**Information about Forest Service Sensitive Species; Key to Acronyms and Abbreviations Used in the Sensitive Species List
31-Oct-05**

These are currently designated sensitive species in the nine Forest Service regions, that are NOT listed or proposed species under the ESA. Each respective Region maintains the the definitive, current, list of designated sensitive species in that Region. Taxa nomenclature has been verified by NatureServe, August 2005. All ranks have been verified by NatureServe, August 2005.

Taxa have been designated sensitive species by each Regional Forester because of a concern for viability. Designation may be due to concerns at both rangewide and planning area scales, OR due to concerns at only a planning area scale. Species are NOT necessarily a designated sensitive species on every National Forest in each Region where it is designated. Forest Service policies that apply to designated sensitive species are given in FS Manual, Chapter 2670: http://www.fs.fed.us/cgi-bin/Directives/get_dirs/fsm?2600!..

All parties should use this information to coordinate and implement species and habitat conservation actions across regions, states and forests, and to develop and implement appropriate conservation strategies for species, habitats and ecosystems; both with and without partnerships.

REGIONS - Forest Service Regions

- R1 -Northern Region, Regional Office (RO) in Missoula MT
- R2 -Rocky Mountain Region, RO in Denver CO
- R3 - Southwestern Region, RO in Albuquerque NM
- R4 - Intermountain Region, RO in Ogden UT
- R5 - Pacific Southwest Region, RO in Vallejo CA
- R6 - Northwest Region, RO in Portland OR
- R8 - Southern Region, RO in Atlanta GA
- R9 - Eastern Region, RO in Milwaukee WI
- R10 - Alaska Region, RO in Juneau AK

2005 NATURESERVE SCIENTIFIC NAME - scientific name used by NatureServe & State Natural Heritage Programs; <http://www.natureserve.org/explorer/>

ALTERNATE SCIENTIFIC NAME(S) - an alternate scientific name(s) that is sometimes used

NATURESERVE PRIMARY COMMON NAME - the primary common name used by NatureServe

MAJOR GROUP - Plant, Invertebrate, Vertebrate

**SUBGROUP - Bryophyte, Conifer, Fern/Fern Ally, Fungi, Lichen
Arachnid, Crustacean, Insect, Mollusc, Other Invertebrate
Amphibian, Bird, Fish, Mammal, Reptile**

G RANK - NatureServe global conservation status rank of taxon; <http://www.natureserve.org/explorer/methods.htm>

G1 = critically imperiled, at very high risk of extinction due to extreme rarity, very steep declines, or other factors

G2 = imperiled, at high risk of extinction due to very restricted range, very few populations, recent and widespread declines or other factors

G3 = vulnerable, at moderate risk of extinction due to restricted range, relatively few populations, recent and widespread declines, or other factors

G4 = apparently secure, uncommon but not rare; some cause for long-term concern due to declines or other factors

G5 = secure, widespread and abundant

G#G# = a numeric range rank, used to indicate the range of uncertainty in the status of a species or community

GH = possibly extinct, missing; known from only historical occurrences but still some hope of rediscovery

GU = unrankable, due to lack of information or due to substantially conflicting information about status or trends

GNR = unranked; Global rank not yet assessed

GNA = not applicable; a conservation status rank is not applicable because the species is not a suitable target for conservation activities

Modifiers:

G#Q = questionable taxonomy, taxonomic distinctiveness at the current level is questionable

G#? = denotes inexact numeric range

U.S. N RANK - NatureServe conservation status rank of taxon at only U.S. national scale; ranks used for global rank applied at national scale (N)

U.S. ESA C - taxon is a designated Candidate species for listing under the U.S. Endangered Species Act

C - designated by the FWS as a Candidate species

FC - designated by the NMFS as a Candidate species
