THE NATIVE PLANT SHOW April 10-11, 2014 / Kissimmee, Florida 41

Restore. Rebuild. Replenish.

The Proven Leader in Native Plant Propagation

With over 135 species of mitigation-quality plant materials, we are Florida's largest grower of native grasses, shrubs, trees and coastal plant species. Our experience extends from projects for private corporations to local, state and federal government initiatives encompassing large habitat and restoration service sites.

APF is unmatched in contract-growing capacity, volume and scalability.

Contact us today to see how we can work together in a cost-effective, high-quality, compliant manner or to schedule a no-obligation site evaluation.

34 Pollinator Friendly Landscapes

University of Florida expert Dr. Jaret Daniels talks about opportunities for enhancing pollinator habitat in a variety of landscape settings.

ABOUT THE AUTHOR: Dr. Jaret C. Daniels is the Assistant Director of Exhibits and Public Programs and Associate Curator of Lepidoptera at the Florida Museum of Natural History, and IFAS Associate Professor of Entomology. Jaret received his B.S. in Biology from Saint John's University in Minnesota and Ph.D. from the Department of Entomology and Nematology at the University of Florida. An insect ecologist by training, his research currently focuses on imperiled butterfly recovery and native insect pollinator conservation.

Mission

To lead Florida's horticulture and landscape industry with native plant production, education and marketing.

Vision

The majority of Floridians will appreciate and understand the aesthetic, economic, ecological and cultural benefits of native plants and landscapes. Native plants will be preferred and dominant, with ecosystem functions restored to most landscapes. FANN will remain the leading professional source for native plants and native landscape services, expertise and information.

Membership

FANN welcomes nurseries, garden centers, landscape professionals and environmental consultants committed to the preservation, restoration, and sustainable use of Florida's native plants and natural environment. Benefits, dues and application form online.

WE DID IT!

THE NATIVE PLANT SHOW

And we'll do it again in April 2014

Thanks to the overwhelming response from the horticulture and landscape industry, FANN's first annual trade show, the Native Plant Show, was a resounding success in April 2013. Hundreds of professional folks trekked to Kissimmee and took advantage of the expertise and advice of the dozens of member nurseries participating. With much admired, attractive exhibits and packed CEU courses, FANN members proved our significance to Florida. The excitement and interest in native plants was never so apparent – FANN is a rising, shining star. Thanks to our Show Committee, sponsors, volunteers, exhibitors and attendees for helping us make history.

Native plants are the future, whether applied in urban landscapes, mitigation or restoration projects – their superior attributes make for a better community by reducing the need for fertilizer and other chemical applications that exotic plants often require, filtering impurities from water, and providing a healthy environment for wildlife. Our positive impact will be appreciated and cherished for decades and generations to come.

If you're reading this, you should join FANN! And save the date for next year's Native Plant Show: April 10-11, 2014. It's where sustainable landscapes start!

More consumers asking for native landscapes

ANOTHER SIGN THAT NATIVE LANDSCAPES ARE GOING MAINSTREAM: "Florida Friendly Native Landscaping" is now a search option on some real estate MLS (Multiple Listing Service) systems. This is one of several "green" designations of interest to contemporary property owners.

At the Native Plant Show in April, Jeff Dix of Dix.Lathrop and Associates, a landscape architecture firm based in Longwood, told us that his firm sees more and more young property buyers who are very focused on green concerns and asking for native plants in their landscapes.

Plan and plant for the future: go native now.

NURSERY & LANDSCAPE PRODUCTS

C & C Peat Company

C&C Peat Company is a premium potting media producer that has been serving Florida Nurseries since 1981. We are the industry leader in research and development into soil alternatives and environmentally friendly products. In addition to Florida and Canadian Peat as our main media components, we produce our own compost on site – created from used horse bedding that would have otherwise found its way into our landfills or water supply.

Plant List Abbreviations & Symbols

Quantities

- L Less than 100
- C 100 or more, hundreds
- M 1,000 or more, thousands

Other

- + following a container size, + indicates a range of larger sizes is available
- ARPB Air root prune bag
- BB balled & burlapped
- BR bare root
- C caliper
- CoolRG Florida Cool Ring™ container
- DBH diameter at breast height
- FG field grown
- FTG full to the ground
- G gallon
- GB growbag
- GC growcone or tubing
- LN liner
- ML multiple trunk
- o.a. overall height
- p.h. planted height
- PTS pints
- QTS quarts
- RM RootMaker container
- RP rose pot
- RPG Roots Plus Growers
- SL Single leader
- spp. species (multiple species of a particular genus)
- SPR spread
- STD standard (straight)
- TC tissue culture
- TFR tree farm ready
- TT tree tubes
- var. variety

Indicates the plant species listed is an exceptionally effective attractor for pollinators (bees, flies, wasps etc.).

No butterfly garden is complete without providing the native larval food sources on which our butterflies lay eggs that hatch into caterpillars. This symbol indicates the plant is a larval food source for a butterfly or moth's caterpillar offspring. Most butterflies/moths lay eggs on just a few native species.

Indicates the plant is an exceptionally good nectar source for butterflies.

Indicates the plant is an exceptionally good nectar source for hummingbirds.

Indicates the plant provides exceptional fruit, seeds, or nesting habitat for birds.

About our Plant Listings

■ WHOLESALE ONLY

PLANT SPECIES are listed alphabetically by botanical name. **Don't know botanical name?** See Common to Botanical Name Cross Reference for botanical names of common plant names, on page 73.

What is a Florida native plant?

Plants listed are Florida natives as identified in the *Guide to the Vascular Plants of Florida*, Third Edition, by Dr. Richard P. Wunderlin and Bruce F. Hansen, University Press of Florida, 2011, with a few carefully defined exceptions where growers recognize regional varieties or FANN has chosen to accept another authority regarding origin. Where regional or local species variation occurs, FANN growers are encouraged to name varieties until such time as the difference is recognized by taxonomists in an official flora of the state. Examples include *Chrysobalanus icaco* 'Horizontal,' *Ulmus americana* 'Florida population,' and *Roystonea regia* 'Florida population.' General categories such as aquatic, wetland and wildflower plants are listed. We also list some cultivars, in accordance with our Florida Native Cultivar policy, available online at www.FloridaNativeNurseries.org. Please contact us with any questions.

How to use these plant listings

Plant listings in this annual directory are best used as a general reference to identify plants that may be commercially available and which nurseries can grow them. More current inventories may be available online. Always phone to confirm availability.

