## MYRTLE-OF-THE-RIVER

Calyptranthes zuzygium (L.) Sw.

**Synonyms:** Myrtus zuzygium L.

Family: Myrtaceae (myrtle)

FNAI Ranks: G4/S2

Legal Status: US-none FL-Endangered
Wetland Status: US-none+ FL-UPL

Gil Nelson

**Field Description: Shrub or small tree** with distinctive forked **branching** pattern. **Leaves** 1.5 - 2.5 inches long, evergreen, smooth, opposite, simple, entire, oval with short tapering tips, midvein conspicuously raised, tiny glandular dots on both surfaces; leaves have a strong odor when crushed. **Flowers** in small clusters on long stalks arising in the angle of leaf and stem; there are no petals, but many white, showy stamens; **flower buds** open by way of a hinged "lid" in the calyx. **Fruit** a round, waxy black berry with rim.

**Similar Species:** Lidflower (*Calyptranthes pallens*) has the same distinctive flower buds but its leaves are hairy and lack the raised midvein. Stoppers (*Eugenia* spp.) have similar leaves and forked branches but their flowers have petals.

**Related Rare Species:** See redberry stopper (*Eugenia confusa*) and devil's smooth-claw (*Pisonia rotundata*) in this guide.

Habitat: Rockland hammocks, coastal berms.

**Best Survey Season:** Spring-summer; early summer and fall, but leaves and branching pattern are distinctive all year.

Range-wide Distribution: FL, Bahamas, Cuba, Hispaniola, Jamaica, and Puerto Rico.

**Conservation Status:** Found in 5 parks and preserves, where it is sometimes locally abundant

**Protection and Management:** Preserve remaining rockland hammocks by purchase or conservation easement. Eradicate exotic pest plants.
