

National Wetlands Inventory Map Report for Quinault Indian Nation

Project ID(s): R01Y19P01: Quinault Indian Nation, fiscal year 2019

Project area

The project area (Figure 1) is restricted to the Quinault Indian Nation, bounded by Grays Harbor Co. Jefferson Co. and the Olympic National Park.

Appendix A: USGS 7.5-minute Quadrangles: Queets, Salmon River West, Salmon River East, Matheny Ridge, Tunnel Island, O'Took Prairie, Thimble Mountain, Lake Quinault West, Lake Quinault East, Taholah, Shale Slough, Macafee Hill, Stevens Creek, Moclips, Carlisle.

Citation: For all quads listed above: See Appendix A *Citation Information:*

Originator: USDA-FSA-APFO Aerial Photography Field Office

Publication Date: 2017

Publication place: Salt Lake City, Utah

Title: Digital Orthoimagery Series of Washington

Geospatial_Data_Presentation_Form: raster digital data

Other_Citation_Details: 1-meter and 1-foot, Natural Color and NIR-False Color

Collateral Data:

- USGS 1:24,000 topographic quadrangles
- USGS – NHD – National Hydrography Dataset
- USGS Topographic maps, 2013
- QIN LiDAR DEM (3 meter) and synthetic stream layer, 2015
- Previous National Wetlands Inventories for the project area
- Soil Surveys, All Hydric Soils: Weyerhaeuser soil survey 1976, NRCS soil survey 2013
- QIN WET tables, field photos, and site descriptions, 2016 to 2019, Janice Martin, and Greg Eide

Inventory Method:

Wetland identification and interpretation was done “heads-up” using ArcMap versions 10.6.1. US Fish & Wildlife Service (USFWS) National Wetlands Inventory (NWI) mapping contractors in Portland, Oregon completed the original aerial photo interpretation and wetland mapping. Primary authors: Nicholas Jones of SWCA Environmental Consulting. 100% Quality Control (QC) during the NWI mapping was provided by Michael Holscher of SWCA Environmental Consulting. Mapped features were evaluated for horizontal, topological and code accuracy and logical consistency, using a combination of “eyes-on” evaluation, ArcGIS Desktop’s built-in topology validation tools, and the USFWS’s Wetlands Data Verification Toolset, which automatically corrects geometry errors, and flags coding and topological errors (errors of adjacency, sliver uplands and wetlands, overlapping features, etc.). The tool was used iteratively until a summary table was generated that demonstrated that all features had passed validation. Regional wetland guidance, oversight and final 30% QA for the submitted mapping project was completed by Bill Kirchner, Region 1, USFWS, NWI.

Field reconnaissance was conducted over the course of two days, July 10th and 11th of 2019 in coordination with Quinault Indian Nation Wetland Specialist Janice Martin, and Quinault Indian Nation Botany Department Program Manager Greg Eide. Funding for the project was provided by a grant from the United States Environmental Protection Agency (US EPA).

Data Limitations:

The user of the map is cautioned that, due to the limitation of mapping primarily through aerial photo interpretation, a small percentage of wetlands may have gone unidentified. Because the aerial photography is taken during a narrow span of time (typically in the summer months), there may be discrepancies between the map and current field conditions. Changes in the landscape which occurred after the photography was taken would also result in discrepancies, and seasonal and year to year variations in precipitation and accumulation of moisture can also lead to other discrepancies.

Classification:

The wetland classifications appearing in the study area are National Wetlands Inventory (NWI) Maps, in accordance with the *Classification of Wetlands and Deepwater Habitats of the United States*. FGDC-STD-004-2013. Second Edition (Federal Geographic Data Committee. 2013) and Data Collection Requirements and Procedures for Mapping Wetland, Deepwater and Related Habitats of the United States. Division of Habitat and Resource Conservation (version 2) (Dahl et al. 2015).

