APHEX SYSTEMS

APHEX REMOTE CONTROLLED MIC PREAMPS The 1788A is a remote controlled 8-channel mic pre that can be situated close to the mic and operated remotely. That way there is less of a chance to introduce RF interference, mic sensitivity reduction, phase problems, and other performance degradations due to long cable runs. It can be controlled via PC or MAC via Ethernet with the free downloadable 1788SW software or any device that generates MIDI. I/O includes 8 XLR mic pres, and 8 XLR outs. The 188 is an 8-channel remote controlled mic pre and is a more cost effective alternative to the 1788A yet can be controlled in the same way as the 1788A. It has 1 XLR out, 2 ADAT optical ports, wordclock, Ethernet and does not have extensive metering.

GRACE DESIGN

GRACE DESIGN M101/M103 The m101 features balanced, transformerless, trans-impedance circuit topology, universal switching power supply, dedicated LED indicators for preamp functions, 48V phantom power, and HPF switch. The Ribbon Mic Mode bypasses the input decoupling capacitors, raises the input impedance from 8.1kΩ to 20kΩ, and defeats the 48V phantom power, preventing damage to delicate ribbon mic elements. The gain range is 10-75dB, including the additional +10dB of gain available with the output trim control. The m103 adds a 3-band EQ and optical compressor. Controls include fully parametric mid, with shelving and peak modes on the high and low bands. The compressor circuit is based on an optical attenuator and provides gentle limiting to fairly heavy compression, while remaining neutral and transparent. The compressor controls can be linked for stereo applications, the order of the EQ/COMP is switchable, and monitoring signal status is simple with 10-segment gain reduction and output meters. The m101 and m103 include a HI-Z input on the front panel. Rear panel I/O options include both balanced TRS and unbalanced TS 1/4" outputs along with the standard XLR balanced out and XLR microphone in. The m103 adds XLR and 1/4" unbalanced mic pre out, and XLR line so that the mic pre and EQ/COMP sections can be accessed independently of each other.

QSC™

QSC PROCESSING AMPLIFIERS These powerful four-channel amplifiers, each with onboard DSP, have the capability to configure and combine channels in various ways to drive a wide range of loudspeaker systems. The CXD series is designed for installed sound applications, including 70V/100V systems while the PLD series is designed for portable live sound use. All models feature Flexible Amplifier Summing Technology™ (FAST) which actively distributes the total amplifier power in various configurations across one, two, three or all four outputs. They also use QSC's next-generation Class-D power amp design in combination with a custom power stage utilizing a new MOSFET output device which offers high voltage operation with better audio quality and thermal performance. The onboard DSP offers four channels of crossover filters, parametric EQ, alignment delay and dynamics processing. Additionally, when using QSC speakers, these amplifiers offer Intrinsic Correction™, a combination of filtering, limiting and speaker processing that compensates for the non-linearities in array and horn design, resulting in exceptional performance. CXD series I/O is provided via Phoenix Connectors, while the PLD series has XLR inputs and Speakon outputs.

The World's First Full-Featured Energy-Saving Mixer Amplifiers

**HD
SERIES**

RDL HD Series 35 Watt ultra high efficiency amplifiers are the world's first full-featured environmentally conscious "green" mixer amplifiers for commercial installations. An internal low-power-consumption processor monitors usage demands to completely shut down internal circuitry for maximum power conservation and extremely low long-term operating cost. These amplifiers draw less than 1 Watt of mains power while in standby mode and automatically turn on when an audio input signal is detected. This coupled with a highly efficient Class-D output stage makes these the most energy efficient mixer amplifiers available.

LSP 500 PRO

Introducing LSP 500 PRO, Sennheiser's fully integrated solution for wireless PA applications. LSP 500 PRO offers a wide range of audio inputs and connectivity, as well as full iPad control to create a range of systems from a single speaker to a large venue with up to 20 operating as a complete system.

HOT SWAPPABLE AND UNSTOPPABLE

LSP 500 PRO features slots for two rechargeable lithium-ion batteries. Batteries can be hot-swapped during operation, with absolutely no interruption to your event's audio. LSP 500 PRO operates for up to six hours, uninterrupted, on two fully-charged battery packs. As one battery depletes, LSP 500 PRO seamlessly switches to the second. Hot-swapping batteries allows you to keep the event running indefinitely. Each battery includes a five position charge indicator, allowing you to verify status before deploying. During operation, battery strength can be continuously monitored by an integrated iPad app, which keeps you fully informed. Between events, the LSP 500 PRO can plug into AC power, which fully recharges any inserted batteries.

COMPLETELY WIRELESS

LSP 500 PRO features three slots for integrating wireless systems

from Sennheiser's highly-acclaimed evolution Wireless G3 series. Load the system as needed for your events – LSP 500 PRO can support up to three independent handheld or bodypack transmitters. The third slot can also be used for a transmitter, which can be used to send all audio from your "master" unit to a series of "satellite" speakers. Internally, a color-coded cabling harness provides all the required connections for audio, power and data.

In addition to the three wireless receiver slots, audio can also be integrated via Bluetooth streaming. LSP 500 allows you to pair your mobile device and stream audio remotely. Audio can also be streamed from a USB device, such as a thumb drive. The USB connection can also be used to record the event. Additional inputs are also provided for a wide range of hard-wired connections. An XLR input with +48V phantom power allows any wired mic to be incorporated. A pair of RCA connectors also allows you to connect any computer, media card, or DVD player as needed.

ALWAYS UNDER YOUR CONTROL

LSP 500 PRO keeps control at your fingertips with an innovative, fully integrated iPad App. The App allows

you to monitor and adjust volumes for all audio sources, from wireless slots to hard-wired connections. For larger systems, the App provides complete control over as many as 20 units. Units can be grouped together for broader control, or adjusted individually as needed. Delay times between speakers can be set quickly and easily – either by distance (in feet) or by time (in milliseconds), providing complete flexibility. The App also includes an integrated equalizer and compressor for every input, allowing complete control over the event.

FAST SETUP. GREAT RESULTS

LSP 500 PRO is a breeze to transport, fast to set up, and simple to operate. An integrated pole mount with tilt function allows you to set up the LSP 500 PRO on any available speaker stand, and quickly adjust for the proper angle for your audience. When you need to move fast, LSP 500 PRO is ready to go. No wires necessary.
