Supported by
The National Lottery®
through the Heritage Lottery Fund

Summary

- 828 species of invertebrates were recorded at the Rea Brook Valley during a survey carried out by FSC Invertebrate Challenge Project volunteers and tutors during 2014.
- The survey was carried out by 34 people, plus a further seven people provided determinations of a small number of species off-site.
- Several species of interest and conservation importance were noted including four Nationally Scarce species, seven species new to Shropshire (VC40), and several others with less than five existing Shropshire records.
- An assessment of the total list of species recorded was undertaken using ISIS software. This showed that three invertebrate assemblages of note were evident within the Specific Assemblage Type (SAT). They were rich flower resource assemblage (nectar feeders), scrub edge, and bark & sapwood decay (saproxylic invertebrates) assemblages. Assessment of the Broad Assemblage Type (BAT) highlighted the flowing water assemblage, the grassland and scrub matrix, arboreal canopy, and wood decay species as all important aspects of the site.
- All records were submitted to the SEDN (Shropshire's virtual local record centre) via the County Recorder Network.
- Management suggestions were not made as part of this project as the focus of the survey was purely identification as a way of assessing the individual progress of Invertebrate Challenge participants, though the data collected would enable management suggestions to be made should that have been our focus.

Rea Brook Valley Invertebrate Survey - 2014

Introduction and Methods

During 2014 an invertebrate survey was undertaken at the Rea Brook Valley in Shrewsbury. The survey was carried out by volunteers and tutors of the Heritage Lottery Fund (HLF) Invertebrate Challenge (IC) project, run by the Field Studies Council (FSC), based out at Preston Montford Field Centre, Montford Bridge. This was an opportunity for participants, particularly the IC volunteers; to demonstrate the skills they had gained during the tenure of Invertebrate Challenge which started in 2011. Many volunteers were completely new to entomology at the beginning of the project and so the idea was to survey a site to show how far they had come on their own entomological journeys. This site was selected to survey as it was a) easily accessible by participants, b) of nature conservation importance (Rea Brook is a Local Nature Reserve), and c) a site that hadn't had any in-depth survey carried out on it before. Rea Brook was therefore felt to be an ideal site on which to carry out the survey.

The Rea Brook Valley is made up of floodplain grassland alongside the brook itself, and some areas are wooded (particularly at Meole Brace). The survey area (see Map 1) was from the old railway line and grassland adjacent to the Cinema of Old Potts Way at the north end, and ran south to Meole Brace. Some areas of the site are managed by the Town Council using grazing animals, and hay is cut from areas where grazing is not appropriate. The site gets a large amount of usage from local people, particularly dog walkers.

Map 1 – Scope of the survey

For ease of biological record making the site was split up into several distinct named sections as listed below and these were given centroid grid references;

- Area A – “Cinema Field and Big Horse” – SJ502119
- Area B – “Small Horse” – SJ503119
- Area C – “Pritchard Way (west of the Rea Brook) – SJ504117
- Area D – “Column Meadow (east of the Rea Brook) – SJ505117
- Area E – “3 Fields” – SJ502113
- Area F – “White Hart” – SJ502110
- Area G – “Bend” - SJ503107

- Area H – “Golf Club” - SJ498109
- Area I – “Golf Club triangle” - SJ491107
- Area J - “Meole North” - SJ487104
- Area K – “Meole South” - SJ485102

More detailed maps of these areas are shown in the appendix of this report.

The survey methodology was mostly carried out using sweep-netting and hand searching, though a vacuum sampler was employed by Nigel Cane-Honeysett for part of one of the final visits to the site. The site was deemed to have too much disturbance by public usage to employ some of the more traditional methods used in an entomological survey such as use of a Malaise Trap, water traps, pitfall traps, interception traps, etc.

Results

A total of approximately 3000 biological records of 828 species of 21 different invertebrate orders were made by IC volunteers and tutors during 2014 (see Table 1). A full list of records can be found in the Appendix of this report and all records were sent by recorders to the various Shropshire County Recorders and onwards to the Shropshire Ecological Data Network (SEDN), which is Shropshire’s virtual local records centre, and the National Biodiversity Network (NBN) Gateway. This means records are accessible to everyone.

The survey was carried out between mid-March and the end of September and records were received from 34 recorders. These were (in alphabetical order); Richard Becker, Pete Boardman, Rich Burkmar, Nigel Cane-Honeysett, Ian Cheeseborough, Richard Comont, Jim Cox, Jim Cresswell, Andy Cutts, Allan Dawes, Michelle Furber, Keith Fowler, Jonathan Groom, Brian Harding, Brian Herring, Nigel Jones, Maria Justamond, Gordon Leel, Sue McLamb, Jay Mitchell, Margaret Mitchell, Stephen Mitchell, Warren Putter, Frances Riding, Glenn Rostron, Colin Slater, Don Stenhouse, Nicola Stone, Marc Taylor, Caroline Uff, David Williams, Kat Woods, Liz Wright and Dan Wrench. An extra 7 people contributed with determinations of specimens and they were; Gavin Broad, John Grierson, Steve Hind, Roger Morris, Stuart Roberts, Ian Thompson, and Sasha Varga.

Order	No. of Species Recorded
Diptera (true flies)	279
Coleoptera (beetles)	148
Hemiptera (true bugs)	146
Hymenoptera (bees, wasps, ants, sawflies & parasitica)	83
Lepidoptera (butterflies and moths)	57
Araneae (spiders)	32
Mollusca (slugs and snails)	28
Odonata (dragonflies and damselflies)	12
Ephemeroptera (mayflies)	6
Neuroptera (lacewings)	6
Orthoptera (grasshoppers, groundhoppers & crickets)	6
Psocoptera (barkflies)	5
Opiliones (harvestman)	5
Prostigmata (mites)	4
Isopoda (woodlice)	3
Trichoptera (caddisflies)	2
Mecoptera (scorpionflies)	2
Collembola (springtails)	1
Chilopoda (centipedes)	1
Diplopoda (millipedes)	1
Dermaptera (earwigs)	1
Total	828

The main groups studied as part of the Invertebrate Challenge project were Diptera, Coleoptera, Hemiptera, Hymenoptera, and Araneae, which shows as they were the most well-covered groups during this survey.

