Diamonds

All our diamonds are sold on a 30-day money-back guarantee!

Diamond Classifications

Our Diamonds are carefully selected and much time and care put into the examination of these gems before purchasing. Our large diamond business is the result of the confidence of thousands of satisfied customers. Remember weight only does not determine values. Other factors—such as Cutting, Color and Perfection—affect the prices of diamonds, regardless of size or weight.

Cutting

The degree of brilliance of a diamond is determined by the excellence of its proportions and the quality of cutting. A correctly proportioned diamond should have 2/5ths of its weight above the girdle and 3/5ths below. A properly proportioned diamond has maximum brilliance over its entire surface.

Color

There is a wide range of color from finest blue white to fine white, white, yellow, and brown.

Perfection

The degree of perfection is a major factor in determining the value of a diamond. Some imperfections in diamonds can be seen by the naked eye; others can be seen only under strong magnification. A flawless diamond (often referred to and described by most jewelers as "perfect") is one without any imperfections whatsoever; that is, none that can be seen by a trained expert using a powerful magnifying glass (10X magnification).

Grading of Diamonds Illustrated in Catalog	
AAA-1	 <p>Identifies extra fine quality and blue-white color. This grade is so fine that even under ten-power magnification it is very difficult for anyone except a diamond expert to detect the faintest type of imperfection. Proportions and quality of cutting are exceptional . . . resulting in the greatest beauty and brilliance possible. This grade is often sold for perfect or flawless.</p>
AAA	 <p>Identifies extra fine quality and color . . . equal to the AAA-1 Grade in every respect except in a slight degree of color. This grade under ten-power magnification reveals the faintest of flaws if critically examined. In appearance it is the equal of the finest diamond.</p>
AA	 <p>Identifies fine color diamonds of slightly less perfection than Grade AAA. The two, or three, very small flaws in most cases can be seen only under a jeweler's magnifying glass. This grade of diamonds is especially appealing to those desiring a larger stone with very little sacrifice in beauty and brilliancy.</p>
A	 <p>Identifies diamonds of fairly nice quality and color. This grade has flaws, visible to the naked eye if closely examined. The quality of cutting and brilliancy is of a slight degree under AA grade.</p>

BEWARE OF MISREPRESENTATION The term "perfectly cut" does not apply to the perfection of a diamond. It describes the cutting only, and is therefore misleading if used to infer quality. Do not be misled.

The 'Linde' Star has essentially the same chemical and physical properties of the natural gem and practically the same degree of beauty, at a fraction of the price of the natural stone. It is as hard and timeless as its natural counterpart and possesses a beauty unlike anything you have ever owned. Its six white sharp rays are visible from both top and sides.

We use only genuine 'Linde' Stars, unconditionally guaranteed.
