FRAKO – Leading-edge technology for safe and reliable network solutions

FRAKO's mission is to provide solutions that are designed and optimized to meet the needs of our customers. Our accumulated experience and our expertise in development and manufacture are applied to achieve this. The operational reliability of our products is as well known internationally as our track record in developing new solutions.

Every sphere, every activity and every operation of our company is hallmarked by quality. This bears fruit in FRAKO's renowned product quality as well as the quality of our advisory and field services. We value reliability, punctuality and transparency with the same commitment we have for durability and performance. This is why FRAKO today leads the entire world in its areas of business:

- High quality capacitors
- Individually specified power factor correction systems
- Efficient power quality solutions
- Intelligent Energy Management Systems
- Dependable customer service before and after sales

Our customers and business partners know that: FRAKO means quality, and that quality means safety and reliability. Because of this we can shoulder the responsibility for the correct functioning, profitability and environmental compatibility of our products and can guarantee their safety to life, limb and property. We are in a position to fulfil the most demanding requirements and develop innovative solutions to suit individual needs.

Our excellently trained and motivated employees have the technical competence and in-depth expertise to design and implement new installations successfully. We ourselves also take particular care to ensure that energy is used sparingly and efficiently in the manufacture and operation of our products. Our own energy consumption and the emissions generated are continually monitored with our in-house Energy Management System to ensure that we achieve the highest levels of energy efficiency and environmental compatibility.

For the future we are committed to an ongoing and intensive effort to maintain our leading position and to justify the trust placed in us by our customers in the fields of power quality, energy cost minimization and energy efficiency.

At FRAKO we look forward to developing, manufacturing and supplying innovative and productive systems for our customers and business partners in the future.

Dr. Matthias Sehmsdorf

QUALITY means safety and reliability

Exacting and ever more demanding quality specifications in all areas are the criteria for our products and services.

A particularly important role in meeting this challenge is our individual advisory and project planning. The basis for our successful cooperation with our customers is given by our certified quality and environmental management systems and our own research and development departments. On top of this we always adhere to our guiding principles that make us a straightforward and agreeable partner to work with. You can always take us at our word; for us that is as much a matter of course as being able to deliver, delivering on time and reacting promptly to handle any complaints.

As a supplier of complete systems, we pay attention to the quality and good working order of every individual component. In this way we achieve the high profitability and increased service life of our installations and systems. We fulfil the most exacting requirements in all areas: when advising customers, honouring commitments and turning individual needs into concrete products and special services.

FRAKO POWER CAPACITORS

FRAKO power capacitors offer 'Made in Germany' quality and form the optimum basis for both fixed installed capacitance for specific duties and controlled power factor correction systems. Our power capacitors incorporate a fourfold safety system for maximum operational reliability. They are the first choice when consumers worldwide need to reduce reactive power, improve power quality and avoid charges for reactive demand.

Distinct advantages of our power capacitors:

- High overload capability
- Long service life
- Maximum operational reliability

FRAKO's patented power capacitors are lead-free because of the patented contact ring and comply with the RoHS Directive. They are available in Basic, Standard, Premium and Heavy Duty versions, so that you can specify the ideal power capacitor for your individual requirements in terms of ampacity, ambient temperature and expected service life.

POWER QUALITY & POWER FACTOR CORRECTION

Poor power quality in the supply network can result in upsets or even failure in technical equipment and installations. FRAKO power quality products offer the right solution to maintain the quality of the power supply at a high level.

FRAKO's power factor correction and filter systems are individually designed for the user, as are our active harmonic filters.

They are installed at those locations where electrical energy is to be saved, voltage fluctuations avoided and harmonics eliminated, or simply where reactive power must be compensated.

ENERGY MANAGEMENT SYSTEMS

FRAKO Energy Management Systems help your company to cut costs and achieve energy efficiency.

The FRAKO Energy Management System supplies the optimum basis for all decisions to be made in optimizing energy consumption. With a FRAKO Energy Management System in place, the flow of utilities in the company is made transparent, their costs can be clearly allocated and accurately charged for, and approaches to saving energy become much easier to identify.

CUSTOMER SERVICES

FRAKO's range of services offers a comprehensive program for achieving high energy efficiency and availability.

Particular importance is attached to the individual advisory and training services offered to our customers, special inspection and maintenance contracts and customized project execution. Every solution that we propose to our customers is based on detailed network measurement readings and an in-depth analysis of the status quo and individual requirements.

POWER FACTOR CORRECTION

POWER FACTOR CORRECTION

1 Components

LKT
Power Capacitors

FRAKO Power Capacitors are installed in power factor correction systems and in passive filters.

FRAKO Power Capacitors have been developed and manufactured for decades solely at the company‘s Teningen production site in Germany. This has resulted in a consistently high product quality being maintained, the basis for assured operational reliability and a long service life.

Application Recommendations

FRAKO offers Power Capacitors for a variety of applications. They are divided into four separate categories with different specifications:

- Basic Capacitors
- Standard Capacitors
- Premium Capacitors
- Heavy Duty Capacitors

FRAKO Power Capacitors with **UL/CSA certification**:

Please contact us if you require information on our UL/CSA series of Power Capacitors.

FRAKO Power Capacitors are available as single-phase and 3-phase versions.

Voltage and power ranges:

- Nominal voltage: 240–800 V, 50 / 60 Hz
- Nominal power: 1.0–40.0 kvar

Design & quality

FRAKO Power Capacitors are manufactured in a unique dry design. Each comprises up to three interconnected capacitor coils wound in a low-loss, metallized polypropylene film and enclosed in a cylindrical aluminium casing provided with an M12 mounting stud. In addition to a PCB-free, flame-resistant mineral filler material, the casings also contain an adhesive stabilizer. Discharge resistors, permanently connected in the factory, guarantee that the residual voltage falls to <50 V within one minute after the capacitor has been disconnected. Cables are connected by means of the tried-and-tested spring clamps of the AKD range, which are 'finger-safe' and maintenance-free.

The use of rigorously inspected materials and their careful processing guarantee excellent quality and a long product service life. FRAKO manufactures its Power Capacitors to its own in-house specifications, which are far more exacting than the requirements of the applicable standards.

Quality control inspections after each individual manufacturing step ensure that the final product is of a high quality. These demanding quality standards, together with specially developed manufacturing technology, enable FRAKO Power Capacitors to achieve a longer-than-average service life. At the end of the manufacturing process, each capacitor is inspected individually. The in-house requirements for this special inspection are considerably more stringent than those of the routine tests specified by the relevant standards.

Standards

All FRAKO Power Capacitors comply with the international standards IEC 60831-1 and -2, and of course with EN 60831 1 and -2. In addition, a special series developed for the North American market complies with the requirements of UL 810 and CSA 22.2 No. 190.

Four safety features ensure uninterrupted operation

The reliability of Power Capacitors is crucially important for the problem-free operation of power factor correction systems and passive filters. FRAKO's measures to ensure this are now fourfold:
Power Capacitors nowadays usually use polypropylene as the dielectric material, its surfaces being metallized. This design has the important property that if local overloading occurs and punctures the substrate film, the fault automatically isolates itself, a phenomenon known as **self-healing**.

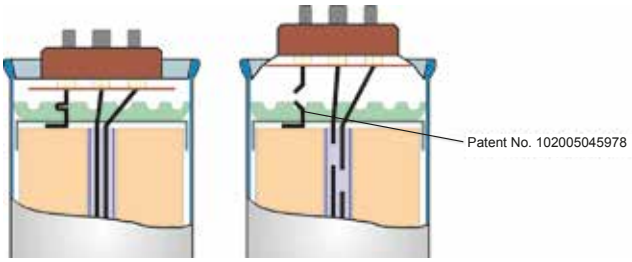
Self-healing is due to the heavy short-circuit current that flows between the films immediately vaporizing the very thin metal coating at the damaged location, thus ending the flow of current.

If several punctures occur in a small area of metallized film, the amount of energy involved might be too much for the **self-healing** action alone to cope with. This could lead to complete failure of the capacitor. However, in this case the second fail-safe function of the fourfold safety design comes into play: the **segmented metallization.**

In the manufacturing process, the polypropylene film for FRAKO Power Capacitors is metallized by vapour deposition to form a pattern of separate individual segments. Each segment is connected to the power supply by slender contact bridges, these being so dimensioned that when severely overloaded (several substrate punctures within one segment), they act as fuses by simply vaporizing, thereby securely isolating the damaged segment from the power supply.

The **segmented metallization** technique increases the reliability of the capacitors and prolongs their service life.

The third design feature for increases product safety is the three-phase **overpressure disconnector**, a mechanical fuse included in every FRAKO capacitor.
If an excessive internal pressure develops due to overloading, or at the end of the capacitor's service life, the mechanical fuse isolates the capacitor safely from the power supply by disconnecting all poles. Should puncturing of the dielectric occur on a major scale, this results in the substrate film melting and generating gases inside the casing, thus building up pressure in the capacitor. This causes the diaphragm lid to bulge outwards, thereby tensioning the internal leads to the coils until they act as mechanical fuses, breaking cleanly at defined locations. The bulging of the lid also increases the internal volume, therefore reducing the pressure inside the capacitor.



Principle of the overpressure disconnection system

In 2015, FRAKO added the patented **contact ring** to the other safety and reliability features, thus making them fourfold.

These patented rings are stamped from a special alloy and are formed with a number of pointed teeth that press into the zinc end-face contact layers on the windings to make electrical contact. The internal connecting leads are spot-welded to the **contact rings** before final assembly of the capacitor.

The great advantage of this solder-free design: it has completely excluded the risk of damaging the capacitor windings at the manufacturing stage due to overheating during soldering of the connecting leads. The quality of the winding connection is significantly increased, and the reliability of the mechanical fuse that protects against excessive internal pressure is improved by its being securely spot-welded in place.

The **contact ring** also enables FRAKO to produce completely lead-free capacitors and make yet another improvement to their operating reliability.

Special technical features

In our ongoing development work on FRAKO Power Capacitors, we always focus on those attributes that are called for in present-day applications. The three following factors are especially important:

- Overvoltage tolerance
- Current-carrying capacity
- Thermal endurance

Overvoltage tolerance

As required by the standards IEC 60831-1 & -2, as with EN 60831-1 & -2, all FRAKO Power Capacitors are designed to withstand the following overvoltages:

8 hours daily:	1.10 × capacitor nominal voltage
30 minutes daily:	1.15 × capacitor nominal voltage
5 minutes:	1.20 × capacitor nominal voltage
1 minute:	1.30 × capacitor nominal voltage

The following table shows a selection of nominal voltage ratings and maximum overvoltages:

Capacitor nominal voltage	240	400	440	480	525	600	690	760	800
8 hours daily	264	440	484	528	578	660	759	836	880
30 min daily	276	460	506	552	604	690	794	874	920
5 minutes	288	480	528	576	630	720	828	912	960
1 minute	312	520	572	624	683	780	897	988	1040

All voltages in volts [V]

Current-carrying capacity

All over the modern world, harmonics are polluting the electricity supply networks. The increasing use of devices such as frequency converters has a growing impact on capacitors. If these are operated in a power supply network contaminated by harmonics, dangerous resonances can result, which can again significantly increase the currents that the capacitors must withstand.

The applicable standards call for a continuous current-carrying capacity of at least 1.3 times the nominal current to be designed for in Power Capacitors. In reality, however, even this value can be exceeded under conditions with extreme levels of harmonics.

For this reason, all FRAKO Power Capacitors are designed for a continuous current-carrying capacity of at least 1.5 times the nominal current. More information on ampacity is given in the specifications table on the following page.

Thermal endurance

Excessive temperatures also have a negative impact on the service life of a capacitor. Storage or operation of capacitors above their permitted temperature limits results in a drastic shortening of their service life. Power Capacitors are assigned to different temperature classes according to the permitted ambient temperature as follows:

Temperature class	Maximum ambient temperature		
	Absolute maximum temp.	Max. average temp. over 1 day	Max. average over 1 year
B	45 °C	35 °C	25 °C
C	50 °C	40 °C	30 °C
D	55 °C	45 °C	35 °C

The temperatures stated above refer to the direct environment of the capacitors. This means the internal temperature in the enclosure or control cabinet that houses them. Experience shows that the limits given in the table for the temperature classes can easily be exceeded in practice. Higher temperatures are to be expected in particular in the case of power factor correction systems fitted with filter reactors.

Power Capacitors in the Standard, Premium and Heavy Duty categories are therefore designed for continuous ambient temperatures of at least 60 °C.

This continuously rated thermal endurance is helped by the compact construction of the capacitors, which is conducive to optimum heat dissipation.

Maintenance-free capacitor connections

The connecting terminal (AKD) is based on the proven technology of the Wago Cage Clamp©. These connectors use special spring clamps that ensure a simple, vibration-resistant and maintenance-free electrical contact with the capacitor. They can be used to connect single-core, stranded or fine-filament copper cables. The AKD spring clamp complies with the IP20 rating as per EN 60529, thus qualifying as ‘finger-safe’.

Specifications of FRAKO Power Capacitors

Category	Basic	Standard	Premium		Heavy Duty
Type designation	LKT …-DB	LKT …-DP	LKT …-DL		LKT …-HD
Nominal voltage	400–525 V	280–800 V	400–525 V	440–615 V[1]	480–525 V
Nominal frequency	50/60 Hz				
Power rating	5.0–36 kvar	5.0–40 kvar	1.0–24 kvar	1.2–29 kvar	16.8–21.6 kvar
Capacitance tolerance[2]	-5 / +5 %				
Dielectric losses	0.2 W / kvar				
Power loss	0.5 W / kvar				
Residual voltage after 60 seconds discharge time	≤50 V				
Maximum overvoltage	1.10 x V_N – 8 hours daily 1.15 x V_N – 30 minutes daily 1.20 x V_N – 5 minutes 1.30 x V_N – 1 minute				
Maximum continuous overcurrent at nominal voltage (50 Hz)	1.5 x I_N	1.8 x I_N	2.2 x I_N	2.0 x I_N	2.7 x I_N
Maximum inrush current at nominal voltage (50 Hz)	200 x I_N	250 x I_N	300 x I_N	272 x I_N	450 x I_N
Test voltage (metal film–metal film)	2.15 x V_N, 2 seconds 1.85 x V_N, 10 seconds				
Test voltage (metal film–casing)	V_N < 600 V = 3.9 kV, 2 seconds V_N > 600 V = 4.3 kV, 2 seconds				
Insulation voltage rating dependent on V_N and diameter	3.9 / 8 kV 3.9 / 12 kV 4.3 / 8 kV 4.3 / 12 kV				
Temperature class	-25 / D	-40 / 60	-40 / 65	-40 / 60	-40 / 68
Min. / max. temperature[3]	-25 / +55 °C	-40 / +60 °C	-40 / +65 °C	-40 / +60 °C	-40 / +68 °C
Max. casing temperature	+70 °C	+75 °C	+78 °C	+75 °C	+78 °C
Min. / max. storage temperature	-25 / +85 °C	-40 / +85 °C			
Max. humidity	95 % non-condensing				
Max. site altitude	4 000 metres				
Service life	100 000 h	130 000 h	170 000 h	130 000 h	200 000 h
Max. number of switching cycles per year	20 000	40 000	60 000	40 000	100 000

[1] Capacitors of the Premium category can be operated above their nominal voltage if a reduced specification is acceptable. The tables on pages 18 and 19 give the maximum permissible continuous overvoltage for each capacitor type.

[2] Other tolerances on request

[3] The table of temperature classes on the previous page applies to capacitors of the Basic category. Capacitors of the categories Standard, Premium and Heavy Duty are specified for continuous operation at the stated maximum temperature.

Basic Capacitors (three-phase, V_N: 400 V...525 V)

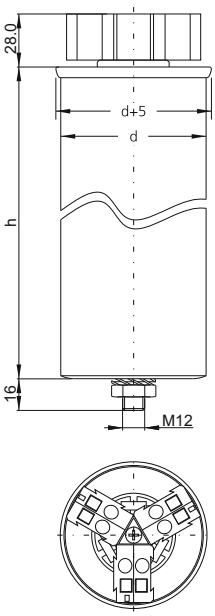
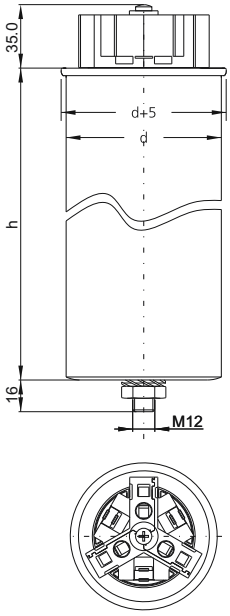
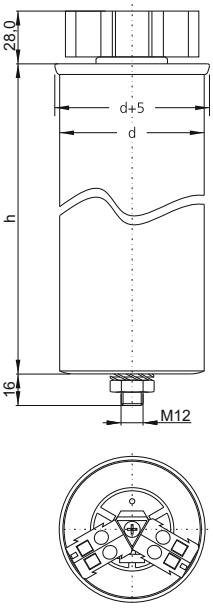
Dimensions



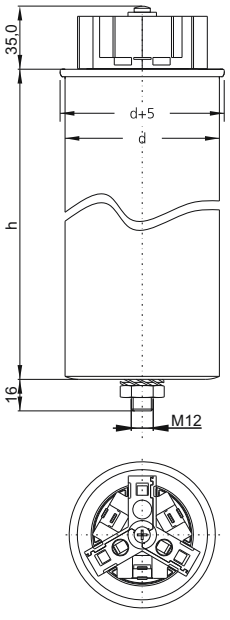
Three-phase capacitor with d = 60/70 mm
Spring tension terminal AKD 25/3 for 2 × 6 mm²



Three-phase capacitor with d = 85 mm
Spring tension terminal AKD 30/3 for 16 mm²



Single-phase capacitor with d = 60/70 mm
Spring tension terminal AKD 25/2 for 2 × 6 mm²



Single-phase capacitor with d = 85 mm
Spring tension terminal AKD 30/2 for 16 mm²

Harmonic Filter Reactors
Basic and Standard Harmonic Filter Reactors

Avoiding resonances – low-loss Harmonic Filter Reactors for your power factor correction – designed for operation with FRAKO Power Capacitors.

- Power range: 3.13 to 200 kvar
- Voltage range: 230 V to 690 V, 50 / 60 Hz
- Detuning factor p = 5.67 … 14 %
- Low-loss design

Application Recommendations

Used together with LKT type Power Factor Correction Capacitors, Harmonic Filter Reactors make it possible to install detuned versions of fixed capacitor banks and Power Factor Correction Systems. This enables switchgear manufacturers to plan and manufacture customer-specific systems.

Type Overview

Type series			Basic	Standard
Type			FDKT	FKD / FDR
Rated voltage			400…525 V	230…690 V
Rated stage power			6.25…200 kvar	3.13…50 kvar
Rated frequency		50 / 60 Hz	• / -	• / •
Series resonance frequency	p=5.67 %	210 / 252 Hz	- / -	• / -
	p=7 %	189 / 227 Hz	• / -	• / •
	p=8 %	177 / 212 Hz	- / -	• / -
	p=14 %	134 / 160 Hz	• / -	• / -
Temperature range			-10 … +60 °C	
Winding material			Al	Al /Cu
Insulation class			H (180 °C)	F (155 °C)
Temperature switch	pre-assembled		•	•
	Switching temperature		130…150 °C	140 °C
	Switching capacity		6.3A / 250 V AC	2.5A / 250 V AC
Ingress protection			IP00 according to IEC 60529	
Power loss max.			10 W/kvar	6 W/kvar
Connection			Terminal strip ≤ 25 kvar Ring terminal ≥ 50 kvar	Connecting cable
Catalogue page			Page 23 ff.	Page 27 ff.

Series Resonance Frequency

Version	Series resonance frequency (50 Hz Mains)	Detuning factor	For mains with utility audio frequency [1]
P1	134 Hz	P= 14 %	≥ 166 Hz
P8	177 Hz	P= 8 %	≥ 217 Hz
P7	189 Hz	P= 7 %	≥ 228 Hz
P5	210 Hz	P= 5.67 %	≥ 270 Hz

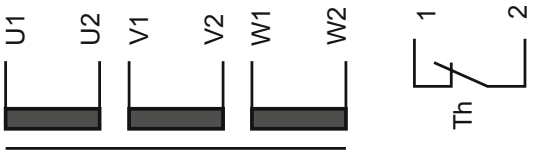
[1] Utility company specifications inconsistent with the above must be taken into account.

Please also refer to the design notes given in our manual of Power Factor Correction. Further series resonance frequencies are available on request.

Connection

Coil input: U1, V1, W1

Coil output: U2, V2, W2



Important Note

Please only use the correct number of the appropriate Power Capacitors as specified in our “Selection Aid: Harmonic Filter Reactors → Capacitors” in our Technical Annex. Apart from possibly overloading the installed components, the utility company‘s remote control systems could also be adversely affected.

FDKT
Basic Harmonic Filter Reactors

Avoiding resonances – low-loss Harmonic Filter Reactors for your power factor correction – designed for operation with FRAKO Power Capacitors.

- Power Range: 6.25 to 200 kvar
- Voltage range: 400 to 525 V, 50 Hz
- Detuning factor p = 7 … 14 %
- Low-loss design

Application Recommendations

Used together with LKT type Power Factor Correction Capacitors, Harmonic Filter Reactors make it possible to install detuned versions of fixed capacitor banks and Power Factor Correction Systems. This enables switchgear manufacturers to plan and manufacture customer-specific systems.

FDR / FKD
Standard Harmonic Filter Reactors

Avoiding resonances – low-loss Harmonic Filter Reactors for your power factor correction – designed for operation with FRAKO Power Capacitors.

- Power range: 3.13 to 50 kvar
- Voltage range: 230 to 690 V, 50 / 60 Hz
- Detuning factor p = 5.67 … 14 %
- Low-loss design

Application Recommendations

Used together with LKT type Power Factor Correction Capacitors, Harmonic Filter Reactors make it possible to install detuned versions of fixed capacitor banks and Power Factor Correction Systems. This enables switchgear manufacturers to plan and manufacture customer-specific systems.

Components
Power Factor Control Relays

**The Reactive Power control Relay for maximum operational reliability.
Simple to install, easy to operate and automatic 'plug and play' start-up.**

Characteristics that count

FRAKO's intelligent reactive power control relays automatically adjust themselves to suit the power factor correction system and the network that they serve. This automatically eliminates the risk of faulty programming.
Incorrect connections or inappropriate locations for the instrument transformers are identified and indicated, therefore making time-consuming and expensive troubleshooting unnecessary.
The patented characteristic curve controls the set target cos phi as a minimum value under normal load while simultaneously preventing overcorrection under low load conditions. This reliably prevents costs for reactive power arising and reduces the risk of network disruptions.
The control relay's intelligent mode of operation ensures that the target parameters are controlled and maintained with the lowest possible number of switching cycles. This minimizes wear of the power factor correction system and reduces disturbances to the network.
Some control relay versions have a trip function to protect the power factor correction system from excessive levels of harmonics.
Last not least, our customers appreciate the user-friendly operation of our reactive power control relays.

Application Recommendations

PQC
Power Quality Controller

The reactive power control relay for maximum operational reliability with power quality monitoring

The PQC Power Quality Controller adds powerful new functionality to the well-known strengths of the FRAKO Reactive Power Control Relays to meet the challenges posed by state-of-the-art power quality systems. With its built-in microprocessor, the PQC handles tasks over and above classical power factor correction. In particular, new protective mechanisms have been incorporated to safeguard not only the network itself but also the system that corrects its power factor. The PQC thus monitors the relevant parameters that can cause disruptions in the network, and gives alarms if they go beyond the limits set to ensure compliance with technical standards. In addition, the PQC also protects the power factor correction system responsible for the network, shutting it down if it becomes overloaded. This significantly reduces the risk of upsets occurring within that system. Defective or partially defective capacitor stages are identified and withdrawn from the power factor correction process. An extremely flexible alarm management function ensures that alarm messages are sent to where they are needed, as appropriate to the event concerned. The possibility of parameterizing each individual controller enables the PQC to be used anywhere, making it the best possible instrument for controlling power quality in contemporary industrial supply networks.

The PQC is characterized by user-friendly features such as simple installation, intuitive operation and the automatic start-up already known from FRAKO Reactive Power Control Relays. Its integrated self-monitoring function improves long-term operational reliability, thus helping to reduce costs and minimize the risk of network disruptions.

Key features

- 1- or 3-phase measurement
- 4-quadrant control
- 6 or 12 switching outputs + 1 alarm contact
- 5 parameterizable control curves
- Graphical user interface with plain text menu in choice of languages
- Integrated monitoring of system parameters with alarm management function

Recommended applications

The PQC is suitable for 4-quadrant power factor correction in:

- Consumer networks
- Power generation networks
- Low and medium voltage networks
- Power factor correction systems with or without detuning

For further Power Factor Control Relays please see page 35

Instrument versions

The PQC is designed primarily for mounting in a 138 x 138 mm cutout in the front of a control panel. Different versions of the instrument can be selected to suit the required application. These differ essentially according to:

- Instrument power supply
- Number of measurement inputs
- Number and rating of switching outputs

Combinations of these parameters mean that 6 different basic types are available:

Instruments with 100–240 V, 50/60 Hz power supplies

Type	Measurement inputs	Switching outputs
PQC 1202401-0	1 V/I	12 x 250 V / 3 A
PQC 1202403-0	3 V/I	12 x 250 V / 3 A
PQC 0602401-0	1 V/I	6 x 250 V / 3 A

Instruments with 100–480 V, 50/60 Hz power supplies

Type	Measurement inputs	Switching outputs
PQC 1204801-0	1 V/I	12 x 250 V / 3 A
PQC 1204803-0	3 V/I	12 x 250 V / 3 A
PQC 0614801-0	1 V/I	6 x 440 V / 3 A

The inputs for the measured voltage are designed for 100-690 V, 50/60 Hz; those for the measured current are designed for use with x/1A or x/5A current transformers.

Operating the PQC

The PQC has a backlit monochrome LC display with 128 × 64 pixels, plus 5 keys for navigating the plain language (German, English or French) menu.