Invertebrate Assemblages

An assessment of the total list of species recorded was undertaken using ISIS software. The software was developed by Natural England initially to examine the invertebrate assemblages of Sites of Special Scientific Interest (SSSI's) when Common Standards Monitoring is undertaken but has shown also to be useful indicator of important invertebrate assemblages where reasonably detailed surveys have taken place. ISIS showed that three invertebrate assemblages of note were evident within the Specific Assemblage Type (SAT). They were **rich flower resource** assemblage (nectar feeders), **scrub edge**, and **bark and sapwood decay** (saproxylic invertebrates) assemblages. Assessment of the Broad Assemblage Type (BAT) highlighted the **flowing water** assemblage, the **grassland and scrub** matrix, **arboreal canopy**, and **wood decay** species as all important aspects of the site.

The specific assemblage types represented in this list are as follows:

SAT code	SAT name	No. spp.	Condition	Percentage of national species pool	Related BAT rarity score
F002	rich flower resource	40	fav	17	
A215	epiphyte fauna	3		15	153
F001	scrub edge	22	fav	12	
W125	slow-flowing rivers	3		12	166
A212	bark & sapwood decay	32	fav	6	153
W114	stream and river margin	2		3	166
A211	heartwood decay	5		3	153
W314	reedfen and pools	3		3	132
F112	open short sward	5		3	117
A213	fungal fruiting bodies	2		2	153
F006	dung	2		2	
F003	scrub-heath & moorland	1		0	

All SATs scoring more than zero are listed

The broad assemblage types represented in this list are as follows:

BAT code	BAT name	Representation (1-100)	Rarity score	Condition	BAT species richness	IEC
F2	grassland & scrub matrix	26	116		182	
A1	arboreal canopy	13	141		91	
W1	flowing water	8	166	fav	57	
A2	wood decay	8	153		58	1
F1	unshaded early successional mosaic	7	117		46	
W2	mineral marsh & open water	6	118		45	
W3	permanent wet mire	6	132		44	
F3	shaded field & ground layer	5	126		34	

Rarity scores are shown only for BATS represented by more than 15 species in the assemblage / fauna being analysed

Important Species

Though most species recorded were common, widespread, or would be expected to be found within the type of habitats at the site it was nevertheless encouraging to record some species that were regionally or nationally important as part of the survey. These are listed as follows;

- Coleoptera: *Ctesias serra* (Fabricius, 1792), commonly known as the cobweb beetle, is a species of beetle native to England. The common name relates to the habit of the larva of taking trapped insects from spiderwebs. The preferred habitat is beneath old thick bark. Nationally Scarce (Notable B).
- Coleoptera: *Philonthus atratus* (Gravenhorst, 1802). A rove beetle with a distribution limited to the south and the Midlands. Nationally Scarce (Notable A).
- Coleoptera: *Scymnus auritus* Thunberg, 1795. An inconspicuous ladybird. New to VC40.
- Coleoptera: *Agonum micans* Nicolai, 1822. Uncommon in VC40.
- Diptera: *Lonchoptera nigrociliata* Duda, 1927. A pointed-winged fly with a western distribution found in Wales, the Marches, and Cumbria. Nationally Scarce.
- Diptera: *Euphranta toxoneura* (Loew, 1846). A picture-winged fly. Nationally Scarce.
- Diptera: *Hoplolabis vicina* (Tonnoir in Goetghebuer & Tonnoir, 1920). A crane fly associated with sandy rivers. SRI 4 category – Shropshire axiozoan
- Diptera: *Hoplolabis areolata* (Siebke, 1872). A crane fly associated with sandy rivers. SRI 4 category – Shropshire axiozoan
- Diptera: *Scleroprocta sororcula* (Zetterstedt, 1851). A crane fly associated with wet woodland. SRI 4 category – Shropshire axiozoan. 3rd VC40 record.
- Diptera: *Calamoncosis glyceriae* Nartshuk, 1958. A small chloropid fly associated with ponds with *Glyceria*. New to VC40.
- Diptera: *Hilara lurida* (Fallén, 1816). A small dance fly. New to VC40.
- Diptera: *Brachyopa insensilis* Collin, 1939. A hoverfly associated with sap runs on horse chestnut. 2nd VC40 record.
- Diptera: *Chyromyia femorellum* (Fallén, 1820). One of the small yellow flies usually found on vegetation. 2nd VC40 record.
- Diptera: *Tephritis hyoscyami* (Linnaeus, 1758). A picture-winged fly. 2nd VC40 record.
- Diptera: *Chrysotoxum verralli* Collin, 1940. A hoverfly. 3rd VC40 record.
- Diptera: *Leopoldus signatus* Wiedemann, 1824. A conopid fly. 3rd VC40 record.
- Diptera: *Atherix ibis* (Fabricius, 1798). Yellow-legged Water Snipefly. Mostly with a western distribution this snipefly is associated with rivers and streams. Local
- Hymenoptera: *Rhyssella approximator* (Fabricius, 1793). An ichneumon wasp. New to VC40.
- Hymenoptera: *Xiphydria camelus* (Linnaeus, 1758). Alder Wood-wasp. Associated with dead or weakened alder and birch trees. Local.
- Araneae: *Philodromus albidus* Kulczynski, 1911. A spider with a southern distribution moving northwards. New to VC40.
- Hemiptera: *Baeopelma foersteri* (Flor, 1861). A psyllid bug. New to VC40.
- Hemiptera: *Cacopsylla sorbi* (Linnaeus, 1758). A psyllid bug. New to VC40.
- Hemiptera: *Psallus pseudoplatani* Reichling, 1984. A plant bug. New to VC40.
- Hemiptera: *Fagocyba cruenta* (Herrich-Schäffer, 1838). A leafhopper. 3rd VC40 record.
- Neuroptera: *Conwentzia psociformis* (Curtis, 1834). A waxy lacewing. 3rd VC40 record.
- Lepidoptera: *Thymelicus lineola* (Ochsenheimer, 1808) Essex Skipper. Only a very recent colonist of Shropshire. Surveyors were surprised at the extent of this species within grassland areas at the Rea Brook.

It is possible that other species new or important to Shropshire were recorded but as of yet not all Orders have had assessments of their conservation status carried out by the relevant county recorders.