Sizes and specifications

For each plant, available sizes (see abbreviations at right) are listed, with quantity, specifications and nursery contact provided for each size. In the size column, the + sign indicates that larger sizes are available – please inquire at the nursery. Additional sizes may be listed on separate lines or may be indicated in the specs column.

Planning a large landscape project?

Please call your local native nursery before writing specifications or listing quantities for use in landscape work. Find out what is available in container sizes and avoid the trouble of revising detailed plant lists. FANN members will be happy to help with information on reasonable specifications for your design projects. To guarantee the size and quantity available for a particular species, you may want to consider contract growing.

Important

Some native species occur throughout a wide geographic area. For best results, use plants originating as close as possible to the final planting site – this practice helps to preserve biodiversity and genetic diversity, and, at the same time, provides the best assurance for successful establishment of the plants at your site. Many growers will provide local seed collection and propagation services.

Wildlife Symbols

Native plants are the primary source of food, shelter and nesting area for native insects, birds, and other creatures. All native plants provide habitat value, but some are extra outstanding. Throughout this directory, symbols are used to highlight these exceptional plants, based on grower observations as well as widely recognized and respected scientific references. This information is provided as a general guide only and does not take into account regional variations. To identify those species of butterflies and birds which frequent your area and can be attracted to your landscape with native plants, please consult with your native nursery, as well as local chapters of the Florida Native Plant Society (www.fnps.org), Florida Audubon Society, and North American Butterfly Association.

Growing Native

Florida Native Plant Society
34th Annual Conference
Thurs-Sun, May 15-18, 2014
Fort Myers, Florida

HOSTED BY THE COCCOLOBA CHAPTER FNPS

- **FIELD TRIPS** to Southwest Florida's wild areas
- **TWO DAYS** of conservation, ecology, gardening & plant science programs

DON'T MISS!

FEATURING KEYNOTE TALK by plant ecologist Dr. J.C. Cahill, consulting scientist for the "What Plants Talk About" episode of the Nature program on PBS.org

VENUE: Florida Gulf Coast University

INFO: www.FNPS.org/conference

Florida's largest gathering of native plant enthusiasts. Native plant sale, exhibitors, authors book signing, silent auction and more.

ENVIRONMENTAL CONSULTANTS

Numbers refer to FANN Locator Map on page 6

A1. Biological Consulting Services

Environmental consulting and permitting, wetlands jurisdictional delineation, wetlands mitigation design, protected species surveys, DRI assessments.

Contact: Joe Young

Phone: 386-423-3402

Fax: 386-423-0107

Email: biocon@bellsouth.net

Location: 208 Rush ST, New Smyrna Beach FL 32168-7037, Volusia County

A2. Coastplan

Leading expert on Sanibel-Captiva and Southwest Florida coastal environments. Company owner Dick Workman is a founding member and past president of the Florida Native Plant Society, co-author of one of the first books on Florida native landscape plants, *Growing Native Plants for Landscape Use in Coastal South Florida*, and has contributed to many other important books about Florida, its culture, history and plants. Workman started the Native Plant Nursery for the Sanibel-Captiva Conservation Foundation and continues to research the benefits and use of Florida's indigenous flora.

Contact: Richard Workman

Phone: 239-694-0101, m: 239-738-3017

Email: coastplan@embarqmail.com

Location: 319 Buena Vista Blvd, Fort Myers FL 33905-2545, Lee County

A3. ecolo-G

Private woman-owned small business corporation committed to providing quality services in environmental consulting, ecological research, habitat restoration and ecotourism. Specializing in federal and state listed species surveys, native and non-native plant identification, vegetation assessments and habitat management, ecolo-G provides a range of ecological services including field research, environmental project management, and technical report writing. Certified Minority Business Enterprise (MBE) with the Florida Department of Management Services Office of Supplier Diversity and Small Business Enterprise (SBE) with South Florida Water Management.

Contact: Anne Cox

Phone: 561-744-9531, 561-339-1549

Fax: 561-744-4888

Email: ecologinc@bellsouth.net

Location: Palm Beach County

A4. Ecological Consultants

Environmental consulting, endangered species surveys, relocations, wetland jurisdictional surveys, mitigation specialists.

Contact: Donald Richardson, Ph.D.

Phone: 813-264-5859

Fax: 813-264-5957

Email: scrub.eci@verizon.net

Location: 5121 Ehrlich Rd STE 103A, Tampa FL 33624, Hillsborough County

A5. Ecological Services Associates

ESA is an environmental consulting firm directed by Craig Huegel, Ph.D. and Hugh Dinkler, PWS. Our 50 years of diverse professional experience have focused on environmental permitting; listed species assessments; plant and wildlife surveys; habitat mapping; land management and restoration plans; environmental education; public-use plans; and environmental landscape designs.

Contact: Craig N. Huegel, PhD

Phone: 941-330-5549, 727-422-6583

Email: chuegel@ecologicalsa.com

Website: www.ecologicalsa.com

Location: 280 Abalone RD, Venice FL 34293, Sarasota County

A6. Florida Restorations

Wetland restoration company, totally dedicated to the proper use of native plant material and installation procedures.

Contact: David Chiappini

Phone: 800-293-5413

Fax: 352-475-5268

Email: dchiapin@atlantic.net

Location: Melrose, Putnam County

A7. Kestrel Ecological Services

We specialize in the identification and eradication of invasive non-native plants. Our staff is licensed by the State of Florida as Commercial Pesticide Applicators with both natural areas and aquatic certifications. Other services include native plant restoration, tree surveys and hazard tree evaluations, wetland determination and delineation, and biological inventories. Our experience includes working for public land managers, developers, residential customers, and large private land owners.

Contact: Erick Smith

Phone: 352-380-0648, 352-339-0701

Fax: 866-653-1311

Email: erick@kestreleco.com

Website: www.kestreleco.com

Location: 915 NW 17TH Ave, Gainesville FL 32609, Alachua County

A8. Lewis Environmental Services

The most respected name in successful wetland restoration in Florida, www.seagrassrestorationnow.com. Environmental consulting, wetland restoration, and native plant landscaping. 30 years of experience worldwide. Certified Senior Ecologist, Ecological Society of America, Board Certified Environmental Professional #1161. Professional Wetland Scientists.

