We acknowledge and respect Victorian Traditional Owners as the original custodians of Victoria's land and waters, their unique ability to care for Country and deep spiritual connection to it.

We honour Elders past and present whose knowledge and wisdom has ensured the continuation of culture and traditional practices.

DEECA is committed to genuinely partnering with Victorian Traditional Owners and Victoria's Aboriginal community to progress their aspirations.

About the Flora and Fauna Guarantee Act

The *Flora and Fauna Guarantee Act 1988* (the FFG Act) is the primary piece of Victorian legislation that provides for the conservation of biodiversity and the management of potentially threatening processes. The listing of species and communities of flora and fauna, where they satisfy prescribed criteria in the FFG Act and in the FFG Regulations, has been a feature of the FFG Act since its inception.

Amendments to the FFG Act in 2019 changed the provision of a single category for listing ‘threatened’ to align with categories and criteria for species with those set out in the Common Assessment Method (CAM) Intergovernmental Memorandum of Understanding, to which Victoria is a party. These changes required the Victorian Government to reassess and amend the FFG Threatened List to align with the categories under the CAM. The CAM categories and criteria match the International Union for the Conservation of Nature (IUCN) Red List categories and criteria, with the addition of a “conservation dependent” category, to be used solely for commercially harvested fish that are listed elsewhere in Australia. Transitional provisions in the amended FFG Act also allowed for the listing of more than 1300 species, previously included in the Victorian Government’s Advisory Lists, on the basis of ‘CAM-compliant’ assessments. For this reason, this document includes many more species than the previous FFG Threatened List. Further work on assessments for species on previous Advisory Lists is still underway.

Legislative provision

This document meets the following statutory requirement:

Flora and Fauna Guarantee Act 1988 Part 3, Division 1, section 10:

- (1) The Governor in Council, in accordance with this section, must establish and maintain a list —
 - (a) of threatened taxa of flora and fauna that sets out —
 - (i) the extinction risk of each listed taxon; and
 - (ii) the category of threat that applies to each listed taxon; and
 - (b) of threatened communities of flora or fauna.
- (2) The Governor in Council —
 - (a) may specify in the list under subsection (1)(a) any taxon of flora or fauna that the Minister, under Division 3, recommends should be specified in the list; and
 - (b) for each taxon specified in the list under subsection (1)(a), must set out, in accordance with the Minister’s recommendation under Division 3—
 - (i) the extinction risk of the taxon; and
 - (ii) the category of threat that applies to the taxon.

About the FFG Threatened List

The FFG Threatened List is organised according to high-level groupings of taxa:

- Vertebrate animals – mammals, birds, reptiles, amphibians and fish;
- Invertebrate animals – crustaceans, insects, molluscs, platyhelminths (flatworms), annelids (annelid worms), cnidarians (sea anemones, jellyfish) and echinoderms (sea stars, sea cucumbers);
- Vascular plants – flowering plants (dicotyledons and monocotyledons), gymnosperms (conifers), ferns and fern allies;
- Non-vascular plants – mosses and liverworts; and
- Fungi and lichens.

The lists of threatened taxa are arranged in tables that include the common and scientific name as well as a column to identify the 'Extinction Risk' and 'Category of Threat'. The Extinction Risk indicates that the taxon is at risk in 'Australia' (i.e. is listed under national legislation with a CAM-compliant assessment, or an endemic Victoria species) or 'Victoria' (i.e. is assessed under Victoria legislation only). 'Category of Threat' denotes the status specified in the FFG Act, for example: extinct; extinct in the wild; critically endangered; endangered; vulnerable; or in the case of a taxon of fish, conservation dependent. For vertebrates, the lists are sorted by common name; for other taxa, the lists are sorted by scientific name.

The FFG Threatened List also includes a list of threatened communities of flora and fauna. These are defined as "a type of assemblage which is...wholly or substantially made up of taxa of flora or fauna existing together in the wild". While all communities are made up of plants and animals, including microorganisms, they may be defined and listed by the vegetation type or by the characteristic plant or animal species.

The FFG Threatened List is regularly updated for the following reasons:

- Victoria adopts an item listed under the EPBC Act if a national assessment is CAM-compliant
- amendments are required due to taxonomic changes
- an assessment (taxon or community of flora and fauna) is made through recommendation by the Victorian Scientific Advisory Committee and a joint decision to add or remove a taxon or community is made by the Victorian Minister for Environment and Minister for Agriculture.

The FFG Threatened List is also available as a Microsoft Excel workbook, which can be searched, sorted or filtered. It can be found here: <https://www.environment.vic.gov.au/conserving-threatened-species/threatened-list/?a=634678>

Alignment of Threatened Lists between Victoria and the Commonwealth

The FFG Threatened List includes taxa that are also listed under the Commonwealth *Environment Protection and Biodiversity Act 1999* (EPBC Act). In some cases, the listings will be inconsistent with the EPBC list. This is due to the following:

- the EPBC list includes taxa that occur in Victoria and other Australian States or Territories, and where an item lacks a national CAM-compliant assessment, the Victorian CAM-compliant status is used; or
- the FFG Threatened List includes Victorian endemic taxa that have recently been re-assessed according to the CAM but are yet to be listed under the EPBC Act.

The CAM will support a Single Operational List for threatened species across Australia. As progress is made towards this, there may continue to be inconsistencies which will be resolved when the Commonwealth completes national re-assessments for taxa and the EPBC list is amended in light of these assessments.

For up-to-date information on the status of taxa under the EPBC Act, refer to the Commonwealth Department of Climate Change, Energy, the Environment and Water website here: <https://www.dcceew.gov.au/environment/epbc>

Nominations to the Threatened List

Members of the public or organisations can make nominations to the Victorian Scientific Advisory Committee (SAC) to consider for listing. You may also nominate an already listed item for reassessment.

When the SAC makes a recommendation regarding a nomination in accordance with the FFG Act, a report is prepared outlining that the nomination should either be supported or not be supported and a summary of the evidence supporting it. These reports form the basis for public submissions, in the case of preliminary recommendations, or for the Ministers' decision, in the case of final recommendations.

More information on how to nominate is available here: <https://www.environment.vic.gov.au/conserving-threatened-species/threatened-list/nominating-items-for-the-flora-and-fauna-guarantee-threatened-list>
