either in isolation or on expanding scrub fringes.

The cliff habitat contains a singular and very different flora to that found elsewhere in the Park. Maritime and salt-resistant plants such as sea beet, tamarisk, golden samphire and sea aster are characteristic, although much of the cliff is bare rock. Stone walls divide most of the compartments, and where walls have not been subject to recent renovation and renewal, lichens abound.

Appendix D lists the plant species hosting noteworthy moth species recorded in the Park, sorted by habitat category; each plant species is assigned one of the following nine habitat categories. Although many plant species occur in more than one category, the author has attempted to select the habitat favoured by the given host plant species for the purposes of this Study.

- Herb-rich grassland (short turf)
- Herb-rich grassland (medium sward)
- Herb-rich grassland (tall sward including saum)
- Hay meadow
- Disturbed soil and verge
- Scrub
- Wood and hedge
- Ditch, pond and seep
- Cliff and dry-stone walls.

Durlston moths 2006

Rarity Categories

Rare or endangered moth species have been assigned the following categories of rarity by the Joint Nature Conservation Committee (JNCC). These categories¹ are used where relevant within this report. 'RDB' stands for Red Data Book.

- **RDB₁** (Endangered) - In danger of extinction and whose survival is unlikely if the causal factors continue operating. Species which are known or believed to occur as only a single population within one 10 km square of the National Grid.
- **RDB₂** (Vulnerable) - Likely to move into the endangered category in the near future if the causal factors continue operating. The species is declining throughout its range.
- **RDB₃** (Rare) - Small populations that are not at present endangered or vulnerable, but are at risk. Species which are estimated to exist in only fifteen or fewer 10 km squares.
- **RDB_x** (Insufficiently known) - Suspected but not definitely known to belong to any of the above categories because of lack of information. Species known from very few localities but that occurs in inaccessible habitats or habitats which are seldom sampled.
- **Notable_a** - Uncommon in Great Britain and thought to occur in 30 or fewer 10 km squares of the National Grid or, for less well recorded groups, within seven or fewer vice-counties.
- **Notable_b** - Uncommon and thought to occur in between 31 and 100 10 km squares of the National Grid or for less well recorded groups, between eight and twenty vice-counties.
- **Notable** - Uncommon and thought to occur in between 16 to 100 10 km squares of the National Grid. Species within this category are often too poorly known for their status to be more precisely estimated.

Two further assignments are used for species that do not have national rarity categorization but that do merit inclusion within habitat management plans as they are noteworthy in Dorset. These are respectively, **Dorset local** and **Dorset rare**. Numbers in brackets denote the total number of UK vice counties that the species has been recorded in wherever the information is available and worth including.

Butterflies are treated differently. The 'Species of Conservation Concern' (**SCC**) and 'Priority Species' assignments used by Butterfly Conservation are also used within the report.

Note ¹: Micromoth categories are provisional only. These designations have not been updated recently by the JNCC, and that the status for some micromoth species was imperfectly known at the time the designations were made.

Durlston moths 2006

4 Methods

I visited the Park a number of times through 2006 with most of the fieldwork (the Survey) carried out between June and early-August to take advantage of the peak moth flight period. Species were sought by sweeping, netting, light-trapping, and leaf miner searches; moreover, premium weather conditions were chosen to carry out all work. Butterflies and day-flying micromoths were most easily observed as they flew in sunny and relatively calm conditions, and a calm pre-dusk period invariably yielded many more micromoths too impatient to wait for darkness. The best conditions for light trapping were those where high dew point temperatures within tropical-source airmasses ensured warm, humid nights. Durlston is a locality where calm conditions occur rarely especially in open exposed grassland but fortunately the very warm season of 2006 yielded a number of perfect weather situations which the author duly exploited to good effect. I used up to four traps, all powered by a petrol generator. Light bulbs ranged from a 22-watt actinic¹ tube to 125 and 250-watt mercury vapour light bulbs, to a 300-watt ultra-violet light bulb.

These are the days on which I visited the Park to conduct research:

Night visit	14/04/2006	Night visit	17/06/2006	Day + night	05/08/2006

Eucosma parvulana, a pRDBk status species of micromoth, was also recorded in the survey.

Durlston moths 2006

5 Survey highlights

- A total of 570 Lepidoptera species were observed during the Survey, just under a quarter of the full UK list.
- The large number of rare Lepidoptera species, including 24 UK Notable and 8 Red Data Book moth species plus 1 'Priority' and 3 'Species of Conservation Concern' butterflies observed during 2006 undoubtedly reinforces the 'SSSI' designation of Durlston Country Park.
- A further eight UK Notable species and two Red Data Book species have been seen since 1990 but were not seen during 2006; many of these are still likely to be resident in the Park.
- The first sighting for more than seventy years of *Neosphaleroptera nubilana*, a tortrix that feeds on the spun shoots of blackthorn, and only the fourth Dorset record of this micromoth.
- The first instance of residency in Dorset for the **Notable**, unicolorous lemon-white Pyralid, *Sitochroa palealis* (right).
- The first Dorset colony of the **Notable** *Eucosma conterminana* (below) was found on grassland near the bridge in compartment 15.

Sitochroa palealis © Chris Steeman

Eucosma conterminana © Philip Jewess

- The rare **Notable** *Agonopterix pallorella* appears to thrive in the Park; it is found in just two other sites in Dorset.
- An even rarer species that feeds in the roots of black knapweed is *Pelochrista caecimaculana* (left). In Dorset, this **pRDBk** moth was known only from Portland – but was present in several compartments at Durlston during the summer.
- The spate of holm oak feeding **Oak Rustic** records from Durlston in 2005 hinted at residency for this new species to the UK and the capture of a badly crippled adult together with five normal adults on 28th October confirms residency for this **pRDB₁** species in the Park (and in mainland UK).
- Evidence is emerging that several species are using holm-oak as a food plant.

Durlston moths 2006

RDB Target species not found in the 2006 survey:

Mecyna flavalis, pRDB2, last recorded at Durlston by Eustace Bankes in 1885
photograph © David Green/Butterfly Conservation

Cynaeda dentalis, pRDB3, last recorded at Durlston in 1949, feeds on viper's bugloss. Photograph © Rob Petley-Jones

The **Four Spotted**, *Tyta luctuosa*, an RDB3 species, was last recorded in 1949 at Durlston
Photograph © David Green/Butterfly Conservation

Other target species of RDB status were *Udea fulvalis* and the Bloxworth Snout, last recorded at Durlston in 2004 and 2005 respectively.

Durlston moths 2006

6. Results by habitat type

6.1 Herb-rich grassland - short turf

Much of Dorset's unimproved chalk grassland has disappeared under the plough. Of the little that remains, much is covered in medium or tall sward grasses. Short turf habitat plus the species uniquely associated with it has consequently become very scarce in the county.

Short turf habitats do exist in the Park and are almost exclusively in the south-eastern portions of compartment 10a and the southern portion of compartment 15 where rabbits graze the grassland. The corridor between compartments 3 and 3a and compartments 6 and 6a have thin soil on limestone rock plus public access, and this combination produces a very short sward. Short turf habitat in a tiny portion of compartment 14 is more quarry floor than grassland but contains pockets of short turf flora such as wild thyme and bastard toadflax.

The list of noteworthy short-turf dependent Lepidoptera is large so the implementation of the objective within the Management Plan 'maintain high percentage of short-grazed downland grassland (average of less than 6cm) in compartments 3a, 6a and 10a' should promote the key species that depend on this biotype whilst reducing the short turf shortfall. Bankes's diary entries for the 1880s are interesting in that they show rare short turf moth species to be much more common in the Park than today, for example, *Epermenia insecurella*, *Olethreutes cespitana*, *Mecyna flavalis* (common then, absent now), Thyme Pug (fifty seen in a day then, today with luck one), etc.; this is likely to be due to a greater acreage of short turf habitat in days gone by. Grayling too may be negatively impacted by a lack of very short turf or bare ground.

Micromoths

- Wild thyme-feeding species seen included the case bearing *Coleophora lixella* found in just four other Dorset sites and noted in several thyme-rich compartments; the very local and strikingly marked *Pyrausta ostrinalis* (right); the exclusively maritime and very distinctive *Pyrausta cingulata*, found by day and at light traps. *Pyrausta ostrinalis* also feeds on spear mint and *Pyrausta cingulata* also feeds on wild clary.
- *Scythris picaepennis* which is seldom seen in the county was also detected. The larva inhabits a silken web or tube which extends from a leaf of wild thyme into the ground; it also feeds on bird's-foot trefoil.
- One of the author's primary aims was to rediscover the bastard toadflax-feeding *Epermenia insecurella* – this **Notable** species was found by Eustace Bankes in all stages in the fields west of Anvil Point Lighthouse over a century ago. The author met with success when several moths were netted as they flew over their foodplant one warm evening in compartment 10a. Later, this species was found in Thesium-rich habitat in compartment 14 too.
- Another species encountered by Eustace Bankes at Durlston over a century ago and now seldom seen in the county is the small Plume *Oxyptilus parvidactylus*. The species, although very skittish, was readily disturbed in good numbers one warm morning just beneath the crest of the steepest downland slopes. The larva feeds in the central rosette of the flower of mouse-ear hawkweed.
- The local *Approaerema anthyllidella* and the highly distinctive **Notable** ♀ Pyralid *Oncocera semirubella*, having a beautiful deep-pink and yellow forewing with a white costal edge, were frequently encountered during the Survey. Both feed on bird's-foot trefoil, while *Oncocera semirubella* feeds also on restharrow and white clover.