A9. Mix'd Greens Environmental

Environmentally conscious, full-service nursery dedicated to sustainable solutions, specializing in reclamation and restoration. A proven leader in the industry for over 35 years, veteran owned and operated by its founder, Mick Gnaegy, Mix'd Greens Environmental opened in 1977 as a start up design landscape installation company expanding into a wholesale nursery in 1989. We proudly service federal and local government municipalities and their agencies as well as provide quality plant materials to local and out-of-town landscape contractors, architects, plant brokers/shippers and retail firms throughout Southern Florida and the Caribbean.

Contact: Mick Gnaegy

The Meadow Around the Hospital in a Garden

COVER STORY

NEMOURS CHILDREN'S HOSPITAL IN ORLANDO

- 30 acres of native meadow plantings
- 78 native species of wildflowers and grasses
- USGBC LEED® Gold Certification
- Florida ASLA 2013 Award of Excellence
- Landscape Architecture: AECOM
- Meadow seeding, planting & maintenance: The Natives
- Formal landscape/hardscape contractor: Greenbriar Landscape*

*In addition to the meadow landscape featured here, native plants are used throughout the hospital's more formal discovery garden and rooftop gardens, as well as bioswales and bioretention areas.

ONE OF ONLY THREE children's hospitals in the nation to have achieved LEED® (Leadership in Energy & Environmental Design) Gold certification from the U.S. Green Building Council, Nemours Children's Hospital staff refer to the facility as a "Hospital in a Garden." Half of its 60-acre campus has been seeded and planted in all native meadow, a more affordable and sustainable alternative to turf and other high-intensity plantings. With a scattering of trees, the meadow restores a sense of Central Florida flatwoods, the predominant historic landscape in the area. The diversity of plants provides seasonal interest visible from major nearby roads as well as from the hospital buildings. The original vision for this approach came from AECOM landscape architects who had worked on similar projects with The Natives, a multi-disciplinary grower and consulting firm specializing in upland restoration design and implementation.

Nemours staff toured native landscape installations with AECOM and The Natives and were impressed with the results. Staff Architect Michael Cluff felt the meadow was an affordable, creative solution for leaving many acres available for future expansion: "We knew we couldn't afford to plant 30-plus acres of St. Augustine and fertilize, water and mow every week. I was convinced we could do it [meadow] after our tour of the native landscaping in the Lake Nona development. I'm new to Florida and I feel the natural Florida landscaping is as appealing as the Disney landscaping experience." In addition to its lower cost based on reduced need for irrigation and maintenance, the meadow contributes to the property's LEED® certification by earning restoration credits under the Sustainable Sites Initiative, voluntary national guidelines and performance benchmarks for sustainable land design, construction and maintenance practices.

Cluff's enthusiasm and the hospital's commitment to sustainability were critical factors in seeing the meadow through to successful installation. A landscape like this requires careful attention to timing and weed exclusion, and is easily derailed by scheduling snafus, communication mix-ups and inadequate site preparation. Nemours worked with the construction management firm to release large plots of acreage to The Natives over three years so that seeding could be done in phases. But problems still cropped up. Under-

ground utilities installation messed up some areas that had to be reseeded; what was supposed to be clean compost was a weed bank; and the absence of temporary irrigation in some areas meant that some seed blew away in the winter winds and had to be replaced. Typical of Florida construction sites, the property had 3-4 feet of fill from an onsite deep lake. Near the buildings, there was also weed-filled sand from a former grove. The percentage of sand, silt and clay varied from one square foot to the next, along with pH and mineral content.

Adjustments were made and the final installation included 78 different indigenous species seeded and planted over 30 acres, including 31 native grasses, sedges and grass-like flowering plants. This diversity should strengthen the landscape ecologically. Weeds are the greatest enemy of wildflowers. Interspersing bunchgrasses with wildflowers helps protect the landscape from weed invasion. In a stable natural prairie or flatwoods, weeds have few open spaces to colonize. Most living spaces are filled by bunchgrasses with fibrous, spreading root systems. Wildflowers, many of which have small root systems,

POLLINATOR FRIENDLY LANDSCAPES

BY JARET C. DANIELS, Ph.D.

Associate Curator of Lepidoptera
Florida Museum of Natural History
IFAS Department of Entomology
University of Florida

POLLINATORS ARE CRITICAL to our environmental and economic well-being. By conservative estimates, 80% of the earth's flowering plants rely on animal pollinators, primarily insects (such as bees, ants, flies, beetles, and wasps), to ensure reproduction. This includes the vast majority of the fruit, vegetable and seed crops that humans consume, as well as many other plants that provide fiber, animal forage, medicine and fuel. Beyond the direct economic value to humans, insect pollination provides essential maintenance of the structure and function of a wide range of natural communities. It sustains native and introduced plants that control erosion, provides food and other resources for game and non-game wildlife, increases property values, and enhances the aesthetic, recreational, and cultural aspects of human activity.

Alarming, managed and wild insect pollinators have suffered declines in recent years, prompting calls for proactive strategies to help bolster their populations and minimize disruption of the valuable service they provide. Continued declines could adversely affect agricultural systems, result in increased vulnerability of some plant species to extinction, and increase overall ecosystem disruption. Habitat degradation and loss are leading factors driving the downward trend of pollinator populations. While much recent attention has been placed on alternative management approaches in agricultural systems, it is clear

TOP: Our magnificent Southern Magnolia, *Magnolia grandiflora*, evolved before bees and relies on beetles for pollination. Southern Magnolia does not produce a true nectar, but its fragrant sugary secretions attract bees. Here, honeybees wander about the flower, loading up on the abundant pollen to provide them with protein, fats, vitamins and minerals.

ABOVE: Native Halictid bee nectaring on the tiny pink flowers of American Beautyberry, *Callicarpa americana*, a shrub better known to most of us for its striking magenta-colored fruit.

Monarch butterfly on Spotted Beebalm, *Monarda punctata*, also known as Dotted Horsemint, one of our best native wildflowers for attracting all kinds of bees and butterflies. Beebalm's showy flowers attract a lot of human attention also.

80% of the earth's flowering plants, including most of the fruits, vegetables and seeds we eat, **DEPEND ON POLLINATORS** — primarily insects, including ants, bees, beetles, flies and wasps.

that effective pollinator conservation must be incorporated comprehensively into the larger environment, with overall efforts involving landscape both large and small.

Luckily, most insects require smaller remnants of available habitat to thrive compared to larger organisms. Roadsides, utility easements and canal margins, often overlooked as waste areas and seldom mentioned in the larger conservation conversation, offer many valuable resources for pollinators. They support a wide variety of flower-rich forage habitat for access to pollen and nectar; and unlike agricultural landscapes, remain unplowed, therefore providing potential nesting sites for ground nesting bees. These same areas offer food (nectar, pollen, host plants and/or prey) and cover for other beneficial insects such as predators and parasitoids, colorful butterflies and moths, and other wildlife including songbirds.

