# Glanzmann's Thrombasthenia

### The Facts

- A person with Glanzmann's Thrombasthenia has blood that does not clot like it should.
  - ° It affects males and females equally.
  - ° Very rare platelet disroder.
  - ° Bleeding can range from mild to very severe.
  - ° The only cure is a bone marrow transplant.
  - ° It is a life-long condition.
- People with Glanzmann's Thrombasthenia do not bleed faster than normal but have a harder time stopping the bleeding.
- It may take medicine to help control the bleeding.
- People with Glanzmann's Thrombasthenia cannot make a strong clot.

## **Common Bleeding Issues**

- Frequent and prolonged nosebleeds
- Nosebleeds that are difficult to stop (may take hours to stop)
- · Bleeding after invasive procedures
- · Bleeding into joints or muscles
- Bleeding with minor cuts and scrapes
- Heavy bleeding during menses for females

## **School Considerations**

- Some people with Glanzmann's Thrombasthenia require frequent intravenous medications and/or blood products to prevent bleeding episodes. Please allow for frequent abscences and help with making up assignments.
- Patients may also require oral medications to help treat or prevent bleeding. This medication may need to be taken at school.
- Please allow for frequent bathroom breaks for females with this disorder.
- Please allow for a 504 plan if needed.

#### **Aid for Minor Bleeding**

- Rest, Ice, Compression, Elevation
- Cuts and scrapes: clean, apply pressure, and bandage
- Nosebleeds: hold head straight (not back) and apply pressure
- Mouth bleeds: apply ice or cold compress
- Headache (not from injury): give Tylenol only.
   If not relieved in two hours or accompanied by other symptoms, contact the parent.

#### **Emergency Bleeding**

- Head: nausea, vomiting, headache, confusion, blurred vision, or loss of consciousness
- Eye: trauma and bleeding into and around the eye
- Neck and throat: pain, swelling, difficulty swallowing, or breathing
- Abdomen: trauma to abdomen, acute tenderness, pain, or swelling

#### In an Emergency:

- Call 911.
- · Inform the parent.
- Notify EMS the child has a bleeding disorder.
- Contact the Hemophilia Treatment Center.

# **Benefits of Physical Activity**

- Promotes overall physical fitness by improving
  - ° Cardiovascular fitness
  - ° Muscular fitness
  - ° Bone health
  - ° Body composition/weight
  - ° Cognitive function
  - ° Academic performance
  - ° Sleep
  - ° Self-esteem
  - ° Self-confidence
  - ° Energy
- · Reduces feelings of anxiety and depression
- · Reduces fatigue
- Increases balance and coordination
- Promotes a spirit of participation and involvement
- · Lowers the risk of
  - ° Spontaneous joint bleeds
  - ° Heart disease
  - ° Stroke
  - ° High blood pressure
  - ° Type 2 diabetes
  - ° Colon cancer

# Which Sports Are Safe?

- AVOID HIGH-IMPACT SPORTS such as football, boxing, hockey, rugby, and wrestling.
- Encourage low-impact sports such as running, aquatics, and golf.
- · Always consult parents regarding any participation in sports.
- Look for activity ratings in the Playing It Safe materials provided by the National Hemophilia Foundation.

Bruising is a common occurrence for people with congenital bleeding disorders