Oncocera semirubella
© Rob Petley-Jones

Durlston moths 2006

- A very local tortrix species ***Cochylis dubitana*** was trapped on one occasion; it feeds on the flowers and seed-head of hawk's-beard and ragwort.
- Several ***Depressaria badiella*** came to light in September. This is a local species that feeds on the hearts of cat's-ear, often killing its host.
- A second Plume moth of interest, ***Stenoptilia zophodactylus*** was trapped on a number of occasions and put up by day from its foodplant common centaury; this moth also feeds on the flowers and seeds of yellow-wort.
- The beautiful silver-flecked, metallic-tinted and tiny **Notable *Pancalia leuwenhoekella*** (right) that feeds in the rootstock of hairy violet was disturbed from its foodplant in two areas of the Park during the daytime.
- Local sheep's fescue feeders included the rare ***Elachista triatomea*** (recorded from just two other Dorset sites) and two 'grass moth' Pyralid species, ***Agriphila selasella*** and ***Platytes cerussella***; the latter is very local and maritime in its range although abundant on the downland slopes in the Park. The larva feeds on the roots of grasses under stones or rocks.
- ***Eudonia pallida***, a moss feeder, is particularly interesting as historically it is a denizen of wetland habitat. It seems that the warming trend has brought with it a strain from the Continent that thrives on dry grassland; *Eudonia pallida* was evidently well established in this 'atypical' habitat at Durlston during 2006.

Pancalia leuwenhoekella
© Andy McKay

Missing micromoths:

- The **Notable** ploughman's spikenard feeding and case-bearing species ***Coleophora conyzae*** was found in 2003 but not during the Survey.
- A key species targeted was the pRDB₂ Pyralid ***Mecyna flavalis***; a common moth in favourable seasons in the late nineteenth century at Durlston. Attempts at flushing it from short turf on sunny slopes met with no success.
- A plant that is rather scarce in the Park being restricted to the gully is common rock-rose; this hosts a local Pyralid species ***Hypochalcia ahenella***. Although not found during the Survey, a single record from a light-trap during 2004 suggests continued residency for this moth following late-nineteenth century records from the Park.
- The **Notable** species ***Agonopterix nanatella*** was 'common among its foodplant carline thistle between Punfield Cove and St Alban's Head' in the late nineteenth century (Eustace Bankes). A more recent record of larval spinnings in carline thistle from the Park in 1981 suggests that continued residency may well be confirmed through diligent searching in the spring months.

Agonopterix nanatella
photograph © Jon Baker

- A thyme-feeder, ***Olethreutes cespitana***, found occasionally in the fields beyond the lighthouse in the late nineteenth century, was not seen.

Macromoths

- The **Notable**, **Light Feathered Rustic**, a species associated with wild thyme, is common at Durlston.
- The local day-flying wasp mimic **Six-belted Clearwing** was seen several times by the author as it flew in sunshine among its foodplant bird's-foot trefoil.
- Two more species associated with bird's-foot trefoil, the very local **Annulet** and the **Notable**, **Chalk Carpet** were readily flushed from xerothermic microhabitats such as bare earth or rock-strewn grassland along the downland slopes. The former species is chameleon-like as

Durlston moths 2006

its ground colour tends to blend in with its surroundings; for example, the heathland form is peaty-brown whereas the chalk cliff form is pallid. It also feeds on common rock rose and creeping cinquefoil.

- A rare polyphagous noctuid, the **Large Ranunculus** was trapped during the Survey in September and occurs sparingly on Portland and along the west Dorset coast. Like the Annulet and the Chalk Carpet, this species may favour and be present at low density in rock-strewn grassland in compartments 3a and 6a.
- Two local macromoth species occur at Durlston, the **Hedge Rustic** and the **Bordered Sallow**; which feed on sheep's fescue and restharrow respectively, were seen during the Survey. The Bordered Sallow was a frequent visitor to the light trap.

Missing Macromoths:

- **Thyme Pug**, a **Notable_b** associated with wild thyme, flushed from bramble brakes from downland as early as 1885 was not seen during the Study and seems to be at low density, although one was observed at a light trap by the author in 2005.
- The **Notable_a** **Grass Eggar** (right), a much decreased species in the UK and now restricted almost exclusively to sandy heathland in Dorset but has also been seen sparingly on the Purbeck coast in the past, indeed it was trapped on four occasions by Archibald Russell in the late 1940s at Scar Bank.
- The **Broad-barred White** which feeds on mouse-ear hawkweed was trapped by the author during 2005 but not in the Survey.

Grass Eggar © Chris Manley

Butterflies

- A single **Dark-green Fritillary** (*right*), a species that feeds on hairy violet, was seen at the end of June in the southern part of the gully.
- Horseshoe vetch feeding species included the **Dingy Skipper**, which was in good numbers, the **Priority Chalk-hill Blue**, seen just once, and the **SCC Adonis Blue** in spectacular numbers beneath the crest of the steepest downland slopes. The author's research of the Chalk-hill Blue on calcareous grassland at Badbury Rings suggests colonies there are centred on regions where the foodplant grows within very short turf.
- The kidney vetch-feeding **SCC Small Blue** was seen in small numbers in June; patches of the foodplant in the south-west corner of compartment 15 supported a colony, for example.
- Common rock rose is rather scarce in the Park; a single **Brown Argus** was seen at the head of the gully in early August.
- A single **Grayling**, a local Dorset species that feeds on sheep's fescue (and red fescue), was seen by butterfly transect walkers on the east transect walk during 2006; this contrasts with an average count of three for the eastern transect and five for the western one since the walks were initiated.
- The local **Green Hairstreak** is at low density in the Park but seen in most years. The caterpillar is rather polyphagous, but common rock-rose or bird's-foot trefoil tend to be preferred foodplants on calcareous grassland; gorse or bramble may host the species too at Durlston.

Dark-green Fritillary
© Tony Adamcik

Durlston moths 2006

6.2 Herb-rich grassland – medium sward

This is the largest grassland habitat component in the Park. Increasing grazing levels each year are designed to continue the process of reducing the fertility of improved soils so that ultimately, floristically-rich grassland dominates open areas of the Park.

Micromoths

- The unicolorous lemon-white Pyralid *Sitochroa palealis* was common amongst its foodplant wild carrot; the larva feeds on the flowers and the seeds of the plant; this is the first instance of residency in Dorset for this **Notable** species.
- Other wild carrot feeding and local species included *Epermenia aequidentellus*, *Agonopterix rotundella* and *Aethes francillana*. The Gelechiid *Caryocolum fraternella* is rare in Dorset and feeds on common mouse-ear in its dry grassland biotype; a singleton was trapped during the Survey.
- Local grass feeders seen included *Elachista biatomella*, a leaf miner of glaucous sedge.
- The first Dorset colony of the **Notable** *Eucosma conterminana* was found on grassland near the bridge in compartment 15; this larva feeds on the flowers and seed heads of great lettuce.
- The local *Epiblema costipunctana* was commonly encountered during the Survey; the larva feeds on the stem and rootstock of ragwort.
- *Dichrorampha petiverella* was flushed from its foodplant yarrow on one occasion in 2006; another local yarrow rootstock feeder from the same family, *Dichrorampha gueneana* was trapped by the author in the Park during 2003.
- A yarrow flower feeding Plume *Platyptilia pallidactyla* came to a light trap during the Study.
- Two rare polyphagous tortix species were recorded during the Survey; these were *Cnephasia genitalana* and *Cnephasia conspersana*; the latter is a coastal grassland species that was discovered feeding on field bindweed flowers by Eustace Bankes.

Missing Micromoths

- Two wild carrot feeders that have been found at the Park in the past are *Aethes willana* in 1890 and *Depressaria pulcherimella* in 1981; the latter also eats burnet-saxifrage.
- *Agriphila latistria*, a feeder of soft brome, was last seen in 1992.

Macromoths

- Bedstraw feeding and local Geometers included the **Galium Carpet**, **Mottled Grey**, and **Wood Carpet**.
- Local cock's-foot feeders found included the **White-point** and the **Delicate**. The White-point in the past had immigrant status only in the UK, but with the current warming trend is now resident along the south coast with reinforcement annually from abroad. The Delicate also has immigrant status but in a few recent years has managed summer residency; 2006 was a very favourable year for it and autumn home-grown populations were unusually large.
- The local **Reddish Light Arches** and **Ear** moths are hosted by various grasses in dry calcareous grassland biotypes, and both came to light traps.

Galium Carpet © Ian Kimber

Durlston moths 2006

Missing Macromoths

- The **Notable**, **Pimpinel Pug**, hosted by burnet-saxifrage, was trapped in the 1940s and 1950s at Scar Bank by Archibald Russell; none were seen in the Park during the Survey and moreover none have been recorded in the Swanage area in recent years.
- A bedstraw feeder, the very local **Ruddy Carpet**, was trapped by the author in the Park in 2005, and on other occasions since 1991.

Butterflies

- The **Clouded Yellow** is an immigrant species that until recently has had no resident status in the UK. However, the warming trend has spawned at least one all-year-round colony in the UK on the undercliffs at Bournemouth. This butterfly was evident at Durlston in 2006. It is possible that this clover-feeding species is also resident in the Park in south-facing, sheltered grassland habitat.

6.3 Herb-rich grassland – tall sward

This habitat type comprises tall sward (e.g. the neglected pockets of downland in compartments 3a and 6a) plus 'saum', i.e. vegetation characterised by tall herbs and sparse shrubs either in isolation or on expanding scrub fringes (e.g. the south-western corners of compartments 13 and 14).