All records were submitted to the SEDN via the County Recorder Network.

Species lists

Diptera

True flies characterised by only one pair of wings. Over 7000 UK species. They are found in all habitats from the sea shore to mountain tops. Whilst some are agricultural pests or vectors of disease, the great majority are beneficial. They are extremely important as predators on other pests and diseases, as pollinators, as food for other animals and the immature stages of the bulk of the species are involved in the decay of organic matter and the recycling of material back into the soil.

Family	Vernacular Name	Taxonomic name
Agromyzidae	Himalayan Balsam leafminer fly	<i>Phytoliriomyza melampyga</i>
Agromyzidae	Holly leafmine fly	<i>Phytomyza ilicis</i>
Anthomyiidae	a fly	<i>Eustalomyia histrio</i>
Anthomyiidae	a fly	<i>Hylemya vagans</i>
Anthomyiidae	a fly	<i>Pegomya bicolor</i>
Asilidae	a robberfly	<i>Dioctria atricapilla</i>
Asilidae	a robberfly	<i>Dioctria baumhaueri</i>
Asilidae	a robberfly	<i>Dioctria linearis</i>
Asilidae	a robberfly	<i>Dioctria rufipes</i>
Athericidae	a water snipe-fly	<i>Atherix ibis</i>
Bibionidae	a St. Mark's fly	<i>Bibio johannis</i>
Bibionidae	a St. Mark's fly	<i>Bibio marci</i>
Bibionidae	a St. Mark's fly	<i>Dilophus febrilis</i>
Bombyliidae	a bee-fly	<i>Bombylius major</i>
Calliphoridae	a blow fly	<i>Lucilia caesar</i>
Calliphoridae	a blow fly	<i>Lucilia sericata</i>
Calliphoridae	a blow fly	<i>Melanomya nana</i>
Callophoridae	a blow fly	<i>Pollenia pediculata</i>
Callophoridae	a blow fly	<i>Pollenia rudis</i>
Callophoridae	a blow fly	<i>Protocalliphora azurea</i>
Cecidomyiidae	a gall midge	<i>Dasineura urticae</i>
Chloropidae	a fly	<i>Calamoncosis glyceriae</i>
Chloropidae	a fly	<i>Chlorops limbatus</i>
Chloropidae	a fly	<i>Thaumatomyia notata</i>
Chyromyidae	a fly	<i>Chyromya femorellum</i>
Clusiidae	a druid fly	<i>Clusia flava</i>
Clusiidae	a druid fly	<i>Clusiodes gentilis</i>
Conopidae	a conopid fly	<i>Leopoldius signatus</i>
Conopidae	a conopid fly	<i>Sicus ferrigineus</i>
Dolichopodidae	a long-legged fly	<i>Campsicnemus curvipes</i>
Dolichopodidae	a long-legged fly	<i>Chrysotus gramineus</i>
Dolichopodidae	a long-legged fly	<i>Dolichocephala guttata</i>
Dolichopodidae	a long-legged fly	<i>Dolichocephala irrorata</i>

Dolichopodidae	a long-legged fly	<i>Dolichopus discifer</i>
Dolichopodidae	a long-legged fly	<i>Dolichopus trivialis</i>
Dolichopodidae	a long-legged fly	<i>Dolichopus unguatus</i>
Dolichopodidae	a long-legged fly	<i>Poecilobothrus nobilitatus</i>
Dolicopodidae	a long-legged fly	<i>Sciapus platypterus</i>
Dolicopodidae	a dance fly	<i>Sympycnus desoutteri</i>
Dolicopodidae	a dance fly	<i>Syntormon denticulatum</i>
Dolicopodidae	a dance fly	<i>Syntormon pallipes</i>
Drosophilidae	a fruit fly	<i>Lordiphosa andalusiaca</i>
Dryomyzidae	a fly	<i>Neuroctena anilis</i>
Empididae	a dance fly	<i>Empis livida</i>
Empididae	a dance fly	<i>Empis nigritarsis</i>
Empididae	a dance fly	<i>Empis stercoraria</i>
Empididae	a dance fly	<i>Empis tessellata</i>
Empididae	a dance fly	<i>Empis trigramma</i>
Empididae	a dance fly	<i>Hilara discoidalis</i>
Empididae	a dance fly	<i>Hilara fuscipes</i>
Empididae	a dance fly	<i>Hilara lurida</i>
Empididae	a dance fly	<i>Hilara maura</i>
Empididae	a dance fly	<i>Hilara monedula</i>
Empididae	a dance fly	<i>Hilara obscura</i>
Empididae	a dance fly	<i>Leptopeza flavipes</i>
Empididae	a dance fly	<i>Ocydromia glabricula</i>
Empididae	a dance fly	<i>Oedalea holmgreni</i>
Empididae	a dance fly	<i>Rhamphomyia albohirta</i>
Empididae	a dance fly	<i>Rhamphomyia crassirostris</i>
Empididae	a dance fly	<i>Rhamphomyia flava</i>
Empididae	a dance fly	<i>Rhamphomyia nigripennis</i>
Empididae	a dance fly	<i>Rhamphomyia tarsata</i>
Empididae	a dance fly	<i>Rhaphium appendiculatum</i>
Empididae	a dance fly	<i>Rhaphium crassipes</i>
Empididae	a dance fly	<i>Rhaphium riparium</i>
Fanniidae	a fly	<i>Fannia armata</i>
Fanniidae	a fly	<i>Fannia lustrator</i>
Fanniidae	a fly	<i>Fannia serena</i>
Heleomyzidae	a fly	<i>Suillia affinis</i>
Heleomyzidae	a fly	<i>Suillia variegata</i>
Lauxaniidae	a fly	<i>Meiosimyza decipiens</i>
Lauxaniidae	a fly	<i>Minettia longipennis</i>
Lauxaniidae	a fly	<i>Sapromyza halidayi</i>
Limoniidae	a crane fly	<i>Antocha vitripennis</i>
Limoniidae	a crane fly	<i>Atypophthalmus inustus</i>
Limoniidae	a crane fly	<i>Austrolimnophila ochracea</i>

