by **MERIDIAN**

## **A1042 AUGER ASSEMBLY MANUAL**

**Read & understand all instructions pertaining to this auger prior to use!**

# Safety Alert

Watch for this **ALERT** Symbol. It identifies potential hazards to Personal **SAFETY** and your **HEALTH**. It points out Safety precautions.

This **SAFETY** symbol means:

**ATTENTION:**

**BE ALERT**

Why is **SAFETY** important to you?

**THREE BIG REASONS:**

\***ACCIDENTS DISABLE AND KILL**

\***ACCIDENTS COST**

\***ACCIDENTS CAN BE AVOIDED**

Failure to read this Auger manual before operation of the Auger is a misuse of the equipment and a needless risk to your **HEALTH** and **SAFETY**. Your life and limbs are worth keeping. Use this equipment with care.

## Symbol

**Signal Words:**

**DANGER, WARNING, CAUTION**

The appropriate signal word for each message has been selected using the following guidelines below the Alert Symbol.

**BE ALERT!**

**DANGER** – Indicates an imminently hazardous situation that, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations, typically for machine components that, for functional purposes, cannot be guarded.

**WARNING** – Indicates a potentially hazardous situation that, if not avoided, could result in death or serious injury, and includes hazards that are exposed when guards are removed. It may also be used to alert against unsafe practices.

**CAUTION** – Indicates a potentially hazardous situation that, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

## Step 1

### Tube Identification

### Step 2 (Tube & Flighting Assembly)

Place tubes on assembly stands as shown. Place stands 12" or less from the end of the tube. Placing stands further than 12" from end of the tube may cause damage to the tubes.

### Step 3

Slide the flighting together from the 1<sup>st</sup> & 2<sup>nd</sup> tube. Connect the flighting using (2) 1/2" x 2-1/2" hex bolts and top lock nuts. Align flighting as shown to make continuous. After connecting the flighting, slide the 1<sup>st</sup> & 2<sup>nd</sup> tube together putting in the top 2 & bottom (2) 1/2" x 1-1/2" flange bolts & nuts.

#### **Step 4 (Winch Installation)**

After the drive option is assembled on to the auger the winch will need to be installed. To install the winch, fasten it to the bracket welded on the underside of the first tube. Secure it to the bracket by using (3) 3/8" x 1" hex flange bolts & nuts as shown in fig. 4.1. (If handle is not installed on the winch refer to the operator's manual for the winch that is provided)

**Fig. 4.1**

#### **Step 5 (Discharge Head Assembly)**

Next, align the 5 studs on the flighting with the 5 holes in the discharge head. Fasten the discharge head to the flighting using (5) 1/2" lock washers & (5) 1/2" lug nuts. Thread lug nuts on flat side against the lock washers. Tighten the 5 lug nuts. Next, fasten the discharge head to the tube using (2) 1/2" x 1-1/2" flange bolts & nuts & (6) 1/2" x 1-1/2" hex bolts & flange nuts. The flange bolts are used on the top 2 holes of the discharge head as shown. Tighten all 8 bolts mounting the discharge head to the tube. Tie red flag supplied in the kit to the discharge head.

**Fig. 5.1**

### **Step 6 (Infeed Housing Assembly)**

Loosen bolts and remove both access panels. Using a lifting strap, lift and slide the infeed housing over the bottom flighting on the 1<sup>st</sup> tube. Secure the infeed housing to the first tube using (6) 1/2" x 1-1/2" flange bolts and nuts & (2) 1/2" x 1-1/2" hex bolts & flange nuts. The (2) 1/2" x 1-1/2" hex bolts should be used on the bottom holes and orientated as shown in fig. 6.4.

**Fig. 6.1**

**Fig. 6.2**

**Fig. 6.3**

**Fig. 6.4**

### **Step 7**

Next, locate the gearbox mounted inside of the infeed housing. Remove the 2 top plugs in the gearbox & replace the top one with the grease zerk & the bottom one with the breather provided.