General Description of the Project Area:

The project area is located in Land Resource Region (LRR) A: Northwestern Forest, Forage and Specialty Crop Region (A) contains the following Major Land Resource Area (MRLA): 4A – Sitka Spruce Belt (Washington). The mapping area is located entirely within the Sitka Spruce MRLA and the boundary of the Quinault Indian Reservation (within the State of Washington).

The project area abuts the Pacific Ocean encompassing the towns of Moclips in the south and Queets approximately 23 miles to the North. The reservation is bounded to the east by Lake Quinault and encompasses 208,150 acres. Most of the Sitka Spruce Belt MRLA has an elevation ranging from sea-level up to 300 feet, typified by narrow beaches, cliffs that rise from the ocean's edge that slopes up to marine terraces, young continental sedimentary rocks and steep hilly terrain away from the coast. The Sitka Spruce Belt MRLA consists primarily of glacial and alluvial sediments and some scattered areas of Tertiary sedimentary siltstone.

The average annual precipitation in Sitka Spruce Belt MRLA ranges from 52 to 60 inches (1,320 to 1,525 millimeters) near the ocean and up to 191 inches (4,850 millimeters) at the higher elevations inland within the MRLA. Most of the rainfall occurs as low intensity, Pacific frontal storms, with snowfall accumulations rare within the project boundary. Precipitation is evenly distributed throughout fall, winter, and spring, but summers are cool and dry. The average annual temperature is 45 to 55 degrees F (7 – 13 degrees C). The freeze-free period averages 290 days and ranges from 220 to 365 days in most of this area.

The dominant soil orders in the MRLA are Andisols, Inceptisols, Spodosols, and Entisols. The soils either have an isomesic or isofrigid soil temperature regimes. The soils are acid throughout; most either very strongly or strongly acid. In the hilly to steep uplands, Andisols and Inceptisols dominate. The undulating to hilly marine and glacial outwash terraces are dominated by Andisols and Spodosols. These soils range from shallow to moderately deep cemented substrate or are deep to very deep ranging from poorly drained to well drained. Within the floodplains of the (e.g. the Queets and Quinault Rivers) and attendant estuaries, the soils are primarily Entisols and Inceptisols with minor areas of Histosols. These soils are typically very deep and poorly to very poorly drained. (NRCS/SSURGO 07/2014).

Description of wetlands:

Wetlands in the Quinault Indian Nation are generally in association with waterways at lower elevations and higher elevation meadow and bog complexes. The major riverine systems cut through the landscape creating broad floodways down-cut into the surrounding terraces.

Wetlands occur both along the current stream channels and within remnant hydric features created over time by changes in the landscape. The hilly landforms in the project area also contain many flats and depressional areas with saturated to continuously saturated substrates with significant deposits of hydric soils. The amount of annual rainfall and mild temperature make for a long, wet growing season which is ideal for the formation of wetlands.

Description of attribute values:

This table reflects classification to the class level and the water regime only. No attempt is made to capture Subclasses in this table since subclass designations were made for each polygon associated with the geodatabase. Specific codes can be interpreted using the USFWS wetlands attribution decoder: <https://fwsprimary.wim.usgs.gov/decoders/wetlands.aspx>.

ATTRIBUTE	DESCRIPTION
E1UBL	Continuously submerged subtidal estuarine habitats composed of unconsolidated substrate with at least 25% cover of particles smaller than stones and vegetative cover less than 30% and variable salinity.
E2ABN	Regularly flooded intertidal flat, characterized by plants that principally grow on or below the surface of the water for most of the growing season in most years.
E2EM/USP	Irregularly flooded intertidal flat, characterized by a matrix of erect, rooted herbaceous hydrophytes and unconsolidated substrates with at least 25% cover of particles smaller than stones (less than 6-7cm).
E2EMN	Regularly flooded intertidal flat, characterized by a matrix of erect, rooted herbaceous hydrophytes that is present for most of the growing season in most years. Tides flood the substrate at least once daily. Typical saltmarsh.
E2EMP	Irregularly flooded intertidal flat, characterized by erect, rooted herbaceous hydrophytes that is present for most of the growing season in most years. Tides flood the substrate less often than once daily. Typical saltmarsh.
E2SSP	Irregularly flooded intertidal wetlands, characterized by the presence of woody vegetation less than 6m (20 feet) tall. Includes species of true shrubs, young trees, and trees or shrubs that are stunted because of environmental conditions

