Approved APB

Defense Acquisition Executive (DAE) Approved Acquisition Program Baseline (APB) dated June 18, 2014

Mission and Description

The Space Fence Ground-Based Radar System (Space Fence) replaces the mission of the Air Force Space Surveillance System Very High Frequency "fence" radar that performed detection of orbiting space objects before decommissioning in FY 2013. The Space Fence mission is to improve Space Situational Awareness by fielding a capability to detect and report small objects in Low Earth Orbit/Medium Earth Orbit (LEO/MEO). The system, comprising one operations center and two radar sites operating at S-band frequencies, will have a modern, net-centric architecture. Fielded capabilities will include uncued capability to find, fix and track small objects in LEO/MEO; improved completeness and accuracy of the space catalog; improved timeliness of orbital event information; and support for improved characterization of space objects.

The Space Fence Ground-Based Radar System Increment 1 (Space Fence Inc 1) includes the operations center, located at the Reagan Test Site Operations Center Huntsville, AL, and one radar site, located at Kwajalein Atoll, Republic of the Marshall Islands.

Executive Summary

Program Highlights Since Last Report

Despite considerable progress in CY 2018, the Space Fence Increment 1 program projects a shift of IOC from second to third guarter CY 2019.

In February 2018, the Kwajalein sensor site successfully demonstrated tracking of resident space objects with partially populated arrays and power supplied by the US Army Garrison on Kwajalein Atoll (USAG-KA).

Lockheed Martin resolved the chronic construction delays experienced in CY 2017 and completed the Space Fence Power Plant Annex (PPA) in April 2018. The Space Fence PPA will be turned over to the Army at IOC, critically augmenting USAG-KA infrastructure.

Lockheed Martin completed radar installation and checkout in May 2018, followed by full integration and test. Contractor Test began on September 28, 2018. The most significant issue to date is a shortfall of available power supplies impacting the ability to test radar performance at full capacity. Corrective actions with the power supply vendor are ongoing. The Contractor Test period is projected to extend into the first guarter of CY 2019.

Space Fence achieved Authorization to Connect for the operations center and sensor site nodes and requisite renewals for Interim Authorization to Test. Cybersecurity testing in support of the Authority to Operate has been successful to date to include Cyber Risk Assessments of the operations center (June 2018) and the sensor site (August 2018). Cooperative Vulnerability Identification and Penetration Testing is planned for January 2019. Presently, the sensor site and operations center are integrated via an unclassified network connection with transition to classified operations projected for January 2019.

Space Fence and Joint Space Operations Center Mission System integration was suspended. The Air Force is developing and implementing workarounds to permit Space Fence interoperability with space surveillance command and control systems. Interoperability testing during contractor and government testing will ensure the full capability of the Space Fence system will be evaluated during operational testing and subsequently available to the warfighter after Operational Acceptance.

Closure of defects from early integration and testing of software and firmware is tracking to plan. Overall software requirements specification level stability and defect resolution rates remain at goal.

The program continues to complete multiple significant sustainment planning activities to include approval of the Life Cycle Sustainment Plan. A series of Spares Provisioning Conferences and Joint Technical Order Certification events were completed. Lockheed Martin delivered interim Technical Order and Training Materials.

There are no significant software-related issues with this program at this time.

History of Significant Developments Since Program Initiation

History of Significant Developments Since Program Initiation							
Date	Significant Development Description						
May 2013	Milestone B DAB conducted May 29, 2013.						
May 2014	Milestone B ADM signed May 30, 2014 following delay due to Sequestration.						
June 2014	Prime contract awarded to Lockheed Martin.						
June 2014	APB signed June 18, 2014.						
September 2015	ADM delegates MDA to the Service Acquisition Executive, redesignating the program as ACAT IC.

RAA	Jul 2019	Jul 2019	Jan 2020	Aug 2019					

Change Explanations

(Ch-1) Current estimate for IOT&E Start changed from January 2019 to April 2019 and current estimate for RAA changed from May 2019 to August 2019 due to persistent issues with power supplies resulting in shortfalls to quantities required to initiate testing the radar at full performance.

Notes

RAA is defined as the date when the Program Manager has provided sufficient equipment and logistics resources to support IOC determination. The RAA objective date assumes the EMD contract award in June 2014, and consists of:

- DD250 of at least one radar sensor and SOC
- Ensuring communications links and connectivity to the Global Information Grid are in compliance with then-existing Net-Centric Enterprise Services standards, guidance and direction
- Initial spares for one radar sensor and SOC
- Common and peculiar support equipment
- Interim contractor support established
- Stand-alone training systems and resources at Initial Qualification Training and Upgrade Qualification Training locations

For this SAR, RAA is being used as a surrogate for IOC.

Acronyms and Abbreviations

CDR - Critical Design Review

IOT&E - Initial Operational Test & Evaluation

PDR - Preliminary Design Review

RAA - Required Assets Available

Funding Notes

Interim Contractor Support is 3021 funded. This period (FY 2019 and FY 2020) is included in the Operations & Sustainment Phase. Therefore, these funds are included in the total Life Cycle Cost, but not included in the Program Acquisition Cost.

Contracts

Contract Identification

Appropriation: RDT&E

Contract Name: Space Fence

Contractor: Lockheed Martin Corp.