**Fig. 7.1**

### **Step 8**

Next, slide the 4 bolt 1-1/4" cast flange bearing over the shaft making sure the grease zerk is located on the same side as the idler sprocket. (If the shaft has surface rust, clean first with an emry cloth) Secure the 4 bolt bearing to the infeed housing using (4) 1/2" x 1-1/2" carriage bolts & flange nuts as shown. When completed use a punch to rotate the shaft so the keyway is in an easy to access position.

**Fig. 8.1**

### **Step 9**

Next, insert (2) 1/4" x 1" square keys into the top & bottom shaft. Slide the 18 tooth sprocket onto the top shaft & the 20 tooth sprocket onto the bottom shaft as shown in fig. 9.1. Use a measuring tape & measure the distance from the center of each sprocket to the infeed housing. Once sprockets are aligned, apply lock-tite to set screws & tighten.

**Fig. 9.1**

### **Step 10**

Locate the #60 chain, #60 half link, & #60 connector link. Attach the half link to the chain on one end & place the chain around the sprockets as shown in fig. 10.1. Secure chain with connector link. When connector link is installed & the loop has been completed, push the idler sprocket in the chain to achieve good tension. When proper tension is achieved tighten the idler sprocket. Now grease top & bottom bearings with multi-lith grease.

**Fig. 10.1**

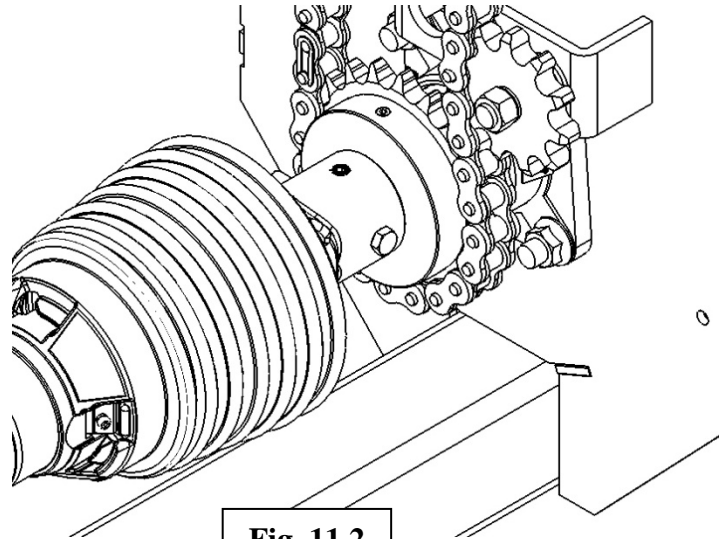

### **Step 11**

Next, insert a 1/4" x 1" square key into the bottom shaft. Slide PTO shaft onto lower drive shaft. Align holes in PTO shaft with hole in drive shaft. Using a punch will help in this application. Secure using a 5/16" x 3" hex bolt & top lock nut. Tighten set screw on PTO shaft.

**Fig. 11.1**

**Fig. 11.2**

### **Step 12**

Next slide the chain guard over the PTO shaft and secure to the infeed housing (4) 3/8" x 3/4" flange bolts. Then place lower "U" shaped guard place onto guard and secure with (4) 3/8" x 3/4" flange bolts.

**Fig. 12.1**

**Step 13**

Locate the PTO support bracket & mount it to the infeed housing as shown in fig. 13.1 using (3) 3/8" x 3/4" flange bolts & flange nuts. Attach the PTO support chain to the bracket as shown using a 3/8" x 1" flange bolt & flange nut.

**Fig. 13.1**

**Step 14**

Locate the jack and slide it onto the jack mount tube located on the side of the tongue. Secure jack with pin.

