## A checklist of fishes of Telangana State, India

### B Laxmappa and Ravinder Rao Bakshi

#### Abstract

A checklist of the fishes of Telangana State is presented, along with their scientific and common names (English and Telugu), IUCN Red List status. 165 species of fishes are recorded from the inland waters of Telangana state comprising of 11 orders and 29 families. Order Cypriniformes were most dominant group represent by 96 species followed by Siluriformes, Perciformes, Beloniformes, Cyprinodontiformes, Synbranchiformes, Osteoglossiformes and Anguilliformes. Among the families recorded, Cyprinidae was the most dominant followed by the Bagridae.

**Keywords:** Telangana, biodiversity, conservation, aquatic ecosystem, IUCN status.

#### 1. Introduction

Telangana is a state in South India divided from Andhra Pradesh and it was formed in 2014 with the capital at Hyderabad. Telangana is situated on the Deccan Plateau, in the central stretch of the eastern seaboard of the Indian Peninsula and covers 114,840 square kilometers (Image: 1). Two major rivers of South India viz., the Godavari and the Krishna River with their several tributaries form the chief perennial river systems of this state. There are a large number of medium and small sized rivers in addition to several man-made reservoirs, backwaters and tanks.

The freshwater fishes of Telangana region remained poorly known until the checklists of few were published in early sixties<sup>[1-3]</sup>. The undivided state of Andhra Pradesh is known to contain 158 species under 68 genera, 27 families and 10 orders of freshwater fishes<sup>[4]</sup>. During the last 23 years, several localized checklists and compilations confined to smaller regions such as a district, a protected area or a river or reservoir system of Telangana have been published<sup>[5-24]</sup>. Until this day, no comprehensive checklists have been published on the fishes of Telangana State. Hence, new checklist has been prepared, in addition to revalidation of the species status of several others. The list of the species has been included alphabetically under the respective families.

The present checklist of 165 species includes several new species and those resurrected from synonyms. This includes exotic and secondary freshwater species. The present proportion of the main groups of primary freshwater fishes is 58% Cyprinoids, 20% Siluroids and other groups 22%. The 165 species are grouped under 11 orders, 29 families and 74 genera. The classification and species names were followed according to the standard literatures<sup>[25-28]</sup>. The representative orders along with the number of families, genera and species are given in Table: 1 and the list of species in Table: 2.

One hundred and sixty five species of fishes are recorded from the inland waters of Telangana state comprising of 11 orders and 29 families. On the basis of percentage composition and species richness in Telangana, order Cypriniformes was dominant (96 species) followed by Siluriformes (33 species), Perciformes (17 species), Cyprinodontiformes (4 species), Synbranchiformes (4 species), Beloniformes (4 species), Osteoglossiformes (2 species), Anguilliformes (2 species), Caraciformes, Clupeiformes and Mugiliformes (1 species each). The order of dominance is as follows (Pie Chart: 1):

Cypriniformes > Siluriformes > Perciformes > Cprinodontiformes = Synbranchiformes = Beloniformes > Osteoglossiformes = Anguilliformes > Caraciformes = Clupeiformes = Mugiliformes.

Among the 165 species found in Telangana state, 9 species viz., *Labeo potail*, *Schismatorhynchus nukta*, *Longischistura striatus*, *Thynnichthys sandkhol*, *Hypselobarbus curmuca*, *Hypselobarbus mussullah*, *Tor khudree*, *Clarias magur* and *Silonia childreni* are

Telangana, India.

considered as globally Endangered species; 12 species, *Anguilla bengalensis*, *Anguilla bicolor*, *Labeo pangusia*, *Chitala chitala*, *Mystus malabaricus*, *Ailia coila*, *Osteobrama belangeri*, *Ompok bimaculatus*, *Ompok pabda*, *Ompok pabo*, *Wallago attu* and *Bagarius bagarius*, are considered as Near Threatened. Another 3 species, *Hyporhamphus xanthopterus*,

*Hypselobarbus kolus* and *Salmophasia horai* are considered as Vulnerable [29]. Therefore, to save this diversity, there is an urgent need for conservation of the fish denizens to conserve the productivity potential of the rivers, reservoirs, backwaters etc., through promulgation of fisheries legislation in future.