The menu is structured in an intuitive way that makes it easy to program the instrument. An overview of the controller in the display shows the key information for the individual phases together with the status of the switching outputs. The operator is thus given all relevant information on the state of the power factor correction system at a glance. An intelligent alarm management function alerts the operator to critical conditions, either by messages in the display, via the alarm contact, or both, as desired.

Commissioning the PQC

When first started up, the PQC automatically determines the system configuration to which it is connected plus the switching outputs in use with their respective capacitance ratings (in kvar). The operator selects the appropriate control profile for the application or parameterizes the PQC to meet the required specifications. Five control profiles—specially developed for the most frequently encountered applications—are saved in the instrument before it leaves the factory. On completion of the start-up procedure, the PQC switches the connected capacitor stages in or out according to the selected control curve.

Advanced temperature and I/O extension:

This option consists of 3 temperature measurement inputs, which can be wired with a PT100 or PT1000 and 2 NTC's. For each of the 3 temperature sensors connected, an individual threshold value can be set. 5 digital in- and outputs (I/O) are additionally available, which are individually configurable. The digital in- and outputs need an external supply voltage of 5 … 24 V DC and can be loaded with 100 mA per output.

Application example:

- Fan control (temperature detection)
- Temperature monitoring
- Automatic switching of relay profiles 1 and 2 (only I/O 1)
- Individually configurable outputs (e.g. to a process control system (PLC)) for status indication and selected alarms.

Capacitor Switching Contactors for Power Factor Correction Systems with or without reactors

Switching Power Capacitors safely –
Capacitor Switching Contactors for any application.

- Safe switching of capacitor stages with or without reactors
- Bounce-free switching contacts
- Wear-free contact material
- Long service life and a high number of switching operations

Application Recommendations

Depending on the application appropriate switching devices are needed for the switching of power factor correction capacitors.

During the switching of Power Capacitors a peak inrush current of 200 times of the rated current can occur. In order to limit the inrush current and to protect switching devices and capacitors, capacitor switching contactors type K3-…K with leading transition contacts are used. To limit the inrush current to <70 x I_N , damping resistors are used.

In case of detuned power factor correction systems the high inrush current is damped by the inductance of the harmonic filter reactor. In those applications capacitor switching contactors type K3-…A are used. Those contactors are made of a special contact material.

Mounting Instructions

In the area of capacitor switching contactors only self-extinguishing material and material of low inflammability may be used, as abnormal temperatures in the area of the resistor spirals, in case of a fault, cannot be excluded.

Specification: Contactors K3-..K are suitable for switching low-inductive and low-loss capacitors in capacitor banks (IEC70 and 831, VDE 0560) without and with reactors.
Capacitor switching contactors are fitted with leading auxiliary contacts and damping resistors, to reduce the value of current peaks < 70 x I_e.
Operating conditions: Capacitor switching contactors are protected against welding for a prospective peak inrush current of 200 x I_e.
Capacitor switching contactors K3-..A can exclusively be used for switching capacitors with harmonic filter reactors.

FR 3AC
Discharge Reactors

Fast and secure discharging of Power Capacitors with low-loss Discharge Reactors.

- Fast discharging of capacitors steps (< 5 seconds at 50 kvar / 400 V)
- 230 to 690 V rated operating voltage
- Three-phase design

Application Recommendations

Due to the integrated discharge resistors FRAKO Power Factor Correction Capacitors discharge within approx. 1 minute. The reconnection of a capacitor stage will be delayed due to the time a capacitor needs for discharging.
Some applications require a fast reconnection. Therefore, the time a capacitor needs to discharge has to be reduced. Discharge reactors safely discharge the capacitor within a few seconds.

LKN / LKSLT
Power Factor Correction Capacitors in sheet steel cases

Power Capacitors type LKN and LKSLT for fixed compensation of, for example, motors and transformers.

- Power range: 7.5 to 100 kvar per case
- Ready for connection
- For floor installation or wall mounting
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Power Factor Correction Capacitors in sheet steel cases are mainly used for fixed compensation of motors and transformers. They are suitable for power factor correction in supply networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. High harmonic levels can overload or damage all electrical devices and machines in the network.

Today, networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with harmonic filter reactors (page 59 ff.).

PFC Capacitors in sheet steel cases

Power Factor Correction Capacitors in sheet steel cases

Power Range

Power Factor Correction Capacitors in sheet steel case:

- **LKN:** 7.5 to 100 kvar
- **LKSLT:** 7.5 to 60 kvar

Construction

Sheet steel case with plinth for floor mounting and lugs for wall mounting.

The case contains:

- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Fuse switch disconnector size NH00 (only available for **LKSLT**)

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The supply cable enters the cabinet through a cable gland and is connected to the studs on the junction plate (**LKN**). In case of an **LKSLT** it is directly connected at the fuse switch disconnector.

Technical Data

Rated voltage	400 V / 50 Hz
Rated voltage of capacitors	440 V / 50 Hz
Ambient temperature	-10 °C to +45 °C
Humidity	Max. 90 %, no condensation
Case colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

The presence of inductive and capacitive reactances in the low voltage network means that the harmonics generated there, together with those fed in from the medium voltage network, can be amplified many times over due to resonance. Particularly in industrial networks with loads that generate harmonics, the use of conventional power factor correction systems without Harmonic Filter Reactors is not advisable. Instead, detuned systems should be installed. See the LKNS and LKND series of detuned power capacitors.

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

PFC Capacitors in sheet steel cases

Power Factor Correction Capacitors in sheet steel cases – detuned

LKND-P / LKNS-P

Power Factor Correction Capacitors in sheet steel cases – detuned

Power Capacitors type LKND-P and LKNS-P for fixed compensation of inductive consumers in networks with high harmonic content.

- Power Range: 7.5 to 50 kvar per case
- Ready for connection
- Power Factor Correction Capacitors LKT dry-type with four safety features
- Low-loss harmonic filter reactors, type: Standard

Application Recommendations

Detuned Power Factor Correction Capacitors in sheet steel cases are mainly used for fixed compensation of motors and transformers.

They are suitable for compensation in supply networks with harmonic distortion according to EN 61000-2-4 class 2.
They are available as follows:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

PFC Capacitors in sheet steel cases

Power Factor Correction Capacitors in sheet steel cases – detuned

Power Range

Power Factor Correction Capacitors in sheet steel case - detuned:

- **LKND-P:** 6.25 to 50 kvar
- **LKNS-P:** 10 to 50 kvar

Construction

Sheet steel case suitable for wall mounting or as freestanding cabinet (with socket, see accessories / options).

The case contains:

- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Low-loss harmonic filter reactors with thermal trip switch

The LKNS series furthermore contains:

- Capacitor switching contactors
- Control terminal strip with control fuse
- Control switch indicator light

Natural air cooling is ensured by appropriate cutouts in the door and on the roof.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Connection

The supply cable enters the cabinet from below and is connected to the studs of the junction plate.

LSPN / LSP
Power Factor Correction Systems on mounting plates

PFC System on mounting plates for installation in standard switchboards.
Type LSPN is also suitable for installation in DIN standard distribution boards.

- Power Range: 17.5 to 200 kvar
- Compact design on a mounting plate
- Ready for connection (without control relay and relay cable)
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Power Factor Correction Systems on mounting plates type LSPN / LSP are suitable for installation in standard switchboards. Type LSPN is also suitable for installation in DIN standard distribution boards. Those systems are pre-wired. One only has to connect the Power Factor Correction Relay (not included) with the terminal strip. Those systems are suitable for power factor correction in networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. High harmonic levels can overload or damage all electrical devices and machines in the network.

Today, networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with Harmonic Filter Reactors (page 73 ff).

Power Range

Power Factor Correction System on mounting plate:

- **LSPN -4:** 17.5 to 60 kvar
- **LSP -2:** 68.75 to 100 kvar
- **LSP -3:** 112.5 to 200 kvar

Construction

Mounting plate with mounted Power Factor Correction Capacitors. Capacitor Switching Contactors and fuses for installation in switchboards.

The system contains:

- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Capacitor Switching Contactors with leading transition contact for damping of current peaks
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal trip switch

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Connection

The power cable is connected to the LV NH00 fuse element; The Power Factor Correction Relay (not included) as well as the cable from the current transformer has to be connected to the control terminal strip.

System Expansion

An extension of the system is possible by adding LSPZ extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Rated voltage	400 V / 50 Hz
Rated voltage of capacitors	440 V / 50 Hz
Ambient temperature	–5 °C to +60 °C
Humidity	Max. 90 %, no condensation
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

The presence of inductive and capacitive reactances in the low voltage network means that the harmonics generated there, together with those fed in from the medium voltage network, can be amplified many times over due to resonance. Particularly in industrial networks with loads that generate harmonics, the use of conventional power factor correction systems without Harmonic Filter Reactors is not advisable. Instead, detuned systems should be installed. See the LSP-P series of Power Factor Correction Systems on mounting plates.

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

LSP-P

Power Factor Correction Systems on mounting plates – detuned

Detuned PFC Systems on mounting plates for installation in standard switchboards for low-voltage networks with harmonic content.

- Power range: 17.5 to 100 kvar
- Compact design on a mounting plate
- Ready for connection (without control relay and relay cable)
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Power Factor Correction Systems on mounting plates type LSP-P are suitable for installation in standard switchboards. Those systems are pre-wired. One only has to connect the Power Factor Correction Relay (not included) to the terminal strip.

They are suitable for supply networks with harmonic distortion according to EN 61000-2-4 class 2. They are available as follows:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

Power Range

Power Factor Correction System on mounting plate - detuned:

- 17.5 to 100 kvar

Construction

Mounting plate with mounted Power Factor Correction Capacitors, Capacitor Switching Contactors and fuses for installation in switchboards.

The system contains:

- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Heavy duty Capacitor Switching Contactors
- Harmonic Filter Reactors with overtemperature switch
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal contact for safety shutdown

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The power cable is connected to the LV NH00 fuse element; The Power Factor Correction Relay (not included) as well as the cable from the current transformer has to be connected to the control terminal strip.

System Expansion

An extension of the system is possible by adding LSPZ-P extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Rated voltage	400 V / 50 Hz
Rated voltage of capacitors	440 V / 50 Hz (-P7 and -P8) 480 V / 50 Hz (-P1)
Ambient temperature	–5 °C to +60 °C
Humidity	Max. 90 %, no condensation
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

For options and accessory equipment for PFC Systems on mounting plates, module rails, ordering examples and dimensional drawings see page 91 ff.

C64C / C84C
Capacitor Modules

Capacitor Modules type C64C and C84C for installation in standard switchgear systems. Suitable for low-voltage networks without harmonic distortion.

- Power Range: 25 to 100 kvar per module
- Compact design; up to 5 modules per cabinet
- Ideal for mounting in all common switchgear systems
- Easy and quick mounting with multifunctional rails
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Capacitor modules type C64C and C84C are suitable for installation in standard switchgear systems. Additional mounting rails for all common switchgear systems:

- W = 600 mm, D = 400, 500, 600 mm resp.
- W = 800 mm, D = 400, 500, 600 mm

allow an easy and quick installation of complex Power Factor Correction Systems.

They are suitable for power factor correction in supply networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. High harmonic levels can overload or damage all electrical devices and machines in the network.

Today, networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with harmonic filter reactors (page 83 ff.).

Power Range
Compact compensation module for installation in switchgear systems:
- 25 to 100 kvar

Construction
Sheet steel chassis with mounted power capacitors, contactors and fuses - ideal for mounting in all common switchgear systems.

The module consists of:
- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Capacitor Switching Contactors with leading transition contacts for damping of current peaks
- Busbar system with bus-mounting fuse bases, 3-pole, size NH00
- Control circuit with female connector (wired connector for connection with terminal strip incl.)

Application / Installation
The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations
For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Installation
Specific module rails are required for installation in the switchgear system. Those module rails are available for all common switchgear systems and can be supplied as an optional accessory.

Connection
The network connection can be done either vertically or horizontally. For the horizontal connection one has to connect the cables equipped with the cable lugs to the busbar by using the M12 screws.

A bus connection bracket CU AW-1 for vertical connection is available as an option.

Additional modules can be connected directly via the busbar system.

Technical Data

Design	Sheet steel chassis for installation in switchgear cabinets C6xC… for cabinets (width = 600 mm) C8xC… for cabinets (width = 800 mm)
Rated voltage	400 V/50 Hz
Rated voltage of capacitors	440 V/50 Hz
Ambient temperature	–5 °C to +60 °C
Humidity	Max. 90 %, no condensation
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes
The presence of inductive and capacitive reactances in the low voltage network means that the harmonics generated there, together with those fed in from the medium voltage network, can be amplified many times over due to resonance. Particularly in industrial networks with loads that generate harmonics, the use of conventional power factor correction systems without Harmonic Filter Reactors is not advisable. Instead, detuned systems should be installed. See the C6xD... and C8xD... series of Capacitor Modules.

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

Other rated voltages, frequencies and power ratings on request

Recommended supply lead cross sections: please refer to the technical annex (page 141 ff.)

For options and accessory equipment for PFC Systems on mounting plates, module rails, ordering examples and dimensional drawings see page 91 ff.

C64D-P / C84D-P / C65D-P / C85D-P
Capacitor Modules – detuned

Capacitor Modules type C64D-P / C84D-P / C65D-P / C85D-P for installation in standard switchgear systems. Suitable for low-voltage networks with harmonic content.

- Power Range: 25 to 100 kvar per module
- Compact design - up to 5 modules per cabinet
- Ideal for mounting in all common switchgear systems
- Easy and quick mounting with multifunctional rails
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Capacitor modules type C64D-P, C65D-P, C84D-P and C85D-P are suitable for installation in standard switchgear systems. Additional mounting rails for all common switchgear systems:

- W = 600 mm, T = 400, 500, 600 mm resp.
- W = 800 mm, T = 400, 500, 600 mm

allow an easy and quick installation of complex Power Factor Correction Systems.

Suitable for supply networks with harmonic distortion according to EN 61000-2-4 class 2.

Available in the following versions:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P5	p = 5.67 %	210 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

Power Range
Compact compensation module ideal for mounting in switchgear systems:
- 25 to 100 kvar

Construction
Sheet steel chassis with mounted power capacitors, contactors and fuses - ideal for mounting in all common switchgear systems.

The module consists of:
- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Heavy duty Capacitor Switching Contactors
- Low-loss Harmonic Filter Reactors with temperature switches
- Busbar system with bus-mounting fuse base, 3-pole, size NH 00
- Control circuit with female connector (wired connector for connection with terminal strip incl.)

Installation Site
The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations
For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Installation
Specific module rails are required for installation in the switchgear system. Those module rails are available for all common switchgear systems and can be supplied as an optional accessory.

Connection
The network connection can be done either vertically or horizontally. For the horizontal connection one has to connect the cables equipped with the cable lugs to the busbar by using the M12 screws.

A bus connection bracket CU AW-1 for vertical connection is available as an option.

Additional modules can be connected directly via the busbar system.

Technical Data

Design	Sheet steel chassis for installation in switch-gear cabinets C6xD… for cabinets (width = 600 mm) C8xD… for cabinets (width = 800 mm)
Rated voltage	400 V/50 Hz
Rated voltage of capacitors	440 V/50 Hz (-P5 to -P8) 480 V/50 Hz (-P1)
Ambient temperature	–5 °C to +60 °C
Humidity	Max. 90 %, no condensation
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes
For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

Page 99

Accessory equipment for PFC Systems on mounting plates

Additional to Capacitor Modules type C or Power Factor Correction Systems on mounting plates type LSP, further components are required to assemble a Power Factor Correction System.
FRAKO offers accessory packages which contain all necessary components to assemble such a PFC-System. Those packages include:

- Power Factor Control Relays and accessories
- Mounting plates
- Module rails
- Ventilation packages
- Bus connection bracket

Power Factor Control Relays and accessories

For technical details on our Power Factor Control Relays please refer to chapter “Power Factor Control Relays”.
For the relays, FRAKO recommends to use suitable control terminal strips with control fuse and thermal trip contact for monitoring the cabinet temperature as well as the connecting cables for the relay.
All items can be ordered as single components or as a complete power factor control relay package.

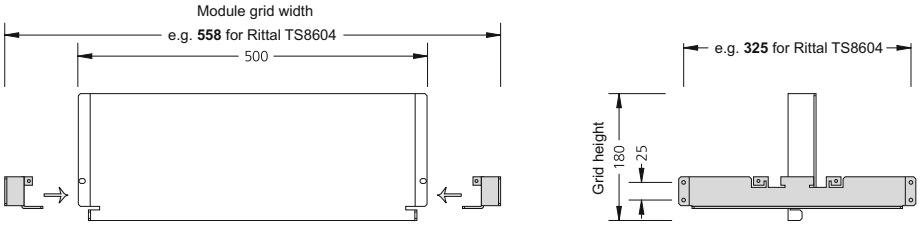
Accessories

Article-No.	Type	Description
Power Factor Control Relays		
38-00320	RM 2106	With 6 control contacts
38-00340	RM 2112	With 12 control contacts
38-00402	PQC 0602401-0	With 6 control contacts, single-phase
38-00400	PQC 1202401-0	With 12 control contacts, single-phase
38-00417	PQC 0602401-20	With 6 control contacts, single-phase with Modbus RTU
38-00416	PQC 0602401-01	With 6 control contacts, single-phase with temperature and I/O extension
38-00418	PQC 0602401-21	With 6 control contacts, single-phase with Modbus RTU + temperature and I/O extension
38-00404	PQC 1202401-20	With 12 control contacts, single-phase with Modbus RTU
38-00403	PQC 1202401-01	With 12 control contacts, single-phase with temperature and I/O extension
38-00405	PQC 1202401-21	With 12 control contacts, single-phase with Modbus RTU + temperature and I/O extension
39-29050	RM 2012 6+6D	With 12 control contacts, 6 relays / 6 with reaction time between 20/40 ms
39-29051	RM 2012 12D	With 12 control contacts, reaction time between 20/40 ms
Control terminal strip with thermal trip contact, premounted		
34-80399	RKL-PQC-6/1	Suitable for PQC with 6 control contacts, single-phase
34-80400	RKL-PQC-12/1	Suitable for PQC with 12 control contacts, single-phase
34-80027	RKL-Z-Schrank	For extension units (only 12 control contacts)
Control cable set, prefabricated for the connection between power factor control relay and control terminal strip RKL		
34-80407	RKS-PQC 6-1300	For connection of PQC with 6 control contacts, single-phase, cable length 1.3 m
34-80409	RKS-PQC 6-2400	For connection of PQC with 6 control contacts, single-phase, cable length 2.4 m
34-80406	RKS-PQC 12-1300	For connection of PQC with 12 control contacts, single-phase, cable length 1.3 m
34-80410	RKS-PQC 12-2400	For connection of PQC with 12 control contacts, single-phase, cable length 2.4 m
89-20559	SS 12-6000	For connecting the basic unit with the extension unit (length: 6 m)

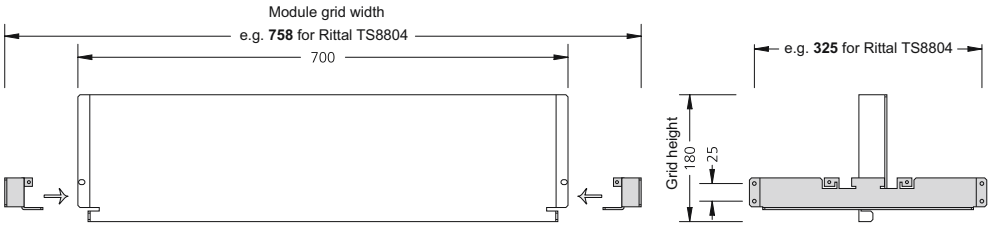
Power Factor Control Relay packages (premounted and wired), consisting of:
Power Factor Control Relay, control terminal strip, set of relay cables and optional modules

Article-No.	Type	Description
Cable set 1.300 mm, PQC single-phase, 12 control contacts		
34-72109	STR-PQC 650-1300	Basic version (incl. controller 38-00400)
34-72128	STR-PQC 652-1300	With Modbus RTU (incl. controller 38-00404)
34-72130	STR-PQC 651-1300	With temperature I/O (incl. controller 38-00403)
34-72132	STR-PQC 653-1300	With Modbus RTU and temperature I/O (incl. controller 38-00405)
Cable set 1.300 mm, PQC single-phase, 6 control contacts		
34-72108	STR-PQC 620-1300	Basic version (incl. controller 38-00402)
34-72127	STR-PQC 622-1300	With Modbus RTU (incl. controller 38-00417)
34-72129	STR-PQC 621-1300	With temperature I/O (incl. controller 38-00416)
34-72131	STR-PQC 623-1300	With Modbus RTU and temperature I/O (incl. controller 38-00418)
Cable set 2.400 mm, PQC single-phase, 12 control contacts		
34-72111	STR-PQC 650-2400	Basic version (incl. relay 38-00400)
34-72134	STR-PQC 652-2400	With Modbus RTU (incl. controller 38-00404)
34-72136	STR-PQC 651-2400	With temperature I/O (incl. controller 38-00403)
34-72138	STR-PQC 653-2400	With Modbus RTU and temperature I/O (incl. controller 38-00405)

Article-No.	Type	Description
Cable set 2.400 mm, PQC single-phase, 6 control contacts		
34-72110	STR-PQC 620-2400	Basic version (incl. controller 38-00402)
34-72133	STR-PQC 622-2400	With Modbus RTU (incl. controller 38-00417)
34-72135	STR-PQC 621-2400	With temperature I/O (incl. controller 38-00416)
34-72137	STR-PQC 623-2400	With Modbus RTU and temperature I/O (incl. controller 38-00418)
Additional Power Factor Control Relay packages:		
34-72044	STR-RM 2012 12D	RM 2012 12D, control terminal strip, cable length: 1.15 m
34-72155	STR-PQC 652-1300 with BU-PROFIBUS DP	PQC 652 with bus converter PROFIBUS DP, cable length 1.3 m
34-80056	SBS-PS 24 VDC-0.63 A	Power supply unit (24 VDC / 0.63 A output) for actuating the electronic switches
Mounting plates for control terminal strip, control transformers etc.		
34-80069	SB-C6	For cabinets width 600 mm
34-80053	SB-C8	For cabinets width 800 mm

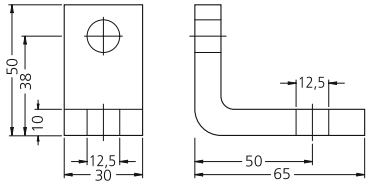


Dimensional drawing SB-C6 with module rail (here: MT-C6-Rittal TS8604)



Dimensional drawing SB-C8 with module rail (here: MT-C8-Rittal TS8804)

Article-No.	Type	Description
Ventilation packages, consisting of:		
34-80096	LP–LSFC-I IP20-6/1	1 pc roof vent, installation in cabinet, 1 pc air inlet filter and thermostat
34-80285	LP-LSFC-A IP43-7/1	1 pc roof vent, installation outside of the cabinet, 1 pc air inlet filter and thermostat
34-80379	LP-LSFC-IP54	1 pc door vent, installation in cabinet, 1 pc air inlet filter and thermostat
Bus connection bracket		
34-80006	CU AW-1	Busbar bracket set for cable connection, complete with fixing screws and protection against accidential contact
34-80114	Final cover complete	Protection against accidental contact (module packages do not include CU-AW 1)



Dimensional drawing CU AW-1

Ordering examples

Example of mounting plates without detuning for installation in enclosure systems supplied by others

Selection criteria:

- **1. Selecting the modules:**

The mounting plates are selected according to:

— Required corrective power (max. 200 kvar)
— Required stage corrective power,
smallest required stage corrective power

e.g. 150 kvar total corrective power with 12.5 kvar stages

Typical type specification: LSP 150–12,5–212–400/440–3
see page 71

- **2. Selecting the required accessories:**

e.g.:
— Control cable set (with the required length)
(e.g. RKS-PQC 6-1300, with 1500 mm total length)
see page 92

- **3. Selecting the required reactive power control relay:**

The control relay is selected to suit the number of switchable stages and additional functions required:
— up to 6 switchable stages: 6-stage control relay
(e.g. PQC 0602401-0)
— up to 12 switchable stages: 12-stage control relay
(e.g. PQC 1202401-0)
see page 92

Ordering example 1

- **Description:**

Example: Installation of mounting plate without detuning, with the following specifications, in an existing sheet steel cabinet:

— **Total corrective power: 150 kvar, 400 V, 50 Hz**
Stage corrective power: 12.5 kvar
— **6-stage reactive power control relay**
— **Control cable set 1300 mm long (1500 mm total length)**

Article-No.	Description	Quantity
34-57063	LSP 150-12,5-212-400/440-3	1
92-11303	Control cable set: RKS-PQC 6-1300	1
38-00402	Control relay: PQC 0602401-0	1

Ordering example 2

- **Description:**

Example: Installation of mounting plate without detuning, with the following specifications, in an existing sheet steel cabinet:

— **Total corrective power: 43.75 kvar, 400 V, 50 Hz**
Stage corrective power: 6.25 kvar
— **6-stage reactive power control relay**
— **Control cable set 1300 mm long (1500 mm total length)**

Article-No.	Description	Quantity
34-57535	LSPN 43,75-6,25-111-400/440–4	1
92-11303	Control cable set: RKS-PQC 6-1300	1
38-00402	Control relay: PQC 0602401-0	1

Ordering examples

Example of module packages without detuning for installation in enclosure systems supplied by others

Selection criteria:

- **1. Selecting the modules:**

The modules are selected according to:
— Required number and size of the stages, smallest required stage corrective power
— The planned enclosure system with its available dimensions

e.g. 100 kvar with 2 x 50 kvar stages and 50 kvar with 2 x 25 kvar stages in an enclosure 800 mm wide and 400 mm deep

Typical type specification: C84C 100–50–2–400/440–84 and C84C 50-25-2-400/440–84
see page 82

- **2. Selecting the mounting rail sets:**

The mounting rail sets are selected to suit the existing or planned enclosure system (e.g. Rittal TS 8).
One mounting rail set is required per module. An additional set is needed for the mounting plate (control terminal strips).