This rank habitat contains the largest number of Red Data Book species in the Park and should therefore be included explicitly within the Management Plan. Maintenance of saum is difficult because scrub clearance tends to remove scrub fringes too. Fragmentation of scrub rather than block removal may provide the solution to this dilemma which will then allow the fragments to 'move' with time. Management should consider promoting and proactively managing the saum biotype within the Park, perhaps allowing hedges and tall sward around the perimeter of compartments to spill out more, for example to allow compartment corners be filled with saum.

Micromoths

- The greater knapweed seed feeding **Metzneria aprilella**, a **pRDBk** species was seen on one occasion in compartment 12.
- The rare and **Notable** **Agonopterix pallorella** was trapped during the Survey; the species feeds in a rolled leaf of black knapweed or field scabious and appears to thrive in the Park; it is found in just two other sites in Dorset.
- An even rarer species that feeds in the roots of black knapweed is **Pelochrista caecimaculana**. In Dorset, this **pRDBk** moth was known only from Portland – but was present in several compartments during the summer.
- A local teasel feeder, **Endothenia gentianaena**, was bred from teasel heads collected during the Survey.
- Rare hogweed and wild parsnip seed feeders found during 2006 included **Aethes dilucidana** and **Cydia gallicana**, the former found in three Dorset sites in recent years, the latter in just two.
- The Dorset rarity **Depressaria douglasella**, recorded on just two inland calcareous downland sites, was seen during the Survey - the larva inhabits a rolled leaf of wild parsnip.

Missing micromoths:

- **Cochylis roseana**, a teasel feeder, was found by the author as recently as 2004 and probably still breeds in the Park.

Durlston moths 2006

Macromoths

- A small colony of the local **Narrow-bordered Five-spot Burnet** was discovered among yellow vetchling in the south-western portion of compartment 13; apart from the abundant and widespread **Six-spot Burnet**, no other Burnet species was seen in the Park.
- The couch grass feeding and local **Rustic Shoulder-knot** was trapped; the larva of this species also feeds on cock's-foot.
- The local and sizeable **Brindled Ochre**, an arctic species whose larva feeds internally within the roots and stems of hogweed and wild parsnip, appears to be well established in the Park. The adult emerges in September, then (in the case of the female) hibernates before flying once more in the spring; two were trapped during October 2006.

Missing macromoths:

- The field bindweed feeding **Four-spotted**, an **RDB3** species, failed to materialise despite walking through much bindweed-rich habitat - a sprinkling of records in the past few years (one from the Park, one from Swanage town, even one from the author's trap at Shapwick) suggests immigration from abroad rather than residency. The Four-spotted was present in the area up to 1950 – Eustace Bankes saw six 'flying rapidly about in the bright sunshine with a rather low buzzing flight in and around a narrow strip of artificial clover-grass' in a field cut for hay on 2nd July 1907.

Butterflies

- Two Tor grass feeders, the **SCC Lulworth Skipper** and the **Wall**, a declining Dorset species, were seen. The former was abundant among the tall grasses on the downland; just two Wall were seen by the author in compartment 10 next to a gate on the top path in June.
- The **Grizzled Skipper**, a declined Dorset species and a rosaceae plant feeder, e.g. agrimony, was recorded by butterfly transect walkers in 2006; two on the eastern transect walk and six on the western transect walk.

Durlston moths 2006

6.4 Hay meadow

Changes in farm practices since the Second World War have meant that arable no longer provides a haven for wild flowers in the way it once did. The practice of using a wild flower understorey to nourish livestock after the main crop has been harvested has ceased, and flower-rich field margins are a thing of the past. Now crops tend to be grown to the very edge of field boundaries and the herbicides applied to them render them virtually uninhabitable. Similarly, hay meadows once widely used to provide smallholder farmers with a viable food source for livestock have all but disappeared together with the once familiar haystacks and hayricks.

A sizeable portion of the Park is managed as hay meadow and in early summer produces a riot of whites and yellows, with ox-eye daisy and yellow rattle predominating. Some of the fields have been sown with wild flower and grass mixes designed to recreate and regenerate hay meadows; others have not been improved at any time. The hay meadows are subject to grazing and rotational cutting with different cycles applied to different aged compartments (see Appendix B).

Overall, the number of noteworthy hay meadow Lepidoptera species located during the Survey was disappointingly low but that may simply be due to the 'new' and transitional state that some of the compartments are in at the current time. The mid-summer close cut is likely to be detrimental for species that simultaneously have non-adult stages affixed to plants; furthermore, a cut three or four seasons in a row would certainly eliminate such species from the compartments subjected to this cycle.

Micromoths

- Three local species, *Elachista bedellella*, *Dichrorampha simpliciana* and *Endothenia marginana*, feeding on meadow oat-grass, mugwort and yellow rattle respectively, were seen during the Survey.
- *Agonopteryx purpurea*, the larva of which creates a rolled leaf of rough chervil or wild carrot was also seen.
- The local common-fleabane feeding Plume *Oidaematophorus lithodactyla* was attracted to the author's traps during the Survey.
- A female *Eucosma parvulana*, a new species to Dorset, was trapped in compartment 15 on downland in July. This **prDBk** species was first identified in Hampshire (the male is indistinguishable from the widely distributed *Eucosma hohenwartiana*). Although the species is said to feed on the flowers and seed heads of saw-wort, black knapweed may be an alternative food source as the moth has been found in sites where saw-wort is absent.

Macromoths

- Three local species were encountered – the **Barred Rivulet**, the **Blackneck** and the **Grass Rivulet**, feeders of red bartsia, tufted vetch and yellow rattle respectively. The Grass Rivulet, a very much decreased species in Dorset, was spectacularly abundant and evidently benefiting from the large stocks of yellow rattle in the central portions of the Park.

Durlston moths 2006

6.5 Disturbed soil and verge

The Park has many footpaths and tracks across it with attendant trampling, and natural soil disturbance is particularly acute on the steepest slopes within compartments 3a, 6a and 10. However, all but one of the eighteen plant species in the Park plant list that fall within the disturbed soil category is local, scarce or rare across the site. This may be because the soil on top of the limestone substrate is too thin to contain a viable wild flower seed bank so that when soil disturbance does occur, subsequent plant re-generation is minimal. The shortfall of disturbed soil and verge plants will evidently reduce the range of potential Lepidoptera species associated with the biotype within the Park.

Micromoths

- The local tortrix *Aethes beatricella* was a frequent visitor to the light traps; it feeds on the seeds of alexanders.
- Two other local species seen were *Calybites phasianipennella*, a black bindweed leaf miner, and *Coleophora peribenanderi*, a case bearer that feeds on creeping thistle.
- Two tortrix species *Aethes tessera* and *Cochylis hybridella* are hosted by the rootstock, roots, flower heads and seeds of hawkweed ox-tongue (and mouse-ear hawkweed). The latter micromoth species was very common across the Park.
- A newcomer to the UK in the early 1990s, *Cochylis molliculana*, a pRDBk species that feeds on prickly sow-thistle is well established at Durlston and a frequent visitor to light traps.
- Local or rare case bearers on orache and goosefoot recorded during the Survey included *Coleophora saxicolella*, *Coleophora versurella* and *Coleophora sternipennella*. The first two species feed on frosted orache and spear-leaved orache. The latter species had only been recorded in Dorset previously at Portland.

Missing micromoths:

- The urban-based rarity *Udea fulvalis*, a pRDBk species, has evidently extended its range beyond the Christchurch, Bournemouth and Swanage conurbations as it has been trapped in the Park on five occasions in the past fifteen years (most recently by the author in 2005); it feeds on the leaves of Labiate plant species.
- *Sitochroa verticalis* also hosted by creeping thistle and regarded as not uncommon locally was last seen at Durlston in June 1889 by Eustace Bankes.
- The local colt's-foot feeding Plume *Platyptilia gonodactyla* trapped in 2004 was not observed during the Survey.
- Eustace Bankes encountered a singleton of *Scrobipalpa obsoletella* in 1885; the larvae of this species feed within orache stems.

Macromoths

- Local or rare orache and goosefoot feeding species include the **Dark Spinach** and the **Plain Pug**; both were seen in July 2006.
- Another local pug, the **Toadflax Pug**, was seen during the Survey and is hosted by common toadflax.
- The annual meadow grass feeder and RDB3 species, the **Beautiful Gothic**, is an extremely handsome moth and on the northern-most edge of its European distribution; however, it is well established along the Purbeck coast and was a frequent visitor to light traps in October 2006.
- Other local annual meadow grass feeders seen during the Survey included the **Feathered Gothic** and the **Saltern Ear**. Both species feed on cock's-foot too.

Missing macromoths:

- The local **Chamomile Shark**, a feeder of mayweeds and chamomiles, was recorded by the author in the Park in 2005.

Durlston moths 2006

6.6 Scrub

The term scrub is used here to denote areas of mature shrubs that have remained largely intact through the ages - a parallel may be drawn to old woodland in so far as the flora and fauna communities have been allowed to become stable and species-rich over time. Unfortunately, improvement of Dorset's calcareous soils since the Second World War has resulted in the removal of much of the older shrub communities, and the small fraction that remains tends to grow on slopes too steep to plough. The moth and butterfly species associated with this habitat type have consequently declined. Scrub is therefore an essential component of calcareous grassland and fortunately the Park contains a healthy acreage of this habitat type.