E2USM	Irregularly exposed deepwater tidal wetlands, characterized by unconsolidated substrates with less than 75% cover of stones, boulders, or bedrock and; less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
E2USN	Regularly flooded intertidal wetlands, characterized by unconsolidated substrates with less than 75% cover of stones, boulders, or bedrock and; less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
E2USP	Irregularly flooded intertidal wetlands, characterized by unconsolidated substrates with less than 75% cover of stones, boulders, or bedrock and; less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
L1UBG	Intermittently exposed flooded lakes greater than 20 acres. Typically, deeper than 2.5 meters (8.2 feet) and bottom particles smaller than (6-7 cm) and primarily consisting of sand and mud.
L1UBH	Permanently flooded lakes greater than 20 acres. Typically, deeper than 2.5 meters (8.2 feet) and bottom particles smaller than (6-7 cm) and primarily consisting of sand and mud.
L2UBF	Semi-permanently flooded lakes and lake edges formed in depressions or artificially impounded which are greater than 20 acres. Typically less than 2.5 meters (8.2 feet) deep and bottom particles smaller than (6-7 cm) and primarily consisting of sand and mud.
L2USC	Large playas (seasonally flooded lake beds) greater than 20 acres in size. Less than 30 percent vegetated and having less than 75% cover of stones, boulder, or bedrock.
M1UBL	Permanently flooded, deep-water marine habitats. Substrates continuously covered with tidal water and salinities exceed 30 parts per thousand (ppt), with no dilution except outside the mouth of estuaries.
M2RSN	Regularly flooded intertidal marine habitat, characterized by bedrock, stones or boulders which singly or in combination have an areal cover of 75% or more and less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
M2RSP	Irregularly flooded intertidal marine habitat, characterized by bedrock, stones or boulders which singly or in combination have an areal cover of 75% or more and less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.

M2USM	Irregularly exposed flooded, deep-water marine habitats. Substrates continuously covered with tidal water and salinities exceed 30 parts per thousand (ppt), with no dilution except outside the mouth of estuaries.
M2USN	Regularly flooded intertidal marine habitat, characterized by unconsolidated substrates, with less than 75% areal cover of stones, boulders, or bedrock and; less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
M2USP	Irregularly flooded intertidal marine habitat, characterized by unconsolidated substrates, with less than 75% areal cover of stones, boulders, or bedrock and; less than 30% areal cover of vegetation. Landforms such as beaches, bars and flats.
PABH	Permanently flooded ponds, less than 20 acres in areal coverage and less than 2.5 meters (8.2 feet) deep with plants that grow principally on or below the surface of the water.
PABT	Semi-permanently flooded fresh water, tidally influenced ponds vegetated with aquatic beds (e.g., pondweed).
PEM/FOC	Seasonally flooded freshwater depressions dominated by herbaceous and forested vegetation. Neither herbaceous nor forested vegetation in the class is dominant.
PEM/FOD	Continuously saturated freshwater depressions dominated by herbaceous and forested vegetation. Neither herbaceous nor forested vegetation in the class is dominant.
PEM/FOE	Seasonally flooded/ continuously saturated freshwater depressions dominated by herbaceous and forested vegetation. Neither herbaceous nor forested vegetation in the class is dominant.
PEM/SSA	Temporarily flooded wetlands dominated by herbaceous and scrub-shrub vegetation in depressions or below springs where the water table is usually at or near the surface. Neither herbaceous nor scrub-shrub vegetation are dominant
PEM/SSC	Seasonally flooded wetlands dominated by herbaceous and scrub-shrub vegetation in depressions or below springs where the water table is usually at or near the surface. Neither herbaceous nor scrub-shrub vegetation are dominant.
PEM/SSD	Continuously saturated wetlands dominated by herbaceous and scrub-shrub vegetation in depressions or below springs where the water table is at or near the surface year-round. Neither herbaceous nor scrub-shrub vegetation are dominant.
PEM/SSE	Seasonally saturated/flooded wetlands dominated by herbaceous and scrub-shrub vegetation in depressions or below springs where the water table is at or near the surface or flooded seasonally year-round. Neither herbaceous nor scrub-shrub vegetation are dominant.