Typical type specification: Rittal TS 8 … W × D 800 x 400 mm
see page 95

- **3. Selecting the required accessories:**

e.g.:
— Connection bracket set (e.g. CU AW–1)
— Ventilation set (e.g. LP-LSFC-A IP43-7/1)
— Mounting plates for control terminal strips (e.g. SB–C8)
see page 93

- **4. Selecting the required control relay package:**

The control relay package is selected to suit the number of switchable stages required:
— up to 6 switchable stages: 6-stage control relay package (e.g. STR–PQC 06)
— Up to 12 switchable stages: 12-stage control relay package (e.g. STR–PQC 12)
see page 92

Ordering example 1

- **Description:**

Example: Assembly of a power factor correction system, without detuning, with the following specifications, in a sheet steel cabinet:
— **Total corrective power: 250 kvar, 400 V, 50 Hz**
Stage corrective power: 2 × 25 kvar and 4 × 50 kvar
— **6-stage reactive power control relay**
— **Rittal TS 8 baying system**

Ordering examples

Example of mounting plates, detuned, for installation in enclosure systems supplied by others

Selection criteria:

- **1. Selecting the modules:**

The mounting plates are selected according to:
— Required corrective power (max.100 kvar)
— Required stage corrective power
— Required detuning factor

e.g. 93.75 kvar total corrective power with 6.25 kvar stages and 7 % detuning factor.

Typical type specification: LSP 93,75–6,25–1111–400/440–3–P7
see page 76

- **2. Selecting the required accessories:**

e.g.:
— Control cable set (with the required length)
(e.g. RKS-PQC 6-1300)
see page 92

- **3. Selecting the required reactive power control relay:**

The control relay is selected to suit the number of switchable stages and additional functions required:
— up to 6 switchable stages: 6-stage control relay
(e.g. PQC 0602401-0)
— up to 12 switchable stages: 12-stage control relay
(e.g. PQC 1202401-0)
see page 92

Ordering example

- **Description:**

Example: Installation of a detuned mounting plate, with the following specifications, in an existing sheet steel cabinet:

— Total corrective power: 93.75 kvar, 400 V, 50 Hz
Stage corrective power: 6.25 kvar, 7 % choke factor
— 6-stage reactive power control relay
— Control cable set 1300 mm long

Article-No.	Description	Quantity
34-57728	LSP 93,75-6,25-1111-400/440-3-P7	1

Ordering examples

Example of module packages using detuned modules for installation in enclosure systems supplied by others

Selection criteria:

- **1. Selecting the modules:**

The modules are selected according to:
— Required number and size of the stages, smallest required stage corrective power
— The planned enclosure system with its available dimensions

e.g. 100 kvar with 2 x 50 kvar stages and 50 kvar with 2 x 25 kvar stages in an 800 mm wide and 400 mm deep cabinet

Typical type specification: C84D 100–50–2–400/440–84-P7 and C84D 50-25-2-400/440–84-P7
see page 86

- **2. Selecting the mounting rail sets:**

The mounting rail sets are selected to suit the existing or planned enclosure system (e.g. Rittal TS 8).
One mounting rail set is required per module. An additional set is needed for the mounting plates (control terminal strips).

Typical type specification: Rittal TS 8… W × D 800 x 400 mm
see page 95

- **3. Selecting the required accessories:**

The required accessories, e.g.
— Connection bracket set (e.g. CU AW–1)
— Ventilation set (e.g. LP-LSFC-A IP43-7/1)
— Mounting plates for control terminal strips (e.g. SB–C8)
see page 93

- **4. Selecting the required control relay package:**

The control relay package is selected to suit the number of switchable stages required:
— up to 6 switchable stages: 6-stage control relay package (e.g. STR–PQC 06)
— up to 12 switchable stages: 12-stage control relay package (e.g. STR–PQC 12)
see page 92

Ordering example 1

- **Description:**

Example: Assembly of a detuned power factor correction system with the following specifications for a sheet steel cabinet:
— **Total corrective power: 250 kvar, 400 V, 50 Hz**
Stage corrective power: 2 × 25 kvar and 4 × 50 kvar
— **6-stage reactive power control relay**
— **Rittal TS 8 baying system**

Ordering examples

Example of module packages using detuned dynamic modules, for installation in enclosure systems supplied by others Capacitor-reactor modules, wear-free and fast-acting, with electronic switching for 100 % duty cycle

Selection criteria:

- **1. Selecting the dynamic modules:**

The modules are selected according to:

— Required number and size of the stages, smallest required stage corrective power

— The planned enclosure system with its available dimensions

e.g. 100 kvar with 2 x 50 kvar stages and 50 kvar with 2 x 25 kvar in an enclosure 800 mm wide and 400 mm deep

Typical type specifications: C85D 100–50–2–400/440–85-P7-E and C84D 50-25-2-400/440–84-P7-E
see page 165

- **2. Selecting the mounting rail sets:**

The mounting rail sets are selected to suit the existing or planned enclosure system (e.g. Rittal TS 8).
One mounting rail set is required per module. An additional set is needed for the mounting plates (control terminal strips).

Typical type specification: Rittal TS 8 … W × D 800 x 500 mm
see page 95

- **3. Selecting the required accessories:**

e.g.:

— Connection bracket set (e.g. CU AW–1)

— Ventilation set (e.g. LP-LSFC-A IP43-7/1)

— Mounting plates for control terminal strips (e.g. SB–C8)

see page 93

- **4. Selecting the required control relay package:**

The control relay package is selected to suit the number of switchable stages required:

— up to 6 switchable stages: 6-stage control relay package (e.g. STR–PQC 06, or fast-acting STR-RM 2012)

— up to 12 switchable stages: 12-stage control relay package (e.g. STR–PQC 12, or fast-acting STR-RM 2012 with reaction times in the range 20 to 40 ms)

see page 92

Page 119

MCS – Modular Construction System

Page 137

Power Factor Correction Systems

Ready to connect, automatic Power Factor Correction Systems in sheet steel cabinets for wall mounting or floor installation.

- Power Range: 17.5 to 500 kvar per cabinet
- Ready for connection
- Fully automatic and intelligent Power Factor Control Relay
- Power Factor Correction Capacitors LKT dry type with four safety features

Application Recommendations

Power Factor Correction Systems are suitable for networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. High harmonic levels can overload or damage all electrical devices and machines in the network.

Nowadays networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with harmonic filter reactors (page 119 ff.).

LSK / LSKI
Power Factor Correction Systems

Ready to connect, automatic Power Factor Correction Systems in sheet steel cabinets for wall mounting. Suitable for networks without harmonic distortion.

- Power Range: 17.5 to 200 kvar per cabinet
- Compact design in sheet steel or insulated enclosures
- Ready for connection
- Fully automatic and intelligent Power Factor Control Relay
- Power Factor Correction Capacitors LKT dry type with four safety features

Application Recommendations

Power Factor Correction Systems type LSK and LSKI are a perfect solution for small and medium-sized firms and buildings.

Power Factor Correction Systems type LSK /LSKI are suitable for power factor correction in networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. High harmonic levels can overload or damage all electrical devices and machines in the network.

Today, networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with Harmonic Filter Reactors (page 119 ff.).

Power Range

Power Factor Correction System in sheet steel cabinet:

- **LSK ...-4:** 17.5 to 60 kvar
- **LSK ...-2:** 68.75 to 100 kvar
- **LSK ...-3:** 112.5 to 200 kvar

Power Factor Correction System in insulation material housing:

- **LSKI ...-4:** 17.5 to 52.5 kvar

Construction

The ready-for-connection Power Factor Correction System consists of a pre-assembled mounting plate, type LSPN or LSP and suitable sheet steel or insulated enclosures.

The cabinet contains:

- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Capacitor Switching Contactors with leading transition contact for damping of current peaks
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal trip contact for safety shutdown
- Intelligent Power Factor Control of the PQC series

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The power supply cable and the current transformer cable enter the bottom of the cabinet through a sliding gland plate and a cable clamp rail, the power supply being connected to the busbar system and the current transformer cable to the terminal strip provided.

System Expansion

An extension of the system is possible by adding LSKZ or LSKIZ extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Design	LSK Sheet steel wall cabinet LSKI Insulated wall cabinet LSK/LSKI …-4 with door left hinged LSK …-2 /…-3 with door right hinged
Rated voltage	400 V / 50 Hz
Rated voltage of capacitors	440 V / 50 Hz
Ambient temperature	–5 °C to +35 °C
Humidity	Max. 90 %, no condensation
Cabinet colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

The presence of inductive and capacitive reactances in the low voltage network means that the harmonics generated there, together with those fed in from the medium voltage network, can be amplified many times over due to resonance. Particularly in industrial networks with loads that generate harmonics, the use of conventional power factor correction systems without Harmonic Filter Reactors is not advisable. Instead, detuned systems should be installed. See the LSK-P series of Power Factor Correction Systems.

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

FRAKO systems are designed for connecting 5 core cables. If a 4-core cable is used, a jumper must be fitted to connect PE and N, or a control transformer must be installed.

LSFC
Power Factor Correction Systems

Ready to connect, automatic Power Factor Correction Systems in sheet steel cabinets for floor installation. Suitable for networks without harmonic distortion.

- Power Range: 100 to 500 kvar
- Modular construction in freestanding sheet steel cabinet
- Ready for connection
- Fully automatic and intelligent Power Factor Control Relay
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations
Power Factor Correction Systems, type LSFC are suitable for compensation in networks without harmonic distortion.

Attention: Even low harmonic levels can be amplified by network resonances. For Power Factor Correction Systems with a power >150 kvar this effect will amplify even more. This is because the PFC-System, together with the transformer, generates resonance frequencies in the network, which are within the range of the low frequency, energy-intensive harmonics. High harmonic levels can overload or damage all electrical devices and machines in the network.

Today, networks without harmonic distortion are quite rare. Therefore we generally recommend installing fixed capacitors with Harmonic Filter Reactors (page 119 ff.).

Power Range
Power Factor Correction System in sheet steel cabinet:
- 100 to 500 kvar

Construction
The ready-for-connection Power Factor Correction System consists of pre-assembled capacitor-reactor modules type C64C… and the suitable sheet steel cabinet.

The cabinet contains:
- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Capacitor Switching Contactors with leading transition contact for damping of current peaks
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal trip contact for safety shutdown
- Intelligent Power Factor Control Relay of the PQC series

Application / Installation
The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations
For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection
The power supply cable and the current transformer cable enter the bottom of the cabinet through a sliding gland plate and a cable clamp rail, the power supply being connected to the busbar system and the current transformer cable to the terminal strip provided.

System Expansion
An extension of the system is possible by adding LSFCZ extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Design	Sheet steel cabinet with door right hinged
Rated voltage	400 V/50 Hz
Rated voltage of capacitors	440 V/50 Hz
Ambient temperature	–5 °C to +40 °C
Humidity	Max. 90 %, no condensation
Cabinet colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes
The presence of inductive and capacitive reactances in the low voltage network means that the harmonics generated there, together with those fed in from the medium voltage network, can be amplified many times over due to resonance. Particularly in industrial networks with loads that generate harmonics, the use of conventional power factor correction systems without Harmonic Filter Reactors is not advisable. Instead, detuned systems should be installed. See the LSFC-P series of Power Factor Correction Systems.

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

FRAKO systems are designed for connecting 5 core cables. If a 4-core cable is used, a jumper must be fitted to connect PE and N, or a control transformer must be installed.

LSK-P
Power Factor Correction Systems – detuned

Ready to connect, automatic Power Factor Correction Systems in sheet steel cabinets for wall mounting. Detuned – for low-voltage networks with harmonic content.

- Power Range: 17.5 to 100 kvar
- Compact design in sheet steel cabinet for wall-mounting
- Ready for connection
- Fully automatic and intelligent Power Factor Control Relay
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Power Factor Correction Systems type LSK-P are a perfect solution for small and medium-sized firms and buildings and also for power factor correction at sub-distribution boards.

They are suitable for supply networks with harmonic distortion according to EN 61000-2-4 class 2. They are available as follows:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

Power Range

Power Factor Correction System in sheet steel cabinet:

- 17.5 to 100 kvar

Construction

The ready-for-connection Power Factor Correction System consists of a pre-assembled mounting plate, type LSP-P and the suitable sheet steel cabinet.

The LSK-P contains:

- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Heavy duty Capacitor Switching Contactors
- Harmonic Filter Reactors with overtemperature switch
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal trip contact for safety shutdown
- Intelligent Power Factor Control Relay of the PQC series

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The power cable and the CT cable enter the bottom of the cabinet through cable glands or rubber sleeves. The power cable is connected directly to the NH fuse base, the cable from the current transformer to the terminal strip.

System Expansion

An extension of the system is possible by adding LSKZ-P extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Design	Sheet steel wall cabinet with door right hinged
Rated voltage	400 V/50 Hz
Rated voltage of capacitors	440 V/50 Hz
Ambient temperature	–5 °C to +35 °C
Humidity	Max. 90 %, no condensation
Cabinet colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

FRAKO systems are designed for connecting 5 core cables. If a 4-core cable is used, a jumper must be fitted to connect PE and N, or a control transformer must be installed.

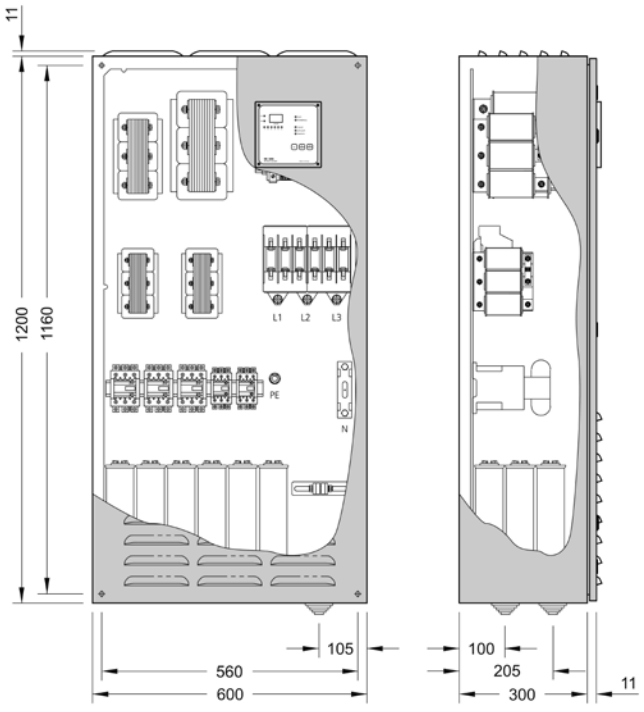
Options and accessories for Power Factor Correction Systems type LSK-P 400V, 50 Hz

Article-No.	Type	Description
Options, mounted and wired ready for operation		
S34-5540	-650- (instead of -620)	Power Factor Control Relay PQC-12/1 instead of PQC-6/1
S34-5508	-Li	Cabinet door with door left hinged
S34-0060	-SO	Special painting outside (RAL-Scale)
S34-5032	-54	Ingress protection IP54
S34-5511	-S131	With connection at the top instead of fuse base ≤ 60 kvar = 1 pc. > 60 kvar = 2 pcs
S34-0103	-LSA	Switch disconnector* three-pole, 160 A in cable entry compartment ≤ 60 kvar
S34-0104	-LSA	Switch disconnector* three-pole, 160 A in cable entry compartment > 60 kvar
S34-0039	-S56	Control switch (On/Off) fitted and connected (requirement for power factor correction systems installed in Switzerland)
S34-5535	-S19	Control phase + N via a protective motor switch (option for France)
S34-5537	-S119 (+ Power)	Control transformer set 315 VA incl. primary and secondary fuses
S34-5073	-SO (+ Description)	Voltage meter with switch
S34-0040	-S66	Summation current transformer 5+5/5A
S34-0081	-S66	Summation current transformer 5+5+5/5A
Accessories, loose		
34-80021	WB LSK-10	Wall distance assembly set 10 mm
34-80018	WB LSK-40	Wall distance assembly set 40 mm
34-80194	KR-LSK-3-200	Fixed base (Height = 200 mm; Depth = 300 mm)

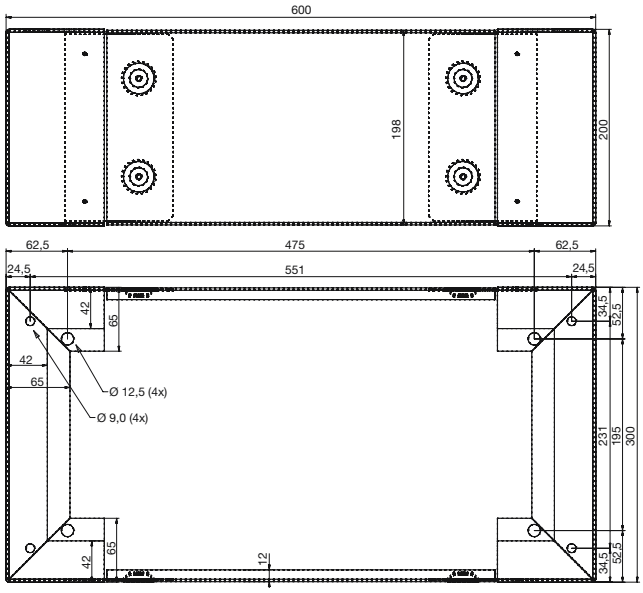
*) Switch disconnector can be operated from the outside

Other options and accessories on request

Dimensions



Dimensional drawing LSK-P (17.5 bis 100 kvar)



Dimensional drawing base LSK-3

All dimensions in mm

LSFC-P
Power Factor Correction Systems – detuned

Ready to connect, automatic Power Factor Correction Systems in sheet steel cabinets for floor installation. Detuned – for low-voltage networks with harmonic content.

- Power Range: 75 to 500 kvar
- Modular construction in freestanding sheet steel cabinet
- Ready for connection
- Fully automatic and intelligent Power Factor Control Relay
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Power Factor Correction Systems, type LSFC-P are suitable for compensation in networks with harmonic distortion according to EN 61000-2-4 class 2.

They are available as follows:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P5	p = 5.67 %	210 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

Power Range

Power Factor Correction System in sheet steel cabinet:

- 75 to 500 kvar

Design

The ready-for-connection Power Factor Correction System consists of pre-assembled capacitor-reactor modules, type C6XD… or C8XD… and the suitable sheet steel cabinet.

The cabinet contains:

- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Heavy duty Capacitor Switching Contactors
- Harmonic Filter Reactors with overtemperature switch
- Fuse links, 3-pole, size NH00
- Control terminal strip with control fuse and thermal trip contact for safety shutdown
- Intelligent Power Factor Control Relay of the PQC series
- Thermostatically controlled motor fan

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The power supply cable and the current transformer cable enter the bottom of the cabinet through a sliding gland plate and a cable clamp rail, the power supply being connected to the busbar system and the current transformer cable to the terminal strip provided.

System Expansion

An extension of the system is possible by adding LSFCZ-P extension units. This extension unit will be integrated in the existing control circuit via the control cable (supplied with the extension unit).

Technical Data

Design	Sheet steel cabinet with door right hinged
Rated voltage	400 V/50 Hz
Rated voltage of capacitors	440 V/50 Hz
Ambient temperature	–5 °C to +40 °C
Humidity	Max. 90 %, no condensation
Cabinet colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

FRAKO systems are designed for connecting 5 core cables. If a 4-core cable is used, a jumper must be fitted to connect PE and N, or a control transformer must be installed.

MCS
Modular Construction System

The FRAKO Modular Construction System MCS is a modular system, with which a skilled switchgear manufacturer can design a technically high-quality Power Factor Correction System. However, knowing our “Manual of Power Factor Correction” is absolutely important to design such a Power Factor Correction System. In this manual one will find all the necessary planning information as well as all the important technical data. You can download the manual free of charge from our website or order it free of charge from your local FRAKO partner.

The FRAKO MCS consists of selected and tested components for designing Power Factor Correction Systems. FRAKO uses these components for its own production of Power Factor Correction Systems in Teningen. This way the skilled switchgear manufacturer can gain from an experience and application know-how of more than 85 years.

The FRAKO Modular Construction System contains the following components:

- Power Factor Control Relay
- Control terminal strip for Power Factor Control Relay and Power Factor Correction Systems
- Control wires
- Busbar holders
- NH-fuse base and NH-isolating switch
- NH-fuse links
- Contactors
- Discharge Reactors
- Harmonic Filter Reactors
- Power Factor Correction Capacitors
- Thyristor switches

Technical Data

For the design of Power Factor Correction Systems **FRAKO** recommends to use the below-mentioned devices and fuses.

- **Busbar Holders**

The busbar holders have a centre to centre distance of 60 mm to the single copper busbars. The copper busbars have either dimensions of 30 × 5 mm or 30 × 10 mm, depending on the total power of the Power Factor Correction System.

Article-No.	Description
34-80375	Busbar holder with a bar centre to centre distance of 60 mm, Cu 30 x 10 mm

34-80375

- **NH-Isolating Switch**

NH-isolating switch size 00. Applicable up to a mains rated voltage of 690 V AC. Available as NH-bus-mounting isolating switches for direct mounting on a busbar system with 60 mm bar centre to centre distance or for mounting on mounting plates.

Article-No.	Description
34-80374	NH-isolating switch for plate mounting, size 00, 160 A, 690 V AC
34-80282	NH-isolating switch for plate mounting, size 00, 160 A, 690 V AC
34-80281	NH-bus-mounting isolating switch, size 00, 160 A, 690 V AC

34-80281

34-80282

34-80374

- **NH-Fuse Holders**

To assemble reasonably priced Power Factor Correction Systems, NH-fuse holders size 00 up to a mains rated voltage of 690 V AC, can be used. These NH-fuse holders are also available as bus-mounting fuse holders for direct mounting on a busbar system with a bar centre to centre distance of 60 mm, or for mounting on mounting plates.

Article-No.	Description
34-80372	NH-bus-mounting fuse base, size 00, 160 A, 690 V AC
34-80280	NH-bus-mounting fuse base, size 00, 160 A, 690 V AC
34-80272	NH-fuse base for plate mounting, size 00, 160 A, 690 V AC
34-80283	NH-fuse base for plate mounting, size 00, 160 A, 690 V AC
34-80373	Cover for NH-fuses with nonisolated grip lugs

34-80283

34-80280

34-80272

34-80372

When operating the above mentioned devices, please note that special attention has to be paid to the corresponding safety regulations, especially the regulations concerning accident prevention!

- **Fuses**

Article-No.	Description
90-00289	Cylindrical fuse 10x38 6 A 500 V (for PQC)
90-00367	Cylindrical fuse 14x51 6 A 690 V (for PQC)
90-00229	Fuse link with nonisolated metal grip lugs 25 A, 500 V AC
90-00062	Fuse link with isolated metal grip lugs 25 A, 500 V AC
90-00131	Fuse link with nonisolated metal grip lugs 35 A, 500 V AC
90-00056	Fuse link with isolated metal grip lugs 35 A, 500 V AC
90-00130	Fuse link with nonisolated metal grip lugs 50 A, 500 V AC
90-00055	Fuse link with isolated metal grip lugs 50 A, 500 V AC
90-00125	Fuse link with nonisolated metal grip lugs 63 A, 500 V AC
90-00054	Fuse link with isolated metal grip lugs 63 A, 500 V AC
90-00124	Fuse link with nonisolated metal grip lugs 80 A, 500 V AC
90-00053	Fuse link with isolated metal grip lugs 80 A, 500 V AC
90-00126	Fuse link with nonisolated metal grip lugs 100 A, 500 V AC
90-00052	Fuse link with isolated metal grip lugs 100 A, 500 V AC
90-00051	Fuse link with isolated metal grip lugs 125 A, 500 V AC
90-00050	Fuse link with isolated metal grip lugs 160 A, 500 V AC
90-00230	Fuse link with isolated metal grip lugs 35 A, 690 V AC
90-00132	Fuse link with isolated metal grip lugs 40 A, 690 V AC
90-00111	Fuse link with isolated metal grip lugs 50 A, 690 V AC
90-00133	Fuse link with isolated metal grip lugs 63 A, 690 V AC

For options and accessory equipment for PFC Systems, module rails, ordering examples and dimensional drawings see page 91 ff.

Technical Annex

Supply Lead Cross Sections

Page 143

Supply lead cross sections for Power Factor Correction Systems

Connection, fuses and supply lead cross sections
When installation work is carried out, the regulations VDE 0100 and VDE 0105, of the German Association for Electrical, Electronic & Information Technologies, the general guidelines of the BDEW (German Association of Energy and Water Industries) and the conditions of supply of the utility company concerned must be complied with. EN 60831-1 resp. VDE 0560 Part 46 state that capacitor units must be suitable for a continuous r.m.s. current of 1.3 times the current that is drawn at the sinusoidal rated voltage and rated frequency. If the capacitance tolerance of 1.1 × C_N is also taken into account, the maximum allowable current can reach values of up to 1.43 × I_N. This overload capability together with the high in-rush current to the capacitors must be taken into account when designing protective devices and cable cross sections.

Note! FRAKO power capacitors offer a current load capacity of 1.5 up to 2.7 × I_N at rated voltage.

FRAKO Power Factor Correction Capacitors with terminal base ensure a maintenance free electrical contact with the connecting wire by using the patented spring clamp technology! The terminal base provides protection against accidental contact! The connecting wires have to be flexible in order not to hinder the proper function of the overpressure disconnector.

Please note that the current transformer, needed for the operation of the system, is not included with delivery.

Rated mains voltage: 400 V / 50 Hz

Dynamic Power Factor Correction Systems

Dynamic Power Factor Correction Systems in sheet steel cabinets

Page 159

Dynamic Capacitor Modules – detuned

Page 163

LSFC-E
Dynamic Power Factor Correction Systems in sheet steel cabinets

The SBS dynamic Power Factor Correction System from FRAKO switches without delay at the next voltage zero at the thyristor switch and thus avoids any peak inrush current. Wear-free switching. The solid-state switches function without any problems even when the capacitors are not discharged and without causing peak inrush currents.

Description
The FRAKO LSFC-E Dynamic Power Factor Correction System provides switching of the capacitor stages with complete elimination of contact wear and network perturbation.