Limoniidae	a crane fly	<i>Cheilotrichia cinerascens</i>
Limoniidae	a crane fly	<i>Cheilotrichia imbuta</i>
Limoniidae	a crane fly	<i>Dicranomyia autumnalis</i>
Limoniidae	a crane fly	<i>Dicranomyia chorea</i>
Limoniidae	a crane fly	<i>Dicranomyia mitis</i>
Limoniidae	a crane fly	<i>Dicranomyia modesta</i>
Limoniidae	a crane fly	<i>Dicranophragma nemorale</i>

Ulidiidae	a picture-winged fly	<i>Melieria crassipennis</i>

Coleoptera

Beetles are insects in the Order Coleoptera and there are around 4000 species in the UK. *Coleoptera* – which means ‘sheath-winged’ refers to their generally most obvious characteristic – they almost always have forewings modified to form protective wing cases (elytra), covering the hind wings (if they have any) used for flight. Beetles almost invariably have biting mouthparts, with sharp mandibles. Many are predators of other insects or invertebrates; while others are plant-feeders, fungus-feeders, or re-cycle decaying animal or plant remains, including dung.

Family	Vernacular Name	Taxonomic name
Apionidae	a dock weevil	<i>Apion frumentarium</i>
Byturidae	a fruitworm beetle	<i>Byturus ochraceus</i>
Byturidae	a fruitworm beetle	<i>Byturus tomentosus</i>
Cantharidae	a soldier beetle	<i>Cantharis decipiens</i>
Cantharidae	a soldier beetle	<i>Cantharis nigricans</i>
Cantharidae	a soldier beetle	<i>Cantharis pellucida</i>

Cantharidae	a soldier beetle	<i>Cantharis rustica</i>
Cantharidae	a soldier beetle	<i>Malthodes minimus</i>
Cantharidae	a soldier beetle	<i>Paradromius linearis</i>

Latridiidae	a minute brown scavenger beetle	<i>Cartodere nodifer</i>
Latridiidae	a minute brown scavenger beetle	<i>Corticicaria gibbosa</i>
Leiodidae	a round fungus beetle	<i>Anisotoma humeralis</i>
Malachiidae	a malachite beetle	<i>Malachius bipustulatus</i>
Oedemeridae	a thick-legged flower beetle	<i>Ischnomera cyanea</i>
Oedemeridae	Swollen-thighed beetle	<i>Oedemera nobilis</i>
Ptiliidae	a feather-wing beetle	<i>Acrotrichis intermedia</i>
Ptiliidae	a feather-wing beetle	<i>Ptenidium nitidum</i>
Ptinidae	a spider beetle	<i>Anobium punctatum</i>
Ptinidae	a spider beetle	<i>Grynobius planus</i>
Ptinidae	a spider beetle	<i>Ptilinus pectinicornis</i>
Pyrochroidae	Red-headed Cardinal Beetle	<i>Pyrochroa serraticornis</i>
Salpingidae	a narrow-waisted bark beetle	<i>Salpingus planirostris</i>
Scarabaeidae	a dung beetle	<i>Aphodius prodromus</i>
Scrautiidae	a false flower beetle	<i>Anaspis garneysi</i>
Staphylinidae	a rove beetle	<i>Anotylus sculpturatus</i>
Staphylinidae	a rove beetle	<i>Anotylus tetracarınatus</i>
Staphylinidae	a rove beetle	<i>Autalia rivularis</i>
Staphylinidae	a rove beetle	<i>Bledius gallicus</i>
Staphylinidae	a rove beetle	<i>Carpelimus elongatulus</i>
Staphylinidae	a rove beetle	<i>Drusilla canaliculata</i>
Staphylinidae	a rove beetle	<i>Gabrius piliger</i>
Staphylinidae	a rove beetle	<i>Lesteva longolytrata</i>
Staphylinidae	a rove beetle	<i>Mocyta fungi</i>
Staphylinidae	a rove beetle	<i>Oligota pusillima</i>

Staphylinidae	a rove beetle	<i>Philonthus atratus</i>
Staphylinidae	a rove beetle	<i>Philonthus quisquiliarius</i>
Staphylinidae	a rove beetle	<i>Philonthus varians</i>
Staphylinidae	a rove beetle	<i>Platystethus cornutus</i>
Staphylinidae	a rove beetle	<i>Scaphisoma agaricinum</i>
Staphylinidae	a rove beetle	<i>Scymaenus tarsatus</i>
Staphylinidae	a rove beetle	<i>Stenus boops</i>
Staphylinidae	a rove beetle	<i>Stenus clavicornis</i>
Staphylinidae	a rove beetle	<i>Stenus nigritulus</i>
Staphylinidae	a rove beetle	<i>Stenus similis</i>
Staphylinidae	a rove beetle	<i>Tachinus laticollis</i>
Staphylinidae	a rove beetle	<i>Tachyporus dispar</i>
Tenebrionidae	a darkling beetle	<i>Lagria hirta</i>

Hemiptera

True bugs (Hemiptera) are one of the major groups of insects found in the UK, comprising nearly 2000 species. They include many of the commonly encountered aquatic insects such as water boatmen and pondskaters alongside the terrestrial species such as shieldbugs.

Family	Vernacular Name	Taxonomic name
Acanthosomatidae	Hawthorn Shieldbug	<i>Acanthosoma haemorrhoidale</i>
Acanthosomatidae	Birch Shieldbug	<i>Elasmotethus interstinctus</i>
Acanthosomatidae	Parent Shieldbug	<i>Elasmucha grisea</i>
Anthocoridae	a flower bug	<i>Anthocoris confusus</i>
Anthocoridae	a flower bug	<i>Anthocoris nemoralis</i>
Anthocoridae	a flower bug	<i>Anthocoris nemorum</i>
Anthocoridae	a flower bug	<i>Cardiastethus fasciiventris</i>
Anthocoridae	a flower bug	<i>Orius vicinus</i>
Aphrophoridae	a froghopper	<i>Aphrophora alni</i>
Aphrophoridae	a froghopper	<i>Aphrophora major</i>
Aphrophoridae	a froghopper	<i>Neophilaenus lineatus</i>

Tingidae	Spear thistle lacebug	<i>Tingis cardui</i>
Velidae	a water cricket	<i>Velia caprai</i>

Hymenoptera

The most familiar Hymenoptera are the bees, wasps and ants; insects feared by many people because of their stings. However, these make up only a small proportion of the order. The Hymenoptera also includes Ichneumons and other parasitic "wasps" and Sawflies. Unfortunately, there is no English name to embrace the whole order as there is for beetles, bugs and true flies. Hymenoptera characteristically have two pairs of wings, a large fore pair and a smaller hind pair. These wings are held together by a series of hooks (called a frenulum) and may appear like a single pair to the naked eye. Hymenoptera also tend to have prominent antennae, generally with nine or more segments and biting mouthparts. The most conspicuous Hymenoptera are the fast-flying, often black and yellow, bees and wasps. Ants, too, are easily noticed when intruding on our lives. However, many of the smaller and less familiar Hymenoptera can have a jewel-like beauty on close examination and are interesting in a great variety of ways. In the British Isles, there are at least 6,700 species of Hymenoptera, occurring in all terrestrial habitats.

