## Touch Panels

shaping tomorrow with you

## About FUJITSU Components

### FUJITSU Components' Touch Panels, years of experience

FUJITSU Components is one of the leading touch panel manufacturers. Our production process is based on the best choice of industry materials, achieving an outstanding optical and mechanical performance.

### Applications

- Automotive (Car infotainment, bus, truck, taxi)
- Mobile devices (UMPC, PDA)
- Factory automation (HMI, industrial PC)
- Measuring instruments and industrial control
- Medical (blood test, dentist appliances, etc.)
- POS, cash register
- Gaming, lotto terminal
- Printer / Copier
- Educational terminal

### Resistive panel features

- Dual input 4 wire panel
- Gesture recognition
- Light touch
- Flush surface
- 4, 5 and 7 wire resistive panels
- Film/Glass, Film/Film or Film/Film/Plastic resistive panels
- Pen, finger, glove input
- High optical quality:
  - Up to 90 % transparency 5% reflection
  - Anti-glare, clear or anti finger print
  - Anti-Newton ring technology
- High mechanical quality
  - Sealed construction
  - Shock resistant option
- High temperature and high reliability version (storage 95°C)
- Sizes from 2 to 19 inches
- Standard and customized sizes
- USB, RS232 and I2C controller

### Capacitive panel features

- Automotive custom panel
- Flush surface
- Industrial version from the shelf up to 21.5" (Partner product)

### Resistive and capacitive solutions

Resistive LIGHT TOUCH/ with gesture recognition  
 Automotive panel

7-wire touchpanel

4-wire touchpanel

Note: Please check individual specification sheets for exact specifications of each part number

### 7-Wire Touch Panels, Film/Glass

Fujitsu’s 7-wire touch panels can be manufactured in 5 to 17 inch.

The 7-wire touch panels can handle up to 10 million plus touches with an operating temperature from -5°C to +60°C and storage from -30°C to +70°C. This unique technology has been developed especially for highly demanding applications such as heavy industry. It combines the advantages of resistance to a high number of inputs and the compensation of temperature and aging drift.

Glass	Part number	Size	FPC Tail	Input	Control board/chip

1.1 mm	N010-0550-T345	8.4"	46 mm	Pen & finger	<b>Control chip</b> NC41120-0036 <i>(Serial)</i> NC41120-0051 <i>(USB) (PS2 optional)</i>	
	N010-0550-T627	10.4"	100 mm	Pen & finger, light touch		
	N010-0551-T255	12.1"	100 mm	Pen & finger, light touch		

### 4-Wire Touch Panels, Film/Glass

#### Single / dual touch - standard / light touch

Fujitsu’s cost efficient 4-wire touch panels offers remarkable features:

- Panels can be used as a single or dual touch solution.  
With the use of Fujitsu’s dual touch controller a single touch panel can be converted to a dual touch panel.
- Available as standard and light touch version.  
Fujitsu’s light touch series, also called “feather touch”, respond to 0.02-0.5N force. The light touch panels are ideal for gesturing functionality like pinch, expand, zoom/ rotate and flick/swipe.
- Fujitsu’s light touch panel combines the high sensitivity technology of a capacitive panel with the characteristic features of a resistive panel; easy integration, low costs and multiple input options (finger, pen, glove, etc.).

Fujitsu’s 4-wire touch panels can be manufactured in 3.8 to 19 inch and can handle up to 1 million touches with an operating temperature from -5°C to +60°C and storage from -30°C to +70°C. The 4-wire technology comes in an anti-glare finish to avoid the mirror effect. The standard transparency for these touch panels is 80%. The technology allows pen and finger inputs which make the touch panels suitable for tablets that make use of pen writing, cash registers and many other applications.

The 4-wire panels can also be offered in customized sizes and support design options, such as flush surface (flat and stylish surface).

### Automotive Touch Panels, resistive and capacitive

#### Resistive version.

Single and dual touch – standard or light touch.

#### Flush surface version

The automotive film/glass touch panels can be manufactured from 3.5 to 8 inch. They are designed for finger applications and can handle 1 million finger touches. They have a high operating temperature range of -30°C to +85°C and the storage temperature range is -40°C to +95°C.

The light touch version is ideal for dual touch gesture functions like zooming a map or flipping pages.

Fujitsu has developed low reflection technologies based on AR coating or polarizer for a better visibility under the sunlight. The transparency can go up to 90% and reflection down to 3%. Customized sizes, custom optical quality and the flush surface design option can be offered

#### Capacitive version.

Multi-input, Flushsurface

Our PCAP automotive panel are based on glass sensor technology, those capacitive panels are tailored to the needs of each customer. Custom sizes can be made up to 10.4 inches (No standard sizes).

The front cover of the panel can be designed in various material and shape and can be the front face of the infotainment device. It can integrate capacitive switches on the side of the active area as well as hole for mechanical button or USB connections.

It can include transparent Icon for LED backlight. The controller can come as a chip on Flex (COF) or can be assembled on the PCB (COB).

The view area has a typical transparency of 90%.

This new line of product benefit from the long experience of Fujitsu in the car industry, on the development and qualification point of view, as well as on the production side where the process quality control meet the top requirement

### Standard (from the shelf) Resistive automotive version

Diagonal in inches	Part number	General data

### Industrial capacitive Panel Standard sizes (from the shelf) (partner product)

In collaboration with a long time Fujitsu partner, FCEU will now offer in Europe a range of projective capacitive panel (PCAP). This range of PCAP panel come in standard size from 7 to 21,5 inches. They are based on Film/Film sensor with standard Cover Glass. They are delivered with Chip On Flex (COF) controller having a USB interface. The existing standard sizes are adapted to the most popular LCD sizes, if needed the cover glass may be customized to fit customers specific design requirement.

They are adapted to a wide variety of applications, from factory automation to instrumentation, from cash register to Medical. As they come in standard sizes, they can be used for small quantities applications.

Diagonal in inches	Ratio	Sensor active area	Cover glass OD	Cover glass VA	FPC length (mm)	Cover glass Thickness
21.5	4x3	481.80x272.30	505.60x310.50	480.80x271.30	70	1.8
18.5	Wide	411.80x232.40	434.8x269	410.8x231.4	70	1.8
15.6	Wide	346.16x195.59	370.0x231.71	345.26x194.59	70	1.8

10.4	4x3	214.20x161.40	235.80x193.40	213.20x160.40	70	1.1
10.1	Wide	219.64x138.14	243.88x156.91	218.02x136.60	72	1.1 (Chemicaly strengthened)
7	Wide	154.30x93.37	170.85x113.87	153.85x92.87	63	1.1

### Liquid Crystal Module (LCM) and more...

Ready to use LCD and touch panel bounded together. From 4.3 to 17 inches.

For customers that don't want to worry about the assembly of the touch panel onto the LCD, Fujitsu can offer a module.

We can propose the LCD or use the LCD of your choice. We offer DSA assembly or optical bounding.

Using our flush surface solution, we can add different options to the panel and deliver the full front face of your device.