The dominance of blackthorn and gorse in the Park is at the expense of several other calcareous shrub species such as dog rose, wayfaring tree, spindle and dogwood. This naturally limits the range of scrub-dependent invertebrates that could potentially become resident within the Park. Succession of the scrub into woodland within compartment 31 is undesirable as it extinguishes the calcareous grassland biotype. The Team should consider the proactive management of compartment 31 (within compartments 3, 6, 10 and 15) to achieve a vibrant scrub community comprising a more balanced set of shrub species.

Micromoths

- A single *Neosphaleroptera nubilana*, a tortrix that feeds on the spun shoots of blackthorn, was netted in flight within compartment 15. This is the fourth Dorset record of this moth and the first sighting for more than seventy years. Two other blackthorn feeders of note were the local *Parornix finitimella* and *Epinotia signatana*.
- Local wild rose feeding species found included the day-flying *Lampronia morosa* plus the tortrix moths *Croesia bergmanniana* and *Croesia holmiana*.
- Gorse feeders of interest were *Cydia internana* and *Pempelia genistella*; the former feeds inside the pods of gorse, the latter a **Notable_a** species lives gregariously within a web.
- Wayfaring tree is scarce in the Park, but several large bushes amongst scrub in compartment 31 had leaves hosting the larvae of the local *Phyllonorycter lantanella*.
- Wild madder grows amongst and over scrub in the Park, sometimes profusely and hosts the **Notable_b** Pyralid *Mecyna asinalis*. This moth was frequent at light traps particularly during the autumn.

Missing micromoths:

- A **Notable_b** Pyralid, *Alipsa angustella*, as a larva feeds in the berries of spindle and was seen on two occasions in the Park in 2005 but not during the Survey.
- The rare *Caloptilia cuculipennella* was recorded from the Park during the 1960s; it occurs on Portland and has been found in just one inland site in Dorset.
- The day-flying *Pammene rhediella* was searched for around hawthorn scrub but not seen; there is a record of this moth by Richard Fairclough during the 1960s from the Park.
- A second wayfaring tree species, the local *Acleris schalleriana*, was recorded from the Park during the 1960s but not during the Survey.

Macromoths

- The local **Sloe Pug**, a species new to the British list during the 1960s, was recorded on four different dates during the Survey; the larva feeds on the flowers of blackthorn during the spring.

Durlston moths 2006

6.7 Wood and hedge

Although woodland was excluded from the scope of the field work, a number of woodland specialists were encountered during the course of the Survey. It is also clear that a fascinating range of mainly deciduous oak-dependent Lepidoptera species rely on the holm oak in the Park at the present time. However, very little tends to grow beneath the holm-oak canopy so that little diversity is apparent in the eastern half of compartment 21; moreover this single tree species has displaced much of the diverse grassland that once dominated the compartment. The Team should consider preventing the holm oak from swallowing up any more grassland in the Park.

Micromoths

- The local *Acrolepia autumnitella* is hosted by bittersweet and deadly nightshade. A moth was beaten from the thicket in compartment 27 in May and a larva was found mining bittersweet by the road forming the north-west boundary of compartment 10 during September.
- A single local hedge woundwort feeding *Endothenia ericetana* was trapped; the larva feeds in the lower stem and roots of the plant.
- A single *Depressaria weirella* was trapped in September - this is the fourth Dorset site to host the moth in recent years - the larva feeds in a rolled leaf of cow parsley, a plant that tends to grow at the edges of woodland.
- A range of unexpected deciduous oak-feeder micromoths were seen during the Survey and included *Acleris literana*, *Tortrix viridana* and *Pammene fasciana*; the larva of the latter feeds inside an acorn.
- Prior to the 1990s, *Caloptilia rufipennella*, a sycamore feeder, had only been recorded from northern Britain and East Anglia. However, from about 1990, this species started to appear in southern coastal counties; it has been recorded by the author in 2005 and 2006 in the Park.

Missing micromoths:

- The rare bramble feeding leaf miner *Ectoedemia erythrogenella* was found by Phil Sterling in 1990; they are found at just five sites in Dorset, all of which have a coastal distribution.
- Two wood-sage feeders, the Notable_b Pyralid *Anania verbascalis* and Notable Plume *Capperia britannioidactyla* were encountered in the Park in 2004 and 2005, respectively. *Anania verbascalis* also feeds on great mullein.
- In recent years *Phycita roborella*, another deciduous oak feeder, has been a frequent visitor to light traps in the Park.

Macromoths

- The **Kent Black Arches**, a Notable_b species hosted by bramble (and dewberry) is well established in the Park and was seen on five occasions in 2006.
- Several deciduous tree species evidently flourish on the holm oak in the Park. A final instar **Lobster** moth caterpillar was found munching a well-eaten holm oak leaf; this woodland species tends to be associated with beech.
- Just like the micros, a range of deciduous oak-feeder macromoths were seen during the Survey and included **Oak Nycteoline**, **Pale Pinion**, **Green Arches** and **Oak Hook-tip**. The spate of holm oak feeding **Oak Rustic** records from Durlston in 2005 hinted at residency for this new species to the UK and the capture of a badly crippled adult together with five normal adults on 28th October confirms residency for this pRDB1 species in the Park (and in mainland UK).
- Another new-comer (in the late 1980s) is the **Cypress Carpet**, an RDBk species, and now well established on *leylandii* in the Swanage area; two were trapped on 28th October during the Survey.

Durlston moths 2006

Missing macromoths:

- A bramble feeder, the local **Brown-spot Pinion**, was seen in the Park in 1993 but not during the Survey.

Butterflies

- A **Purple Hairstreak** was observed by Butterfly Conservation during 2006 and this may be yet another deciduous oak feeding species that has colonised the holm oak at Durlston.

6.8 Ditch, pond and seep

This habitat comprises a tiny portion of the Park but even so a few noteworthy species evidently survive there. The dampest portions are along the landslip in compartment 23, and around ponds situated in compartments 3 and 7.

Micromoths

- The **Notable**, Pyralid *Calamotropha paludella*, a common reed feeder, and the **Notable** tortrix *Phalonidia manniana*, a water mint feeder, were both trapped in July. The latter species has been recorded twice before in the Park.

Macromoths

- None recorded during the survey from this habitat

Missing macromoths:

- Although the **Fen Wainscot** has been recorded several times at Durlston, the last occasion was in 2003 for this common reed feeder.

Durlston moths 2006

6.9 Cliff and dry-stone walls

Cliff and dry-stone walls habitats comprise a small percentage of the total area of the Park, but despite this they are home to many Lepidoptera species that depend entirely on often very specific, marginal and maritime microhabitats. The copious list of species below testifies to the value of this biotope.

Beyond recommending increasing numbers of the flora species supporting the rarer moth species highlighted below, it is difficult to add anything else for cliff habitat other than protecting the habitat from the spread of gorse or blackthorn. In the case of dry-stone wall habitat, perhaps to be careful when repairing or reconstructing stone walls; I reproduce a piece from an entry for 2nd July 1900 within the Bankes diaries: 'On the top stones of west wall of the Lighthouse field I found one or two pupae plus three or four larvae of *Eudonia lineola*. The larvae were very abundant on the (bright yellow) lichens on the undersides of the loose stones on top of the wall until about three years ago, when in re-making the wall, they turned all these stones upside down, with the result that the insect was nearly exterminated and is still extremely scarce. The upperside lichen gets too hard and dry in the sunshine.'

Micromoths

- The highly distinctive, 'leggy' and **Notable_b** Pyralid *Dolicarthria punctalis* was encountered frequently by day and at light traps; the larva feeds on dead and decaying leaves of coastal plants such as buckshorn plantain, ribwort plantain, bird's-foot trefoil, and clovers.
- The rare Gelechiid *Scrobipalpa samadensis* was trapped during the Survey; it feeds in the roots, and mines the leaves, of buckshorn plantain, and has been found in just four other Dorset sites.
- The **Notable** *Crocidesma plebejana* hosted by common mallow is seen most seasons in the Park; 2006 was no exception with five at light traps in late October.
- The **Notable_a** Pyralid *Epischnia banksiella* feeds on golden samphire and was seen several times during the Survey.
- The **Notable_b** Pyralid *Eudonia lineola* is restricted to the coast in Dorset and feeds on lichens on walls too, and on lichens, e.g. *Parmelia* sp., growing on the branches of scrub such as elder or hawthorn; four moths were seen during the Survey.
- *Aristotelia brizella* a **Notable_b** species that feeds on thrift and recorded in just three Dorset sites was seen on several occasions during the Survey.
- *Lobesia littoralis*, another thrift feeder and therefore local in Dorset, was common in the Park; it also feeds on bird's-foot trefoil.

Missing micromoths:

- Three local sea aster feeding species are *Bucculatrix maritima*, *Phalonidia affinitana* and *Eucosma tripoliana*. The former two were recorded by Eustace Bankes in the late nineteenth century; the latter was recorded on two occasions by the author in 2004.
- The **pRDB3** Pyralid *Cynaeda dentalis* feeds internally within the stems of viper's bugloss, a scarce plant in the Park and located on clifftops; a specimen was recorded at light trap by Archibald Russell in 1948 at Scar Bank.
- Two more Gelechiid species of interest include *Scrobipalpa ocellatella*, a **Notable** species hosted by sea beet and recorded in the Park by the author in 1999, and *Caryocolum vicinella* a **Notable_b** species bred by Eustace Bankes in the early twentieth century from larvae discovered in spun shoots of Sea Campion.

