**Maximum wireless performance rate derived from IEEE standard 802.11 specifications. Actual data throughput and wireless coverage may vary based on wireless network capacity, data throughput rate, range and coverage. Performance depends on factors including distance from the access point, volume of network traffic, building materials and construction, operating system used, configuration of wireless products used, interference and other adverse conditions. As used for transfer rate or interface, Megabits per second (Mbps) = 1 million bits per second, Gigabits per second (Gbps) = 1 billion bits per second.*

*** AC rates achievable only when used with any AC-capable router, like WD's My Net AC Dual Band Router. Maximum wireless performance rate derived from IEEE standard 802.11 specifications. Performance may vary based on broadband Internet service, wireless performance factors and wired Ethernet performance of the device. Actual data throughput and wireless coverage may vary based on wireless network capacity, data throughput rate, range and coverage. Performance depends on factors including distance from the access point, volume of network traffic, building materials and construction, operating system used, configuration of wireless products used, interference and other adverse conditions.*

As used for storage capacity, one gigabyte (GB) = one billion bytes, and one terabyte (TB) = one trillion bytes. Total accessible capacity varies depending on operating environment. RAID 0 (Striped) accesses the full capacity of the drives. RAID 1 (Mirrored) accesses half of the total capacity for data protection.

4178-705099-047 June 2013