Together with the RM 2012 fast-acting control relay and/or the **SBS** Dynamic Power Factor Corection Unit, systems of the LSFC–E series are used in low voltage networks:
- with low short-circuit capacities where disruptions occur when large consumers are switched on
- where a fast-acting Power Factor Correction System and a large number of switching cycles are necessary
- where Power Factor Correction is required for only a few supply cycles at a time

Power Range
LSFC-E: 100 to 300 kvar

Construction
Sheet steel cabinet with door and lifting lugs. Ventilation via air inlet filter in the cabinet door and electric fan. Modular construction combining up to three type C-E capacitor-reactor modules.
The components comprise:
- Self-healing LKT type power capacitors with low loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- Electronic switching assemblies designed for 100 % operating time
- Fuselinks, 3-pole, size NH00
- Busbar system
- Control terminal strip with control circuit fuse and thermal switch
- The basic units are equipped with an RM 9606 Reactive Power Control Relay with reaction times about 5 seconds. All systems can also be supplied with EMR 1100 S, EMR 1100 or RM 2012 Control Relays
- Fan, air inlet filter and temperature controller

1

- Low-loss Harmonic Filter Reactors with thermal trip switch for the following series resonance frequencies:

Version	Resonance frequency	Detuning factor	For mains with utility audio frequency [1]
P1	134 Hz	p = 14 %	≥ 166 Hz
P8	177 Hz	p = 8 %	≥ 217 Hz
P7	189 Hz	p = 7 %	≥ 228 Hz

[1] Utility company specifications inconsistent with the above must be taken into account.
In addition, also note version specifications given in our Manual of Power Factor Correction.

Installation Site

The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations

For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Connection

The power supply cable enters the bottom of the cabinet through a sliding gland plate and a cable clamp rail, and is connected directly to the busbar system. The control cables are connected to the terminal strip provided for them.

System Expansion

The easy-to-maintain design simplifies the task of extending existing installations with less than three modules in one cabinet at a later date. It is also always possible to extend existing systems by installing an additional cabinet, type LSFCZ-E (extension unit without control relays).

Accessories / Options

- RM 2012 fast-acting Reactive Power Control Relay with reaction times of 20 to 40 ms (order code -212 instead of -606; see chapter Power Factor Control Relays) instead of a PQC Relay
- SBS control package with reaction times of 3 to 24 ms (order code -SBS) installed and connected, consisting of:
  - AC adapter
  - 16 digital inputs wired to terminals
  - 14 digital outputs
  - Non-volatile program memory
  - Programming according to prior project work
- SBS extension module for an additional 16 digital inputs wired to terminals (order code -SBS2)
- LV HBC switch-disconnectors instead of LV HBC fuselinks for group overcurrent protection
- Customized colour to specified RAL standard
- Additional floor standing base (height: 100 or 200 mm), not fitted
- System installation in cabinet provided free issue by customer (types on request)

Technical Data

Enclosure	Sheet steel cabinet with internal fan at top, door right hinged
Rated voltage	400 V/50 Hz
Rated capacitor voltage	440 V / 50 Hz (-P8, -P7, -P5) 480 V / 50 Hz (-P1)
Ingress protection	IP20 or IP41 per EN 60529
Ambient temperature	–5 °C to +40 °C as per VDE 0660 Part 500
Relative humidity	Max. 90 %, no condensation
Discharge	With discharge resistors acc. to VDE 0560 Part 46
Cabinet colour	RAL 7035
Standards	EN 60831-1 and -2 IEC 60831-1 and -2 EN 61921 IEC 61921 EN 61439-1 and -2 IEC 61439-1 and 2

Important Notes

For further information on power factor correction and harmonics please refer to our “Manual of Power Factor Correction”.

FRAKO systems are designed for connecting 5 core cables. If a 4-core cable is used, a jumper must be fitted to connect PE and N, or a control transformer must be installed.

Dynamic Capacitor Modules – detuned

FRAKO's dynamic Capacitor Modules are suitable for installation in standard switchgear systems. Avoiding of inrush current peaks through instantaneous zero-cross switching – therefore free of wear switching even when capacitors are not discharged.

- Power Range: 25 to 100 kvar per module
- Compact design - up to 300 kvar per cabinet
- Ideal for mounting in all common switchgear systems
- Easy and quick mounting with multifunctional rails
- Power Factor Correction Capacitors LKT dry-type with four safety features

Application Recommendations

Capacitor modules type C84D-P-E, C85D-P-E and C86D-P-E are suitable for installation in standard switchgear systems. Additional mounting rails for all common switchgear systems:

- W = 800 mm, T = 400, 500, 600 mm

allow an easy and quick installation of complex Power Factor Correction Systems.

Suitable for supply networks with harmonic distortion according to EN 61000-2-4 class 2.

Available in the following versions:

Version	Detuning factor	Resonance frequency
P1	p = 14 %	134 Hz
P5	p = 5.67 %	210 Hz
P7	p = 7 %	189 Hz
P8	p = 8 %	177 Hz

Power Range
Compact compensation module ideal for mounting in switchgear systems:
- 25 to 100 kvar

Construction
Sheet steel chassis with mounted power capacitors, electronic switches for 100 % duty cycle and fuses - ideal for mounting in all common switchgear systems.

The module consists of:
- Self-healing LKT type power capacitors with low-loss self-healing dielectric made from segmented metallised polypropylene film. Filled with a PCB-free filler. With discharge resistors, as per EN 60831-1 and -2 as well as IEC 60831-1 and -2
- With electronic switches for 100 % duty cycle
- Low-loss Harmonic Filter Reactors with temperature switches
- Busbar system with bus-mounting fuse base, 3-pole, size NH 00
- Control circuit with female connector (wired connector for connection with terminal strip incl.)

Installation Site
The place of installation must comply with the requirements of the ingress protection and ambient temperature concerned.

Regulations
For installation and connection of Power Factor Correction Capacitors in Germany the following regulations must be complied with: VDE 0100, VDE 0105, VDE 0560 Part 46 and VDE 0106 Part 100 (German Association of Electrical Engineers). In other countries the equivalent local regulations must be followed.

Installation
Specific module rails are required for installation in the switchgear system. Those module rails are available for all common switchgear systems and can be supplied as an optional accessory.

Connection
The network connection can be done either vertically or horizontally. For the horizontal connection one has to connect the cables equipped with the cable lugs to the busbar by using the M12 screws.

A bus connection bracket CU AW-1 for vertical connection is available as an option.

Additional modules can be connected directly via the busbar system.

Technical Data

Passive Filters

2

Passive Filter Systems in sheet steel cabinets

Page 167

LSFC-P4
Passive Filter Systems in sheet steel cabinets

Passive Filter Systems in sheet steel cabinets for low voltage networks heavily contaminated with harmonics but with a relatively low reactive power demand. Customized filter circuits with intelligent control systems are a reliable means of reducing current and voltage harmonics and offer an excellent cost-benefit ratio.

Passive Filter Systems for low voltage networks heavily contaminated with harmonics but needing relatively little reactive power.

- Power range up to 460 A_{rms} per cabinet unit
- Modular construction in freestanding sheet steel cabinet
- LKT power capacitors with dry design and fourfold safety features
- Highly linear filter reactors
- Tuning frequency (detuning factor) individually adjustable for specific network
- Control and self-monitoring system individually configurable via harmonic voltage and filter current, making measurement by external current transformer unnecessary
- Permanent network monitoring by continuous network analysis
- Complete system ready to install

The essential differences between a conventional Power Factor Correction System and a Passive Filter System:

Power Factor Correction System (detuning factor 7 % to 14 %):

- Installation where a large reactive power demand exists
  but
- Harmonic levels are ‘normal’
  (as per EN 50160 or EN 61000-2-4, Class 2)
- Stages switched in and out depending on power factor (cos φ)

Passive Filter System (adjusted detuning factor):

- Installation where harmonic levels are ‘high’
  (as per EN 61000-2-4, Class 3 or higher)
  but
- Reactive power demand is low
- Stages switched in and out depending on voltage and current harmonic levels

Passive Filters

Passive Filter System in sheet steel cabinets

Design and operating principle:

The power circuit of the Passive Filter System consists of power capacitors in series with highly linear filter reactors, the power rating and series resonant frequency of the individual filter circuit stages being carefully adjusted and monitored to suit the characteristics of the particular network.

The system includes the following components:

- Self-healing LKT-type power capacitors with low-loss dielectric – made from segmented metallised polypropylene film – overpressure disconnection, solder-free design and PCB-free filler material;
- LKT series with discharge resistors to EN 60831-1 and -2 / IEC 60831-1 and -2
- Heavy duty capacitor contactors with precharging contacts
- Highly linear filter reactors with thermal trip switch
- Fuse links, 3-pole, size NH00
- Control terminal strip with control circuit fuse and thermal trip contact
- EM-PQ 2300 Power Quality Analyzer as intelligent control unit
- Thermostat-controlled electric cooling fan or natural ventilation

The capacitor stages are switched in by the control unit according to appropriate voltage parameters, such as:

- The levels of individual harmonics or
- The THDv (geometric sum of all voltage harmonics)

The capacitor stages are switched out according to current parameters measured in the filter system, such as:

- The levels of individual harmonics or
- The THDi (geometric sum of all current harmonics)

The control unit is also able to monitor the network for compliance with the relevant power quality standards and send an alarm signal via an Ethernet interface if the monitored parameters go beyond set limits!

Options:

- Power capacitors with up to 909 V overvoltage capacity (continuous)
- Design with modules tuned for several different harmonics — with interlock circuit and monitoring for reliable operation of the complete system
- Compensation circuits for the identification and monitoring of unbalance
- Automatic resonance detuning
- Installation possible in a wide variety of cabinet systems

All dimensions in mm

Active Filters

OSF EZ-Series, OSFS
Active Filters

Active harmonic filters for three-phase low voltage networks with a neutral conductor for the compensation of harmonic currents up to the 49th harmonic, the correction of reactive power at the fundamental frequency and for balancing loads. Available in free-standing modular or compact cabinets, also available in cabinets for wall assembly.

A host of problems...

The quality of a power supply is reduced considerably by loads that generate harmonics. These can cause electronically controlled devices to fail, break down or exhibit “inexplicable malfunction”.

- Sporadic upsets and defects in electronic control systems and devices
- Sporadic tripping of circuit breakers for no apparent reason
- Cables - especially transformers and induction motors - get too hot
- Motor power drops
- Power factor correction systems are overloaded
- The neutral conductor is overloaded
- Flicker in the supply network
- Disrupting effects on the medium voltage network

THE solution

If the operation of loads causing serious harmonics problems calls for an improvement of the network quality, FRAKO Active Filters should be installed.

The harmful effects of harmonics from single loads, load groups or a complete electrical system can be mitigated down to an acceptable degree, if not removed totally from the network.

OSF EZ-Series and OSFS Active Filters combine numerous advantages. They are top-of-the-range instruments hallmarked by extremely short reaction times and selective control up to the 50th harmonic, without current error or phase displacement. The degree of compensation and the control dynamics can be optimized to suit local conditions.

In addition to harmonics compensation, these filters are also suitable for extremely fast control of fundamental-frequency reactive power and for balancing asymmetrical loads. This also reduces the amount of flicker in the network.

Active Filters

OSF EZ-Series, OSFS

Essential operating principle of Active Filters

OSF EZ-Series and OSFS Active Filters are operated in parallel with the loads that generate the harmonics.
The Active Filter analyses the harmonic current caused by nonlinear loads and supplies a compensating current in phase opposition, either over the entire spectrum or with only selected harmonics targeted. The harmonic currents are therefore completely neutralized at the point of connection.

The number, size and location in the circuit of Active Filters depend on the local harmonic spectrum and the specific duties.

OSF EZ-Series
Active Filters

OSF EZ-Series – a highly dynamic Active Filter
The OSF EZ-Series offers a state-of-the-art Active Filter with resonance detection and web server functionality. The module-based solution is scalable in I_N = 60 A steps. The OSF EZ-Series is certified according to CE and available with 3- and 4-wire modules.

The OSF EZ-Series range

— **AS** **Modular cabinet:**
Freestanding cabinet with up to 5 modules

— **WS** **Cabinet for wall assembly:**
With up to two modules

— **KS** **Compact cabinet:**
With up to two modules

— **3** **3-wire:**
For compensating three phases without a neutral conductor

— **4** **4-wire:**
For compensating three phases and the neutral conductor

Options:
- higher-level controller

Characteristics:
- Dynamic current compensation up to the 49th harmonic
- Module-based, scalable in I_N= 60 A steps
- 4-wire and 3-wire solutions
- Selective harmonic compensation
- Compensation level can be adjusted individually for each harmonic
- Detection of resonances and guard function
- Flicker compensation
- Dynamic inductive and capacitive power factor correction
- Higher-level control of several units with FRAKO Power Quality Management integration
- Closed-loop or open-loop operation
- Low-loss 3-level IGBT inverter technology with d.c. link

Superior Control

Superior Control enables the user to ensure that an EZ-Series filter always operates at its best, giving a clear overview of the supply network and optimum loading of the installations.
The higher-level control and visualization system allows the system to adapt as best as possible to local conditions and all external factors. From the display of higher-level parameters, and alarms when variables go outside set limits, to active intervention by the control system – for this, data from other devices, systems or sensors, for example via Modbus TCP, can also be acquired and processed.
In addition, data can be transferred via OPC UA to other networks, such as building control or ERP systems.
The hardware and software installed for Superior Control offers all the prerequisites for an upgrade to the Supervision Service whenever desired. The Supervision Service is an all-inclusive service package for harmonic filter systems that offers peace of mind for the user. Please contact us; we would be very happy to demonstrate how we can support your maintenance and operation to the best of our ability.

Technical Data

OSF EZ-Series (3-wire, compact cabinet, air-cooled), 400 V

Type		OSF EZ-Series 60-400-3-KS	OSF EZ-Series 120-400-3-KS
Article-No.		39-22510	39-22512
Power rating		42 kVA	83 kVA
Compensating current		60 A	120 A
Rated voltage		200 V - 480 V (+/- 10 %)	
Supply frequency		47 - 63 Hz	
Number of phases		3-wire and PE	
Phase connections		3-wire without neutral conductor (TT, TN-C, TN-S, TN-C-S)	
Harmonics compensation		individually up to the 49th order	
Switching frequency		24 kHz	
Max. current		Limited to nominal current	
Current transformer		100:1 up to 2500:1 adjustable in 1 A steps	
Reactive power compensation cos ϕ		-0.7 up to +0.7	
Compensation of unbalance		60 A per phase/per module	
Parallel operation		up to 2 OSF EZ-Series filter cabinets	
Response time		21 µs	
Controller topology		Digital with FFT	
Topology		3-Level IGBT	
Power loss	Standby [W]	50 per module (~ 0.1 %)	
	at max. reactive current [W]	450 per module (~ 1 %)	
	at max. harmonic current [W]	900 per module (~ 2.1 %)	
Max. required airflow		360 m³/h per module	
Overload current		2.5 x I_N for a maximum of 10 ms	
Noise level (1 m)		< 65 db(A)	
Altitude		2 000 m without derating	
Ambient conditions as per (EN 50178)		Relative humidity up to < 95 % non-condensing, PCB are coated Temperature: Storage -25 °C up to +55 °C, 1K4 and 1K3	
Operating temperature		-10 °C to +45 °C full performance, +45 °C to +55 °C derating	
Dimensions (W x H x D) [mm]		625 x 1 225 x 264	625 x 1 225 x 520
Weight [kg]		130	207
Ingress protection		IP54	
Electromagnetic compatibility (EMC)		EN 61000-6-2, EN 61000-6-4, EN 61800-3 (C2)	
Safety		EN 50178, IEC 62477-1, EN 61800-3 class C2	
Conformity		CE	
Interfaces		Web server, Modbus	

Technical Data

OSF EZ-Series (4-wire, compact cabinet, air-cooled), 400 V

Type		OSF EZ-Series 60-400-4-KS	OSF EZ-Series 120-400-4-KS
Article-No.		39-22511	39-22513
Power rating		42 kVA	83 kVA
Compensating current		60 A	120 A
Compensating current in neutral conductor		180 A	360 A
Rated voltage		200 V - 415 V (+/- 10 %)	
Supply frequency		47 - 63 Hz	
Number of phases		3-wire, neutral conductor and PE	
Phase connections		3-wire with neutral conductor (TT, TN-C, TN-S, TN-C-S)	
Harmonics compensation		individually up to the 49th order	
Switching frequency		24 kHz	
Max. current		Limited to nominal current	
Current transformer		100:1 up to 2500:1 adjustable in 1 A steps

OSFS
Active Filters

OSFS – The highly dynamic Active Filter
OSFS units encompass a broad range of state-of-the-art Active Filters with a web server function. The product range is characterized in particular by its variety of options for high-power applications plus a large selection of 690 V units and a special filter.

The OSFS range

- **– F** **Fixed-rating unit:**
  For wall mounting
- **– FS** **Fixed-rating unit:**
  In freestanding cabinet
- **– M** **Modular unit:**
  In freestanding cabinet with up to 3 modules per cabinet
- **– W** **Water cooling:**
  Modular unit in freestanding cabinet, water-cooled
- **– V** **Voltage-controlled:**
  Voltage-controlled Active Filter
- **– UL** UL certificate
  - **— 3** **3-wire:**
    For compensating three phases without a neutral conductor
  - **— 4** **4-wire:**
    For compensating three phases and the neutral conductor

Technical Data

OSFS-F (3-wire fixed-rating unit), 400 V

Type	OSFS 70-400-3-F	OSFS 100-400-3-F	OSFS 130-400-3-F
Article-No.	39-22402	39-22400	39-22403
Power rating	59 kVA	84 kVA	109 kVA
Compensating current per phase at 50/60 Hz	70 A_{rms}	100 A_{rms}	130 A_{rms}
System voltage	400 V ± 10 %		
Nominal frequency	50/60 Hz ± 2 %		
Number of phases	3		
Phase connections	3 phases without neutral conductor (TN, TT, IT)		
Harmonics compensation	Individually up to the 49th harmonic		
Degree of compensation	> 98 %		
Correction of power factor cos φ	Up to 1.0		
Parallel operation	OSFS-F Active Filters can be operated in parallel		
Response time	< 1 ms		
Power loss	< 1200 W	< 1800 W	< 2400 W
Maximum air flow requirements	600 m^3/h		
Noise level	< 70 dB		
Ambient conditions	0 up to 95 % relative humidity, non-condensing, max. altitude: 1000 m above sea level		
Operating temperature	0 up to 40 °C, < 25 °C recommended		
Dimensions (W x H x D) [mm]	230 x 2 040 x 400		
Weight [kg]	120 kg		
Cabinet colour	RAL 7035, RAL 5017 (blue)		
Ingress protection	IP 20 according to IEC 529		
Environmental conditions	Class 3C3 (chemical), class 3S3 (mechanical)		
Electromagnetic compatibility (EMC)	EN 61000-6-2, EN 61000-6-4		
Certificates	CE		
Interfaces	Web server, Ethernet (Modbus TCP)		

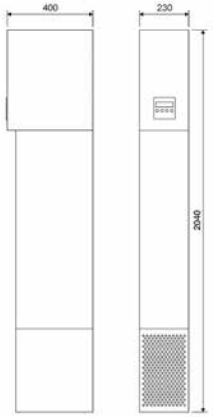
The units can be installed in parallel and are available as standard versions from 208 V to 480 V. Other voltages on request.

OSFS ordering example

Requirement: Active Harmonic Filter with a compensation current of I_h = 170 A.

- Parallel connection of the following OSFS Active Filters
  - OSFS 70-400-3-F
  - OSFS 100-400-3-F

Dimensions



All dimensions in mm

Technical Data

OSFS-F (4-wire fixed rating unit), 400 V

Type	OSFS 100-400-4-F
Article-No.	39-22429
Power Rating	70 kVA
Compensating current at 50/60 Hz	phase current 100 A_{rms} / neutral current 300 A_{rms}
System voltage*	400 V ± 10 %
Nominal frequency *	50/60 Hz ± 2 %
Number of phases	3
Phase connections	3 phases with neutral conductor (TN,TT,IT)
Harmonics compensation	individual compensation up to 49th order
Degree of compensation	> 98 %
Correction of power factor cos ϕ	Up to 1.0
Upgradeability	OSFS Active Filters can be operated in parallel
Response time	< 1 msec
Power loss	< 2235 W
Maximum air flow requirements	600 m³/h
Noise level	< 70 dB(A)
Ambient conditions	0 up to 95 % relative humidity, non-condensing, max. altitude: 1000 m above sea level
Operating temperature	0 bis 50 °C, up to 40 °C without performance reduction
Dimensions (W x H x D) [mm]	230 x 2 040 x 470
Weight [kg]	160
Cabinet colour	Cabinet: RAL 7035 (grey), Base: RAL 5017 (blue)
Ingress protection	IP20 nach IEC 529
Environmental conditions	Class 3C2 (chemical), class 3S2 (mechanical)
Electromagnetic compatibility (EMV)	EN 61000-6-2, EN 61000-6-4
Certificates	CE
Interfaces	Web server, Ethernet (Modbus TCP)**

The units can be installed in parallel and are available as standard versions from 208 - 480 V. Other voltages on request.

* When ordering, please indicate the mains voltage and the mains frequency.

** further interfaces on request.

Active Filter OSFS-M in freestanding cabinet

Modern medical equipment, the latest LED technology and present-day motor control systems make the most exacting demands on power supply quality. Certain loads, however, greatly distort the supply-side waveform by generating harmonics. This situation often calls for an improvement in power quality. With the FRAKO Modular Active Filter, the distortion caused by individual loads, groups of consumers or the entire electrical installation is reduced to a tolerable level or totally eliminated from the network.

Clear benefits:

- 3 versions enable optimum adaption to the compensation requirement: 120 A, 240 A and 360 A
- Modular construction with only one control unit
- User-friendly touchscreen
- User-friendly remote service
- Current-controlled
- New: optionally also available voltage-controlled
- Voltage range: 208 V – 480 V

Technical Data

OSFS-M (3-wire modular unit), 400 V

Type	OSFS 120-400-3-M	OSFS 240-400-3-M	OSFS 360-400-3-M
Article-No.	39-22405	39-22401	39-22406
Power rating	83 kVA	166 kVA	249 kVA
Compensating current per phase at 50/60 Hz	120 A_{rms}	240 A_{rms}	360 A_{rms}
System voltage	400 V ± 10 %		
Nominal frequency	50/60 Hz ± 2 %		
Number of phases	3		
Phase connections	3 phases without neutral conductor (TN, TT, IT)		
Harmonics compensation	Individually up to the 49th harmonic		
Degree of compensation	> 98 %

The OSFS-V voltage-controlled Active Filter

The OSFS-V is an Active Filter that compensates for harmonics in the range 50 Hz–5 kHz (up to the 100th harmonic). It is the fastest dynamic Active Filter worldwide, and also features resonance detection and suppression. It operates either with current transformers or it can be operated voltage-regulated without current transformers. This greatly simplifies its installation in existing networks.

Characteristics:

- High-speed Active Filter (Response time <20 µs)
- Reduction of interharmonics
- 50 Hz - 5 kHz bandwidth
- Voltage and current compensation
- Advanced digital control
- Easy installation
- Insensitive to network conditions
- Harmonics elimination
- Resonance elimination
- Can compensate for harmonics without current transformers
- Cannot be overloaded
- Available for 380 V – 480 V

Mains Analysis Devices for DIN rail mounting or door installation

**The power quality of the electrical supply networks plays an increasingly important role for the operational safety of electrical installations and equipment.
Therefore it becomes more and more important to take appropriate measures to monitor the power quality. This thus provides a measurement of the residual current, i.e. the algebraic sum of the currents in L1, L2, L3 and N, as a key parameter in enabling an assessment of the condition of the electrical installation to be made.**

In contrast to the past it is obvious that it is not sufficient to do a single measurement and then disregard the mains quality if the measurement showed unproblematic values.

Due to complex production processes, changing load conditions and a steady progress in the degree of automation it became important to permanently monitor the quality of electrical power supply.

Thus one can acquire energy know-how and define critical values for measurement variables such as voltage, current and harmonics.

Automatic alarms via different information channels such as e-mail, SMS, warning lights, etc. allow the control of compliance with the now specified critical values.

Of course, critical values predefined by standards and regulations can also be signalled via these channels.

FRAKO Mains Monitoring devices can handle all these operations.

Depending on type and version this can be achieved already by a single device or – even better - in combination with the FRAKO Energy Management System.

Measurement of residual current, PE-monitoring, monitoring of transformers, measurements at low voltage distribution boards as well as monitoring of individual machines and consumers …. FRAKO has the solution for every application.

EM-PQ 2300
Power Quality Analyzer

The power quality of electrical supply networks is of ever increasing importance for the operational reliability of electrical installations and appliances. It is therefore becoming increasingly essential to take appropriate measures to monitor supply network power quality.

The approach used in the past, i.e. simply taking some measurements and then disregarding the power quality issue if these did not appear unusual, is no longer sufficient.

Highly complex manufacturing processes and new power demand profiles, together with ever more sophisticated automation systems, make it today more important than ever to monitor the quality of the power supply on a continuous basis.

This allows the user to accumulate 'energy expertise' and specify sensible alarm settings for parameters such as voltage, current and harmonics.

An automatic alarm function using various means of communication, such as e-mails or alarm annunciators, makes it easier to keep these parameters under control within their specified limits.

The limiting values called for by electrical standards and regulations can, of course, also be monitored in this way.

FRAKO power quality analysis instruments can do all of these things. Depending on instrument type and specifications, these functions can be performed by a single device alone or in combination with a FRAKO Energy Management System.

Whether the duty is to manage a transformer, take measurements at a low voltage main or secondary distribution board, or monitor individual electrical machines or loads, FRAKO has the right instrument for every application.

Description

Power supply monitoring instrument for the acquisition, monitoring and analysis of electrical data in networks up to 690 V (phase–phase, optional with article No. 20-30243), with 5 current transformer inputs and 4 voltage inputs, including residual current measurement (the algebraic sum of the currents in L1, L2, L3 and N, being equal to zero in the ideal case) and PE monitoring.

Permanent and simultaneous monitoring of up to 250 measurement points. The instrument offers more than 600 measurement points to be selected from. Its power failure detection function enables a supply failure of up to one second to be buffered, so that those short dips of particular interest can also be recorded by the EM-PQ 2300 even if the instrument's own power supply is disrupted by this event.

