

Pale Evening-primrose Oenothera pallida ssp. pallida **Onagraceae (Evening Primrose Family)**

Status: Blue / Not Assessed

Best Survey Time: May to June

General Habitat: Upland

RANGE

- Occurs in North America from British Columbia south through the western United States to Texas. not reported as native in California
- In B.C., there are six extant sites in the south Okanagan and one historic record from Pemberton (possibly an introduction)

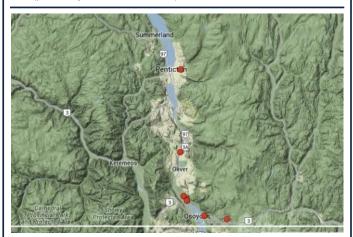

Figure 1 Thompson Okanagan distribution of Oenothera pallida (adapted from BC CDC 2014)

HABITAT

- In the Okanagan, occurs on sandy, open ground, usually in full sun with little competing vegetation in the Bunchgrass Biogeoclimatic Zone
- Associates include big sagebrush (Artemisia tridentata), antelope-brush (Purshia tridentata), prairie sagewort (Artemisia frigida), showy milkweed (Asclepias speciosa), red three-awn (Aristida purpurea) and cheat grass (Bromus tectorum)

Figure 2 Flowering plant in sandy, open habitat; an ant is more likely an incidental visitor then pollinator

Figure 3 Sandy roadside habitat west of Osoyoos, B.C.

LIFE HISTORY

- Perennial evening-primrose over-wintering from a below ground rhizome
- Flowers in the late spring and early summer, with the flowers opening in the evening
- Flowers turn pink after pollination and develop into capsules containing numerous seeds

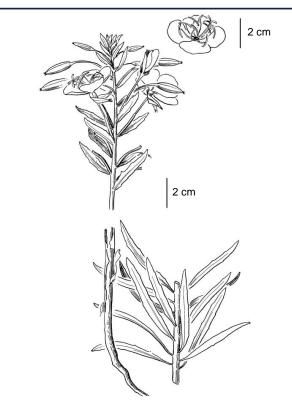

Figure 4 Illustration of O. pallida ssp. pallida by Jeanne R. Janish (Hitchcock et al. 1969)

Oenothera pallida ssp. pallida (continued)

DESCRIPTION

General

- Perennial herb from a rhizome
- Stems very leafy, 10 to 50 cm tall, simple to branched at base, glabrous to grey stiff-hairy

Leaves

Leaves linear to linear lanceolate, 2 to 8 cm long, 5
(10) mm wide, entire to weakly toothed

Flowers

- Usually many, long-stalked, fragrant flowers in leafy spikes, the buds nodding, hypanthium 1.5 to 3.5 cm long, usually pink to purplish
- Petals egg-shaped, 1.5 to 3 cm long, tips rounded to slightly notched, white, aging to pink
- Sepals 1 to 2 cm long, mostly joined
- Stamens about as long as the petals, the anthers 6 to 10 mm long
- Styles about equalling the petals in length, stigma lobes 4, linear, 4 to 6 mm long

Fruits

4-parted linear capsules, 1.5 to 3.5 cm long

Figure 5 Close-up of showy white flowers with four-parted stigma

IDENTIFICATION TIPS

- The tufted perennial habit and showy white flowers distinguish this species from other evening-primrose species in B.C.
- Scarlet gaura (Gaura coccinea), another member of the evening-primrose family, is the closest in appearance to Oenothera pallida ssp. pallida and can be distinguished by its smaller flowers in a dense terminal spike, and long stamens and styles that surpass length of petals

Figure 6 A shorter more densely tufted plant in native habitat

GENERAL THREATS AND GUIDANCE

- Avoid development in areas with known occurrences of *Oenothera pallida* through project relocation or redesign
- Protect open, sandy expanses from disturbance and development, including exclusion of livestock and ATVs through fencing and/or signage, and consider restoration including invasive plant removal following professional advice
- Ensure roadside maintenance activities do not disturb this species and its habitat
- Provincial methods for when and how to conduct rare plant surveys, as well as guidance on mitigation measures should be followed
- Report any sightings to the BC Conservation Data Centre (<u>cdcdata@gov.bc.ca</u>) and MFLNRO Ecosystems Section (<u>josie.symonds@gov.bc.ca</u>)