PEM/SSF	Semi-permanently flooded wetlands dominated by herbaceous and scrub-shrub vegetation in depressions. Neither herbaceous nor scrub-shrub vegetation are dominant.
PEMA	Temporarily flooded depressions dominated by herbaceous vegetation.
PEM(B/D/E)	Wetlands dominated by herbaceous vegetation in depressions or below spring where the water table is usually at or near the surface seasonally (B), permanently (D), or seasonally flooded / saturated (E).
PEMC	Seasonally flooded wetlands dominated by persistent herbaceous vegetation. These areas are comprised of <i>Juncus</i> spp. and <i>Carex</i> spp.
PEMF	Semi-permanently flooded depressions comprised of erect, rooted, herbaceous vegetation (e.g., <i>Scirpus</i> spp., <i>Typha</i> spp., <i>Carex</i> spp., and <i>Juncus</i> spp.).
PEMH	Permanently flooded depressions comprised of erect, rooted, herbaceous vegetation (e.g., <i>Scirpus</i> spp., <i>Typha</i> spp., <i>Carex</i> spp., and <i>Juncus</i> spp.).
PEMR	Seasonally flooded, freshwater, tidally influenced wetlands, with dissolved salts less than 0.5‰ and upright, rooted herbaceous hydrophytes that are present for most of the growing season in most years.
PEMS	Temporarily flooded, freshwater, tidally influenced wetlands, with dissolved salts less than 0.5‰ and upright, rooted herbaceous hydrophytes that are present for most of the growing season in most years.
PEMT	Semi-permanently flooded, freshwater, tidally influenced wetlands, with dissolved salts less than 0.5‰ and upright, rooted herbaceous hydrophytes that are present for most of the growing season in most years.
PFOA	Temporarily flooded depressions and floodplains dominated by forested vegetation. Common palustrine forested species include <i>Salix</i> spp., <i>Acer</i> spp. and <i>Populus</i> spp.
PFOC	Seasonally flooded depressions and floodplains dominated by forested vegetation. Common palustrine forested species include <i>Salix</i> spp., <i>Acer</i> spp. and <i>Populus</i> spp.
PFO(B/D/E)	Wetlands dominated by forested vegetation in depressions or below spring where the water table is usually at or near the surface seasonally (B), permanently (D), or seasonally flooded / saturated (E). Common palustrine forested species include <i>Salix</i> spp., <i>Acer</i> spp. and <i>Populus</i> spp.
PFOR	Seasonally flooded, fresh water, tidally influenced floodplains and wetlands dominated by forested vegetation.