Across the state, the Florida Department of Transportation is responsible for the management and care of some 186,000 acres or 1/2 of one percent (one of every 200 acres) of the entire land area of Florida. Unlike a contiguous parcel of land this size, state roadsides are a network of living edges, touching and linking nearly every natural and agricultural resource in the state – including some 9 million acres of farmlands responsible for contributing billions of dollars to the state's economy each year. As a result, these extensive linear habitat strips also act as effective corridors facilitating local organism movements, population connectivity, and longer distance migration, thereby effectively supporting the larger service of pollination.

Just like with other conservation lands, the management of vegetation along roadsides and easements is a dynamic process. It needs to satisfy and

SCENES FROM 2013, THE WORLD'S FIRST... ALL NATIVE PLANT WHOLESALE TRADE SHOW

ABOVE: **David Chiappini** of Chiappini Farm Native Nursery surprised everyone on set-up day by showing up with his tractor and this beautiful little country-store style building he made from Sand Pine, *Pinus clausa*, that he harvested and milled himself. Attention garden centers: he'll swap the store front name out and sell the store to you. RIGHT: **Alan Shapiro** of Grandiflora went all out as he always does with a beautiful booth. We're counting on his expertise to develop a "best booths" competition for 2014.

On April 4th, 2013, FANN launched what to our knowledge is the only all native plant wholesale trade show anywhere, at the Osceola Heritage Park Exhibition Building in Kissimmee, Florida. This small, exclusive show exceeded everyone's expectations, including ours: sold out exhibition space and well over 300 attendees from the horticulture and landscape industry, including nearly 60 landscape architects. Thirty-six native plant growers from across the state showed off a tremendous variety of top-quality native landscape plants and while most attendees were from Central Florida, we had buyers come from all parts of Florida as well as Georgia, Maryland and even Pennsylvania. FANN expects the show to grow and has acquired more exhibit space for 2014. Plan to be part of it.

Space is limited in this exclusive show. Sign up now.

WHAT ATTENDEES SAID ABOUT THE 2013 (FIRST) SHOW

"We need this show to see and touch the plants. The sessions are full of practical experience and other attendees have so much to share. The show is a must, with lots of take aways that influence my designs."

- Stephen G. Pategas, RLA, ASLA, Hortus Oasis

"I came back with some great new ideas/plants to incorporate into my designs."

- Jessica Griggs, RLA Dix.Lathrop and Associates

"You all did a wonderful job. Please keep me on your mailing list for future events."

- Mike Fay, RLA #540

"Really enjoyed it, the sessions were great. I saw some excellent plant material and everybody was really friendly. You guys did really good."

- Greg Reynolds, RLA, Aloha Pacifica

"I really enjoyed the whole event ... found it both very informative and entertaining."

- Scott Redmon, RLA, ASLA, Redmon Design

"Thanks for the show. The classes were really good."

- Melissa Joynes, RLA, Melissa Joynes Irrigation Design

"I look forward to next year..."

- Richard Lonergan, RLA, ASLA, ELM

"Absolutely wonderful event! I felt honored to be able to mingle with all of the Floridians that are making native plants happen!"

- Keren Giovengo, UGA Marine Extension CoastScapes

REAL FLORIDA LANDSCAPES™

Inaugural Design Competition Winners

FANN invited landscape professionals and students from around the state to be bold, creative, different and wild – and were they ever! In February 2013, three winning native landscape designs were selected from 16 submissions to our first ever Real Florida Landscapes™ Design Competition. Proposals included a variety of residential spaces, entryways, a bioswale, a rain garden, an edibles/medicinals garden and an innovative

commercial connecting space. Winners included landscape architect Larry Teague of Zamia Design; Sara Kovachich, University of Florida graduate landscape architecture student, and landscape designer Monica Higgins, Habitat of Course. Submittals were required to be 100% native in composition, were encouraged to use a variety of species with limited use of mulch and hardscape, be appropriate for one of three broad regions of the state (North, Central or South) and once installed, had to fit within a 300 square

foot space. This last requirement was added so that winning landscapes could be “installed” on the floor of FANN’s Native Plant Show April 4-5, 2013. This small landscape size was a challenging requirement that will be removed from future competitions.

Central Florida Winner: Sara Kovachich, University of Florida, coastal entryway or backyard

Heads up, the Gators are coming to transform our landscapes! FANN and our competition judges were thrilled to receive several high-quality submissions from students at the University of Florida Department of Landscape Architecture. More than two years away from completing her graduate degree in landscape architecture, Sara Kovachich managed to beat other students and some professionals with a distinctive and varied combination of color, textures and forms in a low maintenance, high performance coastal landscape. Sara focused on selecting plants that could be successfully used on an oceanfront property and would provide significant habitat for pollinators, birds and other coastal wildlife. Judges also praised the design’s ability to create a very special human experience in the landscape. A native of South Florida herself, Sara hopes to blend her interest in art, the environment, and practical design into an outdoor career with plants. She has a B.S. in environmental science and plans to graduate in May 2015 with a master’s degree in landscape architecture.

South Florida Winner: Monica Higgins, Habitat of Course, portion of residential landscape

This farmer’s daughter from Kansas credits her mother’s love of gardening and native wildflowers for sparking her original interest in native plants, and entitled her landscape “Prairie’s Edge.” Moving to Florida, she has been

With their winning designs on the floor of the Native Plant Show are at left, Larry Teague, Zamia Design and right, Sara Kovachich, University of Florida graduate student. No photo available for Monica Higgins, Habitat of Course.

& More

DPI Reg #4720397

The winning design for Central Florida: a coastal landscape that feeds and shelters wildlife and nourishes the property owner's soul. A quiet, sheltered seating space provides a panoramic view of the garden and, if ocean-front, a clear view of the beach. Unique visual interest and habitat come from snags (dead trees and portions thereof) placed to feed and house insects and birds.

inspired by the success of past meadow plantings on golf courses as well as visits to Corkscrew Swamp and Fakahatchee Strand. With 17 years of landscape experience in the golf course and resort industry, Monica is now a superintendent at the Naples Lakes Country Club, owns her own firm, Habitat of Course, is a Certified Grounds Manager, Audubon Steward and is an active volunteer with several local plant-related nonprofits. The design she submitted converts a portion of a sloped front lawn from weedy St. Augustine turf to a more wildlife friendly, lower maintenance native landscape of 15 different species. The judges especially liked the combination of native wildflowers and grasses, too rarely used in South Florida landscapes.