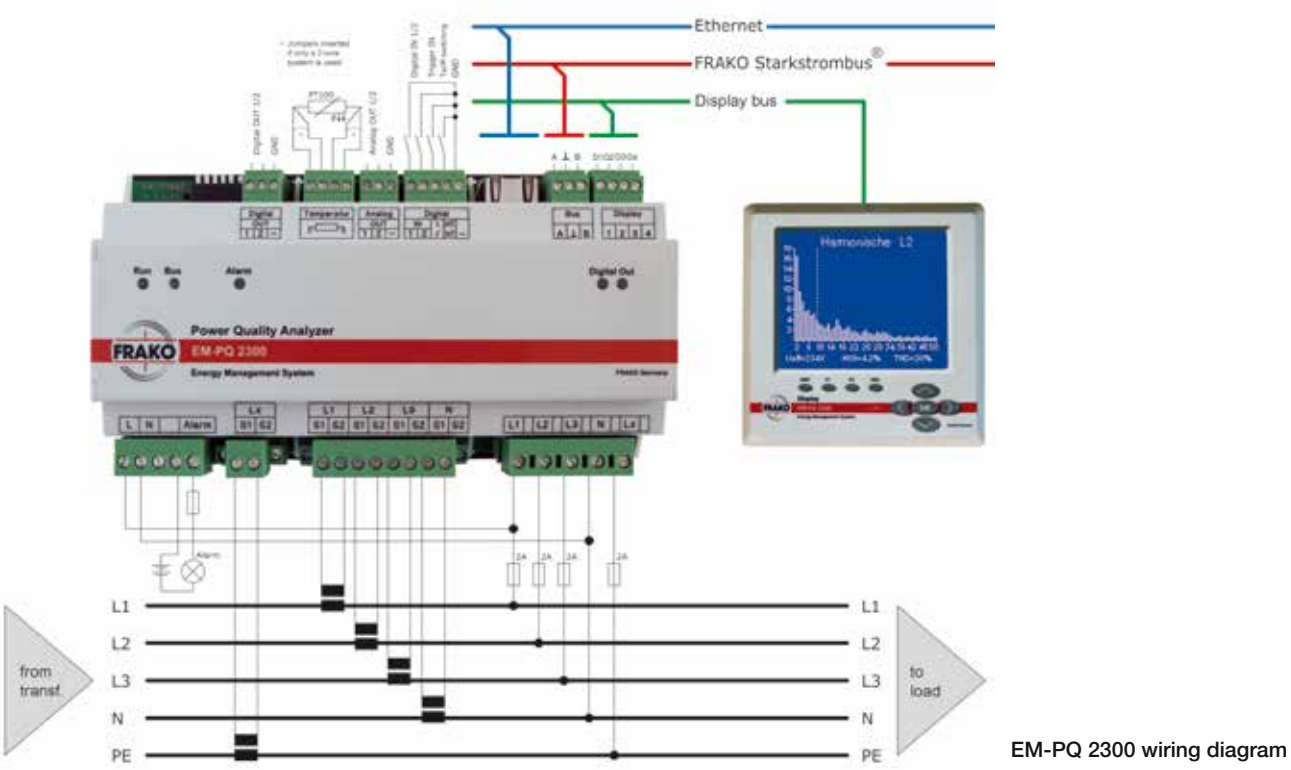
Integrated firewall-friendly web interface. The monitoring function enables an entire building, for example, to be continuously checked for the presence of earth fault currents automatically. This means that incipient insulation faults can be detected at a very early stage and reported to the office responsible for electrical safety.

In many companies, manufacturing automation and IT are still two different worlds. The EM-PQ 2300 solves this problem with the Simple Network Management Protocol (SNMP), an integrated communications interface that enables measurement data from the automation area to be automatically transferred to the IT area.

- Long-term network analysis to EN 50160 or EN 61000-2-4
- Monitoring of supply voltage dips
- Harmonics analysis, current and voltage up to 50th harmonics
- Monitoring of earth conductor current and residual current detection
- User-selectable data recording, e.g. analysis of power demand curve profile
- Display of measurement readings and curves at the optional EM-FD 2500 display, connected to the EM-PQ 2300 Power Quality Analyzer by a 4-core cable. One display can indicate the data from up to 7 EM-PQ 2300 instruments.
- Inputs:
  - 5 current transformer inputs for L1 to L3/N/(PE)
  - 4 voltage inputs for L1 to L3/N and Lx/N up to 690 V (extension option)
  - 3 freely assignable S0 pulse inputs for status signals, energy metering and power calculation, or to synchronize metering with the power supplier
  - 1 S0 pulse input for tariff switching
  - 1 Pt100/1000 4-wire resistance temperature detector input, automatic probe type identification
- Outputs:
  - 1 alarm contact rated at up to 250 V AC
  - 2 digital outputs for alarm purposes. The outputs are electrically isolated and are rated up to 30 V DC
  - 2 analogue outputs for any 2 desired measurement readings, as 0–20 mA, 4–20 mA or 0-10 V signal, internal instrument voltage source, automatic voltage/current identification
- Interfaces:
  - RS-485 bus, for connection to FRAKO Energy Management System
  - Ethernet (RJ45 jack) for connection to FRAKO Energy Management System
  - Modbus (TCP) slave, SNMP agent: the internal alarm system can transmit e-mails via Ethernet
- Software (Device Manager) included for configuration and display of the stored measurement readings via Ethernet

Data acquisition and recording:

- Acquisition and recording of the minimum, maximum and average values of the measurement readings and acquisition intervals defined by the user over parameterized periods of time
- Detection of under- and overvoltages V_{rms}
- Detection of voltage failures V_{rms}
- Detection of inrush currents (10 ms)
- Energy meter (active and reactive power, consumed and fed into network)
- Internal data storage: 256 MB flash memory



EM-PQ 2300 wiring diagram

Easy installation with the DIN rail-mounted enclosure
The EM-PQ 2300 is housed in an enclosure with a pin strip underneath it.

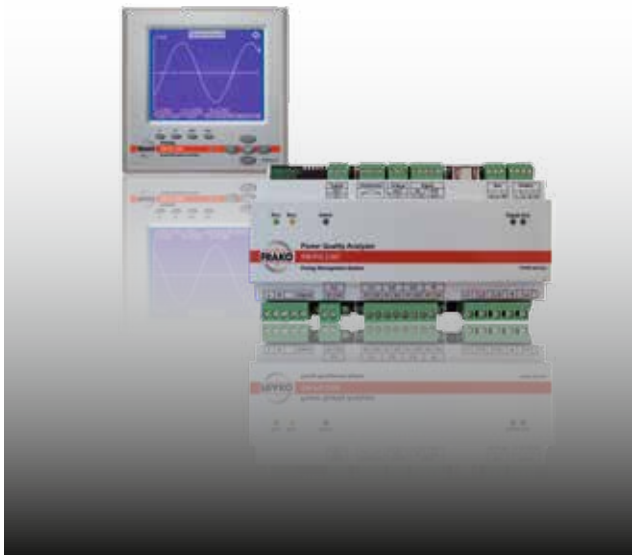
This system, consisting of pin and socket strips and DIN rail bus connectors, enables the individual modules to be easily fitted and connected to one another.

All connections are also available at external terminals for conventional wiring. Use of the 16-pin DIN rail bus connector provides automatic contact from instrument to instrument.

The bus connector enables the FRAKO Starkstrombus®, extension bus and display bus to be connected. The pin and socket strips on the DIN rail ensure quick and easy installation of the instruments in parallel.

It is possible to plug individual instruments in or remove them without dismantling the modular assembly.

Data display on the EM-FD 2500



The EM-FD 2500 has been developed as a physically separate LCD display and operator panel to work with all FRAKO Energy Management devices of the new generation that require this, such as the EM-PQ 2300 and EM-MC 2200 instruments.

The Display is connected to the EM instrument via 4 terminals: two wires for the instrument power supply and two for data transfer.
A maximum of 8 instruments can be connected to a common display bus, with a bus length of up to 40 m to the Display.

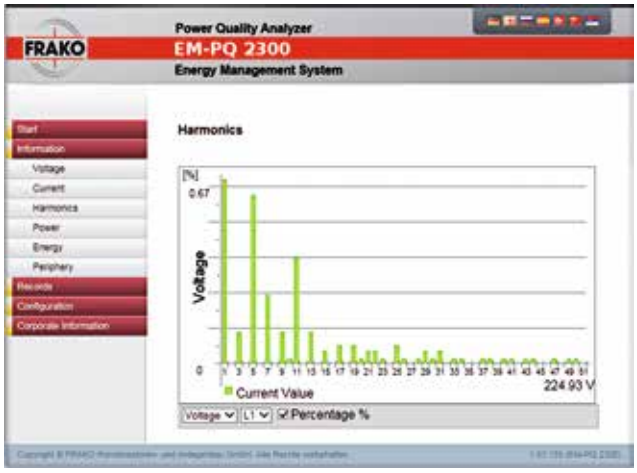
The Display is mounted on the control cabinet door or wall through a Ø 22.5 mm hole, thus greatly simplifying installation. Its orientation is fixed by a screw through the wall into a threaded bush.

Alternatively, the Display can also be mounted in any available 144 x 144 mm cut-out.

Web interface to display the momentary measurement readings

and the event list

- Web server for the configuration and online display of all measurement readings
- Every user at any PC can view the most important measurement data via the intranet



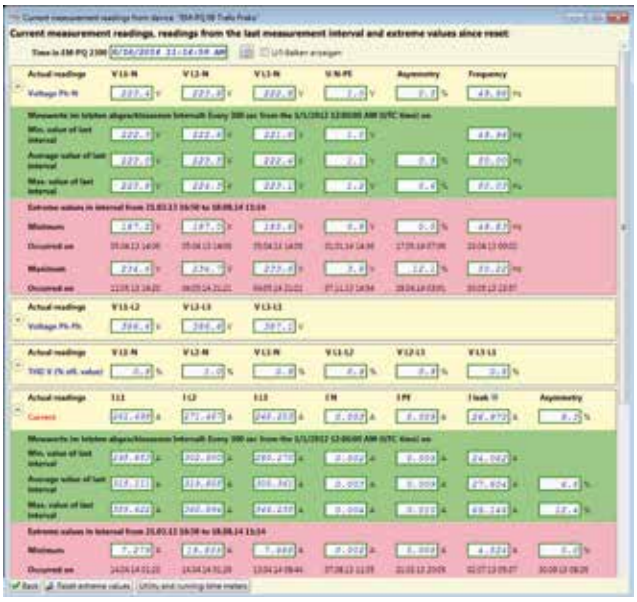
4

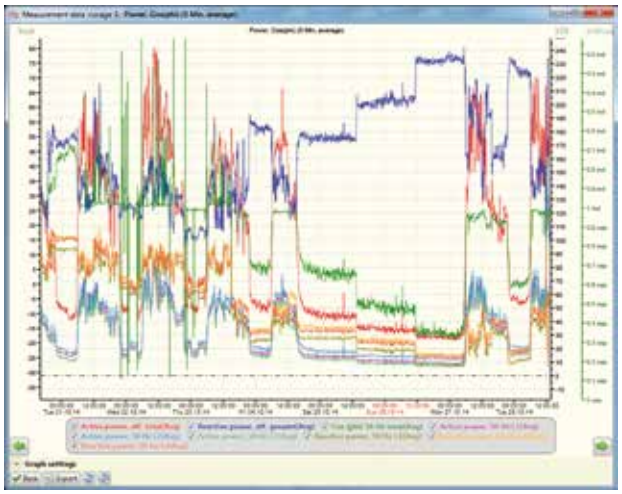
Device Manager –
Clear overview and straightforward programming

- **Momentary measurement readings**
  All key measurement data from the EM-PQ 2300 are displayed in a clear overview.

  With most measurement points, each individual section can be expanded to display the extreme values in the last interval and the extreme values since the last reset.

  The V/I bar graph indicator, which ranges from 0 to full scale value, offers a quick check on the extent to which the current and voltage measurement ranges are being used. This shows immediately whether the current transformers are correctly dimensioned.
- **Continuous data recording**





The continuous data recording function of the EM-PQ 2300 can be configured as desired.

Up to 250 data points can be recorded, the time interval and the type of reading (minimum, average or maximum value) being specified for each data point.

In addition, the option of defining charts and assigning data points to them is also given, so that when the EM-PQ 2300 is accessed, regardless of the PC on which the device manager is installed on, the same charts will always be available.

- **Event-driven data recording including the period prior to**

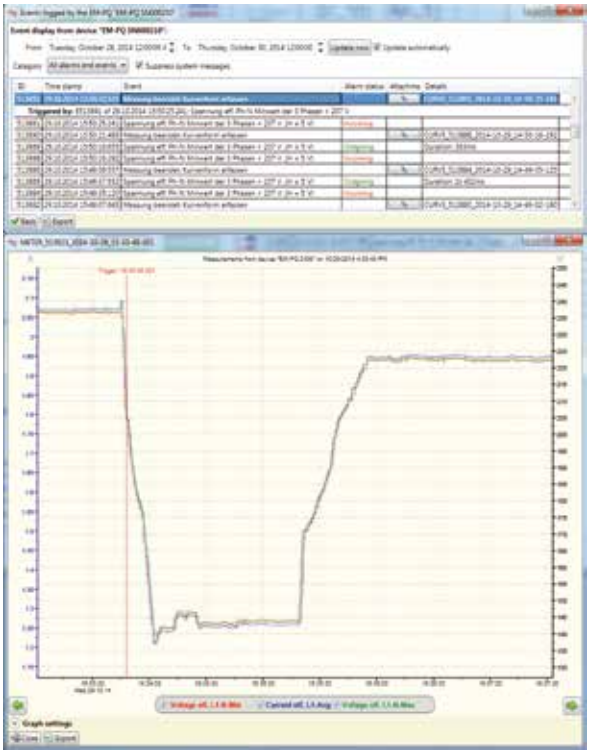
the triggering event

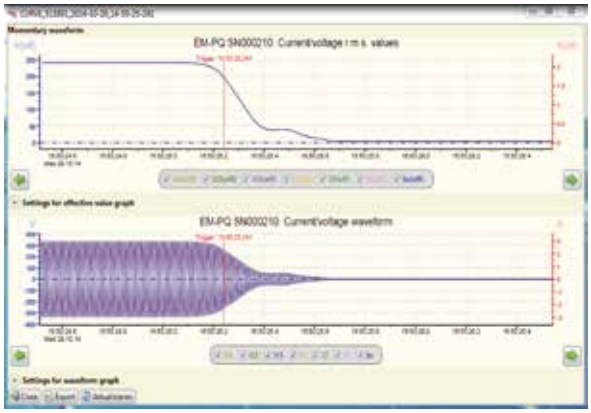
Various events can trigger the recording of data for a limited time independently of the continuous recording function. The user is free to define which measurements are recorded and for how long.

This ‘pretrigger’ function also enables the measurements from the time leading up to the triggering event to be recorded. If this is set at 25%, and the duration of the recording period at one hour, the EM-PQ 2300 will record the measurements made over the 15 minutes before the triggering event and the 45 minutes after it. The EM-PQ 2300 does this by continuously recording the measurements in a small circular buffer. When the recording period is over, the data from before and after the event are saved in a file, and the message ‘Measurement completed’ appears as a new entry in the event report.

Clicking the button in the ‘Att.’ (Attachment) column will display the measurement.

Apart from the user-defined measurements, predefined short-term measurements covering periods of 2 or 6 seconds can also be triggered, the current and voltage measurements being saved both as root-mean-square values over 10 ms intervals and as waveform curves.





An additional feature is that an e-mail can be sent after a measurement is completed. Clicking the e-mail attachment on any PC on which Device Manager or FRAKO-NET is installed will display the measurement.

- **Energy meter for each phase**

The EM-PQ 2300 meters the energy of each phase in addition to the total energy. Two resettable energy meters and one non-resettable meter are available for each phase. Resetting can be performed manually or automatically at any desired interval.

The EM-PQ 2300 can be configured so that it carries out an analysis every week, saving this as a results file, which can then be loaded via the event report.

Technical Data

- **User-friendly evaluation in the chart with cursor values and display of min. and max. readings**

  By activating the cursor lines, the readings can be displayed in a table and time differences can be measured.

  The min./max. display enables the user to find minimum and maximum values over long periods and to display them on an enlarged scale.

  The min./max. display can also be used with an energy meter to determine the energy consumption over a set period. This is displayed directly in the ‘Max - Min’ column.

Display and operation	
	Operation via EM-FD 2500 Display / 5 LEDs on EM-PQ 2300
Article-No.	20-30240
Connections	
	Pin and socket strips
Mechanical construction	
Dimensions (W x H x D)	161.6 x 89.7 x 60.5 mm
Ingress protection	Enclosure /terminals: IP 30 / IP 20 according to EN 60529
Protection class	Class 1 according to EN 61140
Enclosure	Flame retardant V0 to UL94
Mounting	On standard 35 mm DIN rail to EN 50022
Weight	Approx. 0.5 kg
Operating conditions	
Ambient temperature	-20 °C...+60 °C
Article-No.	20-30241

EM-PQ 1500 M
Power Quality Analyzer

Power Quality measurement system to detect, analyze and monitor electrical measurement variables in 400 V low voltage mains and medium voltage mains (100 V secondary).

Description

- Monitoring and evaluation of the mains quality; measurement of all relevant mains data in low and medium voltage mains
- Energy meter for active power (input and output) and reactive power
- Different measurements over 10 periods (200 ms, see EN 61000-4-7), measuring range up to the 40th harmonic (distortion factor current/voltage, absolute value of harmonic current)
- 4 voltage and 3 current measurement inputs
- Bimetallic function
- Integrated alarm management with different output configurations: 2x contact outputs, display, LED
- Easily extendable to include up to 15 measurement units via 2 link connections (max. 40 m) for displaying all relevant data via the display EM-FD 1500
- 2 outputs: adjustable digital/analogue (digital, 4-20 mA/ alarm individually programmable)
- Connection to the FRAKO Energy Management System via FRAKO Starkstrombus® (RS 485)
- Top hat rail mounting

Technical Data

Measurement inputs	
Voltage path	(Phase-Zero) 3 x 57 - 230 V AC +/- 10 % (Phase-Phase) 3 x 100 - 400 V AC +/- 10 %
Frequency	50 Hz
Power consumption	Max. 7 VA
Fuse protection	Max. 2 A external protection required
Current path	3x X/5A (transformer current >6 mA)
Power consumption	Max. 1.8 VA each transformer connection
Inputs	
Display IN	24 V DC, voltage input for display units with a 24 V control unit
Outputs	
Digital OUT	Max. 48 V DC, max 100 mA DC
Digital/Analogue OUT	Max. 30 V DC, max. 100 mA (DC 4-20 mA passive)
Interfaces	
1 FRAKO Starkstrombus®	For connection to FRAKO Energy Management System, according to EN 50170 (P-Net) standardised fieldbus, RS 485 Transfer rate: 76.8 kbit/s Type/ Protocol: RS-485 / P-Net
2 Link Connections	Connection to further EM-PQ 1500 (max. 15) to display on display unit EM-FD 1500 Type/ Protocol: CAN / FRAKO internal
Display	Connection to display unit EM-FD 1500
Mechanical construction	
Dimensions	160 x 102 x 67 mm (W x H x D)
Ingress protection	Housing / terminals IP 40 / IP 20
Version	According to DIN EN 61010-1, DIN EN 61000-6-2 and DIN EN 61000-6-3
Housing	Flame-retardant UL94-V0
Installation	On standard rail 35 mm according to DIN EN 50022
Mounting position	Optional
Weight	Approx. 0.5 kg
Operating conditions	
Ambient temperature	0 °C up to +55 °C
Article-No.	20-30212

Optional Accessories

Article-No.	Type	Description
29-20073	RJ 45 patch cable for EM-PQ 1500; Length: 1 m	RJ 45 patch cable for connecting EM-PQ 1500 Power Quality Monitor with another EM-PQ 1500; Cable length: 1 m
29-20074	RJ 45 patch cable for EM-PQ 1500; Length: 3 m	RJ 45 patch cable for connecting EM-PQ 1500 Power Quality Monitor with another EM-PQ 1500; Cable length: 3 m
29-20075	RJ 45 patch cable for EM-PQ 1500; Length: 5 m	RJ 45 patch cable for connecting EM-PQ 1500 Power Quality Monitor with EM-PQ 1500; Cable length: 5 m
29-20076	RJ 45 patch cable for EM-PQ 1500; Length: 10 m	RJ 45 patch cable for connecting EM-PQ 1500 Power Quality Monitor with EM-PQ 1500; Cable length: 10 m
20-30233	Interface adapter EM-PQ-RS 232	RS-232 Adapter for PC direct access to the data of EM-PQ 1500, including display and configuration software EM-PQ-SW; Cable length: 3 m
20-10700	Mains adapter for Analogue Module EM-AM 24 V DC (can be used as well for EM-PQ 1500)	Switching power supply for DIN rail mounting 24 V DC / 0.35 A and 12 V DC / 20 mA; Mains power supply: 85 to 264 V AC
20-10317	EM-PQ-SW	Software for the configuration and online display of data from the EM-PQ 1500 Power Quality Monitor. Access via: EMIS 1500, EMP 1100, EMT 1101 and EM-PQ-RS 232 adapter. **Note:** included with FRAKO-NET when supplied on CD-ROM

EMA 1101
Mains Monitoring Instrument

Microprocessor 3-phase measurement and monitoring unit with optional connection to the FRAKO Starkstrombus® to detect, analyze and monitor electrical measurement variables in 400 V and 525 V low voltage mains or medium voltage mains (100 V secondary).

Description

Measuring functions:

- Frequency of fundamental from 40 Hz ... 70 Hz
- Measuring intervals from 10/12 (50/60 Hz) periods (200 ms)
- Continuous scanning with 20kHz per channel and calculation of the following measurement readings:
  - Voltage L-N, neutral point displacement voltage
  - Voltage imbalance L1 ... L3
  - Voltage L-L
  - Frequency
  - Current, total current L1 ... L3, total current L1 ... L3+N
  - Power (active, reactive, apparent power, power factor)
  - Fundamental power (active, reactive, apparent power, cos phi, phase shift)
  - Summation L1 ... L3 of the above mentioned values
  - Summation L1 ... L4 (active, reactive, apparent power)
  - Active power (regenerated and consumed)
  - Reactive power (capacitive and inductive)
  - Fourier analyses 1st ... 40th harmonic component of current, voltage, active and reactive power
  - Distortion factor (THD) of current and voltage
- Allocation of the measurement readings to generate protocols of voltage and costs
- Measurement via three external current converters
- Measurement of active demand for incoming and regenerated power
- Menu-driven in plain text and 6 parameters displayed for direct comparison
- Alarm on exceeding set limits with potential-free NO contact as well as plain text shown on a flashing backlit display
- Visualisation of the currents as a bar graph to determine the utilization capacity
- Menu-driven programming in plain text with operator guidance
- Backlit display
- Storage of all meter readings and limit values in the event of a mains failure
- Illuminated LC display of measured values

Technical Data

Power supply	
Mains voltage	230 VAC +/- 10 %
Power consumption	Max. 7 VA
Fuse protection	2 A external protection required
Measurement input	
Voltage path	3x 250 to 550 V AC (external / external conductor) Power consumption: max. 1.0 VA/external conductor Fuse protection: 2 A external protection required
Current path	3x X/ 5 A (transformer current > 6 mA) Power consumption: max. 1.8 VA/ transformer connection
Outputs	
1 Alarm signalling contact	250 V AC / max. 3 A (potential-free NO contact)
Inputs	
Tariff inputs	2 profiles selectable (e. g. HT/NT)
Interfaces (mode can be selected)	
1 FRAKO Starkstrombus®	For connection to FRAKO Energy Management System, according to EN 50170 (P-Net), standardised fieldbus, RS-485 Transfer rate: 76.8 kbit/s
RS-232 Interface	Can be directly connected with a PC via RS-232 interface Transfer rate: 19 200 Baud
Operating elements	Membrane keyboard with 5 keys
Display elements	Lid LCD (4 lines each of 20 characters)
Connections	Plug-in connecting strips (supplied)
Mechanical construction	
Dimensions	Front plate dimensions: 144 x 144 mm (DIN 43700) Switch panel aperture: 138 x 138 mm (DIN 43700) Installation depth: 105 mm
Ingress protection	Housing/Terminals IP54/20 according to VDE 0470 / EN60529
Version	According to VDE 0411 / EN 61010 Contamination level 3, EN 50081, EN 50082
Housing	Flame retardant UL94-V0
Installation	From front panel with screwdriver
Mounting position	Optional
Weight	Approx. 1.3 kg
Operating conditions	
Ambient temperature	0 °C up to +50 °C

EM-FD 2500
Display Unit

The EM-FD 2500 is a graphic display in DIN rail housing to display measurements and wave forms of up to 7 Energy Management devices of the latest generation (e.g. Maximum Controller EM-MC 2200 or Mains Monitoring Unit EM-PQ 2300).

Description

- Front mounting of the display with little effort by a Ø 22.5 mm fixing and a screw to prevent rotation
- Only one cable (4-pin) from the display to the EM device
- Connection of max. 8 EM devices via display bus:
  - 1 display + 7 EM devices
  - 2 displays + 6 EM devices

Technical Data

Power supply	
Voltage	11 V up to 16 V DC, reverse polarity protection, power is to be connected by the EM device
Fuse protection	Internal via 500 mA SMD fuse
Power consumption	Max. 3 VA
Connections	Via plug-in terminals
Conductor cross-section	Max. 1.5 mm²
Interfaces	
Display bus	CAN according to ISO 11898, RS-485, impedance level 120 Ohm Transfer rate: 1 Mbit/s Length of bus: max. 40 m
Mechanical construction	
Dimensions	147 × 147 × 53 mm (W × H × D) including connector, cabinet overhang 23 mm, depth cabinet max. 30 mm, including connector
Ingress protection	Front panel IP54 when using the enclosed sealing mat, housing front IP50 without sealing mat, terminals and terminal area IP20, degree of pollution 3, all data according to DIN EN 60529
Installation	In the front panel / door through a central hole Ø 22.5 mm and a hole for anti-turn locking , Ø 3.5 mm
Version	Insulated housing, Protection class 3 (SELV), working voltage up to max. 16 V
EMV	EMV according to EN 61326 -1, EN 61000-4-2 electrostatic discharge air 8 kV and conductive 4 kV with horizontal and vertical coupling plate, EN 61000-4-3 EMS radiated 80 MHz - 1GHz, horizontal and vertical, level 10 V/ m = irradation industries Class B, EN 61000-4-4 Burst 1 kV capacitive on cable, EN 55022A EMI 30 MHz - 1 GHz = irradation residential area Class A
Weight	330 g
Operating conditions	
Temperature range	0 °C up to +60 °C, no dewing
Installation height	Geographical height max. 2000 m

PQM 1588
Power Quality Manager

The Power Quality Manager is used to provide and record data from the Power Quality Management System. Furthermore alarms are detected, recorded and forwarded. The PQM 1588 can fully replace the central unit EMIS 1500. The instrument incorporates a facility for forwarding data via the OPC UA interface.