PFOS	Temporarily flooded, fresh water, tidally influenced floodplains and wetlands dominated by forested vegetation.
PFO/EMC	Seasonally flooded freshwater depressions dominated by herbaceous and forested vegetation. Neither herbaceous nor forested vegetation in the class is dominant.
PFO/EMD	Continuously saturated freshwater depressions dominated by herbaceous and forested vegetation. Neither herbaceous nor forested vegetation in the class is dominant.
PFO/SSA	Temporarily flooded scrub-shrub and forested wetland typically found along drainages. Neither forested nor scrub-shrub species are dominant.
PFO/SSC	Seasonally flooded scrub-shrub and forested wetland typically found along drainages. Neither forested nor scrub-shrub species are dominant.
PFO/SSD	Continuously saturated freshwater depressions dominated by forested and scrub-shrub vegetation. Neither scrub-shrub nor forested vegetation in the class is dominant.
PFO/SSS	Temporarily flooded, fresh water, tidally influenced wetlands dominated by scrub-shrub and forested vegetation. Neither scrub-shrub nor forested vegetation in the class is dominant.
PSS/FOA	Temporarily flooded scrub-shrub and forested wetland typically found along drainages. Neither forested nor scrub-shrub species are dominant.
PSS/FOC	Seasonally flooded scrub-shrub and forested wetland typically found along drainages. Neither forested nor scrub-shrub species are dominant.
PSS/FOD	Continuously saturated freshwater depressions dominated by forested and scrub-shrub vegetation. Neither scrub-shrub nor forested vegetation in the class is dominant.
PSS/FOF	Semi-permanently flooded scrub-shrub and forested wetland typically found along drainages. Neither forested nor scrub-shrub species are dominant.
PSS/FOE	Continuously saturated and seasonally flooded freshwater depressions dominated by forested and scrub-shrub vegetation. Neither scrub-shrub nor forested vegetation in the class is dominant.
PSS/EMC	Seasonally flooded depressions dominated by herbaceous and scrub shrub vegetation. Neither herbaceous nor scrub-shrub vegetation in dominant.
PSS/EM (B/D/E)	Wetlands in depressions or below springs dominated by herbaceous and scrub shrub vegetation. Neither herbaceous nor scrub-shrub vegetation in dominant. where the water table is usually at or near the surface seasonally (B), permanently (D), or seasonally flooded / continuously saturated (E).
PSS/EMF	Semi-permanently flooded depressions dominated by herbaceous and scrub shrub vegetation. Neither herbaceous nor scrub-shrub vegetation in dominant.
PSSA	Temporarily flooded scrub-shrub wetland typically found along drainages. Common scrub shrub species include Salix spp., Alnus rubra, Spirea douglassi, Cornus stolonifera, Myrica californica, and Rubus spectabilis.

PSSB/D/E	Saturated wetlands dominated by scrub-shrub vegetation in depressions or below spring where the water table is usually at or near the surface seasonally (B), permanently (D), or seasonally flooded / saturated (E).
PSSC	Seasonally flooded scrub-shrub wetland typically found along drainages.
PSSF	Semi-permanently flooded scrub-shrub wetland typically found along drainages.
PSS5H	Permanently flooded scrub-shrub (dead) wetland, typically found along drainages.
PSSR	Seasonally flooded, tidally influenced forested wetlands. Woody vegetation that is less than 6 m (20 feet) tall.
PSSS	Temporarily flooded, tidally influenced forested wetlands. Woody vegetation that is less than 6 m (20 feet) tall.
PUBF	Semi-permanently flooded ponds.
PUBG	Intermittently exposed ponds
PUBH	Permanently flooded ponds.
PUBK	Artificially flooded pond usually excavated and comprised of an artificial substrate (e.g., sewage treatment/detention ponds).
PUBV	Permanently flooded, tidally influenced ponds.
PUSA	Temporarily flooded basins with little or no vegetation.
PUSC	Seasonally flooded basins with little or no vegetation.
PUSK	Artificially flooded pond usually excavated and comprised of an artificial substrate (e.g., sewage treatment/detention ponds). The substrate is exposed for at least half the growing season.
PUSR	Seasonally flooded, tidally influenced ponds.
PUSS	Temporarily flooded, tidally influenced ponds.
R1UBT	Semi-permanently flooded, fresh water, tidally influenced riverine systems characterized by particles smaller than (6-7 cm) and primarily consists of sand and mud and dissolved salts less than 0.5 ⁰ / ₁₀₀ .
R1UBV	Permanently flooded, fresh water, tidally influenced riverine systems characterized by particles smaller than (6-7 cm) and primarily consists of sand and mud and dissolved salts less than 0.5 ⁰ / ₁₀₀ .