North Florida Winner: Larry Teague, ASLA, RLA, Zamia Design, portion of residential landscape

Larry's design goal was a residential landscape that after establishment, would not require irrigation, and would provide wildlife habitat benefits while still being attractive to humans. He ended up with a plan that would work well for many homeowners in typical North Florida settings with slightly acidic soils. All of the plants selected provide nectar for pollinators, including hummingbirds, and the trees and shrubs also provide fruit for birds. A rustic "postless" wooden fence design supports flowering vines. The design also incorporates a near ground-level birdbath, a choice that better suits the preference of birds that have evolved with puddles and other natural water sources. Pedestal birdbaths can absolutely work but are generally designed with human, not avian, needs in mind. Owner of his own landscape architecture firm, Zamia Design, Larry has a Master's Degree in Landscape Architecture from the University of Florida and is also a U.S. Green Building Council LEED Accredited Professional (AP).

Working Together for More Successful Native Landscapes

FANN's competition is intended not only to inspire and showcase, but also to help foster better dialog between landscape professionals and growers on native plant selection, use and maintenance. This inaugural competition demonstrated that many professionals and students are very excited about the use of native plants, and aware of the biodiversity and habitat benefits. Most of the plans submitted, including some of our award winners, still exhibited common problems we need to work on – together:

- Too many plants in too close proximity (Saw Palmettos, bunchgrasses)
- Plants not matched to site conditions (Royal Palms on the dune, sun loving plants shaded by trees, Oakleaf Hydrangea in full sun)
- Plants not sustainable in region (Silver Buttonwood can freeze in Central Florida)
- Plants not available or very hard to find (Saltbush, *Baccharis halimifolia*)
- Plants not available in the size specified (*Asclepias* in 7-gallon container)
- Combinations of plants that reflect poor understanding of plant growth and maintenance needs

As is often the case on "real world" projects, plant substitutions were made at the last minute when we tried to "install" these landscapes on the Native Plant Show exhibit hall floor. More communication between landscape professionals and growers can solve most of these problems and result in more satisfying, sustainable and cost-effective landscapes. Some availability issues can be solved with advance planning and contract growing. Specifying unusual plants can help bring them to market if you coordinate closely with growers capable of producing the plants. FANN encourages you to talk with

integrate a variety of considerations including public safety, infrastructure preservation, and basic vegetation control with protection and preservation of the natural environment and enhancement of scenic quality. Not surprisingly though, the impact of such management decisions extends far beyond the target zone, often for several hundred yards, and influences nearly twenty times that amount of land in the surrounding environment.

Despite the rapidly growing national attention to insect pollinator conservation, relatively little detailed information is available on best management practices appropriate for the Southeast; methods aimed at conserving, augmenting, restoring or creating pollinator habitat on both agricultural and environmental lands. This includes even basic knowledge about the flower preferences of many native bees and other flower-visiting insects.

The Florida Wildflower Foundation is working to help fill this gap by developing and sharing best practices for establishing native Florida wildflowers across our landscapes. They are also working with numerous partners including the Florida Department of Transportation to promote, protect and increase roadside wildflowers through measures like reduced mowing during peak bloom to enhance right-of-way beautification and facilitate seed set as well as the publication of guides featuring specific viewing routes and wildflower destinations. FDOT and the University of Florida have also teamed up on a multiple year study to investigate how roadside vegetation management (mowing) and wildflower augmentation effects native pollinator richness and abundance.

Many smaller spaces can provide value as well. Due in part to the massive popularity of “Bringing Nature Home” by Doug Tallamy, much deserved attention has refocused on home gardens and yards as sites for enjoying, exploring and even conserving biodiversity. To better understand how what one plants can make a difference, the University of Florida and the Florida Wildflower Foundation have again teamed up on a project called “Plant for Wildlife.” This multiple year collaboration compares native, Florida Friendly and conventional exotic residential landscapes for their ability to attract and sustain suburban wildlife diversity, specifically insect pollinators.

While much remains to be learned, several important factors are somewhat universal when it comes to maintaining or establishing pollinator-friendly habitat. First, select a mix of plants that bloom throughout or in succession during the growing season, so that pollinators have consistent access to food resources (pollen and nectar) and can readily build up their local populations. It is important to also include larval host plants if you want to attract and maintain butterflies. Second, provide a diversity of flower colors, shapes, and sizes in order to appeal to a wide range of different pollinators. Avoid tilling the soil during establishment or regular maintenance. Not only will this disturb the dormant seedbed and unleash a flurry of noxious weed growth, but it can destroy the nests of ground nesting native bees. Mowing is a great alternative to control vegetation or aesthetically clean up areas. Avoid extensive use of pesticides and herbicides. As most pollinators are insects, they are extremely sensitive to a variety of direct chemical applications and drift. Use native plants and source local or regional Florida ecotypes when purchasing seed. Together, we can make a difference. ■

Tips

for Creating Pollinator-Friendly Landscapes

Use native plants, preferably locally sourced

Use regional Florida ecotype seed

Select a mix of plants for year round blooming

Avoid tilling or otherwise disturbing soil

Avoid or minimize pesticides and herbicides

More about Native Bees

While insects representing several orders (including butterflies, moths, beetles, flies, and wasps) visit flowers, most are doing so in search of nectar resources and only carry pollen coincidentally on their head, thorax, or body as they move from blossom to blossom.

Most female native bees, on the other hand, intentionally collect pollen as food for their developing larvae. This behavior helps make bees by far the most efficient and productive pollinators of both native plants and agricultural crops.

North America is home to a wide diversity of native bees with more than 4,000 recorded species.

Florida boasts some 316 species including *endemic taxa*. But unlike the European honey bee (*Apis mellifera*), which is a social insect, forms large colonies, and divides the workload of hive construction and care between many individuals, the vast majority of our native bees are solitary. They tend to create and provision a nest on their own, without cooperation with other bees. Nonetheless, they still possess wonderful engineering skills and nest in a variety of locations.

About 70% or so of native bees nest in the ground, by digging a tunnel in bare or semi-bare, well-drained soil. The remaining species tend to be cavity nesters, utilizing abandoned holes in dead wood, excavating tunnels in the soft central pith of stems and twigs, or in the case of carpenter bees, even boring holes in wooden buildings and other human-made structures.