Family	Vernacular Name	Taxonomic name
Apidae	Gwynne's Mining Bee	<i>Andrena bicolor</i>
Apidae	a mining bee	<i>Andrena carantonica</i>
Apidae	a mining bee	<i>Andrena chrysoceles</i>
Apidae	a mining bee	<i>Andrena cineraria</i>
Apidae	a mining bee	<i>Andrena dorsata</i>
Apidae	Tawny Mining Bee	<i>Andrena fulva</i>
Apidae	a mining bee	<i>Andrena haemorrhoea</i>
Apidae	a mining bee	<i>Andrena labiata</i>
Apidae	a mining bee	<i>Andrena minutula</i>
Apidae	a mining bee	<i>Andrena nigroaenea</i>
Apidae	a mining bee	<i>Andrena nitida</i>
Apidae	a solitary bee	<i>Anthophora furcata</i>

Vespidae	a social wasp	<i>Dolichovespula saxonica</i>
Vespidae	Hornet	<i>Vespa crabro</i>
Vespidae	a social wasp	<i>Vespula vulgaris</i>
Xiphydriidae	a sawfly	<i>Xiphydria camelus</i>

Lepidoptera

There are around 2,500 species of butterflies and moths in the United Kingdom. Many are familiar day-time visitors to gardens and other suitable habitats, whilst many remain largely unseen by flying at night, or are small and are only evident as squiggles or leafmines on plants.

Family	Vernacular Name	Taxonomic name
Adelidae	a micro moth (long-horned moth)	<i>Adela rufimitrella</i>
Adelidae	a micro-moth (long-horned moth)	<i>Nemophora degeerella</i>
Choreutidae	Nettle tap	<i>Anthophila fabriciana</i>
Crambidae	Small Magpie	<i>Eurrhyncha hortulata</i>
Crambidae	Beautiful China-mark	<i>Nymphula stagnata</i>
Crambidae	a pyralid moth	<i>Phlyctaenia coronata</i>
Crambidae	Mother of Pearl	<i>Pleuroptya ruralis</i>
Crambidae	Pale Straw Pearl	<i>Udea lutealis</i>
Elachistidae	a micro-moth	<i>Agonopterix arenalla</i>
Geometridae	Common Wave	<i>Cabera exanthemata</i>
Geometridae	Common White Wave	<i>Cabera pusaria</i>
Geometridae	Yellow Shell	<i>Camptogramma bilineata</i>
Geometridae	Common Carpet	<i>Epirrhoe alternata</i>
Geometridae	Barred Straw	<i>Eulithis pyraliata</i>
Geometridae	Riband Wave	<i>Idaea aversata</i>
Geometridae	Shaded Broad Bar	<i>Scotopteryx chenopodiata</i>
Geometridae	Bloodvein	<i>Timandra comae</i>
Geometridae	Silver ground carpet	<i>Xanthorhoe montanata</i>
Glyphipterigidae	a micro-moth	<i>Glyphipterix simplicella</i>
Gracillariidae	a micro-moth	<i>Caloptilia syringella</i>
Gracillariidae	Horse-Chestnut Leaf-miner	<i>Cameraria ohridella</i>
Gracillariidae	Nut-leaf Blister Moth	<i>Phyllonorycter coryli</i>
Gracillariidae	a case-bearing micro moth	<i>Phyllonorycter harrisella</i>
Hesperiidae	Large Skipper	<i>Ochlodes sylvanus</i>
Hesperiidae	Essex Skipper	<i>Thymelicus lineola</i>
Hesperiidae	Small Skipper	<i>Thymelicus sylvestris</i>
Lycaenidae	Holly Blue	<i>Celastrina argiolus</i>
Lycaenidae	Small Copper	<i>Lycaena phlaeas</i>

Lycaenidae	Common Blue	<i>Polyommatus icarus</i>
Lyonetiidae	a micro-moth	<i>Lyonetia clerkella</i>
Micropterigidae	a micro-moth	<i>Micropterix calthella</i>
Nepticulidae	Bramble leafminer	<i>Stigmella aurella</i>
Nepticulidae	a micro-moth	<i>Stigmella microtheriella</i>
Noctuidae	Silver Y moth	<i>Autographa gamma</i>
Noctuidae	Large Yellow Underwing	<i>Noctua pronuba</i>
Noctuidae	Vapourer Moth	<i>Orgyia antiqua</i>
Noctuidae	Angle Shades	<i>Phlogophora meticulosa</i>
Noctuidae	Straw Dot	<i>Rivula sericealis</i>
Noctuidae	White Ermine	<i>Spilosoma lubricipeda</i>
Nymphalidae	Small Tortoiseshell	<i>Aglais urticae</i>
Nymphalidae	Ringlet	<i>Aphantopus hyperantus</i>
Nymphalidae	Peacock	<i>Inachis io</i>
Nymphalidae	Meadow Brown	<i>Maniola jurtina</i>
Nymphalidae	Speckled Wood	<i>Pararge aegeria</i>
Nymphalidae	Comma	<i>Polygonia c-album</i>
Nymphalidae	Gatekeeper	<i>Pyronia tithonus</i>
Nymphalidae	Red Admiral	<i>Vanessa atalanta</i>
Nymphalidae	Painted Lady	<i>Vanessa cardui</i>
Pieridae	Orange Tip	<i>Anthocharis cardamines</i>
Pieridae	Brimstone	<i>Gonepteryx rhamni</i>
Pieridae	Large White	<i>Pieris brassicae</i>
Pieridae	Green-veined White	<i>Pieris napi</i>
Pieridae	Small White	<i>Pieris rapae</i>
Tortricidae	a tortrix moth	<i>Ancylis badiana</i>
Tortricidae	a tortrix moth	<i>Celypha lacunana</i>
Tortricidae	a tortrix moth	<i>Pseudargyrotoza conwagana</i>
Yponomeutidae	Golden Argent	<i>Argyresthia goedartella</i>

Araneae

Spiders (order Araneae) are air-breathing arthropods that have eight legs and chelicerae with fangs that inject venom. They are the largest order of arachnids and rank seventh in total species diversity among all other orders of organisms. There are about 650 species in the UK.