R1USQ	Regularly flooded, fresh water, tidally influenced riverine beach bars, sand bars and exposed flats characterized by particles smaller than (6-7 cm) and primarily consists of sand and mud and dissolved salts less than 0.5 ⁰ / ₁₀₀ .
R3UBF	Semi-permanently flowing upper perennial rivers. characterized by particles smaller than (6-7 cm) and primarily consist of sand and mud.
R3UBH	Permanently flooded upper perennial riverine systems characterized by particles smaller than (6-7 cm) and primarily consist of sand and mud.
R3USC	Seasonally flooded upper perennial unconsolidated shores. Beach bars, sand bars, and exposed flats along rivers and streams
R4SBC	Riverine channels that flow more frequently (seasonally) than intermittent streams (R4SBA).

Description of Special Modifiers:

SPECIAL MODIFIER	DESCRIPTION
h	Diked/Impounded - Created or modified by a man-made barrier or dam, which obstructs the inflow or outflow of water.
x	Excavated - Lies within a basin or channel excavated by man.
r	Artificial Substrate- concrete-lined drainage-ways, as well as Rock Bottom, Unconsolidated Bottom, Rocky Shore and Unconsolidated Shore where the substrate
s	material has been emplaced by humans. Jetties and breakwaters are examples of Artificial Rocky Shores.
f	Farmed—Farmed wetlands occur where the soil surface has been mechanically or physically altered for production of crops, but where hydrophytes would become reestablished if the farming were discontinued. Farmed wetlands should be classified as Palustrine Farmed. Cultivated cranberry bogs may be classified Palustrine-Farmed or Palustrine Scrub-Shrub Wetland Farmed.
d	Partly Drained/Ditched—A partly drained wetland has been altered hydrologically, but soil moisture is still sufficient to support hydrophytes. Drained areas that can no longer support hydrophytes are not considered wetland. This Modifier is also used to identify wetlands containing, or connected to, ditches. The Partly Drained/Ditched Modifier can be applied even if the ditches are too small to delineate.

m	<p>Managed - This modifier is used to identify wetlands where water inputs are controlled to achieve a specific water regime or habitat type. Water control structures in combination with dikes and impoundments are common; however, this modifier should not be used in conjunction with the Artificially Flooded regime nor used to describe reservoirs nor for use in the Riverine system.</p>
---	---

Partial list of wetland and riparian plant species with indicator status:

A list of wetland and non-wetland indicator species for the Olympic Peninsula, and Washington Coastal region is in **Appendix B**.

The most current plant and past plant list can be obtained here:

http://wetlandplants.usace.army.mil/nwpl_static/v33/home/home.html

Regional specialized conventions: None.

Other discussion of mapping issues (image quality, water conditions, etc.): The mapping for this project utilized the most recent NAIP imagery (1-foot resolution) for the State of Washington (2017). Ancillary data also curated was NRCS and Weyerhaeuser soil surveys (hydric soils indications), the existing National Wetlands Inventory, the National Hydrography Dataset for indications of streams and springs.

LiDAR imagery was provided by the Quinault Indian Reservation (collected in 2015). Digital terrain models (DTM; 3m), a hillshade and synthetic streams derived from this LiDAR data was used to more accurately place wetlands and streams. The Quinault Indian Reservation also provided field photos and WETs tables for dozens of delineated wetlands for use as a cross-reference during the photo-interpretation phase of the project.

Other freely available online imagery sources such as Google Earth and Street View provided additional verification of ground conditions represented in older imagery and a series of images to compare to current NAIP imagery.