**Fig. 14.1**

## **Step 15**

Next the hopper winch will be mounted. On the right side of the infeed housing there is a bracket with a pin through it. (Fig. 15.1) Remove pin & set aside. Remove bracket & attach to winch using (3) 3/8" x 1" carriage bolts & flange nuts as shown in fig. 15.2. Tighten bolts by hand only for now. Slide the winch handle onto winch with spring & nut. Tighten nut to secure handle. Place winch on top of bracket welded to the infeed housing and secure with the pin. Angle the winch so it is centered with the top bracket (hopper arm bracket) on the 1<sup>st</sup> tube as shown in figure 15.3. Tighten the (3) 3/8" x 1" carriage bolts.

**Fig. 15.1**

**Fig. 15.2**

**Fig. 15.3**

**Step 16**

Next mount the left hand winch bracket (10131B) to the left side of the infeed housing. Attach the bracket using (4) 3/8" x 1" flange bolts & flange nuts.

**Fig. 16.1**

**Step 17 (Transport Arm Assembly)**

After the left hand side winch mount bracket is secured assemble the hopper transport arm to the 1<sup>st</sup> tube. This will be done using (2) 1/2" x 7" bent pins as shown in figure 17.1.

**Fig. 17.1**

**Step 18**

Next the hopper lift cable will be assembled. Insert cable through the upper then the lower pulley on the hopper transport arm. Pull cable back to the winch. Insert cable through hole on the side of the winch drum. Fasten to winch using the winch cable clamp & nut provided with winch.

**Fig. 18.1**

**Fig. 18.1**

**Step 19** (Carriage Assembly)

**Carriage Identification**

**Axle**

**Lift Arm (2X)**

**Carriage Arms (2X)**

### **Step 20**

First, place the axle under the auger tubes in the middle of the tubes. Attach the carriage arms to the axle with the hub and spindle as shown in fig. 20.1. Fasten the carriage arms & the spindle using (4) 1/2" x 1-1/2" flange bolts and nuts.

### **Step 21**

Next, attach each tire onto the hub and spindle and secure each with (5) 1/2" lug nuts. Tighten lug nuts evenly using a "star" pattern to 80-90 ft/lbs of torque.

## **Step 22**

Next, locate the anti-twist brackets (11657 & 11660). Mount the 2 smaller link brackets to each carriage arm using a 1/2" x 1" hex flange bolt & flange nut. Next, attach the anti-twist arms to the link brackets as shown in Fig. 22.1. Secure all 4 brackets together in this location with a 1/2" x 1-1/2" hex flange bolt & flange nut. Align the holes in the other end of the arm brackets with the holes in the carriage arms.

**Fig. 22.1**

## **Step 23**

Next, attach the carriage arms and anti-twist brackets to the 1<sup>st</sup> auger tube. Secure using (2) 3/4" x 1-1/2" hex bolts & top lock nuts.

**Fig. 23.1**

### **Step 24**

Next, the lift roller will be assembled to the lift arms. Place the lift roller housing bracket (11673) up to one of the lift arms and align the holes. Take the 1" x 7" hex bolt and put it through the arm & one side of the bracket. Place the lift roller (30971) in the housing and push the bolt through the roller. Now, push bolt all the way through the housing. Attach other lift arm onto bolt & secure with a 1" top lock nut. The lift arms, housing, & roller should now be assembled together.

**Fig. 24.1**

### **Step 25**

Next, slide the roller housing assembly onto the top of the track down past the 3<sup>rd</sup> set of holes. Mount the roller stop as shown in Fig. 25.1. Secure with (2) 3/8" x 1" hex flange bolts & flange nuts.

**Fig. 25.1**

### **Step 26**

Next, lift the auger tubes up using a lifting strap. Lift auger tubes up far enough to attach the lift arms to the axle. (See Fig. 26.1) Secure the lift arms with a 1" x 2" hex bolt & top lock nut.

**Fig. 26.1**

### **Step 27**

Next, locate the long x-braces (10693). Mount these to the carriage arms as shown in Fig. 27.1. Secure both braces with (5) 3/8" x 1" hex flange bolts & nuts. Repeat this with the shorter braces (10988) on the lift arms.