Description

The well-established FRAKO System has been steadily and systematically developed. The Power Quality Manager PQM 1588 is a further example and represents state-of-the-art data collector technology. In addition to the widespread Ethernet technology with TCP/IP, the Linux operating system is used within PQM 1588. The measuring devices are connected via different interfaces with the PQM 1588. Several PCs can be connected online to the PQM 1588 simultaneously.

Data collection and storage with the following devices:

- Power Quality Analyzer, type EM-PQ
- Power Factor Control Relay Power Quality Controller PQC
- Maximum Controller EM-MC 2200
- Mains Monitoring unit EMA 1101
- Power Factor Control Relay EMR 1100
- Power Quality Controller PQC
- Modbus devices via Modbus coupler or Modbus TCP
- M-Bus devices via separate coupler

A comprehensive alarm functionality allows:

- that upper and/or lower alarm limits can be defined for all measured data points
- that individual alarms or groups of alarms can be linked to the following signaling methods: Contacts at the Power Quality Manager PQM 1588, network printer, SMS-, Telefax- and E-Mail messages, alarm reports

The measuring devices are integrated via network:

- via Gateway EMG 1500 PN to the FRAKO Starkstrombus®
- via coupler TCP – Modbus or TCP M-Bus
- Several PCs can be connected online to the PQMs 1588 simultaneously.

Advantages:

- including EMVIS 3000 visualization software
- webinterface for the configuration of the network settings
- a steadily growing range of features by software updates
- can continuously be adapted to new requirements
- simple data transfer via OPC UA

The PQM is configured and visualized with EMVIS 3000 and the FRAKO-NET software package (both included in delivery).
Each measuring device requires a certain number of system points. The devices can be used in any combination, provided that the maximum number of system points will not be exceeded.

PQM 1588 as universal data acquisition system:

- Monitors all assigned meters and devices, sets alarm limits and alarm paths individually—own memory for high data security

PQM 1588 for energy, PQ and PFC data:

- Many protocol and interface options: Modbus, M-Bus, KNX, pulse signals,TCP/IP
- Comprehensive alarm management, using e-mails, text messaging, alarm contact, SNMP, etc.
- One or more alarms and alarm paths assignable to each variable
- Flexible as system expands from minimum solution to wide-ranging management system

PQM 1588 as remote monitoring unit:

- Monitoring
- Alarms
- Preventive maintenance

PQM 1588 as data collector with synchronized data:

- Data forwarding to third-party systems
- Merging of machine and energy data
- Visualization with any desired software
- Customized solutions

Software for the display/ evaluation of the data

- Including EMVIS 3000 to enable total visualization
- Comprehensive data evaluation
- CSV export facility

PQM 1588
Central unit

OPC UA

Interface for:

- Industry 4.0
- All types of data
- Free choice of database
- Free choice of visualization
- Customized solutions
- Third-party systems

Technical Data

Power Supply	
Supply voltage	100 V AC – 253 V AC (absolute limits), 230 V DC (absolute limits)
Frequency	45 up to 65 Hz
Power consumption	Max. 7 W / 18 VA
Fuse protection	Max. 2 A (slow acting) external protection required
Interfaces	
Ethernet interface	10/100 MBit/s, RJ45
Outputs	
Relay contact	5 contacts – bistable, 250 V / 2 A AC or 30 V / 2 A DC
Alarm contact	1 contact - bistable, 250 V / 2 A AC or 30 V / 2 A DC 1 NC, 250 V / 2 A AC or 30 V / 2 A DC
Connections	
via plug-in type screw terminals	Conductor cross-section max. 1.5 mm², min. 0.14 mm², Relay-, alarm contacts and supply: Conductor cross-section max. 2.5 mm², min. 0.2 mm², Rated value insulation: 250 V AC, 80 °C
Control elements	
DIP switch	8 pieces
Display elements	
LED	15 pieces
Mechanical Construction	
Dimensions	296 mm × 260 mm × 133 mm (W x H x D)
Installation	On standard rail 35 mm according to DIN EN 50022
Weight	approx. 0.4 kg without packaging
Ingress protection	Enclosure IP30, terminals IP10 according to DIN EN 60529 pollution degree 2 according to EN 61010-1:2011-07
Version	Enclosure protection class II according to DIN EN 61010
Housing	Flammability according to UL 94 V0 as declared by the manufacturer

Mechanical Construction	
EMV	EN 55022 Class B : 2010 + AC : 2011 EN 61000-3-2 : 2014 EN 61000-3-3 : 2013 EN 61000-6-3 : 2007 + A1 : 2011 EN 61000-6-2 : 2005 EN 61000-4-2 : 2009 EN 61000-4-3 : 2006 + A1 : 2008 + A2 : 2010 EN 61000-4-4 : 2012 EN 61000-4-5 : 2014 EN 61000-4-6 : 2014 EN 61000-4-8 : 2010 EN 61000-4-11 : 2004

EMVIS 3000
System-Visualization

In the Energy Management System, the measured variables, statuses and events in the entire in-house energy supply system are acquired, processed centrally and saved. They are presented graphically by the visualization facility and evaluated. The EMVIS 3000 software is a powerful tool for displaying and documenting all the measurement readings from the devices connected to the system. A client management function is available, which enables individual organizational system trees to be assigned to different users, who therefore receive exactly those data that they require for their separate purposes. There are two types of installation: either the single workstation or the server version, the latter with access to up to 5 clients simultaneously via a web browser, with no additional installation necessary in the client systems.

EMVIS 3000 comprises the following functional modules:

EMVIS 3000 Project

The project planning tool ...

- Unrestricted configuration and compilation of evaluations of all data processed by the system
- New functions such as alarm visualization, status, history, ranking
- Server version with access via browser
- User administration, the administrator defines user rights and accesses
- Calculation of **performance figures**
  Performance figures are virtual data points calculated from other data points, an arithmetic computation from measured or imported data, e.g.: “Active energy A x factor + Water quantity B x factor + Compressed air volume C x factor / No. of items D”
- Creation of **benchmarking** charts
  Benchmarking makes a direct comparison of measurement data or performance figures possible, e.g. energy costs of products or company sites
- Creation of **Sankey** diagrams
  A Sankey diagram gives a clear overview of any type of flow, e.g. the flow of utilities. The width of each stream into and out of a location is proportional to the quantity flowing, absolute and percentage values also being stated
- Easy Customizing - individual planning of views - simple and intuitive (the basic package includes 3 views with up to 20 online data points in total)

EMVIS 3000 Report

The reporting tool ...

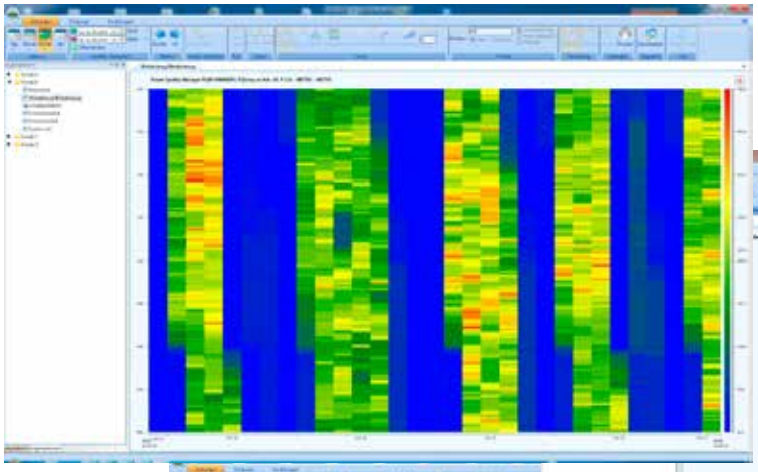
- To simplify navigation, a clear overview of the entire system is displayed in two system trees, either of which can be selected:
  - **Physical:** standard evaluations of all the instruments and channels registered with the system
  - **Organizational:** all evaluations that have been compiled with EMVIS 3000 Project
- Presentation of historical data for analysis and comparison purposes, e.g. different locations or different periods of time
- For example diagrams showing the time course or diagrams without timeline such as **carpetplot, scatter diagram and heatmap**
- The historical data can be exported directly from the chart or consumption table for further processing. Possible export formats are CSV, Excel, Word and PDF
- Direct access to the momentary readings of the connected instruments

- Visualization of the alarms occured is possible through display of the status, history and statistical evaluation in the ranking

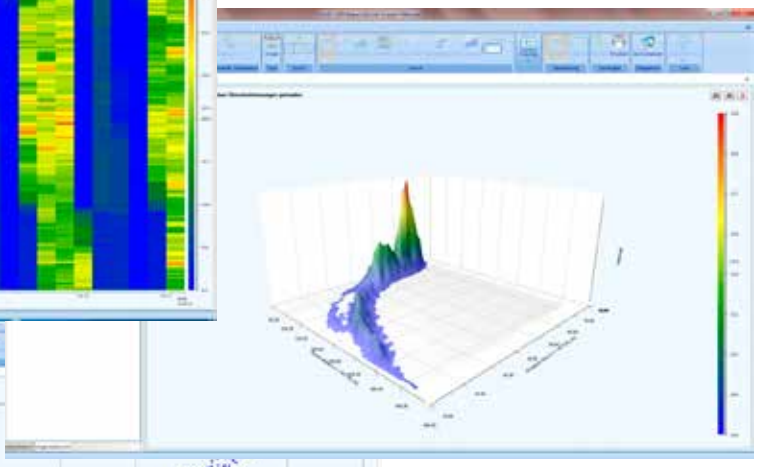
EMVIS 3000 Live

- Views created individually - from site layout drawings right down to the distribution board
- Display of the momentary measurement readings and statuses

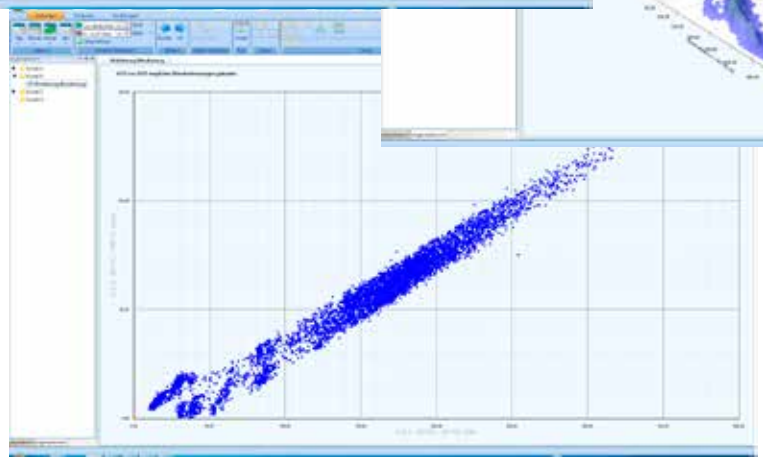
The EMVIS 3000 license enables the software to be installed on several PCs (server and clients) and an EMIS® 1500 Central Unit (and the Power Quality Manager PQM 1588) to be accessed.



Carpetplot

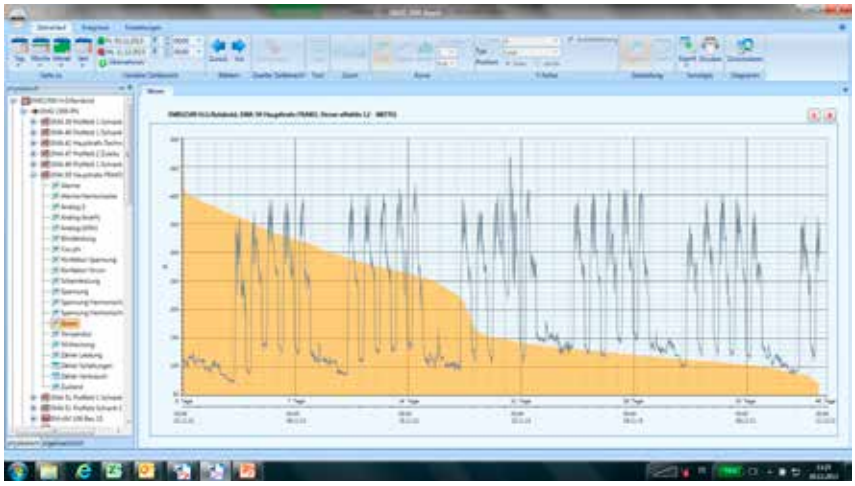


Heatmap 3-D

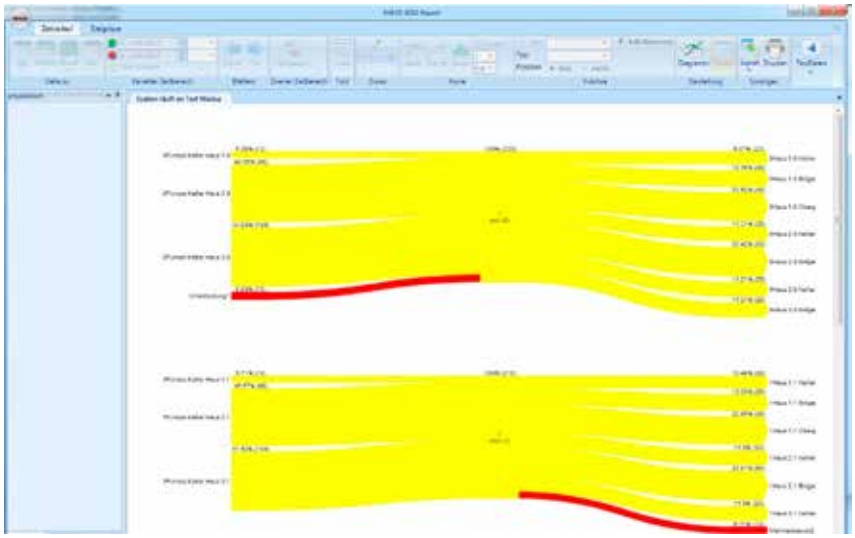


Scatter diagram 2-D

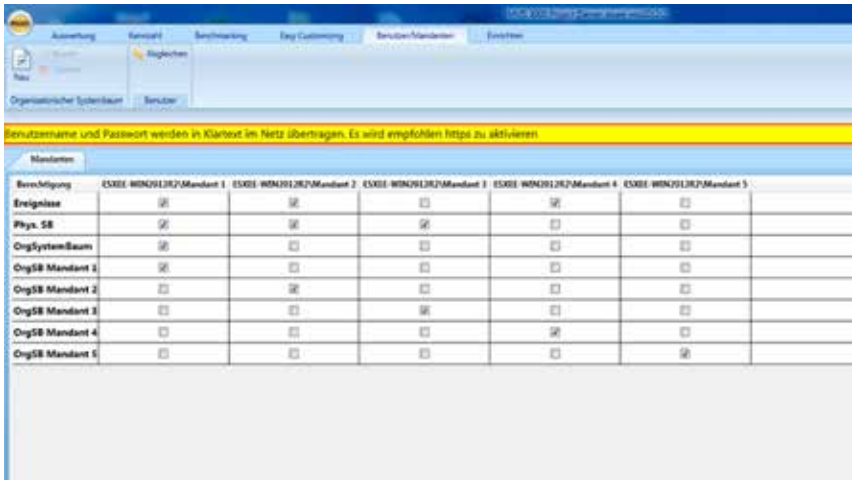
In the physical system tree prepared standard evaluations are deposited for all Energy Management devices. This allows the user to visualize the recorded historical data.



Continuous line graphic - shows the frequency of the variables within a period of time

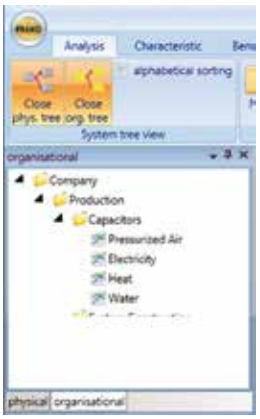


Sankey graphic - shows the flow of energy



Authorization graphic - table showing user administration authorization

Via physical system tree the actually measured data of all EM devices can readily be accessed.



Within the organizational system tree business specific structures are deposited. The business specific structures are projected in form of individual evaluation in the organizational system tree by the customer.

PQM 1588
Power Quality Manager

The Power Quality Manager is used to provide and record data from the Power Quality Management System. Furthermore alarms are detected, recorded and forwarded. The PQM 1588 can fully replace the central unit EMIS 1500. The instrument incorporates a facility for forwarding data via the OPC UA interface.

Description

The well-established FRAKO System has been steadily and systematically developed. The Power Quality Manager PQM 1588 is a further example and represents state-of-the-art data collector technology. In addition to the widespread Ethernet technology with TCP/IP, the Linux operating system is used within PQM 1588.
The measuring devices are connected via different interfaces with the PQM 1588. Several PCs can be connected online to the PQM 1588 simultaneously.

Data collection and storage with the following devices:
- Power Quality Analyzer, type EM-PQ
- Power Factor Control Relay Power Quality Controller PQC
- Maximum Controller EM-MC 2200
- Mains Monitoring unit EMA 1101
- Power Factor Control Relay EMR 1100
- Power Quality Controller PQC
- Modbus devices via Modbus coupler or Modbus TCP
- M-Bus devices via separate coupler

A comprehensive alarm functionality allows:
- that upper and/or lower alarm limits can be defined for all measured data points
- that individual alarms or groups of alarms can be linked to the following signaling methods: Contacts at the Power Quality Manager PQM 1588, network printer, SMS-, Telefax- and E-Mail messages, alarm reports

The measuring devices are integrated via network:
- via Gateway EMG 1500 PN to the FRAKO Starkstrombus®
- via coupler TCP – Modbus or TCP M-Bus
- Several PCs can be connected online to the PQMs 1588 simultaneously.

Advantages:
- including EMVIS 3000 visualization software
- webinterface for the configuration of the network settings
- a steadily growing range of features by software updates
- can continuously be adapted to new requirements
- simple data transfer via OPC UA

The PQM is configured and visualized with EMVIS 3000 and the FRAKO-NET software package (both included in delivery).
Each measuring device requires a certain number of system points. The devices can be used in any combination, provided that the maximum number of system points will not be exceeded.

System Components

Central Unit

PQM 1588 as universal data acquisition system:

- Monitors all assigned meters and devices, sets alarm limits and alarm paths individually—own memory for high data security

PQM 1588 for energy, PQ and PFC data:

- Many protocol and interface options: Modbus, M-Bus, KNX, pulse signals,TCP/IP
- Comprehensive alarm management, using e-mails, text messaging, alarm contact, SNMP, etc.
- One or more alarms and alarm paths assignable to each variable
- Flexible as system expands from minimum solution to wide-ranging management system

PQM 1588 as remote monitoring unit:

- Monitoring
- Alarms
- Preventive maintenance

PQM 1588 as data collector with synchronized data:

- Data forwarding to third-party systems
- Merging of machine and energy data
- Visualization with any desired software
- Customized solutions

Software for the display/ evaluation of the data

- Including EMVIS 3000 to enable total visualization
- Comprehensive data evaluation
- CSV export facility

PQM 1588

EMG 1500-PN
Gateway

The Gateway EMG 1500-PN is the interface between the Ethernet and the FRAKO Starkstrombus®.

Description

Several Gateways can be installed within the Ethernet system so that they can be positioned over the in-house network accessible at various strategic positions. This allows a much easier wiring of the FRAKO Starkstrombus®.

The Gateway has three ports:

- Network connection via Ethernet standard (TCP/IP)
- Interface to the FRAKO Starkstrombus®
- Interface for device configuration

Technical Data

Power supply	
Mains voltage	230 V AC +/- 10 %
Frequency	45 up to 65 Hz
Power consumption	Approx. 10 VA
Fuse protection	Max. 2 A external required
Interfaces	
1 Ethernet	RJ45, for connection to LAN network Protocol: TCP/IP Transmission: 10BaseT half duplex
1 FRAKO Starkstrombus®	For connection to FRAKO Energy Management System, according to EN 50170 (P-Net) standardized fieldbus, RS-485 Transfer rate: 76.8 kbit/s
1 serial interface	9 pole Sub-D connector (male), RS-232 V.24, for the device configuration Protocol: FRAKO internal Transfer rate: 115 200 Baud, 8 Bit, 1 Stopbit, No parity
Display elements	4 LEDs
Connections	Screw-type terminals Conductor cross-section: max. 2.5 mm²
Mechanical construction	
Dimensions	140 x 90 x 59 mm (W x H x D), DIN module housing 8 HP
Ingress protection	Housing/terminals IP40/IP20
Version	Protection class II according to VDE 0411 / DIN EN 61010-1
Housing	Flammability to UL94-V0
Installation	Standard rail 35 mm according to DIN EN 50022
Mounting position	Optional
Weight	Approx. 0.5 kg
Operating conditions	
Ambient temperature	0 °C up to +50 °C
Article-No.	20-10210

Gateways

For the connection of different bus systems for example Modbus, M-Bus, EIB/ KNX etc. various bus couplers are available. Depending on the requirement the suitable bus coupler will be selected.

EMB 1101
Repeater

The repeater EMB 1101 is designed to process and distribute signals in the FRAKO Starkstrombus®. It is necessary to use a repeater for lines with a length of over 1000 m and for bus systems where more than 32 instruments are served by one line. The EMB 1101 also allows to realize star topology.

Description

- Device for conditioning and distribution of signals
- Up to 120 instruments can be operated in a bus system
- The repeater is necessary for lines with a length of over 1000 m and for bus systems where more than 32 instruments are served by one line
- Installing the repeater improves the reliability of the bus system, especially under difficult operating conditions that cause interference
- Star wiring system; up to four lines, each connected to a maximum of 32 instruments, can be wired to one repeater
- Cascading repeaters enables bus lenghts of up to 15 km to be installed
- Existing cable connections, which do not use a bus cable specified by FRAKO, can be used for distances of up to 4 km
- The repeater can electrically isolate sections of the bus system in order to prevent stray currents flowing in the FRAKO Starkstrombus®
- In case of an electrical error in the connected lines, the error will be automatically detected and displayed, and the corresponding line will be closed
- Data transmission errors are automatically detected and signalled by an LED

Technical Data

Power supply	
Supply voltage	60 V - 230 V + 15 % AC or DC
Frequency	If AC: 48 up to 62 Hz
Power consumption	Approx. 6 VA
Fuse protection	Max. 2 A external prescribed
In- / Outputs	
Quantity	4 lines, thereof 1 line galvanically separated
Protocol	FRAKO Starkstrombus®, according to EN 50170 (P-Net), standardized fieldbus, RS-485; transfer rate: 76.8 kbit/s
Display elements	
Operating (Run)	One blinking green LED
Data transfer	One green and red LED per line
Connections	Screw terminals Wire cross-section: max. 2.5 mm²
Mechanical construction	
Dimensions	140 x 90 x 59 mm (W x H x D), DIN module case 8 HP
Ingress protection	Housing IP40, terminals IP20
Version	According to VDE 0411 protection class II (also DIN EN 61010-1)
Housing	PC with 10 % GF, V-0, flammability to UL-94 V-0
Installation	On standard rail 35 mm according to DIN EN 50022
Mounting position	Optional
Weight	Approx. 0.6 kg
Operating conditions	
Ambient temperature	0 °C up to +50 °C
Article-No.	20-10600

Dimensions

EMD 1101
Switching Module

Switching module with 8 switching channels for connection to the extension bus or the FRAKO Starkstrombus®.

The extension module with 8 switching channels can optionally be connected to:

- Maximum Controller EM-MC 2200 or Maximum Demand Controller EML 1101
- System Timer EMT 1101 via FRAKO Starkstrombus®
- Central Unit EMIS® 1500 via FRAKO Starkstrombus® for alarm signalling

Description

- Display of the switching status via LED
- LED display for bus access
- Definition of the switching status (on/off) of the individual switching channels in case of a failure.

Technical Data

Power supply	
Mains voltage	230 V AC -15 % up to +10 %
Frequency	45 up to 65 Hz
Power consumption	4 VA
Fuse protection	Max. 2 A external prescribed
Outputs	
8 switching channels	Normal open contact 250 V AC / 4 A
1 extension bus / FRAKO Starkstrombus®	2-wire-fieldbus, RS-485
Operating elements	8-fold DIP switching series, 10-level rotary switch
Display elements	9 LEDs
Connections	Via plug-in connector blocks within housing; conductor cross-section: max. 2.5 mm²
Mechanical construction	
Dimensions	158 x 75 x 120 mm (W x H x D)
Ingress protection	IP40
Version	Protection class 2 according to DIN EN 61010
Housing	Flammability to UL94-V0 (according to the manufacturer)
Installation	Screw mounting or on standard rail 35 mm according to DIN EN 50022
Mounting position	Wall mounting, vertical
Weight	Approx. 0.8 kg
Operating conditions	
Ambient temperature	0 °C up to +45 °C
Storage temperature	-20 °C up to +60 °C

Maximum Demand Control

2

Maximum Controller

Page 253

Switching Module

Page 259

EM-MC 2200
Maximum Controller

The contemporary styling of the EM-MC 2200 Maximum Controller accentuates its user-friendly energy management technology. It reduces power demand peaks with new additional functions. The self-adapting target demand function provides dynamic adjustment to the site's monthly operating characteristics. Reducing target demand at the beginning of the accounting period, together with automatic self-adaptation, enables additional savings to be made in months with lower demand peaks.