Each nest usually has several separate brood cells with the number of cells varying considerably between individual species. The cells may form a single line, filling the hole or burrow, or occur within more complex, multi-chambered tunnels. Next, the female bee must partition the cells with food for her offspring. She collects copious amounts of pollen, mixes it together with nectar to form a ball, places

Richard Moyroud of Mesozoic Landscapes, far left, and Michael Jameson of Native Green Cay Nursery have both received FANN's 2013 Mike Kenton Award of Recognition.

2013 Mike Kenton Awards of Recognition RICHARD MOYROUD & MIKE JAMESON

FOR THEIR EARLY INNOVATION AND 27 YEARS OF committed service to the Florida Native Plant industry, Michael Jameson of Native Green Cay Nursery and Richard Moyroud of Mesozoic Landscapes are the FANN 2013 winners of the Mike Kenton Award of Recognition. Their awards were presented by Nancy Bissett on Thursday, April 4, 2013 at the FANN Native Plant Show Reception in Kissimmee, Florida.

Choosing to grow only or mostly native plants was considered a quirky if not radical business decision in the early 1980s. Native plant availability in Florida had been generally limited to larger trees whose beauty and proven performance in the landscape were hard to miss by even the most obtuse. Native shrubs and groundcovers were largely unknown. Federal and state legislation resulting from the environmental movement of the 1960s and 1970s had stimulated some demand for native plants to mitigate development and restore natural areas, but almost no one in the industry was thinking about using native plants in urban landscapes. No one, that is, except a small group of environmentally conscious and informed individuals who could recognize the beauty of these plants and their value in combating Florida's sustainability challenges.

Within the first few years of founding FANN in 1986, then known as AFNN, Mike and Richard organized the small group's collective talent to produce an innovative and unique guide for the landscape industry: *Xeric Landscaping with Florida Native Plants*, published in 1991. The book divided Florida into broad geographic regions and within each, identified the predominant native plant communities, generally following a popular vegetation map developed by University of Florida (UF) botanist John Henry Davis and used for years in UF Florida ecology classes. For each native plant community, the book provides a

brief description of soil composition, drainage, salt exposure and natural cycles such as fire and flooding, and a list of commercially available native plants that occur there, grouped by landscape use: canopy trees, understory trees, shrubs, groundcovers, vines, wildflowers and aquatics. Simple elevation sketches illustrate topography and what Richard calls the "60-mile an hour view of the landscape."

Co-editors Mike and Richard kept the language succinct, the format simple and the purpose clear: straightforward plant selection based on what has worked in Florida for millennia without our help. The book clearly espoused the ultimate in "right plant, right place" philosophy long before anyone was using the now popular axiom. It also came at the right time, when interest in native plants was increasing but very few references existed for the landscape use of our plants. The book was an immediate hit with landscape architects and designers who use the book to identify regionally appropriate, reliable and readily sourced native plant palettes for their projects. It remains on the recommended reading list for landscape architects sitting for their Florida licensure examination. Mike and Richard, along with other volunteers, donated their considerable time and work to FANN, which continues to publish the book and uses its framework in organizing content for both of our websites: FloridaNativeNurseries.org and PlantRealFlorida.org.

Native plant growers tend to be a special breed in the family of agricultural and horticultural businesses, and Mike and Richard are no exception. Whip smart, pragmatic and committed to ecological principles and science, these two men have had a profound and lasting influence on our association and the Florida native landscape movement. FANN got a little bit of information about these modest men from their wives, Sylvia Jameson and Melissa McGaughey-Moyroud, both of whom are involved in the industry as well.

MICHAEL JAMESON

It's no surprise that quick-witted Mike comes from an intellectual family: his father was a teacher and writer and his mother taught music. Mike was tuning and reselling pianos in Manhattan when he met future wife Sylvia, who was working in a natural food store. They married and almost immediately decided that the big city was not where they wanted to raise a family. They came down to Florida where Sylvia's parents, Ted and Trudy Winsberg, were running Green Cay Farms, a very well-respected vegetable growing operation in Boynton Beach. After starting with vegetables, newly minted grower Mike moved onto Areca Palms and other exotic ornamental plants.

Sylvia says that Mike is a "really quick study; he immediately finds the best people to learn from and gets right to it." Somehow they ended up at a Florida Native Plant Society Palm Beach Chapter meeting and there "everything clicked, it made so much sense." Native Green Cay, a wholesale field nursery in Boynton Beach, was born and began working with Richard Moyroud and Carl Bates of Plants for Tomorrow. In 1984, there was a very small concentrated group of people throughout the state growing native plants. Almost no information was available. Some people were growing plants in sand without following accepted horticulture practices. Mike was more influenced by Sylvia's father, a soil scientist from Cornell and award-winning member of the Florida State Horticultural Society.

Sylvia recalls how they got a real financial leg up by selling out their Queen Palms – soon thereafter the market was flooded with Queen Palms. The money they made selling out at just the right time enabled them to get into natives and wait for these "new" plants to "catch on" in the landscape trade. Some South Florida school systems caught on early; cities came in later. The Jamesons have seen the native plant industry grow from nothing to what it is today, with all the ups and downs in between. Before the "Great Recession," Native Green Cay was selling plants so fast that they couldn't grow everything themselves and had to buy plants at the going rate in order to supply their clients. Now they're growing from seed again. Like many FANN members, they live on their nursery property. Mike and Sylvia have one son, Max, who has not yet been roped into the nursery business.

RICHARD MOYROUD

Richard established his wholesale nursery and consultation business, Mesozoic Landscapes, in Lake Worth in 1981, after returning to the United States from work as a translator in France. In 1985, he began helping to organize FANN, then known as AFNN. Promoting native plant availability was the small organization's immediate concern and Richard helped launch and edit the annual *Native Plant & Service Directory*, a widely used and respected industry reference. His attention to detail and accuracy set a precedent for the quality of the publication that continues today and is unrivaled in the landscape industry. For the past 15 years, Richard has served as FANN's "Plant Czar," weighing in on periodic questions of plant names, nativity and origin, and the promotion of cultivars.