Family	Vernacular Name	Taxonomic name
Araneidae	Garden Spider	<i>Araneus diadematus</i>
Araneidae	a spider	<i>Araniella cucurbitina sensu stricto</i>
Araneidae	a spider	<i>Araniella opisthographa</i>
Araneidae	a spider	<i>Larinioides cornutus</i>
Clubionidae	a spider	<i>Clubiona lutescens</i>
Dictynidae	a spider	<i>Dictyna uncinata</i>
Linyphiidae	a spider	<i>Bathypantes gracilis</i>

Linyphiidae	a spider	<i>Dismodicus bifrons</i>
Linyphiidae	a spider	<i>Erigone atra</i>
Linyphiidae	a spider	<i>Erigone dentipalpis</i>
Linyphiidae	a spider	<i>Gongylidium rufipes</i>
Linyphiidae	a spider	<i>Hylyphantes graminicola</i>
Linyphiidae	a spider	<i>Leptyphantes tenuis</i>
Linyphiidae	a spider	<i>Linyphia hortensis</i>
Linyphiidae	a spider	<i>Linyphia triangularis</i>
Linyphiidae	a spider	<i>Neriene clathrata</i>
Lycosidae	a spider	<i>Pardosa amentata</i>
Lycosidae	a spider	<i>Pardosa pullata</i>
Philodromidae	a spider	<i>Philodromus albidus</i>
Philodromidae	a spider	<i>Philodromus aureolus</i>
Pisauridae	a spider	<i>Pisaura mirabilis</i>
Tetragnathidae	a spider	<i>Metallina segmentata</i>
Tetragnathidae	a spider	<i>Metellina mengei</i>
Tetragnathidae	a spider	<i>Metellina merianae</i>
Tetragnathidae	a spider	<i>Pachygnatha degeeri</i>
Tetragnathidae	a spider	<i>Tetragnatha extensa</i>
Tetragnathidae	a spider	<i>Tetragnatha montana</i>
Theridiidae	a spider	<i>Anelosimus vittatus</i>
Theridiidae	a spider	<i>Paidiscura pallens</i>
Theridiidae	a spider	<i>Theridion mystaceum</i>

Molluscs – Slugs and Snails

There are around 220 species of non-marine gastropods in the UK which include approximately 30 species of slugs. Though not popular with gardeners slugs and snails fulfill a very useful function in breaking down vegetation and some such as the Leopard Slug are predatory.

Family	Vernacular Name	Taxonomic name
Agriolimacidae	Chestnut Slug	<i>Deroceras invadens</i>
Agriolimacidae	Netted Slug	<i>Deroceras reticulatum</i>
Arionidae	Black Slug	<i>Arion ater</i>
Arionidae	Orange-banded Arion	<i>Arion fasciatus</i>
Arionidae	Orange-banded Arion	<i>Arion flagellus</i>
Arionidae	Small-striped Slug	<i>Arion hortensis</i>
Boettgerillidae	Worm Slug	<i>Boettgerilla pallens</i>
Clausiliidae	Two-toothed door Snail	<i>Clausilia bidentata</i>
Discidae	Discus Snail	<i>Discus rotundatus</i>
Enidae	Lesser Bulin	<i>Merdigera obscura</i>
Helicidae	Copse Snail	<i>Arianta arbustorum</i>
Helicidae	White-lipped Snail	<i>Cepaea hortensis</i>
Helicidae	Brown-lipped Snail	<i>Cepaea nemoralis</i>

Helicidae	Common Garden Snail	<i>Cornu aspersa</i>
Hygromiidae	Wrinkled Snail	<i>Candidula intersecta</i>
Hygromiidae	Hairy Snail	<i>Trichia hispida</i>
Hygromiidae	Strawberry Snail	<i>Trichia striolata</i>
Limacidae	a slug	<i>Lehmannia marginata</i>
Limacidae	Green Cellar Slug	<i>Limacus maculatus</i>
Limacidae	Leopard Slug	<i>Limax maximus</i>
Milacidae	Budapest Slug	<i>Tandonia budapestensis</i>
Oxychilidae	Smooth Glass Snail	<i>Aegopinella nitidula</i>
Punctidae	Dwarf Snail	<i>Punctum pygmaeum</i>
Succineidae	Slender Amber Snail	<i>Oxyloma elegans</i>
Succineidae	Pfeiffer's Amber Snail	<i>Oxyloma pfeifferi</i>
Succineidae	Large Amber Snail	<i>Succinea putris</i>
Vertiginidae	Toothless Column Snail	<i>Columella edentula</i>
Vitrinidae	Pellucid Glass Snail	<i>Vitriina pellucida</i>

Odonata

There are 54 species of damselfly and dragonfly that either breed or visit Britain as migrants regularly or from time to time. All have aquatic larvae and many are familiar to naturalists and others as insects of the warmer months of the year.

