The only DVB-T receiver
with built-in 110mm telescopic antenna!

WinTV-Aero is the most portable Freeview DVB-T-TV[2] and -radio[1] receiver for your netbook or notebook! With the built-in telescopic antenna, your antenna is always available, making WinTV-Aero the most portable digital TV receiver on the market today!

Enhanced DVB-T reception. Inside the WinTV-Aero is the latest, highly sensitive, DVB-T receiver for the best TV reception possible.

WinTV-Aero is simple to connect to your netbook or notebook. Just plug it into a USB 2.0 port, extend the built-in telescopic antenna, install the WinTV application and you're ready to watch and record high quality digital TV on your computer screen. WinTV-Aero also runs on notebook computers with Windows Media Center.

Digital TV recorder, too! Record digital TV programs to disk and play them back on your PC screen in the original digital quality. Use the integrated digital TV guide (EPG) and recording scheduler to ensure you don't miss your favourite programs.

With a single click of your mouse schedule recordings for the next 7 days via the built-in EPG. Use the remote control included to effortlessly enjoy all the benefits of a high end digital video recorder set top box on your PC!

Includes the new Hauppauge WinTV v7 application. WinTV v7 makes watching, recording and pausing live TV a breeze. The simple, more dynamic, button layout means all the essential functions are never more than one click away. And with WinTV v7, you record using the original high quality Freeview digital TV format.

WinTV-Aero is Windows 7 certified.

Hauppauge WinTV v7 - Features
- Watch TV in a windows or full screen
- TimeShift
- Record your TV shows directly to your computers hard drive (MPEG-2)
- EPG (Electronic Programm Guide)
- HDTV support (only with WinTV v7 HD-software

1 The WinTV-Aero supports DVB-T radio. DVB-T radio is not DAB or DMB radio.
2 The WinTV-Aero includes a digital TV telescopic antenna, which can be used when away from home (dependant on reception). When used in the home or office, we recommend a high gain roof top digital antenna. Some viewers will need to replace their aerials to receive digital transmissions if the installation is old or in poor condition. Digital Terrestrial coverage is improving all the time as digital terrestrial television transmitters are continuously being updated. However it may take some time for coverage to reach particular areas of the country. To check if you receive a digital transmission in your area, input your POST Code at: www.dtg.org.uk/retailer/coverage.html