Richard brings a strong conservation and science ethic to our industry. In 1981, he was a charter member of the Palm Beach County Chapter of the Florida Native Plant Society, where he served as president for two years. He helped in passing two county bonds for environmental land acquisition and was appointed to the county's Natural Areas Management Advisory Committee, where he continues to serve to this day. In 1984, the first Exotic Pest Plant Council (EPPC) formed and Richard participated as a board member for several years. While serving as Conservation Chair for the Florida Native Plant Society in 1990, he was appointed to the Endangered Plant Advisory Council, a state board under the Commissioner of Agriculture. The Council evaluates and ranks species listed as endangered or threatened and also evaluates grant requests for research and recovery projects involving critically endangered plants. Richard has chaired the Council for 23 years.

A well traveled plant aficionado, Richard is particularly knowledgeable about native Florida and Caribbean species and has special interests in restoration, natural areas management and populations of plants at their northern and southern limits. On his nursery property, Richard has constructed an observation tower that lets one look across at a planted area that combines Royal Palms, Tulip Trees, Saw Palmettos and other mostly native plants of temperate and tropical origin. Many FANN members think of Richard as the proverbial "walking encyclopedia" when it comes to our plants. Fortunately, he can also talk plants with his wife, Melissa, who owns and operates Lorax Designs, a native landscape design and installation firm.

About Mike Kenton Award of Recognition

The award was established by FANN in 2011 and is named after, inspired by, and honors Mike Kenton, a much beloved

Mike Kenton

native nurseryman who died of cancer in 2010. Mike was founder of Environmental Equities, a tiny nursery with big ambitions — and over 500 different native species.

The Mike Kenton Award of Recognition is presented annually to one individual who has contributed significant value and service to the Florida native plant industry.

Awardees are:

- 2011: Brightman Logan
- 2012: Nancy Bissett
- 2013: Mike Jameson and Richard Moyroud

Xeric Landscaping with Florida Native Plants

Best-selling, highly sought after reference for landscape architects, designers and planners. This industry classic from 1991 provides a framework for plant selection based on Florida native plant communities and the trees, shrubs, vines, groundcovers and other plants found in those communities.

NOW AVAILABLE FROM FANN
\$24.95 incl. shipping & tax

Call growers for current or projected availability. Remember, these plant listings are a general reference, indicating the variety of plants our growers can produce, not necessarily what they have in stock when you need plants. More up-to-date inventories may be found online at www.FloridaNativeNurseries.org, grower websites or other continuously updated digital plant locators.

More next year! 

UNLIMITED

native plant listings online & more for FANN grower members.

DELIVERIES NATIONWIDE

FANN CORRESPONDENCE COURSE

Introduction to Florida Native Plant Selection

CORRESPONDENCE COURSE FOR
LANDSCAPE PROFESSIONALS

FOR LANDSCAPE ARCHITECTS,
DESIGNERS, INSTALLERS
+ MAINTENANCE PROFESSIONALS

Learn and earn continuing education credits from the comfort of your home or office, at your own pace.

Benefit from practical, experienced, professional feedback.

CONTINUING EDUCATION CREDITS

2 CEs for Florida Registered Landscape Architects
4 CEUs for FNGLA Certified Professionals

Gain an understanding of how to use Florida native plant communities as a guide for selecting the right native plants for the right place.

Self-paced research and hands-on exercise with communication by email/phone – requires 2-4 hours of your time.

MORE INFO: Go to FloridaNativeNurseries.org and click "Learn More" tab and select "Introduction to Florida Native Plant Selection" for details and to register.

Florida Native Plant Partnership

Four organizations working together to promote the preservation and use of Florida native plants.

Florida Association of Native Nurseries (FANN)

www.FloridaNativeNurseries.org
Trade association promoting the business of native plants. Members are growers, garden centers, landscape professionals and environmental consultants. We grow, plant and restore Real Florida.

Florida Native Plant Society (FNPS)

www.FNPS.org
Charitable nonprofit working to preserve, conserve and restore the native plants and native plant communities of Florida. With chapters all over Florida, FNPS provides the largest network of native plant enthusiasts.

Florida Wildflower Cooperative

www.FloridaWildflowers.com
Agricultural cooperative producing and supplying high quality wildflower seed and plants. Specialists in growing Florida native ecotype seed for use on large projects and for resale to the public.

Florida Wildflower Foundation

FLORIDA
WILDFLOWER
FOUNDATION

www.FlaWildflowers.org
Charitable nonprofit enriching our lives with Florida native wildflowers through education, planting and research projects. Foundation-sponsored media, festivals and (future) Florida Wildflower Center reach residents and tourists.

Follow us online: our organizations can be found on the web, on Facebook and on other social media.

See us at community and industry events throughout Florida.

Join us in promoting and preserving Real Florida.

Don't know the proper botanical name for that plant? No problem! This cross reference provides botanical names for some common names. Cross reference is alphabetical by common name.