**Fig. 27.1**

### **Step 28 (Lift Cable Assembly)**

Next, attach the lift cable to the winch by sticking one end through the side of the drum and fastening the cable to the outside of the drum. For more information refer to winch manual included with auger. Route the cable up around the lift roller (Fig. 28.2) going from the bottom around the top. Next, pull the cable to the bottom of the discharge tube at wrap cable around the cable stop (30993) as shown if Fig. 28.3. Secure cable around the cable stop using (2) 1/4" cable clamps. After clamps are tightened, track the cable on the winch by slowing turning the handle and guiding the cable on to the drum so it spools properly.

**Fig. 28.1**

**Fig. 28.2**

**Fig. 28.3**

**Step 29** (Swing Tube & Hopper Installation)

Locate the swing hopper swivel ring (30027A). Install the swing hopper swivel ring on the discharge head of the swing tube. Fasten the ring as shown in fig. 29.1 using (2) 1/2" x 5/8" shoulder bolt & 1/2" top lock nuts.

**Fig. 29.1**

**Step 30**

Lift the swing tube up and set on infeed housing as shown. Be sure to align the knuckle assembly in the swing tube with the lower gearbox in the infeed housing. Lower the other end of the swing tube onto the ground.

**Fig. 30.1**

### **Step 31**

Locate the swing tube hold down plate & the 4 hold down spacers. Install the hold down plates & spaces using (4) 3/8" x 1-1/2" flange bolts & flange nuts. Tighten all 4 fasteners.

**Fig. 31.1**

### **Step 32**

Next the wheel will be installed on the swing hopper. First, locate the 4 hopper tires (30104), 4 clevis pins, 4 spacer tubes (10186) & 4 lynch pins. Place the spacer tube through the first hole in the outside of the swing hopper. Slide the clevis pin through the tire and the spacer making sure the offset part of the rim is facing in towards the swing hopper as shown in fig. 32.1. Secure the spacer, tire, & clevis pin by placing a 3/16" lynch pin through the end of the clevis pin. Repeat for all 4 hopper tires. (For more ground clearance install the tire in the bottom hole.)

**Fig. 32.1**

### **Step 33**

Next, install the upper transition flighting (30864) on the lower drive shaft attached to the swing tube flighting. To do this, slide a  $\frac{3}{8}$ " x 1" square key into key way on swing tube flighting shaft. Slide upper transition flighting onto shaft aligning the key and keyway. To secure the transition flighting thread the set screw that is  $\frac{5}{16}$ " x 1- $\frac{1}{4}$ " into hole on knuckle (Fig. 33.1). After set screw is tightened, thread a  $\frac{5}{16}$ " flange nut onto set screw and tighten to lock set screw in place.

**Fig. 33.1**

### **Step 34**

Next, install the swing hopper onto the swing tube. Slide the hopper transition onto the swing tube while inserting the square shaft of the upper transition flighting into the square tube on the lower transition flighting. Align the holes in the hopper and swing tube with a punch. With the access door open secure the hopper to the swing tube using (2)  $\frac{1}{2}$ " x 1- $\frac{1}{2}$ " flange bolts, (4)  $\frac{1}{2}$ " washers, & (2)  $\frac{1}{2}$ " top lock nuts. The washer will go between the bolt and the hopper & the nut and swing tube respectively.

**Fig. 34.1**

### **Step 35**

Next, install the manual canister. Mount the manual canister approximately 4 feet down the carriage arms below the anti-twist brackets. Secure to the tube using (2) #12 x 3/4" self tapping screws. Note that they canister lid will have to be removed to install 1 of the screws. After installation, reattach the canister lid.

**Fig. 35.1**

**This will complete the assembly for your Harvest by Meridian A1042 grain auger.**

**For additional part numbers, information, & overall views please refer to the parts book drawings located at the end of this assembly manual or log onto [www.harvestauger.com](http://www.harvestauger.com).**