Macromoths

- The **Mallow**, a rare moth in Dorset, is resident in the Park on common mallow and seen as singletons in most years; one was trapped in October 2006.
- Another scarce but spectacularly marked pug is the **Netted Pug**; it is well established in the Park on sea campion - the **Tawny Shears** also feeds on sea campion and both were recorded during the Survey. The Tawny Shears is similar to the Annulet as its ground colour

Durlston moths 2006

changes to match the colour of the geology where it occurs ranging from white on cretaceous soils to brown on darker soils.

- The local **Muslin Footman** is abundant in the Park; in fact one can see literally hundreds of larvae grazing lichens growing on walls nocturnally during the early summer months.
- The local **Yellow Belle**, a predominantly maritime species in Dorset and hosted by buckshorn plantain and wild carrot, was seen several times during the Survey.
- A range of noteworthy Noctuid moth species that are polyphagous on herbaceous plants and/or grasses but that have a distinctly maritime distribution in Dorset occur in the Park. These are the **Notable_b Square-spot Dart**, the local **Crescent Dart**, the **Notable_b L-album Wainscot**, the **Notable_b Feathered Brindle** and the local **Feathered Ranunculus**. The Square-spot Dart occurs in just two other Dorset sites.

Missing macromoths:

- Red valerian hosts the **Notable_b Valerian Pug**, a very scarce species in the county and last recorded by the author in 2001.
- The **Bloxworth Snout**, a **pRDB3** species that feeds on pellitory-of-the-wall has become resident on the Channel Islands and more recently on Portland where there are good stocks of the foodplant. It is debatable whether there are sufficient plants at Durlston, but tantalisingly in 2005 Julian Clarke netted one at torchlight near the Look-Out on the south-eastern boundary of compartment 21 where pellitory grows.
- The foodplant of the **Bordered Gothic**, a **Notable_b**, is unknown; this species has declined to the point of extinction in the UK in recent years. This species was recorded by Archibald Russell at Scar Bank on sixteen occasions between the late 1930s and 1950, and until recently, Portland was the last bastion for this now extinct species.
- The local **Northern Rustic** and **Garden Dart**, both polyphagous on herbaceous plants and grasses and with a distinctly maritime distribution in Dorset, were last recorded at Durlston in 1992.

Bordered Gothic

Durlston moths 2006

7. Summary of recommendations

These recommendations are designed to enhance colonies of noteworthy species in the Park.

7.1 General

- Detailed information on scrub and tree species be added to the existing botanical lists, and that these lists be maintained to help future invertebrate research.
- The Team should record moth captures in the format used in Appendix H, and to submit records to the Dorset moth recorders at year end for validation.
- The DCP Management Plan should be expanded to include objectives for target resident lepidoptera species (there are seventeen 'Durlston Critical Species' of moth and four of butterfly), propose action plans for them, and establish mechanisms to monitor progress against each plan over time.
- The Team should share this report with the National Trust so that the NT can act to protect vulnerable and rare species

7.2 Herb-rich grassland – short turf

- Implement the objective within the Management Plan of maintaining the 'high percentage of short-grazed downland grassland (average of less than 6cm) in compartments 3a, 6a and 10a'. This should promote the key species that depend on this biotype whilst reducing the short turf shortfall.

7.3 Herb-rich grassland – medium sward

- Continue policy of reducing the fertility of improved soils so that floristically rich grassland dominates open areas of the Park.

7.4 Herb-rich grassland – tall sward

- This rank habitat contains the largest number of Red Data Book species in the Park and should be included explicitly in the Management Plan. Management should consider promoting and proactively managing the saum biotype within the Park, perhaps allowing hedges and tall sward around the perimeter of compartments to spill out more, for example to allow compartment corners be filled with saum.

7.5 Hay Meadow

- Continue policy of avoiding mid-summer close cut, likely to be detrimental for species that at that time have non-adult stages affixed to plants.

7.6 Scrub

- Consider proactive management of compartment 31 (within compartments 3, 6, 10 and 15) to achieve a vibrant scrub community comprised a more balanced set of shrub species (the current dominance of blackthorn and gorse is at the expense of other calcareous species such as dog rose, wayfaring tree, spindle and dogwood).

7.7 Wood and hedge

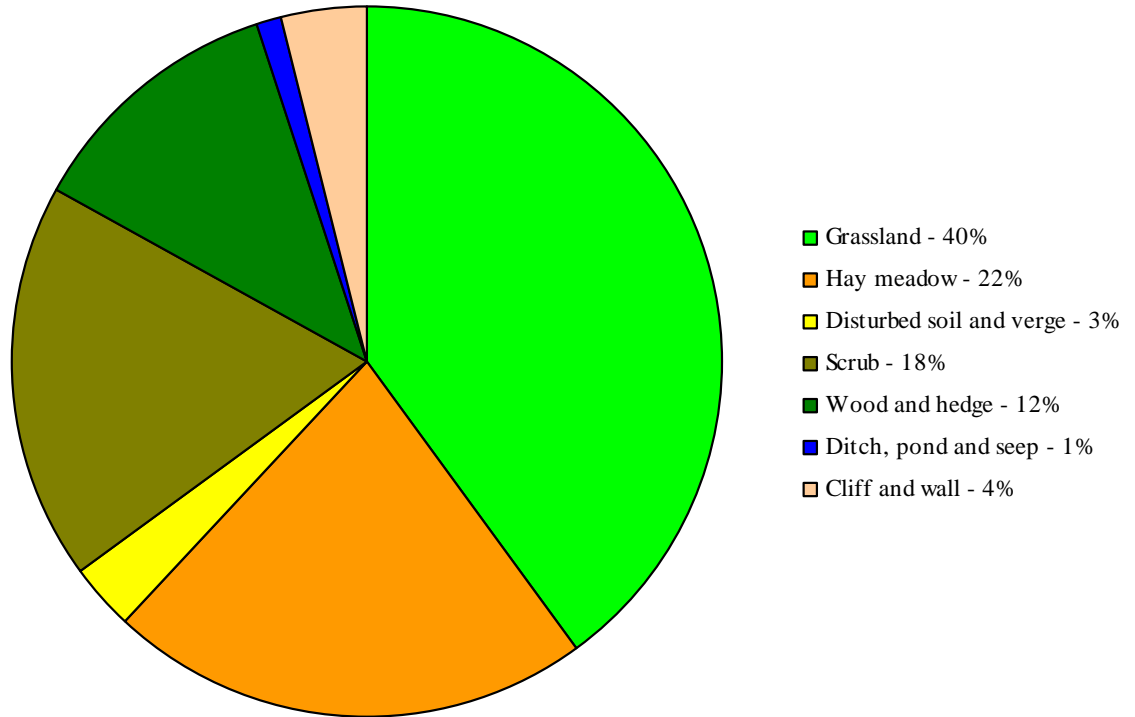

- Prevent the holmoak from swallowing up any more grassland

7.8 Cliff and dry-stone walls

- Prevent the spread of gorse and blackthorn

Durlston moths 2006

APPENDIX A - Habitat types by relative area

Durlston moths 2006

APPENDIX B - Habitat type by compartment

Compartment	Habitat	Area ha. (total 113 ha.)	Grazers	Past Grazing?		frequency	2005 Grazing levels		Haymaking frequency
				1995	2000		Oct – Apr	May – Sept	
1 and 1a	improved grassland	3.66	cattle	Y	Y	annual	0.24		annual
2	improved grassland	3.35	cattle	Y	Y	annual	0.22		annual
3 and 3a	downland grassland	9.78	cattle, rabbit	Y	Y	annual		0.28	-