Common to Botanical Cross Reference

Ageratina Ageratina aromatica	Apalachicola Rosemary Conradina glabra	Bahama Strongbark [error] Bourreria succulenta	Beach Sunflower Helianthus debilis spp.	Black Titi Cliftonia monophylla
Ageratum Conoclinium coelestinum	Apalachicola St. Johns Wort Hypericum chapmanii	Bald Cypress Taxodium distichum	Beach Verbena Glandularia maritima	Black Torch Erithalis fruticosa
Alligator Flag Thalia geniculata	Appalachian Gayfeather Liatris squarrolosa	Bald-headed Carphophorus Carphophorus carnosus	Beachstar Cyperus pedunculatus	Black Walnut Juglans nigra
Alligator Lily Hymenocallis palmeri	Arkansas Oak Quercus arkansana	Balm Dicerandra nova	Beak Rushes Rhynchospora spp.	Black Willow Salix nigra
Allspice Calycanthus floridus var. floridus	Arrow Arum Peltandra virginica	Baltzell's Sedge Carex baltzellii	Beardtongue Penstemon multiflorus	Black-eyed Susan Rudbeckia spp.
American Beautyberry Callicarpa americana	Arrowwood Viburnum Viburnum dentatum	Barbwire Cactus Aganthocereus tetragonus	Beautyberry Callicarpa americana	Blackhead Pithecellobium keyense
American Beech Fagus grandifolia	Ashe Calamintha ashei	Bartram's Ixia Calydorea caelestina	Bedstraw St. John's Wort Hypericum galioides	Blackberries Rubus spp.
American Chestnut Castanea dentata	Ashe Magnolia Magnolia macrophylla var. ashei	Basket Grass Oplismenus hirtellus	Beggar-ticks Bidens mitis Bidens spp.	Blackeyed Susan Rudbeckia fulgida
American Elm Ulmus americana	Asters Symphyotrichum spp.	Basswood Tilia americana	Big Bluestem Andropogon gerardii	Blackhaw Viburnum rufidulum
American Groundnut Apios americana	Autograph Tree Clusia rosea	Bays Persea spp.	Bighead Rush Juncus megarcephalus	Blackjack Oak Quercus marilandica
American Holly Ilex opaca var. opaca	Azalea Rhododendron alabamense	Bay Cedar Suriana maritima	Bird Pepper Capsicum annuum	Blackroot Pterocaulon pycnostachyum
American Hop Hornbeam Ostrya virginiana	Azaleas Rhododendron spp.	Beach Bean Canavalia rosea	Bitterbush Picramnia pentandra	Blanket Flower Gaillardia pulchella
American Linden Tilia americana	Bacopa Bacopa monnieri, Bacopa spp.	Beach Carpet Blutaparon vermiculare	Black Calabash Amphitecna latifolia	Blazing Star Liatris spp.
American Lotus Nelumbo lutea	Bahama Cassia Senna ligustrina	Beach Creeper Ernodea littoralis	Black Cherry Prunus serotina var. serotina Prunus serotina var. alabamensis	Blazing Stars Liatris spp.
American Plum Prunus americana	Bahama Cassia Senna mexicana var. chapmanii	Beach Elder Iva imbricata	Black Gum Nyssa sylvatica var. sylvatica	Blodgett's Ironweed Vernonia angustifolia Vernonia blodgettii
American Sea Rocket Cakile edentula	Bahama Coffee Psychotria ligustrifolia	Beach Grass Panicum amarum	Black Ironwood Krugiodendron ferreum	Bolly Guapira discolor
American Wisteria Wisteria frutescens	Bahama Lysiloma Lysiloma latisiliquum	Beach Jacquemontia Jacquemontia reclinata	Black Mangrove Avicennia germinans	Bloodberry Cordia globosa
Angular Fruit Milkvine Matelea gonocarpus	Bahama Manjack Cordia bahamensis	Beach Morning Glory Ipomoea imperati	Black Rush Juncus roemerianus	Blue Beech Carpinus caroliniana
Anise Illicium floridanum	Bahama Strongback Bourreria succulenta	Beach Peanut Okenia hypogaea

FROM TOP: You're only as good as your crew, and we had the very best thanks to John Sibley, All Native Garden Center & Plant Nursery (and FANN President). John promised us that "My guys can move the whole building if I ask them to." Exhibitors raved about the easy, smooth move-in and move-out thanks to our volunteers and John's super crew, L-R: Nico Herrera, Oliver Herrera, Juaquin Herrera, Elder DeLeon. / In a rare moment of ease at his booth - Show Education Chair Craig Huegel, Ecological Services Associates and Hawthorn Hill Native Wildflowers. Dr. Huegel prodded FANN growers to put on this first show, coordinated the Real Florida Landscapes™ Design Competition (including a very time-consuming plant roundup and set-up in the exhibit hall), and taught a very well-received CEU course on native trees and shrubs. And he's still smiling. We hope.

POLLINATOR FRIENDLY LANDSCAPES

More about Native Bees

continued from page 53

the ball into a cell, lays a single egg, and finally caps off the cell. She repeats this protocol for every cell in the nest before finally sealing the entrance. Her offspring will complete development inside the nest before eventually emerging as an adult bee and starting the lifecycle over again. ■

BOB PETERSON

Native Leafcutter bee, *Osmia* species, on a native sunflower, *Helianthus* species. These bees cut leaves to use in constructing nests in wood, plant stems, dead snail shells and even holes in concrete walls (such as those produced for hurricane shutter installation). Like Honeybees, Leafcutter Bees are commercially important pollinators for food crops including alfalfa, blueberries, carrots and onions.

The Meadow Around the Hospital in a Garden

COVER STORY

continued from page 32

occupy the openings between the grasses.

The diversity of species also provides an ever-changing appearance, which can be a pro and con of such projects. Clients who do not have a sophisticated landscape aesthetic may not appreciate the appearance of some plants when in seed or dormant. Too often, landscape maintenance staff have no familiarity with the plants and are further challenged by seasonal changes and new seedlings.

These challenges can doom a project if it lacks a strong champion.

For the Nemours meadows, The Natives is providing initial maintenance in the form of occasional herbiciding as needed to control exotics and nuisance species, and periodic mowing to encourage additional blooming and to remove spent vegetation after the plants have gone to seed. Controlled burning of the meadow areas would be the preferred maintenance method, but is not practical in a children's hospital setting. ■

Bushy Bluestem Grass, *Andropogon glomeratus*, going to seed in the fall.

Wintertime golden stalks of Broomsedge (*Andropogon virginicus*) along a path in a native flatwoods in Pasco County, Florida.

PHOTOS FROM TOP:
 JACOB TOMPKINS,
 WORKEDPHOTOGRAPHY.COM;
 MARY KEIM; DANIEL OINES.

Nemours Staff Architect Michael Cluff liked the winter-time color of our native *Andropogon* grasses, and four different species were planted in the meadow, including Broomsedge, *A. virginicus*, and Bushy Bluestem, *A. glomeratus*.

Wintertime in a park in Clearwater, Florida. Stalks of native *Andropogon* grass (species not identified) provide bright orange accents against other surrounding green grasses in the foreground.

Five Banded Tiphid Wasp with pollen on his head, on Blanketflower, *Gaillardia pulchella*. Not only does this wasp help pollinate, it also preys on beetles that destroy trees and lawngresses.

PHOTO: PEG URBAN

Popular media have made many people aware that honeybee pollination services are vital and that honeybee populations are in decline. Fewer people realize that native bees are also imperiled pollinators essential to our continued survival, health and well-being.

- The economic value of native pollinators in the U.S. alone is estimated at \$3 billion.
- Several native bee species are more efficient pollinators of certain crops than honeybees.
- Wild native bees can contribute to increased crop yields and quality.
- Native bees will often visit flowers earlier in the day and in inclement weather when honeybees often remain in the hive.
- Native bees are a source of food for other wild creatures, especially birds.
- The majority of native bees are solitary and are not aggressively stinging insects.
- Declines of native bees have been linked to the loss of foraging and nesting habitat, among other factors.

Native bees and other native pollinators need native plants – your landscapes can make a difference. Native plants that are especially valuable to pollinators are highlighted throughout this directory. Watch for  SEE PAGE 34: POLLINATOR FRIENDLY LANDSCAPES