Contractor Location: 199 Borton Landing Rd
Moorestown, NJ 08057

Contract Number: FA8709-14-C-0001

Contract Type: Fixed Price Incentive(Firm Target) (FPIF), Cost Plus Fixed Fee (CPFF), Cost (CR)

Award Date: June 02, 2014
Definitization Date: June 02, 2014

				Contract Pri	ce			
Initial Co	ntract Price ((\$M)	Current Contract Price (\$M)			Estimated Price At Completion (\$		
Target	Ceiling	Qty	Target	Ceiling	Qty	Contractor	Program Manager	
914.7	977.8	1	901.2	971.7	1	923.4	923.	

Target Price Change Explanation

The difference between the Initial Contract Price Target and the Current Contract Price Target is due to multiple awarded Engineering Change Proposals, and requests for equitable adjustment due to differing site conditions.

Contract Variance							
Item	Cost Variance	Schedule Variance					
Cumulative Variances To Date (2/24/2019)	-30.4	-25.6					
Previous Cumulative Variances	-20.6	-24.5					
Net Change	-9.8	-1.1					

Cost and Schedule Variance Explanations

The unfavorable net change in the cost variance is due to schedule delays that have exceeded the period of performance driving costs over the baseline budget.

The unfavorable net change in the schedule variance is due to continued delays that have exceeded the period of performance continuing to drive schedule beyond the baseline.

Notes

Contract performance data is based solely on CLIN 0001 data from the contract.

This contract is more than 90% complete; therefore, this is the final report for this contract.

Deliveries and Expenditures

	Deliveri	es

Total Funding Years		Percent Appropriated	100.00%

The above data is current as of March 11, 2020.

Operating and Support Cost

Cost Estimate Details

Date of Estimate: May 01, 2014 Source of Estimate: CAPE ICE

Quantity to Sustain: 1

Unit of Measure: System
Service Life per Unit: 20.00 Years

Fiscal Years in Service: FY 2019 - FY 2039

Space Fence Inc 1 unit of measure (system) consists of one control center and one radar site.

Sustainment Strategy

The Space Fence System will employ a two level maintenance and support concept (organizational and depot) similar to the current Space Surveillance Network sensors. The development contractor will provide Interim Contractor Support (ICS), for both organizational and depot, for Increment 1 of the Space Fence system for up to two years after IOC for Kwajalein Atoll, Marshall Islands. During the ICS period, the contractor will perform both organizational and depot level maintenance on the Space Fence weapon system.

The Space Fence Depot Source of Repair is complete and has indicated all Space Fence depot repairable workload (hardware and software) as well as cryptological equipment is considered core workload. Oklahoma City Air Logistics Center (OC-ALC) is designated as the depot for hardware and software and the Cryptologic Systems Group in San Antonio, TX is designated as the depot for cryptological equipment.

Planning activity for the depot maintenance with OC-ALC is underway to identify depot requirements and ensure proper activation of the sustainment capability at OC-ALC. As the activities progress, the information gained from the process, as well as the business case analysis, will influence sustainment support strategy after full operational capability. This will ensure the best mix of public and/or private capabilities will be used to sustain the system while meeting statutory requirements. Three essential areas are being addressed: (1) item management of parts (supply source), (2) depot repair, i.e., software/hardware maintenance, and (3) depot management type activities.

System logistics support for the Space Fence Inc 1 program will be performed over the life of the system, expected to be 20 years. This support includes maintenance and periodic technology refreshes to assure the system continues to meet required performance, and allows upgrades when mission requirements dictate as well as the government management of these processes.

The full product support package, including technical orders, support equipment, training, and initial spares, will be delivered by the development contractor prior to fielding, which will enable full sustainment of the system.

Antecedent Information

The Antecedent system is Air Force Space Surveillance System (AFSSS). AFSSS estimates are based on one unit with a service life of 15 years (FY 1998 to FY 2013). The AFSSS was closed October 1, 2013. Cost details were provided by the Air Force Total Ownership Cost database.

Annual O&S Costs BY2014 \$M				
Cost Element	Space Fence Inc 1 Average Annual Cost Per System	Air Force Space Surveillance System (AFSSS) (Antecedent) Average Annual Cost Per System		
Unit-Level Manpower	5.221	0.705		
Unit Operations	16.990	5.050		
Maintenance	2.422	1.240		
Sustaining Support	11.262	1.432		
Continuing System Improvements	14.224	0.610		
Indirect Support	9.828	1.595		
Other	0.274	0.000		
Total	60.221	10.632		

Other costs include Depot Standup amortized over the 20 year design life.

Item	Total O&S Cost \$M				
	Space Fence Inc 1			Air Force Space	
Telli .	Current Development APB Objective/Threshold		Current Estimate	Surveillance System (AFSSS) (Antecedent)	
Base Year	1208.6	1329.5	1204.3	159.5	
Then Year	1554.1	N/A	1554.1	0.0	

Disposal Cost is included in the Operating and Support Cost of the current APB objective and threshold for this program.

Equation to Translate Annual Cost to Total Cost

Total O&S Costs = Unitized cost * number of systems * service life per system

Total O&S Costs = \$60.221M * 1 Space Fence Inc 1 system * 20 year design life = \$1204M
