HOW TO IDENTIFY AZOREAN SPIDERS

- The identification of spiders could be facilitated if we have access to good images of the male pedipalp and female epigyne. We are starting a long-term project to produce high quality images of all the Azorean spider species of both the imago habitus and details on male palp and female epigyne. These images will be posted both in the Azorean Biodiversity Portal and in the Azorean Spider Portal
- <http://www.jorgenlissner.dk/azoreanspiders.aspx>
- See the available images in this document.