Designed to work as a stand-alone unit, the EM-MC 2200 is the ideal solution for small to medium-sized industrial and commercial operations, office buildings and hotels. It is also suitable for larger facilities and for integrating into a FRAKO Energy Management System with the FRAKO Starkstrombus®.
Switching off loads by intelligent terminals (Modbus over IP) or by KNX/EIB actuators and timers is only one of the helpful new features of the EM-MC 2200.
This is an investment with a short payback time even in the deregulated energy market, since exceeding the specified power peak limit still results in extra costs that can be avoided.

Description

Special contract customers whose demand exceeds the agreed maximum (subscribed demand) will face increased costs through entering a higher demand category.

Do you know how many measurement intervals there are in a year?

There are some 35 000 measurement intervals in a year, or about 2 900 in a month. As a rule, the calculation determining the price paid for power in a given month is based on the measurement interval with the greatest demand in that month.

With the EM-MC 2200 Maximum Controller you can stay within the set limits, since this unit cuts demand peaks by shedding those loads assigned a low priority or not considered absolutely essential. Loads are switched off for a short time whenever the subscribed demand appears likely to be exceeded. An individual order of priorities for switching loads off ensures that normal operation can continue without disruption despite this load shedding. The result: Instead of having to pay a higher maximum demand charge, the subscribed demand can even be reduced – and thus save costs!

The modular construction of the EM-MC 2200 makes it both simple and inexpensive to install. It is upgradable at any time by software updates and connecting local EMD 1101 add-on units.

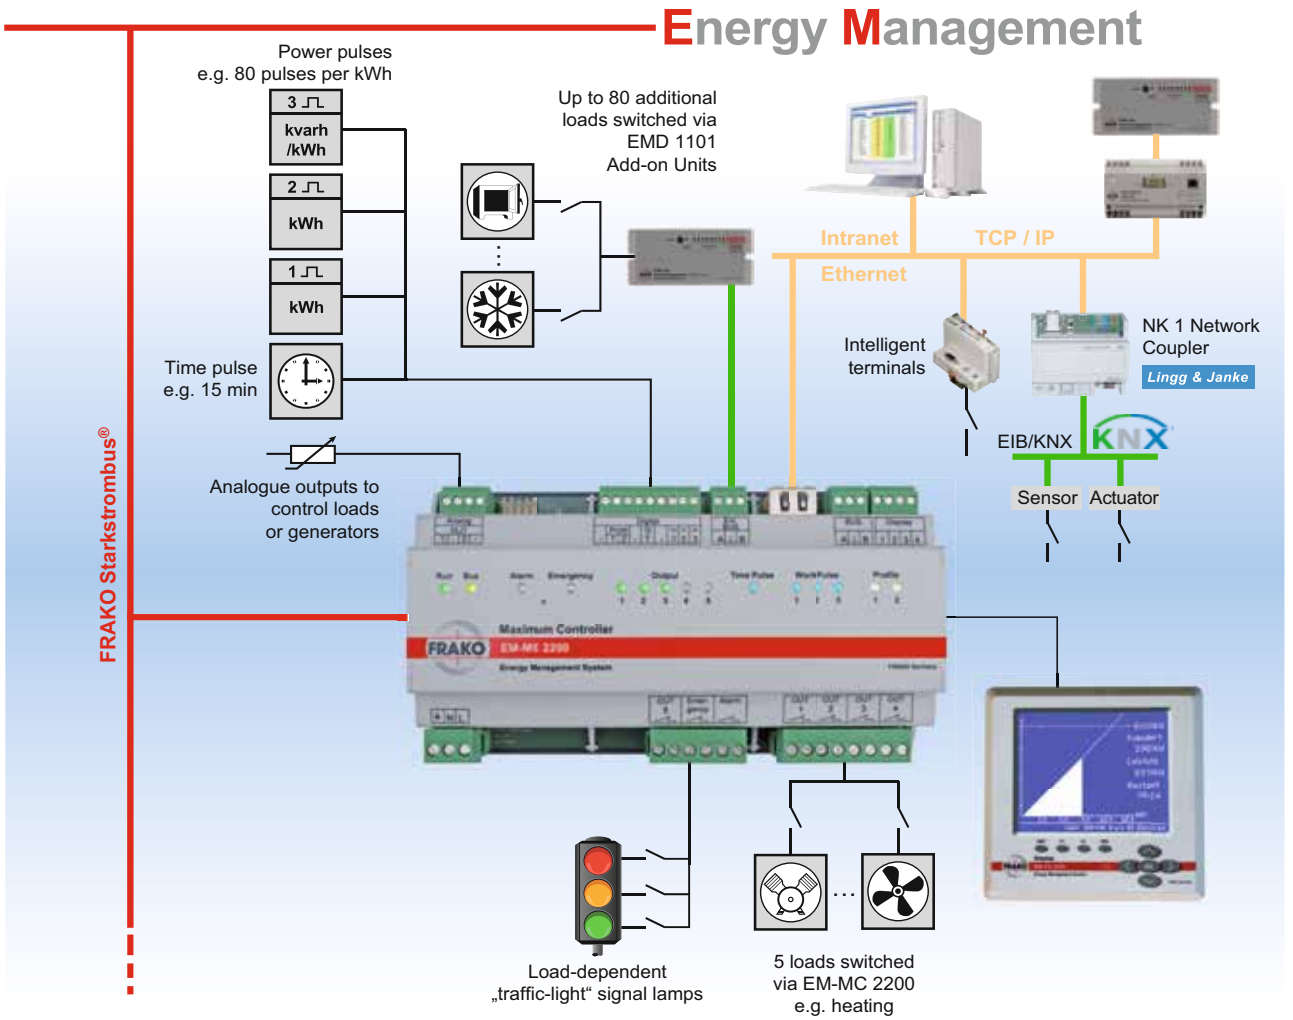
Operation is of proven simplicity with a clear, menu-driven operator dialogue in plain language at the EM-FD 2500 display or by accessing the instrument from a PC.

The scope of supply includes the Device Manager software. This is used to enter and modify parameters and to display—or when needed print out—daily demand curves, load operating times and all basic and load-specific settings.

Maximum Demand Control

Maximum Controller

- Control of demand to limit the average power consumption in a given interval to the set target demand. This is achieved by temporarily switching off individual loads
- Monitoring of demand peaks: if demand is too high, loads are immediately switched off to prevent the circuit breaker tripping
- Power-dependent control application point to prevent unnecessary load shedding at the start of the measurement
- Individual adjustment of the connected loads to suit operating conditions by setting priorities, min./max. OFF times and min. ON times per channel
- 4 profiles can be activated. Target demand and peak power, together with the load parameters priority, power, min./max. OFF times, min. ON times and priority type (time or power priority), can be set for each profile
- To make best use of seasonal demand fluctuations, the self-adapting target demand adjusts itself dynamically to suit the operating conditions of the month concerned. Reducing the target demand at the beginning of the accounting period combined with automatic self-adaptation makes additional savings possible in months with low peak loads
- Formation of switching channel groups for strict compliance with the set priorities
- 'Traffic light' function: 3 switching channels can be used for signal lamps as a visual guide to demand conditions
- Emergency load-shedding mode for keeping within maximum demand even with critical load constellations
- Connection of intelligent terminals (Wago) to switch off loads
- Connection of KNX/EIB components via FRAKO NK1 Network Coupler to switch off loads
- Timer for switching loads to a time schedule or to set time-scheduled target demands or profiles
- Storage of the following data in a ring memory:
  - Average values per interval over 20 000 intervals including the target power applicable at the end of the interval and time stamp
  - Daily maximum values over 500 days including time stamp
  - Monthly maximum values over 48 months
  - 10 000 switching cycles
- Configuration and presentation of momentary and historical measurement readings using the Device Manager software (included in scope of supply)
- Display of measurement readings and the power factor triangle (trend curve) via an integrated web interface or an EM-FD 2500 display, an optional graphic display instrument connected to the EM-MC 2200 Maximum Controller by a 4-core cable. Up to 7 additional EM devices can be viewed on one EM-FD 2500 display.



- **Inputs:**
  - 3 inputs for active energy pulses or 2 for active and 1 for reactive energy pulses. These can be added, subtracted or used as meters. The self-adapting target demand function can be reset via a volt-free contact
  - 1 input for time pulse; interval duration adjustable from 1 to 1 440 minutes
  - 2 inputs for activating the 4 profiles. These adjust the target demand and/or the settings of the connected loads to suit site-specific factors such as regular and off-peak tariffs. Profile switching can be by the internal timer or an input to the EMF 1102 Cost Centre and Alarm Unit

- **Outputs:**
  - 5 switching and 1 emergency load-shedding channel in the basic instrument (decentralized extendability: up to 85 switching channels possible by means of EMD 1101 add-on units, each with 8 relay contacts)
  - 1 alarm contact to signal faults (alarm signal also possible at any desired output)
  - 2 analogue outputs for 2 measurement readings (momentary, trend, target or corrective power, capacity utilization or remaining time) as 0/4–20 mA or 0–10 V signals, or for infinitely variable control of loads; fed by internal power supply

- **Interfaces:**
  - RS-485 bus, FRAKO Starkstrombus® protocol to connect to the FRAKO Energy Management System
  - RS-485 extension bus to connect EMD 1101 add-on units
  - Ethernet (RJ 45 jack) with the following functions:
    - Communication with the EMD 1101 add-on unit or the EMF 1102 Cost Centre and Alarm Unit via the EMG 1500-PN Gateway
    - Output of switching commands also via Modbus TCP
    - Output of switching commands via KNX/EIB (NK1 EIB Network Coupler required)
    - Communication with the EMIS® 1500 Central Unit
    - Communication with the configuration software at the PC

- The software (Device Manager) for configuring and displaying the saved measurement readings via Ethernet is included with the instrument

Easy installation with the DIN rail-mounted enclosure

The EM-MC 2200 is housed in an enclosure with a pin strip underneath it.

This system, consisting of pin and socket strips and DIN rail bus connectors, enables the individual modules to be easily fitted and connected to one another.

All connections are also available at external terminals for conventional wiring. Use of the 16-pin DIN rail bus connector provides automatic contact from instrument to instrument.

The bus connector enables the FRAKO Starkstrombus®, extension bus and display bus to be connected. The pin and socket strips on the DIN rail ensure quick and easy installation of the instruments in parallel.

It is possible to plug individual instruments in or remove them without dismantling the modular assembly.

Data display on the EM-FD 2500

The EM-FD 2500 display has been developed as a physically separate LCD display and operator panel to work with all FRAKO Energy Management devices of the new generation that require this, such as the EM-PQ 2300 and EM-MC 2200 instruments. The display is connected to the EM instrument via 4 terminals: two wires for the instrument power supply and two for data transfer. A maximum of 8 instruments can be connected to a common display bus, with a bus length of up to 40 m to the display. The display is mounted on the control cabinet door or wall through a Ø 22.5 mm hole, thus greatly simplifying installation. Its orientation is fixed by a screw through the wall into a threaded bush. Alternatively, the display can also be mounted in any available 144 x 144 mm cut-out. For this purpose suitable adapters are available.

Data display via the integrated web interface

- Web server for the configuration and online display of all measurement readings
- Each user at any PC can view the most important measurement data via the intranet.

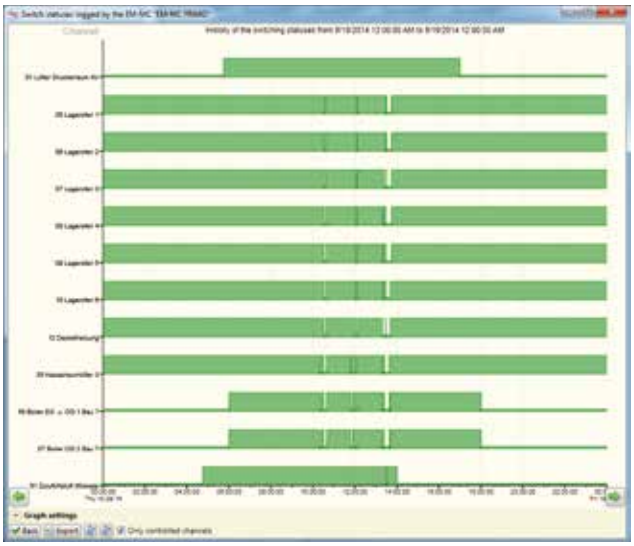
Device Manager – Clear overview and straightforward programming

- **Configuration**
  Configuration of the EM-MC 2200 is divided into two areas termed setting and configuration to distinguish them:
  - **Setting:**
    Setting covers all those adjustments that are necessary when commissioning the instrument itself or introducing add-on units.
  - **Configuration:**
    Configuration covers those adjustments that may have to be changed during ongoing operation.

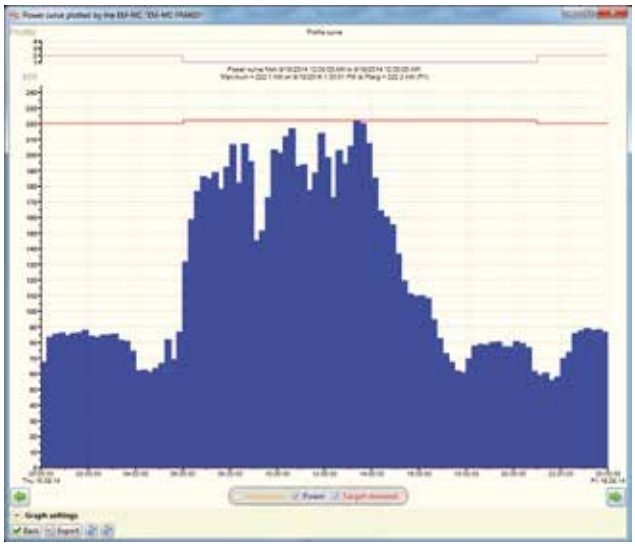
  The loads can be configured in a table giving a clear overview. Settings for the individual profiles can be hidden, if desired, to simplify this overview. Channels can be copied and their settings adopted in total or per channel for all profiles.

- **Trend display**
  Device Manager is a convenient tool for displaying real-time parameters such as momentary power, cumulative power, the remaining time in the current measurement interval and the power triangle. In addition, the statuses of the loads, the current profile (regular/off-peak tariff) and the limit settings are displayed. Any alarms or faults present are immediately apparent.

- **Switched status log**
  The switched status log offers a graphical display of the last 10 000 changes in the switched status of up to 85 controlled switching channels.



- **Documentation**
  The power demand in every measurement interval over the past 200 days is displayed as a chart and documented. Similarly, the demand peaks of the past 500 days and the past 48 months are saved, as are the switched statuses of up to 10 000 switching cycles. It is also no problem to export these recorded data to a spreadsheet program such as Excel.



- **Timer**
  A weekly timer function is incorporated in the EM-MC 2200. This makes up to 400 switching times available, in order to change the status of switching channels to 'Permanently ON', 'Permanently OFF' or 'Controlled' at scheduled times. In the 'Controlled' condition, the EM-MC 2200 controls the actual condition of the load through the target demand control function and the peak demand monitoring function.

  In addition, the profile and the target demand can be controlled by the timer.

Technical Data

Power supply	
Supply voltage	100 V – 253 V AC or 100 V – 230 V DC
Frequency	45 up to 65 Hz
Power consumption	7 W / 18 VA
Overcurrent protection	Max. 2 A external fuse required
Inputs	
General	• S0 interfaces (DIN 43864) to connect volt-free contacts • Voltage with contact open: 15 V • Max. line resistance: 800 Ohm • Short circuit current: 18 mA • Pulse frequency: 0.1 to 20 Hz
3 Pulse inputs	To acquire the power data from 3 meters with pulse outputs. Input 3 can also be used for the acquisition of reactive power data.
1 Time pulse input	1...1 440 minutes
2 Profile switch inputs	To select from 4 profiles

Measurement data storage	
	256 MB onboard flash memory
Outputs	
5 Relay contacts (switching channels)	Bistable, 250 V / 2 A AC or 30 V / 2 A DC
1 Relay contact (emergency load shedding)	Bistable, 250 V / 2 A AC or 30 V / 2A DC
1 Alarm contact	NC 250 V / 2 A AC or 30 V / 2 A DC
1 Extension bus interface	• To connect up to 10 EMD 1101 • Modbus TCP output instruments (fieldbus instruments, function code 5) • EIB actuators/output instruments
2 Analogue outputs	0-10 V / 0-20 mA / 4-20 mA + Steuerung-Verbraucher
'Traffic light' signal lamps	Visual guide to demand conditions

Display and operation, connections	
User interface Art.-No. 20-30240	Operation via external EM-FD 2500 display instrument
Alarm system	•
Timer function	•
Annunciators	15 LEDs
Connections	Pin and socket strips; max. core cross section: max. 1.5 mm²
Mechanical construction	
Dimensions	161.6 x 89.7 x 60.5 mm (W x H x D)
Ingress protection	IP30 (enclosure), IP10 (terminals)
Weight	Approx. 0.4 kg
Protection class	Class II according to EN 61010
Enclosure	Flame retardant UL 94-V0
Mounting	On standard 35 mm DIN rail according to EN 50022
Operating conditions	
Ambient temperature	0 °C up to +45 °C
Article No.	20-20071

Technical Data

PC requirements to run Device Manager	
Hardware	• PC: CPU mit with at least 2 GHz • 1 Gbyte RAM • 200 Mbyte free hard disc space
Software	• Microsoft® Windows®* XP, SP 2 with installed .NET-Framework 3.5 • Microsoft® Windows®* 7 (32 or 64 Bit) • Microsoft® Windows® 2008 Server R2 * Registered trademark of Microsoft Corporation

Dimensions

EMD 1101
Switching Module

Switching module with 8 switching channels for connection to the extension bus or the FRAKO Starkstrombus®.

The extension module with 8 switching channels can be connected selectively to:

- Maximum Controller EM-MC 2200 or Maximum Demand Controller EML 1101
- System Timer EMT 1101 via FRAKO Starkstrombus®

Description

- Display of the switching status via LED
- LED display for bus access
- Definition of the switching status (on/off) of the individual switching channels in case of a failure.

Technical Data

Power supply	
Mains voltage	230 V AC -15 % up to +10 %
Frequency	45 up to 65 Hz
Power consumption	4 VA
Fuse protection	Max. 2 A external prescribed
Outputs	
8 switching channels	Normal open contact 250 V AC / 4 A
1 extension bus / FRAKO Starkstrombus®	2-wire-fieldbus, RS-485
Operating elements	8-fold DIP switching series, 10-level rotary switch
Display elements	9 LEDs
Connections	Via plug-in connector blocks within housing; conductor cross-section: max. 2.5 mm²
Mechanical construction	
Dimensions	158 x 75 x 120 mm (W x H x D)
Ingress protection	IP40
Version	Protection class 2 according to DIN EN 61010
Housing	Flammability to UL94-V0 (according to the manufacturer)
Installation	Screw mounting or on standard rail 35 mm according to DIN EN 50022
Weight	Approx. 0.8 kg
Operating conditions	
Ambient temperature	0 up to +45 °C
Storage temperature	-20 up to +60 °C
Article-No.	20-21002

Electronic Energy Meter

Electronic energy meter for measuring active and reactive energy.

Description

Electronic energy meters for measuring active and reactive energy, available with direct measurement or for operation with voltage/ current transformer. Impulse outputs for active and reactive energy or regenerated active energy. Depending on the type of meter, electrical parameters such as I, V, F and PF as well as P, Q, S will be displayed. Data transmission via additional communication modules is possible.

Type		IME Conto D4 Pt-CE4DT12A2	ECS3-5

EMF 1102
Cost Centre and Alarm Unit

The EMF 1102 is a compact and cost-effective system for the aquisition and storage of meter readings, switching status and alarm signals.

Description
It consists of a data acquisition and memory unit plus modular software components for easy user configuration and for the evaluation and management of the data. Remote alarms can be transmitted by SMS via modem.

The EMF 1102 can be used as a stand-alone system for the acquisition of utilities and operating data in a factory or other premises, or can be installed as an integral part of a FRAKO Energy Management System.

Data acquisition for all types of utility such as electricity, water, gas, compressed air or meter pulse inputs via an S0 interface (= digital inputs).

- Calculation of power, energy and flow rates
- Monitoring of power, energy or flow rate with high and low alarm settings
- Determination of running time and downtime for each channel (running time meter)
- Operating cycle counter
- Monitoring of running times and downtimes with alarm settings (e.g. to detect instrument failure)
- Monitoring of key operating conditions
- Remote alarms by SMS in an event of system faults or if monitored variables exceed critical limits
- Storage of all utility data with memory for several days
- Connection:
  via RS-232 adapter with modem or COM server or direct to PC or via FRAKO Starkstrombus® to the EMP communication processor or the EMIS® 1500 central unit
- Option of visualising and evaluating the meter data via the FRAKO Energy Management System software module (EMVIS 3000)
- Option of displaying, configuring and evaluating the recorded data via the PC by means of the EMF-SW cost centre and alarm software EMF-SW (optional)

Technical Data

Power supply	
Mains voltage	230 V AC +/- 10 %
Frequency	45 to 65 Hz
Power consumption	Approx. 10 VA
Inputs	
General	S0-Interfaces (DIN 43864) for connection of potential-free contacts, common 'E-'-Potential switching time: >= 25 ms Voltage with open contact: 12 V DC +/- 10 % Short circuit current: 12 mA +/- 10 %
12 Pulse Inputs	Pulse frequency: max. 20 Hz Internal shifter shafts: 'Off' at approx. 3 mA, 'On' at approx. 7.5 mA
Outputs	
1 Voltage output	12 V DC, max. 50 mA
Interfaces (mode can be selected)	
1 FRAKO Starkstrombus®	For connection to FRAKO Energy Management System, according to EN 50170 (P-Net), standardized fieldbus, RS-485 Transfer rate: 76.8 kbit/s
RS-232 Interface	Optional via RS-232 Adapter direct connection to PC Tranfer rate: 19 200 Baud
Display elements	14 LEDs
Connections	Screw terminals Conductor cross-section: max. 2.5 mm²
Mechanical construction	
Dimensions	140 x 90 x 59 mm (W x H x D), DIN module cases 8 HP
Ingress protection	Housing/Terminals IP40/20
Version	Protection class II according to VDE 0411 / DIN EN 61010-1
Housing	flame retardant UL94-V0
Installation	on standard rail 35 mm according to DIN EN 50022
Mounting position	Optional
Weight	Approx. 0.6 kg
Operating conditions	
Ambient temperature	0 °C up to +60 °C
Article-No.	20-40005

Optional Accessories

Article-No.	Type	Description
20-10310	EM-RS 232	RS-232 Adapter for direct access via PC to the data of EMA 1101 (SW-Version 1.11*), EMR 1100 (SW-Version 1.95*) and EMF 1102 (SW-Version 1.0*)
20-10309	EM-RS 232 for modem operation	RS-232 Adapter for direct access via PC to the data of EMA 1101 (SW-Version 1.11*), EMR 1100 (SW-Version 1.95*) or EMF 1102 (SW-Version 1.0*) via modem
20-10319	Registration license EMF 1102	License allows EMVIS 3000 access to a Cost Centre and Alarm System EMF 1102, if this is logged by using a virtual data connector.
20-10313	EMF-SW	Display, analysis and configuration software for Cost Centre and Alarm System EMF 1102. Access via: EMIS® 1500, EMP 1100, EMT 1101 and RS-232 adapter. **Note:** included in scope of delivery of FRAKO-NET (for CD delivery)

* or higher

EM-UIF / EM-PTF
Frequency-Converter

The pulse output of the Frequency-Converter is connected to the Cost Centre and Alarm System EMF 1102. This offers the possibility to control, detect and visualize sensors with arbitrary output signals and temperatures with the FRAKO Energy Management System.

EM-UIF
Voltage-/Current-/Frequency Converter

For operating data acquisition of analogue signals with the FRAKO Energy Management System.

EM-PTF
Temperature-/Frequency-Converter

For acquiring operating data with the FRAKO Energy Management System, the measured inlet temperatures from –40 °C to +120 °C will be transformed into a pulse frequency from 0 to 5 Hz.

Technical Data EM-UIF

Power Supply	
Mains voltage	230 V AC +/-20 %
Frequency	45 up to 65 Hz
Power consumption	2.5 VA
Input	
Input variable	DC current or DC voltage
Rated voltage	0-20 mA, 4-20 mA, R_i = 3 Ω 0-10 V, 2-10 V, R_i = 160 kΩ
Overloading continuously	2 times at current 5 times at voltage
Surge overload	Twenty times 1 sec at current five times at voltage
Output	
Rated value	0 up to 5 Hz
OPEN collector	npn, max. 30 V, 100 mA max. loadable
Ingress protection	IP40
Version	Housing insulated, protection class 2, at rated voltage up to 300 V (net to neutral conductor), pollution degree 2, according to DIN EN 61010 Part 1 EMV according to DIN EN 50081-2 and DIN EN 61000-6-2
Installation	On standard rail 35 mm according to DIN EN 50022
Operating conditions	
Ambient temperature	-15 °C up to +55 °C
Article-No.	29-20059

Technical Data EM-PTF

Power supply	
Mains voltage	230 V AC +/-20 %
Frequency	45 bis 65 Hz
Power consumption	2.5 VA
Input	
Input variable	Resistor PT100
Rated value	-40 °C up to 120 °C, constant current via the sensor 2 mA
Types of connection	2-/3-or 4-wire, can be selected by DIP switch
2-wire circuit	Lead max. adjustment 10 Ohm via built-in potentiometer
3-wire circuit	Lead max. 100 Ohm, balanced, no adjustment required
4-wire circuit	Lead max. 100 Ohm, no adjustment required
Output	
Rated value	0 up to 5 Hz
OPEN collector	npn, max. 30 V, 100 mA load
Pulse / Pause	50/50 %
Connections	Screw terminals Conductor cross-section: max. 4 mm²
Mechanical construction	
Dimensions	22.5 x 84 x 108 mm (W x H x D)
Ingress protection	Housing/terminals IP30/IP20 according to DIN EN 60529
Version	Insulated housing, degree of polution 2, overvoltage category CAT 3 according to DIN EN 61010 part 1, EMV according to DIN EN 50081-1, DIN EN 61000-6-2
Installation	On standard rail 35 mm according to DIN EN 50022
Weight	Approx. 0.15 kg
Operating conditions	
Ambient temperature	-15 °C up to +55 °C
Article-No.	29-20049

Accessories

EM-PT 100 Temperature Sensor

Temperature sensor in 4-wire technique for measuring temperatures using the Temperature-/Frequency-Converter EM-PTF, the Power Quality Analyzer EM-PQ 2300 or the Mains Analysis Device EMA 1101.