APPENDIX C - Target Lepidoptera species by habitat category and status

Tax#	Latin Name	English Name	Status	Food Plant - English	Food Plant - Latin	Habitat Category	Last Sighting
1359	<i>Cynaeda dentalis</i>		1. pRDB ₃	viper's bugloss	<i>Echium vulgare</i>	cliff and dry-stone walls	1949
2478	<i>Hypena obsitalis</i>	Bloxworth Snout	2. RDBk	pellitory-of-the-wall	<i>Parietaria judaica</i>	cliff and dry-stone walls	2005
1456	<i>Epischia banksiella</i>		3. Notable/Nb	golden samphire	<i>Inula crithmoides</i>	cliff and dry-stone walls	2006
1341	<i>Eudonia lineola</i>		4. Notable/Nb	lichens, e.g. <i>Parmelia</i>		cliff and dry-stone walls	2006
1399	<i>Dolicarthria punctalis</i>		4. Notable/Nb	buckshorn plantain	<i>Plantago coronopus</i>	cliff and dry-stone walls	2006
1821	<i>Eupithecia valerianata</i>	Valerian Pug	4. Notable/Nb	red valerian	<i>Centranthus ruber</i>	cliff and dry-stone walls	2001
2080	<i>Euxoa obelisca grisea</i>	Square-spot Dart	4. Notable/Nb	herbaceous plants		cliff and dry-stone walls	2006
2153	<i>Heliophobus reticulata</i>	Bordered Gothic	4. Notable/Nb	UNKNOWN		cliff and dry-stone walls	1950
2202	<i>Mythimna l-album</i>	L-album Wainscot	4. Notable/Nb	soft-bladed grasses various grasses and herbaceous plants		cliff and dry-stone walls	2006
2230	<i>Aporophyla australis</i>	Feathered Bindle	4. Notable/Nb	herbaceous plants		cliff and dry-stone walls	2006
753	<i>Aristotelia brizella</i>		4. Notable/Nb	thrift	<i>Armeria maritima</i>	cliff and dry-stone walls	2006
826	<i>Caryocolum vicinella</i>		4. Notable/Nb	sea campion	<i>Silene uniflora</i>	cliff and dry-stone walls	1929
1157	<i>Crocidesma plebejana</i>		5. Notable	common mallow	<i>Malva sylvestris</i> <i>Beta vulgaris ssp.</i> <i>maritima</i>	cliff and dry-stone walls	2006
814	<i>Scrobipalpa ocellatella</i>		5. Notable	sea beet		cliff and dry-stone walls	1999
1109	<i>Lobesia littoralis</i>		6. Dorset rare	thrift	<i>Armeria maritima</i>	cliff and dry-stone walls	2006
1745	<i>Larentia clavaria</i>	Mallow	6. Dorset rare	common mallow	<i>Malva sylvestris</i>	cliff and dry-stone walls	2006
1823	<i>Eupithecia venosata</i>	Netted Pug	6. Dorset rare	sea campion	<i>Silene uniflora</i>	cliff and dry-stone walls	2006
1964	<i>Gnophos obscurata</i>	Annulet	6. Dorset rare	shrubby cinquefoil	<i>Potentilla fruticosa</i>	cliff and dry-stone walls	2006
2082	<i>Euxoa nigricans</i>	Garden Dart	6. Dorset rare	herbaceous plants		cliff and dry-stone walls	1948
2104	<i>Standfussiana lucerneae</i>	Northern Rustic	6. Dorset rare	herbaceous plants		cliff and dry-stone walls	1961
811	<i>Scrobipalpa samadensis</i>		6. Dorset rare	buckshorn plantain	<i>Plantago coronopus</i>	cliff and dry-stone walls	2006
932	<i>Phalonidia affinitana</i>		6. Dorset rare	sea aster	<i>Aster tripolium</i>	cliff and dry-stone walls	1884
1193	<i>Eucosma tripoliana</i>		7. Dorset local	sea aster	<i>Aster tripolium</i>	cliff and dry-stone walls	2004
1968	<i>Aspitates ochrearia</i>	Yellow Belle	7. Dorset local	buckshorn plantain small lichens growing in open situations	<i>Plantago coronopus</i>	cliff and dry-stone walls	2006
2038	<i>Nudaria mundana</i>	Muslin Footman	7. Dorset local	herbaceous plants		cliff and dry-stone walls	2006
2090	<i>Agrotis trux lunigera</i>	Crescent Dart	7. Dorset local	herbaceous plants		cliff and dry-stone walls	2006
2167	<i>Hadena perplexa perplexa</i>	Tawny Shears	7. Dorset local	sea campion	<i>Silene uniflora</i>	cliff and dry-stone walls	2006
2255	<i>Eumichtis lichenea lichenea</i>	Feathered Ranunculus	7. Dorset local	herbaceous plants		cliff and dry-stone walls	2006
267	<i>Bucculatrix maritima</i>		7. Dorset local	sea aster	<i>Aster tripolium</i>	cliff and dry-stone walls	1885
2226	<i>Leucochlaena oditis</i>	Beautiful Gothic	1. RDB ₃	annual meadow grass	<i>Poa annua</i>	disturbed soil and verge	2006
965.1	<i>Cochylis molliculana</i>		2. pRDBk	prickly sow-thistle	<i>Sonchus asper</i>	disturbed soil and verge	2006
1389	<i>Udea fulvalis</i>		2. pRDBk	black horehound	<i>Ballota nigra</i>	disturbed soil and verge	2004
1389	<i>Udea fulvalis</i>		2. pRDBk	spear mint	<i>Mentha spicata</i>	disturbed soil and verge	2004

Durlston moths 2006

Tax#	Latin Name	English Name	Status	Food Plant - English	Food Plant - Latin	Habitat Category	Last Sighting
1382	<i>Anania verbascalis</i>		4. Notable/Nb	great mullein	<i>Verbascum thapsus</i>	disturbed soil and verge	2004
1371	<i>Sitochroa verticalis</i>		6. Dorset rare	creeping thistle	<i>Cirsium arvense</i>	disturbed soil and verge	1929
1749	<i>Pelurga comitata</i>	Dark Spinach	6. Dorset rare	orache sp.	<i>Atriplex sp.</i>	disturbed soil and verge	2006
1749	<i>Pelurga comitata</i>	Dark Spinach	6. Dorset rare	goosefoot sp.	<i>Chenopodium sp.</i>	disturbed soil and verge	2006
566	<i>Coleophora sternipennella</i>		6. Dorset rare [23]	orache sp.	<i>Atriplex sp.</i>	disturbed soil and verge	2006
566	<i>Coleophora sternipennella</i>		6. Dorset rare [23]	goosefoot sp.	<i>Chenopodium sp.</i>	disturbed soil and verge	2006
1363	<i>Pyrausta ostrinalis</i>		7. Dorset local	spear mint	<i>Mentha spicata</i>	disturbed soil and verge	2006
1501	<i>Platyptilia gonodactyla</i>		7. Dorset local	colts-foot	<i>Tussilago farfara</i>	disturbed soil and verge	2004
1816	<i>Eupithecia linariata</i>	Toadflax Pug	7. Dorset local	common toadflax	<i>Linaria vulgaris</i>	disturbed soil and verge	2006
1842	<i>Eupithecia simpliciatata</i>	Plain Pug	7. Dorset local	fat hen	<i>Chenopodium album</i>	disturbed soil and verge	2006
1842	<i>Eupithecia simpliciatata</i>	Plain Pug	7. Dorset local	frosted orache maple-leaved	<i>Atriplex laciniata</i>	disturbed soil and verge	2006
1842	<i>Eupithecia simpliciatata</i>	Plain Pug	7. Dorset local	goosefoot	<i>Chenopodium hybridum</i>	disturbed soil and verge	2006
1842	<i>Eupithecia simpliciatata</i>	Plain Pug	7. Dorset local	spear-leaved orache	<i>Atriplex prostrata</i>	disturbed soil and verge	2006
2164	<i>Hecatera bicolorata</i>	Broad-barred White	7. Dorset local	hawkweed ox-tongue	<i>Picris hieracoides</i>	disturbed soil and verge	2005
2178	<i>Tholera decimalis</i>	Feathered Gothic	7. Dorset local	annual meadow grass	<i>Poa annua</i>	disturbed soil and verge	2002
2214	<i>Cucullia chamomillae</i>	Chamomile Shark	7. Dorset local	pineappleweed	<i>Matricaria discoidea</i> <i>Tripleurospermum inodorum</i>	disturbed soil and verge	2005
2214	<i>Cucullia chamomillae</i>	Chamomile Shark	7. Dorset local	scentless mayweed	<i>Poa annua</i>	disturbed soil and verge	2005
2358	<i>Amphipoea fucosa paludis</i>	Saltern Ear	7. Dorset local	annual meadow grass	<i>Poa annua</i>	disturbed soil and verge	2006
296	<i>Calybitis phasianipennella</i>		7. Dorset local	black bindweed	<i>Fallopia convolvulus</i>	disturbed soil and verge	2006
559	<i>Coleophora peribenanderi</i>		7. Dorset local	creeping thistle	<i>Cirsium arvense</i>	disturbed soil and verge	2006
565	<i>Coleophora saxicolella</i>		7. Dorset local	frosted orache	<i>Atriplex laciniata</i>	disturbed soil and verge	2006
565	<i>Coleophora saxicolella</i>		7. Dorset local	spear-leaved orache	<i>Atriplex prostrata</i>	disturbed soil and verge	2006
568	<i>Coleophora versurella</i>		7. Dorset local	frosted orache	<i>Atriplex laciniata</i>	disturbed soil and verge	2005
568	<i>Coleophora versurella</i>		7. Dorset local	spear-leaved orache	<i>Atriplex prostrata</i>	disturbed soil and verge	2005
816	<i>Scrobipalpa obsoletella</i>		7. Dorset local	fat hen maple-leaved	<i>Chenopodium album</i>	disturbed soil and verge	1885
816	<i>Scrobipalpa obsoletella</i>		7. Dorset local	goosefoot	<i>Chenopodium hybridum</i>	disturbed soil and verge	1885
939	<i>Aethes tesserana</i>		7. Dorset local	hawkweed ox-tongue	<i>Picris hieracoides</i>	disturbed soil and verge	2006
951	<i>Aethes beatricella</i>		7. Dorset local	alexanders	<i>Smyrnum olusatrum</i>	disturbed soil and verge	2006
965	<i>Cochylis hybridella</i>		7. Dorset local	hawkweed ox-tongue	<i>Picris hieracoides</i>	disturbed soil and verge	2006
1292	<i>Calamotropha paludella</i>		5. Notable	common reed	<i>Phragmites australis</i>	ditch, pond and seep	2006
926	<i>Phalonidia manniana</i>		5. Notable	water mint	<i>Mentha aquatica</i>	ditch, pond and seep	2006
2377	<i>Arenostola phragmitidis</i>	Fen Wainscot	7. Dorset local	common reed	<i>Phragmites australis</i>	ditch, pond and seep	2003
1389	<i>Udea fulvalis</i>		2. pRDBk	wild clary	<i>Salvia verbenaca</i>	dry grassland - medium sward	2004
1545	<i>Colias croceus</i>	Clouded Yellow	2. pSCC	clovers	<i>Trifolium spp.</i>	dry grassland - medium sward	2006
1370	<i>Sitochroa palealis</i>		4. Notable/Nb	wild carrot	<i>Daucus carota</i>	dry grassland - medium sward	2006