There has been extensive modification and disturbance across the landscape mostly due to logging within the reservation boundary. Slash piles in clear-cut areas, and other detritus obscured wetland imagery signatures in dozens of sites known to contain wetland vegetation and soils under normal conditions; efforts were made to reconcile these problematic areas wherever possible, while still adhering to the FGDC mandated standards of mapping.

APPENDIX A: List of 1:24,000 scale USGS topographic quadrangles in the project area

USGS ID	Quadrangle Name
47124-E3	Queets
47124-E2	Salmon River West
47124-E1	Salmon River East
47123-E8	Matheny Ridge
47124-D3	Tunnel Island
47124-D2	O'Took Prairie
47124-D1	Thimble Mountain
47123-D8	Lake Quinault West
47123-D7	Lake Quinault East
47124-C3	Taholah
47124-C2	Shale Slough
47124-C1	Macafee Hill
47123-C8	Stevens Creek
47124-B2	Moclips
47124-B1	Carlisle

APPENDIX B: Wetland and Non-wetland Indicator Species (FAC through Obligate)

Arid West	Western Mountains Valleys and Coast	Scientific Name	Common Name
FAC	FACU	<i>Acer glabrum</i>	Rocky Mountain Maple
FAC	FAC	<i>Aconogonon phytolaccifolium</i>	Alpine Fleecflower
FAC	FACU	<i>Actaea rubra</i>	Red Baneberry
FAC	FAC	<i>Adiantum aleuticum</i>	Aleutian Maidenhair
FAC	FACU	<i>Agoseris aurantiaca</i>	Orange-Flower Goat-Chicory
FAC	UPL	<i>Agoseris monticola</i>	_?_
FAC	FAC	<i>Agrostis capillaris</i>	Colonial Bent
FAC	FAC	<i>Agrostis scabra</i>	Rough Bent
FAC	FAC	<i>Alhagi maurorum</i>	Camelthorn
FAC	FAC	<i>Allophyllum gilioides</i>	Dense False Gily-Flower
FAC	FAC	<i>Antennaria corymbosa</i>	Flat-Top Pussytoes
FAC	FAC	<i>Antennaria media</i>	Rocky Mountain Pussytoes
FAC	FAC	<i>Antennaria pulchella</i>	Sierran Pussytoes
FAC	FAC	<i>Apocynum cannabinum</i>	Indian-Hemp

FAC	FAC	<i>Aquilegia formosa</i>	Crimson Columbine
FAC	FAC	<i>Arnica latifolia</i>	Daffodil Leopardbane
FAC	FAC	<i>Arnica mollis</i>	Cordilleran Leopardbane
FAC	FACW	<i>Artemisia douglasiana</i>	Douglas' Wormwood
FAC	FAC	<i>Artemisia potentilloides</i>	Five-Finger Chicken-Sage
FAC	FAC	<i>Asclepias fascicularis</i>	Narrow-Leaf Milkweed
FAC	FAC	<i>Asclepias speciosa</i>	Showy Milkweed
FAC	FACW	<i>Astragalus agrestis</i>	Cock's-Head
FAC	FACU	<i>Astragalus alpinus</i>	Alpine Milk-Vetch
FAC	FACW	<i>Astragalus canadensis</i>	Canadian Milk-Vetch
FAC	FAC	<i>Astragalus hornii</i>	Horn's Milk-Vetch
FAC	FAC	<i>Astragalus robbinsii</i>	Robbins' Milk-Vetch
FAC	FAC	<i>Athyrium americanum</i>	American Alpine Lady Fern
FAC	FAC	<i>Athyrium cyclosorum</i>	Western Lady Fern
FAC	FAC	<i>Atriplex argentea</i>	Silverscale
FAC	UPL	<i>Atriplex dioica</i>	Saline Saltbush
FAC	FAC	<i>Atriplex hortensis</i>	Garden Orache
FAC	FAC	<i>Atriplex lentiformis</i>	Quailbush
FAC	FACW	<i>Atriplex parryi</i>	Parry's Saltbush
FAC	FAC	<i>Atriplex pusilla</i>	Smooth Saltbush
FAC	FACW	<i>Atriplex semibaccata</i>	Australian Saltbush
FAC	FAC	<i>Atriplex serenana</i>	Bracted Saltbush