Technical Data

General	
Rated value	100 Ohm at 0 °C
Temperature range	-80 °C up to +260 °C
Material	Stainless steel
Dimensions	
Sensor sleeve	Diameter: 4 mm, length: 50 mm
Connecting cable	Length: 1 000 mm
Article-No.	29-20050

Optional Accessories

Article-No.	Type	Description
29-20051	EM-PT100 MF	Mounting flange for the temperature probe

EM-AM 2108
Analogue Module

Data acquisition system for 8 analogue, freely configurable input channels. This allows to detect and visualize sensors with random output signals with the FRAKO Energy Management System.

Description

- 8 analogue inputs, selectively:
  - Temperature -50 °C up to 150 °C via 5 K NTC
  - 0 / 4 to 20 mA or - 0 to 10 V
- Monitoring of temperatures and analogue signals with upper and lower alarm limit
- External supply voltage 9 to 36 V DC
- Connection via FRAKO Starkstrombus®
- Resolution temperature range: 0.1 °C; Accuracy entire temperature range: 1 °C
- Resolution voltage range: 10 mV; max. failure: 30 mV
- Resolution current range: 20 µA; max. failure: 60 µA
- Easy configuration of the EM-AM 2108 via EM-AM-SW software
- For each input of the analogue module the current measurement readings as well as the maximum and the minimum value of the last interval will be displayed by the EM-AM SW software
- By integrating the EM-AM 2108 into the FRAKO Energy Information System all temperatures and analogue signals will be captured and monitored with their upper and lower alarm limits
- The system visualization software EMVIS 3000 allows to analyse and visualize the data

Technical Data

Power Supply	
Mains voltage	9 up to 36 V DC
Power consumption	0.72 VA
Input	
Input variable	Direct current or direct current voltage
Rated value	0 to 20 mA, 4 to 20 mA, R_i = 130 Ohm, 0 to 10V, R_i = 115,13 kOhm
Overload, constant	2.5 times (current), 2.5 times (voltage)
Short-time overload	5 times 1 s (current), 5 times 1 s (voltage)
Temperature measurement	Range: -50 °C up to 150 °C Resolution: approx. 0.1 °C Accuracy: 1.5 °C (-50 °C up to -25 °C); 1.0 °C (-25 °C up to +100 °C); 2.0 °C (+100 °C up to +125 °C); 3.5 °C (+125 °C up to +150 °C)
Current measurement	Range: 0 to 20 mA; 4 to 20 mA Resolution: 20 µA; max. failure: 60 µA
Voltage measurement	Range: 0 to 10 V Resolution: 10 mV; max. failure: 30 mV
Connections	Screw terminals; Wire cross section: max. 1.4 mm²
Interface	
1 FRAKO Starkstrombus®	For connection to FRAKO Energy Management System, according to EN 50170 (P-Net), standardised fieldbus, RS-485 transfer rate: 76.8 kbit/s
Display elements	2 LEDs
Mechanical construction	
Dimensions	86 x 128 x 50 mm (W x H x D)
Ingress protection	Housing/terminals IP30/IP20 according to DIN EN 60529
Version	Housing insulated, protection class 3 (SELV), at a rated voltage up to max. 36 V, pollution degree 2, according to EN 61010 part 1 EMV according to EN 61326-1
Installation	On standard rail 35 mm according to DIN EN 50022
Weight	190 g
Operating conditions	
Ambient temperature	0 °C up to +70 °C
Article-No.	20-40009

Optional Accessories

Article-No.	Type	Description
20-10700	Power Supply for analogue module EM-AM 24V DC (also suitable for EM-PQ 1500)	AC/DC SMPS adapter, DIN rail-mounted, 24 V DC / 0.35 A and 12 V DC / 20 mA, AC power supply 85 to 264 V (also suitable for EM-PQ 1500)

EMVIS 3000
System visualization

In the Energy Management System, the measured variables, statuses and events in the entire in-house energy supply system are acquired, processed centrally and saved. They are presented graphically by the visualization facility and evaluated. The EMVIS 3000 software is a powerful tool for displaying and documenting all the measurement readings from the devices connected to the system. A client management function is available, which enables individual organizational system trees to be assigned to different users, who therefore receive exactly those data that they require for their separate purposes. There are two types of installation: either the single workstation or the server version, the latter with access to up to 5 clients simultaneously via a web browser, with no additional installation necessary in the client systems.

EMVIS 3000 comprises the following functional modules:

EMVIS 3000 Project

The project planning tool ...

- Unrestricted configuration and compilation of evaluations of all data processed by the system
- New functions such as alarm visualization, status, history, ranking
- Server version with access via browser
- User administration, the administrator defines user rights and accesses
- Calculation of **performance figures**
  Performance figures are virtual data points calculated from other data points, an arithmetic computation from measured or imported data, e.g.: “Active energy A x factor + Water quantity B x factor + Compressed air volume C x factor / No. of items D”
- Creation of **benchmarking** charts
  Benchmarking makes a direct comparison of measurement data or performance figures possible, e.g. energy costs of products or company sites
- Creation of **Sankey** diagrams
  A Sankey diagram gives a clear overview of any type of flow, e.g. the flow of utilities. The width of each stream into and out of a location is proportional to the quantity flowing, absolute and percentage values also being stated
- Easy Customizing - individual planning of views - simple and intuitive (the basic package includes 3 views with up to 20 online data points in total)

EMVIS 3000 Report

The reporting tool ...

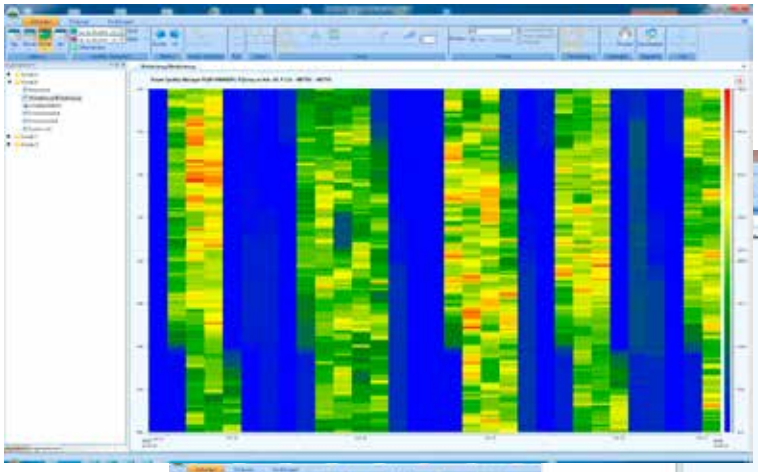
- To simplify navigation, a clear overview of the entire system is displayed in two system trees, either of which can be selected:
  - **Physical:** standard evaluations of all the instruments and channels registered with the system
  - **Organizational:** all evaluations that have been compiled with EMVIS 3000 Project
- Presentation of historical data for analysis and comparison purposes, e.g. different locations or different periods of time
- For example diagrams showing the time course or diagrams without timeline such as **carpetplot, scatter diagram and heatmap**
- The historical data can be exported directly from the chart or consumption table for further processing. Possible export formats are CSV, Excel, Word and PDF
- Direct access to the momentary readings of the connected instruments

- Visualization of the alarms occured is possible through display of the status, history and statistical evaluation in the ranking

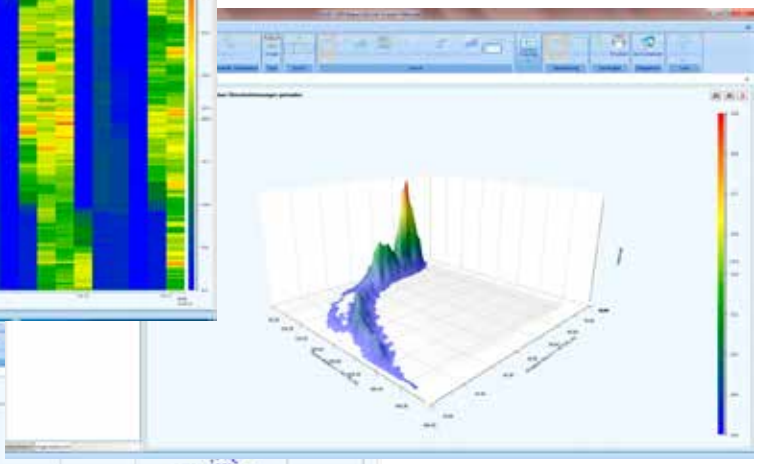
EMVIS 3000 Live

- Views created individually - from site layout drawings right down to the distribution board
- Display of the momentary measurement readings and statuses

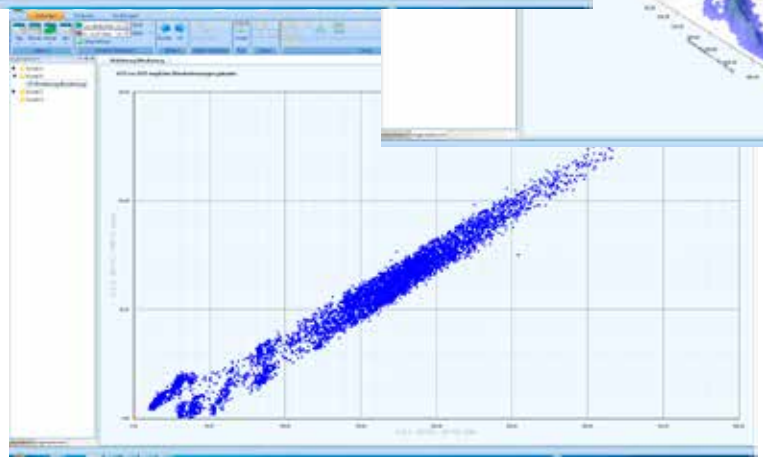
The EMVIS 3000 license enables the software to be installed on several PCs (server and clients) and an EMIS® 1500 Central Unit (and the Power Quality Manager PQM 1588) to be accessed.



Carpetplot

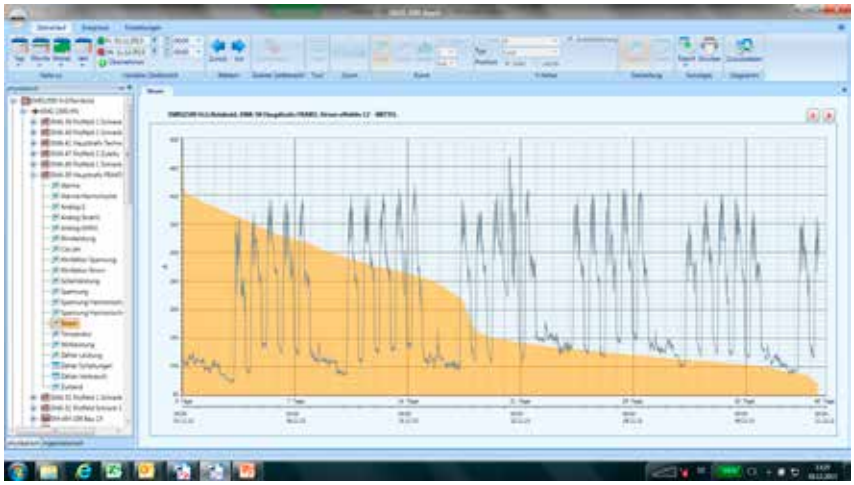


Heatmap 3-D

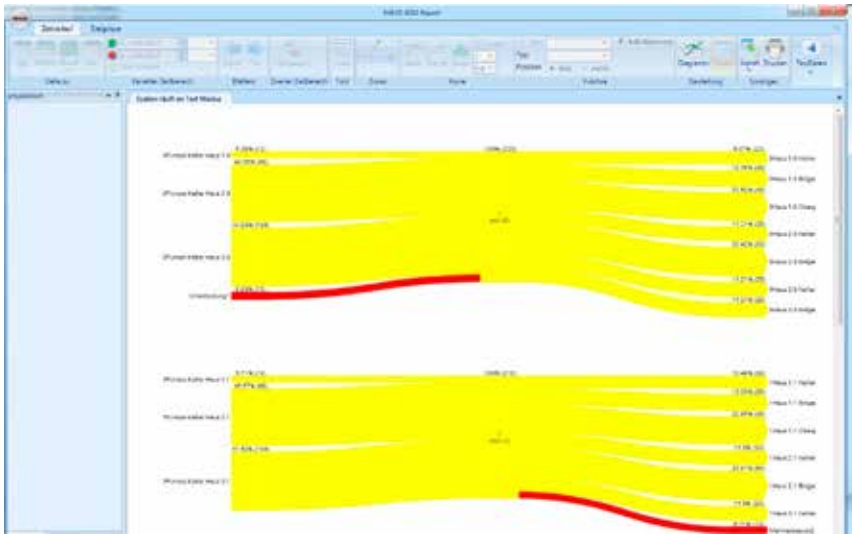


Scatter diagram 2-D

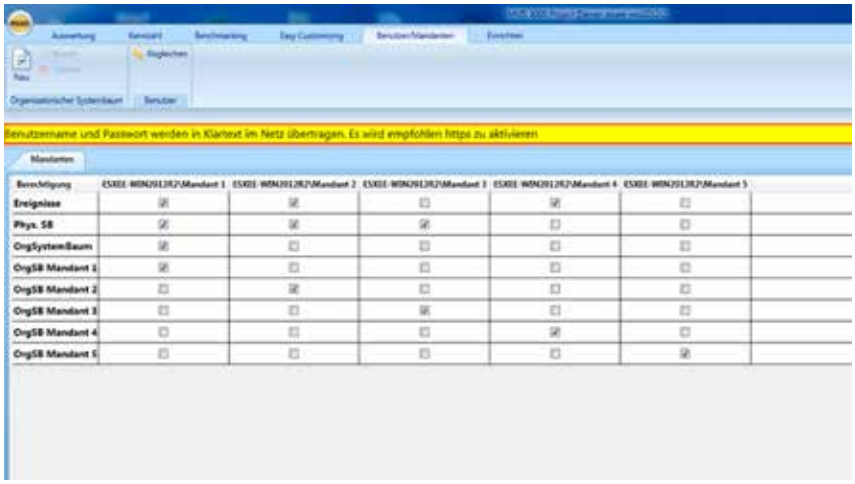
In the physical system tree prepared standard evaluations are deposited for all Energy Management devices. This allows the user to visualize the recorded historical data.



Continuous line graphic - shows the frequency of the variables within a period of time

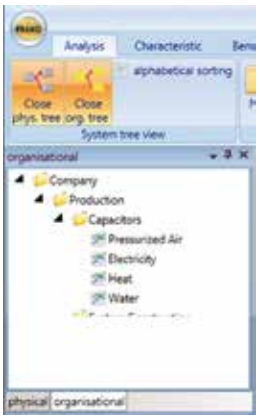


Sankey graphic - shows the flow of energy



Authorization graphic - table showing user administration authorization

Via physical system tree the actually measured data of all EM devices can readily be accessed.



Within the organizational system tree business specific structures are deposited. The business specific structures are projected in form of individual evaluation in the organizational system tree by the customer.

Technical Data

PC requirements for small and medium systems	
Hardware	• Min. Intel Core I3-Processor • User memory: 4 GB RAM • 1 GB free hard disk space • Graphics adapter: min. DirectX 9.0c support and 512 MB video memory
Software	• Microsoft® Windows®* 7 (x32/x64) Microsoft® Windows®* 8 (x32/x64) • Microsoft® Windows®* Server (2012 R2/2008 R2) • .NET 4.5 • .NET 3.5 • FRAKO-NET V1.40.0056 (or higher) • SQL data base Firebird 2.0 (included in FRAKO-NET) * Registered trademark of Microsoft Corporation
Article-No.	20-10649

EMVIS 3000 Extension packages

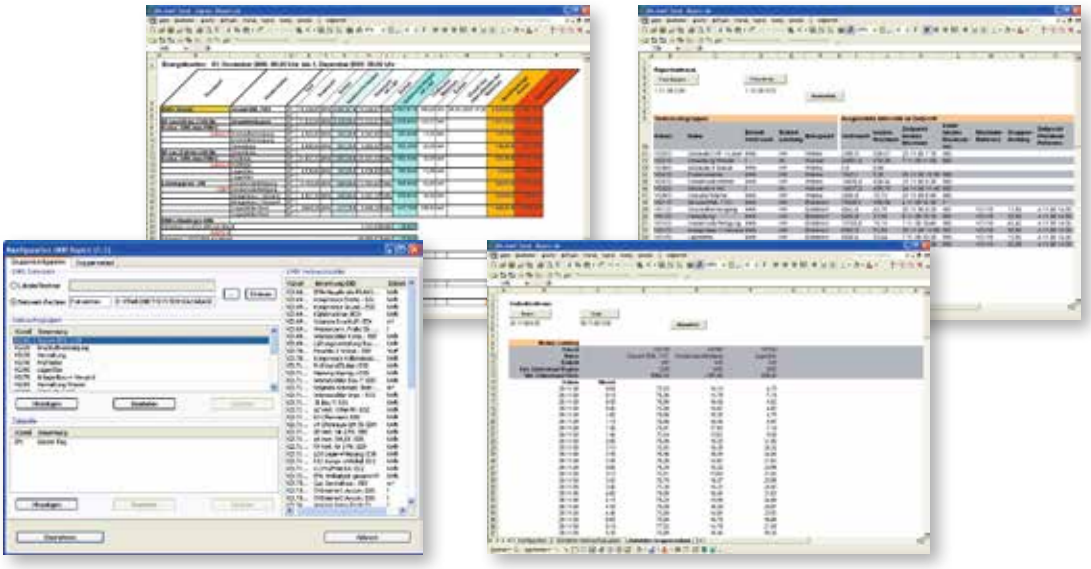
Article-No.	Type	Description
20-10650	EasyCustomizing-S	Individually designed views with up to 100 data points
20-10651	EasyCustomizing-M	Individually designed views with up to 200 data points
20-10652	EasyCustomizing-L	Individually designed views with up to 350 data points
20-10653	EasyCustomizing-XL	Individually designed views with up to 550 data points
20-10654	EasyCustomizing-XXL	Individually designed views with up to 1000 data points

EMVIS 3000 Software-Update

Article-No.	Type	Description
20-10555	EMVIS 3000 Software-Update	from version 3.0 to the latest version up to V3.XXX

EMVIS 3000 Subscription

Article-No.	Type	Description
20-10656	EMVIS 3000 Subscription	version 3.0 and above term of one year



EMIS® Report
Software for Cost Centre Analysis

Energy analysis with EMIS® Report.
Software for automated analysis of energy consumption based on Microsoft® Excel*.
The consumption data recorded with the FRAKO Energy Management System can be imported to an Excel workbook from the SQL databases FRAKO-NET or FRAKO EMIS-DB.

The reporting period can be set as required.

Individual loads or metering units can be combined to load groups (e.g. cost centres) and evaluated with different time profiles. Customer-specific reports can easily be generated by linking to appropriate cells.
By means of that you achieve an optimum transparency of the energy flows within the company.

With EMIS® report, data from the FRAKO database can be imported to an Excel sheet and are available for a customer specific analysis. This makes it a very useful tool for the allocation of costs of the different company divisions and/or energy transfer media (electricity, gas, oil, etc.). It is also a useful data source for the financial controlling of a company.

Transparency of energy costs
- Assigning costs to the originators
- Transparency of all energy flows within the company
- Achieve the utmost efficiency
- Automatic evaluation through e-mail notification - also available as CSV-file

To achieve an optimized reduction of the energy costs it is essential to have information on how much energy was consumed when and where.

The knowledge of the energy consumption per cost centre is necessary to determine the potential for savings.

EMIS® Report provides a structured overview of the consumption of all types of energy of your company such as current, water, gas, compressed air etc. This enables you to financially evaluate those consumptions.

Individual loads or metering units can be combined into load groups or cost centres and evaluated according to different time schedules.

Software

Software for Cost Centre Analysis

Thus, optimal transparency of energy flows is achieved in the company.
Functions:

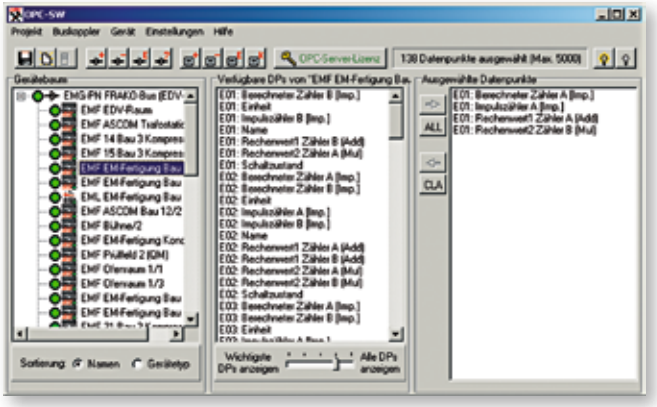
- Automatic evaluation and notification by e-mail
- Period covered by the report is freely definable (date, day, etc.)
- Determination of consumption (kWh, l, m3, ...)
- Consumption peaks within the reporting period
- Time of maximum demand (e.g. kWh)
- Demand by a load or a load group at the time of peak consumption of a reference unit
- Interval values (e. g. 15 minutes) of the reporting period for consumption or consumption rate (e.g. kW)
- Sum of the interval values of the reporting period
- Evaluation according to different time profiles

Technical Data

PC requirements	
Hardware	• Pentium, min. 2 GHz clock frequency • User memory: min. 1 GB RAM • 6 GB free hard disk space • Ethernet 10/100 Mbit/s network connection or/and one free serial interface • CD-ROM drive • SVGA graphics adapter • Colour screen, minimum resolution: 1024 x 768 Pixel
Software	• Database FRAKO-NET DB or FRAKO EMIS-DB • Microsoft® Windows®* 2008 R2 and 2012 R2 • Micosoft® Internet Explorer 5.5* • Microsoft® Excel* (Version 2000 or newer) * Registered trademark of Microsoft Corporation
Article-No.	20-10488

Optional Accessories

Article-No.	Type	Description
20-10494	Software expansion for EMIS® Report	Software update for cost centre and analysis software EMIS® Report



EMG-OPC-Server

Software interface with the current OPC server.
OPC is an open software interface standard that enables a simple standardized interchange of data to take place between automation and control applications, SCADA systems (process visualization) and office applications (e.g. Microsoft® Excel*, Access*).

FRAKO EMG-OPC Server has been developed for visualization purposes on the basis of the **OPC Data Access Specifications 1.0, 2.0 and 3.0**, and uses the Microsoft® DCOM standard.

This enables the client and server to be separated at various PCs in a network. It is recommended, however, to use client and server on the same PC.

Benefits of the OPC interface

- Easy linking of FRAKO mesurement devices, provided with the FRAKO Starkstrombus® protocol, to PC software such as visualization systems or office applications
- Data interchange between applications from various suppliers through a common interface

Operating principle

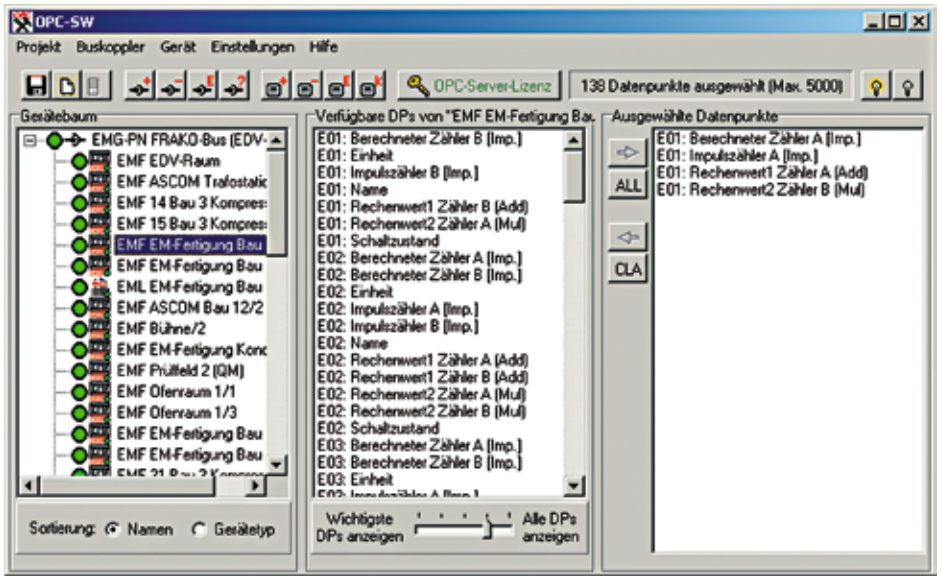
OPC works on the **client / server principle. EMG OPC Server** 'serves up' data from the FRAKO mesurement devices, provided with the FRAKO Starkstrombus® protocol, i.e. makes these available externally. The PC application as 'client' receives and processes the data.

Communication with the **FRAKO Energy Management System** is via an EMG 1500-PN Gateway or the internal gateway in the EMIS® 1500. Access to the gateways is via the site's own Ethernet network (TCP / IP).

The **OPC-SW** software creates the configuration files, which contain the data points for the namespace. This supplies a preselection of data points per gateway that can be provided by **EMG-OPC-Server**. These configuration files are loaded when **EMG-OPC-Server** is started. The OPC client then selects the data points to be provided by EMG-OPC-Server from the specified namespace.

Up to 8 EMG 1500 PN Gateways or internal gateways of the EMIS® 1500 and a maximum number of 5000 data points can be registered per **EMG-OPC-Server**. The same system requirements apply as for the **FRAKO EMVIS 3000 visualization system**.

Configuration



Technical Data

PC requirements	
Hardware	• 2 GHz Dual-Core processor • User memory: 2 GB RAM • 1 GB free hard disk sapce • Ethernet 10/100 Mbit/s network connection
Software	• Microsoft® Windows®* 7 (x32/x64) • Microsoft® Windows® Server (2008 R2) • .NET 1.1 • .NET 4.0 Client oder FULL * Registered trademark of Microsoft Corporation