Durlston moths 2006

Tax#	Latin Name	English Name	Status	Food Plant - English	Food Plant - Latin	Habitat Category	Last Sighting
1399	<i>Dolicarthra punctalis</i>		4. Notable/Nb	clovers	<i>Trifolium</i> spp.	dry grassland - medium sward	2006
1399	<i>Dolicarthra punctalis</i>		4. Notable/Nb	ribwort plantain	<i>Plantago lanceolata</i>	dry grassland - medium sward	2006
1441	<i>Oncocera semirubella</i>		4. Notable/Nb	white clover	<i>Trifolium repens</i>	dry grassland - medium sward	2006
1735	<i>Catarhoe rubidata</i>	Ruddy Carpet	4. Notable/Nb	lady's bedstraw	<i>Galium verum</i>	dry grassland - medium sward	2005
1845	<i>Eupithecia pimpinellata</i>	Pimpinel Pug	4. Notable/Nb	burnet-saxifrage	<i>Pimpinella saxifraga</i>	dry grassland - medium sward	1951
1192	<i>Eucosma conterminana</i>		5. Notable	great lettuce	<i>Lactuca virosa</i>	dry grassland - medium sward	2006
1023	<i>Cnephasia genitalana</i>		6. Dorset rare	polyphagous		dry grassland - medium sward	2006
1367	<i>Pyrausta cingulata</i>		6. Dorset rare	wild clary	<i>Salvia verbenaca</i>	dry grassland - medium sward	2006

APPENDIX D - Habitat categories and host foodplants

Flora species - English	Flora species - Latin	Habitat category
bastard-toadflax	<i>Thesium humifusum</i>	1. dry grassland – short turf
bird's-foot trefoil	<i>Lotus corniculatus</i>	1. dry grassland – short turf
carline thistle	<i>Carlina vulgaris</i>	1. dry grassland – short turf
cat's-ear	<i>Hypochoeris radicata</i>	1. dry grassland – short turf
common centaury	<i>Centaureum erythraea</i>	1. dry grassland – short turf
common rock-rose	<i>Helianthemum nummularium</i>	1. dry grassland – short turf
hairy violet	<i>Viola hirta</i>	1. dry grassland – short turf
hawkbeard sp.	<i>Crepis</i> sp.	1. dry grassland – short turf
horseshoe vetch	<i>Hippocrepis comosa</i>	1. dry grassland – short turf
kidney vetch	<i>Anthyllis vulneraria</i>	1. dry grassland – short turf
mouse-ear hawkweed	<i>Pilosella officinarum</i>	1. dry grassland – short turf
ploughman's spikenard	<i>Inula conyzae</i>	1. dry grassland – short turf
restharrow	<i>Ononis repens</i>	1. dry grassland – short turf
sheep's fescue	<i>Festuca ovina</i>	1. dry grassland – short turf
wild basil	<i>Clinopodium vulgare</i>	1. dry grassland – short turf
wild thyme	<i>Thymus polytrichus</i>	1. dry grassland – short turf
yellow-wort	<i>Blackstonia perfoliata</i>	1. dry grassland – short turf
bladder campion	<i>Silene vulgaris</i>	2. dry grassland – medium sward
burnet-saxifrage	<i>Pimpinella saxifraga</i>	2. dry grassland – medium sward
clovers	<i>Trifolium</i> spp.	2. dry grassland – medium sward
cock's-foot	<i>Dactylis glomerata</i>	2. dry grassland – medium sward
common mouse-ear	<i>Cerastium fontanum</i>	2. dry grassland – medium sward
creeping cinquefoil	<i>Potentilla reptans</i>	2. dry grassland – medium sward
glaucous sedge	<i>Carex flacca</i>	2. dry grassland – medium sward
gorse	<i>Ulex europaeus</i>	2. dry grassland – medium sward
great lettuce	<i>Lactuca virosa</i>	2. dry grassland – medium sward
lady's bedstraw	<i>Galium verum</i>	2. dry grassland – medium sward
prickly sow-thistle	<i>Sonchus asper</i>	2. dry grassland – medium sward
ragwort	<i>Senecio jacobaea</i>	2. dry grassland – medium sward
ribwort plantain	<i>Plantago lanceolata</i>	2. dry grassland – medium sward
soft brome	<i>Bromus hordeaceus</i>	2. dry grassland – medium sward
white clover	<i>Trifolium repens</i>	2. dry grassland – medium sward
wild carrot	<i>Daucus carota</i>	2. dry grassland – medium sward
wild clary	<i>Salvia verbenaca</i>	2. dry grassland – medium sward
yarrow	<i>Achillea millefolium</i>	2. dry grassland – medium sward
agrimony	<i>Agrimonia eupatoria</i>	3. dry grassland - tall sward or saum
black knapweed	<i>Centaurea nigra</i>	3. dry grassland - tall sward or saum
couch grass	<i>Elytrigia repens</i>	3. dry grassland - tall sward or saum
field bindweed	<i>Convolvulus arvensis</i>	3. dry grassland - tall sward or saum
greater knapweed	<i>Centaurea scabiosa</i>	3. dry grassland - tall sward or saum
hogweed	<i>Heracleum sphondylium</i>	3. dry grassland - tall sward or saum
teasel	<i>Dipsacus fullonum</i>	3. dry grassland - tall sward or saum
tor grass	<i>Brachypodium pinnatum</i>	3. dry grassland - tall sward or saum
wild parsnip	<i>Pastinaca sativa</i>	3. dry grassland - tall sward or saum
yellow vetchling	<i>Lathyrus aphaca</i>	3. dry grassland - tall sward or saum
common fleabane	<i>Pulicaria dysenterica</i>	4. hay meadow
corn chamomile	<i>Anthemis arvensis</i>	4. hay meadow
field scabious	<i>Knautia arvensis</i>	4. hay meadow
meadow oat-grass	<i>Helictotrichon pratense</i>	4. hay meadow
mugwort	<i>Artemisia vulgaris</i>	4. hay meadow
red bartsia	<i>Odontites verna</i>	4. hay meadow
red fescue	<i>Festuca rubra</i>	4. hay meadow
rough chervil	<i>Chaerophyllum temulentum</i>	4. hay meadow

Durlston moths 2006

APPENDIX E - Alphabetical list of micromoths recorded in survey

To see capture details of a species, look up the listing by classification number in Appendix H

Scientific name	Classific number	Scientific name	Classific number
<i>Acleris aspersana</i>	1043	<i>Aspilapteryx tringipennella</i>	294
<i>Acleris cristana</i>	1054	<i>Athrips mouffetella</i>	762
<i>Acleris emargana</i>	1062	<i>Bactra lancealana</i>	1111
<i>Acleris hastiana</i>	1053	<i>Batia lunaris</i>	640
<i>Acleris laterana</i>	1038	<i>Batia unitella</i>	642
<i>Acleris literana</i>	1061	<i>Bembecia scopigera</i> (Six-belted clearwing)	382
<i>Acleris notana</i>	1045	<i>Blastobasis decolorella</i>	874
<i>Acleris rhombana</i>	1042	<i>Blastobasis lignea</i>	873
<i>Acleris sparsana</i>	1041	<i>Brachmia blandella</i>	866
<i>Acleris variegana</i>	1048	<i>Brachmia rufescens</i>	868
<i>Acrocercops brongniardella</i>	313	<i>Bryotropha terrella</i>	787
<i>Acrolepia autumnitella</i>	476	<i>Bucculatrix nigricomella</i>	266
<i>Adela fibulella</i>	153	<i>Calamotropha paludella</i>	1292
<i>Adela reamurella</i>	150	<i>Caloptilia rufipennella</i>	284
<i>Aethes beatricella</i>	951	<i>Calybites phasianipennella</i>	296
<i>Aethes cnicana</i>	945	<i>Carcina quercana</i>	658
<i>Aethes dilucidana</i>	949	<i>Caryocolum fraternella</i>	830
<i>Aethes francillana</i>	950	<i>Catoptria pinella</i>	1313
<i>Aethes rubigana</i>	946	<i>Celypha striana</i>	1063
<i>Aethes tesserana</i>	939	<i>Chorelitis pariana</i>	389
<i>Agapeta hamana</i>	937	<i>Chrysoteuchia culmella</i>	1293
<i>Agapeta zoegana</i>	938	<i>Clepsis consimilana</i>	994
<i>Agonopterix arenella</i>	697	<i>Cnephasia conspersana</i>	1019
<i>Agonopterix heracliiana</i>	688	<i>Cnephasia incertana</i>	1024
<i>Agonopterix liturella</i>	698	<i>Cnephasia stephensiana</i>	1020
<i>Agonopterix nervosa</i>	706	<i>Cochlymorpha straminea</i>	936
<i>Agonopterix ocellana</i>	701	<i>Cochylis atricapitana</i>	966
<i>Agonopterix pallorella</i>	700	<i>Cochylis dubitana</i>	964
<i>Agonopterix rotundella</i>	716	<i>Cochylis hybridella</i>	965
<i>Agonopterix subpropinquella</i>	692	<i>Cochylis molliculana</i>	964.1
<i>Agonopterix yeatiana</i>	714	<i>Coleophora albicosta</i>	544
<i>Agonopteryx purpurea</i>	691	<i>Coleophora argentula</i>	563
<i>Agriphila geniculea</i>	1309	<i>Coleophora bernoulliella</i>	533
<i>Agriphila selasella</i>	1303	<i>Coleophora deauratella</i>	519
<i>Agriphila straminella</i>	1304	<i>Coleophora discordella</i>	547
<i>Agriphila tristella</i>	1305	<i>Coleophora frischella</i>	517
<i>Aleimma loeflingiana</i>	1032	<i>Coleophora lixella</i>	530
<i>Alucita hexadactyla</i>	1288	<i>Coleophora lixella</i>	530
<i>Amblyptilia acanthadactyla</i>	1497	<i>Coleophora mayrella</i>	518
<i>Anacamptis blattariella</i>	854	<i>Coleophora peribenanderi</i>	559
<i>Anarsia spartiella</i>	856	<i>Coleophora salicorniae</i>	588
<i>Ancylis achatana</i>	1115	<i>Coleophora saxicolella</i>	565
<i>Ancylis badiana</i>	1126	<i>Coleophora sternipennella</i>	566
<i>Ancylis comptana</i>	1116	<i>Coleophora striatipennella</i>	553
<i>Anthophila fabriciana</i>	385	<i>Cosmoites stabilella</i>	633
<i>Aphomia sociella</i>	1428	<i>Crambus lathonellus</i>	1301
<i>Aproaerema anthyllidella</i>	843	<i>Crambus perlella</i>	1302
<i>Archips podana</i>	977	<i>Crambus pratella</i>	1300
<i>Archips xylosteana</i>	980	<i>Crocidesma plebejana</i>	1157
<i>Argyresthia albistria</i>	422	<i>Croesia bergmanniana</i>	1035
<i>Argyresthia albistria</i>	422	<i>Croesia forsskaleana</i>	1036