Family	Vernacular Name	Taxonomic name
Aeshnidae	Southern Hawker	<i>Aeshna cyanea</i>
Aeshnidae	Brown Hawker	<i>Aeshna grandis</i>
Aeshnidae	Migrant Hawker	<i>Aeshna mixta</i>
Calopterygidae	Banded Demoiselle	<i>Calopteryx splendens</i>
Calopterygidae	Beautiful Demoiselle	<i>Calopteryx virgo</i>
Coenagrionidae	Azure Damselfly	<i>Coenagrion puella</i>
Coenagrionidae	Blue-tailed Damselfly	<i>Ischnura elegans</i>
Coenagrionidae	Large Red Damselfly	<i>Pyrhosoma nymphula</i>
Libellulidae	Broad-bodied Chaser	<i>Libellula depressa</i>
Libellulidae	Four-spotted Chaser	<i>Libellula quadrimaculata</i>
Libellulidae	Common Darter	<i>Sympetrum striolatum</i>
Platycnemididae	White-legged Damselfly	<i>Platycnemis pennipes</i>

Ephemeroptera

With fossils dating back over 300 million years, mayflies are some of the oldest winged insects known. There are 51 species of these delicate insects known from the British Isles. Their larvae are found in a wide range of freshwater habitats including rivers, lakes, canals and ditches. Adults are often seen dancing alongside the water on warm summer days, however some species can be seen in flight throughout the year. Their wings are held upright, butterfly-like above their body.

Family	Vernacular Name	Taxonomic name
Baetidae	Iron Blue	<i>Baetis muticus</i>
Baetidae	Large Dark Olive	<i>Baetis rhodani</i>
Baetidae	Small Dark Olive	<i>Baetis scambus</i>
Ephemeraidae	Green Drake	<i>Ephemera danica</i>
Heptageniidae	Autumn Dun	<i>Ecdyonurus dispar</i>
Heptageniidae	Large Brook Dun	<i>Ecdyonurus torrentis</i>

Orthoptera

In the British Isles there are 27 native species of Orthoptera (grasshoppers and crickets) and a number of non-native, naturalised species. The Orthopteroids of the British Isles Recording Scheme includes these and also native and non-native allied species (insect groups historically considered closely related to the true Orthoptera): cockroaches, earwigs, mantids and stick insects.

Family	Vernacular Name	Taxonomic name
Acrididae	Field Grasshopper	<i>Chorthippus brunneus</i>
Acrididae	Common Green Grasshopper	<i>Omocestus viridulus</i>
Meconematidae	Oak Bush Cricket	<i>Meconema thalassinum</i>
Tetrigidae	Speckled Bush Cricket	<i>Leptophyes punctatissima</i>
Tetrigidae	Slender groundhopper	<i>Tetrix subulata</i>
Tetrigidae	Common Groundhopper	<i>Tetrix undulata</i>

Psocoptera

The order Psocoptera is one of the least recorded insect groups. This lack of recording is not because the species are rarely encountered – on the contrary; almost every tree in Britain is likely to be home to some of these creatures and psocids are far more abundant than some insect orders (e.g. lacewings). One hundred species have been recorded in Britain which, compared to other insect groups, is not a dauntingly large number to learn to identify.

Family	Vernacular Name	Taxonomic name
Ectopsocidae	a bark fly	<i>Ectopsocus briggsi</i>
Stenopsocidae	a bark fly	<i>Graphopsocus cruciatus</i>
Stenopsocidae	a bark fly	<i>Stenopsocus immaculatus</i>
Stenopsocidae	a bark fly	<i>Stenopsocus stigmaticus</i>
Caeciliusidae	a bark fly	<i>Valenzuela flavidus</i>

Opiliones

With their globular body and long thin legs, Harvestmen are unmistakable. Unlike true spiders, the body of a Harvestman consists of a single part rather than two. Many have very long legs and suspend their body low near the ground with their legs bent above them, thus forming a capital 'M' shape with the body at the central V of the M. Long legs allow the animal to span large distances between leaves and twigs as it climbs about vegetation. Not all species are long-legged, certain secretive soil and litter species have much shorter legs. World-wide there are over 3,500 species, of which only a couple of dozen are found in Britain.

Family	Vernacular Name	Taxonomic name
Leiobunidae	a harvestman	<i>Leiobunum blackwalli</i>
Leiobunidae	a harvestman	<i>Leiobunum rotundum</i>
Nemastomatidae	a harvestman	<i>Nemastoma bimaculatum</i>
Phalangidae	a harvestman	<i>Dicranopalpus ramosus</i>
Phalangidae	a harvestman	<i>Paroligolophus agrestis</i>

Prostigmata

Another little-studied group, the mites surveyed as part of the Rea Brook Valley survey were restricted to a few species that cause galls on plants and so the effect of the mite, rather than the mite itself was identified.

Family	Vernacular Name	Taxonomic name
Eriophyidae	a mite (on Alder)	<i>Acalitus brevitarsus</i>
Eriophyidae	a mite (on Field Maple)	<i>Aceria macrochela</i>
Eriophyidae	a mite (on Alder)	<i>Aceria nalepai</i>
Eriophyidae	a mite (on Cleavers)	<i>Cecidophyes rouhollahi</i>

Isopoda

Isopoda is an order (group) of crustaceans that includes woodlice, sea slaters and their relatives. Isopods live in the sea, in fresh water, or on land, and most are small greyish or whitish animals with rigid, segmented exoskeletons (external skeletons). They have two pairs of antennae, seven pairs of jointed limbs on the thorax, and five pairs of branching appendages on the abdomen that are used in respiration. There are 37 species recognised in the UK.

Family	Vernacular Name	Taxonomic name
Oniscidae	Common Shiny Woodlouse	<i>Oniscus asellus</i>
Philosciidae	Common Striped Woodlouse	<i>Philoscia muscorum</i>
Porcellionidae	Common Rough Woodlouse	<i>Porcellio scaber</i>

Trichoptera

The caddisflies are a cosmopolitan group of insects whose aquatic larvae are perhaps better known than their moth-like adults. There are currently 199 species known from the British Isles, out of a total of around 1400 species in Europe and over 12,000 worldwide. Although close study of the genitalia is often necessary for species identification, much progress can be made with easily observed characters such as wing patterns.

Family	Vernacular Name	Taxonomic name
Hydropsychidae	a caddis fly	<i>Hydropsyche pellucidula</i>
Sericostomatidae	a caddis fly	<i>Sericostoma personatum</i>

Mecoptera

The Scorpionflies are regularly spotted in vegetation during the summer. There are about 600 species worldwide, 23 in Europe and only 4 in the British Isles. The adults are scavengers feeding on dead insects, rotting fruit, and even bird droppings. They prefer shady locations, and as they are weak fliers they tend to crawl about on vegetation.

