

TomTom GO 7000 TRUCK

Western & Central Europe

Smart routes for your trucks

Diversions, rerouting and size restrictions: every day your drivers face a bewildering number of challenges to get the goods through. Any one can delay delivery - putting your drivers under pressure and leaving your customers dissatisfied. Until now, navigation devices haven't really taken the needs of truck drivers into consideration. Slower, wider, heavier, taller, longer - route planning for bigger vehicles needs to be different. With TomTom WORK, it is.

TomTom WORK uses smarter navigation to plan better routes for your drivers. They are less likely to get stuck, delayed or drive unnecessary distances - meaning efficient journeys and accurate scheduling.

Save time and money by taking the smartest route

The TomTom GO 7000 TRUCK gets your fleet to their destination the smart way. No matter whether your drivers are at home or abroad, TomTom WORK takes into account:

- the lower speeds of trucks on all roads
- sharp angles that trucks find difficult
- that trucks prefer left turns to right turns, for safety
- access restrictions for trucks based on weight and dimensions

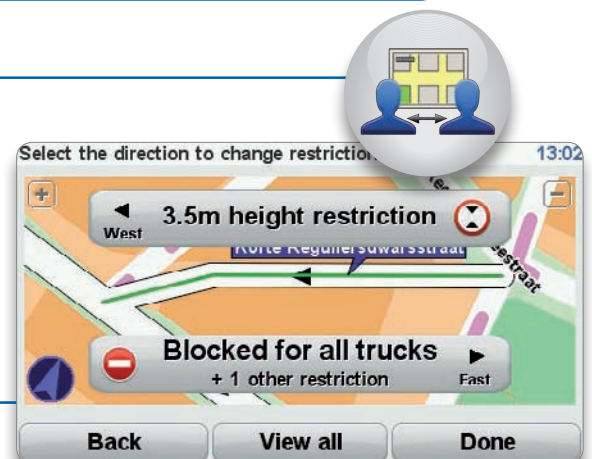

Dimensional and weight restrictions are currently available on the major and interconnecting roads in Austria, Belgium, France, Germany, Luxemburg, the Netherlands, Spain, Switzerland and the Great Britain.

With the GO 7000 TRUCK delays are minimal and your drivers avoid clocking up excessive mileages due to unexpected restrictions.

Simply the best maps

Up to 15% of roads change during the year but so do our maps. With TomTom Map Share you benefit from corrections made by yourself and others. You can add height and weight restrictions to streets or block a road completely for trucks.

Give your customers even better service

No one likes waiting for a delivery. With truck navigation you can give your customers a far more realistic arrival time based on maximum allowed speed. Taking access restrictions into your planning avoids last minute changes and detours. The result? Less stressed drivers and happier customers.

- Arrive on time by avoiding unnecessary delays
- Provide a realistic ETA on real measured speeds and maximum allowed speed for your vehicle

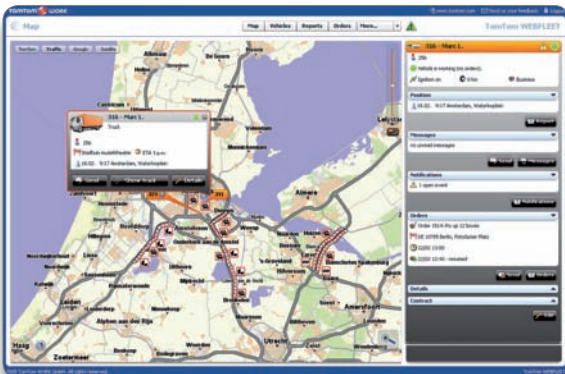

And keep your drivers safer too

Driving with a navigation device is safer as it takes the stress out of route-finding and allows your drivers to focus on the road ahead. The more advanced features of TomTom WORK also mean your drivers will be able to:

- avoid areas where the size of their vehicle might make manoeuvring hazardous
- comply with local regulations on route

However, always pay attention to traffic signs relating to the vehicle's dimensions and weight.

There's more to TomTom WORK Active

The TomTom GO 7000 TRUCK can be part of the TomTom WORK Active solution. TomTom WORK Active is a connected solution that combines navigation with two-way communication, tracking & tracing and reporting.

Not only will your drivers be able to plan more efficient routes, you'll be able to track them in real time and talk to them about any traffic or delivery problems.

And you'll be able to keep your customers informed every step of the way.
