

Tornado Badger Gates have been specifically designed to enable badgers to pass freely through fences without causing damage. Badgers tend to be very territorial in nature, often using set routes within their habitat to move from one place to the next.

If a stock or deer fence is put up across a badger run, they will either dig under the fence, or attempt to break through. In both cases this causes damage to the fence and leaves an open passage for other animals. Tornado Badger Gates completely eliminate this problem.

Features

- Manufactured from galvanised steel for optimum strength and longevity
- Quick and easy to install in existing fences
- Supplied 300mm high x 200mm wide for maximum effectiveness
- Can be locked to allow one-way access
- Hot-dip galvanised after manufacture to BS EN ISO 1461

All measurements given in mm