Family	Vernacular Name	Taxonomic name
Panorpidae	a scorpionfly	<i>Panorpa communis</i>
Panorpidae	a scorpionfly	<i>Panorpa germanica</i>

Collembola

Springtails are tiny animals named for their ability to jump. They aren't actually a single species. They're a large grouping, 'Subclass,' of several thousand species, of which about 250 are found in the UK.

Family	Vernacular Name	Taxonomic name
Entomobryidae	a springtail	<i>Orchesella cincta</i>

Chilopoda

Centipedes are mainly predatory, having a pair of poisonous claws at the sides of their heads. They have only one pair of legs on each body segment and can move very quickly. There are 53 species found in the UK.

Family	Vernacular Name	Taxonomic name
Lithobiidae	Stone Centipede	<i>Lithobius forficatus</i>

Diplopoda

Millipedes are mainly herbivorous (vegetarian) or detritivorous (scavengers). They have two pairs of legs on each body section and move rather slowly. 62 species are known from the UK.

Family	Vernacular Name	Taxonomic name
Julidae	White-legged Snake-millipede	<i>Tachypodoiulus niger</i>

Dermaptera

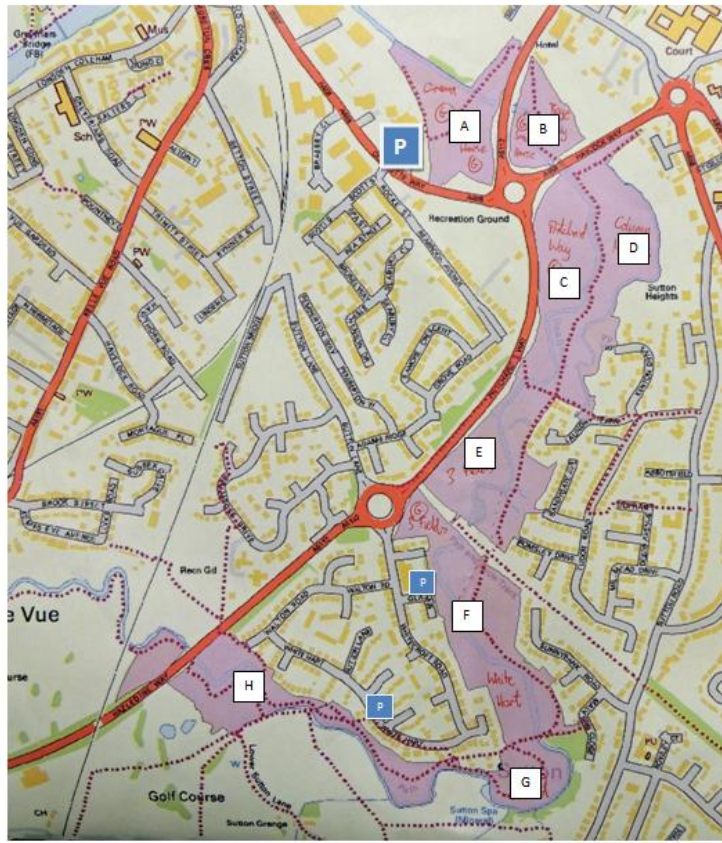

Earwigs are common residents of gardens throughout the year, and are also occasionally found in houses. They are in the insect order Dermaptera, named after their skin-like wings, which are rarely seen. There are 7 species on the UK list.

Family	Vernacular Name	Taxonomic name
Forficulidae	Common Earwig	<i>Forficula auricularia</i>

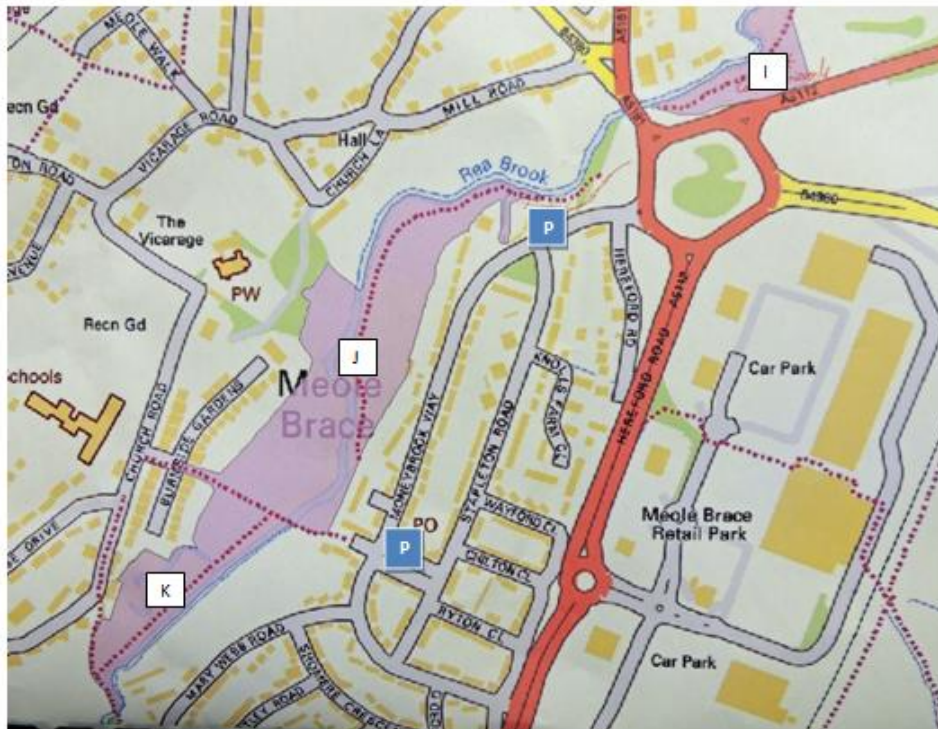

Acknowledgements

Many thanks to Matt Wilcoxon of Shrewsbury Town Council for allowing us to carry out the survey at the Rea Brook Valley. Thanks to everyone who took part in the survey through the year, and particularly those people who travelled some distance to take part, and especially those regular companions who visited the site many times through the year to make the list as full as it turned out to be. A full list of names of participants can be found on page 5. Thanks to our funders, the Heritage Lottery Fund (HLF), the Esmée Fairbairn Foundation, and the Field Studies Council (FSC).
