

Shiley® Phonate®

SPEAKING VALVE

Provide easier vocalization for tracheostomy patients.

The Shiley® Phonate® Speaking Valve is designed for use on alert, awake tracheostomy patients who can breathe independently without assisted

mechanical ventilation. The Phonate Speaking Valve connects to the tracheostomy tube and directs airflow past the vocal

cords to give patients the ability to speak. It permits easier vocalization without finger occlusion, which may cause hygiene and infection concerns. The airflow through the oral and nasal chambers also decreases secretions and improves swallowing and sense of smell.

The Shiley product family from Nellcor includes a complete line of tracheostomy tubes and accessories.

Valve design minimizes work of breathing.

Lightweight valve minimizes additional pressure on the stoma site.

Connector adapts to any tracheostomy tube with a 15-mm hub.

Convenient, hinged cap allows easy cleaning.

Option with port and cap for supplemental oxygen.