FAC	FAC	<i>Atriplex torreyi</i>	Torrey's Saltbush
FAC	FACW	<i>Baccharis salicifolia</i>	Mule's-Fat
FAC	FAC	<i>Barbarea vulgaris</i>	Garden Yellow-Rocket
FAC	FACW	<i>Bassia hyssopifolia</i>	Five-Horn Smotherweed
FAC	FAC	<i>Bassia scoparia</i>	Mexican-Fireweed
FAC	FAC	<i>Bistorta vivipara</i>	Serpent-Grass
FAC	FACU	<i>Botrychium ascendens</i>	Triangle-Lobe Moonwort
FAC	FAC	<i>Botrychium lunaria</i>	Common Moonwort
FAC	FAC	<i>Botrychium simplex</i>	Least Moonwort
FAC	FAC	<i>Botrypus virginianus</i>	Rattlesnake Fern
FAC	FAC	<i>Bromus ciliatus</i>	Fringed Brome
FAC	FAC	<i>Calystegia sepium</i>	Hedge False Bindweed

FAC	FAC	<i>Cardamine oligosperma</i>	Little Western Bittercress
FAC	FAC	<i>Carex abrupta</i>	Abrupt-Beak Sedge
FAC	FAC	<i>Carex bolanderi</i>	Bolander's Sedge
FAC	FACW	<i>Carex capitata</i>	Capitate Sedge
FAC	FAC	<i>Carex douglasii</i>	Douglas' Sedge
FAC	FAC	<i>Carex elynoides</i>	Black-Root Sedge
FAC	FAC	<i>Carex fracta</i>	Fragile-Sheath Sedge
FAC	FAC	<i>Carex haydeniana</i>	Hayden's Sedge
FAC	FAC	<i>Carex heteroneura</i>	Different-Nerve Sedge
FAC	FACU	<i>Carex hoodii</i>	Hood's Sedge
FAC	FAC	<i>Carex infirminervia</i>	_?_
FAC	FAC	<i>Carex leptopoda</i>	Taper-Fruit Short-Scale Sedge
FAC	FACU	<i>Carex micropoda</i>	Pyrenean Sedge
FAC	FACU	<i>Carex microptera</i>	Small-Wing Sedge
FAC	FAC	<i>Carex nova</i>	New Sedge
FAC	FAC	<i>Carex pachystachya</i>	Thick-Head Sedge
FAC	FACW	<i>Carex parryana</i>	Parry's Sedge
FAC	FAC	<i>Carex pelocarpa</i>	Dusky-Seed Sedge
FAC	UPL	<i>Carex petasata</i>	Liddon Sedge
FAC	FAC	<i>Carex podocarpa</i>	Short-Stalk Sedge
FAC	FAC	<i>Carex scirpoidea</i>	Canadian Single-Spike Sedge
FAC	FAC	<i>Carex subfusca</i>	Rusty Sedge
FAC	FAC	<i>Carex subnigricans</i>	Dark Mountain Sedge
FAC	FAC	<i>Carex vallicola</i>	Valley Sedge
FAC	FAC	<i>Carex vernacula</i>	Native Sedge
FAC	FAC	<i>Castilleja rhexiifolia</i>	Rosy Indian-Paintbrush
FAC		<i>Castilleja salsuginosa</i>	Monte Neva Indian-Paintbrush
FAC	FACU	<i>Castilleja tenuis</i>	Hairy Indian-Paintbrush
FAC	FACU	<i>Celtis reticulata</i>	Net-Leaf Hackberry