1524	<i>Emmelina monodactyla</i>		1	At MV light	09/10/2006	035773		
Butterflies								
1526	<i>Thymelicus sylvestris</i>	Small Skipper	1	In flight (compartment 31)	30/06/2006	029771		
1526	<i>Thymelicus sylvestris</i>	Small Skipper	60	In flight and nectaring	05/08/2006	0277		
1528	<i>Thymelicus acteon</i>	Lulworth Skipper	1	In flight (compartment 31 - south-east)	30/06/2006	030770		
1528	<i>Thymelicus acteon</i>	Lulworth Skipper	100	In flight and nectaring	05/08/2006	0277		
1531	<i>Ochlodes faunus</i>	Large Skipper	1	In flight (compartment 14)	30/06/2006	029774		
1531	<i>Ochlodes faunus</i>	Large Skipper	1	In flight (compartment 31)	30/06/2006	029771		
1532	<i>Erynnis tages</i>	Dingy Skipper	12	In flight and basking	02/06/2006	0277		
1545	<i>Colias croceus</i>	Clouded Yellow	2	Flushed from grasses	05/08/2006	022771		
1545	<i>Colias croceus</i>	Clouded Yellow	2	In flight	05/11/2006	021770		

Durlston moths 2006

Tax #	Scientific name	English name	No.	Where trapped	When trapped	Grid Reference	Comment
1549	<i>Pieris brassicae</i>	Large White	1	In flight	02/06/2006	025771	
1550	<i>Pieris rapae</i>	Small White	2	In flight	05/08/2006	0277	
1550	<i>Pieris rapae</i>	Small White	1	In flight	16/09/2006	0277	
1553	<i>Anthocharis cardamines</i>	Orange-tip	1	In flight - female	02/06/2006	0277	
1569	<i>Cupido minimus</i>	Small Blue	3	In flight and basking	02/06/2006	0277	
1569	<i>Cupido minimus</i>	Small Blue	4	In flight (compartment 15 - south west of)	30/06/2006	027768	
1572	<i>Aricia argestis</i>	Brown Argus	1	Male in flight (compartment 10 north-east)	05/08/2006	026772	
1574	<i>Polyommatus icarus</i>	Common Blue	50	In flight	05/08/2006	0277	
1574	<i>Polyommatus icarus</i>	Common Blue	16	In flight	16/09/2006	0277	
1575	<i>Lysandra coridon</i>	Chalk-hill Blue	1	Male in flight (compartment 10 north-east)	05/08/2006	026772	
1576	<i>Lysandra coridon</i>	Adonis Blue	40	In flight and basking, mainly on coastal short-turf grassland	02/06/2006	0277	
1576	<i>Lysandra coridon</i>	Adonis Blue	1	In flight (compartment 15)	30/06/2006	029771	
1576	<i>Lysandra coridon</i>	Adonis Blue	13	In flight and basking, mainly on coastal short-turf grassland	16/09/2006	0277	
1591	<i>Vanessa cardui</i>	Painted Lady	1	In flight	02/06/2006	026772	
1591	<i>Vanessa cardui</i>	Painted Lady	40	In flight and many nectaring on teasel flowerheads	05/08/2006	0277	
1607	<i>Argynnis aglaja</i>	Dark-green Fritillary	1	In flight (compartment 31 - south-east)	30/06/2006	030770	
1614	<i>Pararge aegeria</i>	Speckled Wood	1	Beaten from ivy (compartment 8/9)	29/04/2006	026774	
1614	<i>Pararge aegeria</i>	Speckled Wood	7	In flight and basking	02/06/2006	0277	
1614	<i>Pararge aegeria</i>	Speckled Wood	1	In flight (compartment 25)	30/06/2006	031774	
1614	<i>Pararge aegeria</i>	Speckled Wood	3	In flight	16/09/2006	0277	
1615	<i>Lasiommata megera</i>	Wall	2	In flight and basking	02/06/2006	026772	
1620	<i>Melanargia galathea</i>	Marbled White	23	In flight	30/06/2006	0277	
1625	<i>Pyronia tithonus</i>	Gatekeeper	50	In flight	05/08/2006	0277	
1626	<i>Maniola jurtina</i>	Meadow Brown	18	In flight	30/06/2006	0277	
1626	<i>Maniola jurtina</i>	Meadow Brown	200	In flight	05/08/2006	0277	
1626	<i>Maniola jurtina</i>	Meadow Brown	20	In flight	16/09/2006	0277	
1627	<i>Coenonympha pamphilus</i>	Small Heath	1	In flight	02/06/2006	026771	
1627	<i>Coenonympha pamphilus</i>	Small Heath	6	In flight	30/06/2006	0277	
1627	<i>Coenonympha pamphilus</i>	Small Heath	4	In flight	16/09/2006	0277	

Macro moths

1634	<i>Malacosoma neustria</i>	Lackey	1	At MV light (compartment 7/9/12)	24/06/2006	026774	
1634	<i>Malacosoma neustria</i>	Lackey	13	At MV light (compartment 15 - south of)	30/06/2006	029768	
1634	<i>Malacosoma neustria</i>	Lackey	15	At MV light (compartment 15/31)	04/07/2006	028770	
1634	<i>Malacosoma neustria</i>	Lackey	37	At MV light (compartment 15/31)	21/07/2006	028770	
1634	<i>Malacosoma neustria</i>	Lackey	37	At MV light (compartment 13/14)	26/07/2006	035772	
1634	<i>Malacosoma neustria</i>	Lackey	1	At MV light (compartment 15/31)	05/08/2006	028770

2474	<i>Rivula sericealis</i>	Straw Dot	1	At MV light (compartment 15/31)	04/07/2006	028770	
2474	<i>Rivula sericealis</i>	Straw Dot	5	At MV light (compartment 15/31)	05/08/2006	028770	
2474	<i>Rivula sericealis</i>	Straw Dot	2	At MV light (compartment 15/31)	05/09/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	1	At MV light (compartment 12)	10/06/2006	026773	

Durlston moths 2006

Tax #	Scientific name	English name	No.	Where trapped	When trapped	Grid Reference	Comment
2477	<i>Hypena proboscidalis</i>	Snout	2	At MV light (compartment 10a)	17/06/2006	025771	
2477	<i>Hypena proboscidalis</i>	Snout	2	At MV light (compartment 15 - south of)	30/06/2006	029768	
2477	<i>Hypena proboscidalis</i>	Snout	6	At MV light (compartment 15/31)	04/07/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	5	At MV light (compartment 15/31)	21/07/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	50	At MV light (compartment 13/14)	25/07/2006	029774	
2477	<i>Hypena proboscidalis</i>	Snout	2	At MV light (compartment 15/31)	05/08/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	4	At MV light (compartment 15/31)	05/09/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	4	At MV light	11/09/2006	035773	
2477	<i>Hypena proboscidalis</i>	Snout	8	At MV light (compartment 15/31)	24/09/2006	028770	
2477	<i>Hypena proboscidalis</i>	Snout	1	At MV light	12/10/2006	035773	
2484	<i>Schrankia costaestrigalis</i>	Pinion-streaked Snout	1	At MV light (compartment 15/31)	05/08/2006	028770	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	1	At MV light (compartment 15 - south of)	30/06/2006	029768	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	3	At MV light (compartment 15/31)	04/07/2006	028770	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	12	At MV light (compartment 15/31)	21/07/2006	028770	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	4	At MV light (compartment 13/14)	25/07/2006	029774	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	1	At MV light (compartment 13/14)	26/07/2006	035772	
2489	<i>Herminea tarsipennalis</i>	Fan-foot	1	At MV light (compartment 15/31)	05/08/2006	028770	
2492	<i>Herminia grisealis</i>	Small Fan-foot	1	At MV light (compartment 10a)	17/06/2006	025771	
2492	<i>Herminia grisealis</i>	Small Fan-foot	3	At MV light (compartment 15/31)	21/07/2006	028770	
2492	<i>Herminia grisealis</i>	Small Fan-foot	1	At MV light (compartment 13/14)	25/07/2006	029774	
2492	<i>Herminia grisealis</i>	Small Fan-foot	1	At MV light (compartment 15/31)	05/08/2006	028770
